INDICATIONS/ROUTES/DOSAGE

Edema

PO: ADULTS: 25–100 mg/day in 1–2 divided doses. **Maximum:** 200 mg/day.

Hypertension

PO: ADULTS: 12.5–50 mg/day.

Usual Elderly Dosage

PO: 12.5–25 mg once daily.

Usual Pediatric Dosage

PO: CHILDREN 2–17 YRS: Initially, 1 mg/kg/day. **Maximum:** 3 mg/kg/day (50 mg). **CHILDREN 6 MOS TO 2 YRS:** 1–3 mg/kg/day in 1–2 divided doses. **Maximum:** 37.5 mg/day. **CHILDREN YOUNGER THAN 6 MOS:** 1–3 mg/kg/day in 2 divided doses.

Dosage in Renal Impairment

Avoid use with creatinine clearance less than 10 ml/min.

SIDE EFFECTS

Expected: Increased urinary frequency, urine volume. **Frequent:** Potassium depletion. **Occasional:** Orthostatic hypotension, headache, GI disturbances, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Vigorous diuresis may lead to profound water loss/electrolyte depletion, resulting in hypokalemia, hyponatremia, dehydration. Acute hypotensive episodes may occur. Hyperglycemia may occur during prolonged therapy. Pancreatitis, blood dyscrasias, pulmonary edema, allergic pneumonitis, dermatologic reactions occur rarely. Overdose can lead to lethargy, coma without changes in electrolytes or hydration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check vital signs, esp. B/P for hypotension before administration. Assess baseline electrolytes, esp. for hypokalemia. Evaluate skin turgor, mucous membranes for hydration status. Evaluate for peripheral edema. Assess muscle strength, mental status. Note skin temperature, moisture. Obtain baseline weight. Initiate I&O.

INTERVENTION/EVALUATION

Continue to monitor B/P, vital signs, electrolytes, I&O, daily weight. Note extent of diuresis. Watch for changes from initial assessment (hypokalemia may result in weakness, tremor, muscle cramps, nausea, vomiting, altered mental status, tachycardia; hyponatremia may result in confusion, thirst, cold/clammy skin). Be esp. alert for potassium depletion in pts taking digoxin (cardiac arrhythmias). Potassium supplements are frequently ordered. Check for constipation (may occur with exercise diuresis).

PATIENT/FAMILY TEACHING

• Expect increased frequency, volume of urination. • To reduce hypotensive effect, rise slowly from lying to sitting position, permit legs to dangle momentarily before standing. • Eat foods high in potassium, such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins. • Protect skin from sun, ultraviolet rays (photosensitivity may occur).

hydrocodone

TOP 200 HIGH ALERT

high-droe-**koe**-doan
(Hycodan, Robidone)
Do not confuse Hycodan with Vicodin.

FIXED-COMBINATION(S)

Anexsia: hydrocodone/acetaminophen (a non-narcotic analgesic): 5 mg/500 mg, 7.5 mg/650 mg, 10 mg/650 mg. **Duocet:** hydrocodone/acetaminophen: 5 mg/500 mg. **Hycet:** hydrocodone/acetaminophen: 7.5 mg/325 mg per 15 ml. **Hycodan:** hydrocodone/homatropine (an anticholinergic): 5 mg/1.5 mg. **Hycotuss, Vitussin:** hydrocodone/guaifenesin (an expectorant): 5 mg/100 mg. **Lorcet:** hydrocodone/acetaminophen: 7.5 mg/

650 mg, 10 mg/650 mg. **Lortab:** hydrocodone/acetaminophen: 2.5 mg/500 mg, 5 mg/500 mg, 7.5 mg/500 mg, 10 mg/500 mg. **Lortab Elixir:** hydrocodone/acetaminophen: 2.5 mg/167 mg per 5 ml. **Lortab with ASA:** hydrocodone/aspirin: 5 mg/500 mg. **Norco:** hydrocodone/acetaminophen: 10 mg/325 mg. **Reprexain CIII:** hydrocodone/ibuprofen (an NSAID): 5 mg/200 mg. **Rezira:** hydrocodone/pseudoephedrine (a nasal decongestant): 5 mg/60 mg per 5 ml. **Tussend:** hydrocodone/pseudoephedrine (a sympathomimetic)/guaifenesin (an expectorant): 2.5 mg/30 mg/100 mg per 5 ml. **Vicodin:** hydrocodone/acetaminophen: 5 mg/500 mg. **Vicodin ES:** hydrocodone/acetaminophen: 7.5 mg/750 mg. **Vicodin HP:** hydrocodone/acetaminophen: 10 mg/650 mg. **Vicoprofen:** hydrocodone/ibuprofen (an NSAID): 7.5 mg/200 mg. **Xodol:** hydrocodone/acetaminophen: 5 mg/300 mg. **Zutripto:** hydrocodone/chlorpheniramine (an antihistamine)/pseudoephedrine (a nasal decongestant): 5 mg/4 mg/60 mg. **Zydone:** hydrocodone/acetaminophen: 5 mg/400 mg, 7.5 mg/400 mg, 10 mg/400 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist **(Schedule III). CLINICAL:** Narcotic analgesic, antitussive (see p. 142C).

ACTION

Binds with opioid receptors in CNS. **Therapeutic Effect:** Reduces intensity of incoming pain stimuli from sensory nerve endings, altering pain perception, emotional response to pain; suppresses cough reflex.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (analgesic)	10–20 min	30–60 min	4–6 hrs
PO (antitussive)	N/A	N/A	4–6 hrs

Well absorbed from GI tract. Metabolized in liver. Primarily excreted in urine. **Half-life:** 3.8 hrs (increased in elderly).

USES

Relief of moderate to moderately severe pain, nonproductive cough.

PRECAUTIONS

Contraindications: CNS depression, respiratory depression. **Cautions:** Anoxia, hypercapnia, seizures, acute alcoholism, respiratory dysfunction, increased ICP, severe hepatic impairment, biliary tract disease, delirium tremens, acute abdominal conditions, hypothyroidism, prostatic hypertrophy, Addison's disease, urethral stricture, COPD.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. May prolong labor if administered in latent phase of first stage of labor or before cervical dilation of 4–5 cm has occurred. Respiratory depression may occur in neonate if mother received opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms (irritability, excessive crying, tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures) in the neonate. **Pregnancy Category C (D if used for prolonged periods or at high dosages at term). Children:** Those younger than 2 yrs may be more susceptible to respiratory depression. **Elderly:** May be more susceptible to respiratory depression, may cause paradoxical excitement. Age-related renal impairment, prostatic hypertrophy or obstruction may increase risk of urinary retention; dosage adjustment recommended.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS or respiratory depression, hypotension. **MAOIs, tricyclic antidepressants** may alter effect of hydrocodone. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB**

VALUES: May increase serum amylase, lipase.

AVAILABILITY (Rx)

Combination only (see Fixed Combinations).

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Analgesia

PO: ADULTS, CHILDREN WEIGHING 50 KG OR MORE: Initially, 5–10 mg q3–4h as needed. **ADULTS, CHILDREN WEIGHING LESS THAN 50 KG:** Initially, 0.1–0.2 mg/kg q3–4h as needed. **ELDERLY:** 2.5–5 mg q4–6h.

Cough

PO: ADULTS, ELDERLY: 5–10 mg q4–6h as needed. **Maximum:** 15 mg/dose. **CHILDREN:** 0.6 mg/kg/day in 3–4 divided doses at intervals of at least 4 hrs. **Maximum single dose:** 10 mg (children older than 12 yrs), 5 mg (children 2–12 yrs), 1.25 mg (children younger than 2 yrs).

SIDE EFFECTS

Frequent: Sedation, hypotension, diaphoresis, facial flushing, dizziness, drowsiness. **Occasional:** Urine retention, blurred vision, constipation, dry mouth, headache, nausea, vomiting, difficult/painful urination, euphoria, dysphoria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Tolerance to analgesic effect, physical dependence may occur with repeated use. Prolonged duration of action, cumulative effect may occur in those with hepatic/renal impairment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain vital signs before giving medication. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician. **Analgesic:** Assess onset, type, location, duration of pain. Effect of medication is reduced if full pain recurs before next dose. **Antitussive:** Assess type, severity, frequency of cough.

INTERVENTION/EVALUATION

Palpate bladder for urinary retention. Monitor daily pattern of bowel activity, stool consistency. Initiate deep breathing and coughing exercises, particularly in pts with pulmonary impairment. Assess for clinical improvement; record onset of relief of pain, cough.

PATIENT/FAMILY TEACHING

• Change positions slowly to avoid orthostatic hypotension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Tolerance or dependence may occur with prolonged use at high dosages. • Report nausea, vomiting, constipation, shortness of breath, difficulty breathing. • May take with food.

hydrocortisone

hye-dro-**kor**-ti-sone

(Anusol HC, Caldecort, Colocort, Cortaid, Cortef, Cortenema, Cortizone-10, Hytone, Nupercainal Hydrocortisone Cream, Preparation H Hydrocortisone, Proctocort, Solu-Cortef, Westcort).

Do not confuse hydrocortisone with hydrochlorothiazide, hydrocodone, or hydroxychloroquine, Cortef with Coreg, or Solu-Cortef with Solu-Medrol.

FIXED-COMBINATION(S)

Cortisporin: hydrocortisone/neomycin/polymyxin (an anti-infective): 5 mg/10,000 units/5 mg, 10 mg/10,000 units/5 mg. **Liposivir:** hydrocortisone/acyclovir (an antiviral): 1%/5%.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenal corticosteroid. **CLINICAL:** Glucocorticoid (see pp. 98C, 100C).

ACTION

Inhibits accumulation of inflammatory cells at inflammation sites, phagocytosis, lysosomal enzyme release, synthesis and/or release of mediators of inflammation. **Therapeutic Effect:** Prevents/suppresses cell-mediated immune reactions. Decreases/prevents tissue response to inflammatory process.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	N/A	4–6 hrs	8–12 hrs

Well absorbed after IM administration. Widely distributed. Metabolized in liver. **Half-life:** Plasma, 1.5–2 hrs; biologic, 8–12 hrs.

USES

Systemic: Management of adrenocortical insufficiency, relief of inflammation of corticosteroid-responsive dermatoses, adjunctive treatment of ulcerative colitis, status asthmaticus, anaphylactic shock. **Topical:** Inflammatory dermatoses, adjunctive treatment of ulcerative colitis, atopic dermatitis, inflamed hemorrhoids. **OFF-LABEL:** Management of septic shock. Treatment of thyroid storm.

PRECAUTIONS

Contraindications: Fungal, tuberculosis, viral skin lesions; serious infections, idiopathic thrombocytopenia purpura. **Cautions:** Hyperthyroidism, cirrhosis, hypertension, osteoporosis, thromboembolic tendencies, CHF, seizure disorders, diabetes, respiratory tuberculosis, untreated systemic infections, renal/hepatic impairment, acute MI, myasthenia gravis, glaucoma, cataracts, increased intraocular pressure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. May produce cleft palate if used chronically during first trimester. Breast-feeding not recommended. **Pregnancy Category C (D if used in first trimester). Children:** Prolonged treatment or high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** May be more susceptible to developing hypertension or osteoporosis.

INTERACTIONS

DRUG: May decrease effects of **diuretics, insulin, oral hypoglycemics, potassium supplements. Hepatic enzyme inducers** may decrease effects. **Live virus vaccines** may decrease pt's antibody response to vaccine, increase vaccine side effects, potentiate virus replication. **HERBAL: St. John's wort** may decrease concentration. **Cat's claw, echinacea** may increase immunostimulant properties. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, lipids, sodium. May decrease serum calcium, potassium, thyroxine, WBC count.

AVAILABILITY (Rx)

Cream, Rectal (Cortizone-10, Nupercainal Hydrocortisone Cream, Preparation H Hydrocortisone): 1%. **Cream, Topical:** 0.5%, 1%, 2.5%. **Injection, Powder for Reconstitution (Solu-Cortef):** 100 mg, 250 mg, 500 mg, 1 g. **Ointment, Topical:** 0.5%, 1%, 2.5%. **Suppository (Anusol HC):** 25 mg. **Suspension, Rectal (Colocort):** 100 mg/60 ml. **Tablets (Cortef):** 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

IV

Hydrocortisone Sodium Succinate

Reconstitution • Initially, reconstitute vial per manufacturer's instructions.

• May further dilute with D_5W or 0.9% NaCl. For IV push, dilute to 50 mg/ml; for intermittent infusion, dilute to 1 mg/ml. Note: 100–3,000 mg may be added to 50 ml D_5W or 0.9% NaCl.

Rate of Administration • Administer IV push over 3–5 min (over 10 min for doses 500 mg or greater). Give intermittent infusion over 20–30 min.

Storage • Store at room temperature. • Once reconstituted, stable for 3 days at room temperature. Once further diluted with 0.9% NaCl or D_5W stability concentration dependent: 1 mg/ml (24 hrs) 2 mg/ml to 60 mg/ml (4 hrs).

PO

• Give with food or milk if GI distress occurs.

Rectal

• Shake homogeneous suspension well. • Instruct pt to lie on left side with left leg extended, right leg flexed. • Gently insert applicator tip into rectum, pointed slightly toward navel (umbilicus). Slowly instill medication.

Topical

• Gently cleanse area before application. • Use occlusive dressings only as ordered. • Apply sparingly; rub into area thoroughly.

IV INCOMPATIBILITIES

Ciprofloxacin (Cipro), diazepam (Valium), idarubicin (Idamycin), midazolam (Versed), phenytoin (Dilantin).

IV COMPATIBILITIES

Aminophylline, amphotericin, calcium gluconate, cefepime (Maxipime), digoxin (Lanoxin), diltiazem (Cardizem), diphenhydramine (Benadryl), dopamine (Intropin), insulin, lidocaine, lipids, lorazepam (Ativan), magnesium sulfate, morphine, norepinephrine (Levophed), procainamide (Pronestyl), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Acute Adrenal Insufficiency

IV: ADULTS, ELDERLY: 100 mg IV bolus, then 300 mg/day in divided doses q8h. **CHILDREN:** 1–2 mg/kg IV bolus, then 150–250 mg/day in divided doses q6–8h. **INFANTS:** 1–2 mg/kg/dose IV bolus, then 25–150 mg/day in divided doses q6–8h.

Anti-Inflammation, Immunosuppression

IV, IM: ADULTS, ELDERLY: 15–240 mg q12h. **CHILDREN:** 1–5 mg/kg/day in divided doses q12h.

PO: ADULTS, ELDERLY: 15–240 mg q12h. **CHILDREN:** 2.5–10 mg/kg/day.

Physiologic Replacement

PO: CHILDREN: 0.5–0.75 mg/kg/day in divided doses q8h.

IM: CHILDREN: 0.25–0.35 mg/kg/day as a single dose.

Status Asthmaticus

IV: ADULTS, ELDERLY, CHILDREN: 1–2 mg/kg/dose q6h. Maintenance: 0.5–1 mg/kg q6h.

Anaphylactic Shock

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 500 mg–2 g q2–6h. **CHILDREN YOUNGER THAN 12 YRS:** 50 mg/kg. May repeat in 4 hrs, then q24h as needed.

Adjunctive Treatment of Ulcerative Colitis

Rectal: ADULTS, ELDERLY: 100 mg at bedtime for 21 nights or until clinical and proctologic remission occurs (may require 2–3 mos of therapy).

Rectal: ADULTS, ELDERLY: 1 applicator 1–2 times a day for 2–3 wks, then every second day until therapy ends.

Usual Topical Dosage: ADULTS, ELDERLY: Apply sparingly 2–4 times a day.

SIDE EFFECTS

Frequent: Insomnia, heartburn, anxiety, abdominal distention, diaphoresis, acne, mood swings, increased appetite, facial flushing, delayed wound healing, increased susceptibility to infection, diar-

rhea or constipation. **Occasional:** Headache, edema, change in skin color, frequent urination. **Topical:** Pruritus, redness, irritation. **Rare:** Tachycardia, allergic reaction (rash, hives), psychological changes, hallucinations, depression. **Topical:** Allergic contact dermatitis, purpura. **Systemic:** Absorption more likely with use of occlusive dressings or extensive application in young children.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term therapy: Hypocalcemia, hypokalemia, muscle wasting (esp. arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer, CHF. **Abrupt withdrawal after long-term therapy:** Nausea, fever, headache, sudden severe joint pain, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline values for weight, B/P, serum glucose, cholesterol, electrolytes. Check results of initial tests (tuberculosis [TB] skin test, X-rays, EKG).

INTERVENTION/EVALUATION

Assess for edema. Be alert to infection (reduced immune response): sore throat, fever, vague symptoms. Monitor daily pattern of bowel activity, stool consistency. Monitor electrolytes, B/P, weight, serum glucose. Watch for hypocalcemia (muscle twitching, cramps), hypokalemia (weakness, paresthesia [esp. lower extremities], nausea/vomiting, irritability, EKG changes). Assess emotional status, ability to sleep.

PATIENT/FAMILY TEACHING

• Notify physician of fever, sore throat, muscle aches, sudden weight gain, swelling, visual disturbances, behavioral changes. • Do not take aspirin or any other medication without consulting physician. • Limit caffeine, avoid alcohol. • Inform dentist, other physicians of cortisone therapy now or within past 12 mos. • Caution against overusing joints injected for symptomatic relief. • **Topical:** Apply after shower or bath for best absorption. • Do not cover or use occlusive dressings unless ordered by physician; do not use tight diapers, plastic pants, coverings. • Avoid contact with eyes.

hydromorphone

HIGH ALERT

H

hye-droe-**mor**-fone
(Dilaudid, Dilaudid HP, Exalgo, Hydromorph Contin)

BLACK BOX ALERT High abuse potential, respiratory depression risk. Other opioids, alcohol, CNS depressants increase risk of potentially fatal respiratory depression. Highly concentrated (Dilaudid HP, 10 mg/ml) form not to be interchanged with less concentrated (Dilaudid) form; overdose, death may result.

Do not confuse Dilaudid with demerol or Dilantin, or hydromorphone with hydrocodone or morphine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist **(Schedule II). CLINICAL:** Narcotic analgesic, antitussive (see p. 142C).

ACTION

Binds to opioid receptors in CNS, reducing intensity of pain stimuli from sensory nerve endings. **Therapeutic Effect:** Alters perception, emotional response to pain; suppresses cough reflex.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	90–120 min	4 hrs
IV	10–15 min	15–30 min	2–3 hrs
IM	15 min	30–60 min	4–5 hrs
Subcutaneous	15 min	30–90 min	4 hrs
Rectal	15–30 min	N/A	N/A

Well absorbed from GI tract after IM administration. Widely distributed. Metabolized in liver. Excreted in urine. **Half-life:** 2.6–4 hrs.

USES

Relief of moderate to severe pain. Extended-release tablet (Exalgo): Around the clock, continuous analgesia for extended period.

PRECAUTIONS

Contraindications: Obstetric analgesia, severe respiratory depression in absence of resuscitative equipment, status asthmaticus, severe CNS depression, paralytic ileus, pregnancy (prolonged use or high doses at term), post-GI surgery, biliary tract disease, pancreatitis, respiratory dysfunction. **Cautions:** Severe hepatic, renal, respiratory disease; hypothyroidism, myxedema, respiratory depression, adrenal cortical insufficiency, seizures, acute abdominal conditions, acute alcoholism, head injury, intracranial lesions, hypothyroidism, prostatic hypertrophy, Addison's disease, urethral stricture, COPD.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Unknown if distributed in breast milk. May prolong labor if administered in latent phase of first stage of labor or before cervical dilation of 4–5 cm has occurred. Respiratory depression may occur in neonate if mother receives opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms in the neonate (irritability, excessive crying, tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures). **Pregnancy Category C (D if used for prolonged periods or at high dosages at term). Children:** Those younger than 2 yrs may be more susceptible to respiratory depression. **Elderly:** May be more susceptible to respiratory depression, may cause paradoxical excitement. Age-related renal impairment, prostatic hypertrophy or obstruction may increase risk of urinary retention; dosage adjustment recommended.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS, respiratory depression, hypotension. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Dilaudid HP): 250 mg. **Injection, Solution (Dilaudid):** 1 mg/ml, 2 mg/ml, 4 mg/ml, 10 mg/ml. **Liquid, Oral:** 1 mg/ml. **Suppository (Dilaudid):** 3 mg. **Tablets (Dilaudid):** 2 mg, 4 mg, 8 mg.

Tablets, Extended-Release (Exalgo): 8 mg, 12 mg, 16 mg.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ High concentration injection (10 mg/ml) should be used only in those tolerant to opiate agonists, currently receiving high doses of another opiate agonist for severe, chronic pain due to cancer.

Reconstitution • May give undiluted. • May further dilute with 5 ml Sterile Water for Injection or 0.9% NaCl.

Rate of Administration • Administer IV push very slowly (over 2–3 min). • Rapid IV increases risk of severe adverse reactions (chest wall rigidity, apnea, peripheral circulatory collapse, anaphylactoid effects, cardiac arrest).

Storage • Store at room temperature; protect from light. • Slight yellow discoloration of parenteral form does not indicate loss of potency.

IM, Subcutaneous

• Use short 25- to 30-gauge needle for subcutaneous injection. • Administer slowly; rotate injection sites. • Pts with circulatory impairment experience higher

risk of overdosage due to delayed absorption of repeated administration.

PO

• Give without regard to meals. • Tablets may be crushed. • Extended-release tablets must be swallowed whole; do not break, crush, dissolve, or inject.

Rectal

• Refrigerate suppositories. • Moisten suppository with cold water before inserting well up into rectum.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefazolin (Ancef, Kefzol), diazepam (Valium), lipids, phenobarbital, phenytoin (Dilantin), total parenteral nutrition (TPN).

IV COMPATIBILITIES

Diltiazem (Cardizem), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), fentanyl (Sublimaze), furosemide (Lasix), heparin, lorazepam (Ativan), magnesium sulfate, metoclopramide (Reglan), midazolam (Versed), milrinone (Primacor), morphine, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Analgesia

PO: ADULTS, ELDERLY, CHILDREN WEIGHING 50 KG AND MORE: 2–4 mg q3–4h. Range: 2–8 mg/dose. **CHILDREN OLDER THAN 6 MOS AND WEIGHING LESS THAN 50 KG:** 0.03–0.08 mg/kg/dose q3–4h.

Extended-Release: ADULTS, ELDERLY: Range: 8–64 mg once daily.

IV: ADULTS, ELDERLY, CHILDREN WEIGHING MORE THAN 50 KG (FOR OPIATE-NAIVE PT): 0.2–0.6 mg q2–3h. **USUAL DOSAGE:** 1–2 mg q3–4h. **CHILDREN WEIGHING 50 KG OR LESS:** 0.015 mg/kg/dose q3–6h as needed.

Rectal: ADULTS, ELDERLY: 3 mg q4–8h.

Patient-Controlled Analgesia (PCA)

IV: ADULTS, ELDERLY: (Usual concentration: 0.2 mg/ml). Initially, 0.1–0.2 mg. Range: 0.05–0.4 mg. Lockout interval: 6 min. Range: 5–10 min.

Epidural: ADULTS, ELDERLY: Bolus dose of 0.4–1 mg; infusion rate: 0.03–0.3 mg/hr; demand dose: 0.02–0.05 mg. Lockout interval 10–15 min.

SIDE EFFECTS

Frequent: Drowsiness, dizziness, hypotension (including orthostatic hypotension), decreased appetite. **Occasional:** Confusion, diaphoresis, facial flushing, urinary retention, constipation, dry mouth, nausea, vomiting, headache, pain at injection site. **Rare:** Allergic reaction, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Tolerance to analgesic effect, physical dependence may occur with repeated use. Prolonged duration of action, cumulative effect may occur in those with hepatic/renal impairment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain vital signs before giving medication. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician. **Analgesic:** Assess onset, type, location, duration of pain. Effect of medication is reduced if full pain recurs before next dose. **Antitussive:** Assess type, severity, frequency of cough.

INTERVENTION/EVALUATION

Monitor vital signs; assess for pain relief, cough. Assess breathing sounds. Increase fluid intake, environmental humidity to decrease viscosity of lung secretions. To prevent pain cycles, instruct pt to request pain medication as soon as discomfort begins. Monitor daily pattern of bowel activity, stool consistency (esp.

in long-term use). Initiate deep breathing and coughing exercises, particularly in pts with pulmonary impairment. Assess for clinical improvement; record onset of relief of pain, cough.

PATIENT/FAMILY TEACHING

• Avoid alcohol. • Avoid tasks that require alertness/motor skills until response to drug is established. • Tolerance or dependence may occur with prolonged use at high dosages. • Change positions slowly to avoid orthostatic hypotension. • Do not break, crush, chew, dissolve extended-release tablets.

hydroxychloroquine

hye-drox-ee-**klor**-oh-kwin (Apo-Hydroxyquine, Plaquenil)

BLACK BOX ALERT Should be given by physicians familiar with prescribing information before use.

Do not confuse hydroxychloroquine with hydrocortisone or hydroxyzine, or Plaquenil with Platinol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Aminoquinoline antimalarial. **CLINICAL:** Antimalarial, antirheumatic.

ACTION

Concentrates in parasite acid vesicles, interfering with parasite protein (DNA/RNA) synthesis. Antirheumatic action may involve suppressing formation of antigens responsible for hypersensitivity reactions. **Therapeutic Effect:** Inhibits parasite growth.

PHARMACOKINETICS

Variable rate of absorption. Widely distributed in body tissues (eyes, kidneys, liver, lungs). Protein binding: 45%. Partially metabolized in liver. Partially excreted in urine. **Half-life:** 32 days (in plasma), 50 days (in blood).

USES

Treatment of falciparum malaria (terminates acute attacks, cures nonresistant strains); suppression of acute attacks, prolongation of interval between treatment/relapse in vivax, ovale, malariae malaria. Treatment of discoid or systematic lupus erythematosus, acute and chronic rheumatoid arthritis (RA). **OFF-LABEL:** Porphyria.

PRECAUTIONS

Contraindications: Long-term therapy for children, psoriasis, retinal or visual field changes. **Cautions:** Alcoholism, hepatic disease, G6PD deficiency. Concurrent medications that are hepatotoxic. Children are esp. susceptible to hydroxychloroquine fatalities.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children:** Long-term therapy not recommended. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration of **dapsone.** **HERBAL:** **Echinacea** may decrease concentration. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 200 mg (155 mg base).

ADMINISTRATION/HANDLING

PO

• Give with food or milk.

INDICATIONS/ROUTES/DOSAGE

Treatment of Acute Malaria (Dosage in mg Base)

PO:

Dose	Times	Adults	Children
Initial	Day 1	620 mg	10 mg/kg
Second	6 hrs later	310 mg	5 mg/kg
Third	Day 2	310 mg	5 mg/kg
Fourth	Day 3	310 mg	5 mg/kg

Suppression of Malaria

PO: ADULTS: 310 mg base weekly on same day each wk, beginning 2 wks before entering an endemic area and continuing for 4–6 wks after leaving the area. **CHILDREN:** 5 mg base/kg/wk, beginning 2 wks before entering an endemic area and continuing for 4–6 wks after leaving the area. If therapy is not begun before exposure, administer a loading dose of 10 mg base/kg in 2 equally divided doses 6 hrs apart, followed by the usual dosage regimen.

Rheumatoid Arthritis (RA)

PO: ADULTS: Initially, 400–600 mg (310–465 mg base) daily for 5–10 days, gradually increased to optimum response level. Maintenance (usually within 4–12 wks): Dosage decreased by 50% and then continued at maintenance dose of 200–400 mg (155–310 mg base) daily. Maximum effect may not be seen for several mos.

Lupus Erythematosus

PO: ADULTS: Initially, 400 mg (310 mg base) once or twice a day for several wks or mos. Maintenance: 200–400 mg/day (155–310 mg base).

SIDE EFFECTS

Frequent: Transient headache, anorexia, nausea, vomiting. **Occasional:** Visual disturbances, anxiety, fatigue, pruritus (esp. palms, soles, scalp), irritability, personality changes, diarrhea, photosensitivity. **Rare:** Stomatitis, dermatitis, impaired hearing.

ADVERSE EFFECTS/ TOXIC REACTIONS

Ocular toxicity (esp. retinopathy) may progress even after drug is discontinued. **Prolonged therapy:** Peripheral neuritis, neuromyopathy, hypotension, EKG changes, agranulocytosis, aplastic anemia, thrombocytopenia, seizures, psychosis. **Overdosage:** Headache, vomiting, visual disturbances, drowsiness, seizures, hypokalemia followed by cardiovascular collapse, death.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate CBC, hepatic function tests, vision.

INTERVENTION/EVALUATION

Monitor CBC. Observe for muscular weakness. Evaluate for GI distress. Monitor hepatic function tests. Assess skin/buccal mucosa; inquire about pruritus. Report impaired vision/hearing immediately.

PATIENT/FAMILY TEACHING

- Avoid exposure to direct sunlight.
- Avoid alcohol.
- Explain need for eye exams q3mos with prolonged therapy.
- Immediately notify physician of **any** new visual difficulties, muscular weakness, impaired hearing, tinnitus, numbness, tremors, rash, persistent diarrhea, emotional change.

H

hydroxyurea

HIGH ALERT

hye-**drox**-e-ure-e-ah
(Apo-Hydroxyurea, Droxia, Hydrea)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents or in treatment of sickle cell anemia. Carcinogenic risk; secondary leukemias reported with long-term treatment.

Do not confuse hydroxyurea with hydroxyzine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic urea analogue. **CLINICAL:** Antineoplastic (see p. 84C).

ACTION

Inhibits DNA synthesis without interfering with RNA synthesis or protein. **Therapeutic Effect:** Interferes with normal repair process of cancer cells damaged by irradiation.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 75%–80%. Metabolized in liver. Excreted in urine as urea and unchanged drug. **Half-life:** 3–4 hrs.

USES

Treatment of melanoma; resistant chronic myelocytic leukemia; recurrent, metastatic, inoperable ovarian carcinoma. Used in combination with radiation therapy for local control of primary squamous cell carcinoma of head/neck, excluding lip. Treatment of sickle cell anemia. **OFF-LABEL:** Treatment of HIV, hematologic conditions (e.g., polycythemia vera), cervical cancer, essential thrombocythemia, hyperleukocytosis due to AML, treatment of meningiomas.

PRECAUTIONS

Contraindications: WBC count less than 2,500/mm^3 or platelet count less than 100,000/mm^3, severe anemia in sickle cell anemia. **Cautions:** Previous irradiation therapy, concurrent use with other cytoxic drugs, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. May be harmful to fetus. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** More sensitive to hydroxyurea effects; may require lower dosage.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease the pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum creatinine, uric acid.

AVAILABILITY (Rx)

Capsules: 200 mg (Droxia), 300 mg (Droxia), 400 mg (Droxia), 500 mg (Hydrea).

ADMINISTRATION/HANDLING

Capsules may be opened and emptied into water (will not dissolve completely).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Therapy interrupted when platelet count falls below 100,000/mm^3 or WBC count falls below 2,500/mm^3. Resume when counts return to normal.

Melanoma; Recurrent, Metastatic, Inoperable Ovarian Carcinoma

PO: ADULTS, ELDERLY: 80 mg/kg every 3 days or 20–30 mg/kg/day as a single dose.

Control of Primary Squamous Cell Carcinoma of Head/Neck, Excluding Lips (in Combination with Radiation Therapy)

PO: ADULTS, ELDERLY: 80 mg/kg every 3 days, beginning at least 7 days before starting radiation therapy.

Resistant Chronic Myelocytic Leukemia

PO: ADULTS, ELDERLY: 20–30 mg/kg once a day. **CHILDREN:** 10–20 mg/kg once a day.

HIV Infection

PO: ADULTS, ELDERLY: 1,000 mg/day as single dose or in divided doses.

Sickle Cell Anemia

PO: ADULTS, ELDERLY, CHILDREN: Initially, 15 mg/kg once a day. May increase by 5 mg/kg/day every 12 wks. **Maximum:** 35 mg/kg/day.

SIDE EFFECTS

Frequent: Nausea, vomiting, anorexia, constipation or diarrhea. **Occasional:** Mild, reversible rash; facial flushing; pruritus; fever; chills; malaise. **Rare:** Alopecia, headache, drowsiness, dizziness, disorientation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression manifested as hematologic toxicity (leukopenia and, to a lesser extent, thrombocytopenia, anemia).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain bone marrow studies, hepatic/renal function tests before therapy begins, periodically thereafter. Obtain Hgb, WBC, platelet count, serum uric acid at baseline and weekly during therapy. Those with marked renal impairment may develop visual or auditory hallucinations, marked hematologic toxicity.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bleeding/bruising at any site), symptoms of anemia (excessive fatigue, weakness). Assess skin for rash, erythema. Monitor CBC with differential, platelet count, Hgb, renal/hepatic function, uric acid.

PATIENT/FAMILY TEACHING

- Promptly report fever, sore throat, signs of local infection, unusual bleeding/bruising at any site.

*hydrOXYzine

hye-**drox**-ih-zeen
(Apo-Hydroxyzine, Atarax, Novo-Hydroxyzin, Vistaril)
Do not confuse hydroxyzine with hydralazine or hydroxyurea, or Vistaril with Restoril, Versed, or Zestril.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Piperazine derivative. **CLINICAL:** Antihistamine, antianxiety, antispasmodic, antiemetic, antipruritic (see pp. 14C, 54C).

ACTION

Competes with histamine for receptor sites in GI tract, blood vessels, respiratory tract. Diminishes vestibular stimulation, depresses labyrinthine function. **Therapeutic Effect:** Produces anxiolytic, anticholinergic, antihistaminic, analgesic effects; relaxes skeletal muscle; controls nausea, vomiting.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–30 min	N/A	4–6 hrs

Well absorbed from GI tract and after parenteral administration. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–7 hrs (increased in elderly).

USES

Antiemetic, treatment of anxiety, preop sedation, antipruritic.

PRECAUTIONS

Contraindications: Early pregnancy; subcutaneous, intravenous administration. **Cautions:** Narrow-angle glaucoma, prostatic hypertrophy, bladder neck obstruction, asthma, COPD.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Not recommended in newborns or premature infants (increased risk of anticholinergic effects). Paradoxical excitement may occur. **Elderly:** Increased risk of dizziness, sedation, confusion. Hypotension, hyperexcitability may occur.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depressant effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May cause false-positive urine 17-hydroxycorticosteroid determinations.

AVAILABILITY (Rx)

Injection Solution (Vistaril): 25 mg/ml, 50 mg/ml. **Oral Solution (Vistaril):** 25 mg/5 ml. **Syrup:** 10 mg/5 ml. **Tablets:** 10 mg, 25 mg, 50 mg.

Capsules (Vistaril): 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

IM

◀ALERT▶ Significant tissue damage, thrombosis, gangrene may occur if injection is given subcutaneous, intra-arterial, or by IV.

• IM may be given undiluted. • Use Z-track technique of injection to prevent subcutaneous infiltration. • Inject deep IM into gluteus maximus or midlateral thigh in adults, midlateral thigh in children.

PO

• May give without regard to food. • Shake oral suspension well. • Scored tablets may be crushed; do not crush/break capsule.

INDICATIONS/ROUTES/DOSAGE

Anxiety

PO: ADULTS, ELDERLY: 50–100 mg 4 times a day. **Maximum:** 600 mg/day. **CHILDREN 6 YRS AND OLDER:** 50–100 mg/day in divided doses. **CHILDREN YOUNGER THAN 6 YRS:** 50 mg/day in divided doses.

Nausea/Vomiting

IM: ADULTS, ELDERLY: 25–100 mg/dose q4–6h.

Pruritus

PO: ADULTS, ELDERLY: 25 mg 3–4 times a day. **CHILDREN 6 YRS AND OLDER:** 50–100 mg/day in divided doses. **CHILDREN YOUNGER THAN 6 YRS:** 50 mg/day in divided doses.

Preop Sedation

PO: ADULTS, ELDERLY: 50–100 mg. **CHILDREN:** 0.6 mg/kg/dose.
IM: ADULTS, ELDERLY: 25–100 mg. **CHILDREN:** 0.6–1 mg/kg/dose.

SIDE EFFECTS

Side effects are generally mild, transient. **Frequent:** Drowsiness, dry mouth, marked discomfort with IM injection. **Occasional:** Dizziness, ataxia, asthenia (loss of strength, energy), slurred speech, headache, agitation, increased anxiety. **Rare:** Paradoxical reactions (hyperactivity, anxiety in children; excitement, restlessness in elderly or debilitated pts) generally noted during first 2 wks of therapy, particularly in presence of uncontrolled pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction (wheezing, dyspnea, chest tightness) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Anxiety: Offer emotional support to anxious pt. Assess motor responses (agitation, trembling, tension), autonomic responses (cold/clammy hands, diaphoresis). **Antiemetic:** Assess for dehydration (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue).

INTERVENTION/EVALUATION

For those on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically. Monitor lung sounds for signs of hypersensitivity reaction. Monitor serum electrolytes in pts with severe vomiting. Assess for paradoxical reaction, particularly during early therapy. Assist with ambulation if drowsiness, light-headedness occur.

PATIENT/FAMILY TEACHING

• Marked discomfort may occur with IM injection. • Sugarless gum, sips of tepid water may relieve dry mouth. • Drowsiness usually diminishes with continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established.

hyoscyamine

hye-oh-**sye**-a-meen
(Anaspaz, Hyosine, Levbid, Levsin, Levsin S/L, Symax SL, Symax SR)
Do not confuse Anaspaz with Anaprox, or Levbid with Lithobid or Lopid.

FIXED COMBINATIONS

Donnatal: hyoscyamine/atropine (anticholinergic)/phenobarbital (sedative)/scopolamine (anticholinergic): 0.1037 mg/0.0194 mg/16.2 mg/0.0065 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Antimuscarinic, antispasmodic.

ACTION

Inhibits action of acetylcholine at postganglionic (muscarinic) receptor sites. **Therapeutic Effect:** Decreases secretions (bronchial, salivary, sweat gland, gastric juices). Reduces motility of GI, urinary tracts.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–30 min	—	4–6 hrs

Well absorbed following PO administration. Protein binding: 50%. Metabolized in liver. Majority excreted in urine. Removed by hemodialysis. **Half-life:** 3.5 hrs (immediate-release); 7 hrs (sustained-release).

USES

PO: Adjunctive therapy for peptic ulcer disease, irritable bowel syndrome, neurogenic bladder or bowel; treatment of infantile colic, GI tract disorders caused by spasm, hypermotility of lower urinary tract; reduce abdominal rigidity; reduce tremors associated with Parkinson's disease; drying agent in acute rhinitis. **Parenteral:** Preoperatively to reduce secretions, block cardiac vagal inhibitory reflexes; relief of biliary, renal colic; reduce GI motility to facilitate diagnostic procedures; reduce pain, hypersecretion in pancreatitis; reversal of neuromuscular blockade.

PRECAUTIONS

Contraindications: GI/GU obstruction, myasthenia gravis, narrow-angle glaucoma, paralytic ileus, severe ulcerative colitis. **Cautions:** Hyperthyroidism, CHF, cardiac arrhythmias, prostatic hypertrophy, neuropathy, chronic lung disease, biliary tract disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antacids may decrease absorption. **Other anticholinergics** may increase effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules, Timed-Release: 0.375 mg. **Elixir (Hyosine, Levsin):** 0.125 mg/5 ml. **Injection, Solution (Levsin):** 0.5 mg/ml. **Solution, Oral Drops (Hyosine, Levsin):** 0.125 mg/ml. **Tablets (Anaspaz, Levsin):** 0.125 mg. **Tablets, Orally-Disintegrating (Anaspaz):** 0.125 mg. **Tablets, Sublingual (Levsin S/L, Symax SL):** 0.125 mg.

Tablets, Extended-Release (Levbid, Symax SR): 0.375 mg.

ADMINISTRATION/HANDLING

PO

• Give before meals. • Immediate-release tablets may be crushed, chewed. • Extended-release tablet should be swallowed whole. • Allow orally-disintegrating tablet placed on tongue to dissolve before swallowing; may give with or

without water. • Sublingual: Place under tongue.

Parenteral

• May give undiluted.

INDICATIONS/ROUTES/DOSAGE

GI Tract Disorders

PO, Sublingual: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 0.125–0.25 mg q4h as needed. **EXTENDED-RELEASE:** 0.375–0.75 mg q12h. **Maximum:** 1.5 mg/day. **CHILDREN 2–11 YRS:** 0.0625–0.125 mg q4h as needed. **Maximum:** 0.75 mg/day.

IV, IM: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 0.25–0.5 mg. May repeat as needed up to 4 times/day at 4-hr intervals.

Hypermotility of Lower Urinary Tract

PO *(Sublingual)*: ADULTS, ELDERLY: 0.15–0.3 mg 4 times a day. **(EXTENDED-RELEASE):** 0.375 mg q12h.

Infant Colic

PO: INFANTS: Drops dosed q4h as needed (based on weight): 2.3 kg: 3 drops; 3.4 kg: 4 drops; 5 kg: 5 drops; 7 kg: 6 drops; 10 kg: 8 drops; 15 kg: 11 drops.

SIDE EFFECTS

Frequent: Dry mouth (sometimes severe), decreased diaphoresis, constipation. **Occasional:** Blurred vision, bloated feeling, urinary hesitancy, drowsiness (with high dosage), headache, intolerance to light, loss of taste, anxiety, flushing, insomnia, impotence, mental confusion or excitement (particularly in elderly, children), temporary light-headedness (with parenteral form), local irritation (with parenteral form). **Rare:** Dizziness, faintness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce temporary paralysis of ciliary muscle, pupillary dilation, tachycardia, palpitations, hot/dry/flushed skin, absence of bowel sounds, hyperthermia, increased respiratory rate, EKG abnormalities, nausea, vomiting; rash over face/upper trunk, CNS stimulation, psychosis (agitation, restlessness, rambling speech, visual hallucinations, paranoid behavior, delusions) followed by depression.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Before giving medication, instruct pt to void (reduces risk of urinary retention).

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Palpate bladder for urinary retention. Monitor changes in B/P, temperature. Assess skin turgor, mucous membranes to evaluate hydration status (encourage adequate fluid intake), bowel sounds for peristalsis. Be alert for fever (increased risk of hyperthermia).

PATIENT/FAMILY TEACHING

• May cause dry mouth; maintain good oral hygiene habits (lack of saliva may increase risk of cavities). • Inform physician of rash, eye pain, difficulty in urinating, constipation. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid hot baths, saunas.

ibandronate

TOP 200

eye-**ban**-droe-nate
(Boniva)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Bisphosphonate. **CLINICAL:** Calcium regulator (see p. 143C).

ACTION

Binds to bone hydroxyapatite (part of mineral matrix of bone), inhibits osteoclast activity. **Therapeutic Effect:** Reduces rate of bone turnover, bone resorption, resulting in net gain in bone mass.

PHARMACOKINETICS

Absorbed in upper GI tract. Extent of absorption impaired by food, beverages (other than plain water). Protein binding: 85%–99%. Rapidly binds to bone. Unabsorbed portion eliminated in urine. **Half-life: PO:** 37–157 hrs; **IV:** 5–25 hrs.

USES

Treatment/prevention of osteoporosis in postmenopausal women. **OFF-LABEL:** Hypercalcemia of malignancy; steroid-induced osteoporosis; Paget's disease; reduces bone pain from metastatic bone disease.

PRECAUTIONS

Contraindications: Hypersensitivity to other bisphosphonates (e.g., alendronate, etidronate, pamidronate, risedronate, tiludronate), inability to stand or sit upright for at least 60 min, and in pts with abnormalities of the esophagus that would delay emptying, hypocalcemia. **Cautions:** GI diseases (duodenitis, dysphagia, esophagitis, gastritis, ulcers [drug may exacerbate these conditions]), renal impairment with creatinine clearance less than 30 ml/min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Potential for teratogenic effects. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antacids containing aluminum, calcium, magnesium; vitamin D decrease absorption. **Aspirin, NSAIDs** may increase GI irritation. **HERBAL:** None significant. **FOOD: Beverages (other than plain water), dietary supplements, food** interfere with absorption. **LAB VALUES:** May decrease serum alkaline phosphatase. May increase serum cholesterol.

AVAILABILITY (Rx)

Injection Solution: 3 mg/3 ml syringe. **Tablets:** 150 mg.

ADMINISTRATION/HANDLING

PO

• Give 60 min before first food, beverage of the day, on an empty stomach with 6–8 oz plain water (not mineral water) while pt is standing or sitting in upright position. • Pt cannot lie down for 60 min following drug administration. • Swallow whole; do not chew, suck tablet (potential for oropharyngeal ulceration).

IV

• Give over 15–30 sec.

INDICATIONS/ROUTES/DOSAGE

Osteoporosis

PO: ADULTS, ELDERLY: 150 mg once monthly.

IV: ADULTS, ELDERLY: 3 mg q3mos.

Dosage in Renal Impairment

Not recommended for pts with creatinine clearance less than 30 ml/min.

SIDE EFFECTS

Frequent (13%–6%): Back pain, dyspepsia (epigastric distress, heartburn), peripheral discomfort, diarrhea, headache, myalgia. **IV:** Abdominal pain, dyspepsia, constipation, nausea, diarrhea. **Occasional (4%–3%):** Dizziness, arthralgia, asthenia (loss of strength, energy). **Rare (2% or less):** Vomiting, hypersensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory infection occurs occasionally. Overdose results in hypocalcemia, hypophosphatemia, significant GI disturbances.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Hypocalcemia, vitamin D deficiency must be corrected before beginning therapy. Obtain laboratory baselines, esp. serum

electrolytes, renal function. Obtain results of bone density study.

INTERVENTION/EVALUATION

Monitor electrolytes, esp. serum calcium, alkaline phosphatase. Monitor renal function tests.

PATIENT/FAMILY TEACHING

• Expected benefits occur only when medication is taken with full glass (6–8 oz) of plain water, first thing in the morning and at least 60 min before first food, beverage, medication of the day. Any other beverage (mineral water, orange juice, coffee) significantly reduces absorption of medication. • Do not lie down for at least 60 min after taking medication (potentiates delivery to stomach, reduces risk of esophageal irritation). • Report swallowing difficulties, pain when swallowing, chest pain, new/worsening heartburn. • Consider weight-bearing exercises; modify behavioral factors (e.g., cigarette smoking, alcohol consumption). • Calcium and vitamin D supplements should be taken if dietary intake inadequate.

ibritumomab

HIGH ALERT

ib-rye-**tyoo**-mo-mab
(Zevalin)

BLACK BOX ALERT Severe, potentially fatal infusion reactions (angioedema, hypoxia, marked hypotension, myocardial infarction) reported, usually within 30–130 min of rituximab infusion (cotherapy). Prolonged, severe cytopenia occurs in most pts. Severe cutaneous, mucocutaneous reactions (including fatalities) have been reported. Must be administered by personnel trained in administration/handling of radioisotopes.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic (see p. 84C).

ACTION

Combines targeting power of monoclonal antibodies (MAbs) with cancer-killing ability of radiation. **Therapeutic Effect:** Targets CD antigen (present in greater than 90% of pts with B-cell non-Hodgkin's lymphoma), inducing cellular damage.

PHARMACOKINETICS

Tumor uptake is greater than normal tissue in non-Hodgkin's lymphoma. Most of dose cleared by binding to tumor. Minimally excreted in urine. **Half-life:** 27–30 hrs.

USES

Treatment of non-Hodgkin's lymphoma (NHL) in combination with rituximab in pts with relapsed or refractory low-grade, follicular, or CD20-positive transformed B-cell non-Hodgkin's lymphoma. Pts with previously untreated follicular NHL who achieve a partial or complete response to first-line chemotherapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Platelet count less than 100,000 cells/mm^3, neutrophil count less than 1,500 cells/mm^3, history of failed stem cell collection.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Those with childbearing potential should use contraceptive methods during and up to 12 mos after therapy. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Medications that interfere with platelet function, anticoagulants increase potential for prolonged/severe thrombocytopenia. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo, ginseng, horse chestnut, red clover** may increase antiplatelet activity. **Echinacea** may decrease effect. **FOOD:** None known.

LAB VALUES: May decrease platelet count, WBC count, neutrophil count, Hgb, Hct.

AVAILABILITY (Rx)

Injection Solution: 3.2-mg vial (1.6 mg/ml).

ADMINISTRATION/HANDLING

Rate of Administration • Give IV push over 10 min through a 0.22-micron, low protein-binding in-line filter. After injection, flush line with 10 ml 0.9% NaCl.

IV INCOMPATIBILITIES

Do not mix with any medications.

INDICATIONS/ROUTES/DOSAGE

Non-Hodgkin's Lymphoma

IV: ADULTS, ELDERLY: Regimen consists of two steps: Step 1: Single infusion of 250 mg/m^2 rituximab preceding (4 hrs or less) a fixed dose of 5 mCi (1.6 mg total antibody dose) of indium-111 ibritumomab administered IV push over 10 min. Step 2: Follows step 1 by 7–9 days and consists of a second infusion of 250 mg/m^2 rituximab preceding (4 hrs or less) a fixed dose of 0.4 mCi/kg of Y-90 ibritumomab administered IV push over 10 min.

◄ALERT► Reduce dosage to 0.3 mCi/kg if platelet count is 100,000–149,000 cells/mm^3. Do not administer if platelet count is less than 100,000 cells/mm^3.

SIDE EFFECTS

Frequent (43%–24%): Asthenia (loss of strength, energy), nausea, chills. **Occasional (17%–10%):** Fever, abdominal pain, dyspnea, headache, vomiting, dizziness, cough, oral candidiasis. **Rare (9%–5%):** Pruritus, diarrhea, back pain, peripheral edema, anorexia, rash, flushing, arthralgia, myalgia, ecchymosis, rhinitis, constipation, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombocytopenia (95%), neutropenia (77%), anemia (61%) may be severe and prolonged; may be followed by infection (29%). Hypersensitivity reaction produces hypotension, bronchospasm, angioedema. Severe cutaneous or mucocutaneous reactions (erythema multiforme, Stevens-Johnson syndrome, toxic epidermal necrolysis) have been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pretreatment with acetaminophen and diphenhydramine before each infusion may prevent infusion-related effects. Offer emotional support. Use strict asepsis. CBC, blood chemistries should be obtained as baseline before beginning therapy. Absolute neutrophil count (ANC) nadir is 62 days before recovery begins.

INTERVENTION/EVALUATION

Diligently monitor lab values for possibly severe/prolonged thrombocytopenia, neutropenia, anemia. Monitor for hematologic toxicity (fever, sore throat, signs of local infections, unusual bruising/bleeding), symptoms of anemia (excessive fatigue, weakness), infusion-related allergic reaction. Assess for GI symptoms (nausea, vomiting, abdominal pain, diarrhea).

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (drug lowers resistance). • Avoid crowds, persons with known infections. • Report signs of infection at once (fever, flu-like symptoms). • Contact physician if nausea/vomiting continues at home. • Avoid pregnancy during therapy.

ibuprofen

TOP 200

eye-bue-**pro**-fen

(Advil, Advil Children's, Advil Infants', Advil Junior, Advil Migraine, Apo-Ibuprofen, Caldolor, Ibu-200, Motrin, Motrin Children's, Motrin IB, Motrin Infants', Motrin Junior Strength, NeoProfen, Novo-profen)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation.

Do not confuse Motrin with Neurontin.

FIXED-COMBINATION(S)

Children's Advil Cold: ibuprofen/pseudoephedrine (a nasal decongestant): 100 mg/15 mg per 5 ml. **Combunox:** ibuprofen/oxycodone (a narcotic analgesic): 400 mg/5 mg. **Duexis:** ibuprofen/famotidine (an H_2 antagonist): 800 mg/26.6 mg. **Reprexain CIII:** ibuprofen/hydrocodone (a narcotic analgesic): 200 mg/5 mg. **Vicoprofen:** ibuprofen/hydrocodone (a narcotic analgesic): 200 mg/7.5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID. **CLINICAL:** Antirheumatic, analgesic, antipyretic, antidysmenorrheal, vascular headache suppressant (see p. 128C).

ACTION

Inhibits prostaglandin synthesis. Produces vasodilation acting on heat-regulating center of hypothalamus. **Therapeutic Effect:** Produces analgesic, anti-inflammatory effects; decreases fever.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (analgesic)	0.5 hr	N/A	4–6 hrs
PO (anti-rheumatic)	2 days	1–2 wks	N/A

Rapidly absorbed from GI tract. Protein binding: 90%–99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–4 hrs.

USES

Treatment of fever, juvenile rheumatoid arthritis (JRA), osteoarthritis, minor to moderate pain, primary dysmenorrhea. **Caldolor:** Mild to moderate pain; severe pain in combination with an opioid analgesic; fever. **NeoProfen:** Closes clinically significant patent ductus arteriosus (PDA) in premature infants weighing between 500 and 1,500 g who are no more than 32 wks gestational age when usual medical management is ineffective. **OFF-LABEL:** Treatment of gout, vascular headaches, cystic fibrosis, ankylosing spondylitis.

PRECAUTIONS

Contraindications: History of hypersensitivity to aspirin, NSAIDs. Treatment of perioperative pain in coronary artery bypass graft (CABG) surgery. **NeoProfen:** Infants with proven or suspected untreated infection, congenital heart disease in whom patency of the patent ductus arteriosus is necessary for satisfactory pulmonary or systemic blood flow (e.g., pulmonary atresia), bleeding, thrombocytopenia, coagulation defects, suspected necrotizing enterocolitis, significant renal impairment. **Cautions:** Active peptic ulcer, chronic inflammation of GI tract, GI bleeding disorders, smoking, alcohol use, CHF, hypertension, renal/hepatic impairment, dehydration, asthma, concurrent aspirin, anticoagulant use. **NeoProfen:** Presence of controlled infection or infants at risk for infection, elevated total bilirubin.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category B (D if used in third trimester or near delivery). Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** GI bleeding, ulceration more likely to cause serious adverse effects. Age-related renal impairment may increase risk of hepatic/renal toxicity; reduced dosage recommended.

INTERACTIONS

DRUG: May decrease effects of **antihypertensives, diuretics. Aspirin,**

other salicylates may increase risk of GI side effects, bleeding. May increase effects of **oral anticoagulants.** May increase concentration, risk of toxicity of **lithium.** May increase risk of **methotrexate** toxicity. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo, ginseng, horse chestnut, red clover** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May prolong bleeding time. May alter serum glucose level. May increase BUN, serum creatinine, potassium, AST, ALT. May decrease serum calcium, glucose, Hgb, Hct, platelets.

AVAILABILITY (Rx)

Caplets (Advil, Ibu-200, Motrin IB): 200 mg. **Capsules (Advil, Advil Migraine):** 200 mg. **Gelcaps (Advil, Motrin IB):** 200 mg. **Injection, Solution (NeoProfen):** 10 mg/ml. **(Caldolor):** 100 mg/ml. **Suspension, Oral (Advil Children's, Motrin Children's):** 100 mg/5 ml. **Suspension, Oral Drops (Advil Infants', Motrin Infants'):** 40 mg/ml. **Tablets: (Advil):** 200 mg. **(Motrin):** 400 mg, 600 mg, 800 mg. **Tablets, Chewable (Advil Junior, Motrin Junior Strength):** 100 mg.

ADMINISTRATION/HANDLING

IV (Caldolor)

Reconstitution • Dilute with D_5W or 0.9% NaCl to final concentration of 4 mg/ml or less.
Rate of Administration • Infuse over at least 30 min.
Storage • Store at room temperature. • Stable for 24 hrs after dilution.

IV (NeoProfen)

Reconstitution • Dilute to appropriate volume with D_5W or 0.9% NaCl. • Discard any remaining medication after first withdrawal from vial.
Rate of Administration • Administer via IV port nearest the insertion site. • Infuse continuously over 15 min.
Storage • Store at room temperature. • Stable for 30 min after dilution.

PO

• Give with food, milk, antacids if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Fever

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 200–400 mg q4–6h prn. **Maximum:** 1,200 mg/day. **CHILDREN 6 MOS–11 YRS:** 5–10 mg/kg q6–8h prn. **Maximum:** 40 mg/kg/day.
IV: ADULTS, ELDERLY: 400 mg q4–6h or 100–200 mg q4h as needed. **Maximum:** 3.2 g/day.

Osteoarthritis, Rheumatoid Arthritis (RA)

PO: ADULTS, ELDERLY: 1,200–3,200 mg/day in 3–4 divided doses.

Minor Pain

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 200–400 mg q4–6h prn. **Maximum:** 1,200 mg/day. **CHILDREN 6 MOS–11 YRS:** 4–10 mg/kg q6–8h prn. **Maximum:** 40 mg/kg/day.

Mild to Moderate Pain

PO: ADULTS, ELDERLY: 400 mg q4h prn.
IV: ADULTS, ELDERLY: 400–800 mg q6h prn.

Primary Dysmenorrhea

PO: ADULTS: 200–400 mg q4–6h prn.

Juvenile Rheumatoid Arthritis (JRA)

PO: CHILDREN: 30–50 mg/kg/day in 3–4 divided doses. **Maximum:** 2.4 g/day.

Patent Ductus Arteriosus (PDA)

IV: INFANTS: Initially, 10 mg/kg then 2 doses of 5 mg/kg, after 24 hrs and 48 hrs. All doses based on birth weight.

SIDE EFFECTS

Occasional (9%–3%): Nausea, vomiting, dyspepsia, dizziness, rash. **Rare (less than 3%):** Diarrhea or constipation, flatulence, abdominal cramps or pain, pruritus, increased B/P.

ADVERSE EFFECTS/ TOXIC REACTIONS

Acute overdose may result in metabolic acidosis. Rare reactions with long-term use include peptic ulcer, GI bleeding, gastritis, severe hepatic reaction (cholestasis, jaundice), nephrotoxicity (dysuria, hematuria, proteinuria, nephrotic syndrome), severe hypersensitivity reaction (particularly in pts with systemic lupus erythematosus or other collagen diseases). **NeoProfen:** Hypoglycemia, hypocalcemia, respiratory failure, UTI, edema, atelectasis may occur. **Caldolor:** Abdominal pain, anemia, cough, dizziness, dyspnea, edema, hypertension, nausea, vomiting.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain, inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition. Assess temperature.

INTERVENTION/EVALUATION

Monitor for evidence of nausea, dyspepsia. Monitor CBC, hepatic/renal function tests, occult blood loss. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Observe for bleeding, bruising. Evaluate for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Monitor temperature for fever.

PATIENT/FAMILY TEACHING

• Avoid aspirin, alcohol during therapy (increases risk of GI bleeding). • If GI upset occurs, take with food, milk, antacids. • May cause dizziness. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report ringing in ears, persistent stomach pain, respiratory difficulty, unusual bruising/bleeding, swelling of extremities, chest pain/palpitations.

icatibant

eye-**kat**-i-bant
(Firazyr)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Bradykinin B_2 receptor antagonist. **CLINICAL:** Angioedema agent.

ACTION

Inhibits bradykinin from binding to B_2 receptor. Inhibits effects of hereditary angioedema (HAE), an autosomal dominant disorder that causes rapid inflammation of skin and mucosal membranes. **Therapeutic Effect:** Reduces rapid swelling of submucosal tissues during episodic attack of HAE.

PHARMACOKINETICS

Metabolized by proteolytic enzymes into inactive enzymes. Primarily excreted in urine. **Peak plasma:** 45 min. **Half-life:** 1.4 hrs.

USES

Treatment of acute attacks related to hereditary angioedema.

PRECAUTIONS

Contraindications: None known. **Cautions:** Airway obstruction during acute laryngeal HAE attack may occur.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Use caution when administering to nursing mothers. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Increased risk of higher systemic exposure due to lower medication clearance.

INTERACTIONS

DRUG: May decrease effectiveness of **ACE inhibitors.** **HERBAL:** None significant.

FOOD: None known. **LAB VALUES:** May increase serum AST, ALT.

AVAILABILITY (Rx)

Injection Solution: 30 mg/3 ml in prefilled syringes.

ADMINISTRATION/HANDLING

Subcutaneous

• Inject into left or right anterolateral abdominal wall. • Introduce entire length of needle (1/2 inch) into skin fold between thumb and forefinger, holding skin fold during injection. • Rotate injection sites if applicable. • Inject over 30 sec.

Storage • Refrigerate until time of use. • Visually inspect syringe for particulate matter. • Solution should appear clear, colorless. Do not freeze.

INDICATIONS/ROUTES/DOSAGE

Acute Hereditary Angioedema

Subcutaneous: ADULTS, ELDERLY: Initially, 30 mg once. May repeat 30 mg dose at intervals of at least 6 hrs. **Maximum:** 90 mg/24 hrs.

SIDE EFFECTS

Frequent (97%): Injection site reactions: bruising, hematoma, burning, erythema, hypoesthesia, irritation, numbness, edema, pain, pressure sensation, pruritus, urticaria. **Rare (3%):** Dizziness, allergic reaction, nausea, vomiting, rash, headache, pyrexia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Positive anti-icatibant antibodies reported in 4% of pts. Airway obstruction has been noted rarely during acute laryngeal HAE attacks.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess characteristics of inflammatory attacks (location, severity, history of drooling, difficulty breathing/swallowing). Question history of MI, stroke, unstable angina, laryngeal-associated angioedema. Question possibility of pregnancy or plans of breast-feeding. Assess full medication history, esp. ACE inhibitors.

INTERVENTION/EVALUATION

Assess O_2 saturation, airway patency for mouth, tongue, throat inflammation. If applicable, monitor ACE inhibitor effectiveness, B/P. Frequently monitor for symptom improvement after injection. Notify physician if inflammation remains after 3 doses.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Instruct proper self-administration techniques. • If applicable, inform pt of decreased ACE inhibitor effectiveness. • Report suspected pregnancy. • Seek medical attention immediately if throat swelling, drooling, difficulty breathing occurs during acute attacks. • Symptoms that do not improve or recur will require additional interval doses. • Do not use more than 3 doses in 24 hrs. • Educate about common injection site reactions. Seek medical attention in health care facility if laryngeal symptoms occur after administration of icatibant.

icosapent

eye-**koe**-sa-pent
(Vascepa)
Do not confuse icosapent with icatibant or Vascepa with Vaseretic.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Omega-3 fatty acid. **CLINICAL:** Antihypertriglyceride agent.

ACTION

Potential mechanisms of action include increased B-oxidation, decreased lipogenesis in liver, increased plasma lipoprotein

lipase activity. **Therapeutic Effect:** Reduces hepatic very-low density lipoprotein triglyceride (VLOL-TG) synthesis.

PHARMACOKINETICS

Absorbed in small intestine; enters systemic circulation via thoracic duct lymphatic system. Protein binding: 99%. Metabolized in liver. **Half-life:** 89 hrs.

USES

Adjunct to diet to reduce serum triglyceride levels in adult pts with serum hypertriglyceridemia (500 mg/dl or greater).

PRECAUTIONS

Contraindications: None known. **Cautions:** Known sensitivity or allergy to fish, shellfish, hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy in children younger than 18 yrs not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, low-density lipoprotein (LDL) cholesterol. May alter bleeding time.

AVAILABILITY (Rx)

Capsules, Soft Gelatin: 1 g.

ADMINISTRATION/HANDLING

PO

• Give with food. • Capsule(s) should be swallowed whole. • Instruct pt not to chew capsule. • Do not break open, crush, or dissolve medication.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Before initiating therapy, pt should be on appropriate cholesterol-lowering diet and regimen of physical activity. Continue diet and activity program throughout therapy.

Usual Dosage

PO: ADULTS, ELDERLY: 4 g per day, given as 2 capsules twice daily with food.

SIDE EFFECTS

Rare (2%): Arthralgia. **(Less Than 1%):** Oropharyngeal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased bleeding time has been noted.

NURSING CONSIDERATION

BASELINE ASSESSMENT

Obtain diet history. Obtain baseline chemistries, hepatic function tests, fasting lipid profile. In patients with hepatic impairment, ALT, AST, serum triglyceride, and lipid levels should be monitored periodically during therapy.

INTERVENTION/EVALUATION

Monitor serum triglyceride level for therapeutic response. Monitor LDL cholesterol periodically during therapy. For those taking antiplatelets, monitor bleeding time. Discontinue therapy if no response after 3 mos of treatment.

PATIENT/FAMILY TEACHING

• Continue to adhere to lipid-lowering diet (important part of treatment). • Periodic lab tests are essential part of therapy to determine drug effectiveness.

idarubicin

HIGH ALERT

eye-dah-**roo**-bi-sin
(Idamycin PFS)

BLACK BOX ALERT Cardiotoxicity may occur (CHF, arrhythmias, cardiomyopathy). Severe myelosuppressant. Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Severe local tissue damage, necrosis if extravasation occurs.

Do not confuse Idamycin with Adriamycin, or idarubicin with

daunorubicin, doxorubicin, or epirubicin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anthracycline antibiotic. **CLINICAL:** Antineoplastic (see p. 84C).

ACTION

Inhibits nucleic acid synthesis by interacting with enzyme topoisomerase II, promoting DNA strand supercoiling. **Therapeutic Effect:** Produces death of rapidly dividing cells.

PHARMACOKINETICS

Widely distributed. Protein binding: 97%. Rapidly metabolized in liver to active metabolite. Primarily eliminated by biliary excretion. Not removed by hemodialysis. **Half-life:** 12–27 hrs.

USES

Treatment of acute myeloid leukemia (AML). **OFF-LABEL:** Acute lymphocytic leukemia (ALL).

PRECAUTIONS

Contraindications: Arrhythmias, cardiomyopathy, preexisting myelosuppression, pregnancy, severe CHF. **Cautions:** Renal/hepatic impairment, concurrent radiation therapy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy (may be embryotoxic). Unknown if drug is distributed in breast milk (advise to discontinue breastfeeding before drug initiation). **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Cardiotoxicity may be more prevalent. Caution in those with inadequate bone marrow reserves. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease effects of **antigout medications. Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, uric acid, AST, ALT. May cause EKG changes.

AVAILABILITY (Rx)

Injection Solution: 1 mg/ml in 5-ml, 10-ml, 20-ml vials.

ADMINISTRATION/HANDLING

◀ALERT▶ Give by free-flowing IV infusion (**never** subcutaneous or IM). Gloves, gowns, eye goggles recommended during preparation/administration of medication. If powder/solution comes in contact with skin, wash thoroughly. Avoid small veins, swollen/edematous extremities, areas overlying joints/tendons.

IV

Reconstitution • May give undiluted or dilute with 0.9% NaCl or D_5W.

Rate of Administration • Administer IV push into tubing of freely running IV infusion of D_5W or 0.9% NaCl, preferably via butterfly needle, **slowly** over 3–5 min. • May give intermittent infusion over 10–15 min. • Extravasation produces immediate pain, severe local tissue damage. Terminate infusion immediately. Apply cold compresses for 30 min immediately, then q30min 4 times a day for 3 days. Keep extremity elevated.

Storage • Refrigerate vials. • Diluted solutions in 0.9% NaCl or D_5W are stable for 72 hrs at room temperature or 7 days if refrigerated.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), allopurinol (Aloprim), ampicillin and sulbactam (Unasyn), cefazolin (Ancef, Kefzol), cefepime (Maxipime), ceftazidime (Fortaz), clindamycin (Cleocin), dexamethasone (Decadron), furosemide (Lasix), hydrocortisone (Solu-Cortef), lorazepam (Ativan), meperidine (Demerol), methotrexate, piper-

acillin and tazobactam (Zosyn), sodium bicarbonate, teniposide (Vumon), vancomycin (Vancocin), vincristine (Oncovin).

IV COMPATIBILITIES

Diphenhydramine (Benadryl), granisetron (Kytril), magnesium, potassium.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Refer to individual protocols.

AML

IV: ADULTS, ELDERLY: (Induction): 12 mg/m^2/day for 3 days. **(Consolidation):** 10–12 mg/m^2/day for 2 days.

Dosage in Renal Impairment

ADULTS: Creatinine clearance 10–50 ml/min: Give 75% of dose. Creatinine clearance less than 10 ml/min: Give 50% of dose. **CHILDREN:** Creatinine clearance less than 50 ml/min: Give 75% of dose. **Hemodialysis, Peritoneal Dialysis, Continuous Renal Replacement Therapy:** Administer 75% of dose.

Dosage in Hepatic Impairment

Bilirubin 2.6–5 mg/dl: Give 50% of dose. Bilirubin greater than 5 mg/dl: Avoid use.

SIDE EFFECTS

Frequent: Nausea, vomiting (82%), complete alopecia (scalp, axillary, pubic hair) (77%), abdominal cramping, diarrhea (73%), mucositis (50%). **Occasional:** Hyperpigmentation of nailbeds, phalangeal, dermal creases (46%), fever (26%), headache (20%). **Rare:** Conjunctivitis, neuropathy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression manifested as hematologic toxicity (principally leukopenia and, to lesser extent, anemia, thrombocytopenia) generally occurs within 10–15 days after starting therapy, returns to normal levels by third wk. Cardiotoxicity (either acute, manifested as transient EKG abnormalities, or chronic, manifested as CHF) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine baseline renal/hepatic function, CBC results. Obtain EKG before therapy. Antiemetic medication before and during therapy may prevent or relieve nausea, vomiting. Inform pt of high potential for alopecia.

INTERVENTION/EVALUATION

Monitor CBC, platelet count, serum electrolytes, EKG, renal/hepatic function tests. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Avoid IM injections, rectal temperatures, other trauma that may precipitate bleeding. Check infusion site frequently for extravasation (causes severe local necrosis). Assess for potentially fatal CHF (dyspnea, rales, pulmonary edema), life-threatening arrhythmias.

PATIENT/FAMILY TEACHING

• Total body alopecia is frequent but reversible. • New hair growth resumes 2–3 mos after last therapy dose and may have different color, texture. • Maintain fastidious oral hygiene. • Avoid crowds, those with infections. • Inform physician of fever, sore throat, bruising/bleeding. • Urine may turn pink or red. • Frequent lab testing (CBC, hepatic/renal function) is a normal part of therapy. • Use contraceptive measures during therapy.

ifosfamide

HIGH ALERT

eye-**fos**-fah-mide
(Ifex)

BLACK BOX ALERT Hemorrhagic cystitis may occur. Severe myelosuppressant. May cause CNS toxicity, including confusion, coma. Must be administered by

personnel trained in administration/handling of chemotherapeutic agents.
Do not confuse ifosfamide with cyclophosphamide.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic (see p. 84C).

ACTION

Inhibits DNA, RNA protein synthesis by cross-linking with DNA, RNA strands, preventing cell growth. Cell cycle–phase nonspecific. **Therapeutic Effect:** Interferes with DNA, RNA function.

PHARMACOKINETICS

Metabolized in liver to active metabolite. Protein binding: Negligible. Crosses blood-brain barrier (to a limited extent). Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 11–15 hrs (high dose); 4–7 hrs (low dose).

USES

Treatment of germ cell testicular carcinoma (used in combination with agents that protect against hemorrhagic cystitis). **OFF-LABEL:** Small cell lung, non–small-cell lung, ovarian, epithelial, bladder, soft tissue sarcomas, Hodgkin's, non-Hodgkin's lymphomas, osteosarcoma, acute lymphocytic leukemia, Ewing's sarcoma.

PRECAUTIONS

Contraindications: Severe myelosuppression. **Cautions:** Renal/hepatic impairment, compromised bone marrow function.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** Not intended for this pt population. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bone marrow depressants may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum bilirubin, creatinine, uric acid, AST, ALT.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Ifex): 1 g, 3 g. **Injection, Solution:** 50 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Hemorrhagic cystitis occurs if mesna is not given concurrently. Mesna should always be given with ifosfamide.

IV

Reconstitution • Reconstitute vial with Sterile Water for Injection or Bacteriostatic Water for Injection to provide concentration of 50 mg/ml. Shake to dissolve. • Further dilute with 50–1,000 ml D_5W or 0.9% NaCl to provide concentration of 0.6–20 mg/ml.
Rate of Administration • Infuse over minimum of 30 min. • Give with at least 2,000 ml PO or IV fluid (prevents bladder toxicity). • Give with protectant against hemorrhagic cystitis (i.e., mesna).
Storage • Store vials of powder at room temperature. • Refrigerate vials of solution. • After reconstitution with Bacteriostatic Water for Injection, solution is stable for 3 wks if refrigerated (further diluted solution is stable for 7 days at room temperature or 6 wks if refrigerated).

IV INCOMPATIBILITIES

Cefepime (Maxipime), methotrexate.

IV COMPATIBILITIES

Granisetron (Kytril), ondansetron (Zofran).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage individualized based on clinical response, tolerance to ad-

verse effects. When used in combination therapy, consult specific protocols for optimum dosage, sequence of drug administration.

Germ Cell Testicular Carcinoma

IV: ADULTS: 1,200 mg/m^2/day for 5 consecutive days. Repeat q3–4wks or after recovery from hematologic toxicity. Administer with mesna.

SIDE EFFECTS

Frequent: Alopecia (83%); nausea, vomiting (58%). **Occasional (15%–5%):** Confusion, drowsiness, hallucinations, infection. **Rare (less than 5%):** Dizziness, seizures, disorientation, fever, malaise, stomatitis (mucosal irritation, glossitis, gingivitis).

ADVERSE EFFECTS/ TOXIC REACTIONS

Hemorrhagic cystitis with hematuria, dysuria occurs frequently if protective agent (mesna) is not used. Myelosuppression, characterized by leukopenia and, to a lesser extent, thrombocytopenia, occurs frequently. Pulmonary toxicity, hepatotoxicity, nephrotoxicity, cardiotoxicity, CNS toxicity (confusion, hallucinations, drowsiness, coma) may require discontinuation of therapy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain urinalysis before each dose. If hematuria occurs (greater than 10 RBCs per field), therapy should be withheld until resolution occurs. Obtain WBC, platelet count, Hgb before each dose.

INTERVENTION/EVALUATION

Monitor hematologic studies, urinalysis, renal/hepatic function tests diligently. Assess for fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Alopecia is reversible, but new hair growth may have a different color or texture. • Maintain copious daily fluid intake (protects against cystitis). • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Avoid crowds, those with infections. • Report unusual bleeding/bruising, fever, chills, sore throat, joint pain, sores in mouth or on lips, yellowing skin or eyes.

iloperidone

eye-loe-**per**-i-doan
(Fanapt)

BLACK BOX ALERT Elderly pts with dementia-related psychosis are at increased risk for mortality due to cerebrovascular events.

Do not confuse Fanapt with Xanax, or iloperidone with amiodarone or dronedarone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Piperidinyl-benzisoxazole derivative. **CLINICAL:** Antipsychotic (see p. 65C).

ACTION

Exact mechanism unknown; may be mediated through combination of dopamine type 2 (D_2) and serotonin type 2 ($5\text{-}HT_2$) antagonisms. **Therapeutic Effect:** Diminishes symptoms of schizophrenia.

PHARMACOKINETICS

Steady-state concentration occurs in 3–4 days. Well absorbed from GI tract (unaffected by food). Protein binding: 95%. Extensively metabolized in liver. Primarily excreted in urine, with a lesser amount eliminated in feces. **Half-life:** 18–33 hrs.

USES

Acute treatment of schizophrenia in adults.

PRECAUTIONS

Contraindications: None known. **Cautions:** Cardiovascular disease (heart failure, history of MI, ischemia, cardiac conduction abnormalities), cerebrovascular disease (increases risk of CVA in pts with dementia, seizure disorders). Those with bradycardia, hypokalemia, hypomagnesemia may be at greater risk for torsade de pointes. History of seizures, conditions lowering seizure threshold, high risk of suicide, risk of aspiration pneumonia, congenital QT syndrome, concurrent use of medications that prolong QT interval, decreased GI motility, urinary retention, BPH, xerostomia, visual problems, hepatic impairment, narrow-angle glaucoma, diabetes.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is excreted in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** More susceptible to postural hypotension. Increased risk of cerebrovascular events, mortality, including stroke in elderly pts with psychosis.

INTERACTIONS

DRUG: **Alcohol, CNS depressants** may increase CNS depression. Strong **CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole)** or strong **CYP2D6 inhibitors (e.g., fluoxetine, paroxetine)** may increase concentration. **Medications causing prolongation of QT interval (amiodarone, dofetilide, sotalol)** may increase effects on cardiac conduction, leading to malignant arrhythmias (torsade de pointes). **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum prolactin levels.

AVAILABILITY (Rx)

Tablets: 1 mg, 2 mg, 4 mg, 6 mg, 8 mg, 10 mg, 12 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Schizophrenia

PO: ADULTS: To avoid orthostatic hypotension, begin with 1 mg twice daily, then adjust dosage to 2 mg twice daily, 4 mg twice daily, 6 mg twice daily, 8 mg twice daily, 10 mg twice daily, and 12 mg twice daily on days 2, 3, 4, 5, 6, and 7, respectively, to reach target daily dose of 12–24 mg, given twice daily. Note: Reduce dose by 50% when receiving strong CYP3A4 or poor metabolizers of CYP2D6 inhibitors (see Interactions).

SIDE EFFECTS

Frequent (20%–12%): Dizziness, drowsiness, tachycardia. **Occasional (10%–4%):** Nausea, dry mouth, nasal congestion, weight increase, diarrhea, fatigue, orthostatic hypotension. **Rare (3%–1%):** Arthralgia, musculoskeletal stiffness, abdominal discomfort, nasopharyngitis, tremor, hypotension, rash, ejaculatory failure, dyspnea, blurred vision, lethargy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extrapyramidal disorders, including tardive dyskinesia (protrusion of tongue, puffing of cheeks, chewing/puckering of the mouth), occur in 4% of pts. Upper respiratory infection occurs in 3% of pts. Prolongation of QT interval (as seen on EKG) may produce torsade de pointes, a form of ventricular tachycardia. Neuroleptic malignant syndrome (e.g., hyperpyrexia, muscle rigidity, altered mental status, irregular pulse or B/P) has been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess pt's behavior, appearance, emotional status, response to environment, speech pattern, thought content. EKG

should be obtained to assess for QT prolongation before instituting medication.

INTERVENTION/EVALUATION

Monitor for orthostatic hypotension; assist with ambulation. Monitor for fine tongue movement (may be first sign of tardive dyskinesia, possibly irreversible). Monitor serum potassium, magnesium in pts at risk for electrolyte disturbances. Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Be alert to symptoms of orthostatic hypotension; rise slowly from sitting or lying position. • Consult physician if feeling faint, experience heart palpitations or if fever or muscle rigidity occurs. • Report extrapyramidal symptoms (e.g., involuntary muscle movements, tics) immediately.

iloprost

eye-loe-prost
(Ventavis)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Prostaglandin. **CLINICAL:** Vasodilator.

ACTION

Dilates systemic, pulmonary arterial vascular beds, alters pulmonary vascular resistance, suppresses vascular smooth muscle proliferation. **Therapeutic Effect:** Improves symptoms, exercise tolerance in pts with pulmonary hypertension; delays deterioration of condition.

PHARMACOKINETICS

Protein binding: 60%. Metabolized in liver. Primarily excreted in urine; minimal elimination in feces. **Half-life:** 20–30 min.

USES

Treatment of pulmonary arterial hypertension in pts with NYHA class III, IV symptoms. May be used in combination with bosentan for treatment of pulmonary arterial hypertension. **OFF-LABEL:** WHO group III and IV pulmonary arterial hypertension.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment, concurrent conditions or medications that may increase risk of syncope.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children**: Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Anticoagulants, antiplatelet agents** may increase risk of bleeding. **Antihypertensives, other vasodilators** may increase hypotensive effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, GGT.

AVAILABILITY (Rx)

Solution for Oral Inhalation: 10 mcg/ml, 20 mcg/ml.

ADMINISTRATION/HANDLING

Oral Inhalation

• For inhalation only, using Prodose ADD system. • Transfer entire contents of ampule into the medication chamber. • After use, discard remainder of medicine.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ The 20 mcg/ml concentration is used for pts experiencing extended treatment times.

Pulmonary Hypertension

Oral Inhalation: ADULTS: Initially, 2.5 mcg/dose; if tolerated, increase to 5 mcg/dose. Administer 6–9 times a day at

intervals of 2 hrs or longer while pt is awake. Maintenance: 2.5–5 mcg/dose. **Maximum daily dose:** 45 mcg.

SIDE EFFECTS

Frequent (39%–27%): Increased cough, headache, flushing. **Occasional (13%–11%):** Flu-like symptoms, nausea, lockjaw, jaw pain, hypotension. **Rare (8%–2%):** Insomnia, syncope, palpitations, vomiting, back pain, muscle cramps.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hemoptysis, pneumonia occur occasionally. CHF, renal failure, dyspnea, chest pain occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse.

INTERVENTION/EVALUATION

Monitor pulse, B/P during therapy. Assess for signs of pulmonary venous hypertension.

PATIENT/FAMILY TEACHING

• Follow manufacturer guidelines for proper administration of medication using supplied inhalation system. • Discard any remaining solution in the medication chamber after each inhalation session.

imatinib

HIGH ALERT

im-**at**-in-ib
(Gleevec)
Do not confuse imatinib with dasatininb, erlotinib, lapatinib, nilotinib, sorafenib, or sunitinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protein tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic (see p. 84C).

ACTION

Inhibits Bcr-Abl tyrosine kinase, an enzyme created by Philadelphia chromosome abnormality found in pts with chronic myeloid leukemia (CML). **Therapeutic Effect:** Suppresses tumor growth during the three stages of CML: blast crisis, accelerated phase, chronic phase.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 95% to albumin. Metabolized in liver to active metabolite. Eliminated mainly in feces as metabolites. **Half-life:** 18 hrs; metabolite, 40 hrs.

USES

Newly diagnosed chronic-phase Philadelphia chromosome positive chronic myeloid leukemia (Ph+ CML) in children and adults. Pts in blast crisis, accelerated phase, or chronic phase Ph+ CML who have already failed interferon therapy. Adults with relapsed or refractory Ph+ acute lymphoblastic leukemia (ALL). Adults with myelodysplastic/myeloproliferative disease (MDS/MPD) associated with platelet-derived growth factor receptor (PDGFR) gene rearrangements. Adults with aggressive systemic mastocytosis (ASM) without mutation of the D816V c-Kit or unknown mutation status of the c-Kit. Adults with hypereosinophilic syndrome (HES) and/or chronic eosinophilic leukemia (CEL) with positive, negative, or unknown FIP1L1-PDGFR fusion kinase. Adults with dermatofibrosarcoma protuberans (DFSP) that is unresectable, recurrent, and/or metastatic. Pts with malignant gastrointestinal stromal tumors (GIST) that are unresectable and/or metastatic. Prevents recurrence of cancer in pts following surgical removal of GIST. **OFF-LABEL:** Treatment of desmoid tumors (soft tissue sarcoma). Post stem cell transplant (allogenic), follow-up treatment in CML.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, thyroidectomy pts, hypothyroidism.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential for severe teratogenic effects. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Increased frequency of fluid retention.

INTERACTIONS

DRUG: **CYP3A4 inducers** (e.g., **carbamazepine, dexamethasone, phenobarbital, phenytoin, rifampin**) may decrease concentration. **CYP3A4 inhibitors** (e.g., **clarithromycin, erythromycin, itraconazole, ketoconazole**) may increase concentration. **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. May reduce effect of **warfarin.** **HERBAL:** **St. John's wort** decreases concentration. **FOOD:** **Grapefruit juice** may increase concentration. **LAB VALUES:** May increase serum bilirubin, AST, ALT. May decrease platelet count, WBC count, serum potassium.

AVAILABILITY (Rx)

Tablets: 100 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

- Give with a meal and large glass of water.
- Tablets may be dispersed in water or apple juice.

INDICATIONS/ROUTES/DOSAGE

Ph+ Chronic Myeloid Leukemia (CML) (Chronic Phase)
PO: ADULTS, ELDERLY: 400 mg once daily; may increase to 600 mg/day.

Ph+ CML (Accelerated Phase)
PO: ADULTS, ELDERLY: 600 mg once daily. May increase to 800 mg/day in 2 divided doses.

Ph+ Acute Lymphoblastic Leukemia (ALL)
PO: ADULTS, ELDERLY: 600 mg once daily.

Gastrointestinal Stromal Tumors (GIST)
PO: ADULTS, ELDERLY: 400–600 mg/day.

Aggressive Systemic Mastocytosis (ASM) with Eosinophilia
PO: ADULTS, ELDERLY: Initially, 100 mg/day. May increase up to 400 mg/day.

ASM without Mutation of the D816V C-Kit or Unknown Mutation Status of C-Kit
PO: ADULTS, ELDERLY: 400 mg once daily.

Dermatofibrosarcoma Protuberans (DFSP)
PO: ADULTS, ELDERLY: 400 mg twice a day.

Hypereosinophilic Syndrome (HES)/ Chronic Eosinophilic Leukemia (CEL)
PO: ADULTS, ELDERLY: 400 mg once daily.

HES/CEL with Positive or Unknown FIP1L1-PDGFR Fusion Kinase
PO: ADULTS, ELDERLY: Initially, 100 mg/day. May increase up to 400 mg/day.

Myelodysplastic/Myeloproliferative Disease (MDS/MPD)
PO: ADULTS, ELDERLY: 400 mg once daily.

Usual Dosage for Children (2 Yrs and Older)
Ph+ CML (Chronic Phase, Recurrent or Resistant): 260 mg/m^2/day.
Ph+ CML (Chronic Phase, Newly Diagnosed): 340 mg/m^2/day. **Maximum:** 600 mg/day.

Dosage in Hepatic Impairment (Severe)
Reduce dosage by 25%.

Dosage with Strong CYP3A4 Inducers
Increase dose by 50% with careful monitoring.

SIDE EFFECTS

Frequent (68%–24%): Nausea, diarrhea, vomiting, headache, fluid retention (periorbital, lower extremities), rash, musculoskeletal pain, muscle cramps, arthralgia. **Occasional (23%–10%):** Abdominal pain, cough, myalgia, fatigue, fever, anorexia, dyspepsia, constipation, night sweats, pruritus. Dizziness, blurred vision, somnolence. **Rare (less than 10%):** Nasopharyngitis, petechiae, asthenia (loss of strength, energy), epistaxis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe fluid retention (pleural effusion, pericardial effusion, pulmonary edema, ascites), hepatotoxicity occur rarely. Neutropenia, thrombocytopenia are expected responses to the drug. Respiratory toxicity is manifested as dyspnea, pneumonia. Heart damage (left ventricular dysfunction, CHF) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC weekly for first mo, biweekly for second mo, periodically thereafter. Monitor AST, ALT, hepatic function tests (serum bilirubin, alkaline phosphatase) before beginning treatment, monthly thereafter.

INTERVENTION/EVALUATION

Assess periorbital area, lower extremities for early evidence of fluid retention. Monitor for unexpected, rapid weight gain. Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Monitor CBC for evidence of neutropenia, thrombocytopenia; assess hepatic function tests for hepatotoxicity. Monitor renal function, serum electrolytes. Duration of neutropenia or thrombocytopenia ranges from 2–4 wks.

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine; do not receive vaccinations. • Take with food and a full glass of water. • Avoid grapefruit juice. • Notify physician if chest pain, swelling of extremities, weight gain greater than 5 lb, easy bruising/bleeding occur. • Avoid tasks requiring alertness, motor skills, including driving or operating machinery, until response to drug is established.

imipenem/cilastatin

im-ih-**pen**-em/sye-la-**stat**-in (Primaxin)

Do not confuse imipenem with doripenem, ertapenem, or meropenem, or Primaxin with Premarin or Primacor.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fixed-combination carbapenem. **CLINICAL:** Antibiotic.

ACTION

Imipenem: Penetrates bacterial cell membrane, inhibiting cell wall synthesis. **Cilastatin:** Competitively inhibits the enzyme dehydropeptidase, preventing renal metabolism of imipenem. **Therapeutic Effect:** Produces bacterial cell death.

PHARMACOKINETICS

Readily absorbed after IM administration. Protein binding: **Imipenem:** 20%; **Cilastatin:** 40%. Widely distributed. Metabolized in kidneys. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 1 hr (increased in renal impairment).

USES

Treatment of susceptible infections due to gram-negative (ESBL *Escherichia coli* and *Klebsiella, Enterobacter* spp. PsAs), gram-positive (MSSA, *Streptococcus* spp.), anaerobic organisms including respiratory tract, skin/skin structure, gy-

necologic, bone, joint, intra-abdominal, complicated or uncomplicated UTIs; endocarditis (caused by *S. aureus*); polymicrobic infections; septicemia; serious nosocomial infections. **OFF-LABEL:** Hepatic abscess, neutropenic fever, melioidosis.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of seizures, sensitivity to penicillins, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in cord blood, amniotic fluid, breast milk. **Pregnancy Category C. Children:** No precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease concentration of **valproic acid.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, LDH, AST, ALT. May decrease Hgb, Hct.

AVAILABILITY (Rx)

IM Injection, Powder for Reconstitution (Primaxin): 500 mg. **IV Injection, Powder for Reconstitution (Primaxin):** 250 mg, 500 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute each 250- or 500-mg vial with 100–250 ml D_5W or 0.9% NaCl. Final concentration not to exceed 5 mg/ml.

Rate of Administration • Give by intermittent IV infusion (piggyback). • Do not give IV push. • Infuse over 15–30 min (doses greater than 500 mg over 40–60 min). • Observe pt during initial 30 min of first-time infusion for possible hypersensitivity reaction.

Storage • Solution appears colorless to yellow; discard if solution turns brown. • IV infusion (piggyback) is stable for 4 hrs at room temperature, 24 hrs if refrigerated. • Discard if precipitate forms.

IM

• Prepare 500-mg vial with 2 ml 1% lidocaine without epinephrine • Administer suspension within 1 hr of preparation. • Do not mix with any other medications. • Inject deep in large muscle mass.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotec), fluconazole (Diflucan).

IV COMPATIBILITIES

Diltiazem (Cardizem), insulin, lipids, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Only IM formulation can be used for IM administration. Limit IM use to mild-moderate infection. Dosage based on imipenem content.

Usual Dosage Ranges

IV/IM: ADULTS, ELDERLY, WEIGHING 70 KG OR MORE: 250 mg q6h up to 1,000 mg q6h. **60–69 KG:** 250 mg q8h up to 1 g q8h. **50–59 KG:** 125 mg q6h up to 750 mg q8h. **40–49 KG:** 125 mg q6h up to 500 mg q6h. **30–39 KG:** 125 mg q8h up to 500 mg q8h. **CHILDREN OLDER THAN 3 MOS–12 YRS:** 60–100 mg/kg/day in divided doses q6h. **Maximum:** 4 g/day. **CHILDREN 1–3 MOS:** 100 mg/kg/day in divided doses q6h. **CHILDREN 1–4 WKS:** 25 mg/kg q8h. **CHILDREN YOUNGER THAN 1 WK:** 25 mg/kg q12h.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and severity of infection.

Creatinine Clearance (ml/min)	70 kg or greater	60–69 kg	50–59 kg	40–49 kg	30–39 kg
41–70	250 mg q8h–750 mg q8h	125 mg q6h–750 mg q8h	125 mg q6h–500 mg q6h	125 mg q6h–500 mg q8h	125 mg q8h–250 mg q6h
21–40	250 mg q12h–500 mg q6h	250 mg q12h–500 mg q8h	125 mg q8h–500 mg q8h	125 mg q12h–250 mg q6h	125 mg q12h–250 mg q8h
6–20	250 mg q12h–500 mg q12h	125 mg q12h–500 mg q12h	125 mg q12h–500 mg q12h	125 mg q12h–250 mg q12h	125 mg q12h–250 mg q12h

SIDE EFFECTS

Occasional (3%): Diarrhea, nausea, vomiting. **Rare (1%):** Rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Anaphylactic reactions have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly to beta-lactams, penicillins, cephalosporins. Inquire about history of seizures.

INTERVENTION/EVALUATION

Monitor renal, hepatic, hematologic function tests. Evaluate for phlebitis (heat, pain, red streaking over vein), pain at IV injection site. Assess for GI discomfort, nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Be alert to tremors, possible seizures.

imipramine

i-**mip**-ra-meen
(Apo-Imipramine, Novo-Pramine, Tofranil, Tofranil-PM)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse imipramine with amitriptyline, desipramine, or Norpramin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic antidepressant. **CLINICAL:** Antidepressant, antineuritic, antipanic, antineuralgic, antinarcoleptic adjunct, anticataplectic, antibulimic (see p. 38C).

ACTION

Blocks reuptake of neurotransmitters (norepinephrine, serotonin) at presynaptic membranes, increasing their concentration at postsynaptic receptor sites. **Therapeutic Effect:** Relieves depression, controls nocturnal enuresis.

USES

Treatment of depression, often in conjunction with psychotherapy. Treatment of nocturnal enuresis in children older than 6 yrs. **OFF-LABEL:** Treatment of ADHD, post-traumatic stress disorder, neurogenic pain, panic disorder.

PRECAUTIONS

Contraindications: Acute recovery period after MI, use within 14 days of MAOIs, pregnancy. **Cautions:** Prostatic hypertrophy; history of urinary retention, obstruction; glaucoma; diabetes mellitus; history of seizures; hyperthyroidism; cardiac, hepatic, renal disease; schizophrenia; increased intraocular pressure; hiatal hernia; pts with high risk for suicide. **Pregnancy Category D.**

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase hypotensive effects, CNS, respiratory depression caused by imipramine. **Cimetidine, fluoxetine** may increase concentration, risk of toxicity. **Phenytoin, barbiturates** may decrease concentration. **HERBAL:** **Kava kava, SAMe, St. John's wort, valerian** may increase risk of serotonin syndrome, CNS depression. **St. John's wort** may decrease concentration. **FOOD:** **Grapefruit, grapefruit juice** may increase concentration/toxicity. **LAB VALUES:** May alter serum glucose, EKG readings. **Therapeutic serum level:** 225–300 ng/ml; **toxic serum level:** greater than 500 ng/ml.

AVAILABILITY (Rx)

Capsules (Tofranil-PM): 75 mg, 100 mg, 125 mg, 150 mg. **Tablets (Tofranil):** 10 mg, 25 mg, 50 mg.

ADMINISTRATION/HANDLING

PO

- Give with food, milk if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: Initially, 75–100 mg/day in 3–4 divided doses. May gradually increase to maximum of 200 mg/day (outpatient) or 300 mg/day (inpatient). **ELDERLY, ADOLESCENTS:** Initially, 25–50 mg/day at bedtime. May increase by 10–25 mg every 3–7 days. **Maximum:** 100 mg/day. **CHILDREN:** 1.5 mg/kg/day. May increase by 1 mg/kg every 3–4 days. **Maximum:** 5 mg/kg/day in 1–4 divided doses.

Enuresis

PO: CHILDREN, 6 YRS AND OLDER: Initially, 10–25 mg 1 hr before bedtime. May increase by 25 mg if inadequate response seen after 1 wk. **Maximum:** 2.5 mg/kg/day or 50 mg at bedtime for ages 6–12 yrs; 75 mg at bedtime for ages over 12 yrs.

SIDE EFFECTS

Frequent: Drowsiness, fatigue, dry mouth, blurred vision, constipation, delayed micturition, orthostatic hypotension, diaphoresis, impaired concentration, increased appetite, urinary retention, photosensitivity. **Occasional:** GI disturbances (nausea, metallic taste). **Rare:** Paradoxical reactions (agitation, restlessness, nightmares, insomnia), extrapyramidal symptoms (EPS) (particularly fine hand tremor).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce seizures; cardiovascular effects (severe orthostatic hypotension, dizziness, tachycardia, palpitations, arrhythmias). May result in altered temperature regulation (hyperpyrexia, hypothermia). Abrupt withdrawal from prolonged therapy may produce headache, malaise, nausea, vomiting, vivid dreams.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess appearance, behavior, speech pattern, level of interest, mood. Obtain baseline CBC, hepatic/renal function tests.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor appearance, behavior, speech pattern, level of interest, mood. For pts on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically. Monitor daily pattern of bowel activity, stool consistency. Monitor B/P, pulse for hypotension, arrhythmias. Assess for urinary retention by bladder palpation. **Therapeutic serum level:** 225–300 ng/ml; **toxic serum level:** greater than 500 ng/ml.

PATIENT/FAMILY TEACHING

- Notify physician if depression worsens, thoughts of suicide, agitation, irri-

tability occur. • Change positions slowly to avoid hypotensive effect. • Tolerance to postural hypotension, sedative, anticholinergic effects usually develops during early therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Therapeutic effect may be noted within 2–5 days, maximum effect within 2–3 wks. • Sugarless gum, sips of tepid water may relieve dry mouth. • Do not abruptly discontinue medication. • Limit caffeine; avoid alcohol.

immune globulin IV (IGIV)

im-**mune glob**-u-lin
(Carimune NF, Flebogamma DIF, Gammagard Liquid, Gammagard S/D, Gammaplex, Gamunex-C, Octagam 5%, Privigen)

BLACK BOX ALERT Acute renal impairment characterized by increased serum creatinine, oliguria, acute renal failure, osmotic nephrosis, particularly pts with any degree of renal insufficiency, diabetes mellitus, volume depletion, sepsis, and those older than age 65 yrs.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Immune globulins, blood product. **CLINICAL:** Immunizing agent.

ACTION

Blocks Fc receptor on macrophages in pts with idiopathic thrombocytopenia purpura (ITP). Immunomodulatory effects on T cells and macrophages, esp. cytokine synthesis, B-cell immune function. Provides antibodies that neutralize bacteria, viral toxins. **Therapeutic Effect:** Provides passive immunity against infection; induces rapid increase in platelet count; produces anti-inflammatory effect.

PHARMACOKINETICS

Evenly distributed between intravascular and extravascular space. **Half-life:** 21–23 days.

USES

Treatment of pts with primary immunodeficiency syndromes, idiopathic thrombocytopenic purpura (ITP), prevention of coronary artery aneurysms associated with Kawasaki disease, prevention of recurrent bacterial infections in pts with hypogammaglobulinemia associated with B-cell chronic lymphocytic leukemia (CLL). Treatment of chronic inflammatory demyelinating polyneuropathies. **OFF-LABEL:** Guillain-Barré syndrome; myasthenia gravis; prevention of acute infections in immunosuppressed pts; prevention, treatment of infection in high-risk, preterm, low birth-weight neonates; treatment of multiple sclerosis; HIV-associated thrombocytopenia.

PRECAUTIONS

Contraindications: Selective IgA deficiency, hyperprolinemia (Privigen), severe thrombocytopenia, coagulation disorders. **Cautions:** Cardiovascular disease, history of thrombosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Live virus vaccines may increase vaccine side effects, potentiate virus replication, decrease pt's antibody response to vaccine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Carimune NF): 3 g, 6 g, 12 g. **(Gammagard S/D):** 2.5 g, 5 g, 10 g. **Injection, Solution (Flebogamma DIF, Gammagard Liquid 10%,**

Gammaplex, Gamunex-C, Octagam 5%, Privigen): 1 g, 2.5 g, 5 g, 10 g.

ADMINISTRATION/HANDLING

IV

ALERT Monitor vital signs, B/P diligently during and immediately after IV administration (precipitous fall in B/P may indicate anaphylactic reaction). Stop infusion immediately. Epinephrine should be readily available.

Reconstitution • Reconstitute only with diluent provided by manufacturer. • Discard partially used or turbid preparations.

Rate of Administration • Give by infusion only. • After reconstitution, administer via separate tubing. • Avoid mixing with other medication or IV infusion fluids. • Rate of infusion varies with product used.

Storage • Refer to individual IV preparations for storage requirements, stability after reconstitution.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

Primary Immunodeficiency Syndrome

IV: ADULTS, ELDERLY, CHILDREN: 200–800 mg/kg q3–4wks.

Idiopathic Thrombocytopenic Purpura (ITP)

IV: ADULTS, ELDERLY, CHILDREN: 400–1,000 mg/kg/day for 2–5 days. Maintenance: 400–1,000 mg/kg/dose q3–6wks.

Kawasaki Disease

IV: ADULTS, ELDERLY, CHILDREN: 2,000 mg/kg as a single dose given over 10–12 hrs within 10 days of disease onset. Must be used in combination with aspirin.

Chronic Leukocytic Leukemia (CLL)

IV: ADULTS, ELDERLY, CHILDREN: 400 mg/kg/dose q3–4wks.

Chronic Inflammatory Demyelinating Polyneuropathy

IV: ADULTS, ELDERLY, CHILDREN: 2,000 mg/kg divided over 2–4 days (consecutive). Maintenance: 1,000 mg/kg/day for 1 day q3wks or 500 mg/kg for 2 consecutive days q3wks.

SIDE EFFECTS

Frequent: Tachycardia, backache, headache, arthralgia, myalgia. **Occasional:** Fatigue, wheezing, injection site rash/pain, leg cramps, urticaria, bluish color of lips/nailbeds, light-headedness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anaphylactic reactions occur rarely but incidence increases with repeated injections. Epinephrine should be readily available. Overdose may produce chest tightness, chills, diaphoresis, dizziness, facial flushing, nausea, vomiting, fever, hypotension. Hypersensitivity reaction (anxiety, arthralgia, dizziness, flushing, myalgia, palpitations, pruritus) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Inquire about history of exposure to disease for pt/family as appropriate. Have epinephrine readily available. Pt should be well hydrated prior to administration.

INTERVENTION/EVALUATION

Control rate of IV infusion carefully; too-rapid infusion increases risk of precipitous fall in B/P, signs of anaphylaxis (facial flushing, chest tightness, chills, fever, nausea, vomiting, diaphoresis). Assess pt closely during infusion, esp. first hr; monitor vital signs continuously. Stop infusion if aforementioned signs noted. For treatment of idiopathic thrombocytopenic purpura (ITP), monitor platelet count.

PATIENT/FAMILY TEACHING

• Explain rationale for therapy. • Inform physician if sudden weight gain, fluid re-

tention, edema, decreased urine output, shortness of breath occur.

immune globulin subcutaneous

im-**mune glob**-u-lin
(Hizentra)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Immune globulin. **CLINICAL:** Immunizing agent.

ACTION

Immune globulin replacement therapy for IgG antibodies against bacteria/viruses. **Therapeutic Effect:** Provides immunity against infection.

PHARMACOKINETICS

Bioavailability 73% (compared to IGIV). Time to peak plasma levels: 2.5 days.

USES

Treatment of primary humoral immune deficiency.

PRECAUTIONS

Contraindications: History of anaphylactic or severe systemic reaction to immune globulins, selective IgA deficiency with known antibody against IgA. Hyperprolinemia (Hizentra). **Cautions:** Cardiovascular disease, history of thrombosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Live virus vaccines may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Solution: (Hizentra): IgG 200 mg/ml.

ADMINISTRATION/HANDLING

• Refrigerate; do not freeze; do not shake. • Allow vial to reach room temperature prior to use. • Do not use if cloudy or precipitate forms. • Follow manufacturer's instructions for filling reservoir, preparing pump. • Inject via infusion pump into subcutaneous tissue of abdomen, thigh, upper arm, lateral hip. • May be infused into multiple sites simultaneously.

INDICATIONS/ROUTES/DOSAGE

Measles Prophylaxis, Primary Immune Deficiency

Subcutaneous Infusion: ADULTS, ELDERLY, CHILDREN 2 YRS AND OLDER: Pre-exposure: 200 mg/kg/dose (or greater) once weekly for 2 doses for pts at risk for measles. **Post-exposure:** 200 mg/kg/dose as soon as possible following exposure.

SIDE EFFECTS

Frequent: Local injection site reactions (92%), headache (48%), fever (25%), nausea (18%), sore throat, rash (17%). **Occasional:** Pain, diarrhea, cough (10%), weakness (5%), tachycardia, skin disorder, urine abnormality (3%).

ADVERSE EFFECTS/TOXIC REACTIONS

Anaphylactic reactions are rare, but epinephrine should be readily available. Overdose may produce chest tightness, chills, diaphoresis, dizziness, facial flushing, nausea, vomiting, fever, hypotension. Hypersensitivity reaction (anxiety, arthralgia, dizziness, flushing, myalgia, palpitations, pruritus) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Inquire about history of exposure to disease for pt/family. Epinephrine should be readily available.

INTERVENTION/EVALUATION

Monitor for infusion-related adverse reaction, clinical response, anaphylaxis. Monitor IgG level.

PATIENT/FAMILY TEACHING

• Explain rationale for therapy. • Report to physician any sudden weight gain, fluid retention, edema, decreased urine output, shortness of breath, unusual reactions.

indacaterol

in-da-**ka**-ter-ol
(Arcapta Neohaler)

BLACK BOX ALERT Long-acting beta$_2$-adrenergic agonists (LABAs) have an increased risk of asthma-related deaths. Not indicated for treatment of asthma or acute deterioration of COPD.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Long-acting beta$_2$-adrenergic agonist. **CLINICAL:** Bronchodilator (see p. 74C).

ACTION

Stimulates beta$_2$-adrenergic receptors in lungs, resulting in relaxation of bronchial smooth muscle. **Therapeutic Effect:** Relieves bronchospasm, reduces airway resistance, improves bronchodilation.

PHARMACOKINETICS

Extensive activation of systemic beta-adrenergic receptors; acts primarily in lungs. Protein binding: 94%–95%. Metabolized in liver by hydroxylation. Steady-state level: 12–15 days. Primarily excreted in feces. **Half-life:** 45–126 hrs.

USES

Long-term treatment of airflow obstruction in pts with chronic obstructive pulmonary disease (COPD), including chronic bronchitis and emphysema.

PRECAUTIONS

◀ALERT▶ Not indicated for the treatment of asthma.

Contraindications: Asthma without use of long-term asthma control medication, acutely deteriorating COPD. **Cautions:** Pts with cardiovascular disease (coronary insufficiency, arrhythmias, hypertension, history of hypersensitivity to sympathomimetics), seizure disorders, hyperthyroidism, hypokalemia, diabetes mellitus. May cause paradoxical bronchospasm, severe asthma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to tremor, tachycardia due to age-related increased sympathetic sensitivity.

INTERACTIONS

DRUG: May decrease effectiveness of **beta-adrenergic blocking agents (beta-blockers). Diuretics, steroids, xanthine derivatives** may increase effects of hypokalemia. **Drugs that can prolong QT interval (e.g., erythromycin, quinidine, thioridazine), antiarrhythmics, MAOIs, tricyclic antidepressants** may potentiate cardiovascular effects (increased risk of ventricular arrhythmias). **Erythromycin, ketoconazole, ritonavir, verapamil** may increase serum concentration. **HERBAL:** None known. **FOOD:** None significant. **LAB VALUES:** May decrease serum potassium. May increase serum glucose.

AVAILABILITY (Rx)

Powder for Inhalation: 75 mcg (in blister packs).

ADMINISTRATION/HANDLING

Inhalation

• Open cap of Neohaler by pulling upward, then open mouthpiece. • Remove capsule from blister package and place in center of chamber. Firmly close until click is heard.

• Hold inhaler upright and pierce capsule by pressing side buttons once only. • Instruct pt to exhale completely. Place mouthpiece into mouth, close lips, and inhale quickly and deeply through mouth (this causes capsule to spin, dispensing the drug). A slight whirring noise should occur. If not, this may indicate capsule is stuck. Gently tap inhaler to loosen and reattempt. • Pt should hold breath as long as possible before exhaling. • Check capsule to ensure all the powder is gone. Instruct pt to reinhale if powder remains.

Storage • Store at room temperature. • Maintain capsules within individual blister pack until time of use. • Do not store capsules in Neohaler device.

INDICATIONS/ROUTES/DOSAGE

Maintenance Therapy and Prevention of COPD

Inhalation: ADULTS, ELDERLY: 75 mcg (1 capsule) once daily via Neohaler inhalation device.

SIDE EFFECTS

Occasional (7%–5%): Cough, nasopharyngitis, headache. **Rare (2%):** Oropharyngeal pain, nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Peripheral edema, diabetes mellitus, hyperglycemia, sinusitis, URI reported in greater than 2% of pts. Excessive sympathomimetic stimulation, hypokalemia may produce palpitations, arrhythmias, angina pectoris, tachycardia, muscle cramps, weakness. Hyperglycemia symptoms present with increased thirst, polyuria, dry mouth, drowsiness/confusion, blurred vision. Severe shortness of breath may indicate paradoxical bronchospasm, deteriorating COPD. Serious asthma-related events including death reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess rate, depth, rhythm, type of respirations. Monitor EKG, serum potassium, ABG determinations, O_2 saturation, pulmonary function test. Assess lung sounds for wheezing (bronchoconstriction), rales. Obtain baseline electrolytes, capillary blood glucose. Receive full medication history and screen for possible drug interactions. Question for history of asthma, angina pectoris, diabetes mellitus, peripheral edema.

INTERVENTION/EVALUATION

Routinely monitor BMP, blood glucose, O_2 saturation. Recommend discontinuation of short-acting beta$_2$-agonists (use only for symptomatic relief of acute respiratory symptoms). Monitor for palpitations, tachycardia, serum hypokalemia. Inspect oropharyngeal cavity for irritation.

PATIENT/FAMILY TEACHING

• Follow manufacturer guidelines for proper use of inhaler. • Increase fluid intake (decreases lung secretion viscosity). • Rinse mouth with water after inhalation to decrease mouth/throat irritation. • Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola). • An immediate cough lasting 15 sec may occur after inhaler use. • Report any fever, productive cough, body aches, difficulty breathing.

indapamide

in-**dap**-a-mide
(Apo-Indapamide, Lozide, Novo-Indapamide)
Do not confuse indapamide with lopidine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Thiazide.
CLINICAL: Diuretic, antihypertensive (see p. 102C).

ACTION

Diuretic: Blocks reabsorption of water, sodium, potassium at cortical diluting

segment of distal tubule. **Antihypertensive:** Reduces plasma, extracellular fluid volume, and peripheral vascular resistance by direct effect on blood vessels. **Therapeutic Effect:** Promotes diuresis, reduces B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1–2 hrs	—	Up to 36 hrs

Almost completely absorbed following PO administration. Protein binding: 71%–79%. Extensively metabolized in liver. Excreted in urine. **Half-life:** 14–18 hrs.

USES

Management of hypertension. Treatment of edema associated with CHF. **OFF-LABEL:** Nephrotic syndrome.

PRECAUTIONS

Contraindications: Anuria. **Canada:** Renal decompensation, hepatic impairment, breast-feeding. **Cautions:** History of hypersensitivity to sulfonamides or thiazide diuretics. Severe renal disease, hepatic impairment, prediabetes, diabetes mellitus, elderly, debilitated pts, thyroid disorders, severe hyponatremia, high cholesterol.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B (D if used in pregnancy-induced hypertension). Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive, electrolyte effects.

INTERACTIONS

DRUG: May increase risk of **lithium** toxicity. **HERBAL:** **Ephedra, ginseng, licorice, yohimbe** may worsen hypertension. **Black cohosh** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase plasma renin activity. May decrease protein-bound iodine, serum calcium, potassium, sodium.

AVAILABILITY (Rx)

Tablets: 1.25 mg, 2.5 mg.

ADMINISTRATION/HANDLING

PO

- Give with food, milk if GI upset occurs, preferably with breakfast (may prevent nocturia).

INDICATIONS/ROUTES/DOSAGE

Edema

PO: ADULTS: Initially, 2.5 mg/day, may increase to 5 mg/day after 1 wk.

Hypertension

PO: ADULTS, ELDERLY: Initially, 1.25 mg. May increase to 2.5 mg/day after 4 wks or 5 mg/day after additional 4 wks.

SIDE EFFECTS

Frequent (5% and greater): Fatigue, paresthesia of extremities, tension, irritability, agitation, headache, dizziness, lightheadedness, insomnia, muscle cramps. **Occasional (less than 5%):** Urinary frequency, urticaria, rhinorrhea, flushing, weight loss, orthostatic hypotension, depression, blurred vision, nausea, vomiting, diarrhea, constipation, dry mouth, impotence, rash, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Vigorous diuresis may lead to profound water and electrolyte depletion, resulting in hypokalemia, hyponatremia, dehydration. Acute hypotensive episodes may occur. Hyperglycemia may be noted during prolonged therapy. Pancreatitis, blood dyscrasias, pulmonary edema, allergic pneumonitis, dermatologic reactions occur rarely. Overdose can lead to lethargy, coma without changes in electrolytes or hydration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check vital signs, esp. B/P for hypotension, before administration. Assess baseline electrolytes, particularly check for hypoka-

lemia. Observe for edema; assess skin turgor, mucous membranes for hydration status. Assess muscle strength, mental status. Note skin temperature, moisture. Obtain baseline weight. Initiate I&O.

INTERVENTION/EVALUATION

Continue to monitor B/P, vital signs, electrolytes, I&O, weight. Note extent of diuresis. Watch for electrolyte disturbances (hypokalemia may result in weakness, tremor, muscle cramps, nausea, vomiting, altered mental status, tachycardia; hyponatremia may result in confusion, thirst, cold/clammy skin).

PATIENT/FAMILY TEACHING

• Expect increased frequency, volume of urination. • To reduce hypotensive effect, rise slowly from lying to sitting position, permit legs to dangle momentarily before standing. • Eat foods high in potassium such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins. • Take early in the day to avoid nocturia.

indinavir

in-**din**-ah-veer
(Crixivan)
Do not confuse indinavir with Denavir.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antiviral (see pp. 68C, 117C).

ACTION

Suppresses HIV protease, an enzyme necessary for splitting viral polyprotein precursors into mature infectious viral particles. **Therapeutic Effect:** Interrupts HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 60%. Metabolized in liver. Primarily eliminated in feces. Unknown if removed by hemodialysis. **Half-life:** 1.4–2.2 hrs (increased in hepatic impairment).

USES

Treatment of HIV infection as part of a multidrug regimen (at least 3 antiretroviral agents). **OFF-LABEL:** Prophylaxis following occupational exposure to HIV.

PRECAUTIONS

Contraindications: Concurrent use with alfuzosin, alprazolam, amiodarone, ergot derivatives, midazolam, pimozide, sildenafil (when used for pulmonary arterial hypertension), simvastatin, St. John's wort, triazolam. **Cautions:** Renal/hepatic impairment, hemophilia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if excreted in breast milk. Breast-feeding not recommended in HIV-infected women. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Information not available.

INTERACTIONS

DRUG: Note: See Contraindications. May increase concentration/toxicity of **midazolam, sildenafil, triazolam. Rifabutin, rifampin** may decrease concentration/effects. **HMG-CoA inhibitors (e.g., lovastatin, simvastatin)** may increase risk of myopathy. **Itraconazole, ketoconazole** may increase concentration. **HERBAL: St. John's wort, garlic** may decrease concentration/effects. **FOOD: Grapefruit, grapefruit juice** may decrease concentration/effects. **High-fat, high-calorie, high-protein meals** may decrease concentration. **LAB VALUES:** May increase serum bilirubin, amylase, glucose, AST, ALT. May alter serum triglycerides, cholesterol.

AVAILABILITY (Rx)

Capsules: 100 mg, 200 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

• Store at room temperature. • Protect from moisture (capsules sensitive to moisture; keep in original bottle). • Best given without food 1 hr before or 2 hrs following a meal but may give with water, skim milk, juice, coffee, tea, light meal (e.g., dry toast with jelly). • Do not give with meal high in fat, calories, protein. • If indinavir and didanosine are given concurrently, give at least 1 hr apart on an empty stomach. • May be taken with food when administered with ritonavir.

INDICATIONS/ROUTES/DOSAGE

HIV Infection (in Combination with Other Antiretrovirals)

PO: ADULTS (UNBOOSTED WITH RITONAVIR): 800 mg (two 400-mg capsules) q8h.

Dosage Adjustments When Given Concomitantly: DELAVIRDINE, ITRACONAZOLE, KETOCONAZOLE: Reduce dose to 600 mg q8h. **EFAVIRENZ:** Increase dose to 1,000 mg q8h. **LOPINAVIR/RITONAVIR:** Reduce dose to 600 mg twice a day. **NEVIRAPINE:** Increase dose to 1,000 mg q8h. **RIFABUTIN:** Reduce rifabutin by ½ and increase indinavir to 1,000 mg q8h. **RITONAVIR:** 100–200 mg twice a day and indinavir 800 mg twice a day or ritonavir 400 mg twice a day and indinavir 400 mg twice a day.

HIV Infection in Pts with Hepatic Insufficiency

PO: ADULTS: 600 mg q8h.

SIDE EFFECTS

Frequent: Nausea (12%), abdominal pain (9%), headache (6%), diarrhea (5%). **Occasional:** Vomiting, asthenia (loss of strength, energy), fatigue (4%); insomnia; accumulation of fat in waist, abdomen, back of neck. **Rare:** Altered taste, heartburn, symptomatic urinary tract disease, transient renal dysfunction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Nephrolithiasis (flank pain with or without hematuria) occurs in 4% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Establish baseline lab values. Emphasize need for close monitoring of renal function (urinalysis, serum creatinine) during therapy.

INTERVENTION/EVALUATION

Encourage adequate hydration. Pt should drink 48 oz (1.5 L) of liquid for each 24 hrs during therapy. Monitor for evidence of nephrolithiasis (flank pain, hematuria); contact physician if symptoms occur (therapy should be interrupted for 1–3 days). Monitor daily pattern of bowel activity, stool consistency. Assess for abdominal discomfort, headache. Monitor serum bilirubin, glucose, cholesterol, triglycerides, amylase, lipase, hepatic function tests, CD4 cell count, CBC.

PATIENT/FAMILY TEACHING

• Indinavir is not a cure for HIV infection, nor does it reduce risk of transmission to others. Condition may progress despite treatment. • If dose is missed, take next dose at regularly scheduled time (do **not** double the dose). • Best taken without food but water only (optimal absorption) 1 hr before or 2 hrs following a meal; may take with water, skim milk, juice, coffee, tea, light carbohydrate meal. • Avoid St. John's wort, grapefruit, grapefruit juice.

indomethacin

in-doe-**meth**-a-sin
(Apo-Indomethacin, Indocid, Indocin, Indocin IV, Novo-Methacin)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic

events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation.

Do not confuse Indocin with Imodium, Minocin, or Vicodin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID. **CLINICAL:** Anti-inflammatory, analgesic (see p. 128C).

ACTION

Produces analgesic, anti-inflammatory effects by inhibiting prostaglandin synthesis. Increases sensitivity of premature ductus to dilating effects of prostaglandins. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain. Closure of patent ductus arteriosus.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	—	4–6 hrs

Well absorbed from GI tract. Protein binding: 99%. Metabolized in liver. Excreted in urine. **Half-life:** 4.5 hrs.

USES

Treatment of active stages of rheumatoid arthritis, osteoarthritis, ankylosing spondylitis, acute gouty arthritis. Relieves acute bursitis, tendonitis. **(IV Form):** For closure of hemodynamically significant patent ductus arteriosus of premature infants weighing 500–1,750 g. **OFF-LABEL:** Management of preterm labor.

PRECAUTIONS

Contraindications: Hypersensitivity to aspirin, indomethacin, other NSAIDs. Perioperative pain in setting of CABG surgery. History of proctitis or recent rectal bleeding. **Injection:** In preterm infants with untreated/systemic infection or congenital heart disease where patency of PDA necessary for pulmonary or systemic blood flow; bleeding; thrombocytopenia; coagulation defects; necrotizing enterocolitis; significant renal dysfunction. **Cautions:** Cardiac dysfunction, hypertension, renal/hepatic impairment, epilepsy, concurrent anticoagulant therapy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C (D if used after 34 wks' gestation, close to delivery, or for longer than 48 hrs). Children:** Safety and efficacy not established in those younger than 14 yrs. **Elderly:** GI bleeding, ulceration increase risk of serious adverse effects.

INTERACTIONS

DRUG: May decrease effects of **antihypertensives, diuretics. Aspirin, other salicylates** may increase risk of GI side effects, bleeding. **Bone marrow depressants** may increase risk of hematologic reactions. May increase risk of bleeding with **heparin, oral anticoagulants, thrombolytics.** May increase concentration, risk of toxicity of **lithium.** May increase risk of **cyclosporine, methotrexate** toxicity. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo, ginseng, horse chestnut, red clover** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May prolong bleeding time. May alter serum glucose. May increase BUN, serum creatinine, potassium, AST, ALT. May decrease serum sodium, platelet count, leukocytes.

AVAILABILITY (Rx)

Capsules (Indocin): 25 mg, 50 mg. **Injection, Powder for Reconstitution (Indocin IV):** 1 mg. **Oral Suspension (Indocin):** 25 mg/5 ml. **Suppository:** 50 mg. **Capsules, Extended-Release:** 75 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • To 1-mg vial, add 1–2 ml preservative-free Sterile Water for Injection or 0.9% NaCl to provide concentration of 1 mg/ml or 0.5 mg/ml, respectively. • Do not further dilute.

Rate of Administration • Administer over 20–30 min. • Restrict fluid intake. **Storage** • IV solutions made without preservatives should be used immediately. • Use IV solution immediately following reconstitution. • IV solution appears clear; discard if cloudy or precipitate forms. • Discard unused portion.

PO

• Give after meals or with food, antacids. • Do not crush, chew extended-release capsule. Swallow whole.

◀ALERT▶ IV injection preferred for patent ductus arteriosus in neonate (but may give dose PO via NG tube or rectally).

IV INCOMPATIBILITIES

Amino acid injection, calcium gluconate, cimetidine (Tagamet), dobutamine (Dobutrex), dopamine (Intropin), gentamicin (Garamycin), tobramycin (Nebcin).

IV COMPATIBILITIES

Insulin, potassium.

INDICATIONS/ROUTES/DOSAGE

Moderate to Severe Rheumatoid Arthritis (RA), Osteoarthritis, Ankylosing Spondylitis

PO: ADULTS, ELDERLY (IMMEDIATE-RELEASE): Initially, 25–50 mg 2–3 times a day; increased by 25–50 mg/wk up to 200 mg/day.

Extended-Release: 75–150 mg/day in 1–2 doses/day. **Maximum:** 150 mg/day. **CHILDREN 2 YRS AND OLDER (IMMEDIATE-RELEASE):** 1–2 mg/kg/day in 2–4 divided doses. **Maximum:** 4 mg/kg/day not to exceed 150–200 mg/day.

Acute Gouty Arthritis

PO: ADULTS, ELDERLY: 50 mg 3 times a day for 3–5 days.

Acute Bursitis, Tendonitis

PO: ADULTS, ELDERLY: 75–150 mg/day in 3–4 divided doses for 7–14 days. **Extended-Release:** 75–150 mg/day in 1–2 doses/day.

Patent Ductus Arteriosus

IV: NEONATES: Initially, 0.2 mg/kg. Subsequent doses are based on age, as follows: **NEONATES OLDER THAN 7 DAYS:** 0.25 mg/kg for 2nd and 3rd doses. **NEONATES 2–7 DAYS:** 0.2 mg/kg for 2nd and 3rd doses. **NEONATES LESS THAN 48 HRS:** 0.1 mg/kg for 2nd and 3rd doses. In general, dosing interval is 12 hrs if urine output is greater than 1 ml/kg/hr after prior dose, 24 hrs if urine output is less than 1 ml/kg/hr but greater than 0.6 ml/kg/hr. Dose is held if urine output is less than 0.6. ml/kg/hr or if neonate is anuric.

SIDE EFFECTS

Frequent (11%–3%): Headache, nausea, vomiting, dyspepsia (heartburn, indigestion, epigastric pain), dizziness. **Occasional (less than 3%):** Depression, tinnitus, diaphoresis, drowsiness, constipation, diarrhea. **Patent ductus arteriosus:** Bleeding abnormalities. **Rare:** Hypertension, confusion, urticaria, pruritus, rash, blurred vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Paralytic ileus, ulceration of esophagus, stomach, duodenum, small intestine may occur. Pts with renal impairment may develop hyperkalemia with worsening of renal impairment. May aggravate depression or other psychiatric disturbances, epilepsy, parkinsonism. Nephrotoxicity (dysuria, hematuria, proteinuria, nephrotic syndrome) occurs rarely. Metabolic acidosis/alkalosis, bradycardia occur rarely in pts with patent ductus arteriosus.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain, fever, inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Monitor for evidence of nausea, dyspepsia. Assist with ambulation if dizziness oc-

curs. Evaluate for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Monitor BUN, serum creatinine, potassium, hepatic function tests. Observe for weight gain, edema, bleeding, bruising. In neonates, also monitor heart rate, heart sounds for murmur, B/P, urine output, EKG, serum sodium, glucose, platelets.

PATIENT/FAMILY TEACHING

• Avoid aspirin, alcohol during therapy (increases risk of GI bleeding). • If GI upset occurs, take with food, milk. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report ringing in ears, persistent stomach pain, unusual bruising/bleeding.

infliximab

TOP 200

in-**flix**-ih-mab
(Remicade)

BLACK BOX ALERT Risk of severe/fatal opportunistic infections (tuberculosis, sepsis, fungal), reactivation of latent infections. Very rare cases of very aggressive, usually fatal hepatosplenic T-cell lymphoma reported in adolescents, young adults with Crohn's disease.

Do not confuse infliximab with rituximab, or Remicade with Reminyl or Rituxan.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** GI anti-inflammatory.

ACTION

Binds to tumor necrosis factor (TNF), inhibiting functional activity of TNF. Reduces infiltration of inflammatory cells. **Therapeutic Effect:** Decreases inflamed areas of intestine.

PHARMACOKINETICS

Absorbed into GI tissue; primarily distributed in vascular compartment. **Half-life:** 8–9.5 days.

USES

In combination with methotrexate, reduces signs/symptoms, inhibits progression of structural damage, improves physical function in moderate to severe active rheumatoid arthritis (RA), psoriatic arthritis. Reduces signs/symptoms, induces and maintains remission in moderate to severe active Crohn's disease. Reduces number of draining enterocutaneous/rectovaginal fistulas, maintains fistula closure in fistulizing Crohn's disease. Reduces sign/symptoms of active ankylosing spondylitis. Treatment of chronic severe plaque psoriasis in pts who are candidates for systemic therapy. Reduces sign/symptoms, induces and maintains clinical remission and mucosal healing, eliminates corticosteroid use in moderate to severe active ulcerative colitis. **OFF-LABEL:** Acute graft-vs-host disease.

PRECAUTIONS

Contraindications: Moderate to severe CHF (doses greater than 5 mg/kg should be avoided). Sensitivity to murine proteins, sepsis, serious active infection. **Cautions:** Hematological abnormalities, history of COPD, preexisting or recent onset CNS demyelinating disorders, seizures, heart failure, history of recurrent infections, conditions predisposing pt to infections (e.g., diabetes).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Use cautiously due to higher rate of infection.

INTERACTIONS

DRUG: Anakinra, abatacept may increase risk of infection. **Immunosuppressants** may reduce frequency of infusion reactions, antibodies to infliximab.

Live virus vaccines may decrease immune response. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT, bilirubin.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 100 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each vial with 10 ml Sterile Water for Injection, using 21-gauge or smaller needle. Direct stream of Sterile Water for Injection to glass wall of vial. • Swirl vial gently to dissolve contents (do not shake). • Allow solution to stand for 5 min and inject into 250-ml bag 0.9% NaCl; gently mix. Concentration should range between 0.4 and 4 mg/ml. • Begin infusion within 3 hrs after reconstitution.

Rate of Administration • Administer IV infusion over at least 2 hrs using a low protein-binding filter.

Storage • Refrigerate vials. • Solution should appear colorless to light yellow and opalescent; do not use if discolored or particulate forms.

IV INCOMPATIBILITIES

Do not infuse in same IV line with other agents.

INDICATIONS/ROUTES/DOSAGE

◄ALERT► Premedicate with antihistamines, acetaminophen, steroids to prevent/manage infusion reactions.

Rheumatoid Arthritis (RA)

IV Infusion: ADULTS, ELDERLY: 3 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q8wks thereafter. Range: 3–10 mg/kg at 4- to 8-wk intervals.

Crohn's Disease

IV Infusion: ADULTS, ELDERLY, CHILDREN: 5 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q8wks thereafter. For adults who respond then lose response, consideration may be given to treatment with 10 mg/kg.

Fistulizing Crohn's Disease

IV Infusion: ADULTS, ELDERLY: 5 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q8wks thereafter. For pts who respond then lose response, consideration may be given to treatment with 10 mg/kg.

Ankylosing Spondylitis

IV Infusion: ADULTS, ELDERLY: 5 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q6wks thereafter.

Psoriatric Arthritis

IV Infusion: ADULTS, ELDERLY: 5 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q8wks thereafter. May be used with or without methotrexate.

Plaque Psoriasis

IV Infusion: ADULTS, ELDERLY: 5 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q8wks thereafter.

Ulcerative Colitis

IV Infusion: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 5 mg/kg followed by additional doses at 2 and 6 wks after first infusion, then q8wks thereafter.

SIDE EFFECTS

Frequent (22%–10%): Headache, nausea, fatigue, fever. **Occasional (9%–5%):** Fever/chills during infusion, pharyngitis, vomiting, pain, dizziness, bronchitis, rash, rhinitis, cough, pruritus, sinusitis, myalgia, back pain. **Rare (4%–1%):** Hypotension or hypertension, paresthesia, anxiety, depression, insomnia, diarrhea, UTI.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious infections, including sepsis, occur rarely. Potential for hypersensitivity reaction, lupus-like syndrome, severe hepatic reaction, CHF.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check baseline hydration status (skin turgor for tenting mucous membranes, urinary status).

INTERVENTION/EVALUATION

Monitor urinalysis, erythrocyte sedimentation rate (ESR), B/P. Monitor for signs of infection. Monitor daily pattern of bowel activity, stool consistency. **Crohn's disease:** Monitor C-reactive protein, frequency of stools. Assess for abdominal pain. **Rheumatoid arthritis (RA):** Monitor C-reactive protein. Assess for decreased pain, swollen joints, stiffness.

PATIENT/FAMILY TEACHING

- Notify physician if persistent fever, cough, abdominal pain, swelling of ankles/feet occur.

insulin

TOP 200 HIGH ALERT

in-su-lin

Rapid-acting: INSULIN ASPART: (Novolog), **INSULIN GLULISINE:** (Apidra), **INSULIN LISPRO:** (Humalog)

Short-acting: REGULAR INSULIN: (Humulin R, Novolin R)

Intermediate-acting: NPH: (Humulin N, Novolin N)

Long-acting: INSULIN DETEMIR: (Levemir), **INSULIN GLARGINE:** (Lantus)

Do not confuse Novolog with Humalog or Novolin.

FIXED-COMBINATION(S)

Humalog Mix 75/25: lispro suspension 75% and lispro solution 25%. **Humulin Mix 50/50:** NPH 50% and regular 50%. **Humulin 70/30, Novolin 70/30:** NPH 70% and rapid-acting regular 30%. **Novolog Mix 70/30:** aspart suspension 70% and aspart solution 30%.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Exogenous insulin. **CLINICAL:** Antidiabetic (see p. 42C).

ACTION

Facilitates passage of glucose, potassium, magnesium across cellular membranes of skeletal/cardiac muscle, adipose tissue. Controls storage, metabolism of carbohydrates, protein, fats. Promotes conversion of glucose to glycogen in liver. **Therapeutic Effect:** Controls glucose levels in diabetic pts.

PHARMACOKINETICS

Rapid-Acting

	Onset (min)	Peak (hrs)	Duration (hrs)
Aspart (Novolog)	10–20	1–3	3–5
Glulisine (Apidra)	10–15	1–1.5	3–5
Lispro (Humalog)	15–30	0.5–2.5	3–6.5

Short-Acting

	Onset (min)	Peak (hrs)	Duration (hrs)
Regular (Humulin R)	30–60	1–5	6–10
Regular (Novolin R)	30–60	1–5	6–10

Intermediate-Acting

	Onset (hrs)	Peak (hrs)	Duration (hrs)
NPH (Humulin N)	1–2	6–14	16–24+
NPH (Novolin N)	1–2	6–14	16–24+

Long-Acting

	Onset (hrs)	Peak (hrs)	Duration (hrs)
Detemir (Levemir)	0.8–2	Relatively flat	12 (0.2 units/kg)

I

	Onset (hrs)	Peak (hrs)	Duration (hrs)
			24 (0.4 units/kg)
Glargine (Lantus)	1.1	No peak	24

USES

Treatment of insulin-dependent type 1 diabetes mellitus; non–insulin-dependent type 2 diabetes mellitus (NIDDM) when diet and weight control therapy have failed to maintain satisfactory serum glucose levels or in event of pregnancy, surgery, trauma, infection, fever, severe renal, hepatic, endocrine dysfunction. Regular insulin used for emergency treatment of ketoacidosis, to promote passage of glucose across cell membrane in hyperalimentation, to facilitate intracellular shift of potassium in hyperkalemia. **OFF-LABEL: Insulin aspart, insulin lispro, insulin regular:** Gestational diabetes, mild to moderate diabetic ketoacidosis, mild to moderate hyperosmolar hyperglycemic state. **Insulin NPH:** Gestational diabetes.

PRECAUTIONS

Contraindications: Hypersensitivity, hypoglycemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Insulin is drug of choice for diabetes in pregnancy; close medical supervision is needed. Following delivery, insulin needs may drop for 24–72 hrs, then rise to pre-pregnancy levels. Not distributed in breast milk; lactation may decrease insulin requirements. **Pregnancy Category B:** Aspart, Lispro, Regular, NPH; **Pregnancy Category C:** Detemir, Glargine, Glulisine. **Children:** No age-related precautions noted. **Elderly:** Decreased vision, fine motor tremors may lead to inaccurate self-dosing.

INTERACTIONS

DRUG: Alcohol may increase risk of hypoglycemia. **Beta-adrenergic blockers** may alter effects; may mask signs, prolong periods of hypoglycemia. **Glucocorticoids, thiazide diuretics** may increase serum glucose. **HERBAL: Garlic, ginger, ginseng** may increase risk of hypoglycemia. **FOOD:** None known. **LAB VALUES:** May decrease serum magnesium, phosphate, potassium.

AVAILABILITY

Rapid-Acting

Aspart (Novolog): 100 units/ml vial, 3 ml cartridge, 3 ml Flex-Pen. **Glulisine (Apidra):** 100 units/ml vial, 3 ml cartridge. **Lispro (Humalog):** 100 units/ml vial, 3 ml cartridge, 3 ml pen.

Short-Acting

Regular (Humulin R): 100 units/ml vial. **Regular (Novolin R):** 100 units/ml vial, 3 ml cartridge, 3 ml Innolet prefilled syringe.

Intermediate-Acting

NPH (Humulin N): 100 units/ml vial, 3 ml pen. **NPH (Novolin N):** 100 units/ml vial, 3 ml cartridge, 3 ml Innolet prefilled syringe.

Long-Acting

Detemir (Levemir): 100 units/ml vial, 3 ml Flex-Pen. **Glargine (Lantus):** 100 units/ml vial, 3 ml cartridge.

Intermediate- and Short-Acting Mixtures

Humulin 50/50, Humulin 70/30, Humalog Mix 75/25, Humalog Mix 50/50, Novolin 70/30, Novolog Mix 70/30.

ADMINISTRATION/HANDLING

IV (Regular and Insulin Glulisine [Apidra])

• Use only if solution is clear. • May give undiluted.

Rapid-Acting

Aspart (Novolog) • May give subcutaneous, IV infusion. • Can mix with NPH

(draw aspart into syringe first; inject immediately after mixing). • After first use, stable at room temperature for 28 days. • Administer 5–10 min before meals.

Glulisine (Apidra) • May mix with NPH (draw glulisine into syringe first; inject immediately after mixing). • After first use, stable at room temperature for 28 days. • Administer 15 min before or within 20 min after starting a meal.

Lispro (Humalog) • For subcutaneous use only. • May mix with NPH. Stable for 28 days at room temperature; syringe is stable for 14 days if refrigerated. • After first use, stable at room temperature for 28 days. • Administer 15 min before or immediately after meals.

Short-Acting

Regular (Humulin R, Novolin R) • May give subcutaneous, IM, IV. • May mix with NPH for immediate use or for storage for future use. Stable for 1 mo at room temperature, 3 mos if refrigerated. • Can mix with Sterile Water for Injection or 0.9% NaCl. • After first use, stable at room temperature for 28 days. • Administer 30 min before meals.

Intermediate-Acting

NPH (Humulin N, Novolin N) • For subcutaneous use only. • May mix with aspart (Novolog) or lispro (Humalog). Draw aspart or lispro first and use immediately. • May mix with regular (Humulin R, Novolin R) insulin. Draw regular insulin first, use immediately or may store for future use (up to 28 days). • After first use, stable at room temperature for 28 days. • Administer 15 min before meals when mixed with aspart or lispro; 30 min before meals when mixed with regular.

Long-Acting

Detemir (Levemir) • For subcutaneous use only. • Do not mix with other insulins. • After first use, stable at room temperature for 42 days. • Evening dose given at dinner or at bedtime. Twice-daily regimens can be given 12 hrs after morning dose.

Glargine (Lantus) • For subcutaneous use only. • Do not mix with other insulins. • After first use, stable at room temperature for 28 days. • Administer once daily at same time. Meal timing is not applicable.

Subcutaneous

• Check serum glucose concentration before administration; dosage highly individualized. • Subcutaneous injections may be given in thigh, abdomen, upper arm, buttocks, upper back if there is adequate adipose tissue. • Rotation of injection sites is essential; maintain careful record. • Prefilled syringes should be stored in vertical or oblique position to avoid plugging; plunger should be pulled back slightly and syringe rocked to remix solution before injection.

IV INCOMPATIBILITIES

Diltiazem (Cardizem), dopamine (Intropin), nafcillin (Nafcil).

IV COMPATIBILITIES

Amiodarone (Cordarone), ampicillin/sulbactam (Unasyn), cefazolin (Ancef), cimetidine (Tagamet), digoxin (Lanoxin): (physically compatible for 3 hrs in 0.9% NaCl; in D_5W, water, a slight haze develops within 1 hr), dobutamine (Dobutrex), famotidine (Pepcid), gentamicin, heparin, magnesium sulfate, metoclopramide (Reglan), midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, potassium chloride, propofol (Diprivan), vancomycin (Vancocin).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

◄ALERT► Adjust dosage to achieve premeal and bedtime serum glucose of 80–140 mg/dl (children younger than 5 yrs: 100–200 mg/dl).

Subcutaneous: ADULTS, ELDERLY, CHILDREN: 0.5–1 unit/kg/day. **ADOLESCENTS (DURING GROWTH SPURT):** 0.8–1.2 units/kg/day.

Diabetic Ketoacidosis
IV: ADULTS, ELDERLY: 0.1 unit/kg/hr. Titration based on serum glucose level.

SIDE EFFECTS

Occasional: Localized redness, swelling, itching (due to improper insulin injection technique), allergy to insulin cleansing solution. **Infrequent:** Somogyi effect (rebound hyperglycemia) with chronically excessive insulin dosages. Systemic allergic reaction (rash, angioedema, anaphylaxis), lipodystrophy (depression at injection site due to breakdown of adipose tissue), lipohypertrophy (accumulation of subcutaneous tissue at injection site due to inadequate site rotation). **Rare:** Insulin resistance.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe hypoglycemia (due to hyperinsulinism) may occur with insulin overdose, decrease/delay of food intake, excessive exercise, those with brittle diabetes. Diabetic ketoacidosis may result from stress, illness, omission of insulin dose, long-term poor insulin control.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose level. Discuss lifestyle to determine extent of learning, emotional needs.

INTERVENTION/EVALUATION

Assess for hypoglycemia (refer to pharmacokinetics table for peak times and duration): cool, wet skin; tremors; dizziness; headache; anxiety; tachycardia; numbness in mouth; hunger; diplopia. Assess sleeping pt for restlessness, diaphoresis. Check for hyperglycemia: polyuria (excessive urine output), polyphagia (excessive food intake), polydipsia (excessive thirst), nausea/vomiting, dim vision, fatigue, deep and rapid breathing (Kussmaul respirations). Be alert to conditions altering glucose requirements: fever, trauma, increased activity/stress, surgical procedure.

PATIENT/FAMILY TEACHING

• Instruct on proper technique for drug administration, testing of glucose, signs/symptoms of hypoglycemia and hyperglycemia. • Prescribed diet is an essential part of treatment; do not skip/delay meals. • Carry candy, sugar packets, other sugar supplements for immediate response to hypoglycemia. • Wear or carry medical alert identification. • Check with physician when insulin demands are altered (e.g., fever, infection, trauma, stress, heavy physical activity). • Do not take other medication without consulting physician. • Weight control, exercise, hygiene (including foot care), not smoking are integral parts of therapy. • Protect skin, limit sun exposure. • Inform dentist, physician, surgeon of medication before any treatment is given.

interferon alfa-2b HIGH ALERT

in-ter-**feer**-on
(Intron-A)

BLACK BOX ALERT May cause or aggravate fatal or life-threatening autoimmune disorders, ischemia, neuropsychiatric symptoms (profound depression, suicidal thoughts/behaviors), infectious disorders.

Do not confuse interferon alfa-2b with interferon alfa-2a, interferon alfa-n3, or peginterferon alfa-2b, or Intron with Peg-Intron.

FIXED-COMBINATION(S)

Rebetron: interferon alfa-2b/ribavirin (an antiviral): 3 million units/200 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic response modifier. **CLINICAL:** Antineoplastic (see p. 84C).

ACTION

Inhibits viral replication in virus-infected cells, suppresses cell proliferation, aug-

ments specific cytotoxicity of lymphocytes. **Therapeutic Effect:** Prevents rapid growth of malignant cells; inhibits hepatitis virus.

PHARMACOKINETICS

Well absorbed after IM, subcutaneous administration. Undergoes proteolytic degradation during reabsorption in kidneys. **Half-life:** 2–3 hrs.

USES

Treatment of hairy cell leukemia, condylomata acuminata (genital, venereal warts), AIDS-related Kaposi's sarcoma, chronic hepatitis C (including children 3 yrs of age and older), chronic hepatitis B (including children 1 yr and older), follicular non-Hodgkin's lymphoma. **OFF-LABEL:** Treatment of bladder, cervical, renal carcinoma; chronic myelocytic leukemia; laryngeal papillomatosis; multiple myeloma; cutaneous T-cell lymphoma; mycosis fungoides; West Nile virus.

PRECAUTIONS

Contraindications: Decompensated liver disease, autoimmune hepatitis. **Cautions:** Renal/hepatic impairment, seizure disorder, compromised CNS function, cardiac diseases, history of cardiac abnormalities, myelosuppression, pulmonary impairment, multiple sclerosis, diabetes, thyroid disease, coagulopathy, hypertension, preexisting eye disorders.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy. Breast-feeding not recommended. **Pregnancy Category C (X in combination with ribavirin). Children:** Safety and efficacy not established. **Elderly:** Neurotoxicity, cardiotoxicity may occur more frequently. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase PT, aPTT, LDH, alkaline phosphatase, AST, ALT. May decrease Hgb, Hct, leukocyte, platelet counts.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 10 million units, 18 million units, 50 million units. **Injection, Solution (Multidose Prefilled Pen):** 3 million units/0.2 ml (6 doses-18 million units), 5 million units/0.2 ml (6 doses-30 million units), 10 million units/0.2 mg (6 doses-60 million units). **Injection, Solution (Multidose Vial):** 6 million units/ml, 10 million units/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Prepare immediately before use. • Reconstitute with diluent provided by manufacturer. • Withdraw desired dose and further dilute with 100 ml 0.9% NaCl to provide final concentration of at least 10 million international units/100 ml.

Rate of Administration • Administer over 20 min.

Storage • Refrigerate unopened vials. • Following reconstitution, stable for 24 hrs if refrigerated.

IM, Subcutaneous

• **IM:** Administer in evening (if possible). • **Subcutaneous:** Reconstitute with recommended amount of Sterile Water for Injection. Agitate gently; do not shake.

IV INCOMPATIBILITIES

D_5W. Do not mix with other medications via Y-site administration.

IV COMPATIBILITY

0.9% NaCl, lactated Ringer's.

INDICATIONS/ROUTES/DOSAGE

Hairy Cell Leukemia

IM, Subcutaneous: ADULTS: 2 million units/m^2 3 times a wk for 2–6 mos. If severe adverse reactions occur, modify dose or temporarily discontinue drug.

Condylomata Acuminata

Intralesional: ADULTS: 1 million units/lesion 3 times a wk for 3 wks. May administer a 2nd course at 12–16 wks. Use only 10-million-unit vial, and reconstitute with no more than 1 ml diluent. **Maximum:** 5 lesions per treatment.

AIDS-Related Kaposi's Sarcoma

IM, Subcutaneous: ADULTS: 30 million units/m^2 3 times a wk. Use only 50-million-unit vials. If severe adverse reactions occur, modify dose or temporarily discontinue drug.

Chronic Hepatitis C

IM, Subcutaneous: ADULTS: 3 million units 3 times a wk for up to 6 mos. For pts who tolerate therapy and whose ALT level normalizes within 16 wks, therapy may be extended for up to 18–24 mos. May be used in combination with ribavirin. **CHILDREN, 3–17 YRS:** 3–5 million units/m^2 3 times/wk.

Chronic Hepatitis B

IM, Subcutaneous: ADULTS: 30–35 million units weekly, either as 5 million units/day or 10 million units 3 times a wk for 16 wks.

Subcutaneous: CHILDREN 1–17 YRS: 3 million units/m^2 3 times/wk for 1 wk, then 6 million units/m^2 3 times/wk for 16–24 wks. **Maximum:** 10 million units 3 times/wk.

Malignant Melanoma

IV: ADULTS: Initially, 20 million units/m^2 5 times a wk for 4 wks. Maintenance: 10 million units subcutaneously 3 times a wk for 48 wks.

Follicular Non-Hodgkin's Lymphoma

Subcutaneous: ADULTS: 5 million units 3 times a wk for up to 18 mos.

SIDE EFFECTS

Frequent: Flu-like symptoms (fever, fatigue, headache, myalgia, anorexia, chills), rash (hairy cell leukemia, Kaposi's sarcoma only). **Pts with Kaposi's sarcoma:** All previously mentioned side effects plus depression, dyspepsia, dry mouth or thirst, alopecia, rigors. **Occasional:** Dizziness, pruritus, dry skin, dermatitis, altered taste. **Rare:** Confusion, leg cramps, back pain, gingivitis, flushing, tremor, anxiety, eye pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reactions occur rarely. Severe flu-like symptoms appear dose-related.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, platelet count, blood chemistries, urinalysis, renal/hepatic function tests, Hgb, Hct should be performed before initial therapy and routinely thereafter.

INTERVENTION/EVALUATION

Offer emotional support. Monitor all levels of clinical function (numerous side effects). Encourage ample fluid intake, particularly during early therapy. Monitor for worsening depression, suicidal ideation, associated behaviors.

PATIENT/FAMILY TEACHING

• Clinical response occurs in 1–3 mos. • Flu-like symptoms tend to diminish with continued therapy. • Some symptoms may be alleviated or minimized by bedtime doses. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Avoid tasks that require alertness, motor skills until response to drug is established. • Sips of tepid water may relieve dry mouth. • Notify physician if depression, thoughts of suicide, unusual behavior occur.

interferon beta-1a

in-ter-**feer**-on
(Avonex, Rebif)

Do not confuse Avonex with Avelox, or interferon beta-1a with interferon beta-1b.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic response modifier. **CLINICAL:** Multiple sclerosis agent.

ACTION

Interacts with specific cell receptors found on surface of cells. **Therapeutic Effect:** Produces antiviral, immunoregulatory effects.

PHARMACOKINETICS

Peak serum levels attained 3–15 hrs after IM administration. Biologic markers increase within 12 hrs and remain elevated for 4 days. **Half-life:** 10 hrs (Avonex); 69 hrs (Rebif).

USES

Treatment of relapsing multiple sclerosis to slow progression of physical disability, decrease frequency of clinical exacerbations.

PRECAUTIONS

Contraindications: Hypersensitivity to natural or recombinant interferon, human albumin. **Cautions:** Chronic progressive multiple sclerosis, children younger than 18 yrs, depression, severe psychiatric disorders, hepatic impairment, alcohol abuse, cardiovascular disease, seizure disorders, myelosuppression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has abortifacient potential. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No information available.

INTERACTIONS

DRUG: **Alcohol, hepatotoxic drugs** may increase risk of hepatic injury. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, BUN, alkaline phosphatase, bilirubin, calcium, AST, ALT. May decrease Hgb, neutrophil, platelet, WBC counts.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Avonex): 30 mcg. **Injection Solution (Prefilled Syringe):** 22 mcg/0.5 ml (Rebif), 30 mcg/0.5 ml (Avonex Prefilled Syringe), 44 mcg/0.5 ml (Rebif). **Titration Pack (Prefilled Syringe [Rebif]):** 8.8 mcg/0.2 ml, 22 mcg/0.5 ml.

ADMINISTRATION/HANDLING

IM (Avonex) Syringe

• Refrigerate syringe. • Allow to warm to room temperature before use. • May store up to 7 days at room temperature.

IM (Avonex) Vial

• Refrigerate vials (may store at room temperature up to 30 days). • Following reconstitution, may refrigerate again but use within 6 hrs if refrigerated. • Reconstitute 30-mcg *MicroPin* (6.6 million international units) vial with 1.1 ml diluent (supplied by manufacturer). • Gently swirl to dissolve medication; do not shake. • Discard if discolored or particulate forms. • Discard unused portion (contains no preservative).

Subcutaneous (Rebif)

• Refrigerate. May store at room temperature up to 30 days. Avoid heat, light. • Administer at same time of day 3 days each wk. Separate doses by at least 48 hrs.

INDICATIONS/ROUTES/DOSAGE

Relapsing Multiple Sclerosis

IM *(Avonex)*: ADULTS: 30 mcg once weekly.

Subcutaneous *(Rebif)*: ADULTS: (Target dose 44 mcg 3 times a wk): Initially, 8.8 mcg 3 times a wk for 2 wks, then 22 mcg 3 times a wk for 2 wks, then 44 mcg 3 times a wk thereafter. **(Target dose 22 mcg 3 times a wk):** Initially, 4.4 mcg 3 times a wk for 2 wks, then 11

mcg 3 times a wk for 2 wks, then 22 mcg 3 times a wk thereafter.

Dosage in Hepatic Impairment (Rebif)
Increased hepatic function test results, leukopenia: Decrease dose 20%–50% until toxicity resolves.

SIDE EFFECTS

Frequent: Headache (67%), flu-like symptoms (61%), myalgia (34%), upper respiratory tract infection (31%), depression with suicidal ideation (25%), generalized pain (24%), asthenia (loss of strength, energy), chills (21%), sinusitis (18%), infection (11%). **Occasional:** Abdominal pain, arthralgia (9%), chest pain, dyspnea (6%), malaise, syncope (4%). **Rare:** Injection site reaction, hypersensitivity reaction (3%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Anemia occurs in 8% of pts. Hepatic failure has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain Hgb, CBC, platelet count, blood chemistries including hepatic function tests. Assess home situation for support of therapy.

INTERVENTION/EVALUATION

Assess for headache, flu-like symptoms, myalgia. Periodically monitor lab results, re-evaluate injection technique. Assess for depression, suicidal ideation.

PATIENT/FAMILY TEACHING

• Do not change schedule, dosage without consulting physician. • Follow guidelines for reconstitution of product and administration, including aseptic technique. • Use puncture-resistant container for used needles, syringes; dispose of used needles, syringes properly. • Injection site reactions may occur. These do not require discontinuation of therapy, but type and extent should be carefully noted.

interferon beta-1b

in-ter-**feer**-on
(Betaseron, Extavia)
Do not confuse interferon beta-1b with interferon beta-1a.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic response modifier. **CLINICAL:** Multiple sclerosis agent.

ACTION

Interacts with specific cell receptors found on surface of cells. **Therapeutic Effect:** Produces antiviral, immunoregulatory effects.

PHARMACOKINETICS

Slowly absorbed following subcutaneous administration. **Half-life:** 8 min–4.3 hrs.

USES

Reduces frequency of clinical exacerbations in pts with relapsing-remitting multiple sclerosis (recurrent attacks of neurologic dysfunction). Treatment of early stages of multiple sclerosis.

PRECAUTIONS

Contraindications: Hypersensitivity to albumin, *Escherichia coli*–derived products, interferon. **Cautions:** Chronic progressive multiple sclerosis, children younger than 18 yrs, severe psychiatric disorders, hepatic/renal impairment, alcohol abuse, cardiovascular disease, seizure disorders, myelosuppression, pulmonary disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No information available.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VAL-**

UES: May increase bilirubin, AST, ALT. May decrease neutrophil, lymphocyte, WBC counts.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 0.3 mg (9.6 million units).

ADMINISTRATION/HANDLING

Subcutaneous

• Store vials at room temperature. • After reconstitution, stable for 3 hrs if refrigerated. • Use within 3 hrs of reconstitution. • Discard if discolored or precipitate forms. • Reconstitute 0.3-mg (9.6 million international units) vial with 1.2 ml diluent (supplied by manufacturer) to provide concentration of 0.25 mg/ml (8 million units/ml). • Gently swirl to dissolve medication; do not shake. • Withdraw 1 ml solution and inject subcutaneous into arms, abdomen, hips, thighs using 27-gauge needle. • Discard unused portion (contains no preservative).

INDICATIONS/ROUTES/DOSAGE

Relapsing-Remitting Multiple Sclerosis

Subcutaneous: ADULTS: Initially, 0.0625 mg (2 million units) every other day; gradually increase by 0.0625 mg every 2 wks. Target dose: 0.25 mg (8 million units) every other day.

SIDE EFFECTS

Frequent: Injection site reaction (85%), headache (84%), flu-like symptoms (76%), fever (59%), asthenia (loss of strength, energy) (49%), myalgia (44%), sinusitis (36%), diarrhea, dizziness (35%), altered mental status (29%), constipation (24%), diaphoresis (23%), vomiting (21%). **Occasional:** Malaise (15%), drowsiness (6%), alopecia (4%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Seizures occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain Hgb, CBC, platelet count, blood chemistries (including hepatic function tests). Assess home situation for support of therapy.

INTERVENTION/EVALUATION

Periodically monitor lab results, re-evaluate injection technique. Assess for nausea (high incidence). Monitor sleep pattern. Monitor daily pattern of bowel activity, stool consistency. Assist with ambulation if dizziness occurs. Monitor food intake.

PATIENT/FAMILY TEACHING

• Inform physician of flu-like symptoms (occur commonly but decrease over time). • Wear sunscreen, protective clothing if exposed to sunlight, ultraviolet light until tolerance known.

interferon gamma-1b

in-ter-**feer**-on
(Actimmune)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic response modifier. **CLINICAL:** Immunologic agent.

ACTION

Induces activation of macrophages in blood monocytes to phagocytes (necessary in cellular immune response to intracellular, extracellular pathogens). Enhances phagocytic function, antimicrobial activity of monocytes. **Therapeutic Effect:** Decreases signs/symptoms of serious infections in chronic granulomatous disease.

PHARMACOKINETICS

Slowly absorbed after subcutaneous administration. **Half-life:** 3–6 hrs.

USES

Reduces frequency, severity of serious infections due to chronic granulomatous disease. Delays time to disease progression in pts with severe, malignant osteopetrosis.

PRECAUTIONS

Contraindications: Hypersensitivity to *Escherichia coli*–derived products. **Cautions:** Seizure disorders, compromised CNS function, preexisting cardiac disease (e.g., ischemia, CHF, arrhythmias), hepatic disease, myelosuppression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 1 yr. Flu-like symptoms may occur more frequently. **Elderly:** No information available.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, LDH, triglycerides, cortisol concentrations. May decrease leukocytes, neutrophils, platelets.

AVAILABILITY (Rx)

Injection Solution: 100 mcg/0.5 ml (2 million units).

ADMINISTRATION/HANDLING

◀ALERT▶ Avoid excessive agitation of vial; do not shake.

Subcutaneous

• Refrigerate vials. Do not freeze. • Do not keep at room temperature for more than 12 hrs; discard after 12 hrs. • Vials are single dose; discard unused portion. • Solution is clear, colorless. Do not use if discolored or precipitate forms. • When given 3 times a wk, rotate injection sites.

INDICATIONS/ROUTES/DOSAGE

Chronic Granulomatous Disease; Severe, Malignant Osteopetrosis

Subcutaneous: ADULTS, ELDERLY, CHILDREN OLDER THAN 1 YR: 50 mcg/m^2 (1 million units/m^2) in pts with body surface area (BSA) greater than 0.5 m^2; 1.5 mcg/kg/dose in pts with BSA 0.5 m^2 or less. Give 3 times a wk.

SIDE EFFECTS

Frequent: Fever (52%), headache (33%), rash (17%), chills, fatigue, diarrhea (14%). **Occasional (13%–10%):** Vomiting, nausea. **Rare (6%–3%):** Weight loss, myalgia, anorexia.

ADVERSE EFFECTS/ TOXIC REACTIONS

May exacerbate preexisting CNS dysfunction (manifested as decreased mental status, gait disturbance, dizziness), cardiac abnormalities.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, platelet count, blood chemistries, urinalysis, renal/hepatic function tests should be performed before initial therapy and at 3-mo intervals during course of treatment.

INTERVENTION/EVALUATION

Monitor for flu-like symptoms (fever, chills, fatigue, myalgia). Assess skin for evidence of rash.

PATIENT/FAMILY TEACHING

• Flu-like symptoms (fever, chills, fatigue, muscle aches) are generally mild and tend to disappear as treatment continues. Symptoms may be minimized with bedtime administration. • Avoid tasks that require alertness, motor skills until response to drug is established. • If home use prescribed, follow guidelines for proper technique of administration; care in proper disposal of needles, syringes. • Vials should remain refrigerated.

interleukin-2 (aldesleukin)

HIGH ALERT

in-ter-**loo**-kin
(IL-2, Proleukin)

BLACK BOX ALERT High-dose therapy is associated with capillary leak syndrome resulting in significant hypotension and reduced organ perfusion. Use restricted to pts with normal cardiac/pulmonary function. Increased risk of disseminated infection (sepsis, bacterial endocarditis). Withhold treatment for pts developing moderate-to-severe lethargy or drowsiness (continued treatment may result in coma). Must be administered by personnel trained in administration/handling of chemotherapeutic agents.

Do not confuse aldesleukin with oprelvekin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic response modifier. **CLINICAL:** Antineoplastic (see p. 79C).

ACTION

Promotes proliferation, differentiation, recruitment of T and B cells, lymphokine-activated and natural killer cells, thymocytes. **Therapeutic Effect:** Enhances cytolytic activity in lymphocytes.

PHARMACOKINETICS

Primarily distributed into plasma, lymphocytes, lungs, liver, kidney, spleen. Metabolized to amino acids in cells lining the kidneys. **Half-life:** 80–120 min.

USES

Treatment of metastatic renal cell carcinoma, metastatic melanoma. **OFF-LABEL:** Treatment of AML.

PRECAUTIONS

Contraindications: Abnormal pulmonary function or thallium stress test results, bowel ischemia or perforation, coma or toxic psychosis lasting longer than 48 hrs, GI bleeding requiring surgery, intubation lasting more than 72 hrs, organ allografts, pericardial tamponade, renal dysfunction requiring dialysis for longer than 72 hrs, repetitive or difficult-to-control seizures; retreatment in those who experience any of the following toxicities: angina, MI, recurrent chest pain with EKG changes, sustained ventricular tachycardia, uncontrolled or unresponsive cardiac rhythm disturbances. **Extreme Caution:** Pts with normal thallium stress tests and pulmonary function tests who have history of cardiac or pulmonary disease. **Cautions:** Pts with fixed requirements for large volumes of fluid (e.g., those with hypercalcemia), history of seizures, renal/hepatic impairment, autoimmune disease, inflammatory disorders.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid use in those of either sex not practicing effective contraception. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment; will not tolerate toxicity.

INTERACTIONS

DRUG: Antihypertensives may increase hypotensive effect. **Cardiotoxic, hepatotoxic, myelotoxic, nephrotoxic medications** may increase risk of toxicity. **Glucocorticoids** may decrease effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, AST, ALT. May decrease serum calcium, magnesium, phosphorus, potassium, sodium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Proleukin): 22 million units (1.3 mg) (18 million units/ml = 1.1 mg/ml when reconstituted).

ADMINISTRATION/HANDLING

◀ALERT▶ Hold administration in pts who develop moderate to severe lethargy

I

or drowsiness (continued administration may result in coma).

IV

Reconstitution • Reconstitute 22 million units vial with 1.2 ml Sterile Water for Injection to provide concentration of 18 million units/ml (1.1 mg/ml). Bacteriostatic Water for Injection or NaCl should not be used to reconstitute because of increased aggregation. • During reconstitution, direct Sterile Water for Injection at the side of vial. Swirl contents gently to avoid foaming. Do not shake.

Rate of Administration • Further dilute dose in 50 ml D_5W to a final concentration between 0.49 and 1.1 million international units/ml (30–70 mcg/ml) and infuse over 15 min. Do not use an in-line filter. • Solution should be warmed to room temperature before infusion. • Monitor diligently for drop in mean arterial B/P (sign of capillary leak syndrome [CLS]). Continued treatment may result in significant hypotension (less than 90 mm Hg or a 20 mm Hg drop from baseline systolic pressure), edema, pleural effusion, altered mental status.

Storage • Refrigerate vials; do not freeze. • Reconstituted solution is stable for 48 hrs refrigerated or at room temperature (refrigeration preferred).

IV INCOMPATIBILITIES

Ganciclovir (Cytovene), pentamidine (Pentam), prochlorperazine (Compazine), promethazine (Phenergan).

IV COMPATIBILITIES

Calcium gluconate, dopamine (Intropin), heparin, lorazepam (Ativan), magnesium, potassium.

INDICATIONS/ROUTES/DOSAGE

Metastatic Melanoma, Metastatic Renal Cell Carcinoma

IV: ADULTS 18 YRS AND OLDER: 600,000 units/kg q8h for 14 doses; followed by 9 days of rest, then another 14 doses for a total of 28 doses per course. Course may be repeated after rest period of at least 7 wks from date of hospital discharge.

SIDE EFFECTS

Side effects are generally self-limited and resolve within 2–3 days after discontinuing therapy. **Frequent (89%–48%):** Fever, chills, nausea, vomiting, hypotension, diarrhea, oliguria/anuria, altered mental status, irritability, confusion, depression, sinus tachycardia, pain (abdominal, chest, back), fatigue, dyspnea, pruritus. **Occasional (47%–17%):** Edema, erythema, rash, stomatitis, anorexia, weight gain, infection (UTI, injection site, catheter tip), dizziness. **Rare (15%–4%):** Dry skin, sensory disorders (vision, speech, taste), dermatitis, headache, arthralgia, myalgia, weight loss, hematuria, conjunctivitis, proteinuria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anemia, thrombocytopenia, leukopenia occur commonly. GI bleeding, pulmonary edema occur occasionally. Capillary leak syndrome (CLS) results in hypotension (systolic pressure less than 90 mm Hg or a 20 mm Hg drop from baseline systolic pressure), extravasation of plasma proteins and fluid into extravascular space, loss of vascular tone. May result in cardiac arrhythmias, angina, MI, respiratory insufficiency. Fatal malignant hyperthermia, cardiac arrest, CVA, pulmonary emboli, bowel perforation/gangrene, severe depression leading to suicide occur in less than 1% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pts with bacterial infection and with indwelling central lines should be treated with antibiotic therapy before treatment begins. All pts should be neurologically stable with a negative CT scan before treatment begins. CBC, blood chemistries (including electrolytes), renal/hepatic function tests, chest X-ray should be per-

formed before therapy begins and daily thereafter.

INTERVENTION/EVALUATION

Monitor CBC with differential, platelets, electrolytes, renal/hepatic function tests, weight, pulse oximetry. Determine serum amylase frequently during therapy. Discontinue medication at first sign of hypotension and hold for moderate to severe lethargy (physician must decide whether therapy should continue). Assess altered mental status (irritability, confusion, depression), weight gain/loss. Maintain strict I&O. Assess for extravascular fluid accumulation (rales in lungs, edema in dependent areas).

PATIENT/FAMILY TEACHING

• Nausea may decrease during therapy. • At home, increase fluid intake (protects against renal impairment). • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid exposure to persons with infection. • Contact physician if fever, chills, lower back pain, difficulty with urination, unusual bleeding/bruising, black tarry stools, blood in urine, petechial rash (pinpoint red spots on skin) occur. • Report symptoms of depression or suicidal ideation immediately.

ipilimumab

ip-i-**lim**-ue-mab
(Yervoy)

BLACK BOX ALERT Severe and fatal immune-mediated adverse reactions due to T-cell activation and proliferation are capable of involving any organ system. Specific reactions include enterocolitis, hepatitis, dermatitis, neuropathy, endocrinopathy. Majority of immune-mediated reactions may initially manifest during treatment or weeks to months after treatment. Permanently discontinue treatment and initiate high-dose corticosteroid therapy for severe immune-mediated adverse reactions. Assess all pts for signs/symptoms of enterocolitis, hepatitis, dermatitis (including toxic epidermal necrolysis), neuropathy, endocrinopathy and evaluate clinical chemistries including hepatic function tests and thyroid tests at baseline and before each treatment.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Human cytotoxic T-lymphocyte antigen 4 (CTLA-4)-blocking antibody. **CLINICAL:** Antineoplastic (see p. 84C).

ACTION

Augments T-cell activation and proliferation. Binds to cytotoxic T-lymphoctye-associated antigen 4 (CTLA-4) and blocks interaction of CTLA-4 with its ligands. **Therapeutic Effect:** Inhibits tumor cell growth.

PHARMACOKINETICS

Metabolized in liver. Steady state reached by third dose. **Half-life:** 14.7 days.

USES

Treatment of unresectable or metastatic melanoma.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment, chronic peripheral neuropathy, thyroid/adrenal/pituitary dysfunction, autoimmune disorders (ulcerative colitis, Crohn's disease, lupus, sarcoidosis).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. Must decide to discontinue either breast-feeding or drug regimen due to potential fetal harm. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, bilirubin, eosinophils.

AVAILABILITY (Rx)

Injection, Solution: 5 mg/ml (10 ml, 40 ml vials).

ADMINISTRATION/HANDLING

IV

ALERT Use sterile, nonpyrogenic, low protein-binding in-line filter. Use dedicated line only.

Reconstitution • Calculate number of vials needed for injection. • Inspect for particulate matter or discoloration. • Allow vials to stand at room temperate for approximately 5 min. • Withdraw proper volume and transfer to infusion bag. Dilute in NaCl or D_5W with final concentration ranging from 1–2 mg/ml. Mix diluted solution by gentle inversion. Do not shake or agitate.

Rate of Administration • Infuse over 90 min.

Storage • Solution should be translucent to white or pale yellow with amorphous particles. • Discard vial if cloudy or has pronounced discoloration. • Refrigerate vials until time of use. • May store diluted solution either under refrigeration or at room temperature for no more than 24 hrs.

INDICATIONS/ROUTES/DOSAGE

Metastatic Melanoma

IV: ADULTS: 3 mg/kg q3wks for 4 doses.

ALERT Pts who are presenting with severe immune-mediated adverse reactions must immediately discontinue drug therapy and start prednisone 1 mg/kg/day.

Dosage Modification: Hold scheduled dose for moderate immune-mediated adverse reactions. Pts with complete or partial resolution of adverse reactions and who are receiving less than 7.5 mg/day of prednisone may resume scheduled doses. Permanently discontinued for persistent moderate adverse reactions or inability to reduce corticosteroid dose to 7.5 mg/day, failure to complete full treatment course in 16 wks, any severe or life-threatening adverse reactions.

SIDE EFFECTS

Frequent (42%): Fatigue. **Occasional (32%–29%):** Diarrhea, pruritus, rash, colitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe and fatal immune-mediated adverse reactions have occurred. Enterocolitis (7% of pts) may present with fever, ileus, abdominal pain, GI bleeding, intestinal perforation, severe dehydrating diarrhea. Endocrinopathy (4% of pts), including hypopituitarism, adrenal insufficiency, hypogonadism, hypothyroidism may present with fatigue, headache, mental status change, unusual bowel habits, hypotension and may require emergent hormone replacement therapy. Dermatitis including toxic epidermal necrolysis (2% of pts) may present with full-thickness ulceration or necrotic, bullous, hemorrhagic manifestations. Hepatotoxicity (1% of pts), defined as hepatic function tests greater than 2.5–5 times upper normal limit, may present with right upper abdominal pain, jaundice, black/tarry stools, bruising, dark-colored urine, nausea, vomiting. Neuropathy (1% of pts), including Guillain-Barré syndrome or myasthenia gravis, may present with weakness, sensory alterations, paresthesia, paralysis. Other serious adverse reactions such as pneumonitis, meningitis, nephritis, eosinophilia, pericarditis, myocarditis, angiopathy, temporal arteritis, vasculitis, polymyalgia rheumatica, conjunctivitis, blepharitis, episcleritis, scleritis, leukocytoclastic vasculitis, erythema multiforme, psoriasis, pancreatitis, arthritis, autoimmune thyroiditis reported. Anti-ipilimumab antibodies reported in 1.1% of pts. All severe immune-mediated adverse reactions require immediate high-dose corticoid steroid therapy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, CMP, hepatic panel, TSH, free T4, urine pregnancy. Screen for history of hepatic impairment, chronic

neuropathy, thyroid/adrenal/pituitary dysfunction, autoimmune disorders. Focused assessment relating to possible adverse reactions includes abdominal area (inspection, auscultation, percussion, palpation, bowel pattern, symmetry), skin (color, lesions, mucosal inspection, edema), neurologic (mental status, gait, numbness, tingling, pain, strength, visual acuity), hormonal glands (lymph node inspection/palpation, pyrexia, goiter, palpitations). Question possibility of pregnancy or plans of breast-feeding. Receive full medication history including vitamins, minerals, herbal products.

INTERVENTION/EVALUATION

Monitor vital signs, LFTs, thyroid panel before each dose. Continue focused assessment and screen for life-threatening immune-mediated adverse reactions, including dermatitis (rash, pruritis), neuropathy (weakness, sensory alterations), endocrinopathies (adrenal insufficiency, hypo- or hyperthyroidism). If adverse reactions occur, immediately notify physician and initiate proper treatment. Report suspected pregnancy. CBC, blood cultures for fever, suspected infection. EKG for palpitations, chest pain, difficulty breathing, dizziness. If prednisone therapy initiated, monitor capillary blood glucose and screen for side effects.

PATIENT/FAMILY TEACHING

• Inform pt that serious and fatal adverse reactions indicate inflammation to certain systems: intestines (diarrhea, dark/tarry stools, abdominal pain), liver (yellowing of the skin, dark-colored urine, right upper quadrant pain, bruising), skin (rash, mouth sores, blisters, ulcers), nerves (weakness, numbness, tingling, difficulty breathing, paralysis), hormonal glands (headaches, weight gain, palpitations, changes in mood or behavior, dizziness), eyes (blurry vision, double vision, eye pain/redness). • Prednisone therapy may be started if adverse reactions occur. • May cause fatal harm, stillbirth, premature delivery. • Blood levels will be drawn before each dose. • Report any chest pain, palpitations, fever, swollen glands, stomach pain, vomiting, or any sign of adverse reactions.

ipratropium

TOP 200

ip-ra-**troe**-pee-um
(Atrovent, Atrovent HFA, Novo-Ipramide, Nu-Ipratropium, PMS-Ipratropium)
Do not confuse Atrovent with Alupent or Serevent, or ipratropium with tiotropium.

FIXED-COMBINATION(S)

Combivent, DuoNeb: ipratropium/albuterol (a bronchodilator): *Aerosol:* 18 mcg/90 mcg per actuation. *Solution:* 0.5 mg/2.5 mg per 3 ml.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Bronchodilator (see p. 4C, 73C).

ACTION

Blocks action of acetylcholine at parasympathetic sites in bronchial smooth muscle. **Therapeutic Effect:** Causes bronchodilation, inhibits nasal secretions.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Inhalation	1–3 min	1.5–2 hrs	Up to 4 hrs
Nasal	5 min	1–4 hrs	4–8 hrs

Minimal systemic absorption after inhalation. Metabolized in liver (systemic absorption). Primarily eliminated in feces. **Half-life:** 1.5–4 hrs (nasal).

USES

Inhalation, Nebulization: Maintenance treatment of bronchospasm due to COPD, bronchitis, emphysema, asthma. Not to be used for immediate bronchospasm relief. **Nasal Spray:** Symptomatic relief of rhinorrhea associated with the

common cold and allergic and nonallergic rhinitis.

PRECAUTIONS

Contraindications: History of hypersensitivity to atropine. **Cautions:** Narrow-angle glaucoma, prostatic hypertrophy, bladder neck obstruction, myasthenia gravis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Anticholinergics, medications with anticholinergic properties may increase toxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Aerosol for Oral Inhalation (Atrovent HFA): 17 mcg/actuation. **Solution, Intranasal Spray:** 0.03%; 0.06%. **Solution for Nebulization:** 0.02% (500 mcg).

ADMINISTRATION/HANDLING

Inhalation

• Shake container well. • Instruct pt to exhale completely, place mouthpiece between lips, inhale deeply through mouth while fully depressing top of canister. Hold breath as long as possible before exhaling slowly. • Allow at least 1 minute between inhalations. • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness).

Nebulization

• May be administered with or without dilution in 0.9% NaCl. • Stable for 1 hr when mixed with albuterol. • Give over 5–15 min.

Nasal

• Store at room temperature. • Initial pump priming requires 7 actuations of pump. • If used regularly as recommended, no further priming is required. If not used for more than 4 hrs, pump will require 2 actuations, or if not used for more than 7 days, the pump will require 7 actuations to reprime.

INDICATIONS/ROUTES/DOSAGE

Bronchodilator for COPD

Inhalation: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 2 inhalations 4 times a day. **Maximum:** 12 inhalations/day.
Nebulization: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 500 mcg (one unit dose vial) 3–4 times a day (doses 6–8 hrs apart).

Asthma Exacerbation

Note: Should be given in combination with a short-acting beta-adrenergic agonist.
Inhalation: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 8 inhalations q20min as needed for up to 3 hrs. **CHILDREN 12 YRS OR LESS:** 4–8 inhalations q20min as needed for up to 3 hrs.
Nebulization: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 500 mcg q20min for 3 doses, then as needed. **CHILDREN 12 YRS OR LESS:** 250–500 mcg q20min for 3 doses, then as needed.

Rhinorrhea (Perennial Allergic/Nonallergic Rhinitis)

Intranasal *(0.03%)*: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 2 sprays per nostril 2–3 times a day.

Rhinorrhea (Common Cold)

Intranasal *(0.06%)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2 sprays per nostril 3–4 times a day for up to 4 days. **CHILDREN 5–11 YRS:** 2 sprays per nostril 3 times a day for up to 4 days.

Rhinorrhea (Seasonal Allergy)

Intranasal *(0.06%)*: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 2 sprays per nostril 4 times a day for up to 3 wks.

SIDE EFFECTS

Frequent: Inhalation (6%–3%): Cough, dry mouth, headache, nausea. **Nasal:**

Dry nose/mouth, headache, nasal irritation. **Occasional:** **Inhalation (2%):** Dizziness, transient increased bronchospasm. **Rare (less than 1%):** **Inhalation:** Hypotension, insomnia, metallic/unpleasant taste, palpitations, urinary retention. **Nasal:** Diarrhea, constipation, dry throat, abdominal pain, nasal congestion.

ADVERSE EFFECTS/ TOXIC REACTIONS

Worsening of angle-closure glaucoma, acute eye pain, hypotension occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support (high incidence of anxiety due to difficulty in breathing, sympathomimetic response to drug).

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality, rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Monitor ABGs. Observe lips, fingernails for cyanosis (blue or dusky color in light-skinned pts; gray in dark-skinned pts). Observe for retractions (clavicular, sternal, intercostal), hand tremor. Evaluate for clinical improvement (quieter, slower respirations, relaxed facial expression, cessation of retractions). Monitor for improvement of rhinorrhea.

PATIENT/ FAMILY TEACHING

• Increase fluid intake (decreases lung secretion viscosity). • Do not take more than 2 inhalations at any one time (excessive use may produce paradoxical bronchoconstriction, decreased bronchodilating effect). • Rinsing mouth with water immediately after inhalation may prevent mouth and throat dryness. • Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola, cocoa).

irbesartan

TOP 200

ir-be-**sar**-tan

(Avapro)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse Avapro with Anaprox.

FIXED-COMBINATION(S)

Avalide: irbesartan/hydrochlorothiazide (a diuretic): 150 mg/12.5 mg, 300 mg/12.5 mg, 300 mg/25 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive (see p. 10C).

ACTION

Blocks vasoconstrictor, aldosterone-secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT_1 receptors. **Therapeutic Effect:** Produces vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	—	1–2 hrs	Greater than 24 hrs

Rapidly, completely absorbed after PO administration. Protein binding: 90%. Undergoes hepatic metabolism to inactive metabolite. Recovered primarily in feces and, to a lesser extent, in urine. Not removed by hemodialysis. **Half-life:** 11–15 hrs.

USES

Treatment of hypertension alone or in combination with other antihypertensives. Treatment of diabetic nephropathy. **OFF-LABEL:** Slow rate of progression of aortic root dilation in children with Marfan's syndrome.

PRECAUTIONS

Contraindications: None known. **Cautions:** Impaired renal function, unstented unilateral or bilateral renal artery stenosis, sodium/water depletion.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. May cause fetal or neonatal morbidity or mortality. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Diuretics produce additive hypotensive effects. Potassium-sparing **diuretics, potassium supplements** may increase risk of hyperkalemia. **NSAIDs** may decrease antihypertensive effect. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May slightly increase BUN, serum creatinine. May decrease Hgb.

AVAILABILITY (Rx)

Tablets: 75 mg, 150 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: Initially, 75–150 mg/day. May increase to 300 mg/day. **CHILDREN 6–12 YRS:** Initially, 75 mg/day. May increase to 150 mg/day.

Nephropathy

PO: ADULTS, ELDERLY: Target dose of 300 mg once daily.

SIDE EFFECTS

Occasional (9%–3%): Upper respiratory tract infection, fatigue, diarrhea, cough. **Rare (2%–1%):** Heartburn, dizziness, headache, nausea, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may manifest as hypotension, syncope, tachycardia. Bradycardia occurs less often.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated. Question possibility of pregnancy (see Pregnancy Category). Assess medication history (esp. diuretic therapy).

INTERVENTION/EVALUATION

Maintain hydration (offer fluids frequently). Assess for evidence of upper respiratory infection. Assist with ambulation if dizziness occurs. Monitor electrolytes, renal/hepatic function tests, urinalysis, B/P, pulse. Assess for hypotension.

PATIENT/ FAMILY TEACHING

- Irbesartan may cause fetal or neonatal morbidity or mortality.
- Avoid tasks that require alertness, motor skills until response to drug is established (possible dizziness effect).
- Report any sign of infection (sore throat, fever).
- Avoid exercising during hot weather (risk of dehydration, hypotension).

irinotecan

eye-rin-**oh**-tee-kan
(Camptosar)

BLACK BOX ALERT Can induce both early and late forms of severe diarrhea. Early diarrhea (during or shortly after administration) accompanied by salivation, rhinitis, lacrimation, diaphoresis, flushing. Late diarrhea (occurring more than 24 hrs after administration) can be prolonged and life-threatening. May produce severe, profound myelosuppression.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: DNA topoisomerase inhibitor. **CLINICAL:** Antineoplastic (see p. 85C).

ACTION

Interacts with topoisomerase I, an enzyme that relieves torsional strain in DNA by inducing reversible single-strand breaks. Prevents religation of these single-stranded breaks resulting in damage to double-strand DNA, cell death. **Therapeutic Effect:** Produces cytotoxic effect on cancer cells.

PHARMACOKINETICS

Metabolized to active metabolite in liver after IV administration. Protein binding: 95% (metabolite). Excreted in urine and eliminated by biliary route. **Half-life:** 6–12 hrs; metabolite, 10–20 hrs.

USES

Treatment of metastatic carcinoma of colon, rectum in pts whose disease has recurred or progressed after 5-fluorouracil-based therapy. **OFF-LABEL:** Non–small-cell lung cancer; small-cell lung cancer; refractory solid tumor configuration; untreated rhabdomyosarcoma; cervical, gastric, pancreatic, ovarian, esophageal cancer; Ewing's sarcoma; brain tumor.

PRECAUTIONS

Contraindications: None known. **Cautions:** Pt previously receiving pelvic, abdominal irradiation (increased risk of myelosuppression), elderly older than 65 yrs, hepatic dysfunction, hyperbilirubinemia, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Risk of diarrhea significantly increased.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., **phenytoin, phenobarbital, carbamazepine**) decrease concentration/effects. **CYP3A4 inhibitors** (e.g., **ketoconazole**) increase concentration. **HERBAL: St. John's wort** may decrease irinotecan effectiveness. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST. May decrease Hgb, leukocytes, platelets.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml (2 ml, 5 ml, 25 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute in D_5W (preferred) or 0.9% NaCl to concentration of 0.12–2.8 mg/ml.

Rate of Administration • Administer all doses as IV infusion over 30–90 min. • Assess for extravasation (flush site with Sterile Water for Injection, apply ice if extravasation occurs).

Storage • Store vials at room temperature, protect from light. • Solution diluted with D_5W is stable for 24 hrs at room temperature or 48 hrs if refrigerated. • Solution diluted with 0.9% NaCl is stable for 24 hrs at room temperature. • Do not refrigerate solution if diluted with 0.9% NaCl.

IV INCOMPATIBILITY

Gemcitabine (Gemzar).

INDICATIONS/ROUTES/DOSAGE

Note: Genotyping of UGTIAI available. Pts who are homozygous for the UGTIAI*28 allele are at increased risk for neutropenia. Decreased dose is recommended.

Carcinoma of the Colon, Rectum

IV: ADULTS, ELDERLY: (WEEKLY REGIMEN): Initially, 125 mg/m^2 once weekly for 4 wks, followed by a rest period of 2 wks. Additional courses may be repeated q6wks. Dosage may be adjusted in 25–

50 mg/m^2 increments to as high as 150 mg/m^2 or as low as 50 mg/m^2. **(THREE-WEEK REGIMEN):** 350 mg/m^2 q3wks. Dosage may be adjusted to as low as 200 mg/m^2.

SIDE EFFECTS

Expected: Nausea (64%), alopecia (49%), vomiting (45%), diarrhea (32%). **Frequent:** Constipation, fatigue (29%); fever (28%); asthenia (loss of strength, energy) (25%); skeletal pain (23%); abdominal pain, dyspnea (22%). **Occasional:** Anorexia (19%); headache, stomatitis (18%); rash (16%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression characterized as neutropenia occurs in 97% of pts; neutrophil count less than 50/mm^3 occurs in 78% of pts. Thrombocytopenia, anemia, sepsis occur frequently.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support to pt, family. Assess hydration status, electrolytes, CBC before each dose. Premedicate with antiemetics on day of treatment, starting at least 30 min before administration.

INTERVENTION/EVALUATION

Assess for early signs of diarrhea (preceded by complaints of diaphoresis, abdominal cramping). Monitor hydration status, I&O, electrolytes, CBC, Hgb, platelets, renal/hepatic function tests. Monitor infusion site for signs of inflammation. Inform pt of possibility of alopecia. Assess skin for rash.

PATIENT/ FAMILY TEACHING

• Notify physician if diarrhea, vomiting, fever, light-headedness, dizziness occur. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Avoid crowds, those with infections.

iron dextran

iron **dex**-tran
(DexFerrum, Dexiron, Infed, Infufer)

BLACK BOX ALERT Potentially fatal anaphylactic-type reaction has been associated with parenteral administration.

Do not confuse DexFerrum with Desferal, or iron dextran with iron sucrose.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Trace element. **CLINICAL:** Hematinic iron preparation.

ACTION

Essential component in formation of Hgb. Necessary for effective erythropoiesis, transport and utilization of oxygen. Serves as cofactor of several essential enzymes. **Therapeutic Effect:** Replenishes Hgb, depleted iron stores.

PHARMACOKINETICS

Readily absorbed after IM administration. Most absorption occurs within 72 hrs; remainder within 3–4 wks. Bound to protein to form hemosiderin, ferritin, or transferrin. No physiologic system of elimination. Small amounts lost daily in shedding of skin, hair, nails and in feces, urine, perspiration. **Half-life:** 5–20 hrs.

USES

Treatment of anemia, iron deficiency. Use only when PO administration is not feasible or when rapid replenishment of iron is warranted. **OFF-LABEL:** Cancer chemotherapy-associated anemia.

PRECAUTIONS

Contraindications: All anemias not associated with iron deficiency anemia (pernicious, aplastic, normocytic, refractory). **Extreme Caution:** Serious hepatic impairment. **Cautions:** History of allergies, bronchial asthma, rheumatoid arthritis, preexisting cardiac disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cross placenta in some form (unknown). Trace distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (DexFerrum, Infed): 50 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Test dose is generally given before full dosage; monitor pt for several min after injection due to potential for anaphylactic reaction.

IV

Reconstitution • May give undiluted or dilute in 250–1,000 ml 0.9% NaCl for infusion. • Avoid dilution in dextrose (increased pain/phlebitis).

Rate of Administration • Do not exceed IV administration rate of 50 mg/min (1 ml/min). Too-rapid IV rate may produce flushing, chest pain, hypotension, tachycardia, shock. • Infuse diluted solution over 1–6 hrs. • Pt must remain recumbent 30–45 min after IV administration (minimizes postural hypotension).

Storage • Store at room temperature.

IM

• Draw up medication with one needle; use new needle for injection (minimizes skin staining). • Administer deep IM in upper outer quadrant of buttock only. • Use Z-tract technique (displacement of subcutaneous tissue lateral to injection site before inserting needle) to minimize skin staining.

IV INCOMPATIBILITIES

Do not mix with other medications, TPN solutions.

INDICATIONS/ROUTES/DOSAGE

0.5-ml test dose (0.25 ml in infants). Give prior to initiating iron dextran therapy.

◀ALERT▶ Discontinue oral iron preparations before administering iron dextran. Dosage expressed in terms of milligrams of elemental iron. Dosage individualized based on degree of anemia, pt weight, presence of any bleeding. Use periodic hematologic determinations as guide to therapy.

◀ALERT▶ Not normally given in first 4 mos of life.

Iron Deficiency Anemia

IV, IM: ADULTS, ELDERLY, CHILDREN WEIGHING MORE THAN 15 KG: Dose in ml (50 mg elemental iron/ml) = 0.0442 (desired Hgb less observed Hgb) × lean body weight (in kg) + (0.26 × lean body weight). Give 2 ml or less once daily until total dose reached. **CHILDREN WEIGHING 5–15 KG:** Dose in ml (50 mg elemental iron/ml) = 0.0442 (desired Hgb less observed Hgb) × body weight (in kg) + (0.26 × body weight). Give 2 ml or less once daily until total dose reached.

Maximum Daily Dosages

ADULTS WEIGHING MORE THAN 50 KG: 100 mg. **CHILDREN WEIGHING MORE THAN 15 KG:** 100 mg. **CHILDREN WEIGHING 5–15 KG:** 50 mg. **CHILDREN WEIGHING LESS THAN 5 KG:** 25 mg.

SIDE EFFECTS

Frequent: Allergic reaction (rash, pruritus), backache, myalgia, chills, dizziness, headache, fever, nausea, vomiting, flushed skin, pain/redness at injection site, brown discoloration of skin, metallic taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anaphylaxis occurs rarely in first few min following injection. Leukocytosis, lymphadenopathy occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Do not give concurrently with oral iron form (excessive iron may produce excessive iron storage [hemosiderosis]). Be alert to pts with rheumatoid arthritis (RA), iron deficiency anemia (acute exacerbation of joint pain, swelling may occur). Inguinal lymphadenopathy may occur with IM injection. Assess for adequate muscle mass before injecting medication.

INTERVENTION/EVALUATION

Monitor IM site for abscess formation, necrosis, atrophy, swelling, brownish color of skin. Question pt regarding soreness, pain, inflammation at/near IM injection site. Check IV site for phlebitis. Monitor serum ferritin. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Pain, brown staining may occur at injection site. • Oral iron should not be taken when receiving iron injections. • Stools often become black with iron therapy but is harmless unless accompanied by red streaking, sticky consistency of stool, abdominal pain/cramping, which should be reported to physician. • Oral hygiene, hard candy, gum may reduce metallic taste. • Notify physician immediately if fever, back pain, headache occur.

iron sucrose

iron **soo**-krose
(Venofer)
Do not confuse iron sucrose with iron dextran.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Trace element. **CLINICAL:** Hematinic iron preparation.

ACTION

Essential component in formation of Hgb. Necessary for effective erythropoiesis, transport and utilization of oxygen. Serves as cofactor of several essential enzymes. **Therapeutic Effect:** Replenishes body iron stores in pts on chronic hemodialysis who have iron deficiency anemia and are receiving erythropoietin.

PHARMACOKINETICS

Distributed mainly in blood and to some extent in extravascular fluid. Iron sucrose is dissociated into iron and sucrose by reticuloendothelial system. Sucrose component is eliminated mainly by urinary excretion. **Half-life:** 6 hrs.

USES

Treatment of iron deficiency anemia in pts undergoing chronic hemodialysis or peritoneal dialysis who are receiving supplemental erythropoietin therapy. Treatment of iron deficiency anemia in pts with chronic kidney disease who are not undergoing dialysis (with or without erythropoietin therapy). **OFF-LABEL:** Chemotherapy-associated anemia.

PRECAUTIONS

Contraindications: All anemias except iron deficiency anemia (pernicious, aplastic, normocytic, refractory anemia), evidence of iron overload. **Cautions:** History of allergies, bronchial asthma; hepatic dysfunction, rheumatoid arthritis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Increases Hgb, Hct, serum ferritin, transferrin.

AVAILABILITY (Rx)

Injection Solution: 20 mg of elemental iron/ml in 5-ml, 10-ml vials.

ADMINISTRATION/HANDLING

◀ALERT▶ Administer directly into dialysis line during hemodialysis.

IV

Reconstitution • May give undiluted as slow IV injection or IV infusion. For IV infusion, dilute 100-mg (5-ml) vial in maximum of 100 ml 0.9% NaCl immediately before infusion. • Dilute large doses in maximum of 250 ml 0.9% NaCl.

Rate of Administration • For IV injection, administer 100–200 mg (5–10 ml) over 2–5 min. • For IV infusion, administer 100 mg over at least 15 min; 300 mg over 1.5 hrs; 400 mg over 2.5 hrs; 500 mg over 3.5 hrs.

Storage • Store at room temperature. • Following dilution, stable for 48 hrs at room temperature or if refrigerated.

IV INCOMPATIBILITIES

Do not mix with other medications or add to parenteral nutrition solution for IV infusion.

INDICATIONS/ROUTES/DOSAGE

Iron Deficiency Anemia

Dosage is expressed in terms of milligrams of elemental iron.

IV: ADULTS, ELDERLY (HEMODIALYSIS-DEPENDENT PTS): 5 ml iron sucrose (100 mg elemental iron) delivered during dialysis; administer 1–3 times a wk to total dose of 1,000 mg in 10 doses. Give no more than 3 times a wk. **(PERITONEAL DIALYSIS-DEPENDENT PTS):** 300 mg over 90 min 14 days apart followed by a single 400-mg dose over 2½ hrs 14 days later. **(NON-DIALYSIS-DEPENDENT PTS):** 200 mg over 2–5 min on 5 different occasions within 14 days.

SIDE EFFECTS

Frequent (36%–23%): Hypotension, leg cramps, diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Too-rapid IV administration may produce severe hypotension, headache, vomiting, nausea, dizziness, paresthesia, abdominal/muscle pain, edema, cardiovascular collapse. Hypersensitivity reaction occurs rarely.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Initially, monitor Hgb, Hct, serum ferritin, transferrin monthly, then q2–3mos thereafter. Reliable serum iron values can be obtained 48 hrs following administration.

I

isoniazid

eye-**soe**-nye-a-zid
(Isotamine 🍁, PMS Isoniazid 🍁)

BLACK BOX ALERT Severe, potentially fatal hepatitis may occur.

FIXED-COMBINATION(S)

Rifamate: isoniazid/rifampin (antitubercular): 150 mg/300 mg.
Rifater: isoniazid/pyrazinamide/rifampin (antitubercular): 50 mg/300 mg/120 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Isonicotinic acid derivative. **CLINICAL:** Antitubercular.

ACTION

Inhibits mycolic acid synthesis. Causes disruption of bacterial cell wall, loss of acid-fast properties in susceptible mycobacteria. Active only during bacterial cell division. **Therapeutic Effect:** Bactericidal against actively growing intracellular, extracellular susceptible mycobacteria.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 10%–15%. Widely distributed

(including to CSF). Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 0.5–5 hrs.

USES

Treatment of susceptible mycobacterial infection due to *Mycobacterium tuberculosis*. Drug of choice in tuberculosis prophylaxis. Used in combination with one or more other antitubercular agents for treatment of active tuberculosis.

PRECAUTIONS

Contraindications: Acute hepatic disease, history of hypersensitivity reactions, hepatic injury or severe adverse reactions with previous isoniazid therapy. **Cautions:** Chronic hepatic disease, alcoholism, severe renal impairment. May be cross-sensitive with nicotinic acid, other chemically related medications.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Prophylaxis usually postponed until after delivery. Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** More susceptible to developing hepatitis.

INTERACTIONS

DRUG: Alcohol may increase isoniazid metabolism, risk of hepatotoxicity. May increase toxicity of **carbamazepine, phenytoin. Hepatotoxic medications** may increase risk of hepatotoxicity. May decrease **ketoconazole** concentration. **HERBAL:** None significant. **FOOD: Foods containing tyramine** may cause hypertensive crisis. **LAB VALUES:** May increase serum bilirubin, AST, ALT.

AVAILABILITY (Rx)

Oral Solution: 50 mg/5 ml. **Solution, Injection:** 100 mg/ml. **Tablets:** 100 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• Give 1 hr before or 2 hrs following meals (may give with food to decrease GI upset, but will delay absorption). • Administer at least 1 hr before antacids, esp. those containing aluminum.

INDICATIONS/ROUTES/DOSAGE

Active Tuberculosis (in Combination with One or More Antitubercular)

IM/PO: ADULTS, ELDERLY: 5 mg/kg/day as a single daily dose. Usual dose: 300 mg/day. **CHILDREN:** 10–15 mg/kg/day as a single daily dose. **Maximum:** 300 mg/day.

Tuberculosis Prophylaxis

IM/PO: ADULTS, ELDERLY: 5 mg/kg/day (**maximum:** 300 mg) or 15 mg/kg twice weekly (**maximum:** 900 mg). **CHILDREN:** 10–20 mg/kg/day as a single daily dose. **Maximum:** 300 mg/day or 20–40 mg/kg 2 times/wk. **Maximum:** 900 mg/dose.

SIDE EFFECTS

Frequent: Nausea, vomiting, diarrhea, abdominal pain. **Rare:** Pain at injection site, hypersensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neurotoxicity (ataxia, paresthesia), optic neuritis, hepatotoxicity occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity reactions, hepatic injury or disease, sensitivity to nicotinic acid or chemically related medications. Ensure collection of specimens for culture, sensitivity. Evaluate initial hepatic function results.

INTERVENTION/EVALUATION

Monitor hepatic function test results, assess for hepatitis: anorexia, nausea, vomiting, weakness, fatigue, dark urine, jaundice (hold concurrent INH therapy and inform physician promptly). Assess for paresthesia of extremities (those esp. at risk for neuropathy may be given pyridoxine prophylactically: malnourished, elderly, diabetics, pts with chronic hepatic disease [including alcoholics]). Be alert for fever, skin eruptions (hypersensitivity reaction).

PATIENT/FAMILY TEACHING

• Do not skip doses; continue taking isoniazid for full length of therapy (6–24 mos). • Take preferably 1 hr before or 2 hrs following meals (with food if GI upset). • Avoid alcohol during treatment. • Do not take any other medications, including antacids, without consulting physician. • Must take isoniazid at least 1 hr before antacid. • Avoid tuna, sauerkraut, aged cheeses, smoked fish (consult list of tyramine-containing foods) that may cause hypertensive reaction (red/itching skin, palpitations, light-headedness, hot or clammy feeling, headache). • Notify physician of any new symptom, immediately for vision difficulties, nausea/vomiting, dark urine, yellowing of skin/eyes (jaundice), fatigue, paresthesia of extremities.

isosorbide dinitrate

TOP 200

eye-soe-**sor**-bide
(ISDN, Cedocard SR, Dilatrate-SR, Isordil, Novo-Sorbide)

isosorbide mononitrate

(Apo-ISMO, Imdur, ISMO, Monoket)
Do not confuse Imdur with Imuran, Inderal, or K-Dur, Isordil with Inderal, Isuprel, or Plendil, or Monoket with Monopril.

FIXED-COMBINATION(S)

BiDil: isosorbide dinitrate/hydralazine (a vasodilator): 20 mg/37.5 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Nitrate.
CLINICAL: Antianginal (see p. 125C).

ACTION

Stimulates intracellular cyclic guanosine monophosphate. **Therapeutic Effect:** Relaxes vascular smooth muscle of arterial, venous vasculature. Decreases preload, afterload.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Dinitrate			
Sublingual	2–10 min	N/A	1–2 hrs
PO (chewable)	3 min	N/A	0.5–2 hrs
PO	45–60 min	N/A	4–6 hrs
Mononitrate			
PO (extended-release)	30–60 min	N/A	N/A

Dinitrate poorly absorbed and metabolized in liver to its active metabolite isosorbide mononitrate. Mononitrate well absorbed after PO administration. Excreted in urine and feces. **Half-life:** Dinitrate, 1–4 hrs; mononitrate, 4 hrs.

USES

Dinitrate: Prevention and treatment of angina. **Mononitrate:** Prophylactic treatment of angina pectoris. **OFF-LABEL:** Esophageal spastic disorders, CHF.

PRECAUTIONS

Contraindications: Hypersensitivity to nitrates, concurrent use of sildenafil, tadalafil, vardenafil. **Cautions:** Acute MI, head trauma, increased intracranial pressure (ICP), orthostatic hypotension, blood volume depletion from diuretic therapy, systolic B/P less than 90 mm Hg, hypertrophic cardiomyopathy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C.** **Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Alcohol, antihypertensives, vasodilators** may increase risk of orthostatic hypotension. **Sildenafil, tadalafil, vardenafil** may potentiate hypotensive effects (concurrent use of these agents is contraindicated). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase urine catecholamine, urine vanillylmandelic acid levels.

AVAILABILITY (Rx)

Dinitrate

Tablets (Isordil): 5 mg, 10 mg, 20 mg, 30 mg, 40 mg.

Capsules, Sustained-Release (Dilatrate-SR): 40 mg. **Tablets, Extended-Release (Isochron):** 40 mg. **Tablets, Sublingual (Isordil):** 2.5 mg, 5 mg.

Mononitrate

Tablets (ISMO): 20 mg. **(Monoket):** 10 mg, 20 mg.

Tablets, Extended-Release (Imdur): 30 mg, 60 mg, 120 mg.

ADMINISTRATION/HANDLING

PO

• Best if taken on an empty stomach. • Do not administer around the clock. • Oral tablets may be crushed. • Do not crush/break sustained-, extended-release form. • Do not crush chewable form before administering.

Sublingual

• Do not crush/chew sublingual tablets. • Dissolve tablets under tongue; do not swallow.

INDICATIONS/ROUTES/DOSAGE

Angina

PO *(Isosorbide Dinitrate)*: ADULTS, ELDERLY: 5–40 mg 4 times a day.

Sublingual: ADULTS, ELDERLY: 2.5–5 mg, 5–10 min. **Maximum:** 3 doses in 15–30 min.

Sustained-Release: ADULTS, ELDERLY: 40 mg q8–12h.

PO *(Isosorbide Mononitrate)*: ADULTS, ELDERLY: 5–20 mg twice a day given 7 hrs apart.

Sustained-Release: Initially, 30–60 mg/day in morning as a single dose. May increase dose at 3-day intervals. **Maximum:** 240 mg/day.

CHF

PO *(Isordil Dinitrate)*: ADULTS, ELDERLY: Initially, 20 mg 3–4 times/day. May increase to 120–160 mg/day in divided doses in combination with hydralazine.

SIDE EFFECTS

Frequent: Headache (may be severe) occurs mostly in early therapy, diminishes rapidly in intensity, usually disappears during continued treatment. **Occasional:** Transient flushing of face/neck, dizziness (esp. if pt is standing immobile or is in a warm environment), weakness, orthostatic hypotension, nausea, vomiting, restlessness. GI upset, blurred vision, dry mouth. **Sublingual: Frequent:** Burning, tingling at oral point of dissolution.

ADVERSE REACTIONS/ TOXIC EFFECTS

Drug should be discontinued if blurred vision occurs. Severe orthostatic hypotension manifested by syncope, pulselessness, cold/clammy skin, diaphoresis. Tolerance may occur with repeated, prolonged therapy, but may not occur with extended-release form. Minor tolerance with intermittent use of sublingual tablets. High dosage tends to produce severe headache.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain; precipitating factors (exertion, emotional stress). If headache occurs during management therapy, administer medication with meals.

INTERVENTION/EVALUATION

Assist with ambulation if light-headedness, dizziness occurs. Assess for facial/neck flushing. Monitor number of anginal episodes, orthostatic B/P.

PATIENT/FAMILY TEACHING

• Do not chew/crush sublingual, extended-release, sustained-release forms. • Take sublingual tablets while sitting down. • Rise slowly from lying to sitting position, dangle legs momentarily before standing (prevents dizziness effect). • Take oral form on empty stomach (however, if headache occurs during management therapy, take medication with meals). • Dissolve sublingual tablet under tongue; do not swallow. • Avoid alcohol (intensifies hypotensive effect). • If alcohol is ingested soon after taking nitrates, possible acute hypotensive episode (marked drop in B/P, vertigo, pallor) may occur. • Report signs/symptoms of hypotension, angina.

isotretinoin

eye-so-**tret**-ih-noyn
(Accutane, Amnesteem, Claravis, Isotrex, Sotret)

BLACK BOX ALERT High risk of teratogenic effects; Pregnancy Category X. Obtain two negative pregnancy tests prior to treatment. All pts (male and female) must register and be active in the IPLEDGE™ risk management program.

Do not confuse Accutane with Accolate or Accupril, Claravis with Cleviprex, or isotretinoin with tretinoin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Keratinization stabilizer. **CLINICAL:** Antiacne, antirosacea agent.

ACTION

Reduces sebaceous gland size, inhibiting gland activity. **Therapeutic Effect:** Produces antikeratinizing, anti-inflammatory effects.

USES

Treatment of severe, recalcitrant cystic acne unresponsive to conventional acne therapies. **OFF-LABEL:** Treatment of children with metastatic neuroblastoma or leukemia not responding to conventional therapy.

PRECAUTIONS

Contraindications: Hypersensitivity to isotretinoin, parabens (component of capsules), vitamin A, pregnancy, breastfeeding. **Cautions:** Hepatic dysfunction. Diabetes; hypertriglyceridemia; history of childhood osteoporosis; osteomalacia, other disorders of bone metabolism; psychiatric disorders.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in females who are or may become pregnant while undergoing treatment (very high risk of fetal harm, major fetal birth defects/deformities). Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category X. Children:** Safety and efficacy not established in those younger than 12 yrs. Careful consideration must be given to those 12–17 yrs, esp. children with known metabolic disease, structural bone disease. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Vitamin A** may increase toxic effects. **Tetracycline** may increase potential for pseudotumor cerebri. **HERBAL:** **Dong quai, St. John's wort** may cause photosensitization. **FOOD:** None known. **LAB VALUES:** May increase serum triglycerides, cholesterol, AST, ALT, alkaline phosphatase, LDH, fasting serum glucose, uric acid, sedimentation rate. May decrease HDL.

AVAILABILITY (Rx)

Capsules: (Amnesteem): 10 mg, 20 mg, 40 mg. **(Claravis, Sotret):** 10 mg, 20 mg, 30 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Give with food. Swallow whole with full glass of water. • May chew or open capsule with large needle, place on applesauce, cottage cheese, pudding, oatmeal, or ice cream.

INDICATIONS/ROUTES/DOSAGE

Recalcitrant Cystic Acne

PO: ADULTS, CHILDREN 12–17 YRS: Initially, 0.5–1 mg/kg/day divided in 2 doses for 15–20 wks or until total cyst count decreases by 70%, whichever is sooner. Adults may require doses up to 2 mg/kg/day. May repeat after at least 2 mos off therapy.

Dosage in Hepatic Disease

Dose reductions recommended.

SIDE EFFECTS

Frequent: Cheilitis (inflammation of lips) (90%), skin/mucous membrane dryness (80%), skin fragility, pruritus, epistaxis, dry nose/mouth, conjunctivitis (40%), hypertriglyceridemia (25%), nausea, vomiting, abdominal pain (20%). **Occasional (16%–5%):** Musculoskeletal symptoms (16%) including bone/joint pain, arthralgia, generalized muscle aches; photosensitivity (10%–5%). **Rare:** Diminished night vision, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Inflammatory bowel disease, pseudotumor cerebri (benign intracranial hypertension) have been associated with isotretinoin therapy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baselines for serum glucose, lipids, triglycerides. Obtain two negative pregnancy tests prior to treatment (Pregnancy Category X).

INTERVENTION/EVALUATION

Assess acne for decreased cysts. Evaluate skin/mucous membranes for excessive dryness. Monitor serum glucose, lipids, triglycerides.

PATIENT/FAMILY TEACHING

• Transient exacerbation of acne may occur during initial period. • Must be registered and be active in the IPLEDGE risk management program (see www.ipledgeprogram.com). • May have decreased tolerance to contact lenses during and following therapy. • Do not take vitamin supplements with vitamin A due to additive effects. • Immediately notify physician of onset of abdominal pain, severe diarrhea, rectal bleeding (possible inflammatory bowel disease), headache, nausea/vomiting, visual disturbances (possible pseudotumor cerebri). • Diminished night vision may occur suddenly; take caution with night driving. • Avoid prolonged exposure to sunlight; use sunscreens, protective clothing. • Do not donate blood during or for 1 mo following treatment. • **Women:** Explain serious risk to fetus if pregnancy occurs (give both oral and written warnings, with pt acknowledging in writing that she understands the warnings and consents to treatment). • Must have negative serum pregnancy test within 2 wks before starting therapy; therapy will begin on the second or third day of next normal menstrual period. • Effective contraception (using 2 reliable forms of contraception simultaneously) must be used for at least 1 mo before, during, and for at least 1 mo after therapy.

isradipine

is-**rah**-di-peen
(DynaCirc, DynaCirc CR)
Do not confuse DynaCirc with Dynabac or Dynacin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. **CLINICAL:** Antihypertensive (see p. 77C).

ACTION

Inhibits calcium movement across cardiac, vascular smooth-muscle cell membranes. Potent peripheral vasodilator (does not depress SA, AV nodes). **Therapeutic Effect:** Produces relaxation of coronary vascular smooth muscle, coronary vasodilation. Increases myocardial oxygen delivery in those with vasospastic angina.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (immediate-release hypertension)	2–3 hrs	2–4 wks (multiple doses) 8–16 hrs (single dose)	Greater than 12 hrs

Well absorbed from GI tract. Protein binding: 95%. Metabolized in liver (undergoes first-pass effect). Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 8 hrs.

USES

Management of hypertension. May be used alone or with other antihypertensives. **OFF-LABEL:** Treatment of pediatric hypertension.

PRECAUTIONS

Contraindications: None known. **Cautions:** CHF, hepatic dysfunction, severe GI narrowing (for controlled-release tablets).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Cimetidine** may increase concentration. **Rifampin** may decrease concentration. **HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** **Grapefruit, grapefruit juice** may increase absorption. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules, Immediate-Release (DynaCirc): 2.5 mg, 5 mg.

Tablets, Controlled-Release (DynaCirc CR): 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.
- Swallow controlled-release tablet whole; do not crush, break, chew, divide.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY (IMMEDIATE-RELEASE): Initially 2.5 mg twice a day. May increase by 2.5 mg at 2- to 4-wk intervals. Range: 2.5–10 mg in 2 divided doses. **(CONTROLLED-RELEASE):** Initially, 5 mg once daily. May increase at 2- to 4-wk intervals in increments of 5 mg. **Maximum:** 20 mg/day.

SIDE EFFECTS

Frequent (7%–4%): Peripheral edema, palpitations (higher frequency in females). **Occasional (3%):** Facial flushing, cough. **Rare (2%–1%):** Angina, tachycardia, rash, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces nausea, drowsiness, confusion, slurred speech. CHF occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function tests. Assess B/P, apical pulse immedi-

ately before drug is administered (if pulse is 60 beats/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Assess for peripheral edema behind medial malleolus (sacral area in bedridden pts). Monitor pulse rate for bradycardia. Monitor B/P; observe for signs, symptoms of CHF. Assess skin for flushing.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. Compliance with therapy regimen is essential to control hypertension. • To avoid hypotensive effect, rise slowly from lying to sitting position, wait momentarily before standing. • Contact physician if palpitations, shortness of breath, pronounced dizziness, nausea, chest pain, swelling in extremities occur. • Avoid grapefruit, grapefruit juice.

I

itraconazole

eye-tra-**con**-ah-zoll
(Sporanox)

BLACK BOX ALERT Serious cardiovascular events, including CHF, ventricular tachycardia, torsade de pointes, death, have occurred due to concurrent use with cisapride, pimozide, quinidine, dofetilide, or levomethadyl.

Do not confuse itraconazole with fluconazole, or Sporanox with Suprax or Topamax.

◆CLASSIFICATION

CLINICAL: Antifungal (see p. 47C).

ACTION

Inhibits synthesis of ergosterol (vital component of fungal cell formation). **Therapeutic Effect:** Damages fungal cell membrane, altering its function. Fungistatic.

PHARMACOKINETICS

Moderately absorbed from GI tract. Absorption is increased if drug is taken with food. Protein binding: 99%. Widely distributed, primarily in fatty tissue, liver, kidneys. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 16–26 hrs.

USES

Oral capsules: Treatment of aspergillosis, blastomycosis, esophageal and oropharyngeal candidiasis, empiric treatment in febrile neutropenia, histoplasmosis, onychomycosis. **Oral solution:** Treatment of oral and esophageal candidiasis.

PRECAUTIONS

Contraindications: Hypersensitivity to fluconazole, ketoconazole, miconazole. Left ventricular dysfunction; history of CHF; concurrent use of dofetilide, ergot derivatives, lovastatin, midazolam (oral), quinidine, simvastatin, triazolam; pregnancy or intending to become pregnant. **Cautions:** Hepatic impairment, renal impairment, pts with risk factors for CHF (e.g., COPD, myocardial ischemia).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentration/toxicity of **calcium channel-blocking agents (e.g., felodipine, nifedipine), carbamazepine, cyclosporine, digoxin, ergot alkaloids, HMG-CoA reductase inhibitors (e.g., lovastatin, simvastatin), midazolam, oral antidiabetic agents (e.g., glyburide, glipizide), protease inhibitors (e.g., indinavir, ritonavir, saquinavir), sirolimus, tacrolimus, triazolam, warfarin. CYP3A4 inducers (e.g., carbamazepine, isoniazid, phenobarbital, phenytoin, rifampin)** may decrease concen-

tration/effects. May inhibit metabolism of **busulfan, docetaxel, vinca alkaloids. Erythromycin** may increase risk of cardiac toxicity. **Antacids, H_2 antagonists, proton pump inhibitors** may decrease absorption. **HERBAL: St. John's wort** may decrease concentration. **FOOD: Grapefruit, grapefruit juice** may alter absorption. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, AST, ALT, LDH. May decrease serum potassium.

AVAILABILITY (Rx)

Capsules: 100 mg. **Oral Solution:** 10 mg/ml.

ADMINISTRATION/HANDLING

PO

• Give capsules with food (increases absorption). • Give solution on empty stomach.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: 100–400 mg/day. Doses greater than 200 mg given in 2 divided doses. Length of therapy ranges from 1 day to more than 6 mos.

Blastomycosis, Histoplasmosis

PO: ADULTS, ELDERLY: Initially, 200 mg 3 times/day for 3 days, then 400 mg/day in 2 divided doses for 6–12 mos (6–12 wks for histoplasmosis).

Aspergillosis (Invasive)

PO: ADULTS, ELDERLY: 600 mg/day in 3 divided doses for 3–4 days, then 200–400 mg/day in 2 divided doses.

Esophageal Candidiasis

PO: ADULTS, ELDERLY: Swish 100–200 mg (10–20 ml) in mouth for several seconds, then swallow once daily for a minimum of 3 wks. Continue for 2 wks after resolution of symptoms. **Maximum:** 200 mg/day.

Oropharyngeal Candidiasis

PO: ADULTS, ELDERLY: 200 mg (10 ml) oral solution, swish and swallow once a day for 7–14 days.

Onychomycosis (Fingernail)

PO: ADULTS, ELDERLY: 200 mg twice a day for 7 days, off for 21 days, repeat 200 mg twice a day for 7 days.

Onychomycosis (Toenail)

PO: ADULTS, ELDERLY: 200 mg once daily for 12 wks.

SIDE EFFECTS

Frequent (11%–9%): Nausea, rash. **Occasional (5%–3%):** Vomiting, headache, diarrhea, hypertension, peripheral edema, fatigue, fever. **Rare (2% or less):** Abdominal pain, dizziness, anorexia, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatitis (anorexia, abdominal pain, unusual fatigue/weakness, jaundiced skin/sclera, dark urine) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine baseline temperature, hepatic function tests. Assess allergies.

INTERVENTION/EVALUATION

Assess for signs, symptoms of hepatic dysfunction. Monitor hepatic enzyme test results in pts with preexisting hepatic dysfunction.

PATIENT/ FAMILY TEACHING

• Take capsules with food, liquids if GI distress occurs. • Therapy will continue for at least 3 mos, until lab tests, clinical presentation indicate infection is controlled. • Immediately report unusual fatigue, yellow skin, dark urine, pale stool, anorexia, nausea, vomiting. • Avoid grapefruit, grapefruit juice.

ivacaftor

eye-va-**kaf**-tor
(Kalydeco)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cystic fibrosis transmembrane conductance regulator potentiator. **CLINICAL:** Cystic fibrosis agent.

ACTION

Potentiates a specific protein to facilitate, regulate chloride ions, water transport. In cystic fibrosis pts with a specific gene mutation (G551D), a defect in chloride and water transport results in formation of thick mucus that builds up in lungs. **Therapeutic Effect:** Improves lung function, noted fewer respiratory exacerbations.

PHARMACOKINETICS

Readily absorbed. Peak concentration occurs in 4 hrs. Extensive hepatic metabolism. Protein binding: 99%. Mainly excreted in feces. **Half-life:** 12 hrs.

USES

Treatment of cystic fibrosis in pts age 6 yrs and older who have a G551D mutation in the cystic fibrosis transmembrane conductance regulator *(CFTR)* gene.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy in children younger than 6 yrs not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Concurrent use with strong **CYP3A4 inducers (e.g., carbamazepine, rifampin)** substantially decreases concentration/effects. Recommended not to use concurrently. Strong **CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole)** significantly increase concentration. **Moderate CYP3A4 inhibitors (e.g., erythromycin, fluconazole)** also increase ivacaftor concentration and should not be given concurrently. **HERBAL: St. John's wort** decreases ivacaftor concentration, may diminish effectiveness. **FOOD: Grapefruit, grapefruit juice, Seville oranges** should be avoided (increase ivacaftor concentration). **LAB VALUES:** May increase serum ALT, AST.

AVAILABILITY (Rx)

Tablets, Film-Coated: 150 mg.

ADMINISTRATION/HANDLING

PO

- Give with a fat-containing meal (e.g., eggs, butter, peanut butter, cheese pizza).

INDICATIONS/ROUTES/DOSAGE

Cystic Fibrosis

PO: ADULTS, CHILDREN 6 YRS AND OLDER: One 150-mg tablet every 12 hrs with fat-containing food. **Total daily dose:** 300 mg.

Moderate Hepatic Impairment, Concurrent Use with Moderate CYP3A4 Inhibitors (e.g., fluconazole)

PO: ADULTS, CHILDREN 6 YRS AND OLDER: 150 mg once daily.

Severe Hepatic Impairment

PO: ADULTS, CHILDREN 6 YRS AND OLDER: 150 mg once daily or less frequently.

Concurrent Use with Strong CYP3A4 Inhibitors (e.g., ketoconazole)

PO: ADULTS, CHILDREN 6 YRS AND OLDER: 150 mg twice weekly.

SIDE EFFECTS

Frequent (24%–10%): Headache, nasal congestion, abdominal discomfort, diarrhea, nausea, rash. **Occasional (6%–5%):** Rhinitis, dizziness, arthralgia, bacteria in sputum. **Rare (4% and Less):** Myalgia, wheezing, acne.

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory infections occurs in 22% of pts, nasopharyngitis in 15%. Increase in ALT, AST occurs in 6% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If the pt's genotype is unknown, an FDA-cleared CF mutation test should be used to detect presence of the G551D mutation. Assess ALT, AST prior to and periodically during therapy.

INTERVENTION/EVALUATION

Patients who develop increased ALT, AST levels should be closely monitored until the abnormalities resolve. Dosing should be interrupted if transaminases (ALT or AST) are greater than 5 times the upper limit of normal. Transaminases should be obtained every 3 mos during the first year of treatment, and annually thereafter.

PATIENT/FAMILY TEACHING

• Always take medication with fatty food. • Avoid grapefruit, grapefruit juice, and Seville oranges. • Adhere to routine laboratory testing as a part of treatment regimen. • Report headache, diarrhea, rash, signs and symptoms of respiratory infection.

ixabepilone

ix-ab-**ep**-i-lone
(Ixempra)

BLACK BOX ALERT Combination therapy with capecitabine is contraindicated in pts with AST or ALT greater than 2.5 times upper limit of normal (ULN) or bilirubin greater than 1 times ULN. Increased risk of toxicity, neutropenia-related mortality.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Epothilone microtubule inhibitor, antimitotic agent. **CLINICAL:** Antineoplastic (see p. 85C).

ACTION

Binds directly on microtubules during active stage of G2 and M phases of cell cycle, preventing formation of microtubules, an essential part of the process of separation of chromosomes. **Therapeutic Effect:** Blocks cells in mitotic phase of cell division, leading to cell death.

PHARMACOKINETICS

Extensively metabolized in liver. Protein binding: 77%. Excreted mainly in feces, with lesser amount eliminated in urine. **Half-life:** 52 hrs.

USES

Combination therapy with capecitabine for treatment of metastatic or locally advanced breast cancer in pts after failure of anthracycline, taxane therapy. As monotherapy, treatment of metastatic or locally advanced breast cancer in pts after failure of anthracycline, taxane, and capecitabine therapy. **OFF-LABEL:** Treatment of endometrial cancer.

PRECAUTIONS

Contraindications: Severe hypersensitivity reaction to Cremophor, baseline neutrophil count less than 1,500/mm^3, platelet count less than 100,000 cells/mm^3. **Combination Capecitabine Therapy:** AST or ALT greater than 2.5 times normal range, bilirubin greater than 1 times normal range. **Cautions:** Diabetes mellitus, existing moderate to severe neuropathy, history of cardiovascular disease. **Monotherapy:** AST or ALT greater than 5 times normal range, bilirubin greater than 3 times normal range.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Higher incidence of severe adverse reactions in those older than 65 yrs.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., **amprenavir, atazanavir, clarithromycin, delaviridine, indinavir, itraconazole,**

ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, voriconazole) may increase concentration. **CYP3A4 inducers** (e.g., **carbamazepine, dexamethasone, phenobarbital, phenytoin, rifabutin, rifampin, rifapentin**) may decrease concentration. **HERBAL: St. John's wort** may decrease plasma concentration. **FOOD: Grapefruit, grapefruit juice** may increase plasma concentration. **LAB VALUES:** May increase serum ALT, AST, bilirubin. May decrease WBCs, Hgb, platelets.

AVAILABILITY (Rx)

Injection, Solution: Kit: 15 mg kit supplied with diluent for Ixempra, 8 ml; 45 mg supplied with diluent for Ixempra, 23.5 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Withdraw diluent and slowly inject into vial. • Gently swirl and invert until powder is completely dissolved. • Further dilute with 250 ml lactated Ringer's. • Solution may be stored in vial for a maximum of 1 hr at room temperature. • Final concentration for infusion must be between 0.2 mg/ml and 0.6 mg/ml. • Mix infusion bag by manual rotation.

Rate of Administration • Administer through an in-line filter of 0.2 to 1.2 microns. • Infuse over 3 hrs. Administration must be completed within 6 hrs of reconstitution.

Storage • Refrigerate kit. • Prior to reconstitution, kit should be removed from refrigerator and allowed to stand at room temperature for approximately 30 min. • When vials are initially removed from refrigerator, a white precipitate may be observed in the diluent vial. • This precipitate will dissolve to form a clear solution once diluent warms to room temperature. • Once diluted with lactated Ringer's, solution is stable at room temperature and room light for a maximum of 6 hrs.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ An H_1 antagonist (diphenhydramine 50 mg PO or equivalent) and an H_2 antagonist (ranitidine 150–300 mg PO or equivalent) must be given prior to beginning treatment with ixabepilone. Those who experienced a previous hypersensitivity reaction to ixabepilone require pretreatment with corticosteroids (e.g., dexamethasone 20 mg IV, 30 min before infusion or PO, 1 hr before infusion) in addition to pretreatment with H_1 and H_2 antagonists.

Breast Cancer

IV: ADULTS, ELDERLY: 40 mg/m^2 infused over 3 hrs, every 3 wks. **Maximum:** 88 mg.

Monotherapy Dosage Adjustments for Hepatic Impairment

Mild Hepatic Impairment (AST and ALT Less Than 2.5 Times Normal Range and Bilirubin Less Than Normal Range)

IV: ADULTS, ELDERLY: 40 mg/m^2 infused over 3 hrs, every 3 wks.

Mild Hepatic Impairment (AST and ALT Less Than 10 Times Normal Range and Bilirubin Less Than 1.5 Times Normal Range)

IV: ADULTS, ELDERLY: 32 mg/m^2 infused over 3 hrs, every 3 wks.

Moderate Hepatic Impairment (AST and ALT Less Than 2.5 Times Normal Range and Bilirubin Less Than 3 Times Normal Range)

IV Infusion: ADULTS, ELDERLY: 20–30 mg/m^2 infused over 3 hrs, every 3 wks.

Dose Modification

Dosage adjustment based on grade of neuropathy, hematologic conditions.

SIDE EFFECTS

Common (62%): Peripheral sensory neuropathy. **Frequent (56%–46%):** Fatigue, asthenia (loss of strength, energy), myalgia, arthralgia, alopecia, nausea. **Occasional (29%–11%):** Vomiting, stomatitis, mucositis, diarrhea, musculoskeletal pain, anorexia, constipation, abdominal pain, headache.

Rare (9%–5%): Skin rash, nail disorder, edema, hand-foot syndrome (blistering/rash/peeling of skin on palms of hands, soles of feet), pyrexia, dizziness, pruritus, gastroesophageal reflux disease (GERD), hot flashes, taste disorder, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neuropathy occurs early during treatment; 75% of new onset or worsening neuropathy occurred during first 3 cycles. Pts with diabetes mellitus may be at increased risk for severe neuropathy manifested as Grade 4 neutropenia. Neutropenia, leukopenia occurs commonly; anemia, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question possibility of pregnancy. Obtain baseline CBC, serum chemistries including hepatic function tests (bilirubin, AST, ALT) before treatment begins as baseline and diligently monitor for hepatotoxicity, peripheral neuropathy (most frequent cause of drug discontinuation).

INTERVENTION/EVALUATION

Monitor for symptoms of neuropathy (burning sensation, hyperesthesia, hypoesthesia, paresthesia, discomfort, neuropathic pain). Assess hands and feet for erythema. Monitor CBC for evidence of neutropenia, thrombocytopenia; assess hepatic function tests for hepatotoxicity. Assess mouth for stomatitis, mucositis.

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with those who have recently received live virus vaccine. • Do not have immunizations without physician's approval (drug lowers resistance). • Promptly report fever over 100.5°F, chills, numbness, tingling, burning sensation, erythema of hands/feet.

ketoconazole

kee-toe-**kon**-a-zoll
(Apo-Ketoconazole, Extina, Kuric, Nizoral, Nizoral AD, Nizoral Topical, Novo-Ketoconazole, Xolegel)

BLACK BOX ALERT Potentially fatal hepatotoxicity has occurred. Concurrent cisapride, terfenadine, astemizole contraindicated; serious cardiovascular events (QT prolongation, torsade de pointes, ventricular tachycardia, ventricular fibrillation, fatalities) have occurred.

Do not confuse Nizoral with Nasarel, Neoral, or Nitrol, or Kuric with Carac.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Imidazole derivative. **CLINICAL:** Antifungal (see pp. 47C, 48C).

ACTION

Inhibits synthesis of ergosterol, a vital component of fungal cell formation. **Therapeutic Effect:** Damages fungal cell membrane, altering its function. Fungistatic.

PHARMACOKINETICS

Well absorbed from GI tract following PO administration. Protein binding: 93%–96%. Metabolized in liver. Primarily excreted in bile with minimal elimination in urine. Negligible systemic absorption following topical absorption. Ketoconazole is not detected in plasma after shampooing, topical administration. **Half-life:** 8 hrs.

USES

PO: Treatment of susceptible fungal infections including histoplasmosis, blastomycosis, candidiasis, chronic mucocutaneous candidiasis, coccidioidomycosis, paracoccidioidomycosis, chromomycosis, oral thrush, candiduria. **Shampoo:** Treatment of dandruff. Treatment of tinea versicolor. **Topical:** Treatment of tineas, pityriasis versicolor, cutaneous candidia-

sis, seborrhea dermatitis, dandruff. **Xolegel:** Treatment of seborrheic dermatitis. **OFF-LABEL: Systemic:** Treatment of prostate cancer.

PRECAUTIONS

Contraindications: Concurrent use with ergot derivatives, triazolam, CNS fungal infections. **Cautions:** Hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Oral form distributed in breast milk. Unknown if topical form crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children: Cream, shampoo:** Safety and efficacy not established. **Oral form:** Safety and efficacy not established in those younger than 2 yrs. **Elderly:** No age-related precautions noted.

K

INTERACTIONS

DRUG: May increase concentration/toxicity of **cyclosporine, digoxin, ergot alkaloids, midazolam, protease inhibitors (e.g., indinavir, ritonavir, saquinavir), sirolimus, tacrolimus, triazolam, warfarin. Isoniazid, rifampin** may decrease concentration/effects. **Antacids, H_2 antagonists, proton pump inhibitors (e.g., omeprazole)** may decrease absorption. **HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, AST, ALT. May decrease serum corticosteroid, testosterone.

AVAILABILITY (Rx)

Cream (Kuric): 2%. **Foam (Extina):** 2%. **Gel (Xolegel):** 2%. **Shampoo (Nizoral AD [OTC]):** 1%. **Tablets (Nizoral):** 200 mg.

ADMINISTRATION/HANDLING

PO

• Give with food to minimize GI irritation. • Tablets may be crushed. • Ketoconazole requires acidity; give antacids, anticholinergics, H_2 blockers **at least** 2 hrs following dosing.

Shampoo

• Apply to wet hair, massage for 1 min, rinse thoroughly, reapply for 3 min, rinse.

Topical

• Apply, rub gently into affected/surrounding area.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 200–400 mg/day. **Maximum:** 800 mg/day in 2 divided doses. **CHILDREN 2 YRS AND OLDER:** 3.3–6.6 mg/kg/day.

Topical: ADULTS, ELDERLY: Apply to affected area 1–2 times a day for 2–4 wks.

Shampoo: ADULTS, ELDERLY: Use twice weekly for 4 wks, allowing at least 3 days between shampooing. Use intermittently to maintain control.

SIDE EFFECTS

Occasional (10%–3%): Nausea, vomiting. **Rare (less than 2%):** Abdominal pain, diarrhea, headache, dizziness, photophobia. **Topical:** Burning, irritation, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity (thrombocytopenia, hemolytic anemia, leukopenia) occurs occasionally. Hepatotoxicity may occur within first wk to several mos after starting therapy. Anaphylaxis occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Confirm that culture or histologic test was done for accurate diagnosis; therapy may begin before results known.

INTERVENTION/EVALUATION

Monitor hepatic function tests; be alert for hepatotoxicity: dark urine, pale stools, jaundice, fatigue, anorexia, nausea, or vomiting (unrelieved by giving

medication with food). Monitor CBC for hematologic toxicity. Monitor daily pattern of bowel activity, stool consistency. Assess for dizziness, provide assistance as needed. Evaluate skin for rash, urticaria, pruritus. **Topical:** Check for localized burning, pruritus, irritation.

PATIENT/FAMILY TEACHING

• Prolonged therapy (wks or mos) is usually necessary. • Do not miss a dose; continue therapy as long as directed. • Avoid alcohol (potential for hepatotoxicity). • May cause dizziness; avoid tasks that require alertness, motor skills until response to drug is established. • Take antacids, antiulcer medications at least 2 hrs after ketoconazole. • Notify physician of dark urine, pale stool, yellow skin or eyes, vomiting, increased irritation in topical use, onset of other new symptoms. • **Topical:** Rub well into affected areas. • Avoid contact with eyes. • Keep skin clean, dry; wear light clothing for ventilation. • Separate personal items in direct contact with affected area. • **Shampoo:** Initially, use 2 times a wk for 4 wks with at least 3 days between shampooing; frequency then determined by response to medication.

ketoprofen

kee-toe-**proe**-fen
(Apo-Keto ✱)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID. **CLINICAL:** Antirheumatic, analgesic, antidysmenorrheal, vascular headache suppressant (see p. 128C).

ACTION

Produces analgesic, anti-inflammatory effects by inhibiting prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain.

PHARMACOKINETICS

Immediate-release capsules are rapidly, well absorbed following PO administration; extended-release capsules are well absorbed. Protein binding: 99%. Metabolized in liver. Excreted in urine; less than 10% excreted as unchanged (unconjugated) drug. **Half-life:** 2–4 hrs; extended-release: 3–7.5 hrs.

USES

Symptomatic treatment of acute and chronic rheumatoid arthritis (RA), osteoarthritis. Relief of mild to moderate pain, primary dysmenorrhea.

PRECAUTIONS

Contraindications: Perioperative pain in setting of CABG surgery, history of hypersensitivity to aspirin, NSAIDs. **Cautions:** Renal/hepatic impairment, history of GI tract disease (bleeding or ulcers), predisposition to fluid retention, asthma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. Avoid during late pregnancy (ductus arteriosus). **Pregnancy Category C. (D if used in third trimester or near delivery). Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease effects of **antihypertensives, diuretics. Aspirin, other salicylates** may increase risk of GI side effects, bleeding. May increase risk of bleeding with **heparin, oral anticoagulants, thrombolytics.** May increase concentration, risk of toxicity of **lithium.** May increase risk of **methotrexate** toxicity. **Probenecid** may increase concentration. **HERBAL:** **Cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo, ginseng, horse chestnut, red**

clover may increase antiplatelet activity, risk of bleeding. **FOOD:** None known. **LAB VALUES:** May prolong bleeding time. May increase serum alkaline phosphatase, AST, ALT, bilirubin. May decrease Hgb, Hct, serum sodium.

AVAILABILITY (OTC)

Capsules: 50 mg, 75 mg.

Capsules, Extended-Release: 200 mg.

ADMINISTRATION/HANDLING

PO

• May give with food, milk, full glass (8 oz) of water (minimizes potential GI distress). • Do not break, chew extended-release capsules.

INDICATIONS/ROUTES/DOSAGE

Acute or Chronic Rheumatoid Arthritis and Osteoarthritis

PO: ADULTS: Initially, 75 mg 3 times a day or 50 mg 4 times a day. **ELDERLY:** Initially, 25–50 mg 3–4 times a day. Maintenance: 150–300 mg/day in 3–4 divided doses.

PO *(Extended-Release)*: ADULTS, ELDERLY: 200 mg once a day.

Mild to Moderate Pain, Dysmenorrhea

PO: ADULTS, ELDERLY: 25–50 mg q6–8h. **Maximum:** 300 mg/day.

Dosage in Renal Impairment

Mild: 150 mg/day maximum. **Severe *(creatinine clearance less than 25 ml/min)*:** 100 mg/day maximum.

SIDE EFFECTS

Frequent (11%): Dyspepsia (heartburn, indigestion, epigastric pain). **Occasional (more than 3%):** Nausea, diarrhea/constipation, flatulence, abdominal cramps, headache. **Rare (less than 2%):** Anorexia, vomiting, visual disturbances, fluid retention.

ADVERSE EFFECTS/ TOXIC REACTIONS

Peptic ulcer, GI bleeding, gastritis, severe hepatic reaction (cholestasis, jaundice) occur rarely. Nephrotoxicity (dysuria, hematuria, proteinuria, nephrotic syndrome), severe hypersensitivity reaction (bronchospasm, angioedema) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Monitor for evidence of nausea, dyspepsia. Monitor for therapeutic response: relief of pain, improved range of motion, grip strength, mobility. Monitor renal/hepatic function tests, occult blood loss, mental status.

PATIENT/FAMILY TEACHING

• Avoid aspirin, alcohol during therapy (increases risk of GI bleeding). • If GI upset occurs, take with food, milk. • Swallow capsule whole; do not crush/chew.

ketorolac

kee-**toe**-role-lak
(Acular, Acular LS, Acular PF, Acuvail, Apo-Ketorolac, Novo-Ketorolac, Sprix, Toradol)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation.

Do not confuse Acular with Acthar or Ocular, ketorolac with Ketalar, or Toradol with Foradil, Inderal, Tegretol, or tramadol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: Analgesic, intraocular anti-inflammatory (see p. 128C).

ACTION

Inhibits prostaglandin synthesis, reduces prostaglandin levels in aqueous humor. **Therapeutic Effect:** Reduces intensity of pain stimulus, reduces intraocular inflammation.

PHARMACOKINETICS

Readily absorbed from GI tract after IM administration. Protein binding: 99%. Largely metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–8 hrs (increased in renal impairment, in elderly).

USES

PO, injection, nasal: Short-term (5 days or less) relief of mild to moderate pain. **Ophthalmic:** Relief of ocular itching due to seasonal allergic conjunctivitis. Treatment postop for inflammation following cataract extraction, pain following incisional refractive surgery. **OFF-LABEL:** Prevention, treatment of ocular inflammation (ophthalmic form).

PRECAUTIONS

Contraindications: Advanced renal impairment, active peptic ulcer disease, chronic inflammation of GI tract, GI bleeding/ulceration, history of hypersensitivity to aspirin, NSAIDs. Perioperative pain in setting of CABG surgery. **Cautions:** Renal/hepatic impairment, history of GI tract disease, predisposition to fluid retention, asthma, coagulation disorders, receiving anticoagulants.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category C (D if used in third trimester). Children:** Safety and efficacy not established, but doses of 0.5 mg/kg have been used. **Elderly:** GI bleeding, ulceration more likely to cause serious adverse effects. Age-related renal impairment may increase risk of hepatic/renal toxicity; decreased dosage recommended.

INTERACTIONS

DRUG: May decrease effects of **antihypertensives, diuretics. Aspirin, NSAIDs, other salicylates** may increase risk of GI side effects, bleeding. May increase risk of bleeding with **heparin, oral anticoagulants, thrombolytics.** May increase concentration, risk of toxicity of **lithium.** May increase risk of **methotrexate** toxicity. **Probenecid** may increase concentration. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo, ginseng, horse chestnut, red clover** may decrease antiplatelet activity, risk of bleeding. **FOOD:** None known. **LAB VALUES:** May prolong bleeding time. May increase hepatic function test results, BUN, potassium, creatinine.

AVAILABILITY (Rx)

Injection Solution (Toradol): 15 mg/ml, 30 mg/ml. **Nasal Spray (Sprix):** 1.7-g bottle provides 8 sprays (15.75 mg/spray). **Ophthalmic Solution:** 0.4% (Acular LS), 0.45% (Acuvail), 0.5% (Acular, Acular PF). **Tablets (Toradol):** 10 mg.

ADMINISTRATION/HANDLING

IV

• Give undiluted as IV push. • Give over at least 15 sec.

IM

• Give deep IM slowly into large muscle mass.

PO

• Give with food, milk, antacids if GI distress occurs.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until pocket is formed between eye and lower lid. Place prescribed number of drops into pocket. • Instruct pt to close eye gently for 1–2 min (so medica-

tion will not be squeezed out of the sac) and to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize system absorption.

IV INCOMPATIBILITY

Promethazine (Phenergan).

IV COMPATIBILITIES

Fentanyl (Sublimaze), hydromorphone (Dilaudid), morphine, nalbuphine (Nubain).

INDICATIONS/ROUTES/DOSAGE

Short-Term Relief of Mild to Moderate Pain (Multiple Doses)

PO: ADULTS, ELDERLY: Initially, 20 mg (10 mg for elderly), then 10 mg q4–6h. **Maximum:** 40 mg/24 hrs. **CHILDREN 2–16 YRS:** 0.25 mg/kg q6h.

IV, IM: ADULTS YOUNGER THAN 65 YRS: 30 mg q6h. **Maximum:** 120 mg/24 hrs. **ADULTS 65 YRS AND OLDER, THOSE WITH RENAL IMPAIRMENT, THOSE WEIGHING LESS THAN 50 KG:** 15 mg q6h. **Maximum:** 60 mg/24 hrs. **CHILDREN 2–16 YRS:** 0.5 mg/kg, then 0.25–1 mg/kg q6h for up to 48 hrs. **Maximum:** 90 mg/day.

Nasal Spray: ADULTS, ELDERLY YOUNGER THAN 65 YRS: 31.5 mg (1 spray each nostril) q6–8h. **Maximum daily dose:** 126 mg. **ADULTS 65 YRS AND OLDER, PTS WEIGHING LESS THAN 50 KG:** 15.75 (1 spray in one nostril) mg q6–8h. **Maximum daily dose:** 63 mg.

Short-Term Relief of Mild to Moderate Pain (Single Dose)

IV: ADULTS YOUNGER THAN 65 YRS, CHILDREN 17 YRS AND OLDER WEIGHING MORE THAN 50 KG: 30 mg. **ADULTS 65 YRS AND OLDER, WITH RENAL IMPAIRMENT, WEIGHING LESS THAN 50 KG:** 15 mg. **CHILDREN 2–16 YRS:** 0.5 mg/kg. **Maximum:** 15 mg.

IM: ADULTS YOUNGER THAN 65 YRS, CHILDREN 17 YRS AND OLDER, WEIGHING MORE THAN 50 KG: 60 mg. **ADULTS 65 YRS AND OLDER, WITH RENAL IMPAIRMENT, WEIGHING LESS THAN 50 KG:** 30 mg. **CHILDREN 2–16 YRS:** 1 mg/kg. **Maximum:** 30 mg.

Allergic Conjunctivitis

Ophthalmic: ADULTS, ELDERLY, CHILDREN 3 YRS AND OLDER: 1 drop 4 times a day.

Cataract Extraction

Ophthalmic: ADULTS, ELDERLY: 1 drop 4 times a day. Begin 24 hrs after surgery and continue for 2 wks.

Refractive Surgery

Ophthalmic: ADULTS, ELDERLY: 1 drop 4 times a day for 3 days.

SIDE EFFECTS

Frequent (17%–12%): Headache, nausea, abdominal cramps/pain, dyspepsia (heartburn, indigestion, epigastric pain). **Occasional (9%–3%):** Diarrhea. **Nasal:** Nasal discomfort, rhinalgia, increased lacrimation, throat irritation, rhinitis. **Ophthalmic:** Transient stinging, burning. **Rare (3%–1%):** Constipation, vomiting, flatulence, stomatitis. **Ophthalmic:** Ocular irritation, allergic reactions (manifested by pruritus, stinging), superficial ocular infection, keratitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Peptic ulcer, GI bleeding, gastritis, severe hepatic reaction (cholestasis, jaundice) occur rarely. Nephrotoxicity (glomerular nephritis, interstitial nephritis, nephrotic syndrome) may occur in pts with preexisting renal impairment. Acute hypersensitivity reaction (fever, chills, joint pain) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain. Obtain baseline renal/hepatic function tests.

INTERVENTION/EVALUATION

Monitor renal/hepatic function tests, urinary output. Monitor daily pattern of bowel activity, stool consistency. Observe for occult blood loss. Assess for therapeutic response: relief of pain, stiffness,

swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Be alert to signs of bleeding (may also occur with ophthalmic route due to systemic absorption).

PATIENT/ FAMILY TEACHING

• Avoid aspirin, alcohol during therapy with oral or ophthalmic ketorolac (increases tendency to bleed). • If GI upset occurs, take with food, milk. • Avoid tasks that require alertness, motor skills until response to drug is established. • **Ophthalmic:** Transient stinging, burning may occur upon instillation. • Do not administer while wearing soft contact lenses.

labetalol

la-**bay**-ta-lol
(Apo-Labetalol, Normodyne, Trandate)
Do not confuse labetalol with betaxolol or lamotrigine, or Trandate with tramadol or Trental.

FIXED-COMBINATION(S)

Normozide: labetalol/hydrochlorothiazide (a diuretic): 100 mg/25 mg, 200 mg/25 mg, 300 mg/25 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha-, beta-adrenergic blocker. **CLINICAL:** Antihypertensive (see p. 72C).

ACTION

Blocks alpha$_1$-, beta$_1$-, beta$_2$- (large doses) adrenergic receptor sites. Large doses increase airway resistance. **Therapeutic Effect:** Slows sinus heart rate; decreases peripheral vascular resistance, cardiac output, B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–2 hrs	2–4 hrs	8–12 hrs
IV	2–5 min	5–15 min	2–4 hrs

Completely absorbed from GI tract. Protein binding: 50%. Undergoes first-pass metabolism in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2.5–8 hrs.

USES

Management of mild to severe hypertension. May be used alone or in combination with other antihypertensives. **OFF-LABEL:** Management of preeclampsia, severe hypertension in pregnancy, hypertension during acute ischemic stroke, pediatric hypertension.

PRECAUTIONS

Contraindications: Bronchial asthma, cardiogenic shock, overt cardiac failure, second- or third-degree heart block (except in pts with functioning pacemaker), severe bradycardia, uncontrolled CHF, other conditions associated with severe, prolonged hypotension. **Cautions:** Compensated CHF, severe anaphylaxis to allergens, myasthenia gravis, psychiatric disease, peripheral vascular disease, hepatic or cardiac impairment, pheochromocytoma, diabetes mellitus, concurrent use with digoxin, verapamil.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta. Small amount distributed in breast milk. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** Age-related peripheral vascular disease may increase susceptibility to decreased peripheral circulation.

INTERACTIONS

DRUG: May decrease effects of **beta$_2$ agonists, theophylline. Beta blockers, digoxin** may increase risk of bradycardia. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **Licorice** may cause water retention, increased serum sodium, decreased serum potassium. **FOOD:** None known. **LAB VALUES:** May increase serum antinuclear

antibody titer (ANA), BUN, LDH, lipoprotein, alkaline phosphatase, bilirubin, creatinine, potassium, triglycerides, uric acid, AST, ALT.

AVAILABILITY (Rx)

Injection Solution (Trandate): 5 mg/ml. **Tablets (Trandate):** 100 mg, 200 mg, 300 mg.

ADMINISTRATION/HANDLING

IV

ALERT Pt must be in supine position for IV administration and for 3 hrs after receiving medication (substantial drop in B/P upon standing should be expected).

Reconstitution • For IV infusion, dilute in D_5W to provide concentration of 1–2 mg/ml.

Rate of Administration • For IV push, give over 2–3 min at 10-min intervals. • Do not administer faster than 2 mg/min. • For IV infusion, administer at rate of 2 mg/min initially. Rate is adjusted according to B/P. • Monitor B/P immediately before and q5–10min during IV administration (maximum effect occurs within 5 min).

Storage • Store at room temperature. • After dilution, IV solution is stable for 24 hrs. • Solution appears clear, colorless to light yellow. • Discard if discolored or precipitate forms.

PO

• Give without regard to food. • Tablets may be crushed.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), ceftriaxone (Rocephin), furosemide (Lasix), heparin, nafcillin (Nafcil), thiopental.

IV COMPATIBILITIES

Aminophylline, amiodarone (Cordarone), calcium gluconate, diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), enalapril (Vasotec), fentanyl (Sublimaze), hydromorphone (Dilaudid), lidocaine, lorazepam (Ativan), magnesium sulfate, midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride, potassium phosphate, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 100 mg twice a day adjusted in increments of 100 mg twice a day q2–3days. Maintenance: 100–400 mg twice a day. **Maximum:** 2.4 g/day. **ELDERLY:** Initially, 100 mg 1–2 times a day. May increase as needed. **CHILDREN:** 1–3 mg/kg/day in 2 divided doses. **Maximum:** 10–12 mg/kg/day up to 1,200 mg/day.

Severe Hypertension, Hypertensive Crisis

IV: ADULTS: Initially, 20 mg. Additional doses of 40–80 mg may be given at 10-min intervals, up to total dose of 300 mg. **IV Infusion: ADULTS:** Initially, 2 mg/min up to total dose of 300 mg. **CHILDREN:** 0.4–1 mg/kg/hr. **Maximum:** 3 mg/kg/hr.

SIDE EFFECTS

Frequent (20%–11%): Drowsiness, dizziness, excessive fatigue. **Occasional (10% or less):** Dyspnea, peripheral edema, depression, anxiety, constipation, diarrhea, nasal congestion, weakness, diminished sexual function, transient scalp tingling, insomnia, nausea, vomiting, abdominal discomfort. **Rare:** Altered taste, dry eyes, increased urination, paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS

May precipitate, aggravate CHF due to decreased myocardial stimulation. Abrupt withdrawal may precipitate myocardial ischemia, producing chest pain, diaphoresis, palpitations, headache, tremor. May mask signs, symptoms of acute hypoglycemia (tachycardia, B/P changes) in diabetic pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function tests. Assess B/P, apical pulse immedi-

ately before drug administration (if pulse is 60/min or less or systolic B/P is lower than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Monitor B/P for hypotension. Assess pulse for quality, irregular rate, bradycardia. Monitor EKG for cardiac arrhythmias. Monitor daily pattern of bowel activity, stool consistency. Assist with ambulation if dizziness occurs. Assess for evidence of CHF: dyspnea (particularly on exertion or lying down), night cough, peripheral edema, distended neck veins. Monitor I&O (increase in weight, decrease in urine output may indicate CHF).

PATIENT/FAMILY TEACHING

• Do not discontinue drug except upon advice of physician (abrupt discontinuation may precipitate heart failure). • Rise slowly from sitting position. • Compliance with therapy regimen is essential to control hypertension, arrhythmias. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report shortness of breath, excessive fatigue, weight gain, prolonged dizziness, headache. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician approval. • Limit alcohol.

lacosamide

la-**koe**-sa-myde
(Vimpat)
Do not confuse lacosamide with zonisamide.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Succinimide **(Schedule V). CLINICAL:** Anticonvulsant (see p. 35C).

ACTION

Selectively enhances slow inactivation of sodium channels, stabilizing hyperexcitable neuronal membranes and inhibits neuronal firing. **Therapeutic Effect:** Produces anticonvulsant effect.

PHARMACOKINETICS

Completely absorbed following PO administration. Protein binding: 15%. Maximum plasma concentration occurs 1–4 hrs after oral dosing and is reached at the end of IV infusion. Primarily excreted in urine. Steady-state levels achieved in 3 days. Removed by hemodialysis. **Half-life:** 13 hrs.

USES

Tablets used as adjunctive therapy for treatment of partial-onset seizures in pts 17 yrs and older with epilepsy. Injection form indicated as adjunctive therapy for treatment of partial-onset seizures in pts 17 years and older with epilepsy when oral administration is temporarily not feasible.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, cardiac conduction problems (e.g., marked first-degree AV block, second-degree or higher AV block, sick sinus syndrome without pacemaker), myocardial ischemia, heart failure, high risk of suicide.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 17 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum transaminase, ALT, proteinuria.

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml 20 ml. **Oral Solution:** 10 mg/ml.

Tablets: 50 mg, 100 mg, 150 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Do not crush or break film-coated tablets. • Oral solution should be administered with a calibrated measuring device. • Discard any unused portion after 7 wks.

IV

• Appears as a clear, colorless solution. • Discard unused portion or if precipitate or discoloration is present. • If mixing with diluent, may be stored for 24 hrs at room temperature. Infuse over 30–60 min.

IV COMPATIBILITIES

0.9% NaCl, D_5W, lactated Ringer's.

INDICATIONS/ROUTES/DOSAGE

Note: IV dose is same as oral dose.

Partial-Onset Seizures

PO: ADULTS, CHILDREN 17 YRS AND OLDER: Initially, 50 mg twice daily (100 mg/day). May increase by 100 mg/day at weekly intervals, given as 2 daily divided doses up to maintenance dose of 200–400 mg/day, based on pt response, tolerability.

IV: ADULTS, CHILDREN 17 YRS AND OLDER: May be given undiluted or mixed in compatible diluent and given as 30- to 60-min infusion.

Switch from IV to PO

When switching from IV to PO form, use same equivalent daily dosage and frequency of IV administration.

Switch from PO to IV

When switching from PO to IV form, initial total daily IV dosage should be equivalent to total daily dosage and frequency of PO form and should be infused IV over 30–60 min.

Severe Renal Impairment (Creatinine Clearance 30 ml/min or Less, Pts With End-Stage Renal Disease)

PO/IV: ADULTS, ELDERLY, CHILDREN 17 YRS AND OLDER: Maximum: 300 mg/day.

Hemodialysis: Supplement dose of up to 50% may be given after 4-hr HD treatment.

Mild to Moderate Hepatic Impairment

PO/IV: ADULTS, ELDERLY, CHILDREN 17 YRS AND OLDER: Maximum: 300 mg/day.

SIDE EFFECTS

Frequent (31%–13%): Dizziness, headache. **Occasional (11%–5%):** Nausea, double vision, vomiting, fatigue, blurred vision, ataxia (difficulty with balance, coordination, slurred speech), tremor, nystagmus (involuntary movement of eyeball). **Rare (4%–2%):** Vertigo, diarrhea, gait disturbances, memory impairment, depression, pruritus, injection site discomfort.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk of suicidal ideation, behavior. Dose-dependent prolongations in PR interval noted. Leukopenia, anemia, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, level of consciousness). Initiate seizure precautions. Hepatic/renal function tests, CBC, platelet count should be performed before therapy begins and periodically during therapy.

INTERVENTION/EVALUATION

Observe frequently for recurrence of seizure activity. Assess for clinical improvement (decrease in intensity/frequency of seizures). Assist with ambulation if dizziness occurs. Assess for suicidal ideation, depression, behavioral changes. Drug should be withdrawn gradually (over a minimum of 1 wk) to minimize potential for increased seizure frequency.

PATIENT/FAMILY TEACHING

• Strict maintenance of drug therapy is essential for seizure control. • Avoid

tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Notify physician of depression, suicidal ideation, unusual behavioral changes.

lactulose

lak-tyoo-lohs
(Acilac, Apo-Lactulose, Constulose, Enulose, Generlac, Kristalose, Laxilose)
Do not confuse lactulose with lactose.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Lactose derivative. **CLINICAL:** Hyperosmotic laxative, ammonia detoxicant (see p. 122C).

ACTION

Prevents reabsorption of ammonia, producing osmotic effect. **Therapeutic Effect:** Promotes increased peristalsis, bowel evacuation; decreases serum ammonia concentration.

PHARMACOKINETICS

Poorly absorbed from GI tract. Extensively metabolized in colon. Primarily excreted in feces.

USES

Prevention, treatment of portal-systemic encephalopathy (including hepatic precoma, coma); treatment of chronic constipation.

PRECAUTIONS

Contraindications: Use in pts requiring a low-galactose diet. **Cautions:** Diabetes mellitus, hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Avoid use in those younger than 6 yrs (usually unable to describe symptoms). **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium.

AVAILABILITY (Rx)

Packets (Kristalose): 10 g, 20 g. **Solution, Oral (Constulose, Enulose, Generlac):** 10 g/15 ml.

ADMINISTRATION/HANDLING

PO

• Store solution at room temperature. • Solution appears pale yellow to yellow, viscous liquid. Cloudiness, darkened solution does not indicate potency loss. • Drink water, juice, milk with each dose (aids stool softening, increases palatability). • Mix packets with 4 oz water.

Rectal

• Lubricate anus with petroleum jelly before enema insertion. • Insert carefully (prevents damage to rectal wall) with nozzle toward navel. • Squeeze container until entire dose expelled. • Instruct pt to retain 30–60 min.

INDICATIONS/ROUTES/DOSAGE

Constipation

PO: ADULTS, ELDERLY: 15–30 ml (10–20 g)/day, up to 60 ml (40 g)/day. **CHILDREN:** 1–3 ml/kg/day (0.7–2 g/kg/day).

Prevention of Portal-Systemic Encephalopathy

ADULTS, ELDERLY: 30–45 ml 3–4 times/day. **CHILDREN:** 40–90 ml/day in divided doses 3–4 times a day. **INFANTS:** 2.5–10 ml/day in 3–4 divided doses. Adjust dose q1–2 days to produce 2–3 soft stools/day.

Treatment of Portal-Systemic Encephalopathy

PO: ADULTS, ELDERLY: Initially, 30–45 ml (20–30 g) every hr to induce rapid laxa-

tion. Then, 30–45 ml 3–4 times a day. Adjust dose q1–2days to produce 2–3 soft stools a day. Usual daily dose: 90–150 ml (60–100 g).

Rectal Administration (as Retention Enema)
200 g (300 ml) diluted with 700 ml water or NaCl via rectal balloon catheter. Retain 30–60 min q4–6h. (Transition to oral prior to stopping rectal administration.)

SIDE EFFECTS

Occasional: Abdominal cramping, flatulence, increased thirst, abdominal discomfort. **Rare:** Nausea, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Diarrhea indicates overdose. Long-term use may result in laxative dependence, chronic constipation, loss of normal bowel function.

L

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency; record time of evacuation. Assess for abdominal disturbances. Monitor serum electrolytes in pts exposed to prolonged, frequent, excessive use of medication.

PATIENT/FAMILY TEACHING

• Evacuation occurs in 24–48 hrs of initial dose. • Institute measures to promote defecation: increase fluid intake, exercise, high-fiber diet.

lamivudine

la-**miv**-yoo-deen
(Epivir, Epivir-HBV, Heptovir)

BLACK BOX ALERT Serious, sometimes fatal lactic acidosis, severe hepatomegaly with steatosis (fatty liver) have occurred.

Pts must be monitored for chronic hepatitis B for several months following therapy.

Do not confuse Epivir with Combivir, or lamivudine with lamotrigine.

FIXED-COMBINATION(S)

Combivir: lamivudine/zidovudine (an antiviral): 150 mg/300 mg. **Epzicom:** lamivudine/abacavir (an antiviral): 300 mg/600 mg. **Trizivir:** lamivudine/zidovudine/abacavir (an antiviral): 150 mg/300 mg/300 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nucleoside reverse transcriptase inhibitor. **CLINICAL:** Antiviral (see pp. 69C, 115C).

ACTION

Inhibits HIV reverse transcriptase by viral DNA chain termination. Inhibits RNA-, DNA-dependent DNA polymerase, an enzyme necessary for HIV replication. **Therapeutic Effect:** Slows HIV replication, reduces progression of HIV infection.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: less than 36%. Widely distributed (crosses blood-brain barrier). Primarily excreted unchanged in urine. Not removed by hemodialysis or peritoneal dialysis. **Half-life: Children:** 2 hrs. **Adults:** 5–7 hrs.

USES

Epivir: Treatment of HIV infection in combination with other antiretroviral agents. **Epivir-HBV:** Treatment of chronic hepatitis B. **OFF-LABEL:** Prophylaxis in health care workers at risk of acquiring HIV after occupational exposure to virus. Use as part of multidrug regimen.

PRECAUTIONS

Contraindications: None known. **Cautions:** Use in children with history of pancreatitis or risk factors for developing pancreatitis. Use in combination with interferon alfa

with or without ribavirin in HIV/HBV coinfected pts, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta. Unknown if distributed in breast milk. Breast-feeding not recommended (possibility of HIV transmission). **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 3 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Zalcitabine** may inhibit absorption of both drugs; avoid concurrent administration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase Hgb, neutrophil count, serum amylase, AST, ALT, bilirubin.

AVAILABILITY (Rx)

Oral Solution: 5 mg/ml (Epivir-HBV), 10 mg/ml (Epivir). **Tablets:** 100 mg (Epivir-HBV), 150 mg (Epivir), 300 mg (Epivir).

ADMINISTRATION/HANDLING

PO

- Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS WEIGHING 50 KG OR MORE: 150 mg twice a day or 300 mg once a day. **ADULTS WEIGHING LESS THAN 50 KG:** 4 mg/kg twice a day (up to 150 mg/dose). **CHILDREN 4 MOS–16 YRS:** 4 mg/kg twice a day (up to 150 mg/dose). **INFANTS 1–3 MOS:** 4 mg/kg twice/day. **NEONATES YOUNGER THAN 30 DAYS:** 2 mg/kg twice/day.

Chronic Hepatitis B

PO: ADULTS: 100 mg/day. **CHILDREN 2–17 YRS:** 3 mg/kg/day. **Maximum:** 100 mg/day.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine Clearance	Dosage HIV	Dosage Hepatitis B
30–49 ml/min	150 mg once a day	100 mg first dose, then 50 mg once a day
15–29 ml/min	150 mg first dose, then 100 mg once a day	100 mg first dose, then 25 mg once a day
5–14 ml/min	150 mg first dose, then 50 mg once a day	35 mg first dose, then 15 mg once a day
Less than 5 ml/min	50 mg first dose, then 25 mg once a day	35 mg first dose, then 10 mg once a day

Hemodialysis: Dosing post-HD recommended.

SIDE EFFECTS

Frequent: Headache (35%), nausea (33%), malaise, fatigue (27%), nasal disturbances (20%), diarrhea, cough (18%), musculoskeletal pain, neuropathy (12%), insomnia (11%), anorexia, dizziness, fever, chills (10%). **Occasional:** Depression (9%), myalgia (8%), abdominal cramps (6%), dyspepsia, arthralgia (5%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Pancreatitis occurs in 13% of pediatric pts. Anemia, neutropenia, thrombocytopenia occur rarely. Lactic acidosis, severe hepatomegaly with steatosis have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline lab values, esp. renal function. Screen HIV pt for hepatitis B infection before initiating therapy.

INTERVENTION/EVALUATION

Monitor serum creatinine, amylase, lipase ALT, AST, bilirubin, BUN. Assess for headache, nausea, cough. Monitor daily pat-

tern of bowel activity, stool consistency. Modify diet or administer laxative as needed. Assess for dizziness, sleep pattern. If pancreatitis in children occurs, movement aggravates abdominal pain; sitting up, flexing at the waist relieves the pain.

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • Lamivudine is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Avoid tasks requiring alertness, motor skills until response to drug is established. • Avoid alcohol. • Closely monitor for symptoms of pancreatitis (severe, steady abdominal pain often radiating to the back, clammy skin, hypotension; nausea/vomiting may accompany abdominal pain).

lamotrigine

TOP 200

la-**moe**-tri-jeen
(Apo-Lamotrigine, Lamictal, Lamictal ODT, Lamictal XR, Novo-Lamotrigine)

BLACK BOX ALERT Severe, potentially life-threatening skin rashes have been reported, including Stevens-Johnson syndrome. Risk increased with coadministration with valproic acid and rapid-dose titration.

Do not confuse Lamictal with Lamisil or Lomotil, or lamotrigine with labetalol or lamivudine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenyltriazine. **CLINICAL:** Anticonvulsants (see p. 35C).

ACTION

May block voltage-sensitive sodium channels, stabilizing neuronal membranes, regulating presynaptic transmitter release of excitatory amino acids. **Therapeutic Effect:** Produces anticonvulsant activity. Delays time to occurrence of acute mood episodes (mania, depression, hypomania).

USES

Adjunctive therapy in adults and children with generalized tonic-clonic seizures and partial seizures, treatment of adults and children with generalized seizures of Lennox-Gastaut syndrome. Conversion to monotherapy in adults treated with another enzyme-inducing antiepileptic drug (EIAED). Long-term maintenance treatment of bipolar disorder. Treatment of pts 2 yrs and older with primary generalized tonic-clonic seizures. **Extended-release:** Adjunctive therapy for primary generalized tonic-clonic and partial-onset seizures in pts 13 yrs and older. Conversion to monotherapy in pt 13 yrs and older with partial seizures receiving treatment with a single antiepileptic drug (AED).

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal, hepatic, cardiac impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Breast-feeding not recommended. Increased fetal risk of oral cleft formation has been noted with use during pregnancy. **Pregnancy Category C. Children:** Safety and efficacy in those 18 yrs and younger with bipolar disorder, younger than 13 yrs with epilepsy have not been established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Carbamazepine, phenobarbital, primidone, phenytoin, rifampin** may decrease concentration. **Valproic acid** may increase concentration/effects. **Oral contraceptives** may decrease concentration. **HERBAL:** **Evening primrose** may decrease seizure threshold. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 25 mg, 100 mg, 150 mg, 200 mg.
Tablets (Chewable): 2 mg, 5 mg, 25 mg.
Tablets (Orally-Disintegrating): 25 mg, 50 mg, 100 mg, 200 mg.

Tablets (Extended-Release): 25 mg, 50 mg, 100 mg, 200 mg, 250 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Chewable tablets may be dispensed in water or diluted fruit juice, or swallowed whole. • Extended-release tablets must be swallowed whole; do not chew, crush, or divide. • Place orally-disintegrating tablet on tongue, allow to dissolve; do not break, cut, or chew. Can be swallowed without regard to food or water.

INDICATIONS/ROUTES/DOSAGE

Lennox-Gastaut, Primary Generalized Tonic-Clonic Seizures, Partial Seizures

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: Initially, 25 mg/day for 2 wks, then increase to 50 mg/day for 2 wks. After 4 wks, may increase by 50 mg/day at 1- to 2-wk intervals. Maintenance: 225–375 mg/day in 2 divided doses. **CHILDREN 2–12 YRS:** Initially, 0.3 mg/kg/day in 1–2 divided doses for 2 wks, then increase to 0.6 mg/kg/day in 1–2 divided doses for 2 wks. After 4 wks, may increase by 0.6 mg/kg/day at 1- to 2-wk intervals. Maintenance: 4.5–7.5 mg/kg/day in 2 divided doses. **Maximum:** 300 mg/day in 2 divided doses.

Adjusted Dosage with Antiepileptic Drugs Containing Valproic Acid

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: Initially, 25 mg every other day for 2 wks, then increase to 25 mg/day for 2 wks. After 4 wks, may increase by 25–50 mg/day at 1- to 2-wk intervals. Maintenance: 100–400 mg/day in 2 divided doses (100–200 mg/day when taking lamotrigine with valproic acid alone). **CHILDREN 2–12 YRS:** Initially, 0.15 mg/kg/day in 1–2 divided doses for 2 wks, then increase to 0.3 mg/kg/day in 1–2 divided doses for 2 wks. After 4 wks, may increase by 0.3 mg/kg/day at 1- to 2-wk intervals. Maintenance: 1–5 mg/kg/day in 2 divided doses. **Maximum:** 200 mg/day in 2 divided doses.

Adjusted Dosage with EIAED without Valproic Acid

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: Initially, 50 mg/day for 2 wks, then increase to 100 mg/day in 2 divided doses for 2 wks. After 4 wks, may increase by 100 mg/day at 1- to 2-wk intervals. Maintenance: 300–500 mg/day in 2 divided doses. **CHILDREN 2–12 YRS:** Initially, 0.6 mg/kg/day in 1–2 divided doses for 2 wks, then increase to 1.2 mg/kg/day in 1–2 divided doses for 2 wks. After 4 wks, may increase by 1.2 mg/kg/day at 1- to 2-wk intervals. Maintenance: 5–15 mg/kg/day in 2 divided doses. **Maximum:** 400 mg/day in 2 divided doses.

Usual Maintenance Range for Extended-Release Tablets

PT TAKING VALPROIC ACID: 200–250 mg once daily. **PT TAKING EIAED WITHOUT VALPROIC ADIC:** 400–600 mg once daily. **PT NOT TAKING EIAED:** 300–400 mg once daily.

Conversion to Monotherapy for Pts Receiving EIAEDs

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 500 mg/day in 2 divided doses. Titrate to desired dose while maintaining EIAED at fixed level, then withdraw EIAED by 20% each wk over a 4-wk period.

Conversion to Monotherapy for Pts Receiving Valproic Acid

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: Titrate lamotrigine to 200 mg/day, maintaining valproic acid dose. Maintain lamotrigine dose and decrease valproic acid to 500 mg/day, no greater than 500 mg/day/wk, then maintain 500 mg/day for 1 wk. Increase lamotrigine to 300 mg/day and decrease valproic acid to 250 mg/day. Maintain for 1 wk, then discontinue val-

L

proic acid and increase lamotrigine by 100 mg/day each wk until maintenance dose of 500 mg/day reached.

Bipolar Disorder

PO: ADULTS, ELDERLY: Initially, 25 mg/day for 2 wks, then 50 mg/day for 2 wks, then 100 mg/day for 1 wk, then 200 mg/day beginning with wk 6.

Bipolar Disorder in Pts Receiving EIAEDs

PO: ADULTS, ELDERLY: 50 mg/day for 2 wks, then 100 mg/day for 2 wks, then 200 mg/day for 1 wk, then 300 mg/day for 1 wk, then up to usual maintenance dose 400 mg/day in divided doses.

Bipolar Disorder in Pts Receiving Valproic Acid

PO: ADULTS, ELDERLY: 25 mg/day every other day for 2 wks, then 25 mg/day for 2 wks, then 50 mg/day for 1 wk, then 100 mg/day. Usual maintenance dose with valproic acid: 100 mg/day.

Usual Dosage for Lamictal XR

Adjunct Therapy: Range: 200–600 mg/day.

Conversion to Monotherapy: Range: 250–500 mg/day.

Discontinuation Therapy

◀ALERT▶ A dosage reduction of approximately 50% per wk over at least 2 wks is recommended.

Dosage in Renal Impairment

◀ALERT▶ Decreased dosage may be effective in pts with significant renal impairment.

Dosage in Hepatic Impairment

Moderate to severe without ascites: Reduce dose by 25%. Severe with ascites: Reduce dose by 50%.

SIDE EFFECTS

Frequent: Dizziness (38%), headache (29%), diplopia (double vision) (28%), ataxia (22%), nausea (19%), blurred vision (16%), drowsiness, rhinitis (14%). **Occasional (10%–5%):** Rash, pharyngitis, vomiting, cough, flu-like symptoms, diarrhea, dysmenorrhea, fever, insomnia, dyspepsia. **Rare:** Constipation, tremor, anxiety, pruritus, vaginitis, hypersensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal may increase seizure frequency. Serious rashes, including Stevens-Johnson syndrome, have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (type, onset, intensity, frequency, duration, LOC), drug history (esp. other anticonvulsants), other medical conditions (e.g., renal impairment). Provide safety precautions; quiet, dark environment. Assess baseline mood, behavior.

INTERVENTION/EVALUATION

Report to physician promptly if rash occurs (drug discontinuation may be necessary). Assist with ambulation if dizziness, ataxia occurs. Assess for clinical improvement (decreased intensity/frequency of seizures). Assess for visual abnormalities, headache. Monitor for suicidal ideation, depression, behavioral changes.

PATIENT/ FAMILY TEACHING

• Take medication only as prescribed; do not abruptly discontinue medication after long-term therapy. • Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established. • Carry identification card/bracelet to note anticonvulsant therapy. • Strict maintenance of drug therapy is essential for seizure control. • Report to physician any rash, fever, swelling of glands, worsening depression, suicidal ideation, unusual changes in behavior, worsening of seizure control. • May cause photosensitivity reaction; avoid exposure to sunlight, artificial light.

lansoprazole

TOP 200

lan-**soe**-pra-zol
(Apo-Lansoprazole, Prevacid, Prevacid Solu-Tab, Prevacid 24HR)
Do not confuse lansoprazole with aripiprazole or dexlansoprazole, or Prevacid with Pravachol, Prilosec, or Prinivil.

FIXED-COMBINATION(S)

Prevacid NapraPac: lansoprazole/naproxen (an NSAID): 15 mg/375 mg, 15 mg/500 mg. **Prevpac:** Combination card containing amoxicillin 500 mg (4 capsules), lansoprazole 30 mg (2 capsules), clarithromycin 500 mg (2 tablets).

CLASSIFICATION

CLINICAL: Proton pump inhibitor (see p. 148C).

ACTION

Selectively inhibits gastric parietal cell membrane enzyme system (hydrogen-potassium adenosine triphosphatase, proton pump). **Therapeutic Effect:** Suppresses gastric acid secretion.

PHARMACOKINETICS

Rapid, complete absorption (food may decrease absorption) once drug has left stomach. Protein binding: 97%. Distributed primarily to gastric parietal cells and converted to two active metabolites. Extensively metabolized in liver. Eliminated in bile and urine. Not removed by hemodialysis. **Half-life:** 1.5 hrs (increased in hepatic impairment, elderly).

USES

Short-term treatment (4 wks and less) of healing, symptomatic relief of active duodenal ulcer; short-term treatment (8 wks and less) for healing, symptomatic relief of erosive esophagitis. Long-term treatment of pathologic hypersecretory conditions, including Zollinger-Ellison syndrome. Short-term treatment (8 wks and less) of active benign gastric ulcer, *H. pylori*–associated duodenal ulcer, maintenance treatment for healed duodenal ulcer. Treatment of gastroesophageal reflux disease (GERD), NSAID-associated gastric ulcer. **OTC:** Relief of frequent heartburn. **IV:** Short-term treatment of erosive esophagitis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment. May increase risk of hip, wrist, spine fractures; GI infections.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted but doses greater than 30 mg not recommended.

INTERACTIONS

DRUG: May decrease concentration of **atazanavir.** May interfere with absorption of **ampicillin, digoxin, iron salts, ketoconazole. Sucralfate** may delay absorption. May increase effect of **warfarin.** May decrease effect of **clopidogrel. HERBAL: St. John's wort** may decrease concentration/effects. **FOOD: Food** may decrease absorption. **LAB VALUES:** May increase LDH, serum alkaline phosphatase, bilirubin, cholesterol, creatinine, AST, ALT, triglycerides, uric acid, Hgb, Hct. May produce abnormal albumin/globulin ratio, electrolyte balance, platelet, RBC, WBC count.

AVAILABILITY (Rx)

Tablets, Orally-Disintegrating (Prevacid Solu-Tab): 15 mg, 30 mg.

Capsules (Delayed-Release): (Prevacid): 15 mg, 30 mg. **(Prevacid 24HR):** 15 mg.

ADMINISTRATION/HANDLING

PO

• Give while fasting or before meals (food diminishes absorption). • Do not chew/

crush delayed-release capsules. • If pt has difficulty swallowing capsules, open capsules, sprinkle granules on 1 tbsp of applesauce, swallow immediately.

PO (Solu-Tab)
• Place tablet on tongue; allow to dissolve, then swallow. • May give via oral syringe or nasogastric tube. • May dissolve in 4 ml (15 mg) or 10 ml (30 mg) water.

INDICATIONS/ROUTES/DOSAGE

Duodenal Ulcer
PO: ADULTS, ELDERLY: 15 mg/day, before eating, preferably in the morning, for up to 4 wks. Maintenance: 15 mg/day.

Erosive Esophagitis
PO: ADULTS, ELDERLY: 30 mg/day, before eating, for up to 8 wks. If healing does not occur within 8 wks (in 5%–10% of cases), may give for additional 8 wks. Maintenance: 15 mg/day. **CHILDREN 12–17 YRS:** 30 mg/day up to 8 wks. **CHILDREN 1–11 YRS, WEIGHING GREATER THAN 30 KG:** 30 mg/day; **WEIGHING 30 KG OR LESS:** 15 mg/day.

Gastric Ulcer
PO: ADULTS: 30 mg/day for up to 8 wks.

NSAID Gastric Ulcer
PO: ADULTS, ELDERLY: (Healing): 30 mg/day for up to 8 wks. (Prevention): 15 mg/day for up to 12 wks.

Gastroesophageal Reflux Disease (GERD)
PO: ADULTS: 15 mg/day for up to 8 wks.

***H. Pylori* Infection**
PO: ADULTS, ELDERLY: (triple drug therapy including amoxicillin, clarithromycin) 30 mg q12h for 10–14 days.

Pathologic Hypersecretory Conditions (Including Zollinger-Ellison Syndrome)
PO: ADULTS, ELDERLY: 60 mg/day. Individualize dosage according to pt needs and for as long as clinically indicated. Administer up to 120 mg/day in divided doses.

Heartburn (OTC)
PO: ADULTS, ELDERLY: 15 mg once daily for 14 days. May repeat q4mos.

SIDE EFFECTS

Occasional (3%–2%): Diarrhea, abdominal pain, rash, pruritus, altered appetite. **Rare (1%):** Nausea, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bilirubinemia, eosinophilia, hyperlipemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab values. Assess for epigastric/abdominal pain, evidence of GI bleeding, ecchymosis.

INTERVENTION/EVALUATION

Monitor ongoing laboratory results, CBC, hepatic/renal function tests. Assess for therapeutic response (relief of GI symptoms). Question if diarrhea, abdominal pain, nausea occurs.

PATIENT/ FAMILY TEACHING

• Do not chew/crush delayed-release capsules. • For pts who have difficulty swallowing capsules, open capsules, sprinkle granules on 1 tbsp of applesauce, swallow immediately.

lanthanum

lan-tha-num
(Fosrenol)
Do not confuse lanthanum with lithium.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Detoxifying agent. **CLINICAL:** Phosphate regulator.

ACTION

Dissociates in acidic environment of upper GI tract to lanthanum ions that bind to dietary phosphate released from food during digestion, forming highly insoluble lanthanum phosphate complexes. **Therapeutic Effect:** Reduces phosphate absorption.

PHARMACOKINETICS

Very low absorption following PO administration. Protein binding: greater than 99%. Not metabolized. Phosphate complexes are eliminated in urine. **Half-life:** 53 hrs (in plasma); 2–3.6 yrs (from bone).

USES

Hyperphosphatemia. Reduce serum phosphate levels in pts with end-stage renal disease. Renal failure (GFR Less Than 15 ml/min).

PRECAUTIONS

Contraindications: None known. **Cautions:** Acute peptic ulcer disease, ulcerative colitis, Crohn's disease, bowel obstruction.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established; not recommended for children. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Antacids, oral quinolones** interact with lanthanum carbonate; separate antacid administration by 2 hrs. Administer oral quinolones 1 hr before or 4 hrs after lanthanum. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets, Chewable: 500 mg, 750 mg, 1 g.

ADMINISTRATION/HANDLING

PO

• Tablets should be chewed thoroughly before swallowing. • Give during or immediately after meals.

INDICATIONS/ROUTES/DOSAGE

Phosphate Control/Hyperphosphatemia

PO: ADULTS, ELDERLY: 750 mg–1,500 mg in divided doses, taken with or immediately after a meal. Dose can be titrated at 2- to 3-wk intervals in 750-mg increments, based on serum phosphate levels. Usual dosage range: 1,500–3,000 mg/day.

SIDE EFFECTS

Frequent: Nausea (11%), vomiting (9%), dialysis graft occlusion (8%), abdominal pain (5%). Nausea, vomiting decrease over time.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum phosphate level.

INTERVENTION/EVALUATION

Monitor serum phosphate (target concentration is less than 6 mg/dl).

PATIENT/FAMILY TEACHING

• Take with or immediately after a meal. • Do not take lanthanum within 2 hrs of antacids. • Nausea, vomiting usually diminish over time.

L

lapatinib

la-**pa**-ti-nib
(Tykerb)

BLACK BOX ALERT Hepatotoxicity, possibly severe, has occurred.

Do not confuse lapatinib with dasatinib, erlotinib, or imatinib.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic (see p. 85C).

ACTION

Inhibitory action against kinases targeting intracellular components of epidermal growth factor receptor ErbB1 and a second receptor, human epidermal receptor (HER2 [ErbB2]). **Therapeutic Effect:** Inhibits ErbB-driven tumor cell growth, produces tumor regression, inhibits metastasis.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	4 hrs	—

Steady-state level occurs within 6–7 days. Incomplete and variable oral absorption. Undergoes extensive metabolism. Protein binding: 99%. Minimally excreted in feces and plasma. **Half-life:** 24 hrs.

USES

Combination treatment with capecitabine for advanced or metastatic breast cancer in those who have received prior therapy including an anthracycline, a taxane, and trastuzumab. Combination treatment with letrozole for treatment of postmenopausal women with hormone receptor-positive metastatic breast cancer for whom hormonal therapy is indicated. **OFF-LABEL:** Treatment (in combination with trastuzumab) of HER2-overexpressing metastatic breast cancer that progressed on prior trastuzumab-containing therapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Left ventricular function abnormalities, prolonged QT interval on EKG or medications known to prolong QT interval, hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential for fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase **digoxin** levels. **CYP3A4 inhibitors** (e.g., **atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, voriconazole**) may increase plasma concentration. **CYP3A4 inducers** (e.g., **carbamazepine, dexamethasone, fosphenytoin, phenobarbital, phenytoin, rifabutin, rifampin, rifapentin**) may decrease plasma concentration. **HERBAL: St. John's wort** may increase metabolism and decrease plasma concentration. **FOOD: Grapefruit, grapefruit juice** may increase plasma concentration (potential for torsades, myelotoxicity). **LAB VALUES:** May increase serum ALT, AST, bilirubin. May decrease neutrophils, Hgb, platelets.

AVAILABILITY (Rx)

Tablets: 250 mg.

ADMINISTRATION/HANDLING

PO

• Do not crush, chew, or break film-coated tablets. • Give at least 1 hr before or 1 hr after food.

INDICATIONS/ROUTES/DOSAGE

Breast Cancer

PO: ADULTS, ELDERLY: (With capecitabine): 1,250 mg (5 tablets) once daily on days 1–21 continuously in combination with capecitabine on days 1–14 in a repeating 21-day cycle. **(With letrozole):** 1,500 mg once daily continuously with letrozole.

Dose Modification

PO: ADULTS, ELDERLY: (Cardiac toxicity): Discontinue with decreased left ventricular ejection fraction grade 2 or more or in pts with an ejection fraction that drops to lower limit of normal. May be started at a reduced dose (1,000 mg/day) at a minimum of 2 wks when ejection fraction returns to normal and pt is asymptomatic. **(Pulmonary toxicity):** Discontinue with symptoms indicative of interstitial lung disease or pneumonitis grade 3 or greater.

(Severe hepatic impairment): (with capecitabine): 750 mg/day. **(With letrozole):** 1,000 mg/day. **(CYP3A4 inhibitors/inducers):** Concomitant CYP3A4 inhibitors may require dose reduction of lapatinib; CYP3A4 inducers may require dose increase of lapatinib.

SIDE EFFECTS

Common (65%–44%): Diarrhea (sometimes severe), hand-foot syndrome (blistering/rash/peeling of skin on palms of hands, soles of feet), nausea. **Frequent (28%–26%):** Rash, vomiting. **Occasional (15%–10%):** Mucosal inflammation, stomatitis, extremity pain, back pain, dry skin, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Decreases in left ventricular ejection grade 3 or higher have been observed; 20% decrease relative to baseline is considered toxic.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy. Obtain baseline CBC, serum chemistries before treatment begins and monthly thereafter.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Monitor CBC, particularly Hgb, platelets, neutrophil count, hepatic function tests (AST, ALT, total bilirubin). Assess hands and feet for erythema/blistering/peeling. Monitor for shortness of breath, palpitations, fatigue (decreased cardiac ejection fraction).

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with those who recently received live virus vaccine. • Do not have immunizations without physician's approval (drug lowers resistance). • Promptly report fever, unusual bruising/bleeding from any site. • Assure use of appropriate birth control measures in women.

leflunomide

lee-**floo**-noe-mide (Apo-Leflunomide, Arava, Novo-Leflunomide)

BLACK BOX ALERT Do not use during pregnancy (Pregnancy Category X). Women of childbearing potential must be counseled regarding fetal risk, use of reliable contraceptives confirmed, possibility of pregnancy excluded. Severe hepatic injury may occur.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunomodulatory agent. **CLINICAL:** Anti-inflammatory.

ACTION

Inhibits dihydroorotate dehydrogenase, the enzyme involved in autoimmune process that leads to rheumatoid arthritis (RA). **Therapeutic Effect:** Reduces signs/symptoms of RA, retards structural damage.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: greater than 99%. Metabolized to active metabolite in GI wall, liver. Excreted through renal, biliary systems. Not removed by hemodialysis. **Half-life:** 16 days.

USES

Treatment of active rheumatoid arthritis (RA). Improve physical function in pts with rheumatoid arthritis. **OFF-LABEL:** Treatment of cytomegalovirus (CMV) disease. Prevention of acute/chronic rejection in recipients of solid organ transplants.

PRECAUTIONS

Contraindications: Pregnancy or plans for pregnancy. **Cautions:** Hepatic/renal impairment, positive hepatitis B or C serology, those with immunodeficiency or bone marrow dysplasias, breastfeeding mothers, history of new/recurrent infections, significant hematologic abnormalities, diabetes.

L

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Can cause fetal harm. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category X. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Rifampin** may increase concentration/effects. **Hepatotoxic medications** may increase risk of side effects, hepatotoxicity. Use of **live virus vaccine** not recommended. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, alkaline phosphatase, bilirubin.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA)

PO: ADULTS, ELDERLY: Initially, 100 mg/day for 3 days, then 10–20 mg/day.

Dosage Adjustment in Hepatic Toxicity

ALT Greater Than 2 But Less Than 3 Times Upper Limit of Normal (ULN): Not recommended. **ALT Levels Persist Greater Than 3 Times ULN:** Discontinue and initiate cholestyramine (8 g 3 times/day for 1–3 days) or activated charcoal (50 g q6h for 24 hrs) to accelerate elimination.

SIDE EFFECTS

Frequent (20%–10%): Diarrhea, respiratory tract infection, alopecia, rash, nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Leflunomide may cause immunosuppression. Transient thrombocytopenia, leukopenia, hepatotoxicity occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy (Pregnancy Category X). Obtain baseline CBC, Hgb, Hct, platelet, phosphate, hepatic function tests. Assess limitations in activities of daily living due to rheumatoid arthritis (RA).

INTERVENTION/EVALUATION

Monitor tolerance to medication. Assess symptomatic relief of RA (relief of pain; improved range of motion, grip strength, mobility). Monitor hepatic function tests.

PATIENT/FAMILY TEACHING

- May take without regard to food.
- Improvement may take longer than 8 wks.
- Avoid pregnancy (Pregnancy Category X).

lenalidomide

len-ah-**lid**-oh-mide
(Revlimid)

BLACK BOX ALERT Pregnancy Category X. Analogue to thalidomide. High potential for significant birth defects. Hematologic toxicity (thrombocytopenia, neutropenia) occurs in 80% of pts. Greatly increases risk for DVT, pulmonary embolism in multiple myeloma pts.

Do not confuse lenalidomide with thalidomide.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Isoxazole immunomodulator. **CLINICAL:** Immunosuppressive.

ACTION

Inhibits secretion of pro-inflammatory cytokines, increases secretion of anti-inflammatory cytokines. **Therapeutic Effect:** Prevents growth of B-cell lymphoma cell line, myeloblastic cell line.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 30%. Eliminated in urine. **Half-life:** 3 hrs (increased in renal impairment).

USES

Treatment of low- to intermediate-risk myelodysplastic syndrome (MDS) in pts with deletion 5q cytogenetic abnormality with transfusion-dependent anemia. Treatment of multiple myeloma (in combination with dexamethasone). **OFF-LABEL:** Systemic amyloidosis, lower-risk myelodysplastic syndrome, non-Hodgkin's lymphoma, maintenance treatment for multiple myeloma (following autologous stem cell transplant).

PRECAUTIONS

Contraindications: Pregnancy **(Pregnancy Category X)**, women capable of becoming pregnant. **Cautions:** Renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in women who are or may become pregnant and who are not using two required types of birth control or who are not continuously abstaining from heterosexual sexual contact. Can cause severe birth defects, fetal death. Unknown if distributed in breast milk; breast-feeding not recommended. **Pregnancy Category X. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Age-related renal impairment may require caution in dosage selection. Risk of toxic reactions greater in those with renal insufficiency.

INTERACTIONS

DRUG: None significant. **HERBAL:** Avoid **echinacea** (has immunostimulant properties). **FOOD:** None known. **LAB VALUES:** May decrease WBC count, Hgb, Hct, thrombocytes, troponin I, serum creatinine, sodium, T_3, T_4. May decrease serum bilirubin, glucose, potassium, magnesium.

AVAILABILITY (Rx)

Capsules: 5 mg, 10 mg, 15 mg, 25 mg.

ADMINISTRATION/HANDLING

• Store at room temperature. • Do not crush/open or chew capsules. • Swallow whole with water.

INDICATIONS/ROUTES/DOSAGE

Myelodysplastic Syndrome

PO: ADULTS, ELDERLY: 10 mg once daily.

Dosage Adjustments for Myelodysplastic Syndrome

Platelets:

Thrombocytopenia within 4 wks with 10 mg/day

Baseline platelets 100,000/mcl or greater: Platelets less than 50,000/mcl, hold treatment. Resume at 5 mg/day when platelets return to 50,000/mcl or greater. **Baseline platelets less than 100,000/mcl:** Platelets fall to 50% of baseline, hold treatment. Resume at 5 mg/day if baseline is 60,000/mcl or greater and platelets return to 50,000/mcl or greater. Resume at 5 mg/day if baseline is less than 60,000/mcl and platelets return to 30,000/mcl or greater.

Thrombocytopenia after 4 wks with 10 mg/day: Platelets less than 30,000/mcl OR less than 50,000/mcl with platelet transfusion, hold treatment. Resume at 5 mg/day when platelets return to 30,000/mcl or greater.

Thrombocytopenia developing with 5 mg/day: Platelets less than 30,000/mcl OR less than 50,000/mcl with platelet transfusion, hold treatment. Resume at 5 mg every other day when platelets return to 30,000/mcl or greater.

Neutrophils:

Neutropenia within 4 wks with 10 mg/day

Baseline absolute neutrophil count (ANC) 1,000/mcl or greater: ANC less than 750/mcl, hold treatment. Resume at 5 mg/day when ANC 1,000/mcl or

greater. **Baseline ANC less than 1,000/mcl:** ANC less than 500/mcl, hold treatment. Resume at 5 mg/day when ANC 500/mcl or greater.

Neutropenia after 4 wks with 10 mg/day: ANC less than 500/mcl for 7 days or longer or associated with fever, hold treatment. Resume at 5 mg/day when ANC 500/mcl or greater.

Neutropenia developing with 5 mg/day: ANC less than 500/mcl for 7 days or longer or associated with fever, hold treatment. Resume at 5 mg every other day when ANC 500/mcl or greater.

Multiple Myeloma

PO: ADULTS, ELDERLY: 25 mg/day on days 1–21 of repeated 28-day cycle. (Dexamethasone 40 mg/day on days 1–4, 9–12, 17–20 of each 28-day cycle for first 4 cycles, then 40 mg/day on days 1–4 every 28 days.)

Dosage Adjustments for Multiple Myeloma

Platelets:

Thrombocytopenia: Platelets fall to less than 30,000/mcl, hold treatment, monitor CBC. Resume at 15 mg/day when platelets 30,000/mcl or greater. For each subsequent fall to less than 30,000/mcl, hold treatment and resume at 5 mg/day less than previous dose when platelets return to 30,000/mcl or greater. Do not dose to less than 5 mg/day.

Neutrophils:

Neutropenia: Neutrophils fall to less than 1,000/mcl, hold treatment, add G-CSF, follow CBC weekly. Resume at 25 mg/day when neutrophils return to 1,000/mcl and neutropenia is the only toxicity. Resume at 15 mg/day if other toxicity is present. For each subsequent fall to less than 1,000/mcl, hold treatment and resume at 5 mg/day less than previous dose when neutrophils return to 1,000/mcl or greater. Do not dose to less than 5 mg/day.

SIDE EFFECTS

Frequent (49%–31%): Diarrhea, pruritus, rash, fatigue. **Occasional (24%–12%):** Constipation, nausea, arthralgia, fever, back pain, peripheral edema, cough, dizziness, headache, muscle cramps, epistaxis, asthenia (loss of strength, energy), dry skin, abdominal pain. **Rare (10%–5%):** Extremity pain, vomiting, generalized edema, anorexia, insomnia, night sweats, myalgia, dry mouth, ecchymosis, rigors, depression, dysgeusia, palpitations.

ADVERSE EFFECTS/ TOXIC REACTIONS

Significant increased risk of deep vein thrombosis (DVT), pulmonary embolism. Thrombocytopenia occurs in 62% of pts, neutropenia in 59% of pts, and anemia in 12% of pts. Upper respiratory infection (nasopharyngitis, pneumonia, sinusitis, bronchitis, rhinitis), UTI occur occasionally. Cellulitis, peripheral neuropathy, hypertension, hypothyroidism occur in approximately 6% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Due to high potential for human birth defects/fetal death, female pts must avoid pregnancy 4 wks before therapy, during therapy, during dose interruptions, and 4 wks following therapy. Two reliable

Dosage in Renal Impairment

	Creatinine Clearance 30–59 ml/min	Creatinine Clearance Less Than 30 ml/min (Nondialysis Dependent)	Creatinine Clearance Less Than 30 ml/min (Dialysis Dependent)
Myelodysplastic syndrome	5 mg once daily	5 mg q48h	5 mg 3 times/wk (give after dialysis)
Multiple myeloma	10 mg once daily	15 mg q48h	5 mg once daily (give after dialysis)

forms of contraception must be used even if pt has history of infertility unless it is due to hysterectomy or menopause that has occurred for at least 24 consecutive mos. Females of childbearing potential must have two negative pregnancy tests before therapy initiation.

INTERVENTION/EVALUATION

Perform pregnancy tests on women of childbearing potential: weekly during the first 4 wks of use, then at 4-wk intervals in those with regular menstrual cycles or q2wks in those with irregular menstrual cycles. Monitor for hematologic toxicity; obtain CBC weekly during first 8 wks of therapy and at least monthly thereafter. Observe for signs, symptoms of thromboembolism (shortness of breath, chest pain, extremity pain, swelling, stroke-like symptoms).

PATIENT/FAMILY TEACHING

• Two approved birth control methods must be used before, during, and after therapy for female pts. • A pregnancy test must be performed within 10–14 days and 24 hrs before therapy begins. • Males must always use a latex condom during any sexual contact with females of childbearing potential even if they have undergone a successful vasectomy.

lepirudin

HIGH ALERT

lep-i-rue-din
(Refludan)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thrombin inhibitor. **CLINICAL:** Anticoagulant (see p. 31C).

ACTION

Inhibits thrombogenic action of thrombin (independent of antithrombin II, not inhibited by platelet factor 4). **Therapeutic Effect:** Produces dose-dependent increases in aPTT.

PHARMACOKINETICS

Distributed primarily in extracellular fluid. Primarily eliminated by kidneys. **Half-life:** 1.3 hrs (increased in renal impairment).

USES

Anticoagulant in pts with heparin-induced thrombocytopenia or associated thromboembolic disease to prevent further thromboembolic complications.

PRECAUTIONS

Contraindications: Hypersensitivity to hirudins or to any of the components in Refludan (lepirudin [rDNA]) for injection. **Cautions:** Conditions associated with increased risk of bleeding (bacterial endocarditis, recent major bleeding, CVA, stroke, intracranial surgery, hemorrhagic diathesis, severe hypertension, severe renal/hepatic impairment, recent major surgery).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk or crosses placenta. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Platelet aggregation inhibitors, thrombolytics, warfarin may increase risk of bleeding complications. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo, ginseng, horse chestnut, red clover** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** Increases aPTT, thrombin time.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 1 ml Sterile Water for Injection or 0.9% NaCl to 50 mg vial. • Shake gently. • Produces a clear,

colorless solution (do not use if cloudy). • For IV push, further dilute by transferring to syringe and adding sufficient Sterile Water for Injection, 0.9% NaCl, or D_5W to produce concentration of 5 mg/ml. • For IV infusion, add contents of 2 vials (100 mg) to 250 ml or 500 ml 0.9% NaCl or D_5W, providing concentration of 0.4 or 0.2 mg/ml, respectively.

Rate of Administration • IV push given over 15–20 sec. • Adjust IV infusion based on aPTT or pt's body weight.

Storage • Store unreconstituted vials at room temperature. • Reconstituted solution to be used immediately. • IV infusion stable for up to 24 hrs at room temperature.

IV INCOMPATIBILITIES

Do not mix with other medications.

INDICATIONS/ROUTES/DOSAGE

L

Anticoagulation

◀ALERT▶ Dosage adjusted according to aPTT ratio with target range of 1.5–2.5 times normal.

IV: ADULTS, ELDERLY: 0.2–0.4 mg/kg, IV slowly over 15–20 sec, followed by IV infusion of 0.05–0.15 mg/kg/hr for 2–10 days or longer.

◀ALERT▶ For pts weighing more than 110 kg, maximum initial dose is 44 mg, with maximum IV rate of 16.5 mg/hr.

Dosage in Renal Impairment

All pts with creatinine clearance less than 60 ml/min or a serum creatinine greater than 1.5 mg/dl require dose reduction. Initial bolus dose is decreased to 0.2 mg/kg, with infusion rate adjusted based on creatinine clearance.

Creatinine Clearance	Adjusted Infusion Rate	
45–60 ml/min	50% of standard	0.075 mg/kg/hr
30–44 ml/min	30% of standard	0.045 mg/kg/hr
15–29 ml/min	15% of standard	0.0225 mg/kg/hr
Less than 15 ml/min or hemodialysis	Stop infusion	

SIDE EFFECTS

Frequent (14%–5%): Bleeding from gums, puncture sites, wounds; hematuria; fever; GI, rectal bleeding. **Occasional (3%–1%):** Epistaxis, allergic reaction (rash, pruritus), vaginal bleeding.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose is characterized by excessively high aPTT. Intracranial bleeding occurs rarely. Abnormal hepatic function has been reported in 6% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBC, including platelet count. Determine initial B/P. Assess renal/hepatic function.

INTERVENTION/EVALUATION

Monitor aPTT diligently. Assess Hct, platelet count, urine/stool specimen for occult blood, AST, ALT, renal function studies. Assess for decrease in B/P, increase in pulse rate, complaint of abdominal/back pain, severe headache (may be evidence of hemorrhage). Question for increased discharge during menses. Check peripheral pulses; skin for ecchymosis, petechiae. Check for excessive bleeding from minor cuts, scratches. Assess gums for erythema, gingival bleeding. Assess urine output for hematuria.

PATIENT/FAMILY TEACHING

• Report bleeding, bruising, dizziness, light-headedness, rash, pruritus, fever, edema, breathing difficulty to physician.

letrozole HIGH ALERT

let-roe-zole
(Femara)

Do not confuse Femara with Famvir, Femhrt, or Provera, or letrozole with anastrozole.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aromatase inhibitor, hormone. **CLINICAL:** Antineoplastic (see p. 85C).

ACTION

Decreases circulating estrogen by inhibiting aromatase, an enzyme that catalyzes the final step in estrogen production. **Therapeutic Effect:** Inhibits growth of breast cancers stimulated by estrogens.

PHARMACOKINETICS

Rapidly, completely absorbed. Metabolized in liver. Primarily eliminated by kidneys. Unknown if removed by hemodialysis. **Half-life:** Approximately 2 days.

USES

First-line treatment of locally advanced or metastatic breast cancer. Treatment of advanced breast cancer in postmenopausal women with disease progression following antiestrogen therapy. Postsurgical treatment for postmenopausal women with hormone sensitive early breast cancer. Extended treatment of early breast cancer after 5 yrs of tamoxifen. **OFF-LABEL:** Treatment of ovarian, endometrial cancer.

PRECAUTIONS

Contraindications: Use in women who are or may become pregnant. **Cautions:** Hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. May cause fetal harm. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Tamoxifen may reduce concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum calcium, cholesterol, GGT, AST, ALT, bilirubin.

AVAILABILITY (Rx)

Tablets: 2.5 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Breast Cancer

PO: ADULTS, ELDERLY: 2.5 mg/day. Continue until tumor progression is evident.

Dosage in Severe Hepatic Impairment

PO: ADULTS, ELDERLY: 2.5 mg every other day.

SIDE EFFECTS

Frequent (21%–9%): Musculoskeletal pain (back, arm, leg), nausea, headache. **Occasional (8%–5%):** Constipation, arthralgia, fatigue, vomiting, hot flashes, diarrhea, abdominal pain, cough, rash, anorexia, hypertension, peripheral edema. **Rare (4%–1%):** Asthenia (loss of strength, energy), drowsiness, dyspepsia (heartburn, indigestion, epigastric pain), weight gain, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pleural effusion, pulmonary embolism, bone fracture, thromboembolic disorder, MI occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, chemistries, hepatic/renal function tests. Question for possibility of pregnancy. Obtain pregnancy test prior to beginning therapy.

INTERVENTION/EVALUATION

Monitor for, assist with ambulation if asthenia (loss of strength, energy), dizziness occurs. Assess for headache. Offer antiemetic for nausea, vomiting. Monitor CBC, thyroid function, electrolytes, hepatic/renal function tests. Monitor for evidence of musculoskeletal pain; offer analgesics for pain relief.

PATIENT/FAMILY TEACHING

• Notify physician if nausea, asthenia (loss of strength, energy), hot flashes become unmanageable. • Discuss importance of negative pregnancy test prior to beginning therapy and nonhormonal methods of birth control. • Explain possible risk to fetus if pt is or becomes pregnant before or during therapy.

leucovorin calcium (folinic acid, citrovorum factor)

loo-**koe**-vor-in

Do not confuse folinic acid with folic acid, or leucovorin with Leukeran.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Folic acid antagonist. **CLINICAL:** Antidote.

ACTION

Competes with methotrexate for same transport processes into cells (limits methotrexate action on normal cells). **Therapeutic Effect:** Reverses toxic effects of folic acid antagonists. Reverses folic acid deficiency.

PHARMACOKINETICS

Readily absorbed from GI tract. Widely distributed. Primarily concentrated in liver. Metabolized in liver, intestinal mucosa to active metabolite. Primarily excreted in urine. **Half-life:** 15 min; metabolite, 30–35 min.

USES

Antidote for folic acid antagonists (methotrexate, trimethoprim, pyrimethoamine). Treatment of megaloblastic anemias when folate deficient (e.g., infancy, celiac disease, pregnancy, when oral therapy not possible). Treatment of colon cancer (with fluorouracil). Rescue therapy after high-dose methotrexate for osteosarcoma. **OFF-LABEL:** Adjunctive cofactor therapy in methanol toxicity. Prevents pyrimethamine hematologic toxicity in HIV-positive pts.

PRECAUTIONS

Contraindications: Pernicious anemia, other megaloblastic anemias secondary to vitamin B_{12} deficiency. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** May increase risk of seizures by counteracting anticonvulsant effects of barbiturate, hydantoins. **Elderly:** Age-related renal impairment may require dosage adjustment when used for rescue from effects of high-dose methotrexate therapy.

INTERACTIONS

DRUG: May decrease effects of **anticonvulsants (e.g., phenytoin).** May increase **5-fluorouracil** toxicity/effect when taken in combination. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50 mg, 100 mg, 200 mg, 350 mg. **Injection, Solution:** 10 mg/ml. **Tablets:** 5 mg, 10 mg, 15 mg, 25 mg.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Strict adherence to timing of 5-fluorouracil following leucovorin therapy must be maintained.

Reconstitution • Reconstitute each 50-mg vial with 5 ml Sterile Water for Injection or Bacteriostatic Water for Injection containing benzyl alcohol to provide concentration of 10 mg/ml. • Due to benzyl alcohol in 1-mg ampule and in Bacteriostatic Water for Injection, reconstitute

doses greater than 10 mg/m^2 with Sterile Water for Injection. • Further dilute with 100–1,000 ml D_5W or 0.9% NaCl.

Rate of Administration • Do not exceed 160 mg/min if given by IV infusion (due to calcium content).

Storage • Store powdered vials for parenteral use at room temperature. • Refrigerate solution for injection vials. • Injection appears as clear, yellowish solution. • Use immediately if reconstituted with Sterile Water for Injection; stable for 7 days if reconstituted with Bacteriostatic Water for Injection.

PO

• Scored tablets may be crushed.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), droperidol (Inapsine), foscarnet (Foscavir).

IV COMPATIBILITIES

Cisplatin (Platinol AQ), cyclophosphamide (Cytoxan), doxorubicin (Adriamycin), etoposide (VePesid), filgrastim (Neupogen), 5-fluorouracil, gemcitabine (Gemzar), granisetron (Kytril), heparin, methotrexate, metoclopramide (Reglan), mitomycin (Mutamycin), piperacillin and tazobactam (Zosyn), vinblastine (Velban), vincristine (Oncovin).

INDICATIONS/ROUTES/DOSAGE

Conventional Rescue Dosage in High-Dose Methotrexate Therapy

PO, IV, IM: ADULTS, ELDERLY, CHILDREN: 15 mg (approximately 10 mg/m^2) IM or IV one time, then PO q6h until serum methotrexate level is less than 0.05 micromole/L. If 24-hr serum creatinine level increases by 50% or greater over baseline or methotrexate level exceeds 5 micromole/L, increase to 150 mg q3h until methotrexate level is less than 1 micromole/L, then 15 mg q3h until methotrexate level is less than 0.05 micromole/L.

Folic Acid Antagonist Overdose

PO: ADULTS, ELDERLY, CHILDREN: 5–15 mg/day.

Megaloblastic Anemia Secondary to Folate Deficiency

IM: ADULTS, ELDERLY, CHILDREN: 1 mg or less per day.

Colon Cancer

◀ALERT▶ For rescue therapy in cancer chemotherapy, refer to specific protocols used for optimal dosage and sequence of leucovorin administration.

IV: ADULTS, ELDERLY: 200 mg/m^2 followed by 370 mg/m^2 fluorouracil daily for 5 days. Repeat course at 4-wk intervals for 2 courses, then 4- to 5-wk intervals or 20 mg/m^2 followed by 425 mg/m^2 fluorouracil daily for 5 days. Repeat course at 4-wk intervals for 2 courses, then 4- to 5-wk intervals.

SIDE EFFECTS

Frequent: When combined with chemotherapeutic agents: diarrhea, stomatitis, nausea, vomiting, lethargy, malaise, fatigue, alopecia, anorexia. **Occasional:** Urticaria, dermatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive dosage may negate chemotherapeutic effects of folic acid antagonists. Anaphylaxis occurs rarely. Diarrhea may cause rapid clinical deterioration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Give as soon as possible, preferably within 1 hr, for treatment of accidental overdosage of folic acid antagonists.

INTERVENTION/EVALUATION

Monitor for vomiting—may need to change from oral to parenteral therapy. Observe elderly, debilitated closely due to risk for severe toxicities. Assess CBC with differential, platelet count (also electrolytes, hepatic function tests if used in combination with chemotherapeutic agents).

PATIENT/FAMILY TEACHING

• Explain purpose of medication in treatment of cancer. • Report allergic reaction, vomiting.

leuprolide

HIGH ALERT

loo-proe-lyde
(Eligard, Lupron, Lupron Depot, Lupron Depot-Ped)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Gonadotropin-releasing hormone (GnRH) analogue. **CLINICAL:** Antineoplastic (see pp. 85C, 105C).

ACTION

Stimulates release of luteinizing hormone (LH), follicle-stimulating hormone (FSH) from anterior pituitary gland, stimulating production of estrogen, testosterone. **Therapeutic Effect:** Produces pharmacologic castration, decreases growth of abnormal prostate tissue in males; causes endometrial tissue to become inactive, atrophic in females; decreases rate of pubertal development in children with central precocious puberty.

PHARMACOKINETICS

Rapidly, well absorbed after subcutaneous administration. Absorbed slowly after IM administration. Protein binding: 43%–49%. **Half-life:** 3–4 hrs.

USES

Palliative treatment of advanced prostate carcinoma. Management of endometriosis. Treatment of anemia caused by uterine leiomyomata (fibroids). Treatment of central precocious puberty. **OFF-LABEL:** Treatment of breast cancer, infertility.

PRECAUTIONS

Contraindications: Pregnancy, breastfeeding, undiagnosed vaginal bleeding. Eligard 7.5 mg is contraindicated in women, children; pts with hypersensitivity to GnRH, GnRH agonist analogues, or any of its components. 22.5 mg, 30 mg, 45 mg Lupron Depot contraindicated in women. **Cautions:** History of psychiatric illness.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Depot: Contraindicated in pregnancy. May cause spontaneous abortion. **Pregnancy Category X. Children:** Long-term safety not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum prostatic acid phosphatase (PAP). Initially increases, then decreases, serum testosterone. May increase serum ALT, AST, alkaline phosphatase, LDH, LDL, cholesterol, triglycerides. May decrease platelets, WBC.

AVAILABILITY (Rx)

Injection Depot Formulation: 3.75 mg (Lupron Depot), 7.5 mg (Eligard, Lupron Depot, Lupron Depot-Ped), 11.25 mg (Lupron Depot-Ped), 15 mg (Lupron Depot-Ped), 22.5 mg (Eligard), 30 mg (Lupron Depot), 45 mg (Eligard, Lupron Depot). **Injection Solution (Lupron):** 5 mg/ml.

ADMINISTRATION/HANDLING

◄ALERT► May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IM

Lupron Depot • Store at room temperature. • Protect from light, heat. • Do not freeze vials. • Reconstitute only with diluent provided. Follow manufacturer's instructions for mixing.
• Do not use needles less than 22 gauge; use syringes provided by the manufacturer (0.5-ml low-dose insulin syringes may be used as an alternative). • Administer immediately.

Eligard • Refrigerate. • Allow to warm to room temperature before reconstitution. • Follow manufacturer's instructions for mixing. • Following reconstitution, administer within 30 min.

Subcutaneous

Lupron • Refrigerate vials. • Injection appears clear, colorless. • Discard if discolored or precipitate forms. • Administer into deltoid muscle, anterior thigh, abdomen.

INDICATIONS/ROUTES/DOSAGE

Advanced Prostatic Carcinoma

IM *(Lupron Depot)*: ADULTS, ELDERLY: 7.5 mg every mo, 22.5 mg q3mos, 30 mg q4mos, or 45 mg q6mos.
Subcutaneous *(Eligard)*: ADULTS, ELDERLY: 7.5 mg every mo, 22.5 mg q3mos, 30 mg q4mos, or 45 mg q6mos.
Subcutaneous *(Lupron)*: ADULTS, ELDERLY: 1 mg/day.

Endometriosis

IM *(Lupron Depot)*: ADULTS, ELDERLY: 3.75 mg/mo for up to 6 mos or 11.25 mg q3mos for up to 2 doses.

Uterine Leiomyomata

IM *(With Iron [Lupron Depot])*: ADULTS, ELDERLY: 3.75 mg/mo for up to 3 mos or 11.25 mg as a single injection.

Precocious Puberty

IM *(Lupron Depot-Ped)*: CHILDREN GREATER THAN 37.5 KG: 15 mg q month. **GREATER THAN 25 KG TO 37.5 KG:** 11.25 mg q month. **25 KG OR LESS:** 7.5 mg q month. Titrate dose upward by 3.75 mg/mo if down regulation not achieved. **LUPRON DEPOT-PED (3 MOS):** 11.25 mg or 30 mg q12wks.
Subcutaneous *(Lupron)*: CHILDREN: Initially, 50 mcg/kg/day. Titrate upward by 10 mcg/kg/day if down regulation is not achieved.

SIDE EFFECTS

Frequent: Hot flashes (ranging from mild flushing to diaphoresis). **Females:** Amenorrhea, spotting. **Occasional:** Arrhythmias; palpitations; blurred vision; dizziness; edema; headache; burning, pruritus, swelling at injection site; nausea; insomnia; weight gain. **Females:** Deepening voice, hirsutism, decreased libido, increased breast tenderness, vaginitis, altered mood. **Males:** Constipation, decreased testicle size, gynecomastia, impotence, decreased appetite, angina. **Rare: Males:** Thrombophlebitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Occasionally, signs/symptoms of prostatic carcinoma worsen 1–2 wks after initial dosing (subsides during continued therapy). Increased bone pain and, less frequently, dysuria, hematuria, weakness, paresthesia of lower extremities may be noted. MI, pulmonary embolism occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy before initiating therapy (Pregnancy Category X). Obtain serum testosterone, prostatic acid phosphates (PAP) periodically during therapy. Serum testosterone, PAP should increase during first wk of therapy. Serum testosterone then should decrease to baseline level or less within 2 wks, PAP within 4 wks.

INTERVENTION/EVALUATION

Monitor for arrhythmias, palpitations. Assess for peripheral edema. Assess sleep pattern. Monitor for visual difficulties. Assist with ambulation if dizziness occurs. Offer antiemetics if nausea occurs.

PATIENT/ FAMILY TEACHING

• Hot flashes tend to decrease during continued therapy. • Temporary exacerbation of signs/symptoms of disease may occur during first few wks of therapy. • Use contraceptive measures during therapy. • Inform physician immediately if regular menstruation persists, pregnancy occurs. • Avoid tasks that require

alertness, motor skills until response to drug is established (potential for dizziness).

levalbuterol TOP 200

lee-val-**bue**-ter-all
(Xopenex, Xopenex HFA)
Do not confuse Xopenex with Xanax.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic. **CLINICAL:** Bronchodilator (see p. 74C).

ACTION

Stimulates beta$_2$-adrenergic receptors in lungs, resulting in relaxation of bronchial smooth muscle. **Therapeutic Effect:** Relieves bronchospasm, reduces airway resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Inhalation	5–10 min	1.5 hrs	5–6 hrs
Nebulization	10–17 min	1.5 hrs	5–8 hrs

Half-life: 3.3–4 hrs.

USES

Treatment, prevention of bronchospasm due to reversible obstructive airway disease (e.g., asthma, bronchitis, emphysema).

PRECAUTIONS

Contraindications: History of hypersensitivity to albuterol or levalbuterol. **Cautions:** Cardiovascular disorders (cardiac arrhythmias), seizures, hypertension, hyperthyroidism, diabetes mellitus, hypokalemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** Lower initial dosages recommended.

INTERACTIONS

DRUG: **Beta-adrenergic blocking agents (beta-blockers)** antagonize effects; may produce severe bronchospasm. May decrease **digoxin** concentration. **MAOIs, tricyclic antidepressants** may potentiate cardiovascular effects. **Diuretics** may increase hypokalemia. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum potassium.

AVAILABILITY (Rx)

Inhalation Aerosol: 45 mcg/activation. **Solution for Nebulization:** 0.31 in 3-ml vials, 0.63 mg in 3-ml vials, 1.25 mg in 3-ml vials, 1.25 mg in 0.5-ml vials.

ADMINISTRATION/HANDLING

Nebulization

• No diluent necessary. • Protect from light, excessive heat. Store at room temperature. • Once foil is opened, use within 2 wks. • Use within 1 wk and protect from light after removal from pouch. • Discard if solution is not colorless. • Do not mix with other medications. • Concentrated solution (1.25 mg in 0.5 ml) should be diluted with 2.5 ml 0.9% NaCl prior to use. • Give over 5–15 min.

Inhalation

• Shake well before inhalation. • Following first inhalation, wait 2 min before inhaling second dose (allows for deeper bronchial penetration). • Rinsing mouth with water immediately after inhalation prevents mouth/throat dryness.

INDICATIONS/ROUTES/DOSAGE

Treatment/Prevention of Bronchospasm

Nebulization: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 0.63 mg 3 times a day 6–8 hrs apart. May increase to 1.25 mg 3 times a day with dose monitoring. **CHILDREN 6–11 YRS:** Initially

0.31 mg 3 times a day. **Maximum:** 0.63 mg 3 times a day.
Inhalation: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: 1–2 inhalations q4–6h.

Acute Asthma Exacerbation
Nebulization: ADULTS, ELDERLY: 1.25–2.5 mg q20min for 3 doses, then 1.25–5 mg q1–4h as needed. **CHILDREN:** 0.075 mg/kg (minimum dose: 1.25 mg) q20min for 3 doses, then 0.075–0.15 mg/kg q1–4h as needed.
Inhalation: ADULTS, ELDERLY: 4–8 puffs q20min for up to 4 hrs, then q1–4h. **CHILDREN:** 4–8 puffs q20min for 3 doses, then q1–4h.

SIDE EFFECTS

Occasional: Nervousness (10%), tremor (7%), rhinitis (11%), flu-like illness (4%). **Rare (less than 3%):** Tachycardia, dizziness, anxiety, viral infection, dyspepsia, dry mouth, headache, chest pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive sympathomimetic stimulation may produce palpitations, extrasystoles, tachycardia, chest pain, slight increase in B/P followed by substantial decrease, chills, diaphoresis, blanching of skin. Too-frequent or excessive use may decrease bronchodilating effectiveness, lead to severe, paradoxical bronchoconstriction.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support (high incidence of anxiety due to difficulty in breathing, sympathomimetic response to drug). Assess lung sounds, pulse, B/P. Note color, amount of sputum.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality/rate of pulse, EKG, serum potassium, ABG determinations. Assess lung sounds for wheezing (bronchoconstriction), rales. Observe for paradoxical bronchospasm.

PATIENT/ FAMILY TEACHING

• Increase fluid intake (decreases lung secretion viscosity). • Rinsing mouth with water immediately after inhalation may prevent mouth/throat dryness. • Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola, cocoa). • Notify physician if palpitations, tachycardia, chest pain, tremors, dizziness, headache occurs or shortness of breath is not relieved.

levetiracetam

lee-ve-tye-**ra**-see-tam
(Apo-Levetiracetam, Keppra, Keppra XR)
Do not confuse Keppra with Kaletra, Keflex, or Keppra XR, or levetiracetam with levofloxacin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Pyrrolidine derivative. **CLINICAL:** Anticonvulsant (see p. 35C).

ACTION

Inhibits burst firing without affecting normal neuronal excitability. **Therapeutic Effect:** Prevents seizure activity.

PHARMACOKINETICS

Rapidly, completely absorbed following PO administration. Protein binding: less than 10%. Metabolized primarily by enzymatic hydrolysis. Primarily excreted in urine as unchanged drug. **Half-life:** 6–8 hrs.

USES

PO: Adjunctive therapy in treatment of partial-onset seizures in pts 1 mo and older with epilepsy. Adjunctive therapy in myoclonic seizures in adults and children 12 yrs of age and older. Adjunctive therapy in treatment of primary generalized tonic-clonic seizures in pts 6 yrs and

older with idiopathic generalized seizures. **Keppra XR:** Adjunctive therapy in treatment of partial-onset seizures in pts 16 yrs of age and older. **Injection:** Treatment of partial-onset seizures in adults. **OFF-LABEL:** Bipolar disorder.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment. Pts with depression at high risk for suicide.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established in children 4 yrs or younger. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase Hgb, Hct, RBC, WBC counts.

AVAILABILITY (Rx)

Injection, Solution: 100 mg/ml. **Oral Solution:** 100 mg/ml. **Tablets:** 250 mg, 500 mg, 750 mg, 1,000 mg.

Tablets, Extended-Release: 500 mg, 750 mg.

ADMINISTRATION/HANDLING

IV

Rate of Infusion • Infuse over 15 min.
Reconstitution • Dilute with 100 ml 0.9% NaCl or D_5W.
Storage • Store at room temperature. • Stable for 24 hrs following dilution.

IV INCOMPATIBILITY

Data not available.

IV COMPATIBILITIES

Diazepam (Valium), lorazepam (Ativan), valproate (Depacon).

PO

• Give without regard to food. • Use oral solution for pts weighing 20 kg or less. • Use tablets or oral solution for pts weighing more than 20 kg. • Oral solution should be administered with a calibrated measuring device. • Swallow extended-release and immediate-release tablets whole; do not chew, break, or crush.

INDICATIONS/ROUTES/DOSAGE

Partial-Onset Seizures

IV/PO: ADULTS, ELDERLY, CHILDREN 17 YRS AND OLDER: Initially, 500 mg q12h. May increase by 1,000 mg/day q2wks. **Maximum:** 3,000 mg/day. **Keppra XR:** 1,000 mg once daily. May increase in increments of 1,000 mg every 2 wks. **Maximum:** 3,000 mg daily.
PO: CHILDREN 4–16 YRS: 20 mg/kg/day in 2 divided doses. May increase q2wks by 10 mg/kg/dose. **Maximum:** 60 mg/kg/day in 2 divided doses. **CHILDREN 6 MOS TO YOUNGER THAN 4 YRS:** 20 mg/kg/day in 2 divided doses. May increase q2wks by 10 mg/kg/dose. **Maximum:** 50 mg/kg/day in 2 divided doses. **CHILDREN 1 MO TO YOUNGER THAN 6 MOS (ORAL SOLUTION):** 14 mg/kg/day in 2 divided doses. May increase q2wks by 7 mg/kg/dose. **Maximum:** 42 mg/kg/day in 2 divided doses.

Myoclonic Seizures

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 500 mg q12h. May increase by 1,000 mg/day q2wks. **Maximum:** 3,000 mg/day.

Tonic-Clonic Seizures

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: Initially, 500 mg twice a day. May increase by 1,000 mg/day q2wks until dose of 3,000 mg/day attained. **CHILDREN 6–15 YRS:** Initially, 10 mg/kg twice a day. May increase by 20 mg/kg/day q2wks until dose of 60 mg/kg/day attained.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage (Immediate-Release, IV)	Dosage (Extended-Release)
Greater than 80 ml/min	500–1,500 mg q12h	1,000–3,000 mg q24h
50–80 ml/min	500–1,000 mg q12h	1,000–2,000 mg q24h
30–49 ml/min	250–750 mg q12h	500–1,500 mg q24h
Less than 30 ml/min	250–500 mg q12h	500–1,000 mg q24h
End-stage renal disease using dialysis	500–1,000 mg q24h, after dialysis, a 250- to 500-mg supplemental dose is recommended	NA

SIDE EFFECTS

Frequent (15%–10%): Drowsiness, asthenia (loss of strength, energy), headache, infection. **Occasional (9%–3%):** Dizziness, pharyngitis, pain, depression, anxiety, vertigo, rhinitis, anorexia. **Rare (less than 3%):** Amnesia, emotional lability, cough, sinusitis, anorexia, diplopia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Acute psychosis, seizures have been reported. Sudden discontinuance increases risk of seizure activity.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Initiate seizure precautions. Assess for hypersensitivity to levetiracetam, renal function tests.

INTERVENTION/EVALUATION

Observe for recurrence of seizure activity. Assess for clinical improvement (decrease in intensity/frequency of seizures). Monitor renal function tests. Observe for suicidal ideation, depression, behavioral changes. Assist with ambulation if dizziness occurs.

PATIENT/ FAMILY TEACHING

• Drowsiness usually diminishes with continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Do not abruptly discontinue medication (may precipitate seizures). • Strict maintenance of drug therapy is essential for seizure control. • Report mood swings, hostile behavior, suicidal ideation, unusual changes in behavior.

levocetirizine

lee-voe-se-**tir**-i-zeen
(Xyzal)
Do not confuse levocetirizine with cetirizine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation piperazine. **CLINICAL:** Antihistamine (see p. 54C).

ACTION

Competes with histamine for H_1-receptor sites on effector cells in GI tract, blood vessels, respiratory tract. **Therapeutic Effect:** Relieves allergic response (sneezing, rhinorrhea, postnasal discharge, nasal pruritus, ocular pruritus, tearing), allergic rhinitis (hay fever), mediated by histamine (urticaria, pruritus).

PHARMACOKINETICS

Rapidly, almost completely absorbed from GI tract. Protein binding: 92%. Excreted primarily unchanged in urine. **Half-life:** 8 hrs (increased in renal impairment).

USES

Relief of symptoms of allergic rhinitis (seasonal, perennial) and uncomplicated skin manifestations of chronic idiopathic urticaria.

PRECAUTIONS

Contraindications: Hypersensitivity to hydroxyzine, end-stage renal disease, chil-

dren 6–11 yrs with renal impairment, pts undergoing dialysis. **Cautions:** Renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category B. Children:** Less likely to cause anticholinergic effects (e.g., dry mouth, urinary retention). Safety and efficacy not established in those younger than 6 yrs. **Elderly:** More sensitive to anticholinergic effects (e.g., dry mouth, urinary retention). Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Ritonavir** may increase concentration of levocetirizine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May suppress wheal and flare reactions to antigen skin testing, unless antihistamines are discontinued 4 days before testing.

AVAILABILITY (Rx)

Oral Solution: 0.5 mg/ml. **Tablets:** 5 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Allergic Rhinitis, Chronic Urticaria

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 5 mg once daily in the evening. **CHILDREN 6–11 YRS:** 2.5 mg once daily in the evening. **CHILDREN 6 MOS–5 YRS:** 1.25 mg once daily in the evening.

Dosage in Renal Impairment

◀ALERT▶ CHILDREN 6 MOS TO 5 YRS: Avoid use.

Mild renal function impairment (creatinine clearance 50–80 ml/min): 2.5 mg once daily. **Moderate renal function impairment (creatinine clearance 30–49 ml/min):** 2.5 mg every other day. **Severe renal function impairment (creatinine clearance 10–29 ml/min):** 2.5 mg twice weekly (once every 3–4 days).

SIDE EFFECTS

Adults: Occasional (6%–4%): Drowsiness, nasopharyngitis, fatigue. **Rare (2%–1%):** Dry mouth, pharyngitis. **Children 6–12 yrs: Rare (4%–2%):** Fever, cough, fatigue, epistaxis.

ADVERSE EFFECTS/ TOXIC REACTIONS

None significant.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess severity of rhinitis, urticaria, other symptoms. Obtain baseline renal function tests.

INTERVENTION/EVALUATION

For upper respiratory allergies, increase fluids to maintain thin secretions and offset thirst. Monitor symptoms for therapeutic response.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol during antihistamine therapy.

levofloxacin

TOP 200

lee-voe-**flox**-a-sin

(Iquix, Levaquin, Novo-Levofloxacin, Quixin)

BLACK BOX ALERT May increase risk of tendonitis, tendon rupture.

Do not confuse Levaquin with Levoxyl, Levsin/SL, or Lovenox, or levofloxacin with levetiracetam or levothyroxine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Fluoroquinolone. **CLINICAL:** Antibiotic (see p. 25C).

ACTION

Inhibits DNA enzyme gyrase in susceptible microorganisms, interfering with bacterial cell replication, repair. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed after PO, IV administration. Protein binding: 50%. Widely distributed. Eliminated unchanged in urine. Partially removed by hemodialysis. **Half-life:** 6–8 hrs.

USES

Treatment of susceptible infections due to *S. pneumoniae, S. aureus, E. faecalis, H. influenzae, M. catarrhalis, Serratia marcescens, K. pneumoniae, E. coli, P. mirabilis, P. aeruginosa, C. pneumoniae, Legionella pneumophila, Mycoplasma pneumoniae,* including acute bacterial exacerbation of chronic bronchitis, acute bacterial sinusitis, community-acquired pneumonia, nosocomial pneumonia, complicated and uncomplicated UTI, acute pyelonephritis, complicated and uncomplicated mild to moderate skin/skin structure infections, prostatitis. Inhalation anthrax (post-exposure); plague. **Ophthalmic:** Treatment of superficial infections to conjunctiva (0.5%), cornea (1.5%). **OFF-LABEL:** Anthrax, gonorrhea, pelvic inflammatory disease (PID), diverticulitis, enterocolitis, gonococcal infections, Legionnaire's disease, peritonitis.

PRECAUTIONS

Contraindications: Hypersensitivity to other fluoroquinolones. **Cautions:** Known or suspected CNS disorders, seizure disorder, renal impairment, bradycardia, cardiomyopathy, hypokalemia, hypomagnesemia, myasthenia gravis, severe cerebral arteriosclerosis, prolonged QT interval, diabetes.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Avoid use in pregnancy. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Antacids, iron preparations, sucralfate, zinc decrease absorption. **NSAIDs** may increase risk of CNS stimulation, seizures. May increase effect of **warfarin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May alter serum glucose.

AVAILABILITY (Rx)

Infusion Premix: 250 mg/50 ml, 500 mg/100 ml, 750 mg/150 ml. **Injection, Solution:** 25 mg/ml. **Ophthalmic Solution: (Iquix):** 1.5%. **(Quixin):** 0.5%. **Oral Solution:** 25 mg/ml. **Tablets:** 250 mg, 500 mg, 750 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For infusion using single-dose vial, withdraw desired amount (10 ml for 250 mg, 20 ml for 500 mg). Dilute each 10 ml (250 mg) with minimum 40 ml 0.9% NaCl, D_5W, providing a concentration of 5 mg/ml.

Rate of Administration • Administer slowly, over not less than 60 min for 250 mg or 500 mg; 90 min for 750 mg.

Storage • Available in single-dose 20-ml (500-mg) vials and premixed with D_5W, ready to infuse. • Diluted vials stable for 72 hrs at room temperature, 14 days if refrigerated.

PO

• Do not administer antacids (aluminum, magnesium), sucralfate, iron or multivitamin preparations with zinc within 2 hrs of levofloxacin administration (significantly reduces levofloxacin absorption). • Give tablets without regard to food. • Give oral solution 1 hr before or 2 hrs after meals.

Ophthalmic

• Place a gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place prescribed number of drops into pocket. • Instruct pt to close eye gently (so medication will not be squeezed out of the sac) and to apply digital pressure to lacrimal sac for 1–2 min to minimize systemic absorption.

IV INCOMPATIBILITIES

Furosemide (Lasix), heparin, insulin, nitroglycerin, propofol (Diprivan).

IV COMPATIBILITIES

Aminophylline, dobutamine (Dobutrex), dopamine (Intropin), fentanyl (Sublimaze), lidocaine, lorazepam (Ativan), morphine.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IV/PO: ADULTS, ELDERLY: 250–500 mg q24h; 750 mg q24h for severe or complicated infections.

Bacterial Sinusitis

PO: ADULTS, ELDERLY: 500 mg once daily for 10 days or 750 mg once daily for 5 days.

Bronchitis

PO, IV: ADULTS, ELDERLY: 500 mg q24h for 7 days.

Community-Acquired Pneumonia

PO: ADULTS, ELDERLY: 750 mg/day for 5 days or 500 mg q24h for 7–14 days.

Pneumonia, Nosocomial

PO, IV: ADULTS, ELDERLY: 750 mg q24h for 7–14 days.

Skin/Skin Structure Infections

PO, IV: ADULTS, ELDERLY: (Uncomplicated) 500 mg q24h for 7–10 days. (Complicated) 750 mg q24h for 7–14 days.

Prostatitis

IV, PO: ADULTS, ELDERLY: 500 mg q24h for 28 days.

Uncomplicated UTI

IV, PO: ADULTS, ELDERLY: 250 mg q24h for 3 days.

Complicated UTI, Acute Pyelonephritis

PO, IV: ADULTS, ELDERLY: 250 mg q24h for 10 days.

Anthrax, Plague

PO: ADULTS, ELDERLY, CHILDREN GREATER THAN 50 KG: 500 mg daily for 60 days (anthrax), 10–14 days (plague). **CHILDREN 6 MOS OF AGE OR OLDER AND LESS THAN 50 KG:** 8 mg/kg 2 times/day for 60 days (anthrax), 10–14 days (plague).

Bacterial Conjunctivitis

Ophthalmic: ADULTS, ELDERLY, CHILDREN 1 YR AND OLDER (QUIXIN): 1–2 drops q2h for 2 days (up to 8 times a day), then 1–2 drops q4h for 5 days.

Corneal Ulcer

Ophthalmic: ADULTS, ELDERLY, CHILDREN OLDER THAN 5 YRS (IQUIX): Days 1–3: Instill 1–2 drops q30min to 2 hrs while awake and 4–6 hrs after retiring. **Days 4 through completion:** 1–2 drops q1–4h while awake.

Dosage in Renal Impairment

Normal renal function dosage of 500 mg/day:

Creatinine Clearance	Dosage
50–80 ml/min	No change
20–49 ml/min	500 mg initially, then 250 mg q24h
10–19 ml/min	500 mg initially, then 250 mg q48h

For pts undergoing dialysis, 500 mg initially, then 250 mg q48h.

Normal renal function dosage of 250 mg/day:

Creatinine Clearance	Dosage
20–49 ml/min	No change
10–19 ml/min	250 mg initially, then 250 mg q48h

Normal renal function dosage of 750 mg/day:

Creatinine Clearance	Dosage
50–80 ml/min	No change
20–49 ml/min	Initially, 750 mg, then 750 mg q48h
10–19 ml/min	Initially 750 mg, then 500 mg q48h
Dialysis	500 mg q48h (administer after dialysis on dialysis days)
Continuous Renal Replacement Therapy	
CVVH	500–750 mg once, then 250 mg q24h
CVVHD	500–750 mg once, then 250–500 mg q24h
CVVHDT	500–750 mg once, then 250–750 mg q24h

SIDE EFFECTS

Occasional (3%–1%): Diarrhea, nausea, abdominal pain, dizziness, drowsiness, headache, light-headedness. **Ophthalmic:** Local burning/discomfort, margin crusting, crystals/scales, foreign body sensation, ocular itching, altered taste. **Rare (less than 1%):** Flatulence; pain, inflammation, swelling in calves, hands, shoulder; chest pain; difficulty breathing; palpitations; edema; tendon pain. **Ophthalmic:** Corneal staining, keratitis, allergic reaction, eyelid swelling, tearing, reduced visual acuity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may occur. Superinfection (genital/anal pruritus, ulceration/changes in oral mucosa, moderate to severe diarrhea) may occur from altered bacterial balance. Hypersensitivity reactions, including photosensitivity (rash, pruritus, blisters, edema, sensation of burning skin) have occurred in pts receiving fluoroquinolones.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to levofloxacin, other fluoroquinolones.

INTERVENTION/EVALUATION

Monitor serum glucose, renal/hepatic function tests. Monitor daily pattern of bowel activity, stool consistency. Report hypersensitivity reaction: skin rash, urticaria, pruritus, photosensitivity promptly. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Provide symptomatic relief for nausea. Evaluate food tolerance, altered taste.

PATIENT/ FAMILY TEACHING

• Drink 6–8 glasses of fluid a day (prevents formation of urine crystals). • Avoid tasks that require alertness, motor skills until response to drug is established (may cause dizziness, drowsiness). • Notify physician if tendon pain/swelling, palpitations, chest pain, difficulty breathing, persistent diarrhea occurs. • Avoid exposure to direct sunlight. • Report use of warfarin.

levothyroxine

TOP 200

lee-voe-thy-**rox**-een
(Eltroxin, Levothroid, Levoxyl, Synthroid, Unithroid)

BLACK BOX ALERT Ineffective, potentially toxic for weight reduction. High doses increase risk of serious, life-threatening toxic effects, especially when used with some anorectic drugs.

Do not confuse levothyroxine with levofloxacin or liothyro-

nine, Levoxyl with Lanoxin, Levaquin, or Luvox, or Synthroid with Symmetrel.

FIXED-COMBINATION(S)

With liothyronine, T_3 **(Thyrolar).**

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic isomer of thyroxine. **CLINICAL:** Thyroid hormone (T_4) (see p. 159C).

ACTION

Involved in normal metabolism, growth, development, esp. of CNS in infants. Possesses catabolic, anabolic effects. **Therapeutic Effect:** Increases basal metabolic rate, enhances gluconeogenesis, stimulates protein synthesis.

PHARMACOKINETICS

Variable, incomplete absorption from GI tract. Protein binding: greater than 99%. Widely distributed. Deiodinated in peripheral tissues, minimal metabolism in liver. Eliminated by biliary excretion. **Half-life:** 6–7 days.

USES

Treatment of hypothyroidism, myxedema coma, pituitary thyroid-stimulating hormone (TSH) suppression.

PRECAUTIONS

Contraindications: Acute MI, thyrotoxicosis at any etiology, uncorrected adrenal insufficiency. **Cautions:** Elderly, angina pectoris, hypertension, other cardiovascular disease, adrenal insufficiency, myxedema, diabetes mellitus and insipidus, swallowing disorders.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Does not cross placenta. Minimal distribution in breast milk. **Pregnancy Category A. Children:** No age-related precautions noted. Caution in neonates in interpreting thyroid function tests. **Elderly:** May be more sensitive to thyroid effects; individualized dosage recommended.

INTERACTIONS

DRUG: Cholestyramine, colestipol, aluminum- and **magnesium-containing antacids** may decrease absorption. **Estrogens** may cause decrease in serum-free thyroxine. May enhance effect of **oral anticoagulants (e.g, warfarin). Sympathomimetics** may increase risk of coronary insufficiency, effects of levothyroxine. May decrease effect of **insulin, oral hypoglycemic agents.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Synthroid): 100 mcg, 200 mcg, 500 mcg. **Tablets (Levothroid, Levoxyl, Synthroid, Unithroid):** 25 mcg, 50 mcg, 75 mcg, 88 mcg, 100 mcg, 112 mcg, 125 mcg, 137 mcg, 150 mcg, 175 mcg, 200 mcg, 300 mcg.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not interchange brands (problems with bioequivalence between manufacturers).

IV

Reconstitution • Reconstitute 200-mcg or 500-mcg vial with 5 ml 0.9% NaCl to provide concentration of 40 or 100 mcg/ml, respectively; shake until clear.

Rate of Administration • Use immediately; discard unused portions. • Give each 100 mcg or less over 1 min.

Storage • Store vials at room temperature.

PO

• Administer in the morning on an empty stomach, 30 min before food. • Administer before breakfast to prevent insomnia. • Tablets may be crushed. • Take 4 hrs apart from antacids, iron, calcium supplements.

IV INCOMPATIBILITIES

Do not use or mix with other IV solutions.

INDICATIONS/ROUTES/DOSAGE

Note: IV dose is 50% of oral dose.

Hypothyroidism

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS, GROWTH AND PUBERTY COMPLETE: 1.7 mcg/kg/day as single daily dose. Usual maintenance: 100–200 mcg/day. **CHILDREN OLDER THAN 12 YRS, GROWTH AND PUBERTY INCOMPLETE:** 2–3 mcg/kg/day. **CHILDREN 6–12 YRS:** 4–5 mcg/kg/day. **CHILDREN 1–5 YRS:** 5–6 mcg/kg/day. **CHILDREN 6–12 MOS:** 6–8 mcg/kg/day. **CHILDREN 3–5 MOS:** 8–10 mcg/kg/day. **CHILDREN YOUNGER THAN 3 MOS:** 10–15 mcg/kg/day.

Myxedema Coma

IV: ADULTS, ELDERLY: Initially, 200–500 mcg, then 100–300 mcg next day if necessary.

Pituitary Thyroid-Stimulating Hormone (TSH) Suppression

PO: ADULTS, ELDERLY: Doses greater than 2 mcg/kg/day usually required to suppress TSH below 0.1 milliunits/L.

SIDE EFFECTS

Occasional: Reversible hair loss at start of therapy in children. **Rare:** Dry skin, GI intolerance, rash, urticaria, pseudotumor cerebri, severe headache in children.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive dosage produces signs/symptoms of hyperthyroidism (weight loss, palpitations, increased appetite, tremors, anxiety, tachycardia, hypertension, headache, insomnia, menstrual irregularities). Cardiac arrhythmias occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline weight, vital signs. Signs/symptoms of diabetes mellitus, diabetes insipidus, adrenal insufficiency, hypopituitarism may become intensified. Treat with adrenocortical steroids before thyroid therapy in coexisting hypothyroidism and hypoadrenalism.

INTERVENTION/EVALUATION

Monitor pulse for rate, rhythm (report pulse greater than 100 or marked increase). Observe for tremors, anxiety. Assess appetite, sleep pattern. **Children: (Undertreatment):** May decrease intellectual development, linear growth. **(Overtreatment):** Adversely affects brain maturation, accelerates bone age.

PATIENT/ FAMILY TEACHING

• Do not discontinue drug therapy; replacement for hypothyroidism is lifelong. • Follow-up office visits, thyroid function tests are essential. • Take medication at the same time each day, preferably in the morning. • Monitor pulse for rate, rhythm; report irregular rhythm or pulse rate over 100 beats/min. • Do not change brands. • Notify physician promptly of chest pain, weight loss, anxiety, tremors, insomnia. • Children may have reversible hair loss, increased aggressiveness during first few mos of therapy. • Full therapeutic effect may take 1–3 wks.

lidocaine

TOP 200 HIGH ALERT

lye-doe-kane
(Anestacon, Betacaine, Lidoderm, Xylocaine)

FIXED-COMBINATION(S)

EMLA: lidocaine/prilocaine (an anesthetic): 2.5%/2.5%. **Lidosite:** lidocaine/epinephrine (a sympathomimetic): 10%/0.1%. **Lidocaine with epinephrine:** lidocaine/epinephrine (a sympathomimetic): 2%/1:50,000, 1%/1:100,000, 1%/1:200,000, 0.5%/1:200,000. **Synéra:** lidocaine/tetracaine (an anesthetic): 70 mg/70 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Amide anesthetic. **CLINICAL:** Antiarrhythmic, anesthetic (see pp. 7C, 8C, 16C).

ACTION

Anesthetic: Inhibits conduction of nerve impulses. **Therapeutic Effect:** Causes temporary loss of feeling/sensation. **Antiarrhythmic:** Decreases depolarization, automaticity, excitability of ventricle during diastole by direct action. **Therapeutic Effect:** Inhibits ventricular arrhythmias.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	30–90 sec	N/A	10–20 min
Local anesthetic	2.5 min	N/A	30–60 min

Completely absorbed after IM administration. Protein binding: 60%–80%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 1–2 hrs.

USES

Antiarrhythmic: Rapid control of acute ventricular arrhythmias following MI, cardiac catheterization, cardiac surgery, digitalis-induced ventricular arrhythmias. **Local Anesthetic:** Infiltration/nerve block for dental/surgical procedures, childbirth. **Topical Anesthetic:** Local skin disorders (minor burns, insect bites, prickly heat, skin manifestations of chickenpox, abrasions). Mucous membranes (local anesthesia of oral, nasal, laryngeal mucous membranes; local anesthesia of respiratory, urinary tracts; relief of discomfort of pruritus ani, hemorrhoids, pruritus vulvae). **Dermal patch:** Relief of chronic pain in post-herpetic neuralgia, allodynia (painful hypersensitivity). **OFF-LABEL:** IV infusion for chronic pain syndrome.

PRECAUTIONS

Contraindications: Adams-Stokes syndrome, hypersensitivity to amide-type local anesthetics, supraventricular arrhythmias, Wolff-Parkinson-White syndrome. Severe degree of SA, AV, or intraventricular heart block (except in pts with functioning pacemaker). **Cautions:** Hepatic disease, marked hypoxia, severe respiratory depression, hypovolemia, incomplete heart block, bradycardia, atrial fibrillation, heart failure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** More sensitive to adverse effects. Dose, rate of infusion should be reduced. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Class 1 antiarrhythmics may increase cardiac effects. **HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** IM lidocaine may increase creatine kinase (CK) level (used to diagnose acute MI). **Therapeutic serum level:** 1.5 to 6 mcg/ml; **toxic serum level:** greater than 6 mcg/ml.

AVAILABILITY (Rx)

Cream, Topical: 4%. **Infusion Premix:** 0.4% (4 mg/ml in 250 ml, 500 ml); 0.8% (8 mg/ml in 250 ml, 500 ml). **Injection, Solution:** 0.5% (5 mg/ml), 1% (10 mg/ml), 2% (20 mg/ml). **Jelly, Topical:** 2%. **Solution, Topical:** 4%. **Solution, Viscous:** 2%. **Transdermal, Topical (Lidoderm):** 5%.

ADMINISTRATION/HANDLING

◀ALERT▶ Resuscitative equipment, drugs (including O_2) must always be readily available when administering lidocaine by any route.

IV

◀ALERT▶ Use only lidocaine without preservative, clearly marked **for IV use.**

Reconstitution • For IV infusion, prepare solution by adding 2 g to 250–500 ml D_5W or 0.9% NaCl to provide concentration of 8 mg/ml or 4 mg/ml, respectively. • Commercially available preparations of

0.4% and 0.8% may be used for IV infusion. **Maximum concentration:** 4 g/250 ml (16 mg/ml).

Rate of Administration • For IV push, use 1% (10 mg/ml) or 2% (20 mg/ml). • Administer IV push at rate of 25–50 mg/min. • Administer for IV infusion at rate of 1–4 mg/min (1–4 ml); use volume control IV set.

Storage • Store premix solutions at room temperature.

IM

• Use 10% (100 mg/ml); clearly identify lidocaine that is **for** IM **use.** • Give in deltoid muscle (serum level is significantly higher than if injection is given in gluteus muscle or lateral thigh).

Topical

• Not for ophthalmic use. • For skin disorders, apply directly to affected area or put on gauze or bandage, which is then applied to the skin. • For mucous membrane use, apply to desired area per manufacturer's insert. • Administer lowest dosage possible that still provides anesthesia.

Dermal Patch

Patch may be cut to appropriate size.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), thiopental.

IV COMPATIBILITIES

Aminophylline, amiodarone (Cordarone), calcium gluconate, digoxin (Lanoxin), diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), enalapril (Vasotec), furosemide (Lasix), heparin, insulin, lipids, nitroglycerin, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Ventricular Arrhythmias

IM: ADULTS, ELDERLY: 300 mg (or 4.3 mg/kg). May repeat in 60–90 min.

IV: ADULTS, ELDERLY: Initially, 1–1.5 mg/kg. Refractory ventricular tachycardia, fibrillation: Repeat dose at 0.5–0.75 mg/kg q10–15min after initial dose for a maximum of 3 doses. Total dose not to exceed 3 mg/kg. Follow with continuous infusion (1–4 mg/min) after return of perfusion. Reappearance of arrhythmia during infusion: 0.5 mg/kg, reassess infusion. **CHILDREN, INFANTS:** Initially, 1 mg/kg (**maximum:** 100 mg). May repeat second dose of 0.5–1 mg/kg if start of infusion longer than 15 min. Maintenance: 20–50 mcg/kg/min as IV infusion.

Local Anesthesia

Infiltration, Nerve Block: ADULTS: Local anesthetic dosage varies with procedure, degree of anesthesia, vascularity, duration. **Maximum dose:** 4.5 mg/kg. Do not repeat within 2 hrs.

Topical Local Anesthesia

Topical: ADULTS, ELDERLY: Apply to affected areas as needed.

Treatment of Post-Herpetic Neuralgia

◀ALERT▶ Transdermal patch may contain conducting metal (e.g., aluminum). Remove patch prior to MRI.

Topical *(Dermal Patch)*: ADULTS, ELDERLY: Apply to intact skin over most painful area (up to 3 applications once for up to 12 hrs in a 24-hr period).

SIDE EFFECTS

CNS effects generally dose-related and of short duration. **Occasional: IM:** Pain at injection site. **Topical:** Burning, stinging, tenderness at application site. **Rare:** Generally with high dose: Drowsiness; dizziness; disorientation; light-headedness; tremors; apprehension; euphoria; sensation of heat, cold, numbness; blurred or double vision; tinnitus (ringing in ears); nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious adverse reactions to lidocaine are uncommon, but high dosage by any route may produce cardiovascular depression, bradycardia, hypotension, arrhythmias, heart block, cardiovascular collapse, cardiac arrest. Potential for malignant hyper-

thermia, CNS toxicity may occur, esp. with regional anesthesia use, progressing rapidly from mild side effects to tremors, drowsiness, seizures, vomiting, respiratory depression. Methemoglobinemia (evidenced by cyanosis) has occurred following topical application of lidocaine for teething discomfort and laryngeal anesthetic spray.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to lidocaine, amide anesthetics. Obtain baseline B/P, pulse, respiratory rate, EKG, serum electrolytes.

INTERVENTION/EVALUATION

Monitor EKG, vital signs closely during and following drug administration for cardiac performance. If EKG shows arrhythmias, prolongation of PR interval or QRS complex, inform physician immediately. Assess pulse for rhythm, rate, quality. Assess B/P for evidence of hypotension. Monitor for therapeutic serum level (1.5–6 mcg/ml). For lidocaine given by all routes, monitor vital signs, LOC. Drowsiness should be considered a warning sign of high serum levels of lidocaine. **Therapeutic serum level:** 1.5–6 mcg/ml; **toxic serum level:** greater than 6 mcg/ml.

PATIENT/ FAMILY TEACHING

• **Local anesthesia:** Due to loss of feeling/sensation, protective measures may be needed until anesthetic wears off (no ambulation, including special positions for some regional anesthesia). • **Oral mucous membrane anesthesia:** Do not eat, drink, chew gum for 1 hr after application (swallowing reflex may be impaired, increasing risk of aspiration; numbness of tongue, buccal mucosa may lead to bite trauma). • **IV infusions:** Report dizziness, numbness, double vision, nausea, pain/burning, respiratory difficulty. • **Topical:** Report irritation, pain, numbness, swelling, blurred vision, tinnitus, respiratory difficulty.

linaclotide

lyn-ah-**kloe**-tide

Linzess

BLACK BOX ALERT Contraindicated in pediatric pts 6 yrs of age and younger. Avoid use in pediatric patients 7 yrs through 17 yrs old.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Guanylate cyclase-C (cGMP) agonist. **CLINICAL:** Anti-constipation agent.

ACTION

Binds on the luminal surface of GI epithelium. Increase cGMP which stimulates chloride and bicarbonate into intestinal lumen. **Therapeutic Effect:** Increase intestinal fluid, accelerates transit.

PHARMACOKINETICS

Metabolized within GI tract. Minimal distribution beyond GI tissue. Minimal systemic absorption. **Half-life:** N/A.

USES

Treatment of irritable bowel syndrome with constipation, chronic idiopathic constipation.

PRECAUTIONS

Contraindications: Pediatric patients 6 yrs and younger, known or suspected mechanical GI obstruction. **Cautions:** Diarrhea.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Avoid use in pediatric pts 7 yrs through 17 yrs. Contraindicated in pediatric pts 6 yrs of age and younger. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 145 mcg, 290 mcg.

ADMINISTRATION/HANDLING

PO

• Do not break, crush, dissolve, or divide capsule.

INDICATIONS/ROUTES/DOSAGE

Irritable Bowel Syndrome With Constipation

PO: ADULTS 18 YRS AND OLDER, ELDERLY: 290 mcg once daily. • Give on empty stomach at least 30 min prior to first meal of day.

Chronic Idiopathic Constipation

PO: ADULTS 18 YRS AND OLDER, ELDERLY: 145 mcg once daily.

SIDE EFFECTS

Frequent (16%): Diarrhea (may begin within first 2 wks of initiation of treatment). **Occasional (7%–2%):** Abdominal pain, flatulence, headache, abdominal distention. **Rare (1% and Less):** Gastroesophageal reflux, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe diarrhea was reported in 2% of pts. Viral gastroenteritis was noted in 3% of pts. Fecal incontinence, dehydration was reported in 1%. Dose reduced or suspended secondary to diarrhea, other GI adverse reaction.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily bowel activity, stool consistency (watery, loose, soft, semisolid, solid) and record time of evacuation. Assess for abdominal disturbances. Monitor serum electrolytes in those exposed to prolonged, frequent, or excessive use of medication.

INTERVENTION/EVALUATION

For those with irritable bowel syndrome, assess for improvement in symptoms (relief from bloating, cramping, urgency, abdominal discomfort).

PATIENT/FAMILY TEACHING

• Institute measures to promote defecation: increase fluid intake, exercise, high-fiber diet. • Report new/worsening episodes of abdominal pain, severe diarrhea.

linagliptin

lin-a-**glip**-tin
(Tradjenta)
Do not confuse linagliptin with saxigliptin or sitagliptin.

FIXED-COMBINATION(S)

Jentadueto: linagliptin/metformin (an antidiabetic): 2.5 mg/500 mg; 2.5 mg/850 mg; 2.5 mg/1,000 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dipeptidyl peptidase-4 (DDP-4) inhibitor (gliptan). **CLINICAL:** Antidiabetic agent (see p. 43C).

ACTION

Slows inactivation of incretin hormones by inhibiting DDP-4 enzyme. **Therapeutic Effect:** Incretin hormones increase insulin synthesis/release from pancreas and decrease glucagon secretion. Lowers serum glucose levels.

PHARMACOKINETICS

Rapidly absorbed following PO administration. Peak plasma concentration: 1.5 hrs. Extensive tissue distribution. Protein binding: 70%–99%. Minimal metabolism (90% excreted as unchanged metabolite). Excreted primarily in enterohepatic system (80%), urine (5%). **Half-life:** 12 hrs.

USES

Adjunctive treatment to diet and exercise to improve glycemic controls in pts with type 2 diabetes mellitus alone or in combination with insulin.

PRECAUTIONS

Contraindications: Type 1 diabetes, diabetic ketoacidosis, history of hypersensitive reactions to DD4 inhibitors. **Cautions:** Concurrent use of other hypoglycemics.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., rifampin) may decrease concentration. **Insulin, metformin, saxagliptin, sitagliptin, sulfonylureas** may increase risk of hypoglycemia. **HERBAL: Ginseng, ginger, other herbs with hypoglycemic activity** may increase risk of hypoglycemia. **FOOD:** None known. **LAB VALUES:** Decreases serum glucose. May increase serum uric acid.

AVAILABILITY (Rx)

Tablets: 5 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Type 2 Diabetes Mellitus

PO: ADULTS, ELDERLY: 5 mg once daily.

SIDE EFFECTS

Occasional (5%): Nasopharyngitis. **Rare (less than 2%):** Cough, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypoglycemia reported in 7% of pts. Concomitant use of hypoglycemic medication may increase hypoglycemic risk. Pancreatitis, hypersensitivity reactions (angioedema, rash, urticaria, pruritus, bronchospasm) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check blood glucose, hemoglobin A_{1c} level. Assess pt's understanding of diabetes management, routine glucose monitoring. Receive full medication history including vitamins, minerals, herbal products.

INTERVENTION/EVALUATION

Monitor blood glucose, hemoglobin A_{1c} level. Assess for hypoglycemia (diaphoresis, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia, difficulty concentrating), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, fatigue, Kussmaul breathing). Screen for glucose-altering conditions: fever, increased activity or stress, surgical procedures. Dietary consult for nutritional education.

PATIENT/FAMILY TEACHING

- Diabetes mellitus requires lifelong control. • Diet and exercise is principal part of treatment; do not skip or delay meals. • Test blood glucose regularly. • When taking combination drug therapy or when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity), have hypoglycemic treatment available (glucagon, oral dextrose). • Report suspected pregnancy or plans of breastfeeding. • Monitor daily calorie intake.

linezolid

TOP 200

lin-**ez**-oh-lid
(Zyvox, Zyvoxam)
Do not confuse Zyvox with Zosyn or Zovirax.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Oxazolidinone. **CLINICAL:** Antibiotic.

ACTION

Binds to site on bacterial ribosomal RNA, preventing formation of a complex essential for bacterial translation. **Therapeutic Effect:** Bacteriostatic against enterococci, staphylococci; bactericidal against streptococci.

PHARMACOKINETICS

Rapidly, extensively absorbed after PO administration. Protein binding: 31%. Metabolized in liver by oxidation. Excreted in urine. **Half-life:** 4–5.4 hrs.

USES

Treatment of susceptible infections due to aerobic and facultative, gram-positive microorganisms, including *E. faecium* (vancomycin-resistant strains only), *S. aureus* (including methicillin-resistant strains), *S. agalactiae, S. pneumoniae* (including multidrug-resistant strains), *S. pyogenes.* Treatment of pneumonia (community-acquired and hospital acquired), skin, soft tissue infections (including diabetic foot infections), bacteremia caused by susceptible vancomycin-resistant organisms.

PRECAUTIONS

Contraindications: Concurrent use or within 2 wks of MAOIs; uncontrolled hypertension; pheochromocytoma; thyrotoxicosis; concurrent sympathomimetic, vasopressive agents or dopaminergic agents (unless closely monitored); carcinoid syndrome; concurrent use with SSRIs, tricyclic antidepressants, 5-HT agonists, or buspirone. **Cautions:** Severe renal/hepatic impairment, untreated hyperthyroidism. History of seizures, preexisting myelosuppression, other medications that may cause bone marrow depression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, phenytoin) may decrease concentration/effects. **Adrenergic medications (sympathomimetics)** may increase effect. **SSRIs** may increase risk of serotonin syndrome. **HERBAL:** Supplements containing **caffeine, tyrosine,** or **tryptophan** may precipitate hypertensive crisis. **FOOD:** Excessive amounts of **tyramine-containing foods, beverages** may cause significant hypertension. **LAB VALUES:** May decrease Hgb, neutrophils, platelets, WBC. May increase serum ALT, AST, alkaline phosphatase, amylase, bilirubin, BUN, creatinine, LDH, lipase.

AVAILABILITY (Rx)

Injection Premix: 2 mg/ml in 100-ml, 300-ml bags. **Powder for Oral Suspension:** 100 mg/5 ml. **Tablets:** 600 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Infuse over 30–120 min. • Should be administered without further dilution.

Storage • Store at room temperature. • Protect from light. • Yellow color does not affect potency.

PO

• Give without regard to meals. • Use suspension within 21 days after reconstitution. Gently invert 3–5 times before administration. • Do not shake.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), chlorpromazine (Thorazine), co-trimoxazole (Bactrim), diazepam (Valium), erythromycin (Erythrocin), pentamidine (Pentam IV), phenytoin (Dilantin), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Vancomycin-Resistant Infections (VRI)

PO, IV: ADULTS, ELDERLY, CHILDREN OLDER THAN 11 YRS: 600 mg q12h for 14–28

days. **CHILDREN 11 YRS AND YOUNGER:** 10 mg/kg q8–12h for 14–28 days.

Nosocomial Pneumonia, Community-Acquired Pneumonia, Complicated Skin/Skin Structure Infections

PO, IV: ADULTS, ELDERLY, CHILDREN OLDER THAN 11 YRS: 600 mg q12h for 10–14 days. **CHILDREN 11 YRS AND YOUNGER:** 10 mg/kg q8h for 10–14 days.

Uncomplicated Skin/Skin Structure Infections

PO: ADULTS, ELDERLY: 400 mg q12h for 10–14 days. **CHILDREN OLDER THAN 11 YRS:** 600 mg q12h for 10–14 days. **CHILDREN 5–11 YRS:** 10 mg/kg/dose q12h for 10–14 days. **CHILDREN YOUNGER THAN 5 YRS:** 10 mg/kg q8h for 10–14 days.

MRSA

PO, IV: ADULTS, ELDERLY: 600 mg q12h.

Usual Neonate Dosage

PO, IV: NEONATES: 10 mg/kg/dose q8–12h.

SIDE EFFECTS

Occasional (9%–2%): Diarrhea, nausea, vomiting, insomnia, constipation, rash, dizziness, fever, headache. **Rare (less than 2%):** Altered taste, vaginal candidiasis, fungal infection, tongue discoloration.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombocytopenia, myelosuppression occur rarely. Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain appropriate culture specimens for sensitivity testing prior to therapy. Obtain baseline CBC, chemistries.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable, but increasing severity may indicate onset of antibiotic-associated colitis. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor CBC, platelets, Hgb, chemistries.

PATIENT/ FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • May cause GI upset (may take with food, milk). • Excessive amounts of tyramine-containing foods (red wine, aged cheese) may cause severe reaction (severe headache, neck stiffness, diaphoresis, palpitations). • Avoid alcohol. • Notify physician of persistent diarrhea, nausea, vomiting.

liraglutide

leer-a-**gloo**-tide
(Victoza)

BLACK BOX ALERT Causes dose-dependent and treatment duration–dependent thyroid C-cell tumors, including medullary thyroid cancer.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihyperglycemic (glucagon-like peptide-1 [GLP-1] receptor agonist. **CLINICAL:** Antidiabetic agent (see p. 44C).

ACTION

Stimulates release of insulin from pancreatic beta cells, mimics enhancement of glucose-dependent insulin secretion, suppresses elevated glucagon secretion, slows gastric emptying. **Therapeutic Effect:** Improves glycemic control by increasing postmeal insulin secretion, emptying, increasing satiety.

PHARMACOKINETICS

Maximum concentration achieved in 8–12 hrs. Protein binding: 98%. Metabo-

lized to large proteins without a specific organ as major route of elimination. **Half-life:** 13 hrs.

USES

Adjunct to diet and exercise to improve glycemic control in adult pts with type 2 diabetes mellitus.

PRECAUTIONS

Contraindications: Personal or family history of medullary thyroid carcinoma, those with multiple endocrine neoplasia syndrome type 2. **Cautions:** History of pancreatitis, cholelithiasis, alcohol abuse, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Liraglutide has potential to alter absorption of concurrently administered **oral medications.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Decreases glucose serum levels (when used in combination with insulin secretagogues [e.g., sulfonylureas]).

AVAILABILITY (Rx)

Subcutaneous, Solution (Prefilled Pen): 0.6 mg, 1.2 mg, 1.8 mg.

ADMINISTRATION/HANDLING

Subcutaneous

• May be given in thigh, abdomen, upper arm. • Rotation of injection sites is essential; maintain careful records. • Give at any time without regard to meals.

Storage • Refrigerate prefilled pens. • Discard if freezing occurs. • Discard pen 30 days after initial use.

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus

Subcutaneous: ADULTS, ELDERLY: Initial dose: 0.6 mg subcutaneously once per day for at least 1 wk. This dose is intended to reduce GI symptoms during initial titration; it is not effective for glycemic control. After 1 wk, increase dose to 1.2 mg. If 1.2-mg dose does not result in acceptable glycemic control, dose can be increased to 1.8 mg.

SIDE EFFECTS

Frequent (greater than 13%): Headache, nausea, diarrhea, liraglutide antibody resistance. **Occasional (13%–6%):** Diarrhea, vomiting, dizziness, jitteriness, dyspepsia. **Rare (less than 6%):** Weakness, decreased appetite.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious hypoglycemia may occur when used concurrently with insulin analogue (e.g., sulfonylurea); consider lowering dose.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check blood glucose concentration before administration. Discuss pt's lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt/family does not thoroughly understand diabetes management or glucose testing technique. Dose is gradually increased to improve GI tolerance.

INTERVENTION/EVALUATION

Monitor blood glucose level, food intake. Assess for hypoglycemia (cool wet skin, tremors, dizziness, anxiety, headache, tachycardia, numbness in mouth, hunger, diplopia) or hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity/stress, surgical procedures).

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. • Prescribed diet, exercise are principal parts of treatment; do not skip/delay meals. • Continue following

dietary instructions, regular exercise program, regular testing of blood glucose level. • Serious hypoglycemia may occur when used concurrently with insulin analogue (e.g., sulfonylurea). Consider lowering dose of insulin analogue to reduce risk of hypoglycemia. • Have source of glucose available to treat symptoms of low blood sugar.

TOP 200

lisdexamfetamine

lis-dex-am-**fet**-ah-meen
(Vyvanse)

BLACK BOX ALERT Associated with serious cardiovascular events in pts with preexisting structural cardiac abnormalities or other serious heart problems. Potential for drug dependency exists.

Do not confuse lisdexamfetamine with dextroamphetamine, or Vyvanse with Glucovance, Vivactil, or Vytorin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Amphetamine **(Schedule II). CLINICAL:** CNS stimulant.

ACTION

Enhances action of dopamine, norepinephrine by blocking reuptake from synapses, increasing levels in extraneuronal space. **Therapeutic Effect:** Improves attention span in ADHD.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	Rapid	1 hr	24 hrs

Rapidly absorbed. Converted to dextroamphetamine. Excreted in urine. **Half-life:** Less than 1 hr.

USES

Treatment of ADHD. Maintenance treatment of ADHD in adults.

PRECAUTIONS

Contraindications: Advanced arteriosclerosis, symptomatic cardiovascular disease, moderate to severe hypertension, hyperthyroidism, known hypersensitivity to sympathomimetic amines, glaucoma, agitated mental states, history of drug abuse, use of MAOIs within 14 days (hypertensive crisis may result). **Cautions:** History of preexisting psychosis, bipolar disorder, aggression, tics, Tourette's syndrome, structural cardiac abnormalities, coronary artery disease (CAD) (adults), seizure disorder.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential for fetal harm. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 6 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: MAOIs may prolong/intensify effects. May decrease sedative effect of **antihistamines.** May decrease hypotensive effects of **antihypertensives.** Effects may be decreased by **chlorpromazine, haloperidol, lithium, urinary acidifying agents (ammonium chloride, sodium acid phosphate).** May increase absorption of **phenobarbital, phenytoin. Tricyclic antidepressants** may increase cardiovascular effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase plasma corticosteroid.

AVAILABILITY (Rx)

Capsules: 20 mg, 30 mg, 40 mg, 50 mg, 60 mg, 70 mg.

ADMINISTRATION/HANDLING

PO

• May be given in the morning without regard to food. • Swallow capsule whole; do not chew. • Capsules may be opened and dissolved in water and taken immediately.

INDICATIONS/ROUTES/DOSAGE

ADHD

PO: ADULTS, CHILDREN 6 YRS AND OLDER: Initially, 30 mg once daily in the morning. May increase dosage in increments of 10 or 20 mg/day at weekly intervals. **Maximum:** 70 mg/day.

SIDE EFFECTS

Frequent (39%): Decreased appetite. **Occasional (19%–9%):** Insomnia, upper abdominal pain, headache, irritability, vomiting, weight decrease. **Rare (6%–2%):** Nausea, dry mouth, dizziness, rash, affect change, fatigue, tic.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal following prolonged administration of high dosage may produce extreme fatigue (may last for wks). Prolonged administration to children with ADHD may produce a suppression of weight and/or height patterns. May produce cardiac irregularities, psychotic syndrome.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess attention span, impulse control, interaction with others.

INTERVENTION/EVALUATION

Monitor for CNS stimulation, increase in B/P, weight loss, pulse, sleep pattern, appetite. Observe for signs of hostility, aggression, depression.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Take early in day. • May mask extreme fatigue. • Report pronounced dizziness, decreased appetite, dry mouth, weight loss, new or worsened psychiatric problems, palpitations, dyspnea.

lisinopril

TOP 200

lye-**sin**-oh-pril (Apo-Lisinopril, Novo-Lisinopril, Prinivil, Zestril)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse lisinopril with fosinopril or Risperdal, Prinivil with Plendil, Pravachol, Prevacid, Prilosec, Proventil, or Restoril, or Zestril with Desyrel, Restoril, Vistaril, Zetia, or Zostrix. Do not confuse lisinopril's combination form Zestoretic with Prilosec.

FIXED-COMBINATION(S)

Prinzide/Zestoretic: lisinopril/hydrochlorothiazide (a diuretic): 10 mg/12.5 mg, 20 mg/12.5 mg, 20 mg/25 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: ACE inhibitor. **CLINICAL:** Antihypertensive (see p. 9C, 60C).

ACTION

Suppresses renin-angiotensin-aldosterone system (prevents conversion of angiotensin I to angiotensin II, a potent vasoconstrictor; may inhibit angiotensin II at local vascular, renal sites). Decreases plasma angiotensin II, increases plasma renin activity, decreases aldosterone secretion. **Therapeutic Effect:** Reduces peripheral arterial resistance, B/P (afterload), pulmonary capillary wedge pressure (preload), pulmonary vascular resistance. In those with heart failure, decreases heart size, increases cardiac output, exercise tolerance time.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	6 hrs	24 hrs

Incompletely absorbed from GI tract. Protein binding: 25%. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 12 hrs (increased in renal impairment).

USES

Treatment of hypertension. Used alone or in combination with other antihypertensives. Adjunctive therapy in management of heart failure. Treatment of acute MI within 24 hrs in hemodynamically stable pts to improve survival. Treatment of left ventricular dysfunction following MI.

PRECAUTIONS

Contraindications: History of angioedema from treatment with ACE inhibitors, idiopathic or hereditary angioedema. **Cautions:** Renal impairment, those with sodium depletion or on diuretic therapy, dialysis, hypovolemia, coronary/cerebrovascular insufficiency, severe CHF, left ventricular outflow tract obstruction.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: **Diuretics** may increase effects. May increase concentration, risk of toxicity of **lithium. NSAIDs** may decrease effects. **Potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. May increase hypoglycemic effect of **oral hypoglycemic agents. HERBAL: Ephedra, ginseng, licorice, yohimbe** may worsen hypertension. **Black cohosh, periwinkle** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, potassium, AST, ALT. May decrease serum sodium. May cause positive ANA titer.

AVAILABILITY (Rx)

Tablets (Prinivil, Zestril): 2.5 mg, 5 mg, 10 mg, 20 mg, 30 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Hypertension (Used Alone)

PO: ADULTS: Initially, 10 mg/day. May increase by 5–10 mg/day at 1- to 2-wk intervals. Range: 10–40 mg/day. **ELDERLY:** Initially, 2.5–5 mg/day. May increase by 2.5–5 mg/day at 1- to 2-wk intervals. **Maximum:** 40 mg/day. **CHILDREN 6 YRS OR OLDER:** Initially, 0.07 mg/kg once daily (up to 5 mg). Titrate at 1- to 2-wk intervals. **Maximum:** 40 mg/day.

Hypertension (in Combination with Other Antihypertensives)

◀ALERT▶ If possible, discontinue diuretics 48–72 hrs prior to initiating lisinopril therapy.

PO: ADULTS: Initially, 2.5–5 mg/day titrated to pt's needs. Range: 10–40 mg/day.

Adjunctive Therapy for Management of Heart Failure

PO: ADULTS, ELDERLY: Initially, 2.5–5 mg/day. May increase by no more than 10 mg/day at intervals of at least 2 wks. Maintenance: 5–40 mg/day.

Improve Survival in Pts after MI

PO: ADULTS, ELDERLY: Initially, 5 mg, then 5 mg after 24 hrs, 10 mg after 48 hrs, then 10 mg/day for 6 wks. For pts with low systolic B/P, give 2.5 mg/day for 5 days, then 2.5–5 mg/day. Pt should continue with thrombolytics, aspirin, beta-blockers.

Dosage in Renal Impairment

Titrate to pt's needs after giving the following initial dose:

Hypertension

Creatinine Clearance	Dosage
10–30 ml/min	5 mg
Dialysis	2.5 mg

CHF

Creatinine clearance less than 30 ml/min or serum creatinine greater than 3 mg/dl: Initial dose: 2.5 mg.

SIDE EFFECTS

Frequent (12%–5%): Headache, dizziness, postural hypotension. **Occasional (4%–2%):** Chest discomfort, fatigue, rash, abdominal pain, nausea, diarrhea, upper respiratory infection. **Rare (1% or less):** Palpitations, tachycardia, peripheral edema, insomnia, paresthesia, confusion, constipation, dry mouth, muscle cramps.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive hypotension ("first-dose syncope") may occur in pts with CHF, severe salt/volume depletion. Angioedema (swelling of face and lips), hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in pts with collagen vascular disease (scleroderma, systemic lupus erythematosus). Nephrotic syndrome may be noted in pts with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated. In pts with renal impairment, autoimmune disease, taking drugs that affect leukocytes or immune response, CBC and differential count should be performed before beginning therapy and q2wks for 3 mos, then periodically thereafter.

INTERVENTION/EVALUATION

Assess for edema. Auscultate lungs for rales. Monitor I&O; weigh daily. Monitor daily pattern of bowel activity, stool consistency. Assist with ambulation if dizziness occurs. Monitor B/P, renal function tests, WBC, serum potassium.

PATIENT/ FAMILY TEACHING

• To reduce hypotensive effect, rise slowly from lying to sitting position, permit legs to dangle from bed momentarily before standing. • Limit alcohol intake. • Inform physician if vomiting, diarrhea, diaphoresis, swelling of face/lips/tongue, difficulty in breathing, persistent cough occurs. • Limit salt intake.

lithium

lith-ee-um
(Apo-Lithium, Duralith, Lithobid)

BLACK BOX ALERT Lithium toxicity is closely related to serum lithium levels and can occur at therapeutic doses. Routine determination of serum lithium levels is essential during therapy.

Do not confuse Lithobid with Levbid or Lithostat.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Psychotherapeutic. **CLINICAL:** Antimanic, antidepressant, vascular headache prophylactic.

ACTION

Affects storage, release, reuptake of neurotransmitters. Antimanic effect may result from increased norepinephrine reuptake, serotonin receptor sensitivity. **Therapeutic Effect:** Produces antimanic, antidepressant effects.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: None. Primarily excreted unchanged in urine. Removed

by hemodialysis. **Half-life:** 18–24 hrs (increased in elderly).

USES

Prophylaxis, treatment of acute mania, manic phase of bipolar disorder (manic depressive illness). **OFF-LABEL:** Aggression, post-traumatic stress disorder, conduct disorder in children. Augmenting agent for depression.

PRECAUTIONS

Contraindications: Debilitated pts, severe cardiovascular disease, severe dehydration, severe renal disease, severe sodium depletion or dehydration, pregnancy. **Cautions:** Mild to moderate cardiovascular disease, thyroid disease, elderly, mild to moderate renal impairment, medications altering sodium excretion, pts at risk for suicide.

L

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Freely crosses placenta. Distributed in breast milk. **Pregnancy Category D. Children:** May increase bone formation or density (alter parathyroid hormone concentrations). **Elderly:** More susceptible to develop lithium-induced goiter or clinical hypothyroidism, CNS toxicity. Increased thirst, urination noted more frequently; lower dosage recommended.

INTERACTIONS

DRUG: Diuretics, NSAIDs, metronidazole, ACE inhibitors, angiotensin II antagonists, SSRIs, calcium channel blockers may increase lithium concentration, risk of toxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, immunoreactive parathyroid hormone, calcium. **Therapeutic serum level:** 0.6–1.2 mEq/L; **toxic serum level:** greater than 1.5 mEq/L.

AVAILABILITY (Rx)

Capsules: 150 mg, 300 mg, 600 mg. **Oral Solution:** 300 mg/5 ml. **Tablets:** 300 mg, 600 mg. **Tablets (Extended-Release):** 300 mg, 450 mg.

ADMINISTRATION/HANDLING

PO

• Administer with meals, milk to decrease GI upset. • Do not crush, chew, break extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ During acute phase, a therapeutic serum lithium concentration of 0.6–1.2 mEq/L is required. For long-term control, desired level is 0.8–1 mEq/L. Monitor serum drug concentration, clinical response to determine proper dosage.

Usual Dosage

PO: ADULTS: 300 mg 3–4 times a day or 450–900 mg extended-release form twice a day. **Maximum:** 2.4 g/day. **ELDERLY:** 900–1,200 mg/day. Maintenance: 300 mg twice a day. May increase by 300 mg/day q1wk. **CHILDREN 12 YRS AND OLDER:** 600–1,800 mg/day in 3–4 divided doses (2 doses/day for extended-release). **CHILDREN 6–11 YRS:** 15–60 mg/kg/day in 3–4 divided doses not to exceed usual adult dose.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
10–50 ml/min	50%–75% normal dose
Less than 10 ml/min	25%–50% normal dose

SIDE EFFECTS

◀ALERT▶ Side effects are dose related and seldom occur at lithium serum levels less than 1.5 mEq/L. **Occasional:** Fine hand tremor, polydipsia, polyuria, mild nausea. **Rare:** Weight gain, bradycardia, tachycardia, acne, rash, muscle twitching, peripheral cyanosis, pseudotumor cerebri (eye pain, headache, tinnitus, vision disturbances).

ADVERSE EFFECTS/ TOXIC REACTIONS

Lithium serum concentration of 1.5–2.0 mEq/L may produce vomiting, diarrhea, drowsiness, confusion, incoordination, coarse hand tremor, muscle twitching, T-wave depression on EKG. Lithium serum concentration of 2.0–2.5 mEq/L may result in ataxia, giddiness, tinnitus, blurred vision, clonic movements, severe hypotension. Acute toxicity may be characterized by seizures, oliguria, circulatory failure, coma, death.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess mental status (e.g., mood, behavior). Serum lithium levels should be tested q3–4days during initial phase of therapy, q1–2mos thereafter, and weekly if there is no improvement of disorder or adverse effects occur.

INTERVENTION/EVALUATION

Serum lithium testing should be performed as close as possible to 12th hr following last dose. Clinical assessment of therapeutic effect, tolerance to drug effect is also necessary for correct dosing-level management. Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content. Monitor serum lithium concentrations, CBC with differential, urinalysis, creatinine clearance. Monitor renal, hepatic, thyroid, cardiovascular function; serum electrolytes. Assess for increased urinary output, persistent thirst. Report polyuria, prolonged vomiting, diarrhea, fever to physician (may need to temporarily reduce or discontinue dosage). Monitor for signs of lithium toxicity. Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression). Monitor lithium levels q3–4days at initiation of therapy (then q1–2mos). Obtain lithium levels 8–12 hrs postdose. **Therapeutic serum level:** 0.6–1.2 mEq/L; **toxic serum level:** greater than 1.5 mEq/L.

PATIENT/ FAMILY TEACHING

• Limit alcohol, caffeine intake. • Avoid tasks requiring coordination until CNS effects of drug are known. • May cause dry mouth. • Maintain steady salt, fluid intake (avoid dehydration). • Inform physician if vomiting, diarrhea, muscle weakness, tremors, drowsiness, ataxia occur. • Serum level monitoring is necessary to determine proper dose.

lomitapide

lom-i-**ta**-pide
(Juxtapid)
Do not confuse lomitapide with loperamide.

BLACK BOX ALERT May cause hepatotoxicity. May cause hepatic steatosis (increase in hepatic fat) regardless of ALT, AST elevation; may be risk factor for progressive hepatic disease, including steatohepatitis and cirrhosis. Treatment only available through restricted program under the Risk Evaluation and Mitigation Strategy (REMS) named JUXTAPID REMS PROGRAM.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Microsomal triglyceride transfer protein inhibitor. **CLINICAL:** Antihyperlipidemic.

ACTION

Inhibits microsomal triglyceride transfer protein in lumen of endoplasmic reticulum. Prevents assembly of apo-B-containing lipoproteins in enterocytes, hepatocytes; inhibits synthesis of chylomicrons, very low-density lipoprotein (VLDL). **Therapeutic Effect:** Decreases plasma low-density lipoprotein cholesterol (LDL-C).

PHARMACOKINETICS

Well absorbed in GI tract. Metabolized extensively in liver. Protein binding: 99%.

Peak plasma concentration: 6 hrs. Primarily excreted in feces. **Half-life:** 40 hrs.

USES

Treatment of homozygous familial hypercholesterolemia (HoFH) in combination with low-fat diet and other lipid-lowering therapies, including LDL-cholesterol apheresis.

PRECAUTIONS

Contraindications: Pregnancy (Pregnancy Category X), moderate to severe hepatic impairment, concomitant use of strong CYP3A4 inhibitors (e.g., ketoconazole, protease inhibitors), avoid use in pts with history of glucose-galactose malabsorption. **Cautions:** End-stage renal disease, mild hepatic impairment, alcohol consumption, nutrient malabsorption, dehydration, concurrent use of warfarin, other agents having hepatotoxic potential (e.g., acetaminophen).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy. May cause fetal harm. Must use effective contraception in addition to barrier methods. Unknown if distributed in breast milk. Must either discontinue breast-feeding or discontinue therapy. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** Increased risk for side effects, adverse reactions.

INTERACTIONS

DRUG: **Acetaminophen, amiodarone, isotretinoin, methotrexate, tamoxifen, tetracycline** may increase risk for hepatotoxicity. Strong **CYP3A4 inhibitors** (e.g., **ketoconazole, protease inhibitors**) contraindicated owing to increased risk for myopathy, rhabdomyolysis. Moderate **CYP3A4 inhibitors** (e.g., **atorvastatin, oral contraceptives**) may increase concentration of lomitapide. **Simvastatin, lovastatin** may increase risk for myopathy. May increase concentration of **warfarin.** May increase effects of **P-glycoprotein substrates** (e.g., **digoxin, sitagliptin**). **HERBAL:** None known. **FOOD: Grapefruit, grapefruit juice** may increase absorption, toxicity. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, ALT, AST.

AVAILABILITY (Rx)

Capsules: 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

• Give with water only. • Administer without food (at least 2 hrs after evening meal). • Swallow whole; do not break, crush, dissolve, or divide capsules.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ To reduce risk for fat-soluble nutrient deficiency, recommend supplemental coadministration: vitamin E 400 international units PO daily, linolenic acid 200 mg PO daily, alpha-linolenic acid (ALA) 210 mg PO daily, eicosapentaenoic acid (EPA) 110 mg PO daily, docosahexaenoic acid (DHA) 80 mg PO daily. Because of risk for myopathy, concurrent use of simvastatin should not exceed 20–40 mg/day.

Homozygous Familial Hypercholesterolemia

PO: ADULTS, ELDERLY: Initially, 5 mg once daily for minimum of 2 wks. Gradually increase dose at 4-wk (minimum) intervals to 10 mg once daily, then 20 mg once daily, then 40 mg once daily, then 60 mg once daily based on tolerability. **Maximum:** 60 mg/day.

Dosage Modification

Elevated Hepatic Enzymes

If ALT, AST is between 3 and 5 times upper limit of normal (ULN), reduce dose until ALT, AST less than 3 times ULN. If ALT, AST is greater than 5 times ULN, withhold dose until less than 3 times ULN, then restart at reduced dose. If

hepatotoxicity occurs or bilirubin level rises greater than 2 times ULN, discontinue treatment.

End-Stage Renal Disease Receiving Dialysis, Mild Hepatic Impairment

Do not exceed 40 mg/day.

Concurrent Use of Weak CYP3A4 Inhibitors

Do not exceed 30 mg/day.

Concurrent Use of Contraception

Do not exceed 30 mg/day.

SIDE EFFECTS

Frequent (79%–65%): Diarrhea, nausea. **Occasional (38%–10%):** Dyspepsia, vomiting, abdominal pain, weight loss, abdominal distention, constipation, flatulence, fatigue, back pain, gastric reflux, headache, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Progressive hepatic disease including steatohepatitis, cirrhosis has been reported in 6% of pts due to increased hepatic fat. May reduce absorption of fat-soluble nutrients; recommend daily supplemental replacement. Increased risk for myopathy including rhabdomyolysis (muscle pain/tenderness, weakness, dark or decreased urine output, elevated serum creatinine, CPK) when used with other antihyperlipidemics. May increase risk for supratherapeutic INR with warfarin. Infections including influenza, nasopharyngitis, gastroenteritis reported in 5% of pts. Palpitations, angina pectoris report in 3% of pts. Increased risk for dehydration/malabsorption with galactose intolerance hereditary disorder, pancreatic disease, diarrhea.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain detailed dietary history, esp. fat consumption. Negative pregnancy test must be confirmed before initiating treatment (Pregnancy Category X). Obtain baseline laboratory studies: ALT, AST, alkaline phosphatase, bilirubin, serum cholesterol, triglycerides, PT/INR (if pt is on warfarin). Confirm positive history of alcohol. Receive full medication history including vitamins, minerals, herbal products. Screen for history of galactose intolerance, renal/hepatic impairment, angina.

INTERVENTION/EVALUATION

Maintain hydration; offer fluids frequently. Monitor INR routinely (with anticoagulants). Monitor alkaline phosphatase, ALT, AST, bilirubin with any dosage change, then every month for first year when maintenance goal reached, then every 3 mos. Obtain EKG for palpitations, shortness of breath, dizziness. Monitor for bruising, hematuria, jaundice, right upper abdominal pain, fever, lethargy, melena.

PATIENT/FAMILY TEACHING

• Avoid pregnancy. • Use appropriate contraception measures to include barrier precautions (Pregnancy Category X). • If pregnancy occurs, inform physician immediately. • Diarrhea may decrease effectiveness of oral contraception. • Do not breast-feed. • Maintain low-fat diet. • Report yellowing of skin, bruising, black/tarry stool, right upper quadrant pain, fever, lethargy, chest pain, palpitations. • Avoid alcohol. • Do not eat grapefruit or drink grapefruit juice. • Do not chew, crush, dissolve, or divide capsule. • Report any newly prescribed medications.

lomustine HIGH ALERT

loe-mus-teen
(CeeNU)

BLACK BOX ALERT Must be administered by certified chemotherapy personnel. Severe myelosuppressant (notably thrombocytopenia, leukopenia). May lead to bleeding, overwhelming infection.

Do not confuse lomustine with bendamustine or carmustine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent (nitrosourea). **CLINICAL:** Antineoplastic (see p. 85C).

ACTION

Inhibits DNA, RNA protein synthesis by cross-linking with DNA and RNA strands, preventing cell division. Cell cycle–phase nonspecific. **Therapeutic Effect:** Interferes with DNA, RNA function.

PHARMACOKINETICS

Rapidly, completely absorbed following PO administration. Highly lipid soluble. Metabolized in liver. Excreted in urine. **Half-life:** 16–72 hrs.

L

USES

Treatment of primary/metastatic brain tumors (after surgery and/or radiation therapy), disseminated Hodgkin's lymphoma (as part of combination chemotherapy). **OFF-LABEL:** Treatment of gastric cancer, metastatic melanoma.

PRECAUTIONS

Contraindications: None known. **Cautions:** Depressed platelet, leukocyte, erythrocyte counts; renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be harmful to fetus. Distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bone marrow depressants may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum hepatic function test results.

AVAILABILITY (Rx)

Capsules: 10 mg, 40 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Take with fluids on an empty stomach (decreases nausea, vomiting). • Do not break capsules. • No food or drink for 2 hrs after administration.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Lomustine dosage is individualized based on clinical response and tolerance of adverse effects. When used in combination therapy, consult specific protocols for optimum dosage, sequence of drug administration. Should only be given q6wks.

Usual Dosage

PO: ADULTS, ELDERLY: 100–130 mg/m^2 as single dose. Repeat dose at intervals of at least 6 wks but not until circulating blood elements have returned to acceptable levels. Adjust dose based on hematologic response to previous dose. **CHILDREN:** 75–130 mg/m^2 as a single dose every 6 wks.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
10–50 ml/min	75% of normal dose
Less than 10 ml/min	25%–50% of normal dose

SIDE EFFECTS

Frequent: Nausea, vomiting (occurs 45 min–6 hrs after dose, lasts 12–24 hrs); anorexia (often follows for 2–3 days). **Occasional:** Neurotoxicity (confusion, slurred speech), stomatitis, darkening of skin, diarrhea, rash, pruritus, alopecia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression may result in hematologic toxicity (principally leukopenia, mild anemia, thrombocytopenia). Leu-

kopenia occurs about 6 wks after a dose, thrombocytopenia about 4 wks after a dose; both persist for 1–2 wks. Refractory anemia, thrombocytopenia occur commonly if lomustine therapy continues for more than 1 yr. Hepatotoxicity occurs infrequently. Large cumulative doses of lomustine may result in renal damage.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Manufacturer recommends weekly CBC with differential, platelet count; experts recommend first CBC with differential, platelet count obtained 2–3 wks following initial therapy, subsequent CBC with differential, platelet count indicated by prior toxicity. Antiemetics can reduce duration, frequency of nausea, vomiting.

INTERVENTION/EVALUATION

Monitor CBC with differential, platelet count; hepatic, renal, pulmonary function tests. Observe for stomatitis. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Nausea, vomiting generally abates in less than 1 day. • Fasting before therapy can reduce frequency/duration of GI effects. • Maintain fastidious oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid crowds, those with known illness. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, swelling of legs or feet, jaundice (yellowing of eyes, skin).

loperamide

loe-**per**-a-mide
(Apo-Loperamide, Diamode, Diarr-Eze, Imodium, Imodium A-D, Loperacap, Novo-Loperamide)
Do not confuse Imodium with Indocin, or loperamide with furosemide.

FIXED-COMBINATION(S)

Imodium Advanced: loperamide/simethicone (an antiflatulant): 2 mg/125 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antidiarrheal agent. **CLINICAL:** Antidiarrheal (see p. 450).

ACTION

Directly affects intestinal wall muscles. **Therapeutic Effect:** Slows intestinal motility, prolongs transit time of intestinal contents by reducing fecal volume, diminishing loss of fluid, electrolytes, increasing viscosity, bulk of stool.

PHARMACOKINETICS

Poorly absorbed from GI tract. Protein binding: 97%. Metabolized in liver. Eliminated in feces; excreted in urine. Not removed by hemodialysis. **Half-life:** 7–14 hrs.

USES

Controls, provides symptomatic relief of acute nonspecific diarrhea, chronic diarrhea associated with inflammatory bowel disease, traveler's diarrhea. **OFF-LABEL:** Chemotherapy-induced diarrhea, chronic diarrhea caused by bowel resection.

PRECAUTIONS

Contraindications: Acute ulcerative colitis (may produce toxic megacolon), diarrhea associated with pseudomembranous enterocolitis due to broad-spectrum antibiotics or to organisms that invade intestinal mucosa (e.g., *Escherichia coli,* shigella, salmonella), pts who must avoid constipation. Abdominal pain in presence of diarrhea, children younger than 2 yrs of age, bloody diar-

rhea. **Cautions:** Those with fluid or electrolyte depletion, hepatic impairment. Diarrhea accompanied by high fever; treatment of pts with HIV/AIDS.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Not recommended for those younger than 6 yrs (infants younger than 3 mos more susceptible to CNS effects). **Elderly:** May mask dehydration, electrolyte depletion.

INTERACTIONS

DRUG: **Ritonavir** may increase levels/side effects. May decrease concentration of **saquinavir.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

L

AVAILABILITY (Rx)

Caplets: 2 mg. **Capsules:** 2 mg. **Liquid:** 1 mg/5 ml, 1 mg/7.5 ml. **Solution, Oral:** 1 mg/5 ml.

ADMINISTRATION/HANDLING

Liquid

• When administering to children, use accompanying plastic dropper to measure the liquid.

INDICATIONS/ROUTES/DOSAGE

Acute Diarrhea

PO *(Capsules)*: ADULTS, ELDERLY: Initially, 4 mg, then 2 mg after each unformed stool. **Maximum:** 16 mg/day. **CHILDREN 9–12 YRS, WEIGHING MORE THAN 30 KG:** Initially, 2 mg 3 times a day for 24 hrs. **CHILDREN 6–8 YRS, WEIGHING 20–30 KG:** Initially, 2 mg twice a day for 24 hrs. **CHILDREN 2–5 YRS, WEIGHING 13–20 KG:** Initially, 1 mg 3 times a day for 24 hrs. Maintenance: 1 mg/10 kg only after loose stool but not exceeding initial dose.

Chronic Diarrhea

PO: ADULTS, ELDERLY: Initially, 4 mg, then 2 mg after each unformed stool until diarrhea is controlled. Average maintenance dose: 4–8 mg/day. **Maximum:** 16 mg/day. **CHILDREN:** 0.08–0.24 mg/kg/day in 2–3 divided doses. **Maximum:** 2 mg/dose.

Traveler's Diarrhea

PO: ADULTS, ELDERLY: Initially, 4 mg, then 2 mg after each loose bowel movement (LBM). **Maximum:** 8 mg/day for 2 days. **CHILDREN 9–11 YRS:** Initially, 2 mg, then 1 mg after each LBM. **Maximum:** 6 mg/day for 2 days. **CHILDREN 6–8 YRS:** Initially, 2 mg, then 1 mg after each LBM. **Maximum:** 4 mg/day for 2 days.

SIDE EFFECTS

Rare: Dry mouth, drowsiness, abdominal discomfort, allergic reaction (rash, pruritus).

ADVERSE EFFECTS/ TOXIC REACTIONS

Toxicity results in constipation, GI irritation (nausea, vomiting), CNS depression. Activated charcoal is used to treat loperamide toxicity.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Do not administer in presence of bloody diarrhea, temperature greater than 101°F.

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. Withhold drug, notify physician promptly in event of abdominal pain, distention, fever.

PATIENT/FAMILY TEACHING

• Do not exceed prescribed dose. • May cause dry mouth. • Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established. • Notify physician if diarrhea does not stop within 3 days; abdominal distention, pain occurs; fever develops.

lopinavir/ritonavir

loe-**pin**-ah-veer/rye-**toe**-na-veer (Kaletra)
Do not confuse Kaletra with Keppra.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor combination. **CLINICAL:** Antiretroviral (see pp. 69C, 117C).

ACTION

Lopinavir inhibits activity of protease, an enzyme, late in HIV replication process; ritonavir increases plasma levels of lopinavir. **Therapeutic Effect:** Formation of immature, noninfectious viral particles.

PHARMACOKINETICS

Readily absorbed after PO administration (absorption increased when taken with food). Protein binding: 98%–99%. Metabolized in liver. Eliminated primarily in feces. Not removed by hemodialysis. **Half-life:** 5–6 hrs.

USES

In combination with other antiretroviral agents for treatment of HIV infection.

PRECAUTIONS

Contraindications: Concomitant use of alfuzosin, ergot derivatives (causes vasospasm, peripheral ischemia of extremities), lovastatin, midazolam (oral), pimozide, rifampin, sildenafil (for treatment of pulmonary arterial hypertension), simvastatin, St. John's wort, triazolam (increased sedation, respiratory depression); hypersensitivity to lopinavir, ritonavir. **Cautions:** Hepatic impairment, hepatitis B or C, cardiac disease with underlying conduction abnormalities or structural heart defects, ischemic heart disease, cardiomyopathies, congenital long QT syndrome or medications that prolong QT interval, hypokalemia, history of pancreatitis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Breast-feeding by HIV-infected mothers not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** Age-related renal/hepatic/cardiac impairment requires caution.

INTERACTIONS

DRUG: May increase concentration/toxicity of **amiodarone, atorvastatin, bepridil, clarithromycin, cyclosporine, felodipine, fluticasone, itraconazole, ketoconazole, lidocaine, lovastatin, midazolam, nelfinavir, nicardipine, nifedipine, sildenafil, simvastatin, sirolimus, tacrolimus, trazodone, triazolam, warfarin.** May decrease concentration/effects of **atovaquone, oral contraceptives. CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifampin)** may decrease concentration/effects. May cause disulfiram-like reaction with **metronidazole. HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, GGT, amylase, bilirubin, total cholesterol, triglycerides, uric acid, AST, ALT. May decrease platelets, serum sodium.

AVAILABILITY (Rx)

Oral Solution: 80 mg/ml lopinavir/20 mg/ml ritonavir.

Tablets: 100 mg lopinavir/25 mg ritonavir, 200 mg lopinavir/50 mg ritonavir.

ADMINISTRATION/HANDLING

PO

• Swallow tablets whole; do not chew, break, crush. • Does not require refrigeration. • Give tablets without regard to food. • Solution should be given with food. • Administer solution using calibrated oral syringe.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

Doses based on lopinavir component.

PO: ADULTS: 800 mg once daily or 400 mg twice daily. **CHILDREN 6 MOS–18 YRS, WEIGHING GREATER THAN 40 KG:** 400 mg twice daily. **WEIGHING 15–40 KG:** 10 mg/kg twice a day. **WEIGHING LESS THAN 15 KG:** 12 mg/kg twice daily. **CHILDREN 14 DAYS–6 MOS:** 16 mg/kg twice daily.

Dosage Adjustment for Combination Therapy

Efavirenz, Fosamprenavir, Nelfinavir, Nevirapine: ADULTS, CHILDREN 6 MOS–18 YRS, WEIGHING GREATER THAN 45 KG: 500 mg (533-mg solution) twice daily. **WEIGHING 15–45 KG:** 11 mg/kg twice daily. **WEIGHING LESS THAN 15 KG:** 13 mg/kg twice daily. **Maraviroc, Saquinavir: ADULTS:** 400 mg twice daily.

L

SIDE EFFECTS

Frequent (14%): Mild to moderate diarrhea. **Occasional (6%–2%):** Nausea, asthenia (loss of strength, energy), abdominal pain, headache, vomiting. **Rare (less than 2%):** Insomnia, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anemia, leukopenia, lymphadenopathy, deep vein thrombosis (DVT), Cushing's syndrome, pancreatitis, hemorrhagic colitis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, renal/hepatic function tests, weight.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assess for opportunistic infections: onset of fever, oral mucosa changes, cough, other respiratory symptoms. Check weight at least 2 times a wk. Assess for nausea, vomiting. Observe for signs/symptoms of pancreatitis (nausea, vomiting, abdominal pain). Monitor electrolytes, serum glucose, cholesterol, hepatic function, CBC with differential, platelets, CD4 cell count, viral load.

PATIENT/ FAMILY TEACHING

• Explain correct administration of medication. • Eat small, frequent meals to offset nausea, vomiting. • Lopinavir/ritonavir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pt must continue practices to prevent HIV transmission. • Illnesses, including opportunistic infections, may still occur.

loratadine

lor-**at**-ah-deen

(Alavert, Apo-Loratadine, Claritin, Loradamed, Tavist ND)

Do not confuse Claritin with clarithromycin.

FIXED-COMBINATION(S)

Alavert Allergy and Sinus, Claritin-D: loratadine/pseudoephedrine (a sympathomimetic): 5 mg/120 mg, 10 mg/240 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: H_1 antagonist. **CLINICAL:** Antihistamine (see p. 550).

ACTION

Competes with histamine for H_1 receptor sites on effector cells. **Therapeutic Effect:** Prevents allergic responses mediated by histamine (e.g., rhinitis, urticaria, pruritus).

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1–3 hrs	8–12 hrs	Longer than 24 hrs

Rapidly, almost completely absorbed from GI tract. Protein binding: 97%; metabolite, 73%–77%. Distributed mainly

to liver, lungs, GI tract, bile. Metabolized in liver to active metabolite; undergoes extensive first-pass metabolism. Eliminated in urine and feces. Not removed by hemodialysis. **Half-life:** 8.4 hrs; metabolite, 28 hrs (increased in elderly, hepatic impairment).

USES

Relief of nasal, non-nasal symptoms of seasonal allergic rhinitis (hay fever). Treatment of idiopathic chronic urticaria (hives).

PRECAUTIONS

Contraindications: Hypersensitivity to loratadine or its ingredients. **Cautions:** Renal/hepatic impairment, breast-feeding women.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 2 yrs. **Elderly:** More sensitive to anticholinergic effects (e.g., dry mouth, nose, throat).

INTERACTIONS

DRUG: Clarithromycin, erythromycin, fluconazole, ketoconazole may increase concentration. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD: All foods** delay absorption. **LAB VALUES:** May suppress wheal, flare reactions to antigen skin testing unless drug is discontinued 4 days before testing.

AVAILABILITY (Rx)

Solution, Oral: 5 mg/5 ml. **Syrup:** 5 mg/5 ml. **Tablets (Alavert, Claritin, Loradamed, Tavist ND):** 10 mg. **Tablets, Chewable (Claritin):** 5 mg. **Tablets (Rapidly-Disintegrating [Alavert]):** 10 mg.

ADMINISTRATION/HANDLING

PO

- Preferably give on empty stomach (food delays absorption).

Rapidly-Disintegrating Tablets

- Place under tongue. • Disintegration occurs within seconds, after which tablet contents may be swallowed with or without water.

INDICATIONS/ROUTES/DOSAGE

Allergic Rhinitis, Urticaria

PO: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 10 mg once a day. **CHILDREN 2–5 YRS:** 5 mg once a day.

Dosage in Renal (Creatinine Clearance Less Than 30 ml/min)/Hepatic Impairment

PO: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 10 mg every other day. **CHILDREN 2–5 YRS:** 5 mg every other day.

SIDE EFFECTS

Frequent (12%–8%): Headache, fatigue, drowsiness. **Occasional (3%):** Dry mouth, nose, throat. **Rare:** Photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

None significant.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess lung sounds for wheezing, skin for urticaria, other allergy symptoms.

INTERVENTION/EVALUATION

For upper respiratory allergies, increase fluids to decrease viscosity of secretions, offset thirst, replenish loss of fluids from increased diaphoresis. Monitor symptoms for therapeutic response.

PATIENT/FAMILY TEACHING

- Drink plenty of water (may cause dry mouth). • Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established (may cause drowsiness). • May cause photosensitivity reactions (avoid direct exposure to sunlight).

lorazepam

TOP 200

lor-**a**-zah-pam
(Apo-Lorazepam, Ativan, Lorazepam Intensol, Novo-Lorazem)
Do not confuse Ativan with Ambien or Atarax, or lorazepam with alprazolam, diazepam, Lovaza, temazepam, or Zolpidem.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Antianxiety, sedative-hypnotic, antiemetic, skeletal muscle relaxant, amnesiac, anticonvulsant, antitremor (see p. 14C).

ACTION

Enhances action of inhibitory neurotransmitter gamma-aminobutyric acid (GABA) in CNS, affecting memory, motor, sensory, cognitive function. **Therapeutic Effect:** Produces anxiolytic, anticonvulsant, sedative, muscle relaxant, antiemetic effects.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–60 min	N/A	6–8 hrs
IV	5–20 min	N/A	6–8 hrs
IM	20–30 min	N/A	6–8 hrs

Well absorbed after PO, IM administration. Protein binding: 85%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 10–20 hrs.

USES

PO: Management of anxiety disorders, short-term relief of symptoms of anxiety, anxiety associated with depressive symptoms. Insomnia due to anxiety or transient stress; adjunct to antiemetics. **IV:** Status epilepticus, preanesthesia for amnesia, sedation. **OFF-LABEL:** Treatment of alcohol withdrawal, psychogenic catatonia, partial complex seizures, agitation (IV administration only), antiemetic for chemotherapy; rapid tranquilization of agitated pt.

PRECAUTIONS

Contraindications: Acute narrow-angle glaucoma, preexisting CNS depression, severe hypotension, severe uncontrolled pain, IV administration in pts with sleep apnea, severe respiratory depression (except during mechanical ventilation). **Cautions:** Neonates, renal/hepatic impairment, compromised pulmonary function, concomitant CNS depressant use. Depression, history of drug dependence, alcohol abuse, or significant personality disorder.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cross placenta. May be distributed in breast milk. May increase risk of fetal abnormalities if administered during first trimester of pregnancy. Chronic ingestion during pregnancy may produce fetal toxicity, withdrawal symptoms, CNS depression in neonates. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** Use small initial doses with gradual increases to avoid ataxia, excessive sedation, or paradoxical CNS restlessness, excitement.

INTERACTIONS

DRUG: **Valproic acid** may increase concentration/effects. **Alcohol, other CNS depressants** may increase CNS depression. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None known. **Therapeutic serum level:** 50–240 ng/ml; **toxic serum level:** unknown.

AVAILABILITY (Rx)

Injection Solution: 2 mg/ml, 4 mg/ml. **Oral Solution (Lorazepam Intensol):** 2 mg/ml. **Tablets:** 0.5 mg, 1 mg, 2 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute with equal volume of Sterile Water for Injection, D_5W, or 0.9% NaCl.

Rate of Administration • Give by IV push into tubing of free-flowing IV infusion (0.9% NaCl, D_5W) at a rate not to exceed 2 mg/min.
Storage • Refrigerate parenteral form. • Do not use if discolored or precipitate forms. • Avoid freezing.

IM
• Give deep IM into large muscle mass.

PO
• Give with food. • Tablets may be crushed. • Dilute oral solution in water, juice, soda, or semisolid food.

IV INCOMPATIBILITIES
Aldesleukin (Proleukin), aztreonam (Azactam), idarubicin (Idamycin), ondansetron (Zofran), sufentanil (Sufenta).

IV COMPATIBILITIES
Bumetanide (Bumex), cefepime (Maxipime), diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), heparin, labetalol (Normodyne, Trandate), lipids, milrinone (Primacor), norepinephrine (Levophed), piperacillin and tazobactam (Zosyn), potassium, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Anxiety
PO: ADULTS: 1–10 mg/day in 2–3 divided doses. Average: 2–6 mg/day. **ELDERLY:** Initially, 0.5–1 mg/day. May increase gradually. Range: 0.5–4 mg.
IV: ADULTS, ELDERLY: 0.02–0.06 mg/kg q2–6h.
IV Infusion: ADULTS, ELDERLY: 0.01–0.1 mg/kg/h.
PO, IV: CHILDREN: 0.05 mg/kg/dose q4–8h. Range: 0.02–0.1 mg/kg. **Maximum:** 2 mg/dose.

Insomnia Due to Anxiety
PO: ADULTS: 2–4 mg at bedtime. **ELDERLY:** 0.5–1 mg at bedtime.

Antiemetic
IV: ADULTS, ELDERLY: 0.5–2 mg q4–6h as needed. **CHILDREN 2–15 YRS:** 0.05 mg/kg (up to 2 mg) prior to chemotherapy.
PO: ADULTS, ELDERLY: 0.5–2 mg q4–6h as needed.

Preop Sedation
IV: ADULTS, ELDERLY: 0.044 mg/kg 15–20 min before surgery. **Usual maximum total dose:** 2 mg.
IM: ADULTS, ELDERLY: 0.05 mg/kg 2 hrs before procedure. **Maximum total dose:** 4 mg.

Status Epilepticus
IV: ADULTS, ELDERLY: 4 mg over 2–5 min. May repeat in 10–15 min. **Usual maximum:** 8 mg in 12-hr period. **CHILDREN:** 0.05–0.1 mg/kg over 2–5 min. **Maximum:** 4 mg. May repeat in 10–15 min. **NEONATES:** 0.05 mg/kg over 2–5 min. May repeat in 10–15 min.

SIDE EFFECTS
Frequent: Drowsiness(16%), dizziness (7%). **Rare (less than 4%):** Weakness, ataxia, headache, hypotension, nausea, vomiting, confusion, injection site reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS
Abrupt or too-rapid withdrawal may result in pronounced restlessness, irritability, insomnia, hand tremor, abdominal cramping, muscle cramps, diaphoresis, vomiting, seizures. Overdose results in drowsiness, confusion, diminished reflexes, coma. **Antidote:** Flumazenil (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT
Offer emotional support to anxious pt. Pt must remain recumbent following parenteral administration to reduce hypotensive effect. Assess motor responses (agitation, trembling, tension), autonomic responses (cold or clammy hands, diaphoresis).

INTERVENTION/EVALUATION

Monitor B/P, respiratory rate, heart rate, CBC with differential, hepatic function tests. For those on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically. Assess for paradoxical reaction, particularly during early therapy. Evaluate for therapeutic response: calm facial expression, decreased restlessness, insomnia. **Therapeutic serum level:** 50–240 ng/ml; **toxic serum level:** N/A.

PATIENT/ FAMILY TEACHING

• Drowsiness usually disappears during continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Smoking reduces drug effectiveness. • Do not abruptly discontinue medication after long-term therapy. • Do not use alcohol, CNS depressants. • Contraception recommended for long-term therapy. • Notify physician at once if pregnancy is suspected.

lorcaserin

lore-cah-**sar**-in
(Belviq)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor agonist. **CLINICAL:** Weight loss agent (see p. 137C).

ACTION

Activates $5HT_{20}$ receptors on anorexigenic neurons located in the hypothalamus. **Therapeutic Effect:** Decreases food consumption, promotes satiety.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Peak plasma concentration: 1.5–2h. Distributed in cerebrospinal fluid and CNS. Protein binding: 70%. Extensively metabolized in liver. Primarily excreted in urine with minimal amount eliminated in feces.

USES

Adjunct to reduced-calorie diet and increased physical activity for chronic weight management in adults with an initial body mass index (BMI) of 30 kg/m^2 or greater (obese), or 27 kg/m^2 or greater (overweight) with at least one weight-related comorbid condition (e.g., hypertension, dyslipidemia, type 2 diabetes).

PRECAUTIONS

Contraindications: Pregnancy (Pregnancy Category X). **Cautions:** Avoid use in those with severe renal impairment, end-stage renal disease. Concurrent use with medications that affect serotonergic neurotransmitter system (particularly during initiation of therapy and dose increases). Moderate renal impairment, severe hepatic impairment, CHF. Pts predisposed to priapism (e.g., leukemia).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category X. Children:** Not for use in this age group. **Elderly:** Age-related; renal impairment may require dose adjustment.

INTERACTIONS

DRUG: Can increase concentration/effects of **CYP3D6 substrates (e.g., amitriptyline, metoprolol, venlafaxine). Triptans, monoamine oxidase inhibitors (MAOIs, including linezolid), selective serotonin reuptake inhibitors (SSRIs), selective serotonin-norepinephrine reuptake inhibitors, dextromethorphan, tricyclic antidepressants, bupropion, lithium, tramadol, tryptophan** may increase risk for serotonergic syndrome. **HERBAL: St. John's wort** increases potential for serotonin syndrome. **FOOD:** None known. **ALTERED LAB VALUES:** May lower Hgb, neutrophil count. May increase serum prolactin.

AVAILABILITY (Rx)

Tablets, Film-Coated: 10 mg.

ADMINISTRATION/HANDLING

• Do not crush, cut, or break film-coated tablet. May take without regard to food.

INDICATIONS/ROUTES/DOSAGE

Weight Management

PO: ADULTS, ELDERLY: 10 mg twice daily. Do not exceed 10 mg twice daily. Belviq should be discontinued if 5% weight loss is not achieved by week 12 of therapy.

SIDE EFFECTS

Note: Side effects tend to be mild and transient in nature, gradually diminishing during treatment. **Frequent (16%–5%):** Headache, dizziness, fatigue, diarrhea, nausea, dry mouth, constipation. **Type 2 Diabetic Pts (29%–7%):** Hypoglycemia, headache, back pain, nasopharyngitis, nausea, cough, fatigue, dizziness. **Occasional (6%–2%):** Cough, oropharyngeal pain, sinus congestion, musculoskeletal pain, rash. **Rare (4%–2%): Type 2 Diabetic Pts:** Muscle spasm, peripheral edema, anxiety, insomnia, seasonal allergy, gastroenteritis, toothache, decreased appetite, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Potential for Serotonin Syndrome Serotonin syndrome symptoms may include mental status changes (e.g., agitation, hallucinations, coma), autonomic instability (e.g., tachycardia, labile B/P, hyperthermia), neuromuscular changes (e.g., hyperreflexia, incoordination), and/or GI symptoms (e.g., nausea, vomiting, diarrhea). Serotonin syndrome, in its most severe form, can resemble neuroleptic malignant syndrome, which includes hyperthermia, muscle rigidity, autonomic instability with possible rapid fluctuation of vital signs, and mental status changes. Urinary tract infection occurs in 9% of type 2 diabetic pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Most patients lost at least 5% of their body weight over a year, and a further one third lost at least 10%.

INTERVENTION/EVALUATION

Most pts who develop signs or symptoms of valvular cardiac disease, including dyspnea, dependent edema, CHF, or a new cardiac murmur while on medication; pts should be consistently monitored; discontinuation of treatment may be necessary.

PATIENT/FAMILY TEACHING

• Discontinue therapy if 5% weight loss has not been achieved by 12 wks of treatment. • High-fiber, low-fat diet decreases fat evacuation. • Avoid tasks that require alertness, motor skills until response to drug is established.

losartan

TOP 200

loe-**sar** tan
(Cozaar)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse Cozaar with Colace, Coreg, Hyzaar, or Zocor, or losartan with valsartan.

FIXED-COMBINATION(S)

Hyzaar: losartan/hydrochlorothiazide (a diuretic): 50 mg/12.5 mg, 100 mg/12.5 mg, 100 mg/25 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive (see p. 10C, 60C).

ACTION

Potent vasodilator. Blocks vasoconstrictor, aldosterone-secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT_1 receptors. **Therapeutic Effect:** Causes vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	6 hrs	24 hrs

Well absorbed after PO administration. Protein binding: 98%. Undergoes first-pass metabolism in liver to active metabolites. Excreted in urine and via the biliary system. Not removed by hemodialysis. **Half-life:** 2 hrs; metabolite, 6–9 hrs.

USES

Treatment of hypertension. Used alone or in combination with other antihypertensives. Treatment of diabetic nephropathy, prevention of stroke in pts with hypertension and left ventricular hypertrophy. **OFF-LABEL:** Slow rate of progression of aortic root dilation in children with Marfan's syndrome.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, unstented renal arterial stenosis, significant aortic/mitral stenosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has caused fetal/neonatal morbidity, mortality. Potential for adverse effects on breast-fed infant. Breast-feeding not recommended. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: NSAIDs may decrease effect. **Potassium-sparing diuretics, potassium supplements** may increase serum potassium. **Diuretics, other antihypertensive medications** may produce additive hypotension. **HERBAL: Ephedra, ginseng, licorice, yohimbe** may worsen hypertension. **Black cohosh, periwinkle** may increase antihypertensive effect. **Garlic, ginger, ginseng** may increase hypoglycemic effect. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, AST, ALT, Hgb, Hct. May decrease serum glucose.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 50 mg once a day. **Maximum:** May be given once or twice a day, with total daily doses ranging from 25–100 mg. **CHILDREN 6–16 YRS:** 0.7 mg/kg once daily. **Maximum:** 50 mg/day.

Nephropathy

PO: ADULTS, ELDERLY: Initially, 50 mg/day. May increase to 100 mg/day based on B/P response.

Stroke Prevention

PO: ADULTS, ELDERLY: 50 mg/day. **Maximum:** 100 mg/day.

Hepatic Impairment

PO: ADULTS, ELDERLY: Initially, 25 mg/day. May increase up to 100 mg/day.

Renal Impairment

Not recommended if glomerular filtration rate (GFR) less than 30 ml/min.

SIDE EFFECTS

Frequent (8%): Upper respiratory tract infection. **Occasional (4%–2%):** Dizziness, diarrhea, cough. **Rare (1% or less):** Insomnia, dyspepsia, heartburn, back/leg pain, muscle cramps, myalgia, nasal congestion, sinusitis, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdosage may manifest as hypotension and tachycardia. Bradycardia occurs less often. Institute supportive measures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). Question for possibility of pregnancy (see Pregnancy/Lactation). Assess medication history (esp. diuretic).

INTERVENTION/EVALUATION

Maintain hydration (offer fluids frequently). Assess for evidence of upper respiratory infection, cough. Monitor B/P, pulse. If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated. Assist with ambulation if dizziness occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Pts should take measures to avoid pregnancy. • Report pregnancy to physician as soon as possible. • Avoid tasks that require alertness, motor skills until response to drug is established (possible dizziness effect). • Report any sign of infection (sore throat, fever), chest pain. • Do not take OTC cold preparations, nasal decongestants. • Do not stop taking medication. • Limit salt intake.

lovastatin

TOP 200

loe-va-stat-in
(Altoprev, Apo-Lovastatin, Mevacor, Novo-Lovastatin)
Do not confuse lovastatin with atorvastatin, Leustatin, Lotensin, nystatin, pitavastatin, or pravastatin, or Mevacor with Benicar or Lipitor.

FIXED-COMBINATION(S)

Advicor: lovastatin/niacin: 20 mg/500 mg, 20 mg/750 mg, 20 mg/1,000 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: HMG-CoA reductase inhibitor. **CLINICAL:** Antihyperlipidemic (see p. 58C).

ACTION

Inhibits HMG-CoA reductase, the enzyme that catalyzes the early step in cholesterol synthesis. **Therapeutic Effect:** Decreases LDL, VLDL, triglycerides; increases HDL.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (LDL, cholesterol reduction)	3 days	N/A	N/A

Incompletely absorbed from GI tract (increased on empty stomach). Protein binding: 95%. Hydrolyzed in liver to active metabolite. Primarily eliminated in feces. Not removed by hemodialysis. **Half-life:** 1.1–1.7 hrs.

USES

Decreases elevated serum total and LDL cholesterol in primary hypercholesterolemia; primary prevention of coronary artery disease. Slows progression of coronary atherosclerosis in pts with coronary heart disease. Adjunct to diet in adolescent pts (10–17 yrs) with heterozygous familial hypercholesterolemia.

PRECAUTIONS

Contraindications: Active hepatic disease, pregnancy, unexplained elevated hepatic function tests. Pregnancy, breast-feeding. **Cautions:** History of heavy/chronic alcohol use; renal impairment; previous history of liver disease; concomitant use of amiodarone, cyclosporine, fibrates, gemfibrozil, niacin, verapamil.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (suppression of cholesterol biosynthesis may cause fetal toxicity) and lactation. Unknown if drug is distributed in breast milk. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., ketoconazole, clarithromycin)** may increase concentration, risk of myopathy, rhabdomyolysis. **Cyclosporine, fibrates, gemfibrozil, niacin, amiodarone, verapamil** may increase risk of rhabdomyolysis, acute renal failure. **HERBAL:** **St. John's wort** may decrease concentration/effects. **FOOD:** Large amounts of **grapefruit juice** may increase risk of side effects (e.g., myalgia, weakness). **Red yeast rice** may increase concentration (2.4 mg lovastatin/600 mg rice). **LAB VALUES:** May increase serum creatine kinase (CK), transaminase.

AVAILABILITY (Rx)

Tablets (Mevacor): 10 mg, 20 mg, 40 mg.

Tablets (Extended-Release [Altoprev]): 20 mg, 40 mg, 60 mg.

ADMINISTRATION/HANDLING

PO

- Immediate-release tablet given with meals; extended-release at bedtime.
- Avoid intake of large quantities of grapefruit juice (greater than 1 quart).
- Do not crush extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Atherosclerosis, Coronary Artery Disease

PO: ADULTS, ELDERLY: Initially, 20 mg/day. Maintenance: 10–80 mg once daily or in 2 divided doses. **Maximum:** 80 mg/day.

Hypercholesterolemia

PO: ADULTS, ELDERLY: Initially, 20 mg/day. Maintenance: 10–80 mg once daily or in 2 divided doses. **Maximum:** 80 mg/day.

PO *(Extended-Release)*: ADULTS, ELDERLY: Initially, 20–60 mg once daily at bedtime. **Maximum:** 60 mg once daily at bedtime.

Heterozygous Familial Hypercholesterolemia

PO: CHILDREN 10–17 YRS: Initially, 10 mg/day. May increase to 20 mg/day after 8 wks and 40 mg/day after 16 wks if needed.

Dosage with Concurrent Medication

Cyclosporine: Initially, 10 mg/day. **Maximum:** 20 mg/day. **Fibrates, niacin** (1 gram or more): **Maximum:** 20 mg/day. **Amiodarone, verapamil: Maximum:** 40 mg/day (immediate release); 20 mg/day (extended release).

SIDE EFFECTS

Generally well tolerated. Side effects usually mild and transient. **Frequent (9%–5%):** Headache, flatulence, diarrhea, abdominal pain, abdominal cramping, rash, pruritus. **Occasional (4%–3%):** Nausea, vomiting, constipation, dyspepsia. **Rare (2%–1%):** Dizziness, heartburn, myalgia, blurred vision, eye irritation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Potential for cataract development. Occasionally produces myopathy manifested as muscle pain, tenderness, weakness with elevated creatine kinase (CK). Severe myopathy may lead to rhabdomyolysis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain dietary history. Question for possibility of pregnancy before initiating therapy (Pregnancy Category X). Assess baseline lab results: serum cholesterol, triglycerides, hepatic function tests.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor for headache, dizziness, blurred vision. Assess for rash, pruritus. Monitor serum cholesterol, tri-

glycerides for therapeutic response. Be alert for malaise, muscle cramping/weakness. Monitor hepatic function tests.

PATIENT/FAMILY TEACHING

• Follow special diet (important part of treatment). • Periodic lab tests are essential part of therapy. • Avoid grapefruit juice, alcohol. • Inform physician of severe gastric upset, vision changes, myalgia, weakness, changes in color of urine/stool, yellowing of eyes/skin, unusual bruising.

loxapine

lox-a-peen
(Adasuve)
Do not confuse loxapine with loxitane.

BLACK BOX ALERT Increased risk for mortality in elderly patients with dementia-related psychosis, mainly due to pneumonia, heart failure. Severe bronchospasm has potential for respiratory arrest. Treatment only available through restricted program under the Risk Evaluation and Mitigation Strategy (ADASUVE REMS). Administer only in health care facility that has immediate access to advanced airway equipment including personnel trained in intubation, mechanical ventilation. Screen all pts, regardless of current diagnosis, for history of asthma, COPD, any pulmonary disease before initiation.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Typical anti-psychotic agent. **CLINICAL:** Anti-psychotic (see p. 65C).

ACTION

Not known. May antagonize dopamine, serotonin. **Therapeutic Effect:** Diminishes agitation associated with psychotic behavior.

PHARMACOKINETICS

Rapidly absorbed following oral inhalation. Protein binding: 96.6%. Metabolized extensively in liver. Eliminated primarily in urine, feces. **Half-life:** 6–8 hrs.

USES

Acute treatment of agitation associated with schizophrenia or bipolar I disorder in adults.

PRECAUTIONS

Contraindications: Asthma, COPD, previous history of bronchospasm following loxapine treatment, acute respiratory distress, any medications treating restrictive airway disease. **Cautions:** Cardiovascular, cerebrovascular disease, history of seizure or conditions lowering seizure threshold, elderly pts with dementia-related psychosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Not recommended in nursing mothers. Must either discontinue drug or discontinue breast-feeding. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Increased risk for sudden death in pts with dementia-related psychosis.

INTERACTIONS

DRUG: Alcohol, antidepressants, benzodiazepines, general anesthetics, muscle relaxants, opioid analgesics, phenothiazines, sedative/hypnotics, tricyclics may increase risk of respiratory depression, hypotension, profound sedation, syncope. **Anticholinergics** may increase anticholinergic effects (e.g., urinary retention). **HERBAL: Gotu kola, kava kava, St. John's wort, valerian root** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Powder for Oral Inhalation: 10-mg single-use inhaler.

ADMINISTRATION/HANDLING

Inhalation

• Gently pull tab from rear of inhaler. • Use within 15 min to prevent automatic deactivation. • Check green light is on and

ready for use. • Inform pt that inhaler may produce flash, clicking sound, or may become warm during use. • Instruct pt to fully exhale, place mouthpiece to lips, and inhale with deep, steady breath. • Hold breath for at least 10 sec. • Check that green light turns off. • If green light remains, dose was not delivered and instruct pt to re-inhale. • If green light remains after second try, discard and reopen new inhaler.

Storage

• Store at room temperature. • Maintain sealed pouch until time of use. • Dispose of one-time use inhaler per protocol (prepackaged lithium battery).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Must be administered by healthcare professional in an appropriate setting.

Acute Agitation (Schizophrenia, Bipolar I Disorder)

Inhalation: ADULTS: 10 mg once q24h as needed.

SIDE EFFECTS

Occasional: Sedation, dysgeusia.

ADVERSE REACTIONS/TOXIC EFFECTS

May produce hypotension (3% of pts), orthostatic hypotension, syncope. If vasopressor therapy required, use only norepinephrine, phenylephrine (epinephrine may worsen hypotension due to beta-stimulation with drug-induced partial alpha-blockade). May increase seizure activity related to decreased seizure threshold. Elderly pts with dementia-related psychosis are at increased risk for CVA, TIA, sudden death. May cause neuroleptic malignant syndrome (NMS) manifested by malignant hyperthermia, muscle rigidity, altered mental status, arrhythmia, labile B/P, diaphoresis, rhabdomyolysis, renal failure. Potential for increased anticholinergic effects including exacerbation of glaucoma or urinary retention.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Screen all pts for history of asthma, COPD, bronchospasm, CVA, seizures, alcohol abuse, glaucoma, urinary retention. Auscultate lung sounds for wheezing. Obtain urine pregnancy, current breast-feeding status before treatment. Obtain full medication history.

INTERVENTION/EVALUATION

Assess all pts for signs/symptoms of bronchospasm after administration. Monitor respiratory status every 15 min for 1 hr. If bronchospasm suspected, initiate rapid response; assess need for intubation, mechanical ventilation. Monitor B/P, pulse for hypotension, arrhythmia. Assess pt's behavior, appearance, emotional status, response to environment, speech pattern, thought content.

PATIENT/FAMILY TEACHING

• Immediately report any difficulty breathing, wheezing, chest tightness, cough, muscle rigidity, fever, palpitation, sweating, altered mentation. • Do not breast-feed. • Avoid pregnancy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Change position slowly to avoid orthostatic hypotension.

lubiprostone

loo-bi-**pros**-tone
(Amitiza)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Chloride channel activator. **CLINICAL:** Constipation agent.

ACTION

Secretes fluid into abdominal lumen through activation of chloride channels in apical membranes of GI epithelium. **Therapeutic Effect:** Increases intestinal motility, thereby increasing passage of

stool, alleviating symptoms associated with chronic idiopathic constipation.

PHARMACOKINETICS

Rapidly, extensively metabolized within stomach and jejunum. Minimal distribution beyond GI tissue. Protein binding: 94%. Excreted mainly in urine with trace amount eliminated in feces. **Half-life:** 0.9–1.4 hrs.

USES

Treatment of chronic idiopathic constipation in adults. Treatment of irritable bowel syndrome (IBS) with constipation in women 18 yrs and older.

PRECAUTIONS

Contraindications: History of mechanical GI obstruction. **Cautions:** Severe diarrhea.

LIFESPAN CONSIDERATIONS

May have potential for teratogenic effects. **Pregnancy/Lactation:** Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 8 mcg, 24 mcg.

ADMINISTRATION/HANDLING

PO

- Give with food and water.

INDICATIONS/ROUTES/DOSAGE

Chronic Idiopathic Constipation

PO: ADULTS, ELDERLY: 24 mcg twice daily with food.

IBS

PO: ADULTS, ELDERLY (FEMALES): 8 mcg twice daily with food.

SIDE EFFECTS

Frequent (31%): Nausea. **Occasional (13%–4%):** Headache, diarrhea, abdominal distention, abdominal pain, flatulence, vomiting, peripheral edema, dizziness. **Rare (3%–2%):** Dyspepsia (heartburn, indigestion, epigastric distress), loose stools, fatigue, dry mouth, arthralgia, back pain, cough.

ADVERSE EFFECTS/ TOXIC REACTIONS

UTI, upper respiratory tract infection occurs in 4% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Women should have negative pregnancy test prior to beginning therapy and comply with effective contraceptive measures during therapy. Assess for diarrhea (avoid use in these pts).

INTERVENTION/EVALUATION

Assess for improvement in symptoms (relief from bloating, cramping, urgency, abdominal discomfort). Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Inform physician of new/worsening episodes of abdominal pain, severe diarrhea.
- Avoid tasks that require alertness, motor skills until response to drug is established.

lucinactant

loo-sin-**ak**-tant
(Surfaxin)
Do not confuse Surfaxin with Surfak.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic peptide-containing surfactant. **CLINICAL:** Pulmonary surfactant.

ACTION

Lowers surface tension at air-liquid interface of alveoli during respiration. Stabilizes alveoli versus collapse trans-pulmonary pressure. **Therapeutic Effect:** Improves lung compliance, gas exchange.

PHARMACOKINETICS

Absorbed directly at terminal bronchiole and alveolar surface. No distribution, metabolism, elimination noted. **Half-life:** N/A.

USES

Prevention of respiratory distress syndrome (RDS) in high-risk premature infants.

PRECAUTIONS

Contraindications: None known. **Cautions:** Infants at high-risk for rapid deoxygenation, difficult intubation.

LIFESPAN CONSIDERATIONS

Used only in infants. No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Intratracheal Suspension: 8.5 ml/vial.

ADMINISTRATION/HANDLING

Drug Preparation

• Warm glass vial for 15 min on block heater set at 44°C. • Once warmed, vigorously shake suspension until fluidity achieved. • Record warming date/time on specified carton space. • Visually inspect before use. • Suspension should appear opaque to off-white once warmed. • Slowly draw into syringe using 16- to 18-gauge needle.

Patient Preparation

• Assess satisfactory placement, position, patency of endotracheal (ET) tube. • May suction ET tube prior to administration. • Allow oxygenation to stabilize before proceeding.

Rate of Administration • Raise head of bed to 30 degrees and place infant in right lateral decubitus position. • Attach syringe to 5-French instillation catheter. • Thread catheter into endotracheal access device and advance to position slightly past the distal end of ET tube. • Instill one fourth of suspension as bolus. • Repeat procedure in left lateral decubitus position, then repeat in right lateral decubitus position, then repeat in left lateral decubitus position for total of 4 separate instillations. • If appropriate, do not suction ET tube for 1 hr after administration.

Storage • Refrigerate unused vials. • Protect from light. • Do not freeze. • May store warmed suspension at room temperature for 2 hrs only. • Do not refrigerate warmed suspension. • Discard if not used within 2 hrs.

INDICATIONS/ROUTES/DOSAGE

Respiratory Distress Syndrome

Endotracheal: INFANTS: 5.8 ml/kg, up to 4 doses within first 48 hrs of life. Do not administer more frequently than every 6 hrs.

ADVERSE EFFECTS/ TOXIC REACTIONS

Adverse reactions are mainly attributed to administration, including bradycardia, oxygen desaturation, cyanosis, apnea, airway/ET tube obstruction, reflux into ET tube. Suctioning and/or reintubation may be necessary if airway obstruction occurs.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Must be administered by or under the close supervision of clinicians experienced in ventilator management, intubation, resuscitation, general care of premature infants.

INTERVENTION/EVALUATION

Frequently assess vital signs, airway patency, lung sounds, oxygen saturation, end-tidal CO_2. Modify ventilator settings if adverse reaction, sustained oxygen de-

saturation occurs. Maintain positive end-expiratory pressure of 4–5 cm H_2O during administration.

PATIENT/FAMILY TEACHING

- Offer emotional support to parents.
- Explain role of surfactant in infants.

lurasidone

loo-**ras**-i-doan
(Latuda)

BLACK BOX ALERT Elderly pts with dementia-related psychosis are at increased risk for mortality due to cerebrovascular events, infectious diseases.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopamine, serotonin receptor antagonist.
CLINICAL: Antipsychotic.

ACTION

Antagonizes central dopamine type 2 and serotonin type 2 receptors. **Therapeutic Effect:** Diminishes symptoms of schizophrenia.

PHARMACOKINETICS

Absorbed in 1–3 hrs. Steady-state concentration occurs in 7 days. Well absorbed from GI tract (unaffected by food). Protein binding: 99%. Metabolized in liver to active and inactive metabolites. Primarily excreted in urine, with lesser amount eliminated in feces. **Half-life:** 28–36 hrs.

USES

Treatment of schizophrenia.

PRECAUTIONS

Contraindications: Strong CYP3A4 inhibitors (diltiazem, ketoconazole, ritonavir) and inducers (rifampin). **Cautions:** Cardiovascular disease (heart failure, history of MI, ischemia, conduction abnormalities), cerebrovascular disease (history of CVA in pts with dementia, seizure disorders). Those with an established diagnosis of diabetes mellitus. Parkinson's disease, renal/hepatic impairment, pts at risk for aspiration pneumonia, those at risk for suicide.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** More susceptible to postural hypotension. Increased risk of cerebrovascular events, mortality, including stroke, in elderly pts with psychosis.

INTERACTIONS

DRUG: Alcohol, CNS depressants may increase CNS depression. **Rifampin** decreases concentration/effects. **Diltiazem, ketoconazole, ritonavir** may increase concentration/effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD: Grapefruit, grapefruit juice** may increase risk of torsades, orthostatic hypotension. **LAB VALUES:** May increase prolactin levels.

AVAILABILITY (Rx)

Tablets: 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

- Give with food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Schizophrenia

PO: ADULTS, ELDERLY: 40 mg once daily with food. **Maximum:** 80 mg once daily with food. In those with moderate to severe hepatic/renal impairment, do not exceed 40 mg daily.

SIDE EFFECTS

Frequent (15%–7%): Drowsiness, sedation, insomnia (paradoxical reaction). **Occasional (6%–3%):** Nausea, vomiting, dyspepsia (heartburn, GI upset), fatigue, back pain, akathisia, dizziness, agitation, anxiety. **Rare (2%–1%):** Restlessness, salivary hypersecretion, tongue spasm, torticollis, trismus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extrapyramidal disorder (including cogwheel rigidity, drooling, bradykinesia, tardive dyskinesia, tremors) occurs in 5% of pts. Neuroleptic malignant syndrome (fever, muscle rigidity, irregular B/P or pulse, altered mental status) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content. Renal/hepatic function tests should be obtained before therapy as dose adjustment is required when initiating therapy.

INTERVENTION/EVALUATION

Supervise suicidal risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor for potential neuroleptic malignant syndrome (fever, muscle rigidity, irregular B/P or pulse, altered mental status, visual changes, dyspnea). Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

•Avoid tasks that may require alertness, motor skills until response to drug is established (may cause drowsiness, dizziness). • Avoid alcohol. • Inform physician of trembling in fingers, altered gait, unusual muscle/skeletal movements, palpitations, severe dizziness, fainting, visual changes, rash, difficulty breathing. • Report suicidal ideation, unusual changes in behavior.

lymphocyte immune globulin N

lim-foe-site ih-**myoon** **glah**-bue-lin **N**
(Atgam)

BLACK BOX ALERT Use only by physicians experienced in immunosuppressive therapy for treatment of renal transplant or aplastic anemia pts.

Do not confuse Atgam with Ativan.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic response modifier. **CLINICAL:** Immunosuppressant.

ACTION

Acts as lymphocyte selective immunosuppressant, reducing number/altering function of T lymphocytes, which are responsible for cell-mediated and humoral immunity. Stimulates release of hematopoietic growth factors. **Therapeutic Effect:** Prevents allograft rejection; treats aplastic anemia.

PHARMACOKINETICS

Unknown absorption, metabolism, elimination. **Half-life:** Approximately 5–7 days.

USES

Prevention/treatment of renal allograft rejection. Treatment of moderate to severe aplastic anemia in pts not candidates for bone marrow transplant. **OFF-LABEL:** Prevention/treatment of other solid organ allograft rejection, prevent graft-vs-host disease following stem cell transplantation, myelodysplastic syndrome.

PRECAUTIONS

Contraindications: Systemic hypersensitivity reaction to previous injection of lymphocyte immune globulin N. **Cautions:** Concurrent immunosuppressive therapy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Reduction of **corticosteroids, other immunosuppressants** may unmask reactions to lymphocyte immune globulin. **HERBAL:** **Echinacea** may decrease levels/effects. **FOOD:** None known. **LAB VALUES:** May alter BUN, serum creatinine.

AVAILABILITY

Injection Solution: 50 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Total daily dose must be further diluted with 0.9% NaCl (do not use D_5W). • Gently rotate diluted solution. Do not shake. • Final concentration must not exceed 4 mg/ml.

Rate of Administration • Use 0.2- to 1-micron filter. • Give total daily dose over minimum of 4 hrs.

Storage • Keep refrigerated before and after dilution. • Discard diluted solution after 24 hrs.

IV INCOMPATIBILITIES

No information is available for Y-site administration.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Skin test recommended prior to initial dose. Use 0.1 ml of fresh 1:1,000 dilution. Observe q15–20min for 1 hr.

Prevention of Renal Allograft Rejection

IV: ADULTS, ELDERLY, CHILDREN: 15 mg/kg/day for 14 days, then every other day for 14 days. First dose within 24 hrs before or after transplantation.

Treatment of Renal Allograft Rejection

IV: ADULTS, ELDERLY, CHILDREN: 10–15 mg/kg/day for 14 days, then every other day for 14 more days. **Maximum:** 21 doses in 28 days.

Aplastic Anemia

IV: ADULTS, ELDERLY, CHILDREN: 10–20 mg/kg once a day for 8–14 days, then every other day. **Maximum:** 21 doses.

SIDE EFFECTS

Frequent: Fever (51%), thrombocytopenia (30%), rash (22%), chills (16%), leukopenia (14%), systemic infection (13%). **Occasional (10%–5%):** Serum sickness-like reaction, dyspnea, apnea, arthralgia, chest pain, back pain, flank pain, nausea, vomiting, diarrhea, phlebitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombocytopenia may occur but is generally transient. Severe hypersensitivity reaction, including anaphylaxis, occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Use of high-flow vein (CVL, PICC, Groshong catheter) may prevent chemical phlebitis that may occur if peripheral vein is used.

INTERVENTION/EVALUATION

Monitor frequently for chills, fever, erythema, pruritus. Obtain order for prophylactic antihistamines or corticosteroids.

M

magnesium HIGH ALERT

mag-**nee**-zee-um

magnesium chloride

(Mag-Delay, Slow-Mag)

magnesium citrate

(Citroma, Citro-Mag 🍁)

magnesium hydroxide

(Phillips Milk of Magnesia)

magnesium oxide

(Mag-Ox 400, Uro-Mag)

magnesium protein complex

(Mg-PLUS)

magnesium sulfate

(Epsom salt, magnesium sulfate injection)

Do not confuse magnesium sulfate with morphine sulfate.

FIXED-COMBINATION(S)

With aluminum, an antacid **(Aludrox, Delcid, Gaviscon, Maalox);** with aluminum and simethicone, an antiflatulent **(Di-Gel, Gelusil, Maalox Plus, Mylanta);** with aluminum and calcium, an antacid **(Camalox);** with mineral oil, a lubricant laxative **(Haley's MO);** with magnesium oxide and aluminum oxide, an antacid **(Riopan).**

◆CLASSIFICATION

CLINICAL: Antacid, anticonvulsant, electrolyte, laxative (see pp. 12C, 121C).

ACTION

Antacid: Acts in stomach to neutralize gastric acid. **Therapeutic Effect:** Increases pH. **Laxative:** Osmotic effect primarily in small intestine, draws water into intestinal lumen. **Therapeutic Effect:** Promotes peristalsis, bowel evacuation. **Systemic (dietary supplement replacement):** Found primarily in intracellular fluids. **Therapeutic Effect:** Essential for enzyme activity, nerve conduction, muscle contraction. Maintains and restores magnesium levels. **Anticonvulsant:** Blocks neuromuscular transmission, amount of acetylcholine released at motor end plate. **Therapeutic Effect:** Produces seizure control.

PHARMACOKINETICS

Antacid, laxative: Minimal absorption through intestine. Absorbed dose primarily excreted in urine. **Systemic:** Widely distributed. Primarily excreted in urine.

USES

Magnesium chloride: Dietary supplement. **Magnesium citrate:** Evacuation of bowel before surgical, diagnostic procedures. **Magnesium hydroxide:** Short-term treatment of constipation, symptoms of hyperacidity. **Magnesium oxide:** Magnesium replacement. **Magnesium sulfate:** Treatment/prevention of hypomagnesemia; prevention and treatment of seizures in eclampsia; treatment of seizures associated with acute nephritis; torsade de pointes (atypical ventricular tachycardia); treatment of arrhythmias due to hypomagnesemia (ventricular tachycardia/ventricular fibrillation). **OFF-LABEL: Magnesium sulfate:** Premature labor, acute asthma, MI, tocolysis.

PRECAUTIONS

Contraindications: Antacid: Appendicitis, symptoms of appendicitis, ileostomy, intestinal obstruction, severe renal impairment. **Laxative:** Appendicitis, CHF, colostomy, hypersensitivity, ileostomy, intestinal obstruction, undiagnosed rectal bleeding. **Systemic:** Heart block, myocardial damage, renal failure. **Cautions:** Safety in children younger than 6 yrs not known. **Antacids:** Undiagnosed GI/rectal bleeding, ulcerative colitis, colostomy, diverticulitis, chronic diarrhea. **Laxative:** Diabetes mellitus, pts on low-salt diet (some products contain sugar, sodium). **Systemic:** Severe renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Antacid: Unknown if distributed in breast milk. **Parenteral:** Readily crosses placenta. Distributed in breast milk for 24 hrs after magnesium therapy is discontinued. Continuous IV infusion increases risk of magnesium toxicity in neonate. IV admin-

istration should not be used 2 hrs preceding delivery. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Increased risk of developing magnesium deficiency (e.g., poor diet, decreased absorption, medications).

INTERACTIONS

DRUG: May decrease absorption of **quinolones, tetracycline, bisphosphonates.** May increase effects of **antihypertensives.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES: Antacid:** May increase gastrin production, pH. **Laxative:** May decrease serum potassium. **Systemic:** None significant.

AVAILABILITY

MAGNESIUM CHLORIDE
Tablets (Mag Delay, Slow-Mag): 64 mg.
MAGNESIUM CITRATE
Oral Solution (Citroma): 290 mg/5 ml.
MAGNESIUM HYDROXIDE
Oral Liquid (Phillips Milk of Magnesia): 400 mg/5 ml, 800 mg/5 ml.
Tablets (Chewable [Phillips Milk of Magnesia]): 311 mg.
MAGNESIUM OXIDE
Capsules (Uro-Mag): 140 mg. **Tablets (Mag-Ox 400):** 400 mg.
MAGNESIUM SULFATE
Infusion Solution: 10 mg/ml, 20 mg/ml, 40 mg/ml, 80 mg/ml. **Injection Solution:** 125 mg/ml, 500 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Must dilute to maximum concentration of 20%.
Rate of Administration • For IV infusion, maximum rate of infusion is 2 g/hr.
Storage • Store at room temperature.

IM

• For adults, elderly, use 250 mg/ml (25%) or 500 mg/ml (50%) magnesium sulfate concentration. • For infants, children, do not exceed 200 mg/ml (20%).

PO (Antacid)

• Shake suspension well before use. • Chewable tablets should be chewed thoroughly before swallowing, followed by full glass of water.

PO (Laxative)

• Drink full glass of liquid (8 oz) with each dose (prevents dehydration). • Flavor may be improved by following with fruit juice, citrus carbonated beverage. • Refrigerate citrate of magnesia (retains potency, palatability).

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), lansoprazole (Prevacid), lipids, pantoprazole (Protonix).

IV COMPATIBILITIES

Amikacin (Amikin), cefazolin (Ancef), ciprofloxacin (Cipro), dobutamine (Dobutrex), enalapril (Vasotec), gentamicin, heparin, hydromorphone (Dilaudid), insulin, linezolid (Zyvox), metoclopramide (Reglan), milrinone (Primacor), morphine, piperacillin/tazobactam (Zosyn), potassium chloride, propofol (Diprivan), tobramycin (Nebcin), vancomycin (Vancocin).

INDICATIONS/ROUTES/DOSAGE

Hypomagnesemia
Magnesium sulfate

Mild Deficiency
IM: ADULTS, ELDERLY: 1 g q6h for 4 doses.

Severe Deficiency
IM: ADULTS, ELDERLY: Up to 250 mg/kg over 4 hrs.
IV: ADULTS, ELDERLY: 1–2 g/hr for 3–6 hrs, then 0.5–1 g/hr as needed to correct deficiency. **CHILDREN:** 25–50 mg/kg/dose q4–6h for 3–4 doses.

Symptomatic Deficiency
IV: ADULTS, ELDERLY: 1–2 g over 5–60 min.

Usual Dose for Children
IM/IV: 25–50 mg/kg/dose q4–6h for 3–4 doses. **Maximum single dose:** 2 g.

Usual Dose for Neonates
IM/IV: 25–50 mg/kg/dose q8–12h for 2–3 doses.

Eclampsia
IV: ADULTS: 4–5 g infusion, then 1–2 g/hr continuous infusion. **Maximum:** 40 g/24 hrs.

Hypertension, Seizures
IV, IM *(Magnesium Sulfate)*: ADULTS, ELDERLY: 1 g q6h for 4 doses as needed. **CHILDREN:** 20–100 mg/kg/dose q4–6h as needed.

Arrhythmias, Torsade de Pointes
IV *(Magnesium Sulfate)*: ADULTS, ELDERLY: Initially, 1–2 g over 15 min. **CHILDREN:** 25–50 mg/kg/dose.

Bronchodilation
IV *(Magnesium Sulfate)*: ADULTS, ELDERLY: 2 g as a single dose. **CHILDREN:** 25–75 mg/kg/dose as a single dose.

Constipation
PO *(Magnesium Hydroxide)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 6–8 tablets or 30–60 ml/day (400 mg/5 ml). **CHILDREN 6–11 YRS:** 3–4 tablets or 15–30 ml/day (400 mg/5 ml). **CHILDREN 2–5 YRS:** 1–2 tablets or 5–15 ml/day (400 mg/5 ml).

Hyperacidity
PO *(Magnesium Hydroxide)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2–4 tablets or 5–15 ml as needed up to 4 times a day.

Magnesium Deficiency
PO *(Magnesium Oxide)*: ADULTS, ELDERLY: 1–2 tablets 2–3 times a day.

Dietary Supplement
PO *(Magnesium Chloride)*: ADULTS, ELDERLY: 2 tablets daily.

Cathartic
PO *(Magnesium Citrate)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 120–300 ml. **CHILDREN 6–11 YRS:** 100–150 ml. **CHILDREN YOUNGER THAN 6 YRS:** 0.5 ml/kg up to maximum of 200 ml.

SIDE EFFECTS

Frequent: Antacid: Chalky taste, diarrhea, laxative effect. **Occasional: Antacid:** Nausea, vomiting, stomach cramps. **Antacid, laxative:** Prolonged use or large doses in renal impairment may cause hypermagnesemia (dizziness, palpitations, altered mental status, fatigue, weakness). **Laxative:** Cramping, diarrhea, increased thirst, flatulence. **Systemic (dietary supplement, electrolyte replacement):** Reduced respiratory rate, decreased reflexes, flushing, hypotension, decreased heart rate.

ADVERSE EFFECTS/ TOXIC REACTIONS

Magnesium as antacid, laxative has no known adverse reactions. Systemic use may produce prolonged PR interval, widening of QRS interval. Magnesium toxicity may cause loss of deep tendon reflexes, heart block, respiratory paralysis, cardiac arrest. **Antidote:** 10–20 ml 10% calcium gluconate (5–10 mEq of calcium).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is sensitive to magnesium. **Antacid:** Assess GI pain (duration, location, quality, time of occurrence, relief with food, causative/exacerbative factors). **Laxative:** Assess for weight loss, nausea, vomiting, history of recent abdominal surgery. **Systemic:** Assess renal function, serum magnesium.

INTERVENTION/EVALUATION

Antacid: Assess for relief of gastric distress. Monitor renal function (esp. if dosing is long term or frequent). **Laxative:** Monitor daily pattern of bowel activity, stool consistency. Maintain adequate fluid intake. **Systemic:** Monitor

renal function, magnesium levels, EKG for cardiac function. Test patellar reflexes (knee jerk reflexes) before giving repeat parenteral doses (used as indication of CNS depression; suppressed reflexes may be sign of impending respiratory arrest). Patellar reflex must be present, respiratory rate should be 16/min or over before each parenteral dose. Initiate seizure precautions.

PATIENT/FAMILY TEACHING

• **Antacid:** Take at least 2 hrs apart from other medication. • Do not take longer than 2 wks unless directed by physician. • For peptic ulcer, take 1 and 3 hrs after meals and at bedtime for 4–6 wks. • Chew tablets thoroughly, followed by 8 oz of water; shake suspensions well. • Repeat dosing or large doses may have laxative effect. • **Laxative:** Drink full glass (8 oz) liquid to aid stool softening. • Use only for short term. Do not use if abdominal pain, nausea, vomiting is present. • **Systemic:** Inform physician of any signs of hypermagnesemia (dizziness, palpitations, altered mental status, fatigue, weakness).

mannitol

man-it-ol
(Osmitrol)
Do not confuse Osmitrol with esmolol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Polyol (sugar alcohol). **CLINICAL:** Osmotic diuretic, antiglaucoma, antihemolytic.

ACTION

Elevates osmotic pressure of glomerular filtrate, inhibiting tubular reabsorption of water and electrolytes, resulting in increased flow of water into interstitial fluid/plasma. **Therapeutic Effect:** Produces diuresis; reduces intraocular pressure (IOP), intracranial pressure (ICP), cerebral edema.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV (diuresis)	1–3 hrs	N/A	—
IV (reduced ICP)	—	N/A	1.5–6 hrs

Remains in extracellular fluid. Primarily excreted in urine unchanged. Removed by hemodialysis. **Half-life:** 1.1–1.6 hrs.

USES

Prevention, treatment of oliguric phase of acute renal failure (before evidence of permanent renal failure). Reduces increased ICP due to cerebral edema, spinal cord edema, IOP due to acute glaucoma. Promotes urinary excretion of toxic substances (aspirin, bromides, imipramine, barbiturates). **OFF-LABEL:** Improve renal transplant function.

PRECAUTIONS

Contraindications: Dehydration, intracranial bleeding, severe pulmonary edema, congestion; severe renal disease (anuria), increasing oliguria, azotemia, progressive heart failure. **Cautions:** Concurrent nephrotoxic agents, conditions increasing sensitivity to bronchoconstriction.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** **Yohimbe** may decrease effects. **FOOD:** None known. **LAB VALUES:** May decrease serum phosphate, potassium, sodium.

AVAILABILITY (Rx)

Injection Solution (Osmitrol): 20%, 25%.

ADMINISTRATION/HANDLING

◀ALERT▶ Assess IV site for patency before each dose. Pain, thrombosis noted with extravasation. In-line filter (less than 5 microns) used for concentrations over 20%.

IV

Rate of Administration • Administer test dose for pts with oliguria. • Give IV push over 3–5 min; over 20–30 min for cerebral edema, elevated ICP. Maximum concentration: 25%. • Do not add KCl or NaCl to mannitol 20% or greater. Do not add to whole blood for transfusion.

Storage • Store at room temperature. • If crystals are noted in solution, warm bottle in hot water, shake vigorously at intervals. Cool to body temperature before administration. Do not use if crystals remain after warming procedure.

M

IV INCOMPATIBILITIES

Cefepime (Maxipime), doxorubicin liposomal (Doxil), filgrastim (Neupogen) imipenem-cilastatin (Primaxin).

IV COMPATIBILITIES

Cisplatin (Platinol), furosemide (Lasix), linezolid (Zyvox), lipids, ondansetron (Zofran), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

Test Dose *(to assess adequate renal function)*: ADULTS, ELDERLY: 12.5 g (200 mg/kg) over 3–5 min to produce urine flow of at least 30–50 ml urine/hr. **CHILDREN:** 200 mg/kg over 3–5 min to produce urine flow of at least 1 ml/kg for 1–3 hrs.

Initial: ADULTS, ELDERLY: 0.5–1 g/kg. **CHILDREN:** 0.25–1 g/kg.

Maintenance: ADULTS, ELDERLY: 0.25–0.5 g/kg q4–6h. **CHILDREN:** 0.25–0.5 g/kg q4–6h.

SIDE EFFECTS

Frequent: Dry mouth, thirst. **Occasional:** Blurred vision, increased urinary frequency/volume, headache, arm pain, backache, nausea, vomiting, urticaria, dizziness, hypotension, hypertension, tachycardia, fever, angina-like chest pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Fluid, electrolyte imbalance may occur due to rapid administration of large doses or inadequate urine output resulting in overexpansion of extracellular fluid. Circulatory overload may produce pulmonary edema, CHF. Excessive diuresis may produce hypokalemia, hyponatremia. Fluid loss in excess of electrolyte excretion may produce hypernatremia, hyperkalemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check B/P, pulse before giving medication. Assess skin turgor, mucous membranes, mental status, muscle strength. Obtain baseline weight, chemistry studies. Assess I&O.

INTERVENTION/EVALUATION

Monitor urinary output to ascertain therapeutic response. Monitor serum electrolytes, BUN, renal/hepatic function tests. Assess vital signs, skin turgor, mucous membranes. Weigh daily. Signs of hyponatremia include confusion, drowsiness, thirst, dry mouth, cold/clammy skin. Signs of hypokalemia include changes in muscle strength, tremors, muscle cramps, altered mental status, cardiac arrhythmias. Signs of hyperkalemia include colic, diarrhea, muscle twitching followed by weakness, paralysis, arrhythmias.

PATIENT/FAMILY TEACHING

• Expect increased urinary frequency/volume. • May cause dry mouth.

maraviroc

ma-**rah**-veer-ock
(Celsentri, Selzentry)

BLACK BOX ALERT Possible drug-induced hepatotoxicity with allergic-type features reported.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Chemokine receptor 5 (CCR5) co-receptor antagonist. **CLINICAL:** Antiretroviral (see p. 69C).

ACTION

Binds to human chemokine receptor (CCR5), present on CD-4 and T-cell membranes, preventing interaction of HIV-1 and CCR5, necessary for HIV-1 to enter cells. **Therapeutic Effect:** Decreased invasion of HIV-1 virus into cells.

PHARMACOKINETICS

Variably absorbed following PO administration. Protein binding: 76%. Metabolized in liver. Eliminated mainly in feces, with lesser amount eliminated in urine. **Half-life:** 14–18 hrs.

USES

Treatment of HIV infection in those infected only with detectable chemokine receptor 5 (CCR5)-tropic HIV-1, with evidence of viral replication; HIV-1 strains resistant to multiple antiretroviral agents. Used in combination with other antiretroviral agents.

PRECAUTIONS

Contraindications: Severe renal impairment or ESRD (CrCl less than 30 ml/min) who are taking potent CYP3A4 inhibitors or inducers. **Cautions:** Mild to moderate hepatic/renal impairment, history of orthostatic hypotension, hepatitis B or C, concurrent medication known to lower B/P, those at increased risk for cardiovascular events.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** Age-related hepatic/renal impairment requires close monitoring.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., atazanavir, atazanavir/ritonavir, ketoconazole, lopinavir, ritonavir, saquinavir/ritonavir) may increase concentration. **CYP3A4 inducers (e.g., efavirenz, rifampin)** may decrease concentration. **HERBAL: St. John's wort** may lead to loss of virologic response, potential resistance to maraviroc. **FOOD: Grapefruit, grapefruit juice** may increase orthostatic hypotension. **LAB VALUES:** May increase serum AST, ALT, total bilirubin, amylase, lipase. May decrease lymphocytes/neutrophil count, WBC count.

AVAILABILITY (Rx)

Tablets: 150 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS, ELDERLY, CHILDREN OVER 16 YRS WITH CONCURRENT ANTIRETROVIRAL AGENTS: 300 mg twice a day. **(with CYP3A4 inhibitors): Clarithromycin, delavirdine, itraconazole, ketoconazole, nefazodone, telethromycin:** 150 mg twice a day. **(with CYP3A4 inducers): Carbamazepine, efavirenz, phenobarbital, phenytoin, rifampin:** 600 mg twice a day.

Dosage in Renal Impairment

Creatinine clearance 30 ml/min or greater

CYP3A4 inhibitors	150 mg twice daily
CYP3A4 inducers	600 mg twice daily

Creatinine clearance less than 30 ml/min: 150 mg twice daily	
CYP3A4 inhibitors	Not recommended
Postural hypotension	150 mg twice daily

SIDE EFFECTS

Common (20%): Upper respiratory tract infection. **Frequent (13%–7%):** Cough, fever, rash, musculoskeletal pain, abdominal pain, dizziness, appetite change, herpes simplex infection, sleep disturbances. **Occasional (6%–4%):** Sinusitis, joint pain, bronchitis, constipation, bladder infection, paresthesia, sensory abnormalities. **Rare (3% or less):** Sleep disturbances, pruritus, peripheral neuropathy, dermatitis, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiovascular events (MI, ischemia, unstable angina, coronary artery occlusion/disease), CVA, hepatic failure/cirrhosis, neoplasms occur in less than 2% of pts.

M

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory testing, esp. hepatic function tests, before beginning therapy and at periodic intervals during therapy. Offer emotional support. Obtain medication history.

INTERVENTION/EVALUATION

Closely monitor for evidence of GI discomfort. Monitor daily pattern of bowel activity, stool consistency. Assess skin for evidence of rash. Monitor serum chemistry tests for marked laboratory abnormalities, particularly hepatic profile. Assess for opportunistic infections: onset of fever, cough, or other respiratory symptoms.

PATIENT/FAMILY TEACHING

• Contact physician if fever, abdominal pain, jaundice, dark urine occur. • Avoid tasks that require alertness, motor skills until response to drug is established. • Maraviroc is not a cure for HIV infection, nor does it reduce risk of transmission to others. • May continue to experience illnesses, including opportunistic infections.

meclizine

mek-li-zeen
(Antivert, Bonamine, Bonine, Dramamine Less Drowsy Formula)
Do not confuse Antivert with Alavert, Avodart, or Axert.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Antiemetic, antivertigo.

ACTION

Reduces labyrinthine excitability, diminishes vestibular stimulation of labyrinth, affecting chemoreceptor trigger zone. **Therapeutic Effect:** Reduces nausea, vomiting, vertigo.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–60 min	N/A	8–24 hrs

Well absorbed from GI tract. Widely distributed. Metabolized in liver. Primarily excreted in urine. **Half-life:** 6 hrs.

USES

Prevention/treatment of nausea, vomiting, vertigo due to motion sickness. Treatment of vertigo associated with diseases affecting vestibular system.

PRECAUTIONS

Contraindications: None known. **Cautions:** Narrow-angle glaucoma, obstructive diseases of GI/GU tract, asthma, prostatic hyperplasia, CNS disorders where CNS depression is present.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk (may produce irritability in nursing infants). **Pregnancy Category B. Children/Elderly:** May be more sensitive to anticholinergic effects (e.g., dry mouth).

INTERACTIONS

DRUG: **Alcohol, CNS depressants** may increase CNS depressant effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May produce false-negative results in antigen skin testing unless meclizine is discontinued 4 days before testing.

AVAILABILITY (Rx)

Tablets (Antivert): 12.5 mg, 25 mg. **(Dramamine Less Drowsy Formula):** 25 mg. **Tablets (Chewable [Bonine]):** 25 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Scored tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Motion Sickness

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 12.5–25 mg 1 hr before travel. May repeat q12–24h. May require a dose of 50 mg.

Vertigo

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 25–100 mg/day in divided doses, as needed.

SIDE EFFECTS

Frequent: Drowsiness. **Occasional:** Blurred vision; dry mouth, nose, throat.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction (eczema, pruritus, rash, cardiac disturbances, photosensitivity) may occur. Overdose may vary from CNS depression (sedation, apnea, cardiovascular collapse, death) to severe paradoxical reaction (hallucinations, tremor, seizures). Children may experience paradoxical reaction (restlessness, insomnia, euphoria, anxiety, tremors). Overdose in children may result in hallucinations, seizures, death.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess degree of nausea/vomiting, degree of vertigo.

INTERVENTION/EVALUATION

Monitor B/P, esp. in elderly (increased risk of hypotension). Monitor children closely for paradoxical reaction. Monitor serum electrolytes in those with severe vomiting. Assess skin turgor, mucous membranes to evaluate hydration status.

PATIENT/FAMILY TEACHING

• Tolerance to sedative effect may occur. • Avoid tasks that require alertness, motor skills until response to drug is established. • Dry mouth, drowsiness, dizziness may be an expected response to drug. • Avoid alcoholic beverages during therapy. • Sugarless gum, sips to tepid water may relieve dry mouth. • Coffee, tea may help reduce drowsiness.

M

*medroxyPROGESTERone

me-**drox**-e-proe-**jes**-te-rone (Apo-Medroxy, Depo-Provera, Depo-Provera Contraceptive, Depo-SubQ Provera 104, Novo-Medrone, Provera)

BLACK BOX ALERT Prolonged use (over 2 yrs) of contraceptive injection form may result in loss of bone mineral density. May increase risk of dementia in postmenopausal women.

Do not confuse medroxyprogesterone with hydroxyprogesterone, methylprednisolone, or methyltestosterone, or Provera with Covera, Femara, Parlodel, or Premarin.

FIXED-COMBINATION(S)

Prempro, Premphase: medroxyprogesterone/conjugated estrogens: 1.5 mg/0.3 mg, 1.5 mg/0.45 mg, 2.5 mg/0.625 mg, 5 mg/0.625 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Hormone.
CLINICAL: Progestin, antineoplastic.

ACTION

Transforms endometrium from proliferative to secretory (in estrogen-primed endometrium). Inhibits secretion of pituitary gonadotropins. **Therapeutic Effect:** Prevents follicular maturation, ovulation. Stimulates growth of mammary alveolar tissue; relaxes uterine smooth muscle. Corrects hormonal imbalance.

PHARMACOKINETICS

Well absorbed after PO administration. Slowly absorbed after IM administration. Protein binding: 90%, primarily albumin. Metabolized in liver. Primarily excreted in urine. **Half-life: PO:** 12–17 hrs. **IM:** 40–50 days.

USES

PO: Reduction of endometrial hyperplasia in nonhysterectomized postmenopausal women (concurrently given with estrogen to women with intact uterus), treatment of secondary amenorrhea, abnormal uterine bleeding due to hormonal imbalance. **IM:** Adjunctive therapy, palliative treatment of inoperable, recurrent, metastatic endometrial carcinoma, prevention of pregnancy; endometriosis-associated pain. **OFF-LABEL:** Treatment of endometrial, stromal carcinoma.

PRECAUTIONS

Contraindications: Carcinoma of breast; estrogen-dependent neoplasm; history of or active thrombotic disorders (cerebral apoplexy, thrombophlebitis, thromboembolic disorders); hypersensitivity to progestins; known or suspected pregnancy; missed abortion; severe hepatic dysfunction; undiagnosed abnormal vaginal bleeding; cerebrolvascular disease; use as pregnancy test. **Cautions:** Those with conditions aggravated by fluid retention (asthma, seizures, migraine, cardiac/renal dysfunction), diabetes, history of mental depression, preexisting hypertriglyceremia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid use during pregnancy, esp. first 4 mos (congenital heart, limb reduction defects may occur). Distributed in breast milk. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Hepatic enzyme inducers (e.g., carbamazepine, phenytoin, rifampin) may decrease effect. **HERBAL: St. John's wort** may decrease effect of progestin contraceptive. **FOOD:** None known. **LAB VALUES:** May alter serum thyroid, hepatic function tests, PT, metapyrone test, HDL, total cholesterol, triglycerides. May increase LDL.

AVAILABILITY (Rx)

Injection Suspension: 104 mg/0.65 ml prefilled syringe (Depo-SubQ Provera 104), 150 mg/ml (Depo-Provera Contraceptive), 400 mg/ml (Depo-Provera). **Tablets (Provera):** 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

IM

- Shake vial immediately before administering (ensures complete suspension).
- Administer deep IM into gluteal or deltoid muscle.

SUBCUTANEOUS

- Shake vigorously prior to administration.
- Inject in upper thigh or abdomen (avoid bony areas and umbilicus).
- Give over 5–7 sec; do not rub injection area.

PO

- Give with food.

INDICATIONS/ROUTES/DOSAGE

Endometrial Hyperplasia

PO: ADULTS: 2.5–10 mg/day for 12–14 consecutive days each month starting on day 1 or 16 of cycle.

Secondary Amenorrhea

PO: ADULTS: 5–10 mg/day for 5–10 days, beginning at any time during menstrual cycle.

Abnormal Uterine Bleeding

PO: ADULTS: 5–10 mg/day for 5–10 days, beginning on calculated day 16 or day 21 of menstrual cycle.

Endometrial Carcinoma

IM: ADULTS, ELDERLY: Initially, 400–1,000 mg; repeat at 1-wk intervals. If improvement occurs and disease is stabilized, begin maintenance with as little as 400 mg/mo.

Pregnancy Prevention

IM *(Depo-Provera Contraceptive)*: ADULTS: 150 mg q3mos.

Subcutaneous *(Depo-Subq Provera 104)*: ADULTS: 104 mg q3mos (q12–14wks).

Endometriosis-Associated Pain

Subcutaneous *(Depo-Subq Provera 104)*: ADULTS: 104 mg q3mos (q12–14 wks) for up to 2 yrs.

SIDE EFFECTS

Frequent: Transient menstrual abnormalities (spotting, change in menstrual flow/cervical secretions, amenorrhea) at initiation of therapy. **Occasional:** Edema, weight change, breast tenderness, anxiety, insomnia, fatigue, dizziness. **Rare:** Alopecia, depression, dermatologic changes, headache, fever, nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombophlebitis, pulmonary/cerebral embolism, retinal thrombosis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain usual menstrual history. Question for hypersensitivity to progestins, possibility of pregnancy before initiating therapy (Pregnancy Category X). Obtain baseline weight, serum glucose, B/P.

INTERVENTION/EVALUATION

Check weight daily; report weekly gain of 5 lb or more. Check B/P periodically. Assess skin for rash, urticaria. Report development of chest pain, sudden shortness of breath, sudden decrease in vision, migraine headache, pain (esp. with swelling, warmth, redness) in calves, numbness of arm/leg (thrombotic disorders) immediately.

PATIENT/FAMILY TEACHING

- Inform physician of sudden loss of vision, severe headache, chest pain, coughing up of blood (hemoptysis), numbness in arm/leg, severe pain/swelling in calf, unusual heavy vaginal bleeding, severe abdominal pain/tenderness.
- Depo-Provera Contraceptive injection should be used as long-term birth control method (e.g., longer than 2 yrs) only if other birth control methods are inadequate.

M

megestrol

HIGH ALERT

meh-**jes**-trol

(Apo-Megestrol ✤, Megace, Megace ES, Megace OS ✤)

Do not confuse megestrol with mesalamine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic hormone. **CLINICAL:** Antineoplastic (see p. 85C).

ACTION

Suppresses release of luteinizing hormone (LH) from anterior pituitary gland

by inhibiting pituitary function. **Therapeutic Effect:** Reduces tumor size. Increases appetite.

PHARMACOKINETICS

Well absorbed from GI tract. Metabolized in liver; excreted in urine. **Half-life:** 13–105 hrs (mean 34 hrs).

USES

Palliative management of recurrent, inoperable, metastatic endometrial or breast carcinoma, treatment of anorexia, cachexia, unexplained significant weight loss in pts with AIDS.

PRECAUTIONS

Contraindications: **Suspension:** Known or suspected pregnancy, concomitant use with doftilide. **Cautions:** History of thrombophlebitis, diabetes.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first 4 mos. Breast-feeding not recommended. **Pregnancy Category D (tablets), X (suspension). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** Avoid **black cohosh, dong quai** in estrogen-dependent tumors. Avoid **herbs with progestogenic properties (e.g., chasteberry),** may increase adverse effects. **FOOD:** None known. **LAB VALUES:** May alter serum thyroid, hepatic function tests, PT, HDL, total cholesterol, triglycerides. May increase LDL.

AVAILABILITY (Rx)

Oral Suspension: 40 mg/ml (Megace), 125 mg/ml (Megace ES). **Tablets (Megace):** 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Store tablets, oral suspension at room temperature. • Shake suspension well before use. • Oral suspension compatible with water, orange juice, apple juice. • Administer without regard to food.

INDICATIONS/ROUTES/DOSAGE

Palliative Treatment of Advanced Breast Cancer

PO: ADULTS, ELDERLY: 160 mg/day in 4 equally divided doses.

Palliative Treatment of Advanced Endometrial Carcinoma

PO: ADULTS, ELDERLY: 40–320 mg/day in divided doses. **Maximum:** 800 mg/day in 1–4 divided doses.

Anorexia, Cachexia, Weight Loss

PO *(Megace)*: ADULTS, ELDERLY: 800 mg (20 ml)/day.

PO *(Megace ES)*: ADULTS, ELDERLY: 625 mg/day.

SIDE EFFECTS

Frequent: Weight gain secondary to increased appetite. **Occasional:** Nausea, breakthrough menstrual bleeding, backache, headache, breast tenderness, carpal tunnel syndrome. **Rare:** Feeling of coldness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombophlebitis, pulmonary embolism occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy before initiating therapy (Pregnancy Category D [tablets]; X [suspension]). Provide support to pt, family, recognizing this drug is palliative, not curative.

INTERVENTION/EVALUATION

Monitor for tumor response. Monitor pt weight, caloric intake (appetite stimulant).

PATIENT/FAMILY TEACHING

• Contraception is imperative. • Report lower leg (calf) pain, difficulty breathing,

vaginal bleeding. • May cause headache, nausea, vomiting, breast tenderness, backache.

meloxicam

TOP 200

mel-**ox**-ih-kam
(Apo-Meloxicam, Mobic, Novo-Meloxicam)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, GI perforation.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: Anti-inflammatory, analgesic (see p. 128C).

ACTION

Produces analgesic, anti-inflammatory effects by inhibiting prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (analgesic)	30 min	4–5 hrs	N/A

Well absorbed after PO administration. Protein binding: 99%. Metabolized in liver. Eliminated in urine, feces. Not removed by hemodialysis. **Half-life:** 15–20 hrs.

USES

Relief of signs/symptoms of osteoarthritis, rheumatoid arthritis (RA). Treatment of juvenile rheumatoid arthritis (JRA).

PRECAUTIONS

Contraindications: History of asthma, urticaria with NSAIDs, perioperative pain in setting of CABG surgery. **Cautions:** Renal/hepatic impairment, asthma, coagulation disorders, history of GI disease. Concurrent use of anticoagulants.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C (D if used in third trimester or near delivery).** **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment. More susceptible to GI toxicity; lower dosage recommended.

INTERACTIONS

DRUG: May decrease antihypertensive effects of **ACE inhibitors.** May increase risk of nephrotoxicity with **cyclosporine.** **Aspirin** may increase risk of epigastric distress (heartburn, indigestion). **Warfarin, aspirin** may increase risk of bleeding. May increase concentration, risk of toxicity of **lithium.** **HERBAL:** **Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, green tea, red clover, SAMe** may increase antiplatelet activity, risk of bleeding. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, AST, ALT.

AVAILABILITY (Rx)

Oral Suspension: 7.5 mg/5 ml. **Tablets:** 7.5 mg, 15 mg.

ADMINISTRATION/HANDLING

PO

• Give with food or milk to minimize GI irritation. Shake oral suspension gently before administering.

INDICATIONS/ROUTES/DOSAGE

Osteoarthritis, Rheumatoid Arthritis (RA)
PO: ADULTS, ELDERLY: Initially, 7.5 mg/day. **Maximum:** 15 mg/day (7.5 mg for pts on dialysis).

Juvenile Rheumatoid Arthritis (JRA)
PO: CHILDREN, 2 YRS AND OLDER: 0.125 mg/kg once daily. **Maximum:** 7.5 mg.

SIDE EFFECTS

Frequent (9%–7%): Dyspepsia, headache, diarrhea, nausea. **Occasional (4%–3%):** Dizziness, insomnia, rash, pruritus, flatu-

lence, constipation, vomiting. **Rare (less than 2%):** Drowsiness, urticaria, photosensitivity, tinnitus.

ADVERSE EFFECTS/ TOXIC REACTIONS

In those treated chronically, peptic ulcer, GI bleeding, gastritis, severe hepatic reaction (jaundice), nephrotoxicity (hematuria, dysuria, proteinuria), severe hypersensitivity reaction (bronchospasm, angioedema) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Monitor CBC, hepatic/renal function tests. Assess skin for petechiae. Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Take with food, milk to reduce GI upset. • Inform physician of tinnitus, persistent abdominal pain/cramping, severe nausea, vomiting, difficulty breathing, unusual bruising or bleeding, rash, peripheral edema, chest pain, palpitations.

melphalan

HIGH ALERT

mel-fah-lan
(Alkeran, Alkeran IV)

BLACK BOX ALERT Myelosuppression is common. Potentially mutagenic, leukemogenic. Hypersensitivity noted with IV administration. Must be administered by certified chemotherapy personnel.

Do not confuse Alkeran with Leukeran or Myleran, or melphalan with Mephyton or Myleran.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic (see p. 85C).

ACTION

Inhibits protein synthesis primarily by cross-linking strands of DNA, RNA. Cell cycle–phase nonspecific. **Therapeutic Effect:** Disrupts nucleic acid function, producing cell death.

PHARMACOKINETICS

Oral administration is highly variable. Incomplete intestinal absorption, variable first-pass metabolism, rapid hydrolysis may result. Protein binding: 60%–90%. Extensively metabolized in blood. Eliminated from plasma primarily by chemical hydrolysis. Partially excreted in feces; minimal elimination in urine. **Half-life: PO:** 1–1.25 hrs. **IV:** 1.5 hrs.

USES

Treatment of nonresectable epithelial ovarian carcinoma, multiple myeloma. **OFF-LABEL:** Treatment of breast, endometrial, testicular carcinoma; chronic myelocytic leukemia, Hodgkin's lymphoma, malignant melanoma, neuroblastoma, rhabdomyosarcoma, induction regimen for bone marrow and stem cell transplantation.

PRECAUTIONS

Contraindications: None known. **Cautions:** Leukocyte count less than 3,000/mm^3 or platelet count less than 100,000/mm^3, bone marrow suppression, renal impairment, pregnancy, prior chemotherapy or irradiation.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Alkeran IV): 50 mg. **Tablets (Alkeran):** 2 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 50-mg vial with diluent supplied by manufacturer to yield 5 mg/ml solution. • Further dilute with 0.9% NaCl to final concentration not exceeding 0.45 mg/ml.
Rate of Administration • Infuse over 15–30 min at rate not to exceed 10 mg/min (total infusion should be administered within 1 hr).
Storage • Store at room temperature; protect from light. • Once reconstituted, complete administration within 60 min.

PO

• Store tablets in refrigerator; protect from light. • Give on empty stomach (1 hr before or 2 hrs after meals).

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Acyclovir, dexamethasone (Decadron), famotidine (Pepcid), furosemide (Lasix), lorazepam (Ativan), morphine.

INDICATIONS/ROUTES/DOSAGE

Ovarian Carcinoma

PO: ADULTS, ELDERLY: 0.2 mg/kg/day for 5 successive days. Repeat at 4- to 5-wk intervals.

Multiple Myeloma

PO: ADULTS: Initially, 6 mg once a day for 2–3 wks, followed by up to 4 wks rest, then maintenance dose of 2 mg daily; or 0.15 mg/kg/day for 7 days with 2–6 wks rest, then maintenance dose of 0.05 mg/kg/day; or 0.25 mg/kg/day for 4 days, repeat at 4- to 6-wk intervals.
IV: ADULTS: 16 mg/m^2/dose every 2 wks for 4 doses, then repeat monthly according to protocol.

Dosage in Renal Impairment

PO, IV: BUN LEVEL GREATER THAN 30 MG/DL: Decrease melphalan dosage by 50%. **SERUM CREATININE LEVEL GREATER THAN 1.5 MG/DL:** Decrease melphalan dosage by 50%.

SIDE EFFECTS

Frequent: Nausea, vomiting (may be severe with large dose). **Occasional:** Diarrhea, stomatitis, rash, pruritus, alopecia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression manifested as hematologic toxicity (principally leukopenia, thrombocytopenia, and, to lesser extent, anemia, pancytopenia, agranulocytosis). Leukopenia may occur as early as 5 days after drug initiation. WBC, platelet counts return to normal during 5th wk after therapy, but leukopenia, thrombocytopenia may last more than 6 wks after discontinuing drug. Hyperuricemia noted by hematuria, crystalluria, flank pain.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC weekly. Dosage may be decreased or discontinued if WBC falls below 3,000/mm^3 or platelet count falls below 100,000/mm^3. Antiemetics may be effective in preventing/treating nausea, vomiting.

INTERVENTION/EVALUATION

Monitor CBC with diffferential, platelet count, serum electrolytes, Hgb. Monitor

M

for stomatitis. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness), signs of hyperuricemia (hematuria, flank pain). Avoid IM injections, rectal temperatures, other traumas that may induce bleeding.

PATIENT/FAMILY TEACHING

• Increase fluid intake (may protect against hyperuricemia). • Maintain fastidious oral hygiene. • Alopecia is reversible, but new hair growth may have different color, texture. • Avoid crowds, those with infections. • Inform physician if fever, shortness of breath, cough, sore throat, bleeding, bruising occurs.

memantine

TOP 200

meh-**man**-teen
(Apo-Memantine, Ebixa, Namenda, Namenda XR)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Neurotransmitter inhibitor. **CLINICAL:** Anti-Alzheimer's agent.

ACTION

Decreases effects of glutamate, the principal excitatory neurotransmitter in the brain. Persistent CNS excitation by glutamate is thought to cause symptoms of Alzheimer's disease. **Therapeutic Effect:** May inhibit clinical deterioration in moderate to severe Alzheimer's disease.

PHARMACOKINETICS

Rapidly, completely absorbed after PO administration. Protein binding: 45%. Undergoes little metabolism; most of dose is excreted unchanged in urine. **Half-life:** 60–80 hrs.

USES

Treatment of moderate to severe dementia of Alzheimer's type. **OFF-LABEL:** Treatment of mild to moderate vascular disease, mild cognitive impairment.

PRECAUTIONS

Contraindications: None known. **Cautions:** Moderate to severe renal impairment, severe hepatic impairment, cardiovascular disease, seizure disorder, GU conditions that raise urine pH level.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Not prescribed for this pt population. **Elderly:** No age-related precautions noted, but use is not recommended in those with severe renal impairment (creatinine clearance less than 9 ml/min).

INTERACTIONS

DRUG: Urine alkalinizers (e.g., carbonic anhydrase inhibitors, sodium bicarbonate) may decrease renal elimination of memantine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Oral Solution: 2 mg/ml. **Tablets:** 5 mg, 10 mg.

Capsules (Extended-Release [Namenda XR]): 7 mg, 14 mg, 21 mg, 28 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Administer oral solution using syringe provided. Do not dilute or mix with other fluids. • Do not divide, chew, or crush. Swallow extended-release capsules whole. May open capsule and sprinkle on applesauce.

INDICATIONS/ROUTES/DOSAGE

Alzheimer's Disease

PO: ADULTS, ELDERLY (Immediate-Release): Initially, 5 mg once a day. May increase dosage at intervals of at least 1 wk in 5-mg increments to 10 mg/day (5 mg twice a day), then 15 mg/day (5 mg and 10 mg as

separate doses), and finally 20 mg/day (10 mg twice a day). Target dose: 20 mg/day. **(Extended-Release):** Initially, 7 mg once daily. May increase at intervals of at least 7 days in increments of 7 mg. **Maximum:** 28 mg once daily. Switching from immediate-release to extended-release: Begin the day following last dose of immediate release.
10 mg twice a day: 28 mg once daily.
5 mg twice a day: 14 mg once daily.

Dosage in Renal Impairment

	Dosage	
Creatinine Clearance	**Immediate-Release**	**Extended-Release**
30 ml/min or greater	No adjustments	No adjustments
5–29 ml/min	5 mg twice daily	14 mg once daily

SIDE EFFECTS

Occasional (7%–4%): Dizziness, headache, confusion, constipation, hypertension, cough. **Rare (3%–2%):** Back pain, nausea, fatigue, anxiety, peripheral edema, arthralgia, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess cognitive, behavioral, functional deficits of pt. Assess renal function.

INTERVENTION/EVALUATION

Monitor cognitive, behavioral, functional status of pt. Monitor urine pH (alterations of urine pH toward the alkaline condition may lead to accumulation of the drug with possible increase in side effects). Monitor BUN, creatinine clearance lab values.

PATIENT/FAMILY TEACHING

• Do not reduce or stop medication; do not increase dosage without physician direction. • Ensure adequate fluid intake. • If therapy is interrupted for several days, restart at lowest dose, titrate to current dose at minimum of 1-wk intervals. • Local chapter of Alzheimer's Disease Association can provide a guide to services.

meperidine

HIGH ALERT

me-**per**-ih-deen
(Demerol)

Do not confuse Demerol with Demulen, Desyrel, Dilaudid, or Pamelor, or meperidine with meprobamate.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Narcotic agonist **(Schedule II). CLINICAL:** Opiate analgesic (see p. 142C).

ACTION

Binds to opioid receptors within CNS. **Therapeutic Effect:** Alters pain perception, emotional response to pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15 min	120 min	2–4 hrs
IV	Less than 5 min	5–7 min	2–3 hrs
IM	10–15 min	30–50 min	2–4 hrs
Subcutaneous	10–15 min	60 min	2–4 hrs

Variably absorbed from GI tract; absorption erratic and highly variable after IM administration. Protein binding: 15%–30%. Widely distributed. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2.4–4 hrs; metabolite, 15–30 hrs (increased in hepatic impairment/disease).

USES

◀ALERT▶ Not considered an opioid of choice for treatment of pain. Relief of moderate to severe pain. **OFF-LABEL:** Reduces postop shivering. Reduces rigors from amphotericin.

M

PRECAUTIONS

Contraindications: Use of MAOIs within 14 days. **Cautions:** Renal/hepatic impairment, elderly, debilitated, supraventricular tachycardia, cor pulmonale, history of seizures, acute abdominal conditions, increased intracranial pressure (ICP), respiratory abnormalities, sickle cell anemia, Addison's disease, hypothyroidism, prostatic hypertrophy, urethral stricture, pheochromocytoma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Respiratory depression may occur in neonate if mother received opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms in neonate (irritability, excessive crying, tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures). **Pregnancy Category B (D if used for prolonged periods or at high dosages at term). Children:** Paradoxical excitement may occur. Those younger than 2 yrs more susceptible to respiratory depressant effects. **Elderly:** More susceptible to respiratory depressant effects. Age-related renal impairment may increase risk of urinary retention.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS, respiratory depression, hypotension. **MAOIs** may produce severe, sometimes fatal reaction; meperidine use is contraindicated. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression, sedation. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase. **Therapeutic serum level:** 100–550 ng/ml; **toxic serum level:** greater than 1,000 ng/ml.

AVAILABILITY (Rx)

Injection, Solution: 25 mg/ml, 50 mg/ml, 75 mg/ml, 100 mg/ml. **Injection, Solution (Patient-Controlled Analgesia [PCA]):** 10 mg/ml. **Syrup (Demerol):** 50 mg/5 ml. **Tablets (Demerol):** 50 mg, 100 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • May give undiluted or dilute in D_5W, dextrose-saline combination (2.5%, 5%, 10% dextrose in water—0.45%, 0.9% NaCl), Ringer's, lactated Ringer's, molar sodium lactate diluent for IV injection or infusion.

Rate of Administration • IV dosage must always be administered very slowly, over 2–3 min. • Rapid IV increases risk of severe adverse reactions (chest wall rigidity, apnea, peripheral circulatory collapse, anaphylactoid effects, cardiac arrest).

Storage • Store at room temperature.

IM, Subcutaneous

◀ALERT▶ IM preferred over subcutaneous route (subcutaneous produces pain, local irritation, induration). • Administer slowly. • Those with circulatory impairment at higher risk for overdosage due to delayed absorption of repeated administration.

PO

• Give without regard to meals. • Dilute syrup in glass of water (prevents anesthetic effect on mucous membranes).

IV INCOMPATIBILITIES

Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), cefoperazone (Cefobid), doxorubicin liposomal (Doxil), furosemide (Lasix), heparin, idarubicin (Idamycin), nafcillin (Nafcil), phenytoin (Dilantin), sodium bicarbonate.

IV COMPATIBILITIES

Atropine, bumetanide (Bumex), diltiazem (Cardizem), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), glycopyrrolate (Robinul), hydroxyzine (Vistaril), insulin, lidocaine, lipids, magnesium, midazolam (Versed),

oxytocin (Pitocin), potassium, total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Analgesia

◀ALERT▶ Avoid use in elderly.

PO, IV, IM, Subcutaneous: ADULTS: 50–150 mg/dose q3–4h as needed. **CHILDREN:** 1–1.5 mg/kg/dose q3–4h as needed. **Maximum dose:** 100 mg.

Dosage in Renal Impairment

Avoid use in renal impairment.

SIDE EFFECTS

Frequent: Sedation, hypotension (including orthostatic hypotension), diaphoresis, facial flushing, dizziness, nausea, vomiting, constipation. **Occasional:** Confusion, arrhythmias, tremors, urinary retention, abdominal pain, dry mouth, headache, irritation at injection site, euphoria, dysphoria. **Rare:** Allergic reaction (rash, pruritus), insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. **Antidote:** 0.4 mg naloxone (Narcan). Tolerance to analgesic effect, physical dependence may occur with repeated use.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pt should be in recumbent position before drug is administered by parenteral route. Assess onset, type, location, duration of pain. Obtain vital signs before giving medication. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician. Effect of medication is reduced if full pain recurs before next dose.

INTERVENTION/EVALUATION

Monitor vital signs 15–30 min after subcutaneous/IM dose, 5–10 min after IV dose (monitor for hypotension, change in rate/quality of pulse). Monitor pain level, sedation response. Monitor daily pattern of bowel activity, stool consistency; avoid constipation. Check for adequate voiding. Initiate deep breathing, coughing exercises, particularly in pts with pulmonary impairment. **Therapeutic serum level:** 100–550 ng/ml; **toxic serum level:** greater than 1,000 ng/ml.

PATIENT/FAMILY TEACHING

• Medication should be taken before pain fully returns, within ordered intervals. • Discomfort may occur with injection. • Change positions slowly to avoid orthostatic hypotension. • Increase fluids, bulk to prevent constipation. • Tolerance, dependence may occur with prolonged use of high doses. • Avoid alcohol, other CNS depressants. • Avoid tasks requiring mental alertness, motor skills until response to drug is established.

M

meropenem

mer-oh-**pen**-em

(Merrem IV)

Do not confuse meropenem with doripenem, ertapenem, or imipenem.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbapenem. **CLINICAL:** Antibiotic.

ACTION

Binds to penicillin-binding proteins. Inhibits bacterial cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

After IV administration, widely distributed into tissues and body fluids, including CSF. Protein binding: 2%. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 1 hr.

USES

Treatment of multidrug-resistant infections; meningitis in children 3 mos and older; intra-abdominal infections; complicated skin/skin structure infections caused by susceptible *S. aureus, S. pyogenes, S. agalactiae, S. pneumoniae, H. influenzae, N. meningitidis, M. catarrhalis, E. coli, Klebsiella, Enterobacter, Serratia, P. aeruginosa, B. fragilis*. **OFF-LABEL:** Lower respiratory tract infections, febrile neutropenia, gynecologic/obstetric infections, sepsis, acute pulmonary exacerbation in cystic fibrosis, urinary tract infections, meningitis (adults), pneumonia.

PRECAUTIONS

Contraindications: Anaphylactic reaction to other beta-lactams. **Cautions:** Hypersensitivity to penicillins, cephalosporins, other allergens; renal impairment; CNS disorders, particularly with history of seizures; concurrent use with valproic acid.

M

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 3 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, LDH, AST, ALT, bilirubin. May decrease Hgb, Hct, WBC.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg, 1 g.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 500 mg with 10 ml Sterile Water for Injection, 0.9% NaCl, or D_5W to provide concentration of 50 mg/ml. • Shake to dissolve until clear. • May further dilute with 0.9% NaCl or D_5W to a concentration of 1–20 mg/ml.

Rate of Administration • May give by IV push or IV intermittent infusion (piggyback). • If administering as IV intermittent infusion (piggyback), give over 15–30 min (at a concentration of 1–20 mg/ml); if administered by IV push, give over 3–5 min (at a concentration not greater than 50 mg/ml).

Storage • Store vials at room temperature. • After reconstitution of vials with 0.9% NaCl, stable for 2 hrs at room temperature or 18 hrs if refrigerated (with D_5W, stable for 1 hr at room temperature, 8 hrs if refrigerated). IV infusion with 0.9% NaCl stable for 4 hrs at room temperature or 24 hrs if refrigerated (with D_5W, 1 hr at room temperature or 4 hrs if refrigerated).

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B (Fungizone), diazepam (Valium), doxycycline (Vibramycin), metronidazole (Flagyl), ondansetron (Zofran).

IV COMPATIBILITIES

Dexamethasone (Decadron), dobutamine (Dobutrex), dopamine (Intropin), furosemide (Lasix), heparin, lipids, magnesium, morphine.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV: ADULTS, ELDERLY: 1.5–6 g/day in divided doses q8h. **CHILDREN 3 MOS AND OLDER:** 30–120 mg/kg/day in divided doses q8h. **Maximum:** 6 g/day. **NEONATES:** 20 mg/kg/dose q8–12h.

Meningitis

IV: ADULTS, ELDERLY, CHILDREN WEIGHING 50 KG OR MORE: 2 g q8h. **CHILDREN 3 MOS AND OLDER WEIGHING LESS THAN 50 KG:** 40 mg/kg q8h. **Maximum:** 2 g/dose.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine Clearance	Dosage	Interval
26–49 ml/min	Normal dose (1,000 mg)	q12h
10–25 ml/min	50% of normal dose	q12h
Less than 10 ml/min	50% of normal dose	q24h
Hemodialysis:	500 mg	q24h
Peritoneal dialysis:	Recommended dose (based on indication)	q24h
Continuous renal replacement therapy		
Continuous venovenous hemofiltration	1 gram then 500 mg	q8h OR
	1 gram	q12h
Continuous venovenous hemodialysis/ continuous venovenous hemodiafiltration	1 gram then 500 mg	q6–8h OR
	1 gram	q8–12h

SIDE EFFECTS

Frequent (5%–3%): Diarrhea, nausea, vomiting, headache, inflammation at injection site. **Occasional (2%):** Oral candidiasis, rash, pruritus. **Rare (less than 2%):** Constipation, glossitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Anaphylactic reactions have been reported. Seizures may occur in those with CNS disorders (e.g., brain lesions, history of seizures), bacterial meningitis, renal impairment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Inquire about history of seizures.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor for nausea, vomiting. Evaluate for inflammation at IV injection site. Assess skin for rash. Evaluate hydration status. Monitor I&O, renal/hepatic function tests. Check mental status; be alert to tremors, possible seizures. Assess temperature, B/P twice a day, more often if necessary. Monitor serum electrolytes, esp. potassium.

PATIENT/FAMILY TEACHING

- Inform physician of persistent diarrhea, abdominal cramps, fever.

mesalamine (5-aminosalicylic acid, 5-ASA)

TOP 200

me-**sal**-a-meen

(Apriso, Asacol, Asacol HD, Canasa, Lialda, Mesasal, Pentasa, Rowasa, Salofalk, sfRowasa)

Do not confuse Asacol with Os-Cal, Lialda with Aldara, or mesalamine with megestrol, memantine, or methenamine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Salicylic acid derivative. **CLINICAL:** Anti-inflammatory agent.

ACTION

Locally inhibits arachidonic acid metabolite production (increased in chronic inflammatory bowel disease). **Therapeutic Effect:** Blocks prostaglandin production, diminishes inflammation in colon.

PHARMACOKINETICS

Poorly absorbed from colon. Moderately absorbed from GI tract. Metabolized in liver to active metabolite. Unabsorbed portion eliminated in feces; absorbed portion excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 0.5–1.5 hrs; metabolite, 5–10 hrs.

USES

PO: Treatment, maintenance of remission of mild to moderate active ulcerative

M

colitis. **Rectal:** Treatment of active mild to moderate distal ulcerative colitis, proctosigmoiditis or proctitis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Sulfasalazine sensitivity, active peptic ulcer, pyloric stenosis, pericarditis, myocarditis, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None known. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT, bilirubin.

M

AVAILABILITY (Rx)

Rectal Suspension (Rowasa, sfRowasa): 4 g/60 ml. **Suppositories (Canasa):** 1 g.

Capsules (Controlled-Release [Pentasa]): 250 mg, 500 mg. **Capsules (Extended-Release [Apriso]):** 375 mg. **Tablets (Delayed-Release [Asacol]):** 400 mg. **(Asacol HD):** 800 mg. **(Lialda):** 1.2 g.

ADMINISTRATION/HANDLING

◄ALERT► Store rectal suspension, suppository, oral forms at room temperature.

PO

• Have pt swallow whole; do not break outer coating of tablet. • Give without regard to food. **Apriso:** Do not administer with antacids. **Lialda:** Administer once daily with meal.

Rectal

• Shake bottle well. • Instruct pt to lie on left side with lower leg extended, upper leg flexed forward. • Knee-chest position may also be used. • Insert applicator tip into rectum, pointing toward umbilicus. • Squeeze bottle steadily until contents are emptied. • Store suppositories at room temperature. Do not refrigerate.

INDICATIONS/ROUTES/DOSAGE

Treatment of Ulcerative Colitis

PO *(Capsule [Pentasa])*: ADULTS, ELDERLY: 1 g 4 times a day. **CHILDREN:** 30–60 mg/kg/day divided q6–12h.

PO *(Tablet [Asacol])*: ADULTS, ELDERLY: 800 mg 3 times a day. **CHILDREN:** 30–60 mg/kg/day divided q8–12h.

PO *(Tablet [Lialda])*: ADULTS, ELDERLY: 2.4–4.8 g once daily.

Maintenance of Remission in Ulcerative Colitis

PO *(Capsule [Pentasa])*: ADULTS, ELDERLY: 1 g 4 times a day.

PO *(Capsule, Extended-Release [Apriso])*: ADULTS, ELDERLY: 1,500 mg once daily in the morning.

PO *(Tablet [Asacol])*: ADULTS, ELDERLY: 1.6 g/day in divided doses.

PO *(Tablet [Lialda])*: 2.4 g/day with food.

Distal Ulcerative Colitis, Proctosigmoiditis, Proctitis

Rectal *(Retention Enema)*: ADULTS, ELDERLY: 60 ml (4 g) at bedtime; retained overnight for approximately 8 hrs for 3–6 wks.

Rectal *(1 G Suppository)*: ADULTS, ELDERLY: Once daily at bedtime. Continue therapy for 3–6 wks.

◄ALERT► Suppository should be retained for 1–3 hrs for maximum benefit.

SIDE EFFECTS

Mesalamine is generally well tolerated, with only mild, transient effects. **Frequent (greater than 6%): PO:** Abdominal cramps/pain, diarrhea, dizziness, headache, nausea, vomiting, rhinitis, unusual fatigue. **Rectal:** Abdominal/stomach cramps, flatulence, headache, nausea. **Occasional (6%–2%): PO:** Hair loss, decreased appetite, back/joint pain, flatulence, acne. **Rectal:** Hair loss. **Rare (less than 2%): Rectal:** Anal irritation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Sulfite sensitivity may occur in susceptible pts, manifested as cramping, headache, diarrhea, fever, rash, urticaria, pruritus, wheezing. Discontinue drug immediately. Hepatitis, pancreatitis, pericarditis occur rarely with oral forms.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline chemistries, esp. BUN, creatinine, hepatic function tests. Assess for abdominal pain, discomfort.

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency; record time of evacuation. Assess for abdominal disturbances. Assess skin for rash, urticaria. Discontinue medication if rash, fever, cramping, diarrhea occurs.

PATIENT/FAMILY TEACHING

- Report rash, fever, abdominal pain, significant diarrhea to physician.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- May discolor urine yellow-brown.
- Suppositories stain fabrics.

mesna

mess-na
(Mesnex, Uromitexan ✱)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cytoprotective agent. **CLINICAL:** Antineoplastic adjunct, antidote.

ACTION

Binds with, detoxifies urotoxic metabolites of ifosfamide/cyclophosphamide. **Therapeutic Effect:** Inhibits ifosfamide/cyclophosphamide-induced hemorrhagic cystitis.

PHARMACOKINETICS

Rapidly metabolized after IV administration to mesna disulfide, which is reduced to mesna in kidneys. Protein binding: 69%–75%. Excreted in urine. **Half-life:** 24 min; metabolite: 72 min.

USES

Detoxifying agent used as protectant against hemorrhagic cystitis induced by ifosfamide. **OFF-LABEL:** Reduce incidence of cyclophosphamide-induced hemorrhagic cystitis with high-dose cyclophosphamide.

PRECAUTIONS

Contraindications: None known. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Information not available.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May produce false-positive test result for urinary ketones.

AVAILABILITY (Rx)

Injection Solution: 100 mg/ml. **Tablets:** 400 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • May dilute with D_5W or 0.9% NaCl to concentration of 1–20 mg/ml. • May add to solutions containing ifosfamide or cyclophosphamide.
Rate of Administration • Administer by IV infusion over 15–30 min or by continuous infusion.
Storage • Store parenteral form at room temperature. • After dilution, in 0.9% NaCl or D_5W, stable for 48 hrs at room temperature (solutions of mesna and cyclophosphamide in D_5W stable for 48 hrs

if refrigerated or 6 hrs at room temperature). Discard unused medication.

PO

• Administer orally in either tablet formulation or parenteral solution. • Dilute mesna solution before PO administration to decrease sulfur odor. Can be diluted (1:1 to 1:10) in carbonated cola drinks, fruit juices, milk.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cisplatin (Platinol).

IV COMPATIBILITIES

Allopurinol (Aloprim), docetaxel (Taxotere), doxorubicin (Adriamycin), etoposide (VePesid), gemcitabine (Gemzar), granisetron (Kytril), lipids, methotrexate, ondansetron (Zofran), paclitaxel (Taxol), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

Prevention of Hemorrhagic Cystitis in Pts Receiving Ifosfamide

IV: ADULTS, ELDERLY: 20% of ifosfamide dose at time of ifosfamide administration and 4 and 8 hrs after each dose of ifosfamide. Total dose: 60% of ifosfamide dosage. Range: 60%–160% of the daily ifosfamide dose.

IV/PO: 100% of ifosfamide dose, given as 20% at start time followed by 40% given orally 2 and 6 hrs after start of ifosfamide.

SIDE EFFECTS

Frequent (greater than 17%): Altered taste, soft stools. **Large doses:** Diarrhea, myalgia, headache, fatigue, nausea, hypotension, allergic reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematuria occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

◀ALERT▶ Each dose must be administered with ifosfamide therapy.

INTERVENTION/EVALUATION

Assess morning urine specimen for hematuria. If such occurs, dosage reduction or discontinuation may be necessary. Monitor daily pattern of bowel activity, stool consistency; record time of evacuation. Monitor B/P for hypotension.

PATIENT/FAMILY TEACHING

• Inform physician if headache, myalgia, nausea occurs.

metaxalone

meh-**tax**-ah-lone
(Skelaxin)
Do not confuse metaxalone with mesalamine or metolazone, or Skelaxin with Robaxin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Autonomic agent. **CLINICAL:** Skeletal muscle relaxant (see p. 153C).

ACTION

Skeletal muscle relaxant action may be related to its CNS depressant effects. Does not directly relax skeletal muscle, motor end plate, or nerve fiber. **Therapeutic Effect:** Relieves musculoskeletal pain.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Extensively distributed in tissues. Converts to metabolites. Metabolized in liver; excreted in urine. **Half-life:** 9 hrs.

USES

Adjunct to rest and physical therapy to decrease musculoskeletal pain, muscle spasm associated with strains, sprains, other muscle injuries.

PRECAUTIONS

Contraindications: Severe renal/hepatic impairment, drug-induced anemia, he-

molytic anemia. **Cautions:** Mild to moderate hepatic/renal impairment, elderly, debilitated pts.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those 12 yrs and younger. **Elderly:** May be more susceptible to CNS effects.

INTERACTIONS

DRUG: CNS depressants, including **alcohol, benzodiazepines, opioids, tricyclic antidepressants,** may increase sedative effects. **HERBAL: St. John's wort, kava kava, gotu kola, valerian** may increase CNS depression. **FOOD: High-fat meal** may increase concentration. **LAB VALUES:** May decrease WBC, RBC, platelet count.

AVAILABILITY (Rx)

Tablets: 800 mg.

ADMINISTRATION/HANDLING

• Give without regard to food. • May crush, chew, break tablets.

INDICATIONS/ROUTES/DOSAGE

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 800 mg 3–4 times daily.

SIDE EFFECTS

Occasional: Dizziness, drowsiness, headache, irritability, nausea, nervousness, dyspepsia (indigestion, heartburn, epigastric distress), vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe allergic reaction (rash, pruritus, urticaria, circumoral swelling). Overdosage produces progressive sedation, hypnosis, respiratory failure, but emetic action begins 15–30 min after increasingly higher doses are taken. Leukopenia, hemolytic anemia, hepatobiliary abnormalities occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type, location, duration of musculoskeletal pain, inflammation. Inspect appearance of affected joints for immobility, stiffness, swelling.

INTERVENTION/EVALUATION

Assist with ambulation at all times. Evaluate for therapeutic response: relief of pain, stiffness, swelling; improved mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Medication intended for short-term use (3 wks). • If no improvement noted, contact physician.

metformin

TOP 200 HIGH ALERT

met-**for**-min

(Apo-Metformin, Fortamet, Glucophage, Glucophage XR, Glumetza, Glycon, Novo-Metformin, Riomet)

BLACK BOX ALERT Lactic acidosis occurs very rarely, but mortality rate is 50%. Risk increases with degree of renal impairment, pt's age, those with diabetes, unstable or acute CHF.

Do not confuse Glucophage with Glucotrol, or metformin with metronidazole.

FIXED-COMBINATION(S)

Actoplus Met: metformin/pioglitazone (an antidiabetic): 500 mg/15 mg, 850 mg/15 mg. **Avandamet:** metformin/rosiglitazone (an antidiabetic): 500 mg/1 mg, 500 mg/2 mg, 500 mg/4 mg, 1,000 mg/2 mg, 1,000 mg/4 mg. **Glucovance:** metformin/glyburide (an antidiabetic): 250 mg/1.25 mg, 500 mg/2.5 mg, 500 mg/5 mg. **Janumet, Janumet XR:** metformin/sitagliptin (an antidiabetic): 500 mg/50 mg,

1,000 mg/50 mg. **Jentadueto:** metformin/linagliptin (an antidiabetic): 500 mg/2.5 mg; 1,000 mg/2.5 mg. **Kombiglyze XR:** metformin/saxagliptin (an antidiabetic): 500 mg/5 mg, 1,000 mg/5 mg, 1,000 mg/2.5 mg. **Metaglip:** metformin/glipizide (an antidiabetic): 250 mg/2.5 mg, 500 mg/2.5 mg, 500 mg/5 mg. **PrandiMet:** metformin/repaglinide (an antidiabetic): 500 mg/1 mg, 500 mg/2 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihyperglycemic. **CLINICAL:** Antidiabetic (see p. 43C).

ACTION

Decreases hepatic production of glucose. Decreases absorption of glucose, improves insulin sensitivity. **Therapeutic Effect:** Improves glycemic control, stabilizes/decreases body weight, improves lipid profile.

PHARMACOKINETICS

Slowly, incompletely absorbed after PO administration. Food delays, decreases extent of absorption. Protein binding: Negligible. Primarily distributed to intestinal mucosa, salivary glands. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 9–17 hrs.

USES

Management of type 2 diabetes mellitus as monotherapy or concomitantly with oral sulfonylurea or insulin. **OFF-LABEL:** Polycystic ovarian syndrome, gestational diabetes mellitus. Prevention of type 2 diabetes.

PRECAUTIONS

◀ALERT▶ Lactic acidosis is a rare but potentially severe consequence of metformin therapy. Withhold in pts with conditions that may predispose to lactic acidosis (e.g., hypoxemia, dehydration, hypoperfusion, sepsis).

Contraindications: Renal disease/dysfunction; abnormal creatinine clearance from any cause including MI, acute CHF, septicemia, or shock; acute or chronic metabolic acidosis. **Cautions:** Respiratory impairment, CHF, dehydration, impaired hepatic function, excessive acute/chronic alcohol intake.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Insulin is drug of choice during pregnancy. Distributed in breast milk in animals. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment or peripheral vascular disease may require dosage adjustment or discontinuation.

INTERACTIONS

DRUG: **Furosemide** may increase concentration. **Cationic medications (e.g., digoxin, morphine, quinine, ranitidine, vancomycin)** may increase concentration/effects. **Contrast agents** may increase risk of metformin-induced lactic acidosis, acute renal failure (discontinue metformin 24–48 hrs prior to and up to 72 hrs after contrast exposure). **HERBAL:** **Garlic** may cause hypoglycemia. **FOOD:** None known. **LAB VALUES:** May alter cholesterol, LDL, triglycerides, HDL.

AVAILABILITY (Rx)

Oral Solution (Riomet): 100 mg/ml. **Tablets (Glucophage):** 500 mg, 850 mg, 1,000 mg. **Tablets (Extended-Release):** 500 mg (Fortamet, Glucophage XR, Glumetza), 750 mg (Glucophage XR), 1,000 mg (Fortamet, Glumetza).

ADMINISTRATION/HANDLING

PO

• Swallow whole. Do not crush, break, or chew extended-release tablets. • Give with meals (to decrease GI upset). Give Fortamet with glass of water.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Allow 1–2 wks between dose titrations.

Diabetes Mellitus

PO ***(Immediate-Release Tablets, Solution)*****: ADULTS, ELDERLY:** Initially, 500 mg twice a day or 850 mg once daily. Maintenance: 1,000–2,550 mg/day in 2–3 divided doses. **Maximum:** 2,550 mg/day. **CHILDREN 10–16 YRS:** Initially, 500 mg twice a day. Maintenance: Titrate in 500-mg increments weekly. **Maximum:** 2,000 mg/day.

PO ***(Extended-Release Tablets [Glucophage XR])*****: ADULTS, ELDERLY:** Initially, 500 mg once daily. May increase by 500 mg at 1-wk intervals. Maintenance: 1,000–2,000 mg daily. **Maximum:** 2,000 mg/day.

PO ***(Extended-Release Tablets [Glumetza])*****: ADULTS, ELDERLY:** Initially, 1,000 mg once daily. May increase by 500 mg at 1-wk intervals. **Maximum:** 2,000 mg/day. ***Fortamet*****:** Initially, 500–1,000 mg once daily. May increase by 500 mg at 1-wk intervals. **Maximum:** 2,500 mg/day.

Dosage in Renal Impairment

Contraindicated in pts with serum creatinine greater than 1.5 mg/dl (males) or greater than 1.4 mg/dl (females). Clinically not recommended in pts with creatinine clearance less than 60–70 ml/min.

SIDE EFFECTS

Occasional (greater than 3%): GI disturbances (diarrhea, nausea, vomiting, abdominal bloating, flatulence, anorexia) that are transient and resolve spontaneously during therapy. **Rare (3%–1%):** Unpleasant/metallic taste that resolves spontaneously during therapy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Lactic acidosis occurs rarely (0.03 cases/1,000 pts) but is a serious and often fatal (50%) complication. Lactic acidosis is characterized by increase in blood lactate levels (greater than 5 mmol/L), decrease in blood pH, electrolyte disturbances. Symptoms include unexplained hyperventilation, myalgia, malaise, drowsiness. May advance to cardiovascular collapse (shock), acute CHF, acute MI, prerenal azotemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline glucose, renal function tests.

INTERVENTION/EVALUATION

Monitor fasting serum glucose, Hgb A_{1c}, renal function, Hgb, Hct, RBC. Monitor folic acid, renal function tests for evidence of early lactic acidosis. If pt is on concurrent oral sulfonylureas, assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, numbness in mouth, hunger, diplopia). Be alert to conditions that alter glucose requirements: fever, increased activity, stress, surgical procedure.

PATIENT/FAMILY TEACHING

• Discontinue metformin, contact physician immediately if evidence of lactic acidosis appears (unexplained hyperventilation, muscle aches, extreme fatigue, unusual drowsiness). • Prescribed diet is principal part of treatment; do not skip, delay meals. • Diabetes mellitus requires lifelong control. • Avoid alcohol. • Inform physician if headache, nausea, vomiting, diarrhea persists or skin rash, unusual bruising/bleeding, change in color of urine or stool occurs.

methadone

meth-a-doan
(Dolophine, Metadol, Methadone Disket, Methadone Intensol, Methadose)

BLACK BOX ALERT Potential to prolong QT interval. May cause respiratory depression.

Do not confuse methadone with Mephyton, Metadate CD, Metadate ER, methylphenidate, or morphine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Narcotic agonist **(Schedule II). CLINICAL:** Opioid analgesic (see p. 142C).

ACTION

Binds with opioid receptors within CNS. **Therapeutic Effect:** Alters processes affecting analgesia, emotional response to pain; reduces withdrawal symptoms from other opioid drugs.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–1 hr	1.5–2 hrs	6–8 hrs
IM	10–20 min	1–2 hrs	4–5 hrs
IV	N/A	15–30 min	3–4 hrs

Well absorbed after IM injection. Protein binding: 85%–90%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 7–59 hrs.

USES

Relief of severe pain, detoxification, temporary maintenance treatment of narcotic abstinence syndrome.

PRECAUTIONS

Contraindications: Severe respiratory depression; acute or severe asthma, hypercarbia; paralytic ileus; concurrent use of selegiline. **Caution:** Renal/hepatic impairment, elderly/debilitated, risk for QT prolongation, medications that prolong QT interval, conduction abnormalities, severe volume depletion, cardiovascular disease, depression, suicidal tendencies, history of drug abuse, respiratory disease, biliary tract dysfunction, acute pancreatitis, hypothyroidism, Addison's disease, head injury, increased intracranial pressure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Respiratory depression may occur in neonate if mother received opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms in neonate (irritability, excessive crying, tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures). **Pregnancy Category B (D if used for prolonged periods or at high dosages at term). Children:** Paradoxical excitement may occur. Those younger than 2 yrs more susceptible to respiratory depressant effects. **Elderly:** More susceptible to respiratory depressant effects. Age-related renal impairment may increase risk of urinary retention.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS effects, respiratory depression, hypotension. **CYP3A4 inducers (e.g., carbamazepine, phenobarbital)** may decrease concentration/effects. **CYP3A4 inhibitors (e.g., rifampin, clarithromycin)** may increase methadone levels. **Amiodarone, erythromycin** may prolong QT interval. **MAOIs** may produce severe, sometimes fatal reaction (reduce dose to ¼ of usual methadone dose). **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration/effects. **FOOD: Grapefruit, grapefruit juice** may alter concentration/effects. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection Solution (Dolophine): 10 mg/ml. **Oral Concentrate (Methadone Intensol, Methadose):** 10 mg/ml. **Oral Solution:** 5 mg/5 ml, 10 mg/5 ml. **Tablets (Dispersible [Methadose, Methadone Disket]):** 40 mg. **Tablets (Dolophine, Methadose):** 5 mg, 10 mg.

ADMINISTRATION/HANDLING

IM, Subcutaneous

◀ALERT▶ IM preferred over subcutaneous route (subcutaneous produces pain, local irritation, induration). • Do not use if solution appears cloudy or

contains a precipitate. • Administer slowly. • Those with circulatory impairment experience higher risk of overdosage due to delayed absorption of repeated administration.

PO

• Give without regard to meals. • Oral dose for detoxification and maintenance may be given in fruit juice or water. • Dispersible tablet should not be chewed or swallowed; add to liquid, allow to dissolve before swallowing.

INDICATIONS/ROUTES/DOSAGE

Analgesia

PO: ADULTS, ELDERLY: Initially, 2.5–10 mg q4–12h. **CHILDREN:** 0.1–0.2 mg/kg/dose q4–8h for 2–3 doses then q6–12h as needed. **Maximum dose:** 5–10 mg.

IV, IM, Subcutaneous: ADULTS, ELDERLY: Initially, 2.5 mg q8–12h, then titrate slowly to desired effect. **CHILDREN:** 0.1 mg/kg q4–8h for 2–3 doses, then q4–12h. **Maximum:** 5–8 mg/dose.

Renal/Hepatic Impairment

Creatinine clearance less than 10 ml/min: 50–75% normal dose. Avoid in severe hepatic disease.

Detoxification

PO: ADULTS, ELDERLY: Initially, dose should not exceed 30 mg. An additional 5–10 mg may be provided if withdrawal symptoms have not been suppressed or if symptoms reappear after 2–4 hrs. Total daily dose not to exceed 40 mg. Maintenance range: 80–120 mg/day with titration occurring cautiously. Withdrawal should be less than 10% of the maintenance dose every 10–14 days. **Short-term:** Initially, titrate to 40 mg/day in 2 divided doses. Continue 40-mg dose for 2–3 days. Decrease dose every day or every other day.

SIDE EFFECTS

Frequent: Sedation, decreased B/P (orthostatic hypotension), diaphoresis, facial flushing, constipation, dizziness, nausea, vomiting. **Occasional:** Confusion, urinary retention, palpitations, abdominal cramps, visual changes, dry mouth, headache, decreased appetite, anxiety, insomnia. **Rare:** Allergic reaction (rash, pruritus).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Early sign of toxicity presents as increased sedation after being on a stable dose. Cardiac toxicity manifested as QT prolongation, torsade de pointes. Tolerance to analgesic effect, physical dependence may occur with repeated use. **Antidote:** Naloxone (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess type, location, intensity of pain. **Detoxification:** Assess pt for opioid withdrawal. Pt should be in recumbent position before drug administration by parenteral route. Obtain vital signs before giving medication. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician.

INTERVENTION/EVALUATION

Monitor vital signs 15–30 min after subcutaneous/IM dose, 5–10 min following IV dose. Oral medication is 50% as potent as parenteral. Assess for adequate voiding. Assess for clinical improvement, record onset of relief of pain. Provide support to pt in detoxification program; monitor for withdrawal symptoms.

PATIENT/FAMILY TEACHING

• Methadone may produce drug dependence, has potential for being abused. • Avoid alcohol. • Do not stop taking abruptly after prolonged use. • May cause dry mouth, drowsiness.

M

• Avoid tasks that require alertness, motor skills until response to drug is established. • Report severe drowsiness, respiratory depression.

methocarbamol

meth-oh-**kar**-ba-mal
(Robaxin)
Do not confuse Robaxin with Skelaxin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Autonomic agent, carbamate derivative of guaifenesin. **CLINICAL:** Skeletal muscle relaxant (see p. 153C).

ACTION

Skeletal muscle relaxant action may be related to its CNS depressant effects. Does not directly relax skeletal muscle, motor end plate, or nerve fiber. **Therapeutic Effect:** Relieves musculoskeletal pain.

PHARMACOKINETICS

Extensively distributed in tissues. Protein binding: 46%–50%. Converts to metabolites. Metabolized by dealkylation, hydroxylation; excreted in urine. **Half-life:** 1–2 hrs.

USES

Adjunct to rest and physical therapy for relief of discomfort associated with acute, painful musculoskeletal conditions (e.g., tetanus).

PRECAUTIONS

Contraindications: Renal impairment (injectable formulation). **Cautions:** Myasthenia gravis pts receiving pyridostigmine, hepatic impairment, seizure disorders (injectable formulation).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those 16 yrs and younger. **Elderly:** May be more susceptible to CNS effects.

INTERACTIONS

DRUG: CNS depressants, including **alcohol, benzodiazepines, opioids, tricyclic antidepressants,** may increase sedative effects. May inhibit effect of **pyridostigmine. HERBAL: St. John's wort, valerian, kava kava, gotu kola** may increase CNS depression. **FOOD: High-fat meal** may increase concentration. **LAB VALUES:** May decrease WBC counts.

AVAILABILITY (Rx)

Injection, Solution: 100 mg/ml.

Tablets, Film-Coated: 500 mg, 750 mg.

ADMINISTRATION/HANDLING

IM/IV

(IM) • Maximum of 5 ml can be given into each gluteal region.
(IV) • May give undiluted at maximum rate of 3 ml/min. • May dilute with D_5W or 0.9% NaCl to concentration of 4 mg/ml. • Administer in recumbent position and remain in position for 10–15 min after IV administration.

PO

• Give without regard to food. • May crush or break tablets and mix with food or liquid if needed.

INDICATIONS/ROUTES/DOSAGE

Muscle Spasm

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 1.5 g 4 times/day for 2–3 days, then 4–4.5 g/day in 3–6 divided doses.

Usual Parenteral Dose

IM/IV: ADULTS, ELDERLY: 1 g q8h for up to 3 days.

Tetanus

◀ALERT▶ Do not use for longer than 72 hrs.

IV: ADULTS, ELDERLY: Initially, 1–2 g by direct IV injection, then 1–2 g by IV infusion q6h until oral therapy possible. **CHILDREN:** 15 mg/kg/dose. May repeat q6h if needed. **Maximum:** 1.8 g/m^2/day.

SIDE EFFECTS

Occasional: Dizziness, drowsiness, confusion, double vision, insomnia, headache, irritability, nausea, nervousness, dyspepsia (including nausea, vomiting), vomiting, metallic taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anaphylactic reaction (rash, pruritus, urticaria, angioneurotic edema, fever, bradycardia, hypotension, syncope) has occurred. Leukopenia, cholestatic jaundice, seizure occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type, location, duration of musculoskeletal pain, inflammation. Inspect appearance of affected joints for immobility, stiffness, swelling.

INTERVENTION/EVALUATION

Assist with ambulation at all times. Evaluate for therapeutic response: relief of pain, stiffness, swelling; improved mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • May color urine brown, black, or green. • Medication intended for short-term use (3 wks). • If no improvement noted, contact physician. • Report severe sedation.

methotrexate HIGH ALERT

meth-oh-**trex**-ate
(Apo-Methotrexate, Rheumatrex, Trexall)

BLACK BOX ALERT Pregnancy Category X. May cause fetal abnormalities, death. May produce potentially fatal chronic hepatotoxicity, dermatologic reactions, acute renal failure, pneumonitis, myelosuppression, malignant lymphoma, aplastic anemia, GI toxicity.

Do not confuse methotrexate with metolazone, methylprednisolone, or mitoxantrone. MTX is an error-prone abbreviation; do not use as an abbreviation.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic, antiarthritic, antipsoriatic (see p. 86C).

ACTION

Competes with enzymes necessary to reduce folic acid to tetrahydrofolic acid, a component essential to DNA, RNA, protein synthesis. **Therapeutic Effect:** Inhibits DNA, RNA, protein synthesis.

PHARMACOKINETICS

Variably absorbed from GI tract. Completely absorbed after IM administration. Protein binding: 50%–60%. Widely distributed. Metabolized intracellularly in liver. Primarily excreted in urine. Removed by hemodialysis but not by peritoneal dialysis. **Half-life:** 3–10 hrs (large doses, 8–15 hrs).

USES

Treatment of breast, head/neck, non–small-cell lung, small cell lung carcinomas; trophoblastic tumors; acute lymphocytic, meningeal leukemias; non-Hodgkin's lymphomas (lymphosarcoma, Burkitt's lymphoma); carcinoma of gastrointestinal tract; mycosis fungoides; osteosarcoma; psoriasis; rheumatoid arthritis (including juvenile rheumatoid arthritis). **OFF-LABEL:** Treatment of acute myelocytic leukemia; bladder, cervical, ovarian, prostatic, renal, testicular carcinomas; psoriatic arthritis; systemic dermatomyositis. Treatment of and maintenance of remission in Crohn's disease.

PRECAUTIONS

Contraindications: Breast-feeding. For pts with psoriasis or rheumatoid arthritis: Pregnancy, hepatic disease, alcoholism, immunodeficiency syndrome, preexisting blood dyscrasias. **Cautions:** Peptic ulcer, ulcerative colitis, preexisting myelosuppression, history of chronic hepatic disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy during methotrexate therapy and minimum 3 mos after therapy in males or at least one ovulatory cycle after therapy in females. May cause fetal death, congenital anomalies. Drug is distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D (X for patients with psoriasis or rheumatoid arthritis). Children/Elderly:** Renal/hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, hepatotoxic medications may increase risk of hepatotoxicity. **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **NSAIDs** may increase risk of toxicity. **Probenecid, salicylates** may increase concentration, risk of toxicity. **HERBAL: Cat's claw, echinacea** possess immunostimulant properties. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1 g. **Injection Solution:** 25 mg/ml. **Tablets:** 2.5 mg (Rheumatrex), 5 mg (Trexall), 7.5 mg (Trexall), 10 mg (Trexall), 15 mg (Trexall).

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration. Wear gloves when preparing solution. If powder or solution comes in contact with skin, wash immediately, thoroughly with soap, water. May give IM, IV, intra-arterially, intrathecally.

IV

Reconstitution • Reconstitute powder with D_5W or 0.9% NaCl to provide concentration of 50 mg/ml. • For intrathecal use, dilute with preservative-free 0.9% NaCl to provide a concentration not greater than 2–4 mg/ml.

Rate of Administration • Give IV push at rate of 10 mg/min. • Give IV infusion at rate of 4–20 mg/hr.

Storage • Store vials at room temperature. Diluted solutions stable for 24 hrs at room temperature.

IV INCOMPATIBILITIES

Chlorpromazine (Thorazine), droperidol (Inapsine), gemcitabine (Gemzar), idarubicin (Idamycin), midazolam (Versed), nalbuphine (Nubain).

IV COMPATIBILITIES

Cisplatin (Platinol AQ), cyclophosphamide (Cytoxan), daunorubicin (DaunoXome), doxorubicin (Adriamycin), etoposide (VePesid), 5-fluorouracil, granisetron (Kytril), leucovorin, lipids, mitomycin (Mutamycin), ondansetron (Zofran), paclitaxel (Taxol), vinblastine (Velban), vincristine (Oncovin), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Refer to individual specific protocols for optimum dosage, sequence of administration.

Antineoplastic Dosage

IV: ADULTS, ELDERLY: 30–40 mg/m^2/wk up to 100–12,000 mg/m^2 with leucovorin rescue.

Trophoblastic Neoplasms

PO, IM: ADULTS, ELDERLY: 15–30 mg/day for 5 days; repeat in 7 days for 3–5 courses.

IV: 11 mg/m^2 on days 1–5, repeat every 3 wks.

Head/Neck Cancer

PO, IV, IM: ADULTS, ELDERLY: 25–50 mg/m^2 once weekly.

Breast Cancer

IV: ADULTS, ELDERLY: 30–60 mg/m^2 days 1 and 8 q3–4wks.

Bladder Cancer (Off-Label)

IV: ADULTS, ELDERLY: 30 mg/m^2 days 1 and 8 q3wks.

Mycosis Fungoides

IM, PO: ADULTS, ELDERLY: 5–50 mg once weekly or 15–37.5 mg twice a wk.

Rheumatoid Arthritis (RA)

PO: ADULTS: 7.5 mg once weekly or 2.5 mg q12h for 3 doses once weekly. **ELDERLY:** Initially, 5–7.5 mg/wk. **Maximum:** 20 mg/wk.

Juvenile Rheumatoid Arthritis (JRA)

PO, IM, Subcutaneous: CHILDREN: Initially, 10 mg/m^2 once weekly, then 5–15 mg/m^2/wk as a single dose or in 3 divided doses given q12h.

Psoriasis

PO: ADULTS, ELDERLY: 10–25 mg once weekly or 2.5–5 mg q12h for 3 doses once weekly.

IM/Subcutaneous: ADULTS, ELDERLY: 10–25 mg once weekly.

Dosage in Renal Impairment

Creatinine Clearance	Reduce Dose to
61–80 ml/min	75% of normal
51–60 ml/min	70% of normal
10–50 ml/min	30–50% of normal
Less than 10 ml/min	Avoid use

SIDE EFFECTS

Frequent (10%–3%): Nausea, vomiting, stomatitis; burning/erythema at psoriatic site (in pts with psoriasis). **Occasional (3%–1%):** Diarrhea, rash, dermatitis, pruritus, alopecia, dizziness, anorexia, malaise, headache, drowsiness, blurred vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

High potential for various, severe toxicities. GI toxicity may produce gingivitis, glossitis, pharyngitis, stomatitis, enteritis, hematemesis. Hepatotoxicity more likely to occur with frequent small doses than with large intermittent doses. Pulmonary toxicity characterized by interstitial pneumonitis. Hematologic toxicity, resulting from marked myelosuppression, may manifest as leukopenia, thrombocytopenia, anemia, hemorrhage. Dermatologic toxicity may produce rash, pruritus, urticaria, pigmentation, photosensitivity, petechiae, ecchymosis, pustules. Severe nephrotoxicity produces azotemia, hematuria, renal failure.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Rheumatoid arthritis: Assess pain, range of motion. **Psoriasis:** Assess skin lesions. Question for possibility of pregnancy before initiating therapy (Pregnancy Category X) in pts with psoriasis, rheumatoid arthritis (RA). Obtain all functional tests before therapy, repeat throughout therapy. Antiemetics may prevent nausea, vomiting.

INTERVENTION/EVALUATION

Monitor hepatic/renal function tests, Hgb, Hct, WBC, differential, platelet count, urinalysis, chest X-rays, serum uric acid. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Assess skin for evidence of dermatologic toxicity. Keep pt well hydrated, urine alkaline. Avoid rectal temperatures, traumas that induce bleeding. Apply 5 full min of pressure to IV sites.

PATIENT/FAMILY TEACHING

• Maintain fastidious oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid crowds, those with infection.

M

• Avoid alcohol, salicylates. • Avoid sunlamp, sunlight exposure. • Use contraceptive measures during therapy and for 3 mos (males) or 1 ovulatory cycle (females) after therapy. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, diarrhea. • Alopecia is reversible, but new hair growth may have different color, texture. • Contact physician if nausea/vomiting continues at home.

methylergonovine

meth-il-er-**goe**-noe-veen
(Methergine)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Ergot alkaloid. **CLINICAL:** Oxytoxic agent, uterine stimulant.

ACTION

Stimulates alpha-adrenergic, serotonin receptors, producing arterial vasoconstriction. Causes vasospasm of coronary arteries. Directly stimulates uterine muscle. **Therapeutic Effect:** Increases strength, frequency of uterine contractions, decreases uterine bleeding.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	5–10 min	N/A	3 hrs
IV	Immediate	N/A	45 min
IM	2–5 min	N/A	3 hrs

Rapidly absorbed from GI tract after IM administration. Distributed rapidly to plasma, extracellular fluid, tissues. Metabolized in liver, undergoes first-pass effect. Primarily excreted in urine. **Half-life:** 0.5–2 hrs.

USES

Prevention/treatment of postpartum, postabortion hemorrhage due to atony, involution (not for induction, augmentation of labor).

PRECAUTIONS

Contraindications: Hypertension, pregnancy, toxemia, concurrent use with CYP3A4 inhibitors (e.g., protease inhibitors). **Cautions:** Renal/hepatic impairment, cardiovascular disease, occlusive peripheral vascular disease, sepsis, second stage of labor.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated during pregnancy. Small amounts distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No information available.

INTERACTIONS

DRUG: Vasoconstrictors, vasopressors may increase effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum prolactin.

AVAILABILITY (Rx)

Injection Solution: 0.2 mg/ml. **Tablets:** 0.2 mg.

ADMINISTRATION/HANDLING

Reconstitution • Dilute with 0.9% NaCl to volume of 5 ml.
Rate of Administration • Give over at least 1 min, carefully monitoring B/P.
Storage • Refrigerate ampules. • Initial dose may be given parenterally, followed by oral regimen. • IV use in life-threatening emergencies only.

IV INCOMPATIBILITIES

None known.

IV COMPATIBILITIES

Heparin, potassium.

INDICATIONS/ROUTES/DOSAGE

Prevention/Treatment of Postpartum, Postabortion Hemorrhage

PO: ADULTS: 0.2 mg 3–4 times a day. Continue for up to 7 days.
IV, IM: ADULTS: Initially, 0.2 mg after delivery of anterior shoulder, after delivery of placenta, or during puerperium. May repeat q2–4h as needed.

SIDE EFFECTS

Frequent: Nausea, uterine cramping, vomiting. **Occasional:** Abdominal pain, diarrhea, dizziness, diaphoresis, tinnitus, bradycardia, chest pain. **Rare:** Allergic reaction (rash, pruritus), dyspnea; severe or sudden hypertension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe hypertensive episodes may result in CVA, serious arrhythmias, seizures. Hypertensive effects are more frequent with pt susceptibility, rapid IV administration, concurrent use of regional anesthesia, vasoconstrictors. Peripheral ischemia may lead to gangrene.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine baseline serum calcium level, B/P, pulse. Assess for any evidence of bleeding before administration.

INTERVENTION/EVALUATION

Monitor uterine tone, bleeding, B/P, pulse q15min until stable (about 1–2 hrs). Assess extremities for color, warmth, movement, pain. Report chest pain promptly. Provide support with ambulation if dizziness occurs.

PATIENT/FAMILY TEACHING

• Avoid smoking because of added vasoconstriction. • Report increased cramping, bleeding, foul-smelling lochia. • Report pale, cold hands/feet (possibility of diminished circulation).

methylnaltrexone

meth-il-nal-**trex**-own
(Relistor)
Do not confuse methylnaltrexone with naltrexone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid receptor antagonist. **CLINICAL:** Constipation agent.

ACTION

Blocks binding of opioids to peripheral opioid receptors within GI tract. **Therapeutic Effect:** Decreases constipating effect of opioids without reducing analgesic effect.

PHARMACOKINETICS

Absorbed rapidly. Undergoes moderate tissue distribution. Protein binding: 11%–15%. Excreted primarily in urine, with lesser amount eliminated in feces. **Half-life:** 8 hrs.

USES

Treatment of opioid-induced constipation in pts with advanced illness who are receiving palliative care when response to laxative therapy is insufficient.

PRECAUTIONS

Contraindications: Known or suspected mechanical GI obstruction. **Cautions:** Severe renal impairment, history of GI tract lesion.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Subcutaneous: 12 mg/0.6 ml single-use vial.

ADMINISTRATION/HANDLING

Subcutaneous

• Inject into upper arm, abdomen, or thigh. Do not inject in tender, bruised, red, or hard areas.

Storage • Solution appears as clear and colorless to pale yellow. • If particulate matter is noted, discard. • Once solution is drawn into syringe, may be stored at room temperature. • Administer within 24 hrs.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Usual schedule is once every other day, as needed, but no more frequently than once every 24 hrs.

Constipation

Subcutaneous: ADULTS, ELDERLY WEIGHING 38 KG TO LESS THAN 62 KG: 8 mg. **ADULTS, ELDERLY WEIGHING 62–114 KG:** 12 mg. **ADULTS, ELDERLY WHOSE WEIGHT FALLS OUTSIDE THESE RANGES:** Dose at 0.15 mg/kg (round dose up to nearest 0.1 ml of volume).

Severe Renal Impairment (Creatinine Clearance Less Than 30 ml/min)

Subcutaneous: ADULTS, ELDERLY: Administer 50% of recommended dose.

SIDE EFFECTS

Frequent: Abdominal pain (29%), flatulence (13%), nausea (12%). **Occasional (7%–5%):** Diarrhea, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

30% of pts report defecation within 30 min after drug administration.

INTERVENTION/EVALUATION

Encourage fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. If opioid medication is stopped, drug should be discontinued. Assess for abdominal disturbances.

PATIENT/FAMILY TEACHING

• Laxative effect usually occurs within 30 min but may take up to 24 hrs after medication administration. • Common side effects include transient abdominal pain, nausea, vomiting. • Contact physician if any of these symptoms persist or worsen, or if severe or persistent diarrhea occurs.

TOP 200

methylphenidate

meth-il-**fen**-i-date

(Apo-Methylphenidate, Concerta, Daytrana, Metadate CD, Metadate ER, Methylin, Methylin ER, PMS-Methylphenidate, Ritalin, Ritalin LA, Ritalin SR)

BLACK BOX ALERT Chronic abuse can lead to marked tolerance, psychological dependence. Abrupt withdrawal from prolonged use may lead to severe depression, psychosis.

Do not confuse Metadate ER with Metadate CD, Methylphenidate with methadone, or Ritalin with Rifadin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: CNS stimulant **(Schedule II). CLINICAL:** CNS stimulant.

ACTION

Blocks reuptake of norepinephrine, dopamine into presynaptic neurons. **Therapeutic Effect:** Decreases motor restlessness, fatigue. Increases motor activity, attention span, mental alertness. Produces mild euphoria.

PHARMACOKINETICS

Onset	Peak	Duration
Immediate-release	2 hrs	3–6 hrs
Sustained-release	4–7 hrs	8 hrs
Extended-release	N/A	12 hrs
Transdermal	2 hrs	N/A

Slowly, incompletely absorbed from GI tract. Protein binding: 15%. Metabolized in liver. Eliminated in urine, in feces by biliary system. Unknown if removed by hemodialysis. **Half-life:** 2–4 hrs.

USES

Adjunct to treatment of ADHD with moderate to severe distractibility, short attention spans, hyperactivity, emotional impulsivity in children older than 6 yrs. **Concerta:** ADHD in children 6 yrs and older, adolescents, and adults up to age 65. Management of narcolepsy in adults. **OFF-LABEL:** Secondary mental depression (especially elderly, medically ill).

PRECAUTIONS

Contraindications: Use of MAOIs within 14 days, marked anxiety, tension, agitation, motor tics, family history or diagnosis of Tourette's syndrome, glaucoma. **Metadate:** Severe hypertension, heart failure, arrhythmia, hyperthyroidism, recent MI or angina. **Cautions:** Hypertension, seizures, acute stress reaction, emotional instability, history of drug dependence, heart failure, recent MI, hyperthyroidism, known structural cardiac abnormality, psychosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** May be more susceptible to developing anorexia, insomnia, stomach pain, decreased weight. Chronic use may inhibit growth. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **MAOIs** may increase effects. **Other CNS stimulants** may have additive effect. May inhibit metabolism of **warfarin, anticonvulsants, antidepressants.** **HERBAL:** **Ephedra** may cause hypertension, arrhythmias. **Yohimbe** may increase CNS stimulation. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Oral Solution (Methylin): 5 mg/5 ml, 10 mg/5 ml. **Tablets (Chewable [Methylin]):** 2.5 mg, 5 mg, 10 mg. **Tablets (Methylin, Ritalin):** 5 mg, 10 mg, 20 mg. **Topical Patch (Daytrana):** 10 mg/9 hrs, 15 mg/9 hrs, 20 mg/9 hrs, 30 mg/9 hrs.

Capsules (Extended-Release [Metadate CD]): 10 mg, 20 mg, 30 mg, 40 mg, 50 mg, 60 mg. **Capsules (Extended-Release [Ritalin LA]):** 10 mg, 20 mg, 30 mg, 40 mg. **Tablets (Extended-Release [Concerta]):** 18 mg, 27 mg, 36 mg, 54 mg, 72 mg. **Tablets (Extended-Release [Metadate ER, Methylin ER]):** 10 mg, 20 mg. **Tablets (Sustained-Release [Ritalin SR]):** 20 mg.

ADMINISTRATION/HANDLING

ALERT Sustained-release, extended-release tablets may be given in place of regular tablets, once daily dose is titrated using regular tablets, and titrated dosage corresponds to sustained-release or extended-release tablet strength.

PO

• Do not give drug in afternoon or evening (may cause insomnia). • Do not crush, break extended-release capsules, extended- or sustained-release tablets. • Immediate-release tablets may be crushed. • Give dose 30–45 min before meals.

• **Concerta:** Administer once daily in morning. May take without regard to food but must be taken with water, milk, or juice.

• **Methylin Chewable:** Give with at least 8 oz of water or other fluid.

• **Metadate CD, Ritalin LA:** • May be opened, sprinkled on applesauce. • Swallow applesauce without chewing. Do not crush or chew capsule contents.

Patch

• To be worn daily for 9 hrs. • Replace daily in morning. • Apply to dry, clean area

of hip. • Avoid applying to waistline (clothing may cause patch to rub off). • Alternate application site daily. • Press firmly in place for 30 sec to ensure patch is in good contact with skin. • Do not cut patch.

INDICATIONS/ROUTES/DOSAGE

ADHD

PO: ADULTS, CHILDREN 6 YRS AND OLDER: Initially, 0.3 mg/kg/dose or 2.5–5 mg before breakfast and lunch. May increase by 0.1 mg/kg/dose or by 5–10 mg/day at weekly intervals. Usual dose: 0.5–1 mg/kg/day. **Maximum:** 2 mg/kg/day or 60 mg/day.

PO *(Concerta)*: CHILDREN 6 YRS AND OLDER, ADULTS UP TO 65 YRS OF AGE: Initially, 18 mg once a day; may increase by 18 mg/day at weekly intervals. **Maximum:** 72 mg/day.

PO *(Metadate CD)*: CHILDREN 6 YRS AND OLDER: Initially, 20 mg/day. May increase by 10–20 mg/day at weekly intervals. **Maximum:** 60 mg/day.

PO *(Ritalin LA)*: CHILDREN 6 YRS AND OLDER: Initially, 20 mg/day. May increase by 10 mg/day at weekly intervals. **Maximum:** 60 mg/day.

PO *(Metadate ER, Methylin ER, Ritalin SR)*: CHILDREN 6 YRS AND OLDER: May replace regular tablets after daily dose is titrated and 8-hr dosage corresponds to sustained-release or extended-release tablet strength. **Maximum:** 60 mg/day.

PATCH *(Daytrana)*: CHILDREN 6–12 YRS, ADOLESCENTS: Initially, 10 mg daily (applied and worn for 9 hrs). Dosage is titrated to desired effect. May increase dose no more frequently than every wk.

Narcolepsy

PO: ADULTS, ELDERLY: 10 mg 2–3 times a day. Range: 10–60 mg/day.

SIDE EFFECTS

Frequent: Anxiety, insomnia, anorexia. **Occasional:** Dizziness, drowsiness, headache, nausea, abdominal pain, fever, rash, arthralgia, vomiting. **Rare:** Blurred vision, Tourette's syndrome (uncontrolled vocal outbursts, repetitive body movements, tics), palpitations.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged administration to children with ADHD may delay normal weight gain pattern. Overdose may produce tachycardia, palpitations, arrhythmias, chest pain, psychotic episode, seizures, coma. Hypersensitivity reactions, blood dyscrasias occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

ADHD: Assess attention span, impulsivity, interaction with others, distractibility. **Narcolepsy:** Observe/assess frequency of episodes.

INTERVENTION/EVALUATION

Monitor B/P, pulse, changes in ADHD symptoms. CBC with differential, platelet count should be performed routinely during therapy. If paradoxical return of attention-deficit occurs, dosage should be reduced or discontinued. Monitor growth.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Sugarless gum, sips of tepid water may relieve dry mouth. • Report any increase in seizures. • Take daily dose early in morning to avoid insomnia. • Report anxiety, palpitations, fever, vomiting, skin rash. • Report new or worsened symptoms (e.g., behavior, hostility, concentration ability). • Avoid caffeine. • Do not stop taking abruptly after prolonged use.

TOP 200

*methylPREDNISolone

(Medrol)

*methylPREDNISolone acetate

(DepoMedrol)

*methylPREDNISolone sodium succinate

(Solu-Medrol)

meth-il-pred-**niss**-oh-lone

Do not confuse DepoMedrol with Solu-Medrol, Medrol with Mebaral, or methylprednisolone with medroxyprogesterone or prednisolone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenal corticosteroid. **CLINICAL:** Anti-inflammatory (see p. 98C).

ACTION

Suppresses migration of polymorphonuclear leukocytes, reverses increased capillary permeability. **Therapeutic Effect:** Decreases inflammation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	Rapid	1–2 hrs	30–36 hrs
IM	Rapid	4–8 days	1–4 wks
IV	Rapid	N/A	N/A

Well absorbed from GI tract after IM administration. Widely distributed. Metabolized in liver. Excreted in urine. Removed by hemodialysis. **Half-life:** 3.5 hrs.

USES

Endocrine disorders: Substitution therapy for deficiency states (acute or chronic adrenal insufficiency, congenital adrenal hyperplasia, adrenal insufficiency secondary to pituitary insufficiency). **Nonendocrine disorders:** Arthritis; rheumatic carditis; allergic reaction; collagen, intestinal tract, hepatic, ocular, renal, skin diseases; bronchial asthma; cerebral edema; malignancies; spinal cord injury.

PRECAUTIONS

Contraindications: Administration of live virus vaccines, systemic fungal infection. **IM:** Idiopathic thrombocytopenia purpura. **Cautions:** Respiratory tuberculosis, untreated systemic infections, hypertension, CHF, diabetes, GI disease (e.g., peptic ulcer), myasthenia gravis, hepatic impairment, seizures, cataracts, glaucoma, following acute MI, thyroid disorder, thromboembolic tendencies.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May cause cleft palate (chronic use in first trimester). Breast-feeding not recommended. **Pregnancy Category C. Children:** Prolonged treatment or high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May alter effects of **warfarin. Hepatic enzyme inducers** (e.g., **phenytoin, rifampin**) may decrease effects. **Live virus vaccines** may decrease pt's antibody response to vaccine, increase vaccine side effects, potentiate virus replication. **HERBAL: Cat's claw, echinacea** possess immunostimulant properties. **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, cholesterol, lipid, amylase, sodium. May decrease serum calcium, potassium, thyroxine, hypothalmic-pituitary-adrenal (HPA) axis.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Solu-Medrol): 40 mg, 125 mg, 500 mg, 1 g. **Injection Suspension:** 40 mg/ml, 80 mg/ml. **Tablets (Medrol):** 2 mg, 4 mg, 8 mg, 16 mg, 32 mg. **(Medrol Dosepak):** 4 mg (21 tablets).

ADMINISTRATION/HANDLING

◀ALERT▶ Do **not** give methylprednisolone acetate IV.

M

IV

Reconstitution • For infusion, add to D_5W, 0.9% NaCl.
Rate of Administration • Give IV push over 3–15 min. • Give IV piggyback. Dose of 250 mg over 15–30 min; dose of 500–999 mg over at least 30 min; dose of 1g or greater over 1 hr.
Storage • Store vials at room temperature.

IM

• Methylprednisolone acetate should not be further diluted. • Methylprednisolone sodium succinate should be reconstituted with Bacteriostatic Water for Injection. • Give deep IM in gluteus maximus (avoid injection into deltoid muscle).

PO

• Give with food, milk.

IV INCOMPATIBILITIES

Ciprofloxacin (Cipro), diltiazem (Cardizem), docetaxel (Taxotere), etoposide (VePesid), filgrastim (Neupogen), gemcitabine (Gemzar), paclitaxel (Taxol), potassium chloride, propofol (Diprivan), vinorelbine (Navelbine).

IV COMPATIBILITIES

Dopamine (Intropin), heparin, lipids, midazolam (Versed), theophylline.

INDICATIONS/ROUTES/DOSAGE

Anti-Inflammatory, Immunosuppressive

IV: ADULTS, ELDERLY: 10–40 mg. May repeat q4–6h as needed. **CHILDREN:** 0.5–1.7 mg/kg/day or 5–25 mg/m^2/day in 2–4 divided doses.
PO: ADULTS, ELDERLY: 2–60 mg/day in 1–4 divided doses. **CHILDREN:** 0.5–1.7 mg/kg/day or 5–25 mg/m^2/day in 2–4 divided doses.
IM *(Methylprednisolone Acetate)*: ADULTS, ELDERLY: 10–80 mg q1–2wks.
Intra-Articular, Intralesional: ADULTS, ELDERLY: 20–60 mg q1–5wks.

Status Asthmaticus

IV: ADULTS, ELDERLY, CHILDREN: Initially, 2 mg/kg/dose, then 0.5–1 mg/kg/dose q6h.

Spinal Cord Injury

IV Bolus: ADULTS, ELDERLY, CHILDREN: 30 mg/kg over 15 min, followed by 5.4 mg/kg/hr over 23 hrs, to be given within 45 min of bolus dose.

SIDE EFFECTS

Frequent: Insomnia, heartburn, anxiety, abdominal distention, diaphoresis, acne, mood swings, increased appetite, facial flushing, GI distress, delayed wound healing, increased susceptibility to infection, diarrhea, constipation. **Occasional:** Headache, edema, tachycardia, change in skin color, frequent urination, depression. **Rare:** Psychosis, increased blood coagulability, hallucinations.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term therapy: Hypocalcemia, hypokalemia, muscle wasting (esp. in arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer, CHF. **Abrupt withdrawal after long-term therapy:** Anorexia, nausea, fever, headache, severe arthralgia, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any of the corticosteroids, components. Obtain baselines for height, weight, B/P, serum glucose, electrolytes. Check results of initial tests (tuberculosis [TB] skin test, X-rays, EKG).

INTERVENTION/EVALUATION

Monitor I&O, daily weight; assess for edema. Monitor daily pattern of bowel activity, stool consistency. Check vital signs at least twice a day. Be alert for infection (sore throat, fever, vague symp-

toms). Monitor serum electrolytes, including B/P, glucose. Monitor for hypocalcemia (muscle twitching, cramps, positive Trousseau's or Chvostek's signs), hypokalemia (weakness, muscle cramps, numbness, tingling [esp. lower extremities], nausea/vomiting, irritability, EKG changes). Assess emotional status, ability to sleep. Check lab results for blood coagulability, clinical evidence of thromboembolism.

PATIENT/FAMILY TEACHING

• Take oral dose with food, milk. • Do not change dose/schedule or stop taking drug; must taper off gradually under medical supervision. • Notify physician of fever, sore throat, muscle aches, sudden weight gain or loss, edema, loss of appetite, fatigue. • Maintain fastidious personal hygiene, avoid exposure to disease, trauma. • Severe stress (serious infection, surgery, trauma) may require increased dosage. • Follow-up visits, lab tests are necessary. • Children must be assessed for growth retardation. • Inform dentist, other physicians of methylprednisolone therapy now or within past 12 mos.

metoclopramide

met-oh-**kloe**-prah-myde
(Apo-Metoclop ✱, Metozolv ODT, Reglan)

BLACK BOX ALERT Prolonged use may cause tardive dyskinesia.

Do not confuse metoclopramide with metolazone or metoprolol, or Reglan with Renagel.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopamine receptor antagonist. **CLINICAL:** GI emptying adjunct, peristaltic stimulant, antiemetic.

ACTION

Stimulates motility of upper GI tract. Decreases reflux into esophagus. Raises threshold activity in chemoreceptor trigger zone. **Therapeutic Effect:** Accelerates intestinal transit, gastric emptying. Relieves nausea, vomiting.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–60 min	N/A	1–2 hrs
IV	1–3 min	N/A	1–2 hrs
IM	10–15 min	N/A	1–2 hrs

Well absorbed from GI tract. Metabolized in liver. Protein binding: 30%. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 4–6 hrs.

USES

Facilitates placement of enteral feeding tubes; stimulates gastric emptying, intestinal transit in conjunction with radiography; symptomatic treatment of gastroparesis, gastroesophageal reflux disease (GERD); prevents or treats chemotherapy-induced nausea, vomiting; prevents or treats postop nausea, vomiting. **Orally-disintegrating tablets:** Treatment of gastroparesis, GERD.

PRECAUTIONS

Contraindications: Concurrent use of medications likely to produce extrapyramidal reactions, GI hemorrhage, GI obstruction/perforation, history of seizure disorder, pheochromocytoma. **Cautions:** Renal impairment, CHF, cirrhosis, hypertension, depression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** More susceptible to having dystonic reactions. **Elderly:** More likely to have parkinsonian dyskinesias after long-term therapy.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depressant effect. **Anticholinergics, opioid analgesics** may decrease effects on GI motility. **HERBAL:** None significant. **FOOD:** None

known. **LAB VALUES:** May increase serum aldosterone, prolactin.

AVAILABILITY (Rx)

Injection Solution: 5 mg/ml. **Syrup:** 5 mg/5 ml. **Tablets:** 5 mg, 10 mg.

Tablets, Orally-Disintegrating: 5 mg, 10 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute doses greater than 10 mg in 50 ml D_5W or 0.9% NaCl.
Rate of Administration • Infuse over 15–30 min. • May give undiluted slow IV push at rate of 10 mg over 1–2 min. • Too-rapid IV injection may produce intense feeling of anxiety, restlessness, followed by drowsiness.
Storage • Store vials at room temperature. • After dilution, IV infusion (piggyback) is stable for 24 hrs.

PO

• Give 30 min before meals and at bedtime. • Tablets may be crushed. • Do not cut, divide, chew orally-disintegrating tablets. Place on tongue, swallow with saliva.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), cefepime (Maxipime), doxorubicin liposomal (Doxil), furosemide (Lasix), propofol (Diprivan).

IV COMPATIBILITIES

Dexamethasone, diltiazem (Cardizem), diphenhydramine (Benadryl), fentanyl (Sublimaze), heparin, hydromorphone (Dilaudid), lipids, morphine, potassium chloride, total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Prevention of Chemotherapy-Induced Nausea/Vomiting

IV: ADULTS, ELDERLY, CHILDREN: 1–2 mg/kg 30 min before chemotherapy; repeat q2h for 2 doses, then q3h as needed for total of 5 doses/day.

Postop Nausea/Vomiting

IV: ADULTS, ELDERLY, CHILDREN OLDER THAN 14 YRS: 10 mg q6–8h as needed. **CHILDREN 14 YRS OF AGE AND YOUNGER:** 0.1–0.2 mg/kg/dose q6–8h as needed.

Gastroparesis

PO, IV: ADULTS: 10 mg 30 min before meals and at bedtime for 2–8 wks.
PO: ELDERLY: Initially, 5 mg 30 min before meals and at bedtime. May increase to 10 mg.
IV: ELDERLY: 5 mg over 1–2 min. May increase to 10 mg.

Symptomatic Gastroesophageal Reflux Disease (GERD)

PO: ADULTS: 10–15 mg up to 4 times a day, or single doses up to 20 mg as needed. **ELDERLY:** Initially, 5 mg 4 times a day. May increase to 10 mg. **CHILDREN:** 0.1–0.2 mg/kg/dose 4 times/day.

Facilitate Small Bowel Intubation (Single Dose)

IV: ADULTS, ELDERLY: 10 mg as a single dose. **CHILDREN 6–14 YRS:** 2.5–5 mg as a single dose. **CHILDREN YOUNGER THAN 6 YRS:** 0.1 mg/kg as a single dose.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
Less than 40 ml/min	50% of normal dose

SIDE EFFECTS

◄ALERT► Doses of 2 mg/kg or greater, or increased length of therapy, may result in a greater incidence of side effects.

Frequent (10%): Drowsiness, restlessness, fatigue, lethargy. **Occasional (3%):** Dizziness, anxiety, headache, insomnia, breast tenderness, altered menstruation, constipation, rash, dry mouth, galactorrhea, gynecomastia. **Rare (less than 3%):** Hypotension, hypertension, tachycardia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extrapyramidal reactions occur most frequently in children, young adults (18–30 yrs) receiving large doses (2 mg/kg) during chemotherapy and usually are limited to akathisia (involuntary limb movement, facial grimacing, motor restlessness). Neuroleptic malignant syndrome (diaphoresis, fever, unstable B/P, muscular rigidity).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Antiemetic: Assess for dehydration (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue). Assess for nausea, vomiting, abdominal distention, bowel sounds.

INTERVENTION/EVALUATION

Monitor for anxiety, restlessness, extrapyramidal symptoms (EPS) during IV administration. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Evaluate for therapeutic response from gastroparesis (nausea, vomiting, bloating). Monitor renal function, B/P, heart rate.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Report involuntary eye, facial, limb movement (extrapyramidal reaction). • Avoid alcohol.

metolazone

meh-**toe**-la-zone
(Zaroxolyn)
Do not confuse metolazone with metaxolone, methotrexate, metoclopramide, or metoprolol, or Zaroxolyn with Zarontin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thiazide diuretic. **CLINICAL:** Diuretic, antihypertensive (see p. 102C).

ACTION

Diuretic: Blocks reabsorption of sodium, potassium, chloride at distal convoluted tubule, promoting delivery of sodium to potassium side, increasing sodium-potassium (Na-K) exchange. **Therapeutic Effect:** Produces renal excretion. **Antihypertensive:** Reduces plasma and extracellular fluid volume, peripheral vascular resistance. **Therapeutic Effect:** Reduces B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (diuretic)	1 hr	2 hrs	12–24 hrs

Incompletely absorbed from GI tract. Protein binding: 95%. Primarily excreted unchanged in urine. Not removed by hemodialysis. **Half-life:** 20 hrs.

USES

Treatment of mild to moderate essential hypertension, edema due to CHF, nephrotic syndrome or impaired renal function.

PRECAUTIONS

Contraindications: Anuria, hepatic coma/precoma, history of hypersensitivity to sulfonamides, thiazide diuretics. **Cautions:** Severe renal disease, severe hepatic impairment, gout, lupus erythematosus, prediabetes or diabetes, elevated serum cholesterol, triglycerides.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Small amount distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category B (D if used in pregnancy-induced hypertension). Children:** No age-related precautions noted. **Elderly:** May be more sensitive to hypotensive or electrolyte effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase risk of **digoxin** toxicity associated with metolazone-in-

duced hypokalemia. May increase risk of **lithium** toxicity. **HERBAL:** **Ephedra, ginseng, licorice** may decrease effect. **Black cohosh, periwinkle** may enhance effect. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, cholesterol, LDL, bilirubin, calcium, creatinine, uric acid, triglycerides. May decrease urinary calcium, serum magnesium, potassium, sodium.

AVAILABILITY (Rx)

Tablets: 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• May give with food, milk if GI upset occurs, preferably with breakfast (may prevent nocturia).

INDICATIONS/ROUTES/DOSAGE

Edema

PO: ADULTS: 2.5–10 mg/day. May increase to 20 mg/day in edema associated with renal disease or heart failure.

Hypertension

PO: ADULTS: 2.5–5 mg/day.

Usual Elderly Dosage

PO: Initially, 2.5 mg/day or every other day.

Usual Pediatric Dosage

PO: 0.2–0.4 mg/kg/day in 1–2 divided doses.

SIDE EFFECTS

Expected: Increased urinary frequency/volume. **Frequent (10%–9%):** Dizziness, lightheadedness, headache. **Occasional (6%–4%):** Muscle cramps/spasm, drowsiness, fatigue, lethargy. **Rare (less than 2%):** Asthenia (loss of strength, energy), palpitations, depression, nausea, vomiting, abdominal bloating, constipation, diarrhea, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Vigorous diuresis may lead to profound water loss and electrolyte depletion, resulting in hypokalemia, hyponatremia, dehydration. Acute hypotensive episodes may occur. Hyperglycemia may occur during prolonged therapy. Pancreatitis, paresthesia, blood dyscrasias, pulmonary edema, allergic pneumonitis, dermatologic reactions occur rarely. Overdose can lead to lethargy, coma without changes in electrolytes, hydration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check vital signs, esp. B/P for hypotension, before administration. Assess baseline serum electrolytes, particularly check for hypokalemia. Assess skin turgor, mucous membranes for hydration status. Assess for peripheral edema. Assess muscle strength, mental status. Note skin temperature, moisture. Obtain baseline weight. Monitor I&O.

INTERVENTION/EVALUATION

Continue to monitor B/P, vital signs, serum electrolytes, I&O, weight. Note extent of diuresis. Monitor for electrolyte disturbances (hypokalemia may result in weakness, tremors, muscle cramps, nausea, vomiting, altered mental status, tachycardia; hyponatremia may result in confusion, thirst, cold/clammy skin).

PATIENT/FAMILY TEACHING

• Expect increased urinary frequency/volume. • Rise slowly from lying to sitting position, permit legs to dangle momentarily before standing to reduce hypotensive effect. • Avoid tasks requiring motor skills, mental alertness until response to drug is established. • Eat foods high in potassium, such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins.

metoprolol TOP 200 HIGH ALERT

meh-**toe**-pro-lole
(Apo-Metoprolol, Betaloc,

Lopressor, Novo-Metoprolol, Nu-Metop, Toprol XL)

BLACK BOX ALERT Abrupt withdrawal can produce acute tachycardia, hypertension, ischemia. Drug should be gradually tapered over 1–2 wks.

Do not confuse Lopressor with Lyrica, metoprolol with metoclopramide or metolazone, or Toprol XL with Tegretol, Tegretol XR, or Topamax.

FIXED-COMBINATION(S)

Dutoprol: metoprolol/hydrochlorothiazide (a diuretic): 25 mg/12.5 mg, 50 mg/12.5 mg, 100 mg/12.5 mg. **Lopressor HCT:** metoprolol/hydrochlorothiazide (a diuretic): 50 mg/25 mg, 100 mg/25 mg, 100 mg/50 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Beta_1$-adrenergic blocker. **CLINICAL:** Antianginal, antihypertensive, MI adjunct (see p. 61C, 72C).

ACTION

Selectively blocks $beta_1$-adrenergic receptors; high dosages may block $beta_2$-adrenergic receptors. Decreases oxygen requirements. Large doses increase airway resistance. **Therapeutic Effect:** Slows heart rate, decreases cardiac output, reduces B/P. Decreases myocardial ischemia severity.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	10–15 min	1–2 hrs	N/A
PO (extended-release)	N/A	6–12 hrs	N/A
IV	Immediate	20 min	N/A

Well absorbed from GI tract. Protein binding: 12%. Widely distributed. Metabolized in liver (undergoes significant first-pass metabolism). Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 3–7 hrs.

USES

Lopressor: Treatment of hemodynamically stable acute myocardial infarction (AMI), angina pectoris, hypertension. **Toprol XL:** Treatment of angina pectoris, to reduce mortality or hospitalizations in pts with heart failure, pts already receiving ACE inhibitors, diuretics, and/or digoxin, hypertension. **OFF-LABEL:** Treatment of ventricular arrhythmias, migraine prophylaxis, essential tremor, aggressive behavior, prevent reinfarction post MI, prevent/treat atrial fibrillation/atrial flutter, hypertrophic cardiomyopathy, thyrotoxicosis.

PRECAUTIONS

Contraindications: Cardiogenic shock, MI with heart rate less than 45 beats/min or systolic B/P less than 100 mm Hg, overt heart failure, second- or third-degree heart block, sinus bradycardia. **HTN/Angina:** Sinus bradycardia, second- or third-degree heart block, overt CHF, sick sinus syndrome (except with pacemaker), severe peripheral arterial disease, pheochromocytoma. **Cautions:** Bronchospastic disease, renal impairment, peripheral vascular disease, hyperthyroidism, diabetes mellitus, myasthenia gravis, psychiatric disease. **Extended-release:** Compensated heart failure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. Avoid use during first trimester. May produce bradycardia, apnea, hypoglycemia, hypothermia during delivery, low birth-weight infants. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** Age-related peripheral vascular disease may increase susceptibility to decreased peripheral circulation.

INTERACTIONS

DRUG: Diuretics, other antihypertensives may increase hypotensive effect. May mask symptoms of hypoglycemia, prolong hypoglycemic effect of **insulin,**

M

oral hypoglycemics. NSAIDs may decrease antihypertensive effect. **Sympathomimetics, xanthines** may mutually inhibit effects. Potent **CYP2D6 inhibitors (e.g., fluoxetine, cimetidine)** may increase concentration. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum antinuclear antibody titer (ANA), BUN, serum lipoprotein, LDH, alkaline phosphatase, bilirubin, creatinine, potassium, uric acid, AST, ALT, triglycerides.

AVAILABILITY (Rx)

Injection Solution (Lopressor): 1 mg/ml. **Tablets (Lopressor):** 25 mg, 50 mg, 100 mg.

Tablets (Extended-Release [Toprol XL]): 25 mg, 50 mg, 100 mg, 200 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give undiluted. • Administer IV injection over 1 min. • May give by IV piggyback (in 50 ml D_5W or 0.9% NaCl) over 30–60 min. • Monitor EKG, B/P during administration.

Storage • Store at room temperature.

PO

• Tablets may be crushed; do not crush/chew extended-release tablets. • Extended-release tablets may be divided in half. • Give at same time each day. • May be given with or immediately after meals (enhances absorption).

IV INCOMPATIBILITY

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Alteplase (Activase), meperidine (Demerol), morphine.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 50 mg twice daily. Increase at weekly (or longer) intervals. Maintenance: 100–450 mg/day. **ELDERLY:** Initially, 25 mg/day. Range: 25–300 mg/day. **CHILDREN:** Initially, 1–2 mg/kg/day in 2 divided doses. **Maximum:** 6 mg/kg/day.

PO *(Extended-Release)*: ADULTS: 25–100 mg/day as single dose. May increase at least at weekly intervals until optimum B/P attained. **Maximum:** 400 mg/day. **ELDERLY:** Initially, 25–50 mg/day as a single dose. May increase at 1- to 2-wk intervals. **CHILDREN:** Initially, 1 mg/kg once daily. **Maximum:** 50 mg. May increase to 2 mg/kg/day. **Maximum:** 200 mg/day.

Angina Pectoris

PO: ADULTS: Initially, 50 mg twice daily. Increase at weekly (or longer) intervals. Usual range: 50–200 mg twice daily. **Maximum:** 400 mg/day.

PO *(Extended-Release)*: ADULTS: Initially, 100 mg/day as single dose. May increase at least at weekly intervals until optimum clinical response achieved. **Maximum:** 400 mg/day.

CHF

PO *(Extended-Release)*: ADULTS: Initially, 25 mg/day. May double dose q2wks. **Maximum:** 200 mg/day.

Early Treatment of MI

IV: ADULTS: 5 mg q2min for 3 doses, followed by 50 mg orally q6h for 48 hrs. Begin oral dose 15 min after last IV dose. In pts who do not tolerate full IV dose, give 25–50 mg orally q6h, 15 min after last IV dose, then 100 mg twice a day for at least 3 mos.

SIDE EFFECTS

Metoprolol is generally well tolerated, with transient and mild side effects. **Frequent:** Diminished sexual function, drowsiness, insomnia, unusual fatigue/weakness. **Occasional:** Anxiety, diarrhea,

constipation, nausea, vomiting, nasal congestion, abdominal discomfort, dizziness, difficulty breathing, cold hands/feet. **Rare:** Altered taste, dry eyes, nightmares, paresthesia, allergic reaction (rash, pruritus).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension, bronchospasm. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremulousness, exacerbation of angina, MI, ventricular arrhythmias. May precipitate CHF, MI in pts with heart disease; thyroid storm in those with thyrotoxicosis; peripheral ischemia in those with existing peripheral vascular disease. Hypoglycemia may occur in pts with previously controlled diabetes mellitus (may mask signs of hypoglycemia). **Antidote:** Glucagon (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function tests. Assess B/P, apical pulse immediately before drug administration (if pulse is 60/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician). **Antianginal:** Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress).

INTERVENTION/EVALUATION

Measure B/P near end of dosing interval (determines whether B/P is controlled throughout day). Monitor B/P for hypotension, respiration for shortness of breath. Assess pulse for quality, rate, rhythm. Assess for evidence of CHF: dyspnea (esp. on exertion, lying down), night cough, peripheral edema, distended neck veins. Monitor I&O (increased weight, decreased urinary output may indicate CHF). Therapeutic response to hypertension noted in 1–2 wks.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control hypertension, arrhythmias. • If dose is missed, take next scheduled dose (do not double dose). • To avoid hypotensive effect, rise slowly from lying to sitting position, wait momentarily before standing. • Report excessive fatigue, dizziness. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician approval. • Monitor B/P, pulse before taking medication. • Restrict salt, alcohol intake.

metronidazole

me-troe-**nye**-da-zole
(Apo-Metronidazole, Flagyl, Flagyl ER, Flagyl 375, MetroCream, MetroGel, MetroGel-Vaginal, NidaGel, Noritate, Vandazole)
Do not confuse metronidazole with meropenum, metformin, methotrexate, or miconazole.

FIXED-COMBINATION(S)

Helidac: metronidazole/bismuth/tetracycline (an anti-infective): 250 mg/262 mg/500 mg. **Pylera:** metronidazole/bismuth/tetracycline (an anti-infective): 125 mg/140 mg/125 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nitroimidazole derivative. **CLINICAL:** Antibacterial, antiprotozoal.

ACTION

Disrupts DNA, inhibiting nucleic acid synthesis. **Therapeutic Effect:** Produces bactericidal, antiprotozoal, amebicidal, trichomonacidal effects. Produces

anti-inflammatory, immunosuppressive effects when applied topically.

PHARMACOKINETICS

Well absorbed from GI tract; minimally absorbed after topical application. Protein binding: less than 20%. Widely distributed; crosses blood-brain barrier. Metabolized in liver to active metabolite. Primarily excreted in urine; partially eliminated in feces. Removed by hemodialysis. **Half-life:** 8 hrs (increased in alcoholic hepatic disease, neonates).

USES

Treatment of anaerobic infections (skin/skin structure, CNS, lower respiratory tract, bone/joints, intra-abdominal, gynecologic, endocarditis, septicemia). Treatment of trichomoniasis, amebiasis, antibiotic-associated pseudomembranous colitis (AAPC). Topical treatment of acne rosacea. **Vaginal gel:** Treatment of bacterial vaginosis. **OFF-LABEL:** Crohn's disease.

M

PRECAUTIONS

Contraindications: Hypersensitivity to other nitroimidazole derivatives (also parabens with topical application), pregnancy (first trimester). **Cautions:** Blood dyscrasias, severe hepatic dysfunction, CNS disease, predisposition to edema, concurrent corticosteroid therapy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Contraindicated during first trimester in those with trichomoniasis. Topical use during pregnancy, lactation discouraged. **Pregnancy Category B. Children:** Safety and efficacy of topical administration not established in those younger than 21 yrs. **Elderly:** Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Alcohol** may cause disulfiram-type reaction (e.g., abdominal cramps, nausea, vomiting, headache, psychotic reactions). **Disulfiram** may increase risk of toxicity. May increase effects of **oral anticoagulants.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum LDH, AST, ALT.

AVAILABILITY (Rx)

Capsules (Flagyl 375): 375 mg. **Injection (Infusion):** 500 mg/100 ml. **Tablets (Flagyl):** 250 mg, 500 mg. **Topical Cream:** 0.75% (MetroCream), 1% (Noritate). **Topical Gel (MetroGel):** 0.75%, 1%. **Vaginal Gel (MetroGel-Vaginal, Vandazole):** 0.75%.

Tablets (Extended-Release [Flagyl ER]): 750 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Infuse IV over 30–60 min. Do not give by IV bolus.

Storage • Store at room temperature (ready-to-use infusion bags).

PO

• Give without regard to meals. Give with food to decrease GI irritation. • Extended-release tablet should be given on an empty stomach (1 hr before or 2 hrs after meals). • Do not crush extended-release tablets.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), filgrastim (Neupogen), total parenteral nutrition (TPN).

IV COMPATIBILITIES

Diltiazem (Cardizem), dopamine (Intropin), heparin, hydromorphone (Dilaudid), lipids, lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine.

INDICATIONS/ROUTES/DOSAGE

Anaerobic Infections

PO, IV: ADULTS, ELDERLY: 500 mg q6–8h. **Maximum:** 4 g/day.

PO: CHILDREN, INFANTS: 15–35 mg/kg in divided doses q8h.

IV: CHILDREN, INFANTS: 30 mg/kg/day in divided doses q6h.

Amebiasis

PO: ADULTS, ELDERLY: 500–750 mg 3 times a day for 5–10 days. **CHILDREN:** 35–50 mg/kg/day in 3 divided doses for 10 days. **Maximum:** 750 mg/dose.

Giardiasis

PO: ADULTS, ELDERLY: 500 mg 2 times per day for 5–7 days.

Pseudomembranous Colitis

PO: ADULTS, ELDERLY: 250–500 mg 3–4 times a day. **CHILDREN:** 5 mg/kg q6h for 7–10 days. **Maximum:** 2 g/day.

Trichomoniasis

PO: ADULTS, ELDERLY: 250 mg 3 times a day or 375 mg twice a day or 500 mg twice a day or 2 g as a single dose. **CHILDREN:** 15–30 mg/kg/day in 3 divided doses for 7 days.

Bacterial Vaginosis

PO: ADULTS (NONPREGNANT): 500 mg twice a day for 7 days or 750 mg (extended-release) once daily for 7 days.
Intravaginal: ADULTS: 0.75% apply twice a day for 5 days.
◀ALERT▶ Centers for Disease Control and Prevention (CDC) does not recommend the use of topical agents during pregnancy.

Rosacea

Topical: ADULTS, ELDERLY: (1%): Apply to affected area once daily. **(0.75%):** Apply to affected area twice a day.

Dosage in Renal Impairment

Creatinine clearance less than 10 ml/min: Administer 50% of dose or q12h.

SIDE EFFECTS

Frequent: Systemic: Anorexia, nausea, dry mouth, metallic taste. **Vaginal:** Symptomatic cervicitis/vaginitis, abdominal cramps, uterine pain. **Occasional: Systemic:** Diarrhea, constipation, vomiting, dizziness, erythematous rash, urticaria, reddish-brown urine. **Topical:** Transient erythema, mild dryness, burning, irritation, stinging, tearing when applied too close to eyes. **Vaginal:** Vaginal, perineal, vulvar itching; vulvar swelling. **Rare:** Mild, transient leukopenia; thrombophlebitis with IV therapy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Oral therapy may result in furry tongue, glossitis, cystitis, dysuria, pancreatitis. Peripheral neuropathy (manifested as numbness, tingling of hands/feet) usually is reversible if treatment is stopped immediately upon appearance of neurologic symptoms. Seizures occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity to metronidazole, other nitroimidazole derivatives (and parabens with topical). Obtain specimens for diagnostic tests, cultures before giving first dose (therapy may begin before results are known).

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor I&O, assess for urinary problems. Be alert to neurologic symptoms (dizziness; paresthesia of extremities). Assess for rash, urticaria. Watch for onset of superinfection (ulceration/change of oral mucosa, furry tongue, vaginal discharge, genital/anal pruritus).

PATIENT/FAMILY TEACHING

• Urine may be red-brown or dark. • Avoid alcohol, alcohol-containing preparations (cough syrups, elixirs) for at least 48 hrs after last dose. • Avoid tasks that require alertness, motor skills until response to drug is established. • If taking metronidazole for trichomoniasis, refrain from sexual intercourse until full treatment is completed. • For amebiasis, frequent stool specimen checks will be necessary. • **Topical:** Avoid contact with eyes. • May apply cosmetics after application.

M

• Metronidazole acts on erythema, papules, pustules but has no effect on rhinophyma (hypertrophy of nose), telangiectasia, ocular problems (conjunctivitis, keratitis, blepharitis). • Other recommendations for rosacea include avoidance of hot/spicy foods, alcohol, extremes of hot/cold temperatures, excessive sunlight.

micafungin

mye-ka-**fun**-jin
(Mycamine)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Echinocandin antifungal. **CLINICAL:** Antifungal (see p. 47C).

ACTION

Inhibits synthesis of glucan (vital component of fungal cell formation), damaging fungal cell membrane. **Therapeutic Effect:** Decreased glucan content leads to cellular lysis.

PHARMACOKINETICS

Extensively bound to albumin. Protein binding: greater than 99%. Slowly metabolized in liver to active metabolite. Primarily excreted in feces and, to a lesser extent, in urine. Not removed by hemodialysis. **Half-life:** 11–21 hrs.

USES

Treatment of esophageal candidiasis, candidemia, candida peritonitis, abscesses, acute disseminated candidiasis, prophylaxis of *Candida* infection in pts undergoing hematopoietic stem cell transplant. **OFF-LABEL:** Prophylaxis of HIV-related esophageal candidiasis. Treatment of infections due to *Aspergillus* spp.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, concomitant hepatotoxic medications.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May reduce sperm count. May be embryotoxic. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration of **nifedipine, sirolimus, itraconazole.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, alkaline phosphatase, LDH, AST, ALT.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50 mg, 100 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 5 ml 0.9% NaCl (without bacteriostatic agent) to each 50-mg vial (10 ml to 100-mg vial) to yield micafungin 10 mg/ml. • Gently swirl to dissolve; do not shake. • Further dilute in 0.9% NaCl or D_5W to final concentration of 0.5–1.5 mg/ml. • Alternatively, D_5W may be used for reconstitution and dilution. • Flush existing IV line with 0.9% NaCl or D_5W before infusion.

Rate of Administration • Infuse over 60 min.

Storage • Reconstituted solution is stable for 24 hrs at room temperature. • Discard if precipitate is present.

IV INCOMPATIBILITIES

Do not mix with any other medication.

INDICATIONS/ROUTES/DOSAGE

Esophageal Candidiasis

IV: ADULTS, ELDERLY: 150 mg/day for 10–30 days.

Candida Prophylaxis in Stem Cell Pts

IV: ADULTS, ELDERLY: 50 mg/day.

Candidemia, Disseminated Candidiasis, Peritonitis, Abscesses
IV: ADULTS, ELDERLY: 100 mg/day for 15 days.

SIDE EFFECTS

Occasional (3%–2%): Nausea, headache, diarrhea, vomiting, fever. **Rare (1%):** Dizziness, drowsiness, pruritus, abdominal pain, dyspepsia (heartburn, indigestion, epigastric pain).

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction characterized by rash, pruritus, facial edema occurs rarely. Anaphylaxis, hemoglobinuria, hemolytic anemia have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine baseline hepatic/renal function tests and periodically thereafter.

INTERVENTION/EVALUATION

Monitor serum chemistry results for evidence of hepatic/renal impairment.

miconazole

mye-**kon**-a-zoll
(Baza Antifungal, Lotrimin, Micaderm, Micatin, Micozole, Mitrazol, Monistat, Monistat 3, Monistat 7, Oravig)
Do not confuse Lotrimin with Lotrisone, Micatin with Miacalcin, or miconazole with metronidazole or Micronase.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Imidazole derivative. **CLINICAL:** Antifungal (see p. 480).

ACTION

Inhibits synthesis of ergosterol (vital component of fungal cell formation), damaging fungal cell membrane. **Therapeutic Effect:** Fungistatic; may be fungicidal, depending on concentration.

PHARMACOKINETICS

Small amounts absorbed systemically after vaginal administration. Widely distributed. Protein binding: 91%–93%. Metabolized in liver. Primarily excreted in feces. **Half-life:** 24 hrs.

USES

Buccal tablet: Oropharyngeal candidiasis. **Vaginal:** Vulvovaginal candidiasis. **Topical:** Cutaneous candidiasis, tinea cruris, t. corporis, t. pedis, t. versicolor.

PRECAUTIONS

Contraindications: Avoid vaginal preparations during first trimester of pregnancy (unless essential to pt's welfare). **Cautions:** Sensitivity to other antifungals (clotrimazole, ketoconazole). **(Oral):** hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety not established in those younger than 1 yr. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Cream (Topical): Baza, Micaderm, Micatin: 2%. **Cream (Vaginal): Monistat 7:** 2%; **Monistat 3:** 2%, 4%. **Tablet (Buccal):** 50 mg. **Topical Powder: Mitrazol:** 2%. **Vaginal Suppository: Monistat 3:** 200 mg; 1,200 mg; **Monistat 7:** 100 mg.

INDICATIONS/ROUTES/DOSAGE

Vulvovaginal Candidiasis
Intravaginal Suppository: ADULTS, ELDERLY: 100-mg suppository at bedtime for 7 days, 200-mg suppository at bedtime

for 3 days, or 1,200-mg suppository once at bedtime or during the day.

Intravaginal Cream: ADULTS, ELDERLY: 2% cream: 1 applicatorful at bedtime for 7 days. 4% cream: 1 applicatorful at bedtime for 3 days.

Topical Fungal Infections, Cutaneous Candidiasis

Topical: ADULTS, ELDERLY, CHILDREN: Apply liberally twice per day, morning and evening.

Oropharyngeal Candidiasis

Buccal: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 50 mg once daily to gum region for 14 consecutive days.

SIDE EFFECTS

Topical: Pruritus, burning, stinging, erythema, urticaria. **Vaginal (2%):** Vulvovaginal burning, pruritus, irritation; headache; skin rash.

M

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Topical: Avoid occlusive dressings. Apply only small amount to cover area completely.

INTERVENTION/EVALUATION

Topical/vaginal: Assess for burning, pruritus, irritation.

PATIENT/FAMILY TEACHING

• **Vaginal preparation:** Base interacts with certain latex products (e.g., condoms, contraceptive diaphragm). • Ask physician about douching, sexual intercourse. • **Topical:** Rub well into affected areas. • Avoid getting in eyes. • Keep areas clean, dry; wear light clothing for ventilation. • Separate personal items in contact with affected areas.

midazolam

HIGH ALERT

mye-**da**-zoe-lam
(Apo-Midazolam, Versed)

BLACK BOX ALERT May cause severe respiratory depression, respiratory arrest, apnea. Avoid rapid injection, prolonged infusion (increases risk).

Do not confuse Versed with VePesid or Vistaril.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Sedative, anxiolytic (see p. 6C).

ACTION

Enhances action of gamma-aminobutyric acid (GABA), one of the major inhibitory neurotransmitters in the brain. **Therapeutic Effect:** Produces anxiolytic, hypnotic, anticonvulsant, muscle relaxant, amnestic effects.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	10–20 min	N/A	N/A
IV	1–5 min	5–7 min	20–30 min
IM	5–15 min	30–60 min	2–6 hrs

Well absorbed after IM administration. Protein binding: 97%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1–5 hrs.

USES

Sedation, anxiolytic, amnesia before procedure or induction of anesthesia, conscious sedation before diagnostic/radiographic procedure, continuous IV sedation of intubated or mechanically ventilated pts. **OFF-LABEL:** Anxiety, status epilepticus, conscious sedation.

PRECAUTIONS

Contraindications: Acute narrow-angle glaucoma, allergies to cherries (syrup), coma, shock. **Cautions:** Renal/hepatic/pulmonary impairment, impaired gag reflex, CHF, treated open-angle glaucoma,

obese pts, concurrent CNS depressants, alcoholics.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if drug is distributed in breast milk. **Pregnancy Category D. Children:** Neonates more likely to have respiratory depression. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS effects, respiratory depression, hypotensive effects. **CYP3A4 inhibitors (e.g., erythromycin)** may increase concentration/sedative effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration. **FOOD: Grapefruit, grapefruit juice** increase oral absorption, systemic availability. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 1 mg/ml, 5 mg/ml. **Syrup:** 2 mg/ml.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give undiluted or as infusion. • Resuscitative equipment, O_2 must be readily available before IV administration. • Administer by slow IV injection over at least 2–5 min at concentration of 1–5 mg/ml. • Reduce IV rate in those older than 60 yrs, debilitated pts with chronic disease states, pulmonary impairment. • Too-rapid IV rate, excessive doses, or single large dose increases risk of respiratory depression/arrest.

Storage • Store vials at room temperature.

IM

• Give deep IM into large muscle mass. **Maximum concentration:** 1 mg/ml.

PO

• Do not mix with grapefruit juice.

IV INCOMPATIBILITIES

Albumin, amphotericin B complex (Abelcet, AmBisome, Amphotec), ampicillin (Polycillin), ampicillin and sulbactam (Unasyn), bumetanide (Bumex), co-trimoxazole (Bactrim), dexamethasone (Decadron), fosphenytoin (Cerebyx), furosemide (Lasix), hydrocortisone (Solu-Cortef), lipids, methotrexate, nafcillin (Nafcil), sodium bicarbonate, sodium pentothal (Thiopental).

IV COMPATIBILITIES

Amiodarone (Cordarone), atropine, calcium gluconate, diltiazem (Cardizem), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), etomidate (Amidate), fentanyl (Sublimaze), glycopyrrolate (Robinul), heparin, hydromorphone (Dilaudid), hydroxyzine (Vistaril), insulin, lorazepam (Ativan), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Preop Sedation

PO: CHILDREN: 0.25–0.5 mg/kg. **Maximum:** 20 mg.
IV: ADULTS, ELDERLY: 0.02–0.04 mg/kg. **CHILDREN 6–12 YRS:** 0.025–0.05 mg/kg. **CHILDREN 6 MOS–5 YRS:** 0.05–0.1 mg/kg.
IM: ADULTS, ELDERLY: 0.07–0.08 mg/kg 30–60 min before surgery. Usual dose: 5 mg. **CHILDREN:** 0.1–0.15 mg/kg 30–60 min before surgery. **Maximum:** 10 mg.

Conscious Sedation for Diagnostic, Therapeutic, Endoscopic Procedures

IV: ADULTS, ELDERLY: 0.5–2 mg over 2 min. Titrate as needed. **Maximum total dose:** 2.5–5 mg. **CHILDREN 6–12 YRS:** 0.025–0.05 mg/kg. Total dose of 0.4 mg/kg may be necessary. **Maximum total dose:** 10 mg. **CHILDREN 6 MOS–5 YRS:** 0.05–0.1 mg/kg. Total dose of 0.6 mg/kg may be necessary. **Maximum total dose:** 6 mg.

Continuous Sedation During Mechanical Ventilation

IV: ADULTS, ELDERLY: Initially, 0.02–0.08 mg/kg (1–5 mg in 70-kg adult). May repeat at 5- to 15-min intervals until adequate sedation achieved or continuous infusion rate of 0.04–0.2 mg/kg/hr and titrated to desired effect. **CHILDREN:** Initially, 0.05–0.2 mg/kg followed by continuous infusion of 0.06–0.12 mg/kg/hr (1–2 mcg/kg/min) titrated to desired effect. Usual range: 0.4–6 mcg/kg/min.

SIDE EFFECTS

Frequent (10%–4%): Decreased respiratory rate, tenderness at IM or IV injection site, pain during injection, oxygen desaturation, hiccups. **Occasional (3%–2%):** Hypotension, paradoxical CNS reaction. **Rare (less than 2%):** Nausea, vomiting, headache, coughing.

ADVERSE EFFECTS/ TOXIC REACTIONS

Inadequate or excessive dosage, improper administration may result in cerebral hypoxia, agitation, involuntary movements, hyperactivity, combativeness. Too-rapid IV rate, excessive doses, or single large dose increases risk of respiratory depression/arrest. Respiratory depression/apnea may produce hypoxia, cardiac arrest.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Resuscitative equipment, oxygen must be available. Obtain vital signs before administration.

INTERVENTION/EVALUATION

Monitor respiratory rate, oxygen saturation continuously during parenteral administration for underventilation, apnea. Monitor vital signs, level of sedation q3–5min during recovery period.

midodrine

mye-doe-dreen
(Amatine, Apo-Midodrine, ProAmatine)

BLACK BOX ALERT Can cause marked rise in supine blood pressure; use in pts for whom orthostatic hypotension significantly impairs daily life.

Do not confuse Amatine or ProAmatine with amantadine or protamine, or midodrine with Midrin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Vasopressor. **CLINICAL:** Orthostatic hypotension adjunct.

ACTION

Forms active metabolite desglymidodrine, an alpha$_1$ agonist, activating alpha receptors of arteriolar, venous vasculature. **Therapeutic Effect:** Increases vascular tone, B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	—	2–3 hrs

Rapid absorption from GI tract following PO administration. Protein binding: Low. Undergoes enzymatic hydrolysis (deglycination) in systemic circulation. Excreted in urine. **Half-life:** 0.5 hr.

USES

Treatment of symptomatic orthostatic hypotension. **OFF-LABEL:** Vasovagal syncope, prevention of dialysis-induced hypotension, urinary incontinence.

PRECAUTIONS

Contraindications: Acute renal impairment, persistent supine hypertension, pheochromocytoma, severe cardiac disease, thyrotoxicosis, urine retention. **Cautions:** Renal/hepatic impairment, history of visual problems, diabetes, urinary retention.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Digoxin** may have additive bradycardic effects. **Sodium-retaining steroids (e.g., fludrocortisone)** may increase sodium retention. **Vasoconstrictors** may have additive effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

• Give without regard to food. • Last dose of day should be given 3–4 hrs before bedtime.

INDICATIONS/ROUTES/DOSAGE

Orthostatic Hypotension

PO: ADULTS, ELDERLY: 10 mg 3 times a day. Give during the day when pt is upright, such as upon arising, midday, and late afternoon. Do not give later than 6 PM. **Maximum:** 40 mg/day.

Dosage in Renal Impairment

For adults and elderly pts, give 2.5 mg 3 times a day; increase gradually, as tolerated. **Hemodialysis:** Dose after HD unless used to prevent HD-induced hypotension.

SIDE EFFECTS

Frequent (20%–7%): Paresthesia, piloerection, pruritus, dysuria, supine hypertension. **Occasional (Less Than 7%–1%):** Pain, rash, chills, headache, facial flushing, confusion, dry mouth, anxiety.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased systolic arterial pressure has been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess sensitivity to midodrine, other medications (esp. digoxin, sodium-retaining vasoconstrictors). Assess medical history, esp. for renal impairment, severe hypertension, cardiac disease.

INTERVENTION/EVALUATION

Monitor B/P, renal, hepatic, cardiac function.

PATIENT/FAMILY TEACHING

• Do not take last dose of the day after evening meal or less than 4 hrs before bedtime. • Do not give if pt will be supine. • Use caution with OTC medications that may affect B/P (e.g., cough and cold, diet medications).

M

mifepristone

mif-**ep**-ris-tone
(Korlym, Mifeprex)

BLACK BOX ALERT Discuss medication guide, pt agreement, and expected effects before prescribing. Serious, sometimes fatal, infections, excessive bleeding have occurred following surgical and medical abortions, including following use of mifepristone.

Do not confuse Mifeprex with Mirapex, or mifepristone with misoprostol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiprogestin. **CLINICAL:** Abortifacient.

ACTION

Has antiprogestational activity resulting from competitive interaction with progesterone. Inhibits activity of endogenous, exogenous progesterone. Has antiglucocorticoid, weak antiandrogenic activity. **Therapeutic Effect:** Terminates pregnancy.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 98%. Metabolized in liver. Primarily eliminated in feces; minimal excretion in urine. **Half-life:** 18 hrs.

USES

Korlym: Control hyperglycemia secondary to hypercortisolism in adults with endogenous Cushing's syndrome. **Mifeprex:** Termination of intrauterine pregnancy through day 49 of pregnancy. **OFF-LABEL:** Breast/ovarian cancer, unresectable meningioma.

PRECAUTIONS

Contraindications: Chronic adrenal failure, concurrent long-term steroid or anticoagulant therapy, confirmed or suspected ectopic pregnancy, intrauterine device (IUD) in place, hemorrhagic disorders, inherited porphyria, hypersensitivity to misoprostol or other prostaglandins, lack of access to emergency medical service, inability to understand or comply with treatment. **Cautions:** Treatment of women older than 35 yrs, smoking more than 10 cigarettes/day, cardiovascular disease, hypertension, hepatic/renal impairment, diabetes, severe anemia. **Pregnancy Category X.**

INTERACTIONS

DRUG: **CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifampin**) may increase metabolism. **CYP3A4 inhibitors (e.g., erythromycin, itraconazole, ketoconazole)** may inhibit metabolism. **HERBAL:** **St. John's wort** may increase metabolism. **FOOD:** **Grapefruit, grapefruit juice** may inhibit metabolism. **LAB VALUES:** May alter serum ALT, AST, alkaline phosphatase.

AVAILABILITY (Rx)

Tablets (Mifeprex): 200 mg. **Korlym:** 300 mg.

ADMINISTRATION/HANDLING

Korlym

- Take with a meal.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ May be used in combination with misoprostol for termination of pregnancy.

Termination of Pregnancy (Mifeprex)

PO: ADULTS: Day 1: 600 mg as single dose. **Day 3:** 400 mcg misoprostol (unless termination of pregnancy has occurred). **Day 14:** Post-treatment examination.

Cushing Syndrome (Korlym)

PO: ADULTS, ELDERLY: Initially, 300 mg once daily. May increase in 300 mg increments to maximum of 1,200 mg/day or 20 mg/kg/day.

SIDE EFFECTS

Frequent (greater than 10%): Headache, dizziness, abdominal pain, nausea, vomiting, diarrhea, fatigue. **Occasional (10%–3%):** Uterine hemorrhage, insomnia, vaginitis, dyspepsia (heartburn, indigestion, epigastric pain), back pain, fever, viral infections, rigors. **Rare (2%–1%):** Anxiety, syncope, anemia, asthenia (loss of strength, energy), leg pain, sinusitis, leukorrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for use of ketoconazole, itraconazole, erythromycin, rifampin, anticonvulsants (affects metabolism).

INTERVENTION/EVALUATION

◀ALERT▶ If mifepristone results in an incomplete abortion, surgical intervention may be necessary.

Monitor Hgb/Hct. Confirm pregnancy is completely terminated at approximately 14 days after drug administration. Assess degree of vaginal bleeding.

PATIENT/FAMILY TEACHING

• Advise pts of treatment procedure and effects, need for follow-up visit. • Vaginal bleeding, uterine cramping may occur.

milnacipran

mil-na-**sip**-ran
(Savella)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, and young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Savella with cevimeline or sevelamer.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin, norepinephrine reuptake inhibitor.
CLINICAL: Fibromyalgia agent.

ACTION

Appears to inhibit serotonin and norepinephrine reuptake at CNS neuronal presynaptic membranes. **Therapeutic Effect:** Reduces chronic pain, fatigue, depression, sleep disorders associated with fibromyalgia syndrome; improves physical function.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 13%. Eliminated unchanged in urine. Steady-state levels reached in 36–48 hrs. **Half-life:** 6–8 hrs.

USES

Management of fibromyalgia. **OFF-LABEL:** Depression.

PRECAUTIONS

Contraindications: Concomitant use or within 14 days of MAOIs, uncontrolled narrow-angle glaucoma. **Cautions:** Pts with depression, those at increased risk of suicide, other psychiatric disorders; elevated blood pressure or heart rate; history of seizures; pts with substantial alcohol use or chronic liver disease; pts with history of dysuria (e.g., prostatic hypertrophy, prostatitis; controlled narrow-angle glaucoma). Renal impairment, cardiovascular disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Increased risk of fetal complications, including need for respiratory support, if drug is given during third trimester of pregnancy. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those 17 yrs and younger. **Elderly:** Severe renal impairment requires dosage adjustment.

INTERACTIONS

DRUG: Lithium, MAOIs may impair serotonin metabolism, increase risk of serotonin syndrome. **Epinephrine, norepinephrine** may produce paroxysmal hypertension, arrhythmias. **Intravenous digoxin** may produce tachycardia, hypotension. May inhibit antihypertensive effect of **clonidine. HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression, increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May decrease serum sodium.

AVAILABILITY (Rx)

Tablets, Film-Coated: 12.5 mg, 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

• Give without regard to food. • Do not crush, break film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Fibromyalgia

PO: ADULTS, ELDERLY: Day 1: 12.5 mg once. **Days 2–3:** 25 mg/day (12.5 mg twice daily). **Days 4–7:** 50 mg/day (25 mg twice daily). **After Day 7:** 100 mg/day (50 mg twice daily). Dose may be increased to 200 mg/day (100 mg twice daily).

Severe Renal Impairment (Creatine Clearance 5–29 ml/min)
Reduce maintenance dose by 50% to 50 mg/day (25 mg twice daily). Based on pt response, dose may be increased to 100 mg/day (50 mg twice daily). Not recommended in end-stage renal disease.

SIDE EFFECTS

Frequent (37%–18%): Nausea, headache. **Occasional (16%–5%):** Constipation, insomnia, hot flashes, dizziness, hyperhidrosis, palpitations, vomiting, URI. **Rare (Less Than 5%):** Dry mouth, increased B/P, anxiety, skin flushing, rash, blurred vision, abdominal pain, chest pain, chills, pruritus, paresthesia, tachycardia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt discontinuation may present withdrawal symptoms (dysphoria, irritability, agitation, dizziness, paresthesia, anxiety, confusion, headache, lethargy, emotional lability, tinnitus, seizures). Serotonin syndrome symptoms may include mental status changes (agitation, hallucinations), hyperreflexia, incoordination. May increase risk of bleeding events (e.g., ecchymoses, hematomas, epistaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline pain intensity scale, location(s) of pain, tenderness. Obtain baseline B/P, heart rate. Question for history of changes in day-to-day pain intensity.

INTERVENTION/EVALUATION

Control nausea with antiemetics. Treat complaint of headache, migraine with appropriate analgesics. Monitor for increase in B/P, pulse. Question for changes in visual acuity. Assess for clinical improvement and record onset of pain control, decreased fatigue, lessening of depressive symptoms, improvement in sleep pattern. Monitor for suicidal ideation.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Do not abruptly discontinue medication. • Increase fluids, bulk to prevent constipation. • Contact physician if mental status changes occur (including thoughts of suicide, unusual behavior) or sweating, hot flushing become intolerable. • Caution about risk of bleeding associated with concomitant use of NSAIDs, aspirin.

milrinone

HIGH ALERT

mil-ri-nohn
(Primacor)
Do not confuse Primacor with Primaxin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cardiac inotropic agent. **CLINICAL:** Vasodilator.

ACTION

Inhibits phosphodiesterase, which increases cyclic adenosine monophosphate (cAMP), potentiating delivery of calcium to myocardial contractile systems. **Therapeutic Effect:** Relaxes vascular muscle, causing vasodilation. Increases cardiac output; decreases pulmonary capillary wedge pressure, vascular resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	5–15 min	N/A	N/A

Protein binding: 70%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 1.7–2.7 hrs.

USES

Short-term management of CHF. **OFF-LABEL:** Inotropic therapy for pts unresponsive to other therapy, heart trans-

plant candidates, palliation of symptoms in end-stage heart failure.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe obstructive aortic or pulmonic valvular disease, history of ventricular arrhythmias, atrial fibrillation/flutter, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Primacor): 1 mg/ml, 10-ml single-dose vial, 20-ml single-dose vial, 50-ml single-dose vial. **Injection Solution (Premix [Primacor]):** 200 mcg/ml (100 ml, 200 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV infusion, dilute 20-mg (20-ml) vial with 80 ml 0.9% NaCl or D_5W to provide concentration of 0.2 mg/ml (200 mcg/ml).

Rate of Administration • For IV injection (loading dose), administer undiluted slowly over 10 min. • Monitor for arrhythmias, hypotension during IV therapy; reduce or temporarily discontinue infusion until condition stabilizes.

Storage • Diluted solutions stable for 72 hrs at room temperature.

IV INCOMPATIBILITIES

Furosemide (Lasix), imipenem-cilastatin (Primaxin), procainamide (Pronestyl).

IV COMPATIBILITIES

Calcium gluconate, dexamethasone (Decadron), digoxin (Lanoxin), diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), heparin, hydromorphone (Dilaudid), lidocaine, magnesium, midazolam (Versed), morphine, nitroglycerin, potassium, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Management of CHF

IV: ADULTS: Initially, 50 mcg/kg over 10 min. Continue with maintenance infusion rate of 0.375–0.75 mcg/kg/min based on hemodynamic and clinical response.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
50 ml/min	0.43 mcg/kg/min
40 ml/min	0.38 mcg/kg/min
30 ml/min	0.33 mcg/kg/min
20 ml/min	0.28 mcg/kg/min
10 ml/min	0.23 mcg/kg/min
5 ml/min	0.2 mcg/kg/min

SIDE EFFECTS

Occasional (3%–1%): Headache, hypotension. **Rare (less than 1%):** Angina, chest pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Supraventricular/ventricular arrhythmias (12%), nonsustained ventricular tachycardia (2%), sustained ventricular tachycardia (1%) may occur. Ventricular fibrillation (0.2%) has been documented.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab studies, esp. BN peptide. Offer emotional support (difficulty breathing may produce anxiety). Assess B/P, apical pulse rate before treatment begins and during IV therapy. Assess lung sounds; observe for edema.

INTERVENTION/EVALUATION

Monitor B/P, heart rate, cardiac output, EKG, serum potassium, renal function, signs/symptoms of CHF.

minocycline

TOP 200

mye-noe-**sye**-kleen
(Apo-Minocycline, Dynacin, Minocin, Novo-Minocycline, Solodyn, Ximino)
Do not confuse Dynacin with Dyazide, DynaCirc, or Dynapen, or Minocin with Indocin, Mithracin, or niacin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tetracycline. **CLINICAL:** Antibiotic.

ACTION

Inhibits bacterial protein synthesis by binding to ribosomes. **Therapeutic Effect:** Bacteriostatic.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 70%–75%. Partial elimination in feces; minimal excretion in urine. Not removed by hemodialysis. **Half-life:** 11–23 hrs.

USES

Treatment of susceptible infections due to *Rickettsiae, M. pneumoniae, C. trachomatis, C. psittaci, H. ducreyi, Yersinia pestis, Francisella tularensis, Vibrio cholerae, Brucella* spp., gram-negative organisms, including prostate, urinary tract, CNS infections (not meningitis), uncomplicated gonorrhea, inflammatory acne, brucellosis, skin granulomas, cholera, trachoma, nocardiasis, yaws, syphilis (when penicillins are contraindicated). **Solodyn, Ximino:** Treatment of inflammatory lesions of moderate to severe nonnodular acne. **OFF-LABEL:** Treatment of atypical mycobacterial infection, rheumatoid arthritis (RA), scleroderma.

PRECAUTIONS

Contraindications: Children younger than 8 yrs. **Cautions:** Hypersensitivity to tetracyclines, last half of pregnancy, renal impairment, hepatic impairment, sun/ultraviolet exposure (severe photosensitivity reaction).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. May inhibit fetal skeletal growth. **Pregnancy Category D. Children:** May cause permanent discoloration of teeth, enamel hypoplasia. Not recommended in those younger than 8 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Aluminum-, calcium-, magnesium-containing antacids may decrease absorption, effect. **Ergot** may increase risk of ergotism. May decrease the effects of **estrogen-containing oral contraceptives. HERBAL: Dong quai, St. John's wort** may increase risk of photosensitivity. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, amylase, bilirubin, AST, ALT, BUN.

AVAILABILITY (Rx)

Capsules (Minocin): 50 mg, 75 mg, 100 mg. **Tablets (Dynacin, Minocin):** 50 mg, 75 mg, 100 mg.

Capsules (Pellet-Filled [Minocin]): 50 mg, 100 mg. **Capsules, Extended-Release (Ximino):** 45 mg, 67.5 mg, 90 mg, 112.5 mg, 135 mg. **Tablets (Extended-Release [Solodyn]):** 45 mg, 65 mg, 90 mg, 115 mg, 135 mg.

ADMINISTRATION/HANDLING

PO

• Take without regard to food. • Give with adequate fluid (reduces risk of esophageal irritation and ulceration). • Swallow pellet-filled capsules, extended-release tablets whole; do not chew, crush, or split.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: Initially, 100–200 mg, then 100 mg q12h. **CHILDREN OLDER THAN 8 YRS:** Initially, 4 mg/kg, then 2 mg/kg q12h.

Acne

PO *(Solodyn)*: CHILDREN 12 YRS AND OLDER, WEIGHING 126–136 KG: 135 mg once daily; **WEIGHING 103–125 KG:** 115 mg once daily; **WEIGHING 78–102 KG:** 90 mg once daily; **WEIGHING 55–77 KG:** 65 mg once daily; **WEIGHING 45–54 KG:** 45 mg once daily. ***(Ximino)*: CHILDREN 12 YRS AND OLDER, WEIGHING 126–136 KG:** 135 mg once daily; **WEIGHING 97–125 KG:** 112 mg once daily; **WEIGHING 75–96 KG:** 90 mg once daily; **WEIGHING 56–74 KG:** 67.5 mg once daily; **WEIGHING 45–55 KG:** 45 mg once daily.

***(Capsule or Immediate-Release Tablet)*: ADULTS, ELDERLY:** 50–100 mg/day.

SIDE EFFECTS

Frequent: Dizziness, light-headedness, diarrhea, nausea, vomiting, abdominal cramps, possibly severe photosensitivity, drowsiness, vertigo. **Occasional:** Altered pigmentation of skin, mucous membranes; rectal/genital pruritus, stomatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Superinfection (esp. fungal), anaphylaxis, increased ICP may occur. Bulging fontanelles occur rarely in infants.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. tetracyclines, sulfite.

INTERVENTION/EVALUATION

Assess ability to ambulate (may cause vertigo, dizziness). Monitor daily pattern of bowel activity, stool consistency. Monitor hepatic/renal function tests with long-term therapy. Assess skin for rash. Observe for signs of increased intracranial pressure (altered LOC, widened pulse pressure). Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • Drink full glass of water with capsules or tablets. • Avoid tasks that require alertness, motor skills until response to drug is established. • Notify physician if diarrhea, rash, other new symptom occurs. • Protect skin from sun exposure. • Advise female pts to use additional form of birth control (may decrease effectiveness of oral contraceptives).

minoxidil

min-**ox**-i-dill

(Apo-Gain ♣, Loniten, Minox ♣, Rogaine, Rogaine Extra Strength)

BLACK BOX ALERT Can cause pericarditis and pericardial effusion, occasionally progressing to tamponade; can exacerbate angina pectoris.

Do not confuse Loniten with Lipitor or Lotensin, or minoxidil with metolazone, midodrine, Minipress, Minocin, Monopril, or Noxafil.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Peripheral vasodilator. **CLINICAL:** Antihypertensive, hair growth stimulant (see p. 62C).

ACTION

Acts directly on vascular smooth muscle, producing vasodilation of arterioles. **Therapeutic Effect:** Decreases peripheral vascular resistance, B/P; increases cutaneous blood flow; stimulates hair follicle epithelium, hair follicle growth.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5 hr	2–8 hrs	2–5 days

Well absorbed from GI tract; minimal absorption after topical application. Protein binding: None. Widely distributed. Metabolized in liver to active metabolite. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 3.5 hrs.

USES

Treatment of severe symptomatic hypertension, hypertension associated with organ damage. Used for pts who fail to respond to maximal therapeutic dosages of diuretic and two other antihypertensive agents. Treatment of alopecia androgenetica (**males:** baldness of vertex of scalp; **females:** diffuse hair loss or thinning of frontoparietal areas).

PRECAUTIONS

Contraindications: Pheochromocytoma. **Cautions:** Severe renal impairment, chronic CHF, coronary artery disease, recent MI (1 mo), pulmonary hypertension.

M

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** More sensitive to hypotensive effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **NSAIDs** may decrease hypotensive effects. **HERBAL:** **Licorice** may cause increased serum sodium, water retention. **FOOD:** None known. **LAB VALUES:** May increase plasma renin activity, BUN, serum alkaline phosphatase, creatinine, sodium. May decrease Hgb, Hct, erythrocyte count.

AVAILABILITY

Tablets (Loniten): 2.5 mg, 10 mg. **Topical Solution (OTC):** 2% (20 mg/ml) (Rogaine), 5% (50 mg/ml) (Rogaine Extra Strength).

ADMINISTRATION/HANDLING

PO

• Give without regard to food. Give with food if GI upset occurs. • Tablets may be crushed.

Topical

• Shampoo, dry hair before applying medication. • Wash hands immediately after application. • Do not use hair dryer after application (reduces effectiveness).

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, CHILDREN 12 YRS AND OLDER: Initially, 5 mg/day. Increase in at least 3-day intervals to 10 mg, then 20 mg, then up to 40 mg/day in 1–2 doses. **ELDERLY:** Initially, 2.5 mg/day. May increase gradually. Maintenance: 10–40 mg/day. **Maximum:** 100 mg/day. **CHILDREN YOUNGER THAN 12 YRS:** Initially, 0.1–0.2 mg/kg (5 mg maximum) daily. Gradually increase at a minimum of 3-day intervals. Maintenance: 0.25–1 mg/kg/day in 1–2 doses. **Maximum:** 50 mg/day.

Hair Regrowth

Topical: ADULTS: Apply to affected areas of scalp 2 times per day. Four months of therapy may be needed for hair growth.

SIDE EFFECTS

Frequent: **PO:** Edema with concurrent weight gain, hypertrichosis (elongation, thickening, increased pigmentation of fine body hair; develops in 80% of pts within 3–6 wks after beginning therapy). **Occasional:** **PO:** EKG T-wave changes (usually revert to pretreatment state with continued therapy or drug withdrawal). **Topical:** Pruritus, rash, dry/flaking skin, erythema. **Rare:** **PO:** Breast tenderness, headache, photosensitivity reaction. **Topical:** Allergic reaction, alopecia, burning sensation at scalp, soreness at hair root, headache, visual disturbances.

ADVERSE EFFECTS/ TOXIC REACTIONS

Tachycardia, angina pectoris may occur due to increased oxygen demands associated with increased heart rate, cardiac output. Fluid/electrolyte imbalance, CHF may occur, esp. if a diuretic is not given concurrently. Too-rapid reduction in B/P may result in syncope,

CVA, MI, ocular/vestibular ischemia. Pericardial effusion, tamponade may be seen in pts with renal impairment not on dialysis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P in both arms and take pulse for 1 full min immediately before giving medication. If pulse increases 20 beats/min or more over baseline or systolic or diastolic B/P decreases more than 20 mm Hg, withhold drug, contact physician.

INTERVENTION/EVALUATION

Monitor fluids/electrolytes, body weight, B/P. Assess for peripheral edema. Assess for signs of CHF (cough, rales at base of lungs, cool extremities, dyspnea on exertion). Monitor fluid, serum electrolytes. Assess for distant or muffled heart sounds by auscultation (pericardial effusion, tamponade).

PATIENT/FAMILY TEACHING

• Maximum B/P response occurs in 3–7 days. • Rise slowly from sitting/lying position. • Reversible growth of fine body hair may begin 3–6 wks following initiation of treatment. • When used topically for stimulation of hair growth, treatment must continue on a permanent basis—cessation of treatment will begin reversal of new hair growth. • Avoid exposure to sunlight, artificial light sources.

mirabegron

mir-ah-**beg**-ron
(Myrbetriq)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Beta_3$-adrenergic agonist. **CLINICAL:** Smooth muscle relaxant.

ACTION

Relaxes detrusor smooth muscle of bladder through $beta_3$ stimulation during storage phase of urinary bladder fill–void cycle. **Therapeutic Effect:** Increases bladder capacity, reduces symptoms of urinary urgency, increased voiding frequency, urge incontinence, nocturia.

PHARMACOKINETICS

Readily absorbed following oral administration; extensively distributed in body. Protein binding: 71%. Renal elimination primarily through active tubular secretion along with glomerular filtration. Primarily eliminated in urine (55%) with a lesser amount excreted in feces (35%). **Half-life:** 50 hrs.

USES

Treatment of overactive bladder with symptoms of urinary incontinence, urgency, frequency.

PRECAUTIONS

Contraindications: None known. **Cautions:** Bladder outlet obstruction, those taking antimuscarinic medications (increases urinary retention), mild to moderate hepatic/renal impairment. Not recommended for use in those with severe uncontrolled hypertension (SBP equal to or greater than 180 mm Hg and/or DBP equal to or greater than 110 mm Hg).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration of **desipramine, digoxin, metoprolol, thioridazine, flecainide, propafenone.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase GGT, LDH; temporarily increase ALT, AST.

AVAILABILITY (RX)

Tablets, Extended Release: 25 mg, 50 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Administer with water, swallow whole. • Do not break, crush, dissolve or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Overactive Bladder

PO: ADULTS, ELDERLY: Initially, 25 mg once daily May increase to 50 mg once daily.

Dosage in Renal/Hepatic Impairment

PO: ADULTS, ELDERLY: 25 mg once daily.

SIDE EFFECTS

Occasional (9%–4%): Hypertension, headache, nasopharyngitis. **Rare (2%–1%):** Constipation, arthralgia, diarrhea, tachycardia, fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Worsening of preexisting hypertension reported infrequently. Urinary tract infection occurs in 6% of patients; influenza in 3%, and upper respiratory infection in 1.5%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check B/P prior to giving medication and assess for hypertension. Monitor EKG. Receive full medication history and screen for possible drug interactions. Monitor I&O (particularly in pts with history of urinary retention).

INTERVENTION/EVALUATION

Monitor baseline ALT, AST, LDH, GGT, and periodically thereafter. Palpate bladder for urinary retention. Measure B/P near end of dosing interval (determines whether B/P is controlled throughout day). Periodic B/P determinations are recommended, especially in hypertensive pts. Titrate digoxin serum level for therapeutic effect (very narrow line between therapeutic and toxic level). Assess pulse for quality, irregular rate, bradycardia. Question for evidence of headache.

PATIENT/FAMILY TEACHING

• Report urinary retention to doctor/nurse. • Do not use nasal decongestants, over-the-counter cold preparations without doctor approval. Restrict salt, alcohol intake. • Take mirabegron with water; swallow tablet whole; do not chew, crush, dissolve, or divide tablet. • May take with or without food.

mirtazapine

TOP 200

mir-**taz**-a-peen
(Apo-Mirtazapine, Novo-Mirtazapine, Remeron, Remeron Soltab)

BLACK BOX ALERT Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Remeron with Premarin, Rozerem, or Zemuron.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tetracyclic compound. **CLINICAL:** Antidepressant (see p. 40C).

ACTION

Acts as antagonist at presynaptic alpha$_2$-adrenergic receptors, increasing norepinephrine, serotonin neurotransmission. Has low anticholinergic activity. **Therapeutic Effect:** Relieves depression, produces sedative effects.

PHARMACOKINETICS

Rapidly, completely absorbed after PO administration; absorption not affected by food. Protein binding: 85%. Me-

tabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 20–40 hrs (longer in males [37 hrs] than females [26 hrs]).

USES

Treatment of depression. **OFF-LABEL:** Post-traumatic stress disorder.

PRECAUTIONS

Contraindications: Use of MAOIs within 14 days. **Cautions:** Renal/hepatic impairment, high-risk pts for seizures, suicidal ideation or behavior.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, CNS depressant medications may increase impairment of cognition, motor skills. **Serotonergic drugs (e.g., venlafaxine)** may increase risk of serotonin syndrome. **CYP3A4 inducers (e.g., phenytoin)** may decrease concentration/effects. **CYP3A4 inhibitors (e.g., ketoconazole)** may increase concentration/effects. **MAOIs** may increase risk of neuroleptic malignant syndrome, hypertensive crisis, severe seizures. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration/effects, may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May increase serum cholesterol, triglycerides, ALT.

AVAILABILITY (Rx)

Tablets (Remeron): 7.5 mg, 15 mg, 30 mg, 45 mg. **Tablets (Orally-Disintegrating [Remeron Soltab]):** 15 mg, 30 mg, 45 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • May crush/break scored tablets.

Orally-Disintegrating Tablets

• Do not split tablet. • Place on tongue; dissolves without water.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: Initially, 15 mg at bedtime. May increase by 15 mg/day q1–2wks. **Maximum:** 45 mg/day. **ELDERLY:** Initially, 7.5 mg at bedtime. May increase by 7.5–15 mg/day q1–2wks. **Maximum:** 45 mg/day.

Dosage in Renal Impairment

Creatinine Clearance	
11–39 ml/min	30% decreased clearance
Less than 11 ml/min	50% decreased clearance

SIDE EFFECTS

Frequent: Drowsiness (54%), dry mouth (25%), increased appetite (17%), constipation (13%), weight gain (12%). **Occasional:** Asthenia (loss of strength, energy) (8%), dizziness (7%), flu-like symptoms (5%), abnormal dreams (4%). **Rare:** Abdominal discomfort, vasodilation, paresthesia, acne, dry skin, thirst, arthralgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Higher incidence of seizures than with tricyclic antidepressants (esp. in those with no history of seizures). Overdose may produce cardiovascular effects (severe orthostatic hypotension, dizziness, tachycardia, palpitations, arrhythmias). Abrupt discontinuation from prolonged therapy may produce headache, malaise, nausea, vomiting, vivid dreams. Agranulocytosis occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess mental status, appearance, behavior, speech pattern, level of interest, mood. Obtain baseline weight. For pts on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Children, adolescents are at increased risk for suicidal thoughts/behavior and worsening of depression, esp. during first few mos of therapy. Assess appearance, behavior, speech pattern, level of interest, mood. Monitor for hypotension, arrhythmias.

PATIENT/FAMILY TEACHING

• Take as single bedtime dose. • Avoid alcohol, depressant/sedating medications. • Avoid tasks requiring alertness, motor skills until response to drug established. • Report worsening depression, suicidal ideation, unusual changes in behavior.

misoprostol

mis-oh-**pros**-toll
(Apo-Misoprostol, Cytotec, Novo-Misoprostol)

BLACK BOX ALERT Pregnancy Category X. Use during pregnancy can cause abortion, premature birth, birth defects. Not to be given to women of childbearing potential unless pt is capable of complying with effective contraception.

Do not confuse Cytotec with Cytoxan, or misoprostol with metoprolol or mifepristone.

FIXED-COMBINATION(S)

Arthrotec: misoprostol/diclofenac (an NSAID): 200 mcg/50 mg, 200 mcg/75 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Prostaglandin. **CLINICAL:** Antisecretory, gastric protectant.

ACTION

Replaces protective prostaglandins consumed with prostaglandin-inhibiting therapies (e.g., NSAIDs). **Therapeutic Effect:** Reduces acid secretion from gastric parietal cells, stimulates bicarbonate production from gastric/duodenal mucosa.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	1–1.5 hrs	3–6 hrs

Rapidly absorbed from GI tract. Protein binding: 80%–90%. Rapidly converted to active metabolite. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 20–40 min.

USES

Prevention of NSAID-induced gastric ulcers and in pts at high risk for developing gastric ulcer/gastric ulcer complications. Medical termination of pregnancy (in conjunction with mifepristone). **OFF-LABEL:** Cervical ripening, labor induction, fat malabsorption in cystic fibrosis.

PRECAUTIONS

Contraindications: Allergy to prostaglandins, pregnancy when used to reduce NSAID-induced ulcers (produces uterine contractions). **Cautions:** Renal impairment, cardiovascular disease, inflammatory bowel disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Produces uterine contractions, uterine bleeding, expulsion of products of conception (abortifacient property). **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Antacids** may increase levels. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 100 mcg, 200 mcg.

ADMINISTRATION/HANDLING

PO

• Give with or after meals (minimizes diarrhea).

INDICATIONS/ROUTES/DOSAGE

Prevention of NSAID-Induced Gastric Ulcer

PO: ADULTS: 200 mcg 4 times a day with food (last dose at bedtime). Continue for duration of NSAID therapy. May reduce dosage to 100 mcg 4 times a day or 200 mcg 2 times a day with food. **ELDERLY:** 100–200 mcg 4 times a day with food.

Chemical Termination of Pregnancy

Refer to mifepristone monograph.

SIDE EFFECTS

Frequent (40%–20%): Abdominal pain, diarrhea. **Occasional (3%–2%):** Nausea, flatulence, dyspepsia, headache. **Rare (1%):** Vomiting, constipation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdosage may produce sedation, tremor, seizures, dyspnea, palpitations, hypotension, bradycardia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy before initiating therapy (Pregnancy Category X).

PATIENT/FAMILY TEACHING

• Avoid magnesium-containing antacids (minimizes potential for diarrhea).
• Women of childbearing potential must not be pregnant before or during medication therapy (may result in hospitalization, surgery, infertility, fetal death).
• Incidence of diarrhea may be lessened by taking immediately following meals.

mitomycin HIGH ALERT

mye-toe-**mye**-sin
(Mutamycin)

BLACK BOX ALERT Potent vesicant. Marked myelosuppression. Infiltration produces ulceration, necrosis, cellulitis, tissue sloughing. Must be administered by certified chemotherapy personnel.

Do not confuse mitomycin with mithramycin or mitoxantrone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antibiotic.
CLINICAL: Antineoplastic (see p. 86C).

ACTION

Alkylating agent, cross-linking with strands of DNA. **Therapeutic Effect:** Inhibits DNA, RNA synthesis.

PHARMACOKINETICS

Widely distributed. Does not cross blood-brain barrier. Primarily metabolized in liver, excreted in urine. **Half-life:** 50 min.

USES

Treatment of disseminated adenocarcinoma of stomach, pancreas. **OFF-LABEL:** Treatment of bladder cancer, prevention of excess scarring in glaucoma filtration procedures in pts at high risk of bleb failure.

PRECAUTIONS

Contraindications: Coagulation disorders, bleeding tendencies, pregnancy, platelet count less than 75,000/mm^3. **Cautions:** Myelosuppression, renal (serum creatinine greater than 1.7 mg/dl)/hepatic impairment, prior radiation treatment.

M

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breast-feeding not recommended. Safety in pregnancy not established. **Pregnancy Category D. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum creatinine.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 5 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration. Give via IV push, IV infusion. Extremely irritating to vein. Injection may produce pain with induration, thrombophlebitis, paresthesia.

IV

Reconstitution • Reconstitute with Sterile Water for Injection to provide solution containing 0.5–1 mg/ml. • Do not shake vial to dissolve. • Allow vial to stand at room temperature until complete dissolution occurs. • For IV infusion, further dilute with 50–100 ml D_5W or 0.9% NaCl (concentration 20–40 mcg/ml).

Rate of Administration • Give slow IV push or by IV infusion over 15–30 min. • Extravasation may produce cellulitis, ulceration, tissue sloughing. Terminate administration immediately, inject ordered antidote. Apply ice intermittently for up to 72 hrs; keep area elevated.

Storage • Use only clear, blue-gray solutions. • Concentration of 0.5 mg/ml (reconstituted vial or syringe) is stable for 7 days at room temperature or 2 wks if refrigerated. Further diluted solution with D_5W is stable for 3 hrs, 12 hrs if diluted with 0.9% NaCl at room temperature.

IV INCOMPATIBILITIES

Aztreonam (Azactam), bleomycin (Blenoxane), cefepime (Maxipime), filgrastim (Neupogen), heparin, piperacillin/tazobactam (Zosyn), sargramostin (Leukine), vinorelbine (Navelbine).

IV COMPATIBILITIES

Cisplatin (Platinol AQ), cyclophosphamide (Cytoxan), doxorubicin (Adriamycin), 5-fluorouracil, granisetron (Kytril), leucovorin, methotrexate, ondansetron (Zofran), vinblastine (Velban), vincristine (Oncovin).

INDICATIONS/ROUTES/DOSAGE

Refer to individual protocols.

Usual Dosage

IV: ADULTS, ELDERLY, CHILDREN: Initially, 10–20 mg/m^2 as single dose. Repeat q6–8wks.

Dosage in Renal Impairment

Creatinine clearance less than 10 ml/min: Give 75% of normal dose.

SIDE EFFECTS

Frequent (Greater Than 10%): Fever, anorexia, nausea, vomiting. **Occasional (10%–2%):** Stomatitis, paresthesia, purple colored bands on nails; rash, alopecia, unusual fatigue. **Rare (Less Than 1%):** Thrombophlebitis, cellulitis with extravasation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Marked myelosuppression results in hematologic toxicity manifested as leukopenia, thrombocytopenia, and, to a lesser extent, anemia (generally occurs within

2–4 wks after initial therapy). Renal toxicity may be evidenced by increased BUN, serum creatinine levels. Pulmonary toxicity manifested as dyspnea, cough, hemoptysis, pneumonia. Long-term therapy may produce hemolytic uremic syndrome, characterized by hemolytic anemia, thrombocytopenia, renal failure, hypertension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC with differential, platelets, PT, bleeding time, before and periodically during therapy. Antiemetics before and during therapy may alleviate nausea/vomiting.

INTERVENTION/EVALUATION

Monitor hematologic status, renal function studies. Assess IV site for phlebitis, extravasation. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Assess for renal toxicity (foul odor from urine, elevated BUN, serum creatinine).

PATIENT/FAMILY TEACHING

• Maintain fastidious oral hygiene. • Immediately report any stinging, burning, pain at injection site. • Do not have immunizations without physician's approval (drug lowers resistance to infection). • Avoid contact with those who have recently received live virus vaccine. • Alopecia is reversible, but new hair growth may have different color, texture. • Contact physician if nausea/vomiting, fever, sore throat, bruising, bleeding, shortness of breath, painful urination occur.

mitoxantrone

HIGH ALERT

my-toe-**zan**-trone
(Novantrone)

BLACK BOX ALERT May cause cardiotoxicity, potentially fatal CHF. Infiltration produces ulceration, necrosis, cellulitis, tissue sloughing. Secondary AML, myelodysplasia have occurred. Must be administered by certified chemotherapy personnel.

Do not confuse mitoxantrone with methotrexate, mitomycin, or Mutamycin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anthracenedione. **CLINICAL:** Nonvesicant, antineoplastic (see p. 86C).

ACTION

Inhibits B-cell, T-cell, macrophage proliferation, DNA, RNA synthesis. Active throughout entire cell cycle. **Therapeutic Effect:** Causes cell death.

PHARMACOKINETICS

Protein binding: greater than 95%. Widely distributed. Metabolized in liver. Primarily eliminated in feces by biliary system. Not removed by hemodialysis. **Half-life:** 2.3–13 days.

USES

Treatment of acute, nonlymphocytic leukemia (monocytic, myelogenous, promyelocytic), late-stage hormone-resistant prostate cancer, multiple sclerosis. **OFF-LABEL:** Treatment of acute lymphocytic leukemia; breast cancer; non-Hodgkin's lymphoma; pediatric acute leukemias, sarcoma; Hodgkin's lymphoma; myelodysplastic lymphoma.

PRECAUTIONS

Contraindications: None known. **Cautions:** Preexisting bone marrow suppression, previous treatment with cardiotoxic medications, hepatobiliary impairment. Baseline left ventricular ejection fraction less than 50%, cumulative lifetime mitoxantrone dose of 140 mg/m^2 or more, multiple sclerosis with hepatic impairment.

M

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Breast-feeding not recommended**. Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effect of **antigout medications. Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: Echinacea** may decrease levels/effects. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, uric acid, AST, ALT.

AVAILABILITY (Rx)

Injection Solution: 2 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration. Give by IV injection, IV infusion. Must dilute before administration.

IV

Reconstitution • Dilute with at least 50 ml D_5W or 0.9% NaCl.

Rate of Administration • Do not administer by subcutaneous, IM, intrathecal, or intra-arterial injection. • Do not give IV push over less than 3 min. • Give IV bolus over at least 3 min, IV intermittent infusion over 15–60 min, or IV continuous infusion (0.02–0.5 mg/ml) in D_5W or 0.9% NaCl.

Storage • Store vials at room temperature. • Opened vials, diluted solutions stable for 7 days at room temperature or refrigerated.

IV INCOMPATIBILITIES

Aztreonam (Azactam), cefepime (Maxipime), heparin, paclitaxel (Taxol), piperacillin/tazobactam (Zosyn).

IV COMPATIBILITIES

Allopurinol (Aloprim), etoposide (VePesid), gemcitabine (Gemzar), granisetron (Kytril), ondansetron (Zofran), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Refer to individual protocols.

Leukemias

IV: ADULTS, ELDERLY: 12 mg/m^2 once a day for 2–3 days. **CHILDREN:** 10 mg/m^2 once daily for 5 days.

Prostate Cancer

IV: ADULTS, ELDERLY: 12–14 mg/m^2 every 21 days.

Multiple Sclerosis

IV: ADULTS, ELDERLY: 12 mg/m^2/dose q3mos. **Maximum lifetime cumulative dose:** 140 mg/m^2.

SIDE EFFECTS

Frequent (Greater Than 10%): Nausea, vomiting, diarrhea, cough, headache, stomatitis, abdominal discomfort, fever, alopecia. **Occasional (9%–4%):** Ecchymosis, fungal infection, conjunctivitis, UTI. **Rare (3%):** Arrhythmias.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression may be severe, resulting in GI bleeding, sepsis, pneumonia. Renal failure, seizures, jaundice, CHF may occur. Cardiotoxicity has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate left ventricular ejection fraction before initiating therapy and before administering each dose. Offer emotional support. Establish baseline for CBC with differential, temperature, pulse rate/quality, respiratory status. Obtain pregnancy test prior to each dose for females of childbearing age.

INTERVENTION/EVALUATION

Monitor hematologic status, pulmonary function studies, hepatic/renal function tests. Monitor for stomatitis, fever, signs of local infection, unusual bruising/bleeding from any site. Extravasation produces swelling, pain, burning, blue discoloration of skin.

PATIENT/FAMILY TEACHING

• Urine will appear blue-green for 24 hrs after administration. Blue tint to sclera may appear. • Maintain adequate daily fluid intake (may protect against renal impairment). • Do not have immunizations without physician's approval (drug lowers resistance to infection). • Avoid crowds, those with infection. • Contraceptive measures recommended during therapy. • Notify physician if chills, fever, sore throat, difficulty breathing, unusual bruising/bleeding occur.

modafinil

TOP 200

moe-**daf**-ih-nil
(Alertec, Apo-Modafinil, Provigil)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Alpha_1$-agonist, CNS stimulant **(Schedule IV).**
CLINICAL: Wakefulness-promoting agent, antinarcoleptic.

ACTION

Binds to dopamine reuptake carrier sites, increasing alpha activity, decreasing delta, theta, beta brain wave activity. **Therapeutic Effect:** Reduces number of sleep episodes, total daytime sleep.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 60%. Widely distributed. Metabolized in liver. Excreted by kidneys. Unknown if removed by hemodialysis. **Half-life:** 15 hrs.

USES

Treatment of excessive daytime sleepiness associated with narcolepsy, shift work sleep disorder, adjunct therapy for obstructive sleep apnea/hypopnea syndrome. **OFF-LABEL:** Treatment of ADHD, multiple sclerosis–related fatigue.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of clinically significant mitral valve prolapse, left ventricular hypertrophy, renal/hepatic impairment, angina, cardiac disease, ischemia, recent MI, preexisting psychosis or bipolar disorder, Tourette's syndrome.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is excreted in breast milk. Use caution if given to pregnant women. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** Age-related renal/hepatic impairment may require decreased dosage.

INTERACTIONS

DRUG: May decrease concentrations of **cyclosporine, oral contraceptives.** May increase concentrations of **tricyclic antidepressants, warfarin. Other CNS stimulants** may increase CNS stimulation. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets (Provigil): 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Narcolepsy, Obstructive Sleep Apnea/Hypopnea Syndrome

PO: ADULTS: 200 mg/day in the morning. **ELDERLY:** Initially, 100 mg/day in the morning.

Shift Work Sleep Disorder
PO: ADULTS: 200 mg about 1 hr prior to start of work shift.

SIDE EFFECTS

Generally well tolerated. **Occasional (5%):** Headache, nausea, dizziness, insomnia, palpitations, diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Agitation, excitation, increased B/P, insomnia may occur. Psychiatric disturbances (anxiety, hallucinations, suicidal ideation), serious allergic reactions (angioedema, Stevens-Johnson syndrome) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline evidence of narcolepsy or other sleep disorders, including pattern, environmental situations, length of sleep episodes. Question for sudden loss of muscle tone (cataplexy) precipitated by strong emotional responses before sleep episode. Assess frequency/severity of sleep episodes before drug therapy.

INTERVENTION/EVALUATION

Monitor sleep pattern, evidence of restlessness during sleep, length of insomnia episodes at night. Assess for dizziness, anxiety; initiate fall precautions. Sugarless gum, sips of tepid water may relieve dry mouth.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Do not increase dose without physician approval. • Use alternative contraceptives during therapy and 1 mo after discontinuing modafinil (reduces effectiveness of oral contraceptives).

mometasone

TOP 200

moe-**met**-a-sone
(Elocon)

mometasone furoate

(Asmanex Twisthaler, Nasonex)

FIXED-COMBINATION(S)

Dulera: mometasone/formoterol (beta-adrenergic agonist): 100 mcg/5 mcg, 200 mcg/5 mcg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocorticosteroid. **CLINICAL:** Anti-inflammatory (see p. 3C, 74C, 76C, 100C).

ACTION

Inhibits release of inflammatory cells into nasal tissue, preventing early activation of allergic reaction. **Therapeutic Effect:** Decreases response to seasonal/perennial rhinitis.

PHARMACOKINETICS

Undetectable in plasma. Protein binding: 98%–99%. Swallowed portion undergoes extensive metabolism. Excreted primarily through bile and, to a lesser extent, urine. **Half-life:** 5 hrs.

USES

Nasal: Treatment of nasal symptoms of seasonal/perennial allergic rhinitis in adults, children over 2 yrs. Prophylaxis of nasal symptoms of seasonal allergic rhinitis in adults, adolescents over 12 yrs. Treatment of nasal polyps. **Inhalation:** Maintenance treatment of asthma as prophylactic therapy or supplement in pts requiring oral steroids for purpose of decreasing oral steroid requirement. **Topical:** Relief of inflammatory, pruritic manifestations of steroid-responsive dermatoses.

PRECAUTIONS

Contraindications: Hypersensitivity to milk proteins. Status asthmaticus or acute bronchospasm (inhalation). **Cautions:** Adrenal insufficiency, glaucoma, untreated infection, tuberculosis, ocular herpes simplex, *Candida albicans* infection of mouth/pharynx.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Prolonged treatment/high doses may decrease short-term growth rate, cortisol secretion. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Ketoconazole** may increase concentration (inhalation). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Cream (Elocon): 0.1%. **Lotion (Elocon):** 0.1%. **Nasal Spray (Nasonex):** 50 mcg/spray. **Ointment (Elocon):** 0.1%. **Powder for Oral Inhaler (Asmanex Twisthaler):** 110 mcg (delivers 100 mcg/actuation), 220 mcg (delivers 200 mcg/actuation).

ADMINISTRATION/HANDLING

Inhalation

• Hold twisthaler straight up with pink portion (base) on bottom, remove cap. • Exhale fully. • Firmly close lips around mouthpiece and inhale a fast, deep breath. • Hold breath for 10 sec.

Intranasal

• Instruct pt to clear nasal passages as much as possible before use. • Tilt head slightly forward. • Insert spray tip into nostril, pointing toward nasal passages, away from nasal septum. • Spray into one nostril while pt holds other nostril closed, concurrently inspires through nose to permit medication as high into nasal passages as possible.

Topical

• Apply thin layer of cream, lotion, ointment to cover affected area. Rub in gently. • Do not cover area with occlusive dressing.

INDICATIONS/ROUTES/DOSAGE

Allergic Rhinitis

Nasal Spray: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2 sprays in each nostril once a day. When used to prevent nasal rhinitis, begin 2–4 wks prior to start of pollen season. **CHILDREN 2–11 YRS:** 1 spray in each nostril once a day.

Asthma

Inhalation: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER (Previous therapy with bronchodilators or inhaled corticosteroids): Initially, inhale 220 mcg (1 puff) once a day. **Maximum:** 440 mcg/day as single or 2 divided doses. **(Previous therapy with oral corticosteroids):** Initially, inhale 440 mcg (2 puffs) twice a day. Reduce prednisone no faster than 2.5 mg/day beginning after at least 1 wk of mometasone. **CHILDREN 4–11 YRS:** 110 mcg once daily in evening.

Skin Disease

Topical: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Apply cream, lotion, or ointment to affected area once a day.

Nasal Polyp

Nasal Spray: ADULTS, ELDERLY: 2 sprays (100 mcg) in each nostril twice a day.

SIDE EFFECTS

Occasional: **Inhalation:** Headache, allergic rhinitis, upper respiratory infection, muscle pain, fatigue. **Nasal:** Nasal irritation, stinging. **Topical:** Burning. **Rare:** **Inhalation:** Abdominal pain, dyspepsia, nausea. **Nasal:** Nasal/pharyngeal candidiasis. **Topical:** Pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Acute hypersensitivity reaction (urticaria, angioedema, severe bronchospasm) occurs rarely. Transfer from systemic to local steroid therapy may unmask previously suppressed bronchial asthma condition.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroids.

INTERVENTION/EVALUATION

Teach proper use of nasal spray, oral inhaler. Instruct pt to clear nasal passages before use. Contact physician if no improvement in symptoms, sneezing, nasal irritation occur. Assess lung sounds for wheezing, rales.

PATIENT/FAMILY TEACHING

• Do not change dose schedule or stop taking drug; must taper off gradually under medical supervision. **Nasal:** Contact physician if symptoms do not improve; sneezing, nasal irritation occur. • Clear nasal passages prior to use. **Inhalation:** Inhale rapidly, deeply; rinse mouth after inhalation. • Not indicated for acute asthma attacks. **Topical:** Do not cover affected area with bandage, dressing.

M

montelukast

TOP 200

mon-**tee**-loo-kast
(Singulair)
Do not confuse Singulair with Sinequan.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Leukotriene receptor inhibitor. **CLINICAL:** Antiasthmatic (see p. 76C).

ACTION

Binds to cysteinyl leukotriene receptors, inhibiting effects of leukotrienes on bronchial smooth muscle. **Therapeutic Effect:** Decreases bronchoconstriction, vascular permeability, mucosal edema, mucus production.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	N/A	24 hrs
PO (chewable)	N/A	N/A	24 hrs

Rapidly absorbed from GI tract. Protein binding: 99%. Extensively metabolized in liver. Excreted almost exclusively in feces. **Half-life:** 2.7–5.5 hrs (slightly longer in elderly).

USES

Prophylaxis, chronic treatment of asthma. Prevention of exercise-induced bronchoconstriction. Not for use in reversal of bronchospasm in acute asthma attacks, status asthmaticus. Treatment of seasonal allergic rhinitis (hay fever). Relief of perennial allergic rhinitis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Systemic corticosteroid treatment reduction during montelukast therapy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Use during pregnancy only if necessary. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted in those older than 6 yrs or the elderly.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, phenobarbital, rifampin) may decrease level, effect. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, eosinophils.

AVAILABILITY (Rx)

Oral Granules: 4 mg per packet. **Tablets:** 10 mg. **Tablets (Chewable):** 4 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

• When treating asthma, administer in evening without regard to meals. • When treating allergic rhinitis, may individual-

ize administration times. • Granules may be given directly in mouth or mixed with carrots, rice, applesauce, ice cream, baby formula, or breast milk (do not add to any other liquid or food). • Give within 15 min of opening packet.

INDICATIONS/ROUTES/DOSAGE

Bronchial Asthma

PO: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: One 10-mg tablet a day, taken in the evening. **CHILDREN 6–14 YRS:** One 5-mg chewable tablet a day, taken in the evening. **CHILDREN 2–5 YRS:** One 4-mg chewable tablet a day, taken in the evening. **CHILDREN 6–23 MOS:** 4 mg (oral granules) once daily in the evening.

Seasonal Allergic Rhinitis

PO: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: One 10-mg tablet, taken in the evening. **CHILDREN 6–14 YRS:** One 5-mg chewable tablet, taken in the evening. **CHILDREN 2–5 YRS:** One 4-mg chewable tablet, taken in the evening.

Perennial Allergic Rhinitis

PO: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: One 10-mg tablet, taken in the evening. **CHILDREN 6–14 YRS:** One 5-mg chewable tablet, taken in the evening. **CHILDREN 2–5 YRS:** One 4-mg chewable tablet, taken in the evening. **CHILDREN 6–23 MOS:** 4 mg oral granules, taken in the evening.

Exercise-Induced Bronchoconstriction Prevention

PO: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: 10 mg 2 or more hrs before exercise. No additional doses within 24 hrs.

SIDE EFFECTS

Adults, children 15 yrs and older: **Frequent (18%):** Headache. **Occasional (4%):** Influenza. **Rare (3%–2%):** Abdominal pain, cough, dyspepsia, dizziness, fatigue, dental pain. **Children 6–14 yrs: Rare (less than 2%):** Diarrhea, laryngitis, pharyngitis, nausea, otitis media, sinusitis, viral infection.

ADVERSE EFFECTS/ TOXIC REACTIONS

Suicidal ideation and behavior, depression has been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Chewable tablet contains phenylalanine (component of aspartame); parents of phenylketonuric pts should be informed. Assess lung sounds for wheezing. Assess for allergy symptoms.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respirations; quality/rate of pulse. Assess lung sounds for wheezing. Monitor for change in mood, behavior.

PATIENT/FAMILY TEACHING

• Increase fluid intake (decreases lung secretion viscosity). • Take as prescribed, even during symptom-free periods as well as during exacerbations of asthma. • Do not alter/stop other asthma medications. • Drug is not for treatment of acute asthma attacks. • Report increased use or frequency of short-acting bronchodilators, changes in behavior, suicidal ideation.

M

morphine

TOP 200 HIGH ALERT

mor-feen

(Astramorph PF, Avinza, DepoDur, Duramorph PF, Infumorph, Kadian, M-Eslon, MS Contin, MSIR, Oramorph SR, Roxanol)

BLACK BOX ALERT Be alert for signs of abuse, misuse, diversion. ***Epidural:*** Monitor for delayed sedation. ***Sustained-release:*** Do not crush or chew. ***MS Contin:*** Use only in opioid-tolerant pts requiring over 400 mg/day. ***Kadian:*** Use only in opioid-tolerant pts. ***Avinza:*** Alcohol disrupts extended-release timing. ***Duramorph PF:*** Risk of severe and/or sustained cardiopulmonary depression.

Do not confuse Avinza with Evista or Invanz, morphine with hydromorphone, morphine sulfate with magnesium sulfate, MS Contin with Oxycontin, or Roxanol with OxyFast, Roxicet, or Roxicodone. MSO_4 and MS are error-prone abbreviations.

FIXED-COMBINATION(S)

Embeda: morphine/naloxone (an opioid antagonist): 20 mg/0.8 mg, 30 mg/1.2 mg, 50 mg/2 mg, 60 mg/2.4 mg, 80 mg/3.2 mg, 100 mg/4 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Narcotic agonist **(Schedule II). CLINICAL:** Opiate analgesic (see p. 142C).

ACTION

Binds with opioid receptors within CNS. **Therapeutic Effect:** Alters pain perception, emotional response to pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Oral solution	30 min	1 hr	3–5 hrs
Tablets	30 min	1 hr	3–5 hrs
Tablets (extended-release)	N/A	3–4 hrs	8–12 hrs
IV	Rapid	0.3 hr	3–5 hrs
IM	5–30 min	0.5–1 hr	3–5 hrs
Epidural	15–60 min	1 hr	12–20 hrs
Subcutaneous	10–30 min	1.1–5 hrs	3–5 hrs
Rectal	20–60 min	0.5–1 hr	3–7 hrs

Variably absorbed from GI tract. Readily absorbed after IM, subcutaneous administration. Protein binding: 20%–35%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 2–4 hrs (increased in hepatic disease).

USES

Relief of moderate to severe, acute, or chronic pain; analgesia during labor. Drug of choice for pain due to MI, dyspnea from pulmonary edema not resulting from chemical respiratory irritant. **DepoDur:** Epidural (lumbar) single-dose management of surgical pain. **Infumorph:** Use in devices for managing intractable chronic pain. **Extended-release:** Use only when repeated doses for extended periods of time are required.

PRECAUTIONS

Contraindications: Acute or severe asthma, GI obstruction, paralytic ileus, severe hepatic/renal impairment, severe respiratory depression. **Sustained Release:** GI obstruction, acute postoperative pain. **Oral Solution:** Heart failure due to lung disease; arrhythmias, head injury, seizures, acute alcoholism. **Injection:** Labor when premature birth expected. **Immediate Release *(Tablets, Oral Solution):*** Post biliary tract surgery, concurrent use of MAO inhibitors, general CNS depression. **Extreme Caution:** COPD, cor pulmonale, hypoxia, hypercapnia, preexisting respiratory depression, head injury, increased ICP, severe hypotension. **Cautions:** Biliary tract disease, pancreatitis, Addison's disease, hypothyroidism, urethral stricture, prostatic hyperplasia, debilitated pts, those with CNS depression, toxic psychosis, seizure disorders, alcoholism.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May prolong labor if administered in latent phase of first stage of labor or before cervical dilation of 4–5 cm has occurred. Respiratory depression may occur in neonate if mother received opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms in neonate (irritability, excessive crying, tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures). **Pregnancy Category C (D if used for prolonged periods or at high dosages at term). Children:** Paradoxical excitement may occur; those younger than 2 yrs are more susceptible

to respiratory depressant effects. **Elderly:** Paradoxical excitement may occur. Age-related renal impairment may increase risk of urinary retention.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS effects, respiratory depression, hypotension. **MAOIs** may produce severe, sometimes fatal reaction (reduce dosage to ¼ of usual morphine dose). **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection, Liposomal Suspension (DepoDur): 10 mg/ml. **Injection, Solution:** 2 mg/ml, 4 mg/ml, 5 mg/ml, 10 mg/ml, 15 mg/ml, 25 mg/ml, 50 mg/ml. **Injection, Solution (Epidural, Intrathecal, IV Infusion) (Astramorph PF, Duramorph PF):** 0.5 mg/ml, 1 mg/ml. **Injection, Solution (Epidural or Intrathecal) (Infumorph):** 10 mg/ml, 25 mg/ml. **Injection, Solution Patient-Controlled Analgesia (PCA) Pump:** 1 mg/ml, 5 mg/ml. **Solution Oral (Roxanol):** 20 mg/ml, 10 mg/5 ml, 20 mg/5 ml. **Suppository:** 5 mg, 10 mg, 20 mg, 30 mg. **Tablets:** 15 mg, 30 mg.

Capsules, Extended-Release (Avinza): 30 mg, 45 mg, 60 mg, 75 mg, 90 mg, 120 mg. **Capsules, Sustained-Release (Kadian):** 10 mg, 20 mg, 30 mg, 50 mg, 60 mg, 80 mg, 100 mg, 200 mg. **Tablets, Extended-Release (MS Contin, Oramorph SR):** 15 mg, 30 mg, 60 mg, 100 mg, 200 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • May give undiluted. • For IV injection, may dilute in Sterile Water for Injection or 0.9% NaCl to final concentration of 1–2 mg/ml. • For continuous IV infusion, dilute to concentration of 0.1–1 mg/ml in D_5W and give through controlled infusion device.

Rate of Administration • Always administer very slowly. Rapid IV increases risk of severe adverse reactions (apnea, chest wall rigidity, peripheral circulatory collapse, cardiac arrest, anaphylactoid effects).

Storage • Store at room temperature.

Epidural, Liposomal

• May give either diluted or undiluted. • Do not use an in-line filter. • Store solution in refrigerator; do not freeze. May store at room temperature for 7 days. • Following withdrawal from vial, use within 4 hrs. • Gently invert vial to resuspend drug; avoid aggressive agitation.

IM, Subcutaneous

• Administer slowly, rotating injection sites. • Pts with circulatory impairment experience higher risk of overdosage due to delayed absorption of repeated administration.

PO

• May give without regard to food. • Mix liquid form with fruit juice to improve taste. • Do not crush, break extended-release capsule, tablets. • **Avinza, Kadian:** May mix with applesauce immediately prior to administration.

Rectal

• If suppository is too soft, chill for 30 min in refrigerator or run cold water over foil wrapper. • Moisten suppository with cold water before inserting well into rectum.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), doxorubicin (Doxil), lipids, phenytoin (Dilantin), thiopental.

IV COMPATIBILITIES

Amiodarone (Cordarone), atropine, bumetanide (Bumex), bupivacaine (Marcaine, Sensorcaine), diltiazem (Cardizem), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), glycopyrrolate (Robinul), heparin, hydroxyzine

(Vistaril), lidocaine, lorazepam (Ativan), magnesium, midazolam (Versed), milrinone (Primacor), nitroglycerin, potassium, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage should be titrated to desired effect.

Analgesia

PO *(Immediate-Release)*: ADULTS, ELDERLY: 10–30 mg q3–4h as needed. **CHILDREN:** 0.15–0.3 mg/kg q3–4h as needed.

◀ALERT▶ For the Avinza dosage below, be aware that this drug is to be administered once a day only.

◀ALERT▶ For the Kadian dosage information below, be aware that this drug is to be administered q12h or once a day.

◀ALERT▶ Be aware that pediatric dosages of extended-release preparations of Kadian and Avinza have not been established.

◀ALERT▶ For the MS Contin and Oramorph SR dosage information below, be aware that the daily dosage is divided and given q8h or q12h.

PO *(Extended-Release [Avinza])*: ADULTS, ELDERLY: Dosage requirement should be established using prompt-release formulations and is based on total daily dose. Avinza is given once a day only.

PO *(Extended-Release [Kadian])*: ADULTS, ELDERLY: Dosage requirement should be established using prompt-release formulations and is based on total daily dose. Dose is given once a day or divided and given q12h.

PO *(Extended-Release [MS Contin, Oramorph SR])*: ADULTS, ELDERLY: Dosage requirement should be established using prompt-release formulations and is based on total daily dose. Daily dose is divided and given q8h or q12h. **CHILDREN:** 0.3–0.6 mg/kg/dose q12h.

IV: ADULTS, ELDERLY: 2.5–5 mg q3–4h as needed. Note: Repeated doses (e.g., 1–2 mg) may be given more frequently (e.g., every hr) if needed. **CHILDREN:** 0.1–0.2 mg/kg q3–4h as needed. **NEONATES:** Initially, 0.05 mg/kg q4–8h. **Maximum:** 0.1 mg/kg/dose.

IV Continuous Infusion: ADULTS, ELDERLY: 0.8–10 mg/hr. Range: Titrate up to 80 mg/hr. **NEONATES:** Initially, 0.01 mg/kg/hr (10 mcg/kg/hr). **Maximum:** 0.015–0.02 mg/kg/hr. **CHILDREN:** 10–60 mcg/kg/hr.

IM: ADULTS, ELDERLY: 5–10 mg q3–4h as needed. **CHILDREN:** 0.1–0.2 mg/kg q3–4h as needed.

Epidural: ADULTS, ELDERLY: Initially, 1–6 mg bolus, infusion rate: 0.1–2 mg/hr. **Maximum:** 10 mg/24 hrs.

Intrathecal: ADULTS, ELDERLY: One-tenth of the epidural dose: 0.2–0.25 mg/dose.

Patient-Controlled Analgesia (PCA)

IV: ADULTS, ELDERLY: Usual concentration: 1 mg/ml. **Demand dose:** 1 mg (range: 0.5–2.5 mg). **Lockout interval:** 5–10 min.

SIDE EFFECTS

◀ALERT▶ Ambulatory pts, those not in severe pain may experience nausea, vomiting more frequently than those in supine position or who have severe pain. **Frequent:** Sedation, decreased B/P (including orthostatic hypotension), diaphoresis, facial flushing, constipation, dizziness, drowsiness, nausea, vomiting. **Occasional:** Allergic reaction (rash, pruritus), dyspnea, confusion, palpitations, tremors, urinary retention, abdominal cramps, vision changes, dry mouth, headache, decreased appetite, pain/burning at injection site. **Rare:** Paralytic ileus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Tolerance to analgesic effect, physical dependence may occur with repeated use. Prolonged duration of action, cumu-

lative effect may occur in those with hepatic/renal impairment. **Antidote:** Naloxone (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pt should be in recumbent position before drug is given by parenteral route. Assess onset, type, location, duration of pain. Obtain vital signs before giving medication. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician. Effect of medication is reduced if full pain recurs before next dose.

INTERVENTION/EVALUATION

Monitor vital signs 5–10 min after IV administration, 15–30 min after subcutaneous, IM. Be alert for decreased respirations, B/P. Check for adequate voiding. Monitor daily pattern of bowel activity, stool consistency. Avoid constipation. Initiate deep breathing, coughing exercises, particularly in those with pulmonary impairment. Assess for clinical improvement, record onset of pain relief. Consult physician if pain relief is not adequate.

PATIENT/FAMILY TEACHING

• Discomfort may occur with injection. • Change positions slowly to avoid orthostatic hypotension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, CNS depressants. • Tolerance, dependence may occur with prolonged use of high doses. • Report ineffective pain control, constipation, urinary retention.

moxifloxacin

TOP 200

mox-ih-**flox**-a-sin
(Avelox, Avelox IV, Moxeza, Vigamox)

BLACK BOX ALERT May increase risk of tendonitis, tendon rupture.

Do not confuse Avelox with Avonex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fluoroquinolone. **CLINICAL:** Antibacterial (see p. 25C).

ACTION

Inhibits two enzymes, topoisomerase II and IV, in susceptible microorganisms. **Therapeutic Effect:** Interferes with bacterial DNA replication. Prevents/delays emergence of resistant organisms. Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract after PO administration. Protein binding: 50%. Widely distributed throughout body with tissue concentration often exceeding plasma concentration. Metabolized in liver. Primarily excreted in urine, with lesser amount in feces. **Half-life: PO:** 12 hrs; **IV:** 15 hrs.

USES

Treatment of susceptible infections due to *S. pneumoniae, S. pyogenes, S. aureus, H. influenzae, M. catarrhalis, K. pneumoniae, M. pneumoniae, C. pneumoniae* including acute bacterial exacerbation of chronic bronchitis, acute bacterial sinusitis, intra-abdominal infection, community-acquired pneumonia, uncomplicated skin/skin structure infections. **Ophthalmic:** Topical treatment of bacterial conjunctivitis due to susceptible strains of bacteria. **OFF-LABEL:** Legionella, pneumonia.

PRECAUTIONS

Contraindications: Hypersensitivity to quinolones. **Cautions:** Renal/hepatic impairment, bradycardia, acute myocardial ischemia, myasthenia gravis, diabetes, rheumatoid arthritis, CNS disorders, cerebral arthrosclerosis, seizures, those with prolonged QT interval, uncorrected hypokalemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be distributed in breast milk. May produce terato-

M

genic effects. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Antacids, iron preparations, sucralfate** may decrease absorption. **NSAIDs** may increase risks of CNS stimulation/seizures. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Injection Infusion (Avelox IV): 400 mg (250 ml). **Ophthalmic Solution (Moxeza, Vigamox):** 0.5%. **Tablets (Avelox):** 400 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Available in ready-to-use containers.
Rate of Administration • Give by IV infusion only. • Avoid rapid or bolus IV infusion. • Infuse over 60 min.
Storage • Store at room temperature. • Do not refrigerate.

PO

• Give without regard to meals. • Oral moxifloxacin should be administered 4 hrs before or 8 hrs after antacids, multivitamins, iron preparations, sucralfate, didanosine chewable/buffered tablets, pediatric powder for oral solution.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place prescribed number of drops into pocket. • Instruct pt to close eye gently (so medication will not be squeezed out of the sac) and to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption.

IV INCOMPATIBILITIES

Do not add or infuse other drugs simultaneously through the same IV line. Flush line before and after use if same IV line is used with other medications.

INDICATIONS/ROUTES/DOSAGE

Usual Dose
PO, IV: ADULTS, ELDERLY: 400 mg q24h.

Acute Bacterial Sinusitis
PO, IV: ADULTS, ELDERLY: 400 mg q24h for 10 days.

Acute Bacterial Exacerbation of Chronic Bronchitis
PO, IV: ADULTS, ELDERLY: 400 mg q24h for 5 days.

Community-Acquired Pneumonia
PO, IV: ADULTS, ELDERLY: 400 mg q24h for 7–14 days.

Intra-Abdominal Infection
PO, IV: ADULTS, ELDERLY: 400 mg q24h for 5–14 days.

Skin/Skin Structure Infection
PO, IV: ADULTS, ELDERLY: 400 mg once a day for 7–21 days.

Topical Treatment of Bacterial Conjunctivitis Due to Susceptible Strains of Bacteria
Ophthalmic: ADULTS, ELDERLY, CHILDREN 1 YR AND OLDER: (Vigamox): 1 drop 3 times a day for 7 days. **(Moxeza):** 1 drop 2 times a day for 7 days.

SIDE EFFECTS

Frequent (8%–6%): Nausea, diarrhea. **Occasional: PO, IV (3%–2%):** Dizziness, headache, abdominal pain, vomiting. **Ophthalmic (6%–1%):** Conjunctival irritation, reduced visual acuity, dry eye, keratitis, eye pain, ocular itching, swelling of tissue around cornea, eye discharge, fever, cough, pharyngitis, rash, rhinitis. **Rare (1%):** Change in sense of taste, dyspepsia (heartburn, epigastric pain, indigestion), photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pseudomembranous colitis (severe abdominal cramps/pain, severe watery diarrhea, fever) may occur. Superinfection (anal/genital pruritus, moderate to severe diarrhea, stomatitis) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity to moxifloxacin, quinolones.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assist with ambulation if dizziness occurs. Assess for headache, abdominal pain, vomiting, altered taste, dyspepsia (heartburn, indigestion). Monitor WBC, signs of infection.

PATIENT/FAMILY TEACHING

• May be taken without regard to food. • Drink plenty of fluids. • Avoid exposure to direct sunlight; may cause photosensitivity reaction. • Do not take antacids 4 hrs before or 8 hrs after dosing. • Take full course of therapy. • Report abdominal cramping/pain, persistent diarrhea.

mupirocin

TOP 200

mue-peer-oh-sin
(Bactroban, Bactroban Nasal)
Do not confuse Bactroban or Bactroban Nasal with bacitracin, baclofen, or Bactrim.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-infective. **CLINICAL:** Topical antibacterial.

ACTION

Inhibits bacterial protein, RNA synthesis. Less effective on DNA synthesis. **Nasal:** Eradicates nasal colonization of methicillin-resistant *Staphylococcus aureus* (MRSA). **Therapeutic Effect:** Prevents bacterial growth, replication. Bacteriostatic.

PHARMACOKINETICS

Following topical administration, penetrates outer layer of skin (minimal through intact skin). Protein binding: 95%. Metabolized in liver; excreted in urine. **Half-life:** 17–36 min.

USES

Ointment: Topical treatment of impetigo caused by *S. aureus*, *S. pyogenes*. **Cream:** Treatment of traumatic skin lesions due to *S. aureus*, *S. pyogenes*. **Intranasal ointment:** Eradication of *S. aureus* from nasal, perineal carriage sites. **OFF-LABEL:** Surgical prophylaxis to prevent wound infections (intranasal).

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment, burn pts.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Cream, Topical (Bactroban): 2%. **Ointment, Intranasal (1-g single-use tube) (Bactroban Nasal):** 2%. **Ointment, Topical (Bactroban):** 2%.

ADMINISTRATION/HANDLING

Topical

Cream, Ointment • For topical use only. • May cover with gauze dressing. • Avoid contact with eyes.

Intranasal

• Apply ½ of the ointment from single-use tube into each nostril. • Avoid contact with eyes.

INDICATIONS/ROUTES/DOSAGE

Usual Topical Dosage

Topical Cream: ADULTS, ELDERLY, CHILDREN 3 MOS AND OLDER: Apply small amount 3 times a day for 10 days. **Topical Ointment: ADULTS, ELDERLY, CHILDREN 2 MOS AND OLDER:** Apply small amount 3–5 times a day for 5–14 days.

Usual Nasal Dosage

Intranasal: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Apply small amount 2–4 times a day for 5–14 days.

SIDE EFFECTS

Frequent: Nasal (9%–3%): Headache, rhinitis, upper respiratory congestion, pharyngitis, altered taste. **Occasional: Nasal (2%):** Burning, stinging, cough. **Topical (2%–1%):** Pain, burning, stinging, pruritus. **Rare: Nasal (less than 1%):** Pruritus, diarrhea, dry mouth, epistaxis, nausea, rash. **Topical (less than 1%):** Rash, nausea, dry skin, contact dermatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Superinfection may result in bacterial, fungal infections, esp. with prolonged, repeated therapy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess skin for type, extent of lesions.

INTERVENTION/EVALUATION

Monitor healing of skin lesions. In event of skin reaction, stop applications, cleanse area gently, notify physician.

PATIENT/FAMILY TEACHING

• For external use only. • Avoid contact with eyes. • Explain precautions to avoid spread of infection; teach how to apply medication. • If skin reaction, irritation develops, notify physician. • If no improvement is noted in 3–5 days, contact physician.

mycophenolate

mye-koe-**fen**-o-late
(CellCept, Myfortic)

BLACK BOX ALERT Increased risk of congenital malformation, spontaneous abortion. Increased risk for development of lymphoma, skin malignancy. Increased susceptibility to infections.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunologic agent. **CLINICAL:** Immunosuppressant (see p. 119C).

ACTION

Suppresses immunologically mediated inflammatory response by inhibiting inosine monophosphate dehydrogenase, an enzyme that deprives lymphocytes of nucleotides necessary for DNA, RNA synthesis, thus inhibiting proliferation of T and B lymphocytes. **Therapeutic Effect:** Prevents transplant rejection.

PHARMACOKINETICS

Rapidly, extensively absorbed after PO administration (food decreases drug plasma concentration but does not affect absorption). Protein binding: 97%. Completely hydrolyzed to active metabolite mycophenolic acid. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 17.9 hrs.

USES

Should be used concurrently with cyclosporine and corticosteroids. **CellCept:** Prophylaxis of organ rejection in pts receiving allogeneic hepatic/renal/cardiac transplants. **Myfortic:** Renal transplants. **OFF-LABEL:** Treatment of hepatic transplant rejection, mild heart transplant rejection, moderate to severe psoriasis,

proliferative lupus nephritis, myasthenia gravis, graft-vs-host disease.

PRECAUTIONS

Contraindications: Hypersensitivity to mycophenolic acid or polysorbate 80 (IV formulation). **Cautions:** Active severe GI disease, renal impairment, neutropenia, women of childbearing potential.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Breast-feeding not recommended. Increased risk of miscarriage, birth defects. **Pregnancy Category C. (Myfortic: Pregnancy Category D). Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentrations of **acyclovir, ganciclovir** in pts with renal impairment. **Antacids (aluminum- and magnesium-containing), cholestyramine** may decrease absorption. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **Other immunosuppressants (e.g., cyclophosphamide, cyclosporine, tacrolimus)** may increase risk of infection, lymphomas. **Probenecid** may increase concentration. **HERBAL: Cat's claw, echinacea** may decrease effects (have immunostimulant properties). **FOOD: All foods** may decrease concentration. **LAB VALUES:** May increase serum cholesterol, alkaline phosphatase, creatinine, AST, ALT. May alter serum glucose, lipids, calcium, potassium, phosphate, uric acid.

AVAILABILITY (Rx)

Capsules (CellCept): 250 mg. **Injection, Powder for Reconstitution (CellCept):** 500 mg. **Oral Suspension (CellCept):** 200 mg/ml. **Tablets (CellCept):** 500 mg.

Tablets (Delayed-Release [Myfortic]): 180 mg, 360 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 500-mg vial with 14 ml D_5W. Gently agitate. • For 1-g dose, further dilute with 140 ml D_5W; for 1.5-g dose further dilute with 210 ml D_5W, providing a concentration of 6 mg/ml.

Rate of Administration • Infuse over at least 2 hrs. • Begin infusion within 4 hrs of reconstitution.

Storage • Store at room temperature. • IV infusion stable for 12 hrs at room temperature.

PO

• Give on empty stomach (1 hr before or 2 hrs after food). • Do not open capsules or crush, cut, or chew delayed-release tablets. Avoid inhalation of powder in capsules, direct contact of powder on skin/mucous membranes. If contact occurs, wash thoroughly, with soap, water. Rinse eyes profusely with plain water. • May store reconstituted suspension in refrigerator or at room temperature. • Suspension is stable for 60 days after reconstitution. • Suspension can be administered orally or via an NG tube (minimum size 8 French).

IV INCOMPATIBILITIES

Mycophenolate is compatible only with D_5W. Do not infuse concurrently with other drugs or IV solutions.

INDICATIONS/ROUTES/DOSAGE

Prevention of Renal Transplant Rejection

PO, IV *(Cellcept)*: ADULTS, ELDERLY: 1 g twice a day. **PO: CHILDREN *(Cellcept Suspension)*:** 600 mg/m^2/dose twice a day. **Maximum:** 1 g twice a day.

PO *(Myfortic)*: ADULTS, ELDERLY: 720 mg twice a day. **CHILDREN 5–16 YRS:** 400 mg/m^2 twice a day. **Maximum:** 720 mg twice a day.

PO ***(Myfortic)*****: ADULTS, ELDERLY:** 720 mg twice a day. **CHILDREN 5–16 YRS:** 400 mg/m^2 twice a day. **Maximum:** 720 mg twice a day.

Prevention of Heart Transplant Rejection
PO, IV ***(Cellcept)*****: ADULTS, ELDERLY:** 1.5 g twice a day.

Prevention of Hepatic Transplant Rejection
PO ***(Cellcept)*****: ADULTS, ELDERLY:** 1.5 g twice a day.
IV ***(Cellcept)*****: ADULTS, ELDERLY:** 1 g twice a day.

SIDE EFFECTS

Frequent (37%–20%): UTI, hypertension, peripheral edema, diarrhea, constipation, fever, headache, nausea. **Occasional (18%–10%):** Dyspepsia; dyspnea; cough; hematuria; asthenia (loss of strength, energy); vomiting; edema; tremors; abdominal, chest, back pain; oral candidiasis; acne. **Rare (9%–6%):** Insomnia, respiratory tract infection, rash, dizziness.

N

ADVERSE EFFECTS/ TOXIC REACTIONS

Significant anemia, leukopenia, thrombocytopenia, neutropenia, leukocytosis may occur, particularly in those undergoing renal transplant rejection. Sepsis, infection occur occasionally. GI tract hemorrhage occurs rarely. There is an increased risk of developing neoplasms. Immunosuppression results in increased susceptibility to infection.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Women of childbearing potential should have a negative serum or urine pregnancy test within 1 wk before initiation of drug therapy. Assess medical history, esp. renal function, existence of active digestive system disease, drug history, esp. other immunosuppressants.

INTERVENTION/EVALUATION

CBC should be performed weekly during first mo of therapy, twice monthly during second and third mos of treatment, then monthly throughout the first yr. If rapid fall in WBC occurs, dosage should be reduced or discontinued. Assess particularly for delayed bone marrow suppression. Report any major change in assessment of pt.

PATIENT/FAMILY TEACHING

- Effective contraception should be used before, during, and for 6 wks after discontinuing therapy, even if pt has a history of infertility, other than hysterectomy. • Two forms of contraception must be used concurrently unless abstinence is absolute. • Contact physician if unusual bleeding/bruising, sore throat, mouth sores, abdominal pain, fever occurs. • Laboratory follow-up while taking medication is important part of therapy. • Malignancies may occur.

nabumetone

na-**bue**-me-tone
(Apo-Nabumetone, Novo-Nabumetone, Relafen)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID. **CLINICAL:** Analgesic, anti-inflammatory (see p. 129C).

ACTION

Produces analgesic anti-inflammatory effects by inhibiting prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 99%. Widely distributed. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 22–30 hrs.

USES

Acute, chronic treatment of osteoarthritis, rheumatoid arthritis (RA). **OFF-LABEL:** Moderate pain.

PRECAUTIONS

Contraindications: Perioperative pain in setting of CABG surgery, history of hypersensitivity to aspirin or NSAIDs. **Cautions:** Active peptic ulcer disease, chronic inflammation of GI tract, GI bleeding/ulceration, CHF, fluid retention, hypertension, hepatic/renal impairment, concurrent use of anticoagulants, aspirin, or corticosteroids; asthma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in low concentration in breast milk. Avoid use during last trimester (may adversely affect fetal cardiovascular system: premature closing of ductus arteriosus). **Pregnancy Category C (D if used in third trimester or near delivery). Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may increase risk of hepatic/renal toxicity; reduced dosage recommended. More likely to have serious adverse effects with GI bleeding/ulceration.

INTERACTIONS

DRUG: May decrease effects of **antihypertensives, diuretics. Aspirin, other salicylates** may increase risk of GI side effects, bleeding. May increase effects of **heparin, oral anticoagulants, thrombolytics.** May increase concentration/risk of **lithium** toxicity. May increase risk of **methotrexate** toxicity. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, horse chestnut** possess antiplatelet activity, may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** May increase urine protein levels, BUN, serum LDH, alkaline phosphatase, creatinine, potassium, AST, ALT. May decrease serum uric acid, Hgb, Hct, leukocytes, platelets.

AVAILABILITY (Rx)

Tablets (Relafen): 500 mg, 750 mg.

ADMINISTRATION/HANDLING

PO

- Give with food, milk, antacids to decrease GI irritation, increase absorption.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA), Osteoarthritis

PO: ADULTS, ELDERLY: Initially, 1,000 mg as a single dose or in 2 divided doses. May increase up to 2,000 mg/day as a single dose or in 2 divided doses.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
30–49 ml/min	Initially, 750 mg/day. **Maximum:** 1,500 mg/day
Less than 30 ml/min	Initially, 500 mg/day. **Maximum:** 1,000 mg/day

SIDE EFFECTS

Frequent (14%–12%): Diarrhea, abdominal cramps/pain, dyspepsia. **Occasional (9%–4%):** Nausea, constipation, flatulence, dizziness, headache. **Rare (3%–1%):** Vomiting, stomatitis, pruritus, rash, tinnitus, edema, fatigue, diaphoresis, insomnia, somnolence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in acute hypotension, tachycardia. Rare reactions with long-term use include peptic ulcer, GI bleeding, gastritis, nephrotoxicity (dysuria, cystitis, hematuria, proteinuria, nephrotic syndrome), severe hepatic reactions (cholestasis, jaundice), severe hypersensitivity reactions (bronchospasm, angioedema).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Monitor renal function tests in pts with renal insufficiency. Assist with ambulation if drowsiness, dizziness occurs. Monitor for evidence of dyspepsia. Monitor daily pattern of bowel activity, stool consistency. Assess for therapeutic response: relief of pain, stiffness, swelling; increase in joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• May cause serious GI bleeding with or without pain. • Avoid aspirin, alcohol. • May take with food if GI upset occurs. • Avoid tasks requiring mental alertness, motor skills until response to drug is established. • Report GI symptoms.

N

nadolol

HIGH ALERT

na-**doe**-lol
(Apo-Nadol, Corgard, Novo-Nadolol)

BLACK BOX ALERT Severe angina exacerbation, MI, ventricular arrhythmias noted in angina pts after abrupt withdrawal.

Do not confuse Corgard with Coreg.

FIXED-COMBINATION(S)

Corzide: nadolol/bendroflumethiazide (a diuretic): 40 mg/5 mg, 80 mg/5 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta-adrenergic blocker. **CLINICAL:** Antianginal, antihypertensive (see p. 72C).

ACTION

Blocks $beta_1$- and $beta_2$-adrenergenic receptors. Large doses increase airway resistance. **Therapeutic Effect:** Slows heart rate, decreases cardiac output, B/P. Decreases myocardial ischemia severity by decreasing oxygen requirements.

PHARMACOKINETICS

Variable absorption after PO administration. Protein binding: 28%–30%. Not metabolized. Excreted unchanged in feces. **Half-life:** 20–24 hrs.

USES

Management of mild to moderate hypertension; used alone or in combination with diuretics, esp. thiazide type. Management of chronic stable angina pectoris. Prophylaxis of migraine headaches. **OFF-LABEL:** Prophylaxis of variceal hemorrhage; management of thyrotoxicosis.

PRECAUTIONS

Contraindications: Bronchial asthma, cardiogenic shock, sinus node dysfunction, second- or third-degree heart block (except with functioning pacemaker), sinus bradycardia, uncontrolled cardiac failure. **Cautions:** Compensated heart failure; concurrent use of verapamil, digoxin, or diltiazem; diabetes; renal impairment; myasthenia gravis; peripheral vascular disease; psychiatric disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Digoxin may increase risk of bradycardia. May mask symptoms of hypoglycemia, prolong hypoglycemic effect of **insulin, oral hypoglycemics. HERBAL: Ephedra, garlic, ginseng, yohimbe** may worsen hypertension. **Licorice** may cause increased serum sodium, water re-

tention, decreased serum potassium. **FOOD:** None known. **LAB VALUES:** May increase serum antinuclear antibody (ANA) titer, BUN, serum LDH, lipoprotein, alkaline phosphatase, bilirubin, potassium, uric acid, AST, ALT, triglycerides.

AVAILABILITY (Rx)

Tablets: 20 mg, 40 mg, 80 mg, 120 mg, 160 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Hypertension, Angina

PO: ADULTS: Initially, 40 mg/day. May increase by 40–80 mg at 3- to 7-day intervals. **Maximum: (Hypertension)** 240–320 mg/day. **(Angina):** 160–240 mg. **ELDERLY:** Initially, 20 mg/day. May increase gradually. Range: 20–240 mg/day.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
31–50 ml/min	q24–36 h
10–30 ml/min	q24–48 h
Less than 10 ml/min	q40–60 h

SIDE EFFECTS

Nadolol is generally well tolerated, with transient, mild side effects. **Occasional (6% or less):** Diminished sexual function, drowsiness, unusual fatigue/weakness, bradycardia, difficulty breathing, depression, cold hands/feet, diarrhea, constipation, anxiety, nasal congestion, nausea, vomiting, altered taste, dry eyes, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremors, exacerbation of angina, MI, ventricular arrhythmias. May precipitate CHF, MI in pts with cardiac disease; thyroid storm in those with thyrotoxicosis; peripheral ischemia in those with existing peripheral vascular disease. Hypoglycemia may occur in pts with previously controlled diabetes.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function tests. Assess B/P, apical pulse immediately before drug administration (if pulse is 60/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician). **Antianginal:** Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain; precipitating factors (exertion, emotional stress).

INTERVENTION/EVALUATION

Monitor B/P for hypotension, respiratory effort for dyspnea. Assess pulse for quality, irregular rate, bradycardia. Assess hands/feet for coldness, tingling, numbness. Assess for evidence of CHF: dyspnea (particularly on exertion, lying down), night cough, peripheral edema, distended neck veins. Monitor I&O (increase in weight, decrease in urinary output may indicate CHF).

PATIENT/FAMILY TEACHING

• Do not discontinue abruptly (may precipitate angina MI, ventricular arrhythmias). • Inform physician if difficulty breathing, night cough, swelling of arms/legs, slow pulse, dizziness, confusion, depression, rash, fever, sore throat, unusual bleeding/bruising occurs. • Avoid tasks that require alertness, motor skills until response to drug is established. • Limit alcohol.

nafcillin

naf-**sill**-in
(Nallpen ✱, Unipen ✱)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillinase-resistant penicillin. **CLINICAL:** Antibiotic (see p. 28C).

ACTION

Binds to bacterial membranes. **Therapeutic Effect:** Inhibits cell wall synthesis. Bactericidal.

USES

Treatment of respiratory tract, skin/skin structure infections; osteomyelitis; endocarditis; meningitis; perioperatively, esp. in cardiovascular, orthopedic procedures. Predominant treatment of infections caused by susceptible strains of staphylococci.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillin. **Cautions:** History of allergies, particularly cephalosporins, severe renal/hepatic impairment.

N

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; appears in cord blood, amniotic fluid. Distributed in breast milk. May lead to rash, diarrhea, candidiasis in neonate, infant. **Pregnancy Category B. Children:** Immature renal function in neonate may delay renal excretion. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: High doses (2 g q4h) may decrease effects of **warfarin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause false-positive Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1 g, 2 g. **Infusion (Premix):** 1 g/50 ml, 2g/100 ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Space doses evenly around the clock.

IV

Reconstitution • Reconstitute each vial with 10 ml Sterile Water for Injection or 0.9% NaCl. • For intermittent IV infusion (piggyback), further dilute with 50–100 ml 0.9% NaCl or D_5W to maximum concentration of 40 mg/ml.

Rate of Administration • Infuse over 30–60 min. • Because of potential for hypersensitivity/anaphylaxis, start initial dose at few drops per min, increase slowly to ordered rate; stay with pt first 10–15 min, then check q10min. • Limit IV therapy to less than 48 hrs, if possible. Stop infusion if pt complains of pain at IV site.

Storage ***(IV infusion [piggyback])*** • Stable for 24 hrs at room temperature, 96 hrs if refrigerated. • Discard if precipitate forms.

IM

• Reconstitute each 500 mg with 1.7 ml Sterile Water for Injection or 0.9% NaCl to provide concentration of 250 mg/ml. • Inject IM into large muscle mass.

IV INCOMPATIBILITIES

Aztreonam (Azactam), diltiazem (Cardizem), droperidol (Inapsine), fentanyl, gentamicin, insulin, labetalol (Normodyne, Trandate), methylprednisolone (Solu-Medrol), midazolam (Versed), nalbuphine (Nubain), vancomycin (Vancocin), verapamil (Isoptin).

IV COMPATIBILITIES

Acyclovir, famotidine (Pepcid), fluconazole (Diflucan), heparin, hydromorphone (Dilaudid), lidocaine, lipids, magnesium, morphine, potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV: ADULTS, ELDERLY: 0.5–2 g q4–6h. **CHILDREN:** 50–200 mg/kg/day in divided doses q4–6h. **Maximum:** 12 g/day. **NEONATES:** 50–140 mg/kg/day in divided doses q6–12h.

IM: ADULTS, ELDERLY: 500 mg q4–6h. **CHILDREN:** 25 mg/kg twice daily.

SIDE EFFECTS

Frequent: Mild hypersensitivity reaction (fever, rash, pruritus), GI effects (nausea, vomiting, diarrhea). **Occasional:** Hypokalemia with high IV dosages, phlebitis, thrombophlebitis (common in elderly). **Rare:** Extravasation with IV administration.

ADVERSE EFFECTS/ TOXIC REACTIONS

Potentially fatal antibiotic-associated colitis, superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Hematologic effects (esp. involving platelets, WBCs), severe hypersensitivity reactions, anaphylaxis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. penicillins, cephalosporins.

INTERVENTION/EVALUATION

Hold medication, promptly report rash (possible hypersensitivity), diarrhea (fever, abdominal pain, mucus/blood in stool may indicate antibiotic-associated colitis). Evaluate IV site frequently for phlebitis (heat, pain, red streaking over vein), infiltration (potential extravasation). Monitor periodic CBC, urinalysis, serum potassium, renal/hepatic function. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Check hematology reports (esp. WBCs), periodic serum renal/hepatic reports in prolonged therapy.

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Doses should be evenly spaced. • Discomfort may occur with IM injection. • Report IV discomfort immediately. • Notify physician in event of diarrhea, rash, other new symptoms.

nalbuphine

HIGH ALERT

nal-bue-feen
(Nubain)
Do not confuse Nubain with Navane.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Narcotic agonist, antagonist. **CLINICAL:** Opioid analgesic (see p. 142C).

ACTION

Binds with opioid receptors within CNS. May displace opioid agonists, competitively inhibiting their action; may precipitate withdrawal symptoms. **Therapeutic Effect:** Alters pain perception, emotional response to pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	2–3 min	30 min	3–4 hrs
IM	Less than 15 min	60 min	3–6 hrs
Subcutaneous	Less than 15 min	N/A	3–6 hrs

Well absorbed after IM, subcutaneous administration. Metabolized in liver. Primarily eliminated in feces by biliary secretion. **Half-life:** 3.5–5 hrs.

USES

Relief of moderate to severe pain, preop analgesia, obstetric analgesia, adjunct to anesthesia. **OFF-LABEL:** Opioid-induced pruritus.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, respiratory depression, recent MI, recent biliary tract surgery, head trauma, increased intracranial pressure (ICP), pregnancy, those suspected of being opioid dependent, obesity, thyroid dysfunction, prostatic hyperplasia, urinary stricture, adrenal insufficiency, cardiovascular disease.

N

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Breast-feeding not recommended. May cause fetal, neonatal adverse effects during labor/delivery (e.g., fetal bradycardia). **Pregnancy Category B (D if used for prolonged periods or at high dosages at term). Children:** Paradoxical excitement may occur. Those younger than 2 yrs more susceptible to respiratory depression. **Elderly:** More susceptible to respiratory depression. Age-related renal impairment may increase risk of urinary retention.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS effects, respiratory depression, hypotension. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml, 20 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • May give undiluted.
Rate of Administration • For IV push, administer each 10 mg over 3–5 min.
Storage • Store parenteral form at room temperature.

IM

• Rotate IM injection sites.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), docetaxel (Doxil), ketorolac (Toradol), lipids, methotrexate, nafcillin (Nafcil), piperacillin and tazobactam (Zosyn), sargramostim (Leukine, Prokine), sodium bicarbonate.

IV COMPATIBILITIES

Diphenhydramine (Benadryl), droperidol (Inapsine), glycopyrrolate (Robinul), hydroxyzine (Vistaril), lidocaine, midazolam (Versed), prochlorperazine (Compazine), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Analgesia

IV, IM, Subcutaneous: ADULTS, ELDERLY: 10 mg q3–6h as needed. Do not exceed maximum single dose of 20 mg or daily dose of 160 mg. **CHILDREN 1 YR AND OLDER:** 0.1–0.2 mg/kg q3–4h as needed. **Maximum:** 20 mg/dose, 160 mg/day.

Supplement to Anesthesia

IV: ADULTS, ELDERLY: Induction: 0.3–3 mg/kg over 10–15 min. Maintenance: 0.25–0.5 mg/kg as needed.

SIDE EFFECTS

Frequent (36%): Sedation. **Occasional (9%–3%):** Diaphoresis, cold/clammy skin, nausea, vomiting, dizziness, vertigo, dry mouth, headache. **Rare (less than 1%):** Restlessness, emotional lability, paresthesia, flushing, paradoxical reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal after prolonged use may produce symptoms of narcotic withdrawal (abdominal cramping, rhinorrhea, lacrimation, anxiety, fever, piloerection [goose bumps]). Overdose results in severe respiratory depression, skeletal muscle flaccidity, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Tolerance to analgesic effect, physical dependence may occur with chronic use.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain vital signs before giving medication. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician. Assess onset, type, location, duration of pain. Effect of medication is reduced if full pain recurs before next dose. Low abuse potential.

INTERVENTION/EVALUATION

Monitor for change in respirations, B/P, rate/quality of pulse. Monitor daily pattern of bowel activity, stool consistency. Initiate deep breathing, coughing exercises, particularly in pts with pulmonary impairment. Assess for clinical improvement, record onset of relief of pain. Consult physician if pain relief is not adequate.

PATIENT/FAMILY TEACHING

• Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established. • May cause dry mouth. • May be habit forming.

naloxone

nah-**lox**-ohwn
(Narcan)
Do not confuse naloxone with Lanoxin or naltrexone, or Narcan with Marcaine or Norcuron.

FIXED-COMBINATION(S)

Embeda: naloxone/morphine (an opioid agonist): 0.8 mg/20 mg, 1.2 mg/30 mg, 2 mg/50 mg, 2.4 mg/60 mg, 3.2 mg/80 mg, 4 mg/100 mg. **Suboxone (sublingual film):** naloxone/buprenorphine (an analgesic): 0.5 mg/2 mg, 1 mg/4 mg, 2 mg/8 mg, 3 mg/12 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Narcotic antagonist. **CLINICAL:** Antidote.

ACTION

Displaces opioids at opioid-occupied receptor sites in CNS. **Therapeutic Effect:** Reverses opioid-induced sleep/sedation, increases respiratory rate, raises B/P to normal range.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–2 min	N/A	20–60 min
IM	2–5 min	N/A	20–60 min
Subcutaneous	2–5 min	N/A	20–60 min

Well absorbed after IM, subcutaneous administration. Metabolized in liver. Primarily excreted in urine. **Half-life:** 60–100 min.

USES

Complete or partial reversal of opioid depression including respiratory depression. Diagnosis of suspected opioid tolerance or acute opioid overdose. Neonatal opiate depression. Coma of unknown origin. **OFF-LABEL:** Opioid-induced pruritus.

PRECAUTIONS

Contraindications: None known. **Cautions:** Chronic cardiac/pulmonary disease, coronary artery disease, those suspected of being opioid dependent, postop pts (to avoid cardiovascular changes), history of seizures.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 0.4 mg/ml, 1 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • May dilute 1 mg/ml with 50 ml Sterile Water for Injection to provide concentration of 0.02 mg/ml. • For continuous IV infusion, dilute each 2 mg of naloxone with 500 ml of D_5W or

0.9% NaCl, producing solution containing 0.004 mg/ml (4 mcg/ml).

Rate of Administration • May administer undiluted. • Give each 0.4 mg as IV push over 30 sec.

Storage • Store parenteral form at room temperature. • Use mixture within 24 hrs; discard unused solution. • Protect from light. • Stable in D_5W or 0.9% NaCl at 4 mcg/ml for 24 hrs.

IM

• Give deep IM in large muscle mass.

IV INCOMPATIBILITY

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Heparin, ondansetron (Zofran), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Opioid Overdose

IV, IM, Subcutaneous: ADULTS, ELDERLY: 2 mg q2–3min as needed. May repeat doses q20–60min. **CHILDREN 5 YRS AND OLDER, WEIGHING 20 KG OR MORE:** 2 mg/dose; if no response, may repeat q2–3min. May need to repeat doses q20–60min. **CHILDREN YOUNGER THAN 5 YRS, WEIGHING LESS THAN 20 KG:** 0.1 mg/kg (**maximum:** 2 mg); if no response, repeat q2–3min. May need to repeat doses q20–60min.

Reversal of Respiratory Depression With Therapeutic Opioid Dosing

IV, IM, Subcutaneous: ADULTS, ELDERLY: Initially, 0.04–0.4 mg. May repeat until desired response achieved. **CHILDREN:** 0.001–0.005 mg/kg. Dose may be repeated as needed.

Postanesthesia Narcotic Reversal

IV: ADULTS, ELDERLY: 0.1–0.2 mg q2–3min. **INFANTS, CHILDREN:** 0.01 mg/kg; may repeat q2–3min.

SIDE EFFECTS

None known; little or no pharmacologic effect in absence of narcotics.

ADVERSE EFFECTS/ TOXIC REACTIONS

Too-rapid reversal of narcotic-induced respiratory depression may result in agitation, nausea, vomiting, tremors, increased B/P, tachycardia. Excessive dosage in postop pts may produce significant reversal of analgesia, agitation, tremors. Hypotension or hypertension, ventricular tachycardia/fibrillation, pulmonary edema may occur in those with cardiovascular disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Maintain clear airway. Obtain weight of children to calculate drug dosage.

INTERVENTION/EVALUATION

Monitor vital signs, esp. rate, depth, rhythm of respiration, during and frequently following administration. Carefully observe pt after satisfactory response (duration of opiate may exceed duration of naloxone, resulting in recurrence of respiratory depression). Assess for increased pain with reversal of opiate.

naltrexone

nal-**trex**-ohwn
(ReVia, Vivitrol)

BLACK BOX ALERT Can cause hepatic injury in excessive doses.

Do not confuse naltrexone with naloxone, or ReVia with Revatio or Revex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid receptor antagonist. **CLINICAL:** Ethanol detoxification agent, antidote.

ACTION

Blocks effects of endogenous opioid peptides by competitively binding at opioid receptors. **Therapeutic Effect: Alcohol deterrent:** Decreases craving, drinking days, relapse rate. **Antidote:** Blocks physical dependence of morphine, heroin, other opioids.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	N/A	24–72 hrs
IM	N/A	2 hrs	2–4 wks

Well absorbed following PO administration. Protein binding: 21%. Metabolized in liver; undergoes first-pass metabolism. Reduction in first-pass hepatic metabolism when given by intramuscular route. Excreted primarily in urine; partial elimination in feces. **Half-life: PO:** 4 hrs; **IM:** 5–10 days.

USES

Vivitrol: Treatment of alcohol dependence in pts able to abstain from alcohol in outpatient setting prior to initiation of treatment. Prevention of relapse to opioid dependence following opioid detoxification. **ReVia:** Blocks effects of exogenously administered opioids.

PRECAUTIONS

Contraindications: Opioid dependence or current use of opioid analgesics, acute opioid withdrawal, failed naloxone challenge or positive urine screen for opioids, acute hepatitis, hepatic failure. **Cautions:** Active hepatic disease; history of suicide attempts, depression; history of bleeding disorders; concurrent anticoagulant therapy; renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effects of **opioid analgesics.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum transaminase, AST, ALT.

AVAILABILITY (Rx)

Injection Suspension, Extended-Release Kit (Vivitrol): 380 mg/4 ml vial. **Tablets: (ReVia):** 50 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ In those with narcotic dependence, do not attempt treatment until pt has remained opioid free for 7–10 days. Test urine for opioids for verification. Pt should not be experiencing withdrawal symptoms.

IM

• Give in deep muscle mass of gluteal region, alternating buttocks. • Vivitrol must be suspended only in diluent supplied in kit.

Storage • Store entire diluent supplied in the kit. • All components (microspheres, diluent, preparation needle, administration needle with safety device) are required for preparation administration. Spare administration needle is provided in case of clogging.

PO

• Administer with food or antacids or after meals.

INDICATIONS/ROUTES/DOSAGE

Adjunct in Treatment of Alcohol Dependence, Prevention of Relapse to Opioid Dependence

IM: ADULTS, ELDERLY: (Vivitrol): 380 mg once every 4 wks or once/mo.

Block Effects of Opioids, Alcohol Dependence

PO: ADULTS, ELDERLY: Initially, 25 mg. Observe pt for 1 hr. If no withdrawal signs appear, give 50 mg on day 2. Maintenance regimen is flexible, variable, and individualized. May be given as 50 mg daily, 50 mg/day Monday thru Friday and

100 mg on Saturday, 100 mg every other day, or 150 mg every 3 days for 12 wks.

SIDE EFFECTS

Common: IM: (69%): Injection site reaction (induration, tenderness, pain, nodules, swelling, pruritus, ecchymosis). **Frequent: Alcohol Deterrent: (33%–10%):** Nausea, headache, depression. **Narcotic Addiction (10%–5%):** Insomnia, anxiety, headache, low energy, abdominal cramps, nausea, vomiting, joint/muscle pain. **Occasional: Alcohol Deterrent (4%–2%):** Dizziness, anxiety, fatigue, insomnia, vomiting, suicidal ideation. **Narcotic Addiction (5% or less):** Irritability, increased energy, dizziness, anorexia, diarrhea, constipation, rash, chills, increased thirst.

ADVERSE EFFECTS/ TOXIC REACTIONS

Signs/symptoms of opioid withdrawal include stuffy/runny nose, tearing, yawning, diaphoresis, tremor, vomiting, piloerection (goose bumps), feeling of temperature change, arthralgia, myalgia, abdominal cramps, formication (feeling of skin crawling). Accidental naltrexone overdosage produces withdrawal symptoms within 5 min of ingestion, lasts up to 48 hrs. Symptoms present as confusion, visual hallucinations, drowsiness, significant vomiting, diarrhea. Hepatotoxicity may occur with large doses.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Treatment with naltrexone should not be instituted unless pt is opioid free for 7–10 days, alcohol free for 3–5 days before therapy begins. Obtain medication history (esp. opioids), other medical conditions (esp. hepatitis, other hepatic disease). If there is any question of opioid dependence, a naloxone challenge test should be performed (naloxone administered to verify opioid dependence and eligibility for admission to opioid treatment program).

INTERVENTION/EVALUATION

Monitor closely for evidence of hepatotoxicity (abdominal pain that lasts longer than a few days, white bowel movements, dark urine, jaundice). Monitor serum AST, ALT, bilirubin.

PATIENT/FAMILY TEACHING

• If heroin, other opiates are self-administered, there will be no effect. However, any attempt to overcome naltrexone's prolonged 24- to 72-hr blockade of opioid effect by taking large amounts of opioids is dangerous and may result in coma, serious injury, fatal overdose. • Naltrexone blocks effects of opioid-containing medicine (cough/cold preparations, antidiarrheal preparations, opioid analgesics). • Contact physician if abdominal pain lasting longer than 3 days, white bowel movement, dark-colored urine, yellow eyes occur.

N

naproxen

TOP 200

na-**prox**-en
(Aleve, Anaprox, Anaprox DS, Apo-Naproxen, EC-Naprosyn, Naprelan, Naprosyn, Novo-Naprox, Nu-Naprox, Pamprin)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines.

Do not confuse Aleve with Allese, or Anaprox with Anaspaz or Avapro.

FIXED-COMBINATION(S)

Prevacid NapraPac: naproxen/lansoprazole (proton pump inhibitor): 375 mg/15 mg, 500 mg/15 mg.
Treximet: naproxen/sumatriptan (an antimigraine): 500 mg/85 mg.
Vimovo: naproxen/esomeprazole (proton pump inhibitor): 375 mg/20 mg, 500 mg/20 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: Analgesic, anti-inflammatory (see p. 129C).

ACTION

Produces analgesic, anti-inflammatory effects by inhibiting prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (analgesic)	1 hr	2–4 hrs	7 hrs or less
PO (anti-inflammatory)	2 wks	2–4 wks	12 hrs

Completely absorbed from GI tract. Protein binding: 99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 13 hrs.

USES

Treatment of acute or long-term mild to moderate pain, primary dysmenorrhea, rheumatoid arthritis (RA), juvenile rheumatoid arthritis (JRA), osteoarthritis, ankylosing spondylitis, acute gouty arthritis, bursitis, tendonitis, fever.

PRECAUTIONS

Contraindications: Hypersensitivity to aspirin, naproxen, other NSAIDs. Perioperative pain in setting of CABG surgery. **Cautions:** GI/cardiac disease, renal/hepatic impairment, asthma, CHF, concurrent use of anticoagulants, smoking, use of alcohol.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closing of ductus arteriosus). **Pregnancy Category C (D if used in third trimester or near delivery). Children:** Safety and efficacy not established in those younger than 2 yrs. Children older than 2 yrs at increased risk for skin rash. **Elderly:** Age-related renal impairment may increase risk of hepatic/renal toxicity; reduced dosage recommended. More likely to have serious adverse effects with GI bleeding/ulceration.

INTERACTIONS

DRUG: May decrease effects of **antihypertensives, diuretics. Aspirin, other salicylates** may increase risk of GI side effects, bleeding. **Bone marrow depressants** may increase risk of hematologic reactions. May increase risk of bleeding with **heparin, oral anticoagulants, thrombolytics.** May increase concentration, risk of toxicity of **lithium.** May increase risk of **methotrexate** toxicity. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, horse chestnut, red clover** possess antiplatelet activity, may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** May prolong bleeding time. May increase BUN, serum creatinine, ALT, AST, alkaline phosphatase. May decrease Hgb, Hct, leukocytes, platelets, uric acid.

AVAILABILITY (Rx)

Gelcaps (Aleve [OTC]): 220 mg naproxen sodium (equivalent to 200 mg naproxen). **Oral Suspension (Naprosyn):** 125 mg/5 ml naproxen. **Tablets:** 220 mg naproxen sodium (equivalent to 200 mg naproxen) (Aleve [OTC]), 250 mg (Naprosyn), 275 mg naproxen sodium (equivalent to 250 mg naproxen) (Anaprox), 550 mg naproxen sodium (equivalent to 500 mg naproxen) (Anaprox DS).

Tablets (Controlled-Release): 375 mg naproxen (EC-Naprosyn), 412.5 mg naproxen sodium (equivalent to 375 mg naproxen) (Naprelan), 500 mg naproxen (EC-Naprosyn), 550 mg naproxen sodium (equivalent to 500 mg naproxen) (Naprelan), 825 mg naproxen sodium (equivalent to 750 mg naproxen) (Naprelan).

ADMINISTRATION/HANDLING

PO

• Swallow controlled-release form whole. Do not break, crush, chew. • Scored tablets may be broken/crushed. • Best taken with food or milk (decreases GI irritation). • Shake suspension well.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA), Osteoarthritis, Ankylosing Spondylitis

PO: ADULTS, ELDERLY: 500–1,000 mg/day in 2 divided doses. May increase to 1,500 mg/day for limited time.

Acute Gouty Arthritis

PO: ADULTS, ELDERLY: Initially, 750 mg naproxen (825 mg naproxen sodium), then 250 mg naproxen (275 mg naproxen sodium) q8h until attack subsides. **Naprelan:** Initially, 1,000–1,500 mg, then 1,000 mg once daily until attack subsides.

Mild to Moderate Pain, Dysmenorrhea, Bursitis, Tendonitis

PO: ADULTS, ELDERLY: Initially, 500 mg naproxen (550 mg naproxen sodium), then 250 mg naproxen (275 mg naproxen sodium) q6–8h as needed. **Maximum:** 1.25 g/day naproxen (1.375 g/day naproxen sodium). **Naprelan:** 1,000 mg once daily.

Juvenile Rheumatoid Arthritis (JRA)

PO *(Naproxen Only)*: CHILDREN OLDER THAN 2 YRS: 10 mg/kg/day in 2 divided doses. **Maximum:** 1,000 mg/day.

OTC Uses

PO: ADULTS 65 YRS AND YOUNGER, CHILDREN 12 YRS AND OLDER: 220 mg (200 mg naproxen sodium) q8–12h. May take 440 mg (400 mg naproxen sodium) as initial dose. **ADULTS OLDER THAN 65 YRS:** 220 mg (200 mg naproxen sodium) q12h.

Renal Impairment

Not recommended with creatinine clearance less than 30 ml/min.

SIDE EFFECTS

Frequent (9%–4%): Nausea, constipation, abdominal cramps/pain, heartburn, dizziness, headache, drowsiness. **Occasional (3%–1%):** Stomatitis, diarrhea, indigestion. **Rare (less than 1%):** Vomiting, confusion.

ADVERSE EFFECTS/ TOXIC REACTIONS

Rare reactions with long-term use include peptic ulcer, GI bleeding, gastritis, severe hepatic reactions (cholestasis, jaundice), nephrotoxicity (dysuria, hematuria, proteinuria, nephrotic syndrome), and severe hypersensitivity reaction (fever, chills, bronchospasm).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Monitor CBC, platelet count, serum renal/hepatic function tests, Hgb, daily pattern of bowel activity, stool consistency. Evaluate for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Take with food, milk. • Avoid aspirin, alcohol during therapy (increases risk of GI bleeding). • Report headache, rash, visual disturbances, weight gain, black or tarry stools, bleeding, persistent headache.

naratriptan

nar-a-**trip**-tan
(Amerge)

Do not confuse Amerge with Altace or Amaryl.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor agonist. **CLINICAL:** Antimigraine (see p. 63C).

ACTION

Binds selectively to vascular receptors, producing vasoconstrictive effect on cranial blood vessels. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 28%–31%. Metabolized by liver to inactive metabolite. Eliminated primarily in urine and, to lesser extent, in feces. **Half-life:** 6 hrs (increased in hepatic/renal impairment).

USES

Treatment of acute migraine headache with or without aura in adults.

PRECAUTIONS

Contraindications: Basilar/hemiplegic migraine, cerebrovascular disease, peripheral vascular disease, coronary artery disease, ischemic heart disease (including angina pectoris, history of MI, silent ischemia, Prinzmetal's angina), severe hepatic impairment (Child-Pugh grade C), severe renal impairment (serum creatinine less than 15 ml/min), uncontrolled hypertension, use within 24 hrs of ergotamine-containing preparations or another serotonin receptor agonist, 5-HT agonist (e.g., sumatriptan), MAOI use within 14 days. **Cautions:** Mild to moderate renal/hepatic impairment, pt profile suggesting cardiovascular risks.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Not recommended in the elderly.

INTERACTIONS

DRUG: Ergotamine-containing medications may produce vasospastic reaction. **SSRIs** and **SNRIs (e.g., fluoxetine, fluvoxamine, paroxetine, sertraline)** may produce serotonin syndrome (e.g., hyperreflexia, incoordination, weakness). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 1 mg, 2.5 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not crush, chew tablets. Swallow whole with water.

INDICATIONS/ROUTES/DOSAGE

Acute Migraine Attack

PO: ADULTS: 1 or 2.5 mg. If headache improves but then returns, dose may be repeated after 4 hrs. **Maximum:** 5 mg/24 hrs.

Dosage in Renal/Hepatic Impairment

Hepatic Failure	Creatinine Clearance	Dosage
Mild to moderate	15–39 ml/min	Initial, 1 mg. Max: 2.5/24 hrs
Severe	Less than 15 ml/min	Do not use

SIDE EFFECTS

Occasional (5%): Nausea. **Rare (2%):** Paresthesia, dizziness, fatigue, drowsiness, feeling of pressure in throat, neck, jaw.

ADVERSE EFFECTS/ TOXIC REACTIONS

Corneal opacities, other ocular defects may occur. Cardiac events (ischemia, coronary artery vasospasm, MI), noncardiac vasospasm-related reactions (hemorrhage, cerebrovascular accident [CVA]) occur rarely, particularly in pts with hypertension, diabetes, strong family history of

coronary artery disease, obese pts, smokers, males older than 40 yrs, postmenopausal women.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of peripheral vascular disease, renal/hepatic impairment, possibility of pregnancy. Question pt regarding possible precipitating symptoms, onset, location, duration of migraine.

INTERVENTION/EVALUATION

Assess for relief of migraine headache; potential for photophobia, phonophobia (sound sensitivity), nausea, vomiting.

PATIENT/FAMILY TEACHING

• Do not crush, chew tablet; swallow whole with water. • May repeat dose after 4 hrs (maximum of 5 mg/24 hrs). • May cause dizziness, fatigue, drowsiness. • Avoid tasks that require alertness, motor skills until response to drug is established. • Inform physician of any chest pain, palpitations, tightness in throat, rash, hallucinations, anxiety, panic.

natalizumab

na-tah-**liz**-yoo-mab
(Tysabri)

BLACK BOX ALERT Restricted distribution program (TOUCH), given only to program-qualified/enrolled pts. Increased risk of leukoencephalopathy (progressive, often fatal viral brain infection).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Multiple sclerosis agent, immunologic agent.

ACTION

Binds to surface of leukocytes, inhibiting adhesion of leukocytes to vascular endothelial cells of GI tract, preventing migration of leukocytes across endothelium into inflamed parenchymal tissue. **Therapeutic Effect:** Inhibits inflammatory activity of activated immune cells, reduces clinical exacerbations of multiple sclerosis, Crohn's disease.

PHARMACOKINETICS

Half-life: 11 days.

USES

Treatment of relapsing forms of multiple sclerosis to reduce frequency of clinical exacerbations. Treatment of moderate to severe Crohn's disease in pts with inadequate response or unable to tolerate conventional Crohn's disease therapies.

PRECAUTIONS

Contraindications: Pts who have or have had progressive multifocal leukoencephalopathy (PML). **Cautions:** Chronic progressive multiple sclerosis, children younger than 18 yrs. Concomitant immunosuppressants (may increase risk of infection).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antineoplastics, immunomodulating agents, immunosuppresants may increase risk of PML. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase lymphocytes, monocytes, eosinophils, basophils, red blood cells (usually reversible within 16 wks after last dose).

AVAILABILITY (Rx)

Injection Solution: 300 mg/15 ml concentrate.

ADMINISTRATION/HANDLING

IV

Reconstitution • Withdraw 15 ml natalizumab from vial; inject concentrate into 100 ml 0.9% NaCl. • Invert solution to mix completely; do not shake. • Discard if solution is discolored or particulate forms.
Rate of Administration • Infuse over 1 hr. • Following completion of infusion, flush with 0.9% NaCl.
Storage • Refrigerate vials. • Do not shake, freeze. Protect from light. • After reconstitution, solution is stable for 8 hrs if refrigerated.

IV INCOMPATIBILITIES

Do not mix with any other medications or diluent other than 0.9% NaCl.

INDICATIONS/ROUTES/DOSAGE

Relapsed Multiple Sclerosis, Crohn's Disease
IV Infusion: ADULTS 18 YRS AND OLDER, ELDERLY: 300 mg every 4 wks.

SIDE EFFECTS

Frequent (35%–15%): Headache, fatigue, depression, arthralgia. **Occasional (10%–5%):** Abdominal discomfort, rash, urinary urgency/frequency, irregular menstruation/dysmenorrhea, dermatitis. **Rare (4%–2%):** Pruritus, chest discomfort, local bleeding, rigors, tremor, syncope.

ADVERSE EFFECTS/ TOXIC REACTIONS

UTI, lower respiratory tract infection, gastroenteritis, vaginitis, allergic reaction, tonsillitis, PMI.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, serum chemistries including hepatic enzyme levels. Assess home situation for support of therapy.

INTERVENTION/EVALUATION

Periodically monitor lab results. Assess for arthralgia, depression, urinary changes, menstrual irregularities. Assess skin for evidence of rash, pruritus, dermatitis. Monitor for signs/symptoms of UTI, respiratory infection.

nateglinide

HIGH ALERT

na-**te**-glye-nide
(Starlix)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihyperglycemic. **CLINICAL:** Antidiabetic agent (see p. 44C).

ACTION

Stimulates insulin release from beta cells of pancreas by depolarizing beta cells, leading to opening of calcium channels. Resulting calcium influx induces insulin secretion. **Therapeutic Effect:** Lowers serum glucose concentration.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	20 min	1 hr	4 hrs

Rapidly absorbed from GI tract. Protein binding: 98%, primarily to albumin. Extensive metabolism in liver. Primarily excreted in urine; minimal elimination in feces. **Half-life:** 1.5 hrs.

USES

Treatment of type 2 diabetes mellitus in pts whose disease cannot be adequately controlled with diet and exercise and in pts who have not been chronically treated with other antidiabetic agents. Used as monotherapy or in combination with metformin or a thiazolidinedione.

PRECAUTIONS

Contraindications: Diabetic ketoacidosis, type 1 diabetes mellitus. **Cautions:** Hepatic/renal impairment, adrenal/pituitary dysfunction.

N

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Increased susceptibility to hypoglycemia.

INTERACTIONS

DRUG: Beta-blockers may mask symptoms of hypoglycemia. **Beta-blockers, MAOIs, NSAIDs, salicylates** may increase hypoglycemic effect. **Corticosteroids, sympathomimetics, thiazide diuretics, thyroid medications** may decrease hypoglycemic effect. **HERBAL: Bilberry, garlic, ginger, ginseng** may increase hypoglycemic effect. **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 60 mg, 120 mg.

ADMINISTRATION/HANDLING

PO

• Ideally, give within 15 min of a meal, but may be given immediately before a meal to as long as 30 min before a meal.

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus

PO: ADULTS, ELDERLY: 120 mg 3 times a day before meals. 60 mg 3 times a day may be given in pts close to HbA_{1C} goal.

SIDE EFFECTS

Frequent (10%): Upper respiratory tract infection. **Occasional (4%–3%):** Back pain, flu symptoms, dizziness, arthropathy, diarrhea. **Rare (2% or less):** Bronchitis, cough.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypoglycemia occurs in less than 2% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check fasting serum glucose, glycosylated Hgb (HbA_{1C}) periodically to determine minimum effective dose. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt, family do not thoroughly understand diabetes management, glucose-testing technique. At least 1 wk should elapse to assess response to drug before new dose adjustment is made.

INTERVENTION/EVALUATION

Monitor serum glucose, food intake. Assess for hypoglycemia (cool, wet skin, tremors, dizziness, anxiety, headache, tachycardia, numbness in mouth, hunger, diplopia), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep rapid breathing). Be alert to conditions that alter glucose requirements: fever, increased activity, stress, surgical procedures.

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. • Prescribed diet, exercise are principal parts of treatment; do not skip, delay meals. • Continue to adhere to dietary instructions, regular exercise program, regular testing of serum glucose.

nebivolol

TOP 200

neh-**biv**-oh-lol
(Bystolic)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta-adrenergic blocker. **CLINICAL:** Antihypertensive (see p. 72C).

ACTION

Predominantly blocks $beta_1$-adrenergic receptors. Large doses block both $beta_1$ and $beta_2$ receptors. **Therapeutic Ef-**

fect: Slows sinus heart rate, decreases myocardial contractility, B/P.

PHARMACOKINETICS

	Onset	Peak	Duration
PO	30 min	1.5–4 hrs	12 hrs

Completely absorbed from GI tract. Protein binding: 98%. Metabolized in liver. Primarily excreted unchanged in feces (44%), with lesser amount eliminated in urine (38%). **Half-life:** 12 hrs (increased in severe renal impairment).

USES

Management of hypertension. Used alone or in combination with other antihypertensives. **OFF-LABEL:** Heart failure.

PRECAUTIONS

Contraindications: Severe bradycardia, overt cardiac failure, cardiogenic shock, heart block greater than first degree, severe hepatic impairment, sick sinus rhythm (unless pt has pacemaker). **Cautions:** Diabetes mellitus, acute exacerbation of coronary artery disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cross placenta; appears to be distributed in breast milk. May produce low birthweight infants. **Pregnancy Category C (D in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Diuretics, other hypotensives** may increase hypotensive effect. **CYP2D6 inhibitors** (e.g., **fluoxetine, paroxetine**) may increase concentration/effects. **HERBAL:** **Ephedra, ginseng, yohimbe, ginger, licorice** may worsen hypertension. **Black cohosh, periwinkle** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum uric acid, AST, ALT, bilirubin, triglycerides. May decrease platelet count, serum HDL.

AVAILABILITY (Rx)

Tablets: 2.5 mg, 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Do not crush, split, chew tablets.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 5 mg once a day alone or in combination with other antihypertensives. May increase at 2-wk intervals to maximum 40 mg once a day.

Severe Renal Impairment (Creatinine Clearance Less Than 30 ml/min)

PO: ADULTS, ELDERLY: Initially, 2.5 mg once a day. Increase cautiously.

Moderate Hepatic Impairment

PO: ADULTS, ELDERLY: Initially, 2.5 mg once a day. Increase cautiously.

SIDE EFFECTS

Generally well tolerated, with mild and transient side effects. **Occasional (9%):** Headache. **Rare (2%–1%):** Fatigue, dizziness, diarrhea, nausea, insomnia, peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Large doses may produce bradycardia, dyspnea, rash. Acute pulmonary edema, renal failure, AV block reported. **Antidote:** Glucagon (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function tests. Assess B/P, apical pulse immediately before drug administration (if pulse is 60/min or less, or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Measure B/P near end of dosing interval (determines whether B/P is controlled

throughout day). Monitor B/P for hypotension. Assess pulse for quality, irregular rate, bradycardia. Question for evidence of headache.

PATIENT/FAMILY TEACHING

• Compliance with therapy regimen is essential to control hypertension. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician's approval. • Monitor B/P, pulse before taking medication. • Restrict salt, alcohol intake.

nelarabine

HIGH ALERT

nel-**ar**-a-been
(Arranon, Atriance)

BLACK BOX ALERT Dose-limiting neurotoxicity (confusion, severe drowsiness, seizures, ataxia, ascending neuropathy). Must be administered by certified chemotherapy personnel.

CLASSIFICATION

PHARMACOTHERAPEUTIC: DNA demethylation agent. **CLINICAL:** Antineoplastic; antimetabolite (see p. 86C).

ACTION

Incorporates into DNA, leading to inhibition of DNA synthesis. Exerts cytotoxic effect on rapidly dividing cells by causing demethylation of DNA. **Therapeutic Effect:** Produces cell death.

PHARMACOKINETICS

Rapidly eliminated from plasma. Extensive distribution. Protein binding: less than 25%. Partially eliminated in urine. **Half-life:** 30 min.

USES

Treatment of T-cell acute lymphoblastic leukemia, T-cell lymphoblastic lymphoma in pts whose disease has not responded to or has relapsed following treatment with at least two chemotherapy regimens.

PRECAUTIONS

Contraindications: None known. **Cautions:** Bone marrow suppression, elevated uric acid, gout, history of uric acid stones, severe hepatic disease, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause developmental abnormalities of the fetus. Breast-feeding not recommended. **Pregnancy Category D. Children:** No age-related precautions noted. **Elderly:** Increased risk of neurologic toxicities.

INTERACTIONS

DRUG: Live virus vaccines may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, WBCs, RBCs, platelets, serum albumin, calcium, glucose, magnesium, potassium. May increase serum bilirubin, transaminase, creatinine, AST.

AVAILABILITY (Rx)

Injection Solution: 250 mg (5 mg/ml) in 50-ml vials (Arranon).

ADMINISTRATION/HANDLING

IV

Reconstitution • Do not dilute before administration. • Transfer appropriate dose into polyvinylchloride infusion bag or glass container before administration.
Rate of Administration • Administer as 2-hr infusion for adults, 1-hr infusion for pediatric pts.
Storage • Store vials at room temperature. • Solution should appear colorless, free of precipitate. Undiluted injection solution stable for 8 hrs in PVC infusion bag or glass container.

INDICATIONS/ROUTES/DOSAGE

T-Cell Leukemia, Lymphoma

IV: ADULTS, ELDERLY: 1,500 mg/m^2 infused over 2 hrs on days 1, 3, and 5 repeated q21days. **CHILDREN:** 650 mg/m^2

infused over 1 hr daily for 5 consecutive days repeated q21days.

SIDE EFFECTS

ADULTS

Frequent (50%–41%): Fatigue, nausea. **Occasional (25%–11%):** Cough, fever, drowsiness, vomiting, dyspnea, diarrhea, constipation, dizziness, asthenia (loss of strength, energy), peripheral edema, paresthesia, headache, peripheral neuropathy, myalgia, petechiae, generalized edema. **Rare (9%–4%):** Anorexia, abdominal pain, arthralgia, hypertension, tachycardia, confusion, rigors, stomatitis, back pain, epistaxis, insomnia, dehydration, extremity pain, depression, abdominal distention, blurred vision.

CHILDREN

Frequent (17%): Headache. **Occasional (10%–6%):** Vomiting, drowsiness, asthenia (loss of strength, energy), peripheral neuropathy. **Rare (4%–2%):** Paresthesia, tremor, ataxia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in severe neurotoxicity, myelosuppression. Hematologic toxicity manifested as thrombocytopenia, neutropenia, anemia occurs in most cases. Pleural effusion occurs in 10% of pts, pneumonia in 8% of pts, seizures in 6% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Give emotional support to pt, family. Use strict asepsis, protect pt from infection. Hydration, urine alkalization, prophylaxis with allopurinol must be given to prevent hyperuricemia of tumor lysis syndrome. Perform blood counts as needed to monitor response and toxicity but esp. before each dosing cycle.

INTERVENTION/EVALUATION

Monitor for neurologic toxicity (severe drowsiness, confusion, seizure), hematologic toxicity (fever, sore throat, signs of local infections, unusual bruising/bleeding), symptoms of anemia (excessive fatigue, weakness). Assess response to medication; monitor and report nausea, vomiting, diarrhea. Avoid rectal temperatures, other traumas that may induce bleeding. Monitor renal/hepatic function.

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (drug lowers resistance). • Avoid crowds, persons with known infections. • Report signs of infection at once (fever, flu-like symptoms). • Contact physician if nausea/vomiting continues at home. • Advise men to use barrier contraception while receiving treatment. • Measures should be taken to avoid pregnancy. • Contact physician if new or worsening symptoms of peripheral neuropathy occur.

nelfinavir

nel-**fin**-ah-veer
(Viracept)
Do not confuse nelfinavir with nevirapine, or Viracept with Viramune.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antiviral (see pp. 69C, 117C).

ACTION

Inhibits activity of HIV-1 protease, the enzyme necessary for formation of infectious HIV. **Therapeutic Effect:** Formation of immature noninfectious viral particles rather than HIV replication.

PHARMACOKINETICS

Well absorbed after PO administration (absorption increased with food). Protein binding: 98%. Metabolized in liver. Highly bound to plasma proteins. Eliminated primarily in feces. Unknown if removed by hemodialysis. **Half-life:** 3.5–5 hrs.

USES

Treatment of HIV infection in combination with other antiretrovirals.

PRECAUTIONS

Contraindications: Concurrent administration with alfuzosin, amiodarone, ergot derivatives, midazolam, rifampin, sildenafil (when used for pulmonary arterial hypertension), triazolam. **Cautions:** Hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted in those older than 2 yrs. **Elderly:** No information available.

INTERACTIONS

DRUG: May increase toxicity of **colchicine. Anticonvulsants (e.g., carbamazepine, phenytoin)** may decrease concentration. May increase concentration of **fluticasone, immunosuppressants (e.g., cyclosporine, sirolimus, tacrolimus), indinavir, saquinavir, trazodone, lovastatin, atorvastatin.** May decrease effects of **oral contraceptives.** **HERBAL:** **St. John's wort** may decrease concentration/effects. **FOOD:** **All foods** increase concentration. **LAB VALUES:** May decrease neutrophil, WBC counts.

AVAILABILITY (Rx)

Powder for Oral Suspension: 50 mg/g. **Tablets:** 250 mg, 625 mg.

ADMINISTRATION/HANDLING

PO

• Give with food (light meal, snack). • Tablets can be dissolved in water then mixed with milk or crushed and mixed with pudding. • Mix oral powder with small amount of water, milk, formula, soy formula, soy milk, dietary supplement. • Entire contents must be consumed in order to ingest full dose. • Do not mix with acidic food, orange juice, apple juice, applesauce (bitter taste), or with water in original oral powder container.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS: 750 mg (three 250-mg tablets) 3 times a day or 1,250 mg (two 625-mg tablets) twice a day in combination with other antiretrovirals. **CHILDREN 2–13 YRS:** 45–55 mg/kg twice a day or 25–35 mg/kg 3 times a day. **Maximum:** 2,500 mg/day.

SIDE EFFECTS

Frequent (20%): Diarrhea. **Occasional (7%–3%):** Nausea, rash. **Rare (2%–1%):** Flatulence, asthenia (loss of strength, energy).

ADVERSE EFFECTS/ TOXIC REACTIONS

Diabetes mellitus, hyperglycemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check hematology, hepatic function tests for accurate baseline.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor hepatic enzyme studies for abnormalities. Be alert to development of opportunistic infections (fever, chills, cough, myalgia).

PATIENT/FAMILY TEACHING

• Take with food (optimizes absorption). • Take medication every day as prescribed. • Doses should be evenly spaced around the clock. • Do not alter dose, discontinue medication without informing physician. • Nelfinavir is not a cure for HIV infection nor does it reduce risk of transmission to others. • Illnesses, including opportunistic infections, may still occur.

neostigmine

nee-oh-**stig**-meen
(Prostigmin)

Do not confuse neostigmine or Prostigmin with physostigmine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cholinergic. **CLINICAL:** Antimyasthenic, antidote (see p. 91C).

ACTION

Prevents destruction of acetylcholine by attaching to enzyme acetylcholinesterase, enhancing impulse transmission across myoneural junction. **Therapeutic Effect:** Improves intestinal/skeletal muscle tone; stimulates salivary, sweat gland secretions.

USES

Improvement of muscle strength in control of myasthenia gravis; diagnosis of myasthenia gravis; prevention/treatment of postop bladder distention, urinary retention; antidote for reversal of effects of nondepolarizing neuromuscular blocking agents after surgery.

PRECAUTIONS

Contraindications: GI/GU obstruction, history of hypersensitivity reaction to bromides, peritonitis. **Cautions:** Epilepsy, asthma, bradycardia, hyperthyroidism, arrhythmias, peptic ulcer, recent coronary occlusion. **Pregnancy Category C.**

INTERACTIONS

DRUG: **Anticholinergics** reverse, prevent effects. **Cholinesterase inhibitors** may increase risk of toxicity. Antagonizes effects of **neuromuscular blockers.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Prostigmin): 0.5 mg/ml, 1 mg/ml. **Tablets (Prostigmin):** 15 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Give 0.011 mg/kg atropine sulfate IV simultaneously with neostigmine or IM 30 min before administering neostigmine to prevent adverse effects.

PO

- May administer with or without food.

IV COMPATIBILITIES

Glycopyrrolate (Robinul), heparin, ondansetron (Zofran), potassium chloride, thiopental (Pentothal).

INDICATIONS/ROUTES/DOSAGE

Myasthenia Gravis

PO: ADULTS, ELDERLY: Initially, 15 mg 3–4 times a day. Gradually increase as necessary q1–2days. Maintenance: 150 mg/day (range of 15–375 mg). **CHILDREN:** 2 mg/kg/day or 60 mg/m^2/day divided q3–4h, not to exceed 375 mg/day.

IV, IM, Subcutaneous: ADULTS: 0.5–2.5 mg q1–3h up to 10 mg/24 hrs. **CHILDREN:** 0.01–0.04 mg/kg q2–4h.

Diagnosis of Myasthenia Gravis

◀ALERT▶ Discontinue all cholinesterase medications at least 8 hrs before testing; atropine should be given IV immediately before or IM 30 min before neostigmine.

IM: ADULTS, ELDERLY: 0.02 mg/kg as single dose. **CHILDREN:** 0.025–0.04 mg/kg as a single dose.

Prevention of Postop Bladder Distention, Urinary Retention

IM, Subcutaneous: ADULTS, ELDERLY: 0.25 mg q4–6h for 2–3 days.

Treatment of Postop Bladder Distention, Urinary Retention

IM, Subcutaneous: ADULTS, ELDERLY: 0.5–1 mg q3h for 5 doses after bladder has been emptied.

Reversal of Neuromuscular Blockade After Surgery

IV: ADULTS, ELDERLY: 0.5–2.5 mg given slowly. **CHILDREN:** 0.025–0.08 mg/kg/dose. **INFANTS:** 0.025–0.1 mg/kg/dose.

Dosage in Renal Impairment

Creatinine Clearance	Dose
10–50 ml/min	50% of normal dose
Less than 10 ml/min	25% of normal dose

N

SIDE EFFECTS

Frequent: Muscarinic effects (diarrhea, diaphoresis, increased salivation, nausea, vomiting, abdominal cramps/pain). **Occasional:** Muscarinic effects (urinary urgency/frequency, increased bronchial secretions, miosis, lacrimation).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces cholinergic crisis manifested as abdominal discomfort/cramps, nausea, vomiting, diarrhea, flushing, facial warmth, excessive salivation, diaphoresis, lacrimation, pallor, bradycardia, tachycardia, hypotension, bronchospasm, urinary urgency, blurred vision, miosis, fasciculation (involuntary muscular contractions visible under skin).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Larger doses should be given at time of greatest fatigue. Avoid large doses in those with megacolon, reduced GI motility.

INTERVENTION/EVALUATION

Monitor muscle strength, vital signs. Monitor for therapeutic response to medication (increased muscle strength, decreased fatigue, improved chewing, swallowing functions).

PATIENT/FAMILY TEACHING

- Report nausea, vomiting, diarrhea, diaphoresis, increased salivary secretions, palpitations, muscle weakness, severe abdominal pain, difficulty breathing.

nesiritide

HIGH ALERT

ness-**ear**-ih-tide
(Natrecor)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Brain natriuretic peptide. **CLINICAL:** Endogenous hormone.

ACTION

Facilitates cardiovascular homeostasis, fluid status through counterregulation of renin-angiotensin-aldosterone system, stimulating cyclic guanosine monophosphate, thereby leading to smooth muscle cell relaxation. **Therapeutic Effect:** Promotes vasodilation, natriuresis, diuresis, correcting CHF.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	15 min	1 hr	Up to 4 hrs

Excreted primarily in heart by left ventricle. Metabolized by natriuretic neutral endopeptidase enzymes on vascular luminal surface. **Half-life:** 18–23 min.

USES

Treatment of acutely decompensated CHF in pts who have dyspnea at rest or with minimal activity.

PRECAUTIONS

Contraindications: Cardiogenic shock, systolic B/P less than 90 mm Hg. **Cautions:** Significant valvular stenosis, restrictive/obstructive cardiomyopathy, constrictive pericarditis, pericardial tamponade, suspected low cardiac filling pressures, atrial/ventricular arrhythmias/conduction defects, hypotension (Systolic B/P less than 100 mm Hg), hepatic/renal insufficiency.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** **Ephedra, ginger, ginseng, licorice** may increase B/P. **Black cohosh, goldenseal, hawthorne** may decrease B/P. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1.5 mg/5-ml vial.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not mix with other injections, infusions. Do not give IM.

IV

Reconstitution • Reconstitute one 1.5-mg vial with 5 ml D_5W or 0.9% NaCl, 0.2% NaCl, or any combination thereof. Swirl or rock gently, add to 250-ml bag D_5W or 0.9% NaCl, 0.2% NaCl, or any combination thereof, yielding a solution of 6 mcg/ml.

Rate of Administration • Give as IV bolus over approximately 60 sec initially, followed by continuous IV infusion.

Storage • Store vial at room temperature. Once reconstituted, vials are stable at 36°–77°F (2°–25°C) for up to 24 hrs. Use reconstituted solution within 24 hrs.

IV INCOMPATIBILITIES

Bumetanide (Bumex), enalapril (Vasotec), ethacrynic acid (Edecrin), furosemide (Lasix), heparin, hydralazine (Apresoline), insulin, sodium metabisulfite.

INDICATIONS/ROUTES/DOSAGE

Treatment of Acute CHF

IV Bolus: ADULTS, ELDERLY: 2 mcg/kg followed by continuous IV infusion of 0.01 mcg/kg/min. At intervals of 3 hrs or longer, may be increased by 0.005 mcg/kg/min (preceded by bolus of 1 mcg/kg), up to maximum of 0.03 mcg/kg/min.

SIDE EFFECTS

Frequent (11%): Hypotension. **Occasional (8%–2%):** Headache, nausea, bradycardia. **Rare (1% or less):** Confusion, paresthesia, drowsiness, tremor.

ADVERSE EFFECTS/ TOXIC REACTIONS

Ventricular arrhythmias (ventricular tachycardia, atrial fibrillation, AV node conduction abnormalities), angina pectoris occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose, in addition to regular monitoring (be alert to fluctuations).

INTERVENTION/EVALUATION

Monitor B/P, pulse rate for hypotension frequently during therapy. Hypotension is dose-limiting and dose-dependent. If excessive reduction in B/P occurs, place pt in supine position with legs elevated. With physician, establish parameters for adjusting rate, stopping infusion. Maintain accurate I&O; measure urinary output frequently. Immediately notify physician of decreased urinary output, cardiac arrhythmias, significant decrease in B/P, heart rate.

PATIENT/FAMILY TEACHING

- Report chest pain, palpitations.

nevirapine

ne-**vye**-ra-peen
(Viramune, Viramune XR)

BLACK BOX ALERT Potentially severe, life-threatening dermatologic hypersensitivity, hepatic reactions may occur. Greatest risk occurs within first 6 wks of treatment.

Do not confuse nevirapine with nelfinavir, or Viramune with Viracept.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Non-nucleoside reverse transcriptase inhibitor. **CLINICAL:** Antiviral (see p. 116C).

ACTION

Binds directly to HIV-1 reverse transcriptase, changing shape of enzyme, blocking RNA-, DNA-dependent polymerase activity. **Therapeutic Effect:** Interferes with HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Readily absorbed after PO administration. Protein binding: 60%. Widely distributed. Extensively metabolized in liver. Excreted primarily in urine. **Half-life:** 45 hrs (single dose); 25–30 hrs (multiple doses).

USES

Used in combination with other antiretroviral agents for treatment of HIV-1 infected adults who have experienced clinical, immunologic deterioration. **OFF-LABEL:** Reduce risk of transmitting HIV from infected mother to newborn.

PRECAUTIONS

Contraindications: Moderate to severe hepatic impairment, use in occupational or nonoccupational postexposure prophylaxis regimens. **Cautions:** Elevated AST, ALT levels, history of chronic hepatitis (B or C), higher $CD4^+$ cell counts (greater risk of hepatic events), renal impairment.

N

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Breast-feeding not recommended (possibility of HIV transmission). **Pregnancy Category C. Children:** Granulocytopenia occurs more frequently. **Elderly:** No information available.

INTERACTIONS

DRUG: May decrease concentrations of **ketoconazole, oral contraceptives, clarithromycin, protease inhibitors. Rifabutin, rifampin** may decrease concentration. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, alkaline phosphatase, GGT, AST, ALT. May decrease Hgb, neutrophil, platelet counts.

AVAILABILITY (Rx)

Oral Suspension: 50 mg/5 ml. **Tablets:** 200 mg.

Tablets, Extended-Release: 400 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. May give with water, milk, or soda. • Shake suspension gently prior to administration. • Swallow extended-release tablets whole; do not break, crush, dissolve, or divide

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS: 200 mg once daily for 14 days (to reduce risk of rash). Maintenance: 200 mg twice daily in combination with nucleoside analogues. **CHILDREN 8 YRS AND OLDER:** Initially, 120–150 mg/m^2/dose (**maximum:** 200 mg) once daily for 14 days. Increase to 120–150 mg/m^2/dose twice daily (if no rash). **CHILDREN 8 YRS OF AGE OR YOUNGER:** 200 mg/m^2/dose once daily for 14 days (**maximum:** 200 mg). Increase to 200 mg/m^2/dose twice daily (if no rash).

Extended-Release Dosage

PO: ADULTS, ELDERLY: 400 mg once daily.

SIDE EFFECTS

Frequent (8%–3%): Rash, fever, headache, nausea, granulocytopenia (more common in children). **Occasional (2%–1%):** Stomatitis (burning, erythema, ulceration of oral mucosa; dysphagia). **Rare (less than 1%):** Paresthesia, myalgia, abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Skin reactions, hepatitis may become severe, life-threatening.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline lab values, esp. hepatic function tests, before initiating therapy and at intervals during therapy. Obtain medication history (esp. use of oral contraceptives).

INTERVENTION/EVALUATION

Closely monitor for evidence of rash (usually appears on trunk, face, extremi-

ties; occurs within first 6 wks of drug initiation). Observe for rash accompanied by fever, blistering, oral lesions, conjunctivitis, swelling, muscle/joint aches, general malaise.

PATIENT/FAMILY TEACHING

• If nevirapine therapy is missed for longer than 7 days, restart by using one 200-mg tablet daily for first 14 days, followed by one 200-mg tablet twice a day. • Continue therapy for full length of treatment. • Doses should be evenly spaced. • Swallow extended-release tablets whole; do not chew, crush, dissolve, or divide. • Nevirapine is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Notify physician if any rash, yellowing of skin/eyes, nausea, loss of appetite occurs.

niacin, nicotinic acid

TOP 200

nye-a-sin, nik-oh-**tin**-ik **as**-id
(Niacor, Niaspan, Slo-Niacin)
Do not confuse niacin, Niacor, or Niaspan with minocin or Nitro-Bid.

FIXED-COMBINATION(S)

Advicor: niacin/lovastatin (HMG-CoA reductase inhibitor [statin]): 500 mg/20 mg, 750 mg/20 mg, 1,000 mg/20 mg. **Simcor:** niacin/simvastatin (HMG-CoA reductase inhibitor [statin]): 500 mg/20 mg, 500 mg/40 mg, 750 mg/20 mg, 1,000 mg/20 mg, 1,000 mg/40 mg.

◆CLASSIFICATION

CLINICAL: Antihyperlipidemic, water-soluble vitamin (see pp. 57C, 161C).

ACTION

Component of two coenzymes needed for tissue respiration, lipid metabolism, glycogenolysis. Inhibits synthesis of very-low-density lipoproteins (VLDLs). **Therapeutic Effect:** Reduces total, LDL, VLDL cholesterol levels and triglyceride levels; increases HDL cholesterol concentration.

PHARMACOKINETICS

Readily absorbed from GI tract. Widely distributed. Protein binding: 20%. Metabolized in liver (extensive first-pass effect). Primarily excreted in urine. **Half-life:** 45 min.

USES

Treatment of dyslipidemias, lower risk of recurrent MI (pts with history of MI/hyperlipidemia), slow progression of CAD, treatment of hypertriglyceridemia in pts at risk for pancreatitis. **OFF-LABEL:** Treatment of pellagra, dietary supplement.

PRECAUTIONS

Contraindications: Active peptic ulcer disease, arterial hemorrhaging, hepatic dysfunction, hypersensitivity to niacin, tartrazine (frequently seen in pts sensitive to aspirin). **Cautions:** Diabetes mellitus, gallbladder disease, unstable angina, MI, renal impairment, heavy alcohol use, concomitant use of anticoagulants, gout, history of jaundice/hepatic disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not recommended for use during pregnancy/lactation. Distributed in breast milk. **Pregnancy Category A (C if used at dosages above the recommended daily allowance). Children:** No age-related precautions noted. Not recommended in those younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Alcohol** may increase risk of side effects. May increase effect of **antihypertensives. Lovastatin, pravastatin, simvastatin** may increase risk of acute renal failure, rhabdomyolysis. **Vasoactive drugs (e.g., calcium channel blockers, nitrates)** may increase hypotension. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase

N

serum uric acid, PT, amylase, bilirubin, fasting glucose, LDH, transaminase. May decrease platelets.

AVAILABILITY (OTC)

Tablets (Immediate-Release [Niacor]): 50 mg, 100 mg, 250 mg, 500 mg.

Capsules (Extended-Release): 250 mg, 400 mg, 500 mg. **Tablets (Controlled-Release [Slo-Niacin]):** 250 mg, 500 mg, 750 mg. **Tablets (Extended-Release [Niaspan]):** 500 mg, 750 mg, 1,000 mg.

ADMINISTRATION/HANDLING

PO

• For pts switching from immediate-release niacin to extended-release niacin, initiate extended-release form with low doses and titrate to therapeutic response. • Give with food. • Give aspirin 30 min before taking extended-release niacin to minimize flushing. • Do not crush, break, or chew long-acting forms.

INDICATIONS/ROUTES/DOSAGE

Hyperlipidemia

PO *(Immediate-Release)*: ADULTS, ELDERLY: Initially, 250 mg once a day (with evening meal). May increase dose q4–7days up to 1.5–2 g/day in 2–3 divided doses. After 2 mos may increase at 2- to 4-wk intervals to 3 g/day in 3 divided doses. **Maximum:** 6 g/day in 3 divided doses. Usual daily dose: 1.5–3 g/day.

PO *(Controlled-Release)*: ADULTS, ELDERLY: Initially, 500 mg/day at bedtime for 4 wks, then 1 g at bedtime for 4 wks. May increase by 500 mg q4wks up to maximum of 2 g/day. Usual daily dose: 1–2 g/day.

SIDE EFFECTS

Frequent: Flushing (esp. face, neck) occurring within 20 min of drug administration and lasting for 30–60 min, GI upset, pruritus. **Occasional:** Dizziness, hypotension, headache, blurred vision, burning/tingling of skin, flatulence, nausea, vomiting, diarrhea. **Rare:** Hyperglycemia, glycosuria, rash, hyperpigmentation, dry skin.

ADVERSE EFFECTS/ TOXIC REACTIONS

Arrhythmias occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain diet history, especially fat consumption. Question for history of hypersensitivity to niacin, tartrazine, aspirin. Assess serum baselines, cholesterol, triglyceride, glucose, hepatic function tests.

INTERVENTION/EVALUATION

Evaluate flushing, degree of GI discomfort. Check for headache, dizziness, blurred vision. Monitor daily pattern of bowel activity, stool consistency. Monitor hepatic function, serum cholesterol, triglycerides. Check serum glucose carefully in those on insulin, oral antihyperglycemics. Assess skin for rash, dryness. Monitor serum uric acid.

PATIENT/FAMILY TEACHING

• Transient flushing of the skin, sensation of warmth, pruritus, tingling may occur. • Notify physician if dizziness occurs (avoid sudden changes in posture). • Inform physician if nausea, vomiting, loss of appetite, yellowing of skin, dark urine, feeling of weakness occur. • If medically approved, take aspirin 30 min before taking extended-release niacin to minimize flushing. • Take at bedtime with low-fat snack. • Limit alcohol consumption.

*niCARdipine

nye-**kar**-di-peen
(Cardene, Cardene IV, Cardene SR)
Do not confuse Cardene with Cardizem, Cardura, or codeine, Cardene SR with Cardizem SR or codeine, or nicardipine with nifedipine or nimodipine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. **CLINICAL:** Antianginal, antihypertensive (see p. 77C).

ACTION

Inhibits calcium ion movement across cell membranes, depressing contraction of cardiac, vascular smooth muscle. **Therapeutic Effect:** Increases heart rate, cardiac output. Decreases systemic vascular resistance, B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–2 hrs	—	8 hrs

Rapidly, completely absorbed from GI tract. Protein binding: 95%. Undergoes first-pass metabolism in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–4 hrs.

USES

PO: Immediate-release: Treatment of chronic stable (effort-associated) angina, essential hypertension. **Sustained-release:** Treatment of essential hypertension. **Parenteral:** Short-term treatment of hypertension when oral therapy not feasible or desirable. **OFF-LABEL:** Subarachnoid hemorrhage with associated neurologic deficits, prevention of migraine headaches, CHF, control blood pressure in acute ischemic stroke and intracranial hemorrhage, postoperative hypertension associated with carotid endarterectomy.

PRECAUTIONS

Contraindications: Advanced aortic stenosis. **Cautions:** Cardiac, renal, hepatic dysfunction; heart failure; hypertrophic cardiomyopathy; aortic stenosis; coronary artery disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentration of **cyclosporine.** **HERBAL:** **Ephedra, ginger, ginseng, yohimbe** may increase hypertension. **Licorice** may cause retention of sodium, water; may increase loss of potassium. **St. John's wort** may decrease levels. **FOOD: Grapefruit, grapefruit juice** may alter absorption. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules (Cardene): 20 mg, 30 mg. **Infusion, Ready to Use:** 20 mg/200 ml, 40 mg/200 ml. **Injection Solution (Cardene IV):** 2.5 mg/ml (10-ml vial).

Capsules (Sustained-Release [Cardene SR]): 30 mg, 45 mg, 60 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute 25-mg vial with 240 ml D_5W, 0.45% NaCl, or 0.9% NaCl to provide concentration of 0.1 mg/ml.

Rate of Administration • Give by slow IV infusion. • Change IV site q12h if administered peripherally.

Storage • Store at room temperature. • Diluted IV solution is stable for 24 hrs at room temperature.

PO

• Give without regard to food. • Do not break, crush, or divide capsules. Swallow whole.

IV INCOMPATIBILITIES

Ampicillin (Principen), ampicillin/sulbactam (Unasyn), cefepime (Maxipime), ceftazidine (Fortaz), furosemide (Lasix), heparin, sodium bicarbonate, thiopental (Pentothal).

IV COMPATIBILITIES

Diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), epinephrine, hydromorphone (Dilaudid), labetalol (Trandate), lorazepam (Ativan), midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Chronic Stable Angina

PO: ADULTS, ELDERLY: Initially, 20 mg 3 times a day. Range: 20–40 mg 3 times a day (allow 3 days between dosage increases).

Essential Hypertension

PO: ADULTS, ELDERLY: Initially, 20 mg 3 times a day. Range: 20–40 mg 3 times a day (allow 3 days between dosage increases).

PO *(Sustained-Release)*: ADULTS, ELDERLY: Initially, 30 mg twice a day. Range: 30–60 mg twice a day.

Short-Term Treatment of Hypertension (Parenteral Dosage as Substitute for Oral Nicardipine)

IV: ADULTS, ELDERLY: 0.5 mg/hr (for pt receiving 20 mg PO q8h), 1.2 mg/hr (for pt receiving 30 mg PO q8h), 2.2 mg/hr (for pt receiving 40 mg PO q8h).

Pts Not Already Receiving Nicardipine

IV: ADULTS, ELDERLY (GRADUAL B/P DECREASE): Initially, 5 mg/hr. May increase by 2.5 mg/hr q15min. After B/P goal is achieved, decrease rate to 3 mg/hr. **ADULTS, ELDERLY (RAPID B/P DECREASE):** Initially, 5 mg/hr. May increase by 2.5 mg/hr q5min. **Maximum:** 15 mg/hr until desired B/P attained. After B/P goal achieved, decrease rate to 3 mg/hr.

Changing From IV to Oral Antihypertensive Therapy

ADULTS, ELDERLY: Begin antihypertensives other than nicardipine when IV has been discontinued; for nicardipine, give first dose 1 hr before discontinuing IV.

Dosage in Hepatic Impairment

ADULTS, ELDERLY: Initially, give 20 mg twice a day, then titrate.

Dosage in Renal Impairment

ADULTS, ELDERLY: Initially, give 20 mg q8h (30 mg twice a day [sustained-release capsules]), then titrate.

SIDE EFFECTS

Frequent (10%–7%): Headache, facial flushing, peripheral edema, light-headedness, dizziness. **Occasional (6%–3%):** Asthenia (loss of strength, energy), palpitations, angina, tachycardia. **Rare (Less Than 2%):** Nausea, abdominal cramps, dyspepsia (heartburn, indigestion, epigastric pain), dry mouth, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces confusion, slurred speech, drowsiness, marked hypotension, bradycardia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Concurrent therapy of sublingual nitroglycerin may be used for relief of anginal pain. Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress).

INTERVENTION/EVALUATION

Monitor B/P during and following IV infusion. Assess for peripheral edema behind medial malleolus. Assess skin for facial flushing, dermatitis, rash. Question for asthenia (loss of strength, energy), headache. Monitor serum hepatic enzyme results. Assess EKG, pulse for tachycardia.

PATIENT/FAMILY TEACHING

• May take without regard to food. • Sustained-release capsule taken whole; do not break, chew, crush, or divide. • Avoid alcohol, grapefruit juice, limit caffeine. • Inform physician if angina pains not relieved or palpitations, shortness of

breath, swelling, dizziness, constipation, nausea, hypotension occur. • Avoid tasks requiring motor skills, alertness until response to drug is established.

nicotine

nik-o-teen
(Commit, Habitrol, NicoDerm, NicoDerm CQ, Nicorette, Nicorette Plus, Nicotrol, Nicotrol Inhaler, Nicotrol NS, Thrive)
Do not confuse Nicoderm with Nitroderm.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cholinergic-receptor agonist. **CLINICAL:** Smoking deterrent (see p. 155C–156C).

ACTION

Binds to acetylcholine receptors, producing both stimulating, depressant effects on peripheral, central nervous systems. **Therapeutic Effect:** Provides source of nicotine during nicotine withdrawal, reduces withdrawal symptoms.

PHARMACOKINETICS

Absorbed slowly after transdermal administration. Protein binding: 5%. Metabolized in liver. Excreted primarily in urine. **Half-life:** 4 hrs.

USES

Alternative, less potent form of nicotine (without tar, carbon monoxide, carcinogenic substances of tobacco) used as part of smoking cessation program. **OFF-LABEL: Transdermal:** Management of ulcerative colitis.

PRECAUTIONS

Contraindications: Smoking during immediate post-MI period, life-threatening arrhythmias, severe or worsening angina, pregnancy, active temporomandibular joint disease (gum), pregnancy. **Cautions:** Hyperthyroidism, pheochromocytoma, insulin-dependent diabetes mellitus, severe renal impairment, eczematous dermatitis, oral/pharyngeal inflammation, esophagitis, peptic ulcer (delays healing in peptic ulcer disease), coronary artery disease, recent MI, serious cardiac arrhythmias, vasospastic disease, angina, hypertension, hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed freely into breast milk. Use of cigarettes, nicotine gum associated with decrease in fetal breathing movements. **Pregnancy Category D. Children:** Not recommended in this pt population. **Elderly:** Age-related decrease in cardiac function may require dosage adjustment.

INTERACTIONS

DRUG: Smoking cessation, decreased dosage of nicotine may alter effects of **tricyclic antidepressants, theophylline.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Chewing Gum (Nicorette, Thrive): 2 mg, 4 mg. **Inhalation (Nicotrol Inhaler):** 10 mg cartridge. **Lozenges (Commit):** 2 mg, 4 mg. **Nasal Spray (Nicotrol NS):** 0.5 mg/spray. **Transdermal Patch (NicoDerm CQ):** 7 mg/24 hrs, 14 mg/24 hrs, 21 mg/24 hrs.

ADMINISTRATION/HANDLING

Gum

• Do not swallow. • Chew 1 piece when urge to smoke present. • Chew slowly and intermittently for 30 min. • Chew until distinctive nicotine taste (peppery) or slight tingling in mouth perceived, then stop; when tingling almost gone (about 1 min) repeat chewing procedure (this allows constant slow buccal absorption). • Too-rapid chewing may cause excessive release of nicotine, resulting in adverse effects similar to oversmoking (e.g., nausea, throat irritation).

Inhaler

• Insert cartridge into mouthpiece. • Puff on nicotine cartridge mouthpiece for 20 min.

Lozenge

• Do not chew or swallow. • Allow to dissolve slowly (20–30 min).

Transdermal

• Apply promptly upon removal from protective pouch (prevents evaporation, loss of nicotine). • Use only intact pouch. Do not cut patch. • Apply only once daily to hairless, clean, dry skin on upper body, outer arm. • Replace daily; rotate sites; do not use same site within 7 days; do not use same patch longer than 24 hrs. • Wash hands with water alone after applying patch (soap may increase nicotine absorption). • Discard used patch by folding patch in half (sticky side together), placing in pouch of new patch, and throwing away in such a way as to prevent child or pet accessibility. • Patch may contain conducting metal; remove prior to MRI.

INDICATIONS/ROUTES/DOSAGE

Smoking Cessation Aid to Relieve Nicotine Withdrawal Symptoms

PO *(Chewing Gum)*: ADULTS, ELDERLY: Less than 25 cigarettes/day: Use 2 mg. 25 or more cigarettes/day: Use 4 mg. Chew 1 piece of gum when urge to smoke, up to 24/day. Use following schedule: wks 1–6: q1–2h (at least 9 pieces/day); wks 7–9: q2–4h; wks 10–12: q4–8h.

PO *(Lozenge)*:

◀ALERT▶ For those who smoke the first cigarette within 30 min of waking, administer the 4-mg lozenge; otherwise, administer the 2-mg lozenge.

ADULTS, ELDERLY: One 4-mg or 2-mg lozenge q1–2h for the first 6 wks (use at least 9 lozenges/day first 6 wks); 1 lozenge q2–4h for wks 7–9; and 1 lozenge q4–8h for wks 10–12. **Maximum:** 1 lozenge at a time, 5 lozenges/6 hrs, 20 lozenges/day.

Transdermal: ◀ALERT▶ Apply 1 new patch q24h. **ADULTS, ELDERLY WHO SMOKE 10 CIGARETTES OR MORE PER DAY:** Follow the guidelines below. **Step 1:** 21 mg/day for 6 wks. **Step 2:** 14 mg/day for 2 wks. **Step 3:** 7 mg/day for 2 wks. **ADULTS, ELDERLY WHO SMOKE LESS THAN 10 CIGARETTES PER DAY:** Follow the guidelines below. **Step 1:** 14 mg/day for 6 wks. **Step 2:** 7 mg/day for 2 wks.

Nasal: ADULTS, ELDERLY: Each dose (2 sprays, 1 spray in each nostril) = 1 mg nicotine. Initially, 1–2 doses/hr. **Maximum:** 5 doses/hr (10 sprays), 40 doses/day (80 sprays). Take at least 8 doses (16 sprays) per day.

Inhaler *(Nicotrol)*: ADULTS, ELDERLY: Puff on nicotine cartridge mouthpiece for about 20 min as needed.

SIDE EFFECTS

Frequent: All forms: Hiccups, nausea. **Gum:** Mouth/throat soreness. **Transdermal:** Erythema, pruritus, burning at application site. **Occasional: All forms:** Eructation, GI upset, dry mouth, insomnia, diaphoresis, irritability. **Gum:** Hoarseness. **Inhaler:** Mouth/throat irritation, cough. **Rare: All forms:** Dizziness, myalgia, arthralgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces palpitations, tachyarrhythmias, seizures, depression, confusion, diaphoresis, hypotension, rapid/weak pulse, dyspnea. Lethal dose for adults is 40–60 mg. Death results from respiratory paralysis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Screen, evaluate those with coronary heart disease (history of MI, angina pectoris), serious cardiac arrhythmias, Buerger's disease, Prinzmetal's variant angina.

INTERVENTION/EVALUATION

Monitor smoking habit, B/P, pulse, sleep pattern, skin for erythema, pruritus, burn-

ing at application site if transdermal system used.

PATIENT/FAMILY TEACHING

• Follow guidelines for proper application of transdermal system. • Chew gum slowly to avoid jaw ache, maximize benefit. • Inform physician if persistent rash, pruritus occurs with patch. • Do not smoke while wearing patch.

*NIFEdipine

nye-**fed**-i-peen
(Adalat CC, Adalat XL ♣, Afeditab CR, Apo-Nifed ♣, Nifediac CC, Nifedical XL, Novo-Nifedin ♣, Procardia, Procardia XL)
Do not confuse nifedipine with nicardipine or nimodipine, or Procardia XL with Cartia XT.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. **CLINICAL:** Antianginal, antihypertensive (see p. 61C, 78C).

ACTION

Inhibits calcium ion movement across cell membranes, depressing contraction of cardiac, vascular smooth muscle. **Therapeutic Effect:** Increases heart rate, cardiac output. Decreases systemic vascular resistance, B/P.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: 92%–98%. Undergoes first-pass metabolism in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–5 hrs.

USES

Treatment of angina due to coronary artery spasm (Prinzmetal's variant angina), chronic stable angina (effort-associated angina). **Extended-release:** Treatment of essential hypertension. **OFF-LABEL:** Treatment of Raynaud's phenomenon, pulmonary hypertension, preterm labor, prevention/treatment of high-altitude pulmonary edema.

PRECAUTIONS

Contraindications: Cardiogenic shock, concomitant administration with strong CYP3A4 inducers (e.g., rifampin), acute MI. **Cautions:** Renal/hepatic impairment, obstructive coronary disease, CHF, severe aortic stenosis, severe left ventricular dysfunction, hypertrophic cardiomyopathy, edema.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Insignificant amount distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Strong CYP3A4 inducers (e.g., rifampin, phenobarbital, phenytoin, carbamazepine) reduce concentration/effects. **CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole)** may increase concentration. **Beta-blockers** may have additive effect. May increase **digoxin** concentration, risk of toxicity. **Hypokalemia-producing agents (e.g., furosemide, other diuretics)** may increase risk of arrhythmias. **HERBAL: Ephedra, garlic, ginseng, yohimbe** may increase hypertension. **Licorice** may cause retention of sodium, water; may increase loss of potassium. **St. John's wort** decreases concentration/effects. **FOOD: Grapefruit, grapefruit juice** may increase risk for flushing headache, tachycardia, hypotension. **LAB VALUES:** May cause positive ANA, direct Coombs' test.

AVAILABILITY (Rx)

Capsules (Procardia): 10 mg, 20 mg.

Tablets, Extended-Release: (Adalat CC, Afeditab CR, Procardia XL): 30 mg, 60 mg, 90 mg. **(Nifediac CC, Nifedical XL):** 30 mg, 60 mg.

ADMINISTRATION/HANDLING

PO

• Do not crush/break/chew extended-release tablets. • Give without regard to meals (Adalat CC, Nifediac CC should be taken on an empty stomach). • Grapefruit juice may alter absorption; avoid with all products.

Sublingual

• Capsules must be punctured, chewed, and/or squeezed to express liquid into mouth.

INDICATIONS/ROUTES/DOSAGE

Prinzmetal's Variant Angina, Chronic Stable (Effort-Associated) Angina

PO: ADULTS, ELDERLY: Initially, 10 mg 3 times a day. Increase at 7- to 14-day intervals. Maintenance: 10 mg 3 times a day up to 30 mg 4 times a day.

PO *(Extended-Release)*: ADULTS, ELDERLY: Initially, 30–60 mg/day. May increase at 7- to 14-day intervals. **Maximum:** 120–180 mg/day.

Essential Hypertension

PO *(Extended-Release)*: ADULTS, ELDERLY: Initially, 30–60 mg/day. May increase at 7- to 14-day intervals. **Maximum:** 90–120 mg/day. **CHILDREN 1–17 YRS:** Initially, 0.25–0.5 mg/kg/day. **Maximum:** 3 mg/kg/day or 120 mg/day.

SIDE EFFECTS

Frequent (30%–11%): Peripheral edema, headache, flushed skin, dizziness. **Occasional (12%–6%):** Nausea, shakiness, muscle cramps/pain, drowsiness, palpitations, nasal congestion, cough, dyspnea, wheezing. **Rare (5%–3%):** Hypotension, rash, pruritus, urticaria, constipation, abdominal discomfort, flatulence, sexual dysfunction.

ADVERSE EFFECTS/ TOXIC REACTIONS

May precipitate CHF, MI in pts with cardiac disease, peripheral ischemia. Overdose produces nausea, drowsiness, confusion, slurred speech. **Antidote:** Glucagon (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Concurrent therapy of sublingual nitroglycerin may be used for relief of anginal pain. Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain; precipitating factors (exertion, emotional stress). Check B/P for hypotension immediately before giving medication.

INTERVENTION/EVALUATION

Assist with ambulation if light-headedness, dizziness occurs. Assess for peripheral edema. Assess skin for flushing. Monitor serum hepatic enzymes. Observe for signs/symptoms of CHF.

PATIENT/FAMILY TEACHING

• Rise slowly from lying to sitting position, permit legs to dangle from bed momentarily before standing to reduce hypotensive effect. • Contact physician if palpitations, shortness of breath, pronounced dizziness, nausea, exacerbations of angina occur. • Avoid alcohol, concomitant grapefruit, grapefruit juice use.

nilotinib

HIGH ALERT

nye-**loe**-ti-nib
(Tasigna)

BLACK BOX ALERT Prolongs QT interval; sudden deaths reported. Do not use in pts with hypokalemia, hypomagnesemia, prolonged QT syndrome.

Do not confuse nilotinib with dasatinib, erlotinib, imatinib, nilutamide, sorafenib, sunitinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protein-tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic (see p. 86C).

ACTION

Inhibits the Bcr-Abl tyrosine kinase, a translocation-created enzyme, created by

the Philadelphia chromosome abnormality noted in chronic myelogenous leukemia (CML). **Therapeutic Effect:** Inhibits proliferation and tumor growth during two stages of CML: accelerated phase, chronic phase.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 98%. Metabolized in liver. Eliminated mainly in feces. Food increases concentration, and dose cannot be given less than 2 hrs before and less than 1 hr after food. **Half-life:** 17 hrs.

USES

Treatment of chronic phase and accelerated phase of chronic myelogenous leukemia (CML) in adult pts resistant or intolerant to prior therapy that included imatinib. Treatment of newly diagnosed Philadelphia chromosome positive chronic myeloid leukemia in chronic phase (Ph+ CML-CP). **OFF-LABEL:** Acute lymphoblastic leukemia, systemic mastocytosis hypereosinophilic syndrome.

PRECAUTIONS

Contraindications: Hypokalemia, hypomagnesemia, long QT syndrome. **Cautions:** Myelosuppression, QT prolongation, history of pancreatitis, hepatic impairment, electrolyte abnormalities, pregnancy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., clarithromycin, erythromycin, itraconazole, ketoconazole) increase concentration. **CYP3A4 inducers (e.g., carbamazepine, dexamethasone, phenobarbital, phenytoin, rifampicin)** decrease concentration. **QT-prolonging medications** may increase risk of prolonged QT interval. **HERBAL: St. John's wort** may decrease concentration. **FOOD: Grapefruit, grapefruit juice** may increase risk for torsades, myelotoxicity. **LAB VALUES:** May decrease WBCs, platelets, serum magnesium, phosphorus, albumin, sodium. May increase serum glucose, lipase, bilirubin, ALT, AST. May alter serum potassium, alkaline phosphatase, creatinine.

AVAILABILITY (Rx)

Capsules: 150 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• Give at least 2 hrs before and 1 hr after ingestion of food. • Contents may be opened, mixed with applesauce and taken within 15 min. • Swallow capsules whole; do not crush. • Store at room temperature.

INDICATIONS/ROUTES/DOSAGE

Note: Dosage adjusted in hepatic impairment, hematologic toxicity, nonhematologic toxicity, QT prolongation (consult specific product labeling).

Chronic Myelogenous Leukemia (CML)

PO: ADULTS, ELDERLY: 400 mg twice daily every 12 hrs, without food.

Ph+ CML-CP

PO: ADULTS, ELDERLY: 300 mg twice daily.

SIDE EFFECTS

Frequent (33%–21%): Rash, nausea, headache, pruritus, fatigue, diarrhea, constipation, vomiting. **Occasional (18%–10%):** Arthralgia, cough, pharyngitis, asthenia (loss of strength, energy), fever, myalgia, abdominal pain, peripheral edema, weight gain, bone pain, muscle spasm, back pain. **Rare (9%–1%):** Anorexia, insomnia, dizziness, paresthesia, vertigo, palpitations, flushing, hypertension, flatulence, alopecia, night sweats.

N

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolongation of QT interval producing ventricular tachycardia (torsade de pointes) may result in seizure, sudden death. Neutropenia, thrombocytopenia, anemia are expected response to drug. Respiratory toxicity manifested as dyspnea, pneumonia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC every 2 wks for the first 2 mos and then monthly thereafter. Hypokalemia or hypomagnesemia must be corrected prior to initiating therapy. Monitor hepatic function tests (AST, ALT, bilirubin, alkaline phosphatase) before treatment begins and monthly thereafter. Obtain baseline weight.

INTERVENTION/EVALUATION

Monitor serum electrolytes periodically during therapy, particularly potassium, magnesium, sodium, lipase. Monitor for unexpected weight gain. Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel frequency, stool consistency. Monitor CBC for evidence of neutropenia, thrombocytopenia; assess hepatic function tests for hepatotoxicity. These pts should be closely monitored for QT-interval prolongation.

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine; do not receive vaccinations. • Do not ingest food less than 2 hours before and less than 1 hr after dose is taken. • Avoid grapefruit products.

nilutamide

HIGH ALERT

nye-**loo**-ta-myde
(Anandron, Nilandron)

BLACK BOX ALERT Interstitial pneumonitis reported in 2% of pts manifested as progressive exertional dyspnea, cough, chest pain, fever.

Do not confuse nilutamide with nilotinib.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Hormone.
CLINICAL: Antineoplastic (see p. 86C).

ACTION

Competitively inhibits androgen activity by binding to androgen receptors in target tissue. **Therapeutic Effect:** Decreases growth of abnormal prostate tissue.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 72%–85%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 23–87 hrs.

USES

Treatment of metastatic prostatic carcinoma (stage D_2) in combination with surgical castration. For maximum benefit, begin on same day or day after surgical castration.

PRECAUTIONS

Contraindications: Severe hepatic impairment, severe respiratory insufficiency. **Cautions:** Hepatitis, marked increase in serum hepatic enzymes.

LIFESPAN CONSIDERATIONS

Pregnancy Category C. Children: Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effect of **warfarin.** May increase concentration, risk of toxicity with **fosphenytoin, phenytoin, theophylline. HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, creatinine, AST, ALT, alkaline phosphatase, BUN, glucose. May decrease Hgb, WBC.

AVAILABILITY (Rx)

Tablets: 150 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Prostatic Carcinoma

PO: ADULTS, ELDERLY: 300 mg once a day for 30 days, then 150 mg once a day. Begin on day of, or day after, surgical castration.

SIDE EFFECTS

Frequent (28%): Skin flushing, hot flashes. **Occasional (10%–6%):** Nausea, dyspnea, constipation, dizziness, abnormal vision. **Rare (less than 6%):** Malaise, diarrhea, weight loss, dry mouth, parethesia, pruritus, photophobia, rhinitis, decreased libido, diminished sexual function, gynecomastia, alcohol intolerance, increased B/P.

ADVERSE EFFECTS/ TOXIC REACTIONS

Interstitial pneumonitis occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline chest X-ray, hepatic enzymes before beginning therapy.

INTERVENTION/EVALUATION

Monitor B/P periodically and hepatic function tests in long-term therapy.

PATIENT/FAMILY TEACHING

- Contact physician if any side effects occur at home, esp. signs of hepatic toxicity (jaundice, dark urine, fatigue, abdominal pain). • Tinted glasses may help improve night driving.

nimodipine

nye-**mode**-i-peen
(Nimotop)

BLACK BOX ALERT Severe cardiovascular events, including fatalities, have resulted when capsule contents have been withdrawn by syringe and administered by IV injection rather than nasogastric tube.

Do not confuse nimodipine with nicardipine or nifedipine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. **CLINICAL:** Cerebral vasospasm agent (see p. 78C).

ACTION

Inhibits movement of calcium ions across vascular smooth muscle cell membranes. Exerts greatest effect on cerebral arteries. **Therapeutic Effect:** Produces favorable effect on severity of neurologic deficits due to cerebral vasospasm. May prevent cerebral spasm.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 95%. Metabolized in liver. Excreted in urine; eliminated in feces. Not removed by hemodialysis. **Half-life:** 1–2 hrs.

USES

Improvement of neurologic deficits due to cerebral vasospasm following subarachnoid hemorrhage from ruptured congenital intracranial aneurysms in pts in satisfactory neurologic condition. **OFF-LABEL:** Treatment of chronic and classic migraine, chronic cluster headaches.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment, decreased GI motility, history of bowel obstruction, hypertrophic cardiomyopathy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment

may require dosage adjustment. May experience greater hypotensive response, constipation.

INTERACTIONS

DRUG: **Beta-blockers** may have additive effect, increase depression of cardiac SA/AV conduction. May increase **digoxin** concentration. **Agents inducing hypokalemia** may increase risk of arrhythmias. **CYP3A4 inhibitors (e.g., erythromycin, itraconazole, ketoconazole, protease inhibitors)** may inhibit metabolism. **CYP3A4 inducers (e.g., rifabutin, rifampin)** may increase metabolism. **HERBAL:** **Ephedra, garlic, ginseng, yohimbe** may increase hypertension. **Licorice** may cause retention of sodium, water; may increase loss of potassium. **St. John's wort** may decrease levels/effect. **FOOD:** **Grapefruit juice** may increase concentration, risk of toxicity. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 30 mg.

ADMINISTRATION/HANDLING

PO

• If pt unable to swallow, place hole in both ends of capsule with 18-gauge needle to extract contents into syringe. • Empty into NG tube; flush tube with 30 ml normal saline.

INDICATIONS/ROUTES/DOSAGE

Subarachnoid Hemorrhage

PO: ADULTS, ELDERLY: 60 mg q4h for 21 days. Begin within 96 hrs of subarachnoid hemorrhage.

Dosage in Hepatic Failure

PO: ADULTS, ELDERLY: 30 mg q4h.

SIDE EFFECTS

Occasional (6%–2%): Hypotension, peripheral edema, diarrhea, headache. **Rare (Less Than 2%):** Allergic reaction (rash, urticaria), tachycardia, flushing of skin.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces nausea, weakness, dizziness, drowsiness, confusion, slurred speech.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess LOC, neurologic response, initially and throughout therapy. Monitor baseline hepatic function tests. Assess B/P, apical pulse immediately before drug administration (if pulse is 60/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Monitor CNS response, heart rate, B/P for evidence of hypotension, signs/symptoms of CHF.

PATIENT/FAMILY TEACHING

• Do not crush, chew, split capsules. • Inform physician if palpitations, shortness of breath, swelling, constipation, nausea, dizziness occur.

nitazoxanide

nye-ta-**zox**-a-nide
(Alinia)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiparasitic. **CLINICAL:** Antiprotozoal.

ACTION

Interferes with body's reaction to pyruvate ferredoxin oxidoreductase, an enzyme essential for anaerobic energy metabolism. **Therapeutic Effect:** Produces antiprotozoal activity, reducing/terminating diarrheal episodes.

PHARMACOKINETICS

Rapidly hydrolyzed to active metabolite. Protein binding: 99%. Excreted in urine, bile, feces. **Half-life:** 2–4 hrs.

USES

Treatment of diarrhea caused by *Cryptosporidium parvum, Giardia lamblia* in children 12 mos and older, adults. **OFF-LABEL:** *C. difficile*-associated diarrhea.

PRECAUTIONS

Contraindications: None known. **Cautions:** Caution with use of suspension in diabetic pts, hepatic/biliary disease, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 1 yr (suspension) and younger than 12 yrs (tablet). **Elderly:** Not for use in this age group.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, ALT.

AVAILABILITY (Rx)

Powder for Oral Suspension: 100 mg/5 ml. **Tablets:** 500 mg.

ADMINISTRATION/HANDLING

PO (Oral Suspension)

• Store unreconstituted powder at room temperature. • Reconstitute oral suspension with 48 ml water to provide concentration of 100 mg/5 ml. • Shake vigorously to suspend powder. • Reconstituted solution is stable for 7 days at room temperature. • Give with food.

PO (Tablets)

• Give with food.

INDICATIONS/ROUTES/DOSAGE

Diarrhea Caused by *C. Parvum, G. Lamblia*

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 500 mg q12h for 3 days. **CHILDREN 4–11 YRS:** 200 mg q12h for 3 days. **CHILDREN 12–47 MOS:** 100 mg q12h for 3 days.

SIDE EFFECTS

Occasional (8%): Abdominal pain. **Rare (2%–1%):** Diarrhea, vomiting, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline B/P, weight, serum glucose, electrolytes. Assess for dehydration.

INTERVENTION/EVALUATION

Evaluate serum glucose in diabetics, electrolytes (therapy generally reduces abnormalities). Weigh pt daily. Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Parents of children with diabetes should be aware that the oral suspension contains 1.48 g of sucrose per 5 ml. • Therapy should provide significant improvement of diarrhea.

N

nitrofurantoin

nye-troe-fue-**ran**-toyn
(Apo-Nitrofurantoin, Furadantin, Macrobid, Macrodantin, Novo-Furantoin)

Do not confuse Macrobid with MicroK or Nitro-Bid, or nitrofurantoin with Neurontin or nitroglycerin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antibacterial. **CLINICAL:** Antibiotic, UTI prophylaxis.

ACTION

Inhibits synthesis of bacterial DNA, RNA, proteins, cell walls by altering, inactivat-

ing ribosomal proteins. **Therapeutic Effect:** Bacteriostatic (bactericidal at high concentrations).

PHARMACOKINETICS

Microcrystalline form rapidly, completely absorbed; macrocrystalline form more slowly absorbed. Food increases absorption. Protein binding: 60%. Primarily concentrated in urine, kidneys. Metabolized in most body tissues. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 20–60 min.

USES

Prevention/treatment of UTI caused by susceptible gram-negative, gram-positive organisms, including *E. coli, S. aureus, Enterococcus, Klebsiella, Enterobacter.*

PRECAUTIONS

Contraindications: Anuria, oliguria, substantial renal impairment (creatinine clearance less than 40 ml/min), infants younger than 1 mo due to risk of hemolytic anemia. Pregnancy at term; during labor and delivery. **Cautions:** Renal impairment, diabetes mellitus, electrolyte imbalance, anemia, vitamin B deficiency, debilitated (greater risk of peripheral neuropathy), G6PD deficiency (greater risk of hemolytic anemia).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Contraindicated at term and during lactation when infant suspected of having G6PD deficiency. **Pregnancy Category B (contraindicated at term). Children:** No age-related precautions noted in those older than 1 mo. **Elderly:** More likely to develop acute pneumonitis, peripheral neuropathy. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Antacids containing magnesium trisilicate may decrease absorption. **Probenecid** may increase concentration, risk of toxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, phosphorus. May decrease Hgb.

AVAILABILITY (Rx)

Capsules (Macrocrystalline, Monohydrate [Macrobid]): 100 mg. **Capsules (Macrocrystalline [Macrodantin]):** 25 mg, 50 mg, 100 mg. **Oral Suspension (Microcrystalline [Furadantin]):** 25 mg/5 ml.

ADMINISTRATION/HANDLING

PO

• Give with food, milk to enhance absorption, reduce GI upset. • May mix suspension with water, milk, fruit juice; shake well.

INDICATIONS/ROUTES/DOSAGE

UTI

PO *(Furadantin, Macrodantin)*: ADULTS, ELDERLY: 50–100 mg q6h. **Maximum:** 400 mg/day. **CHILDREN:** 5–7 mg/kg/day in divided doses q6h. **Maximum:** 400 mg/day.

PO *(Macrobid)*: ADULTS, ELDERLY: 100 mg twice daily.

Long-Term Prevention of UTI

PO: ADULTS, ELDERLY: 50–100 mg at bedtime. **CHILDREN:** 1–2 mg/kg/day as a single dose or 2 divided doses. **Maximum:** 100 mg/day.

Dosage in Renal Impairment

Contraindicated in pts with creatinine clearance less than 60 ml/min.

SIDE EFFECTS

Frequent: Anorexia, nausea, vomiting, dark urine. **Occasional:** Abdominal pain, diarrhea, rash, pruritus, urticaria, hypertension, headache, dizziness, drowsiness. **Rare:** Photosensitivity, transient alopecia, asthmatic exacerbation in those with history of asthma.

ADVERSE EFFECTS/ TOXIC REACTIONS

Superinfection, hepatotoxicity, peripheral neuropathy (may be irreversible),

Stevens-Johnson syndrome, permanent pulmonary impairment, anaphylaxis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of asthma. Evaluate lab test results for renal/hepatic baseline values.

INTERVENTION/EVALUATION

Monitor I&O, renal/hepatic function tests, CBC. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash, urticaria. Be alert for numbness/tingling, esp. of lower extremities (may signal onset of peripheral neuropathy). Observe for signs of hepatotoxicity (fever, rash, arthralgia, hepatomegaly). Perform respiratory assessment: auscultate lungs, check for cough, chest pain, difficulty breathing.

PATIENT/ FAMILY TEACHING

• Urine may become dark yellow/brown. • Take with food, milk for best results, reduce GI upset. • Complete full course of therapy. • Avoid sun, ultraviolet light; use sunscreen, wear protective clothing. • Notify physician if cough, fever, chest pain, difficulty breathing, numbness/tingling of fingers, toes occur. • Rare occurrence of alopecia is transient.

nitroglycerin TOP 200

nye-troe-**glis**-er-in
(Minitran, Nitro-Bid, Nitro-Dur, Nitrolingual, Nitrostat, Nitro-Time, Trinipatch ✱)

Do not confuse Nitro-Bid with Macrobid or Nicobid, Nitro-Dur with Nicoderm, nitroglycerin with nitrofurantoin or nitroprusside, or Nitrostat with Nilstat or Nystatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nitrate.
CLINICAL: Antianginal, antihypertensive, coronary vasodilator (see p. 126C).

ACTION

Dilates coronary arteries, improves collateral blood flow to ischemic areas within myocardium. IV form produces peripheral vasodilation. **Therapeutic Effect:** Decreases myocardial oxygen demand. Reduces left ventricular preload, afterload.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Sublingual	1–3 min	4–8 min	30–60 min
Translingual spray	2 min	4–10 min	30–60 min
Buccal tablet	2–5 min	4–10 min	2 hrs
PO (extended-release)	20–45 min	45–120 min	4–8 hrs
Topical	15–60 min	30–120 min	2–12 hrs
Transdermal patch	40–60 min	60–180 min	18–24 hrs
IV	1–2 min	Immediate	3–5 min

Well absorbed after PO, sublingual, topical administration. Undergoes extensive first-pass metabolism. Metabolized in liver, by enzymes in bloodstream. Protein binding: 60%. Excreted in urine. Not removed by hemodialysis. **Half-life:** 1–4 min.

USES

Lingual, sublingual, buccal dose used for acute relief of angina pectoris. Extended-release, topical forms used for prophylaxis, long-term angina management. IV form used in treatment of CHF, acute MI, perioperative hypertension, induction of intraoperative hypotension. **OFF-LABEL:** Short-term management of

pulmonary hypertension, esophageal spastic disorders, uterine relaxation.

PRECAUTIONS

Contraindications: Allergy to adhesives (transdermal); increased ICP; severe anemia; concurrent use of sildenafil, tadalafil, vardenafil (PDE5 inhibitors). **IV:** Use for hypotension, uncontrolled hypokalemia, pericardial tamponade, constrictive pericarditis. **Cautions:** Acute MI, hepatic/renal disease, blood volume depletion from diuretic therapy, severe hypotension (systolic B/P less than 90 mm Hg), bradycardia (less than 50 beats/min).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** More susceptible to hypotensive effects. Age-related renal impairment may require dosage adjustment.

N

INTERACTIONS

DRUG: **Alcohol, other antihypertensives, vasodilators** may increase risk of orthostatic hypotension. Concurrent use of **sildenafil, tadalafil, vardenafil** (PDE5 inhibitors) produces significant hypotension. **HERBAL:** **Ephedra, ginger, ginseng, licorice** may increase hypertension. **Black cohosh, goldenseal, hawthorne** may cause hypotension. **FOOD:** None known. **LAB VALUES:** May increase serum methemoglobin, urine catecholamine concentrations.

AVAILABILITY (Rx)

Infusion, Pre-Mix: 25 mg/250 ml, 50 mg/500 ml (0.1 mg/ml), 50 mg/250 ml (0.2 mg/ml), 100 mg/250 ml. **Injection, Solution:** 5 mg/ml. **Ointment (Nitro-Bid):** 2%. **Translingual Spray (Nitrolingual):** 0.4 mg/spray. **Transdermal Patch (Minitran, Nitro-Dur):** 0.1 mg/hr, 0.2 mg/hr, 0.4 mg/hr, 0.6 mg/hr.

Capsules, Extended-Release (Nitro-Time): 2.5 mg, 6.5 mg, 9 mg. **Tablets, Sublingual (Nitrostat):** 0.4 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Cardioverter/defibrillator must not be discharged through paddle electrode overlying nitroglycerin (transdermal, ointment) system (may cause burns to pt or damage to paddle via arcing).

IV

Reconstitution • Available in ready-to-use injectable containers. • Dilute vials in D_5W or 0.9% NaCl. Maximum concentration: 400 mcg/ml. • Use glass bottles.
Rate of Administration • Use microdrop or infusion pump.
Storage • Store at room temperature. • Reconstituted solutions stable for 48 hrs at room temperature or 7 days if refrigerated.

PO

• Do not chew, crush, split extended-release capsules. • Do not shake oral aerosol canister before lingual spraying.

Sublingual

• Do not swallow. • Dissolve under tongue. • Administer while seated. • Slight burning sensation under tongue may be lessened by placing tablet in buccal pouch. • Keep sublingual tablets in original container.

Topical

• Spread thin layer on clean, dry, hairless skin of upper arm or body (not below knee or elbow), using applicator or dose-measuring papers. Do not use fingers; do not rub/massage into skin.

Transdermal

• Apply patch on clean, dry, hairless skin of upper arm or body (not below knee or elbow). • May keep patch on when bathing/showering. • Do not cut/trim to adjust dose.

IV INCOMPATIBILITIES

Alteplase (Activase), phenytoin (Dilantin).

IV COMPATIBILITIES

Amiodarone (Cordarone), diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), epinephrine, famotidine (Pepcid), fentanyl (Sublimaze), furosemide (Lasix), heparin, hydromorphone (Dilaudid), insulin, labetalol (Trandate), lidocaine, lipids, lorazepam (Ativan), midazolam (Versed), milrinone (Primacor), morphine, nicardipine (Cardene), nitroprusside (Nipride), norepinephrine (Levophed), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Acute Treatment/Prophylaxis of Angina Pectoris

Translingual Spray: ADULTS, ELDERLY: 1–2 sprays onto or under tongue q3–5min until relief is noted (no more than 3 sprays in 15-min period).

Sublingual: ADULTS, ELDERLY: One tablet under tongue. If chest pain has not improved in 5 min, call 911. After the call, may take additional tablet. A third tablet may be taken 5 min after second dose (maximum of 3 tablets).

Long-Term Prophylaxis of Angina

PO *(Extended-Release)*: ADULTS, ELDERLY: 2.5–6.5 mg 3–4 times a day. **Maximum:** 26 mg 4 times a day.

Topical: ADULTS, ELDERLY: Initially, ½ inch q6–8h during waking hours. Range: ½–2 inches q8h.

Transdermal Patch: ADULTS, ELDERLY: Initially, 0.2–0.4 mg/hr. Maintenance: 0.4–0.8 mg/hr. Consider patch on for 12–14 hrs, patch off for 10–12 hrs (prevents tolerance).

CHF, Acute MI

IV: ADULTS, ELDERLY: Initially, 5 mcg/min via infusion pump. Increase in 5-mcg/min increments at 3- to 5-min intervals until B/P response is noted or until dosage reaches 20 mcg/min, then increase by 10–20 mcg/min q3–5min. Dosage may be further titrated according to clinical, therapeutic response up to 400 mcg/min. **CHILDREN:** Initially, 0.25–0.5 mcg/kg/min; titrate by 0.5–1 mcg/kg/min q3–5min up to 20 mcg/kg/min.

SIDE EFFECTS

Frequent: Headache (possibly severe; occurs mostly in early therapy, diminishes rapidly in intensity, usually disappears during continued treatment), transient flushing of face/neck, dizziness (esp. if pt is standing immobile or is in a warm environment), weakness, orthostatic hypotension. **Sublingual:** Burning, tingling sensation at oral point of dissolution. **Ointment:** Erythema, pruritus. **Occasional:** GI upset. **Transdermal:** Contact dermatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Discontinue drug if blurred vision, dry mouth occurs. Severe orthostatic hypotension may occur, manifested by syncope, pulselessness, cold/clammy skin, diaphoresis. Tolerance may occur with repeated, prolonged therapy; minor tolerance may occur with intermittent use of sublingual tablets. High doses tend to produce severe headache.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain; precipitating factors (exertion, emotional stress). Assess B/P, apical pulse before administration and periodically following dose. Pt must have continuous EKG monitoring for IV administration.

INTERVENTION/EVALUATION

Monitor B/P, heart rate. Assess for facial, neck flushing. Cardioverter/defibrillator must not be discharged through paddle electrode overlying nitroglycerin system (may cause burns to pt or damage to paddle via arcing).

PATIENT/FAMILY TEACHING

• Rise slowly from lying to sitting position, dangle legs momentarily before standing. • Take oral form on empty stomach (however, if headache occurs during therapy, take medication with meals). • Use spray only when lying down. • Dissolve sublingual tablet under tongue; do not swallow. • Take at first sign of angina. • May take another dose q5min if needed up to a total of 3 doses. • If not relieved within 5 min, contact physician or immediately go to emergency room. • Do not change brands. • Keep container away from heat, moisture. • Do not inhale lingual aerosol but spray onto or under tongue (avoid swallowing after spray is administered). • Expel from mouth any remaining lingual, sublingual, intrabuccal tablet after pain is completely relieved. • Place transmucosal tablets under upper lip or buccal pouch (between cheek and gum); do not chew/swallow tablet. • Avoid alcohol (intensifies hypotensive effect). If alcohol is ingested soon after taking nitroglycerin, possible acute hypotensive episode (marked drop in B/P, vertigo, diaphoresis, pallor) may occur. • Do not use within 48 hrs of sildenafil, tadalafil, vardenafil (PDE5 inhibitors). May cause acute hypotensive episode.

nitroprusside

HIGH ALERT

nye-troe-**prus**-ide
(Nipride, Nitropress)

BLACK BOX ALERT Must dilute with D_5W. Can cause sharp decrease in B/P; may lead to irreversible ischemia, death. Unless used briefly or at low infusion rate (less than 2 mcg/kg/min), potentially lethal levels of cyanide may result. Do not use maximum dose for longer than 10 min.

Do not confuse nitroprusside with nitroglycerin or Nitrostat.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Vasodilator. **CLINICAL:** Antihypertensive, vasodilator, antidote.

ACTION

Direct vasodilating action on arterial, venous smooth muscle. Decreases peripheral vascular resistance, preload, afterload; improves cardiac output. **Therapeutic Effect:** Dilates coronary arteries, decreases oxygen consumption, relieves persistent chest pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	Less than 2 min	Dependent on infusion rate	1–10 min

Reacts with Hgb in erythrocytes, producing cyanmethemoglobin, cyanide ions. Primarily excreted in urine. **Half-life:** less than 10 min.

USES

Immediate reduction of B/P in hypertensive crisis. Produces controlled hypotension in surgical procedures to reduce bleeding. Treatment of acute CHF.

PRECAUTIONS

Contraindications: Compensatory hypertension (AV shunt, coarctation of aorta), congenital (Leber's) optic atrophy, inadequate cerebral circulation, moribund pts, tobacco amblyopia (dim vision). **Cautions:** Severe hepatic/renal impairment, hypothyroidism, hyponatremia, elderly, increased intracranial pressure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** More sensitive to hypotensive effect. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Antihypertensives** may increase hypotensive effect. **HERBAL:** **Yohimbe** may decrease effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 25 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute with 250–1,000 ml D_5W to provide concentration of 200 mcg, 50 mcg/ml, respectively. **Maximum concentration:** 200 mg/250 ml. • Wrap infusion bottle in aluminum foil immediately after mixing.

Rate of Administration • Give by IV infusion only, using infusion rate chart provided by manufacturer or protocol. • Administer using IV infusion pump. • Be alert for extravasation (produces severe pain, sloughing).

Storage • Protect solution from light. • Solution should appear very faint brown. • Use only freshly prepared solution. Once prepared, do not keep or use longer than 24 hrs. • Deterioration evidenced by color change from brown to blue, green, dark red. • Discard unused portion.

IV INCOMPATIBILITY

Cisatracurium (Nimbex).

IV COMPATIBILITIES

Diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), enalapril (Vasotec), heparin, insulin, labetalol (Normodyne, Trandate), lidocaine, midazolam (Versed), milrinone (Primacor), nitroglycerin, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Parenteral Dosage

IV Infusion: ADULTS, ELDERLY, CHILDREN: Initially, 0.3–0.5 mcg/kg/min. May increase by 0.5 mcg/kg/min to desired hemodynamic effect or appearance of headache, nausea. Usual dose: 3 mcg/kg/min. Doses greater than 4 mcg/kg/min rarely needed. **Maximum:** 10 mcg/kg/min (children: 8–10 mcg/kg/min).

SIDE EFFECTS

Occasional: Flushing of skin, pruritus, pain/redness at injection site.

ADVERSE EFFECTS/ TOXIC REACTIONS

Too-rapid IV infusion rate reduces B/P too quickly. Nausea, vomiting, diaphoresis, apprehension, headache, restlessness, muscle twitching, dizziness, palpitations, retrosternal pain, abdominal pain may occur. Symptoms disappear rapidly if rate of administration is slowed or temporarily discontinued. Overdose produces metabolic acidosis, tolerance to therapeutic effect.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check with physician for desired B/P parameters (B/P is normally maintained approximately 30%–40% below pretreatment levels). Medication should be discontinued if therapeutic response is not achieved within 10 min after IV infusion at 10 mcg/kg/min.

INTERVENTION/EVALUATION

Monitor EKG, B/P continuously. Monitor blood acid-base balance, electrolytes, laboratory results, I&O. Assess for metabolic acidosis (weakness, disorientation, headache, nausea, hyperventilation, vomiting). Assess for therapeutic response to medication. Monitor B/P for potential rebound hypertension after infusion is discontinued.

N

nizatidine

nye-**za**-ti-deen
(Apo-Nizatidine, Axid, Novo-Nizatidine)
Do not confuse Axid with Ansaid.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: H_2 receptor antagonist. **CLINICAL:** Antiulcer, gastric acid secretion inhibitor (see p. 108C).

ACTION

Inhibits histamine action at histamine-2 (H_2) receptors of parietal cells. **Therapeutic Effect:** Inhibits basal/nocturnal gastric acid secretion.

PHARMACOKINETICS

Rapidly, well absorbed from GI tract. Protein binding: 35%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1–2 hrs (increased in renal impairment).

USES

Short-term treatment of active duodenal ulcer, active benign gastric ulcer. Prevention of duodenal ulcer recurrence. Treatment of gastroesophageal reflux disease (GERD), including erosive esophagitis. **OFF-LABEL:** Part of multidrug therapy for *H. pylori* eradication used to reduce risk of duodenal ulcer recurrence.

PRECAUTIONS

Contraindications: Hypersensitivity to other H_2 antagonists. **Cautions:** Renal impairment.

N

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Interferes with skin tests using allergen extracts. May increase serum alkaline phosphatase, AST, ALT.

AVAILABILITY (Rx)

Capsules (Axid): 150 mg, 300 mg. **Oral Solution (Axid):** 15 mg/ml.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. Best given after meals or at bedtime. • Do not administer within 1 hr of magnesium- or aluminum-containing antacids (decreases absorption). • May give immediately before eating for heartburn prevention.

INDICATIONS/ROUTES/DOSAGE

Active Duodenal Ulcer

PO: ADULTS, ELDERLY: 300 mg at bedtime or 150 mg twice daily.

Prevention of Duodenal Ulcer Recurrence

PO: ADULTS, ELDERLY: 150 mg at bedtime.

Gastroesophageal Reflux Disease (GERD)

PO: ADULTS, ELDERLY: 150 mg twice a day.

Active Benign Gastric Ulcer

PO: ADULTS, ELDERLY: 150 mg twice daily or 300 mg at bedtime.

Dosage in Renal Impairment

Dosage adjustment is based on creatinine clearance.

Creatinine Clearance	Active Ulcer	Maintenance Therapy
20–50 ml/min	150 mg at bedtime	150 mg every other day
Less than 20 ml/min	150 mg every other day	150 mg q3days

SIDE EFFECTS

Occasional (2%): Drowsiness, fatigue. **Rare (1%):** Diaphoresis, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Asymptomatic ventricular tachycardia, hyperuricemia not associated with gout, nephrolithiasis occur rarely.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Assess for abdominal pain, GI bleeding (overt blood in emesis/stool, tarry stools). Monitor blood tests for elevated AST, ALT, serum alkaline phosphatase (hepatocellular injury).

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, aspirin, smoking, excessive amounts of caffeine. • Inform physician if symptoms of heartburn, acid indigestion, sour stomach persist after 2 wks of continuous use of nizatidine.

norepinephrine HIGH ALERT

nor-ep-ih-**nef**-rin
(Levophed)

BLACK BOX ALERT Extravasation may produce severe tissue necrosis, sloughing. Using fine hypodermic needle, liberally infiltrate area with 10–15 ml saline solution containing 5–10 mg phentolamine.

Do not confuse Levophed with Levaquin or levofloxacin, or norepinephrine with epinephrine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic. **CLINICAL:** Vasopressor (see p. 158C).

ACTION

Stimulates beta$_1$-adrenergic receptors, alpha-adrenergic receptors, increasing peripheral resistance. Enhances contractile myocardial force, increases cardiac output. Constricts resistance, capacitance vessels. **Therapeutic Effect:** Increases systemic B/P, coronary blood flow.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	Rapid	1–2 min	N/A

Localized in sympathetic tissue. Metabolized in liver. Primarily excreted in urine.

USES

Corrects hypotension unresponsive to adequate fluid volume replacement (as part of shock syndrome) caused by MI, bacteremia, open heart surgery, renal failure.

PRECAUTIONS

Contraindications: Hypovolemic states (unless as an emergency measure), mesenteric/peripheral vascular thrombosis, profound hypoxia. **Cautions:** Hypertension, occlusive vascular disease, peripheral or mesenteric vascular thrombosis, those taking MAOIs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. May produce fetal anoxia due to uterine contraction, constriction of uterine blood vessels. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: MAOIs, antidepressants (tricyclic) may prolong hypertension. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 1 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Blood, fluid volume depletion should be corrected before drug is administered.

IV

◀ALERT▶ Dilute only in dextrose-containing solutions (D_5W, D_5NS). Dextrose-containing fluids offer protection against significant loss of potency due to oxidation. Administration in saline solution only is not recommended.

Reconstitution • Add 4 ml (4 mg) to 250 ml D_5W (16 mcg/ml). **Maximum concentration:** 32 ml (32 mg) to 250 ml (128 mcg/ml).

Rate of Administration • Closely monitor IV infusion flow rate (use infusion pump). • Monitor B/P q2min during IV infusion until desired therapeutic response is achieved, then q5min during remaining

N

IV infusion. • Never leave pt unattended. • Maintain B/P at 80–100 mm Hg in previously normotensive pts, and 30–40 mm Hg below preexisting B/P in previously hypertensive pts. • Reduce IV infusion gradually. Avoid abrupt withdrawal. • If using peripherally inserted catheter, it is imperative to check the IV site frequently for free flow and infused vein for blanching, hardness to vein, coldness, pallor to extremity. • If extravasation occurs, area should be infiltrated with 10–15 ml sterile saline containing 5–10 mg phentolamine (does not alter pressor effects of norepinephrine).

Storage • Do not use if solution is brown or contains precipitate. • Store at room temperature.

IV INCOMPATIBILITIES

Pantoprazole (Protonix), phenobarbital, phenytoin (Dilantin), regular insulin.

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium gluconate, diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), epinephrine, esmolol (Brevibloc), fentanyl (Sublimaze), furosemide (Lasix), haloperidol (Haldol), heparin, hydromorphone (Dilaudid), labetalol (Trandate), lipids, lorazepam (Ativan), magnesium, midazolam (Versed), milrinone (Primacor), morphine, nicardipine (Cardene), nitroglycerin, potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Acute Hypotension Unresponsive to Fluid Volume Replacement

IV: ADULTS, ELDERLY: Initially, administer at 0.5–1 mcg/min. Adjust rate of flow to establish and maintain desired B/P (40 mm Hg below preexisting systolic pressure). Average maintenance dose: 8–30 mcg/min. **CHILDREN:** Initially, 0.05–0.1 mcg/kg/min; titrate to desired effect. **Maximum:** 1–2 mcg/kg/min.

SIDE EFFECTS

Norepinephrine produces less pronounced, less frequent side effects than epinephrine. **Occasional (5%–3%):** Anxiety, bradycardia, palpitations. **Rare (2%–1%):** Nausea, anginal pain, shortness of breath, fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extravasation may produce tissue necrosis, sloughing. Overdose manifested as severe hypertension with violent headache (may be first clinical sign of overdose), arrhythmias, photophobia, retrosternal or pharyngeal pain, pallor, diaphoresis, vomiting. Prolonged therapy may result in plasma volume depletion. Hypotension may recur if plasma volume is not maintained.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess EKG, B/P continuously (be alert to precipitous B/P drop). Never leave pt alone during IV infusion. Be alert to pt complaint of headache.

INTERVENTION/EVALUATION

Monitor IV flow rate diligently. Assess for extravasation characterized by blanching of skin over vein, coolness (results from local vasoconstriction); color, temperature of IV site extremity (pallor, cyanosis, mottling). Assess nailbed capillary refill. Monitor I&O; measure output hourly, report urine output less than 30 ml/hr. Once B/P parameter has been reached, IV infusion should not be restarted unless systolic B/P falls below 70–80 mm Hg.

norfloxacin

nor-**flox**-a-sin
(Apo-Norflox, Norfloxacine, Noroxin, Novo-Norfloxacin, PMS-Norfloxacin)

BLACK BOX ALERT May increase risk of tendonitis, tendon rupture.

Do not confuse norfloxacin with Norflex, or Noroxin with Norflex or Neurontin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Quinolone. **CLINICAL:** Anti-infective (see p. 25C).

ACTION

Interferes with bacterial cell replication by inhibiting DNA-gyrase in susceptible microorganisms. **Therapeutic Effect:** Bactericidal.

USES

Treatment of susceptible infections due to *E. faecalis, E. coli, K. pneumoniae, P. mirabilis, P. aeruginosa, S. epidermidis, S. saprophyticus,* including UTIs, acute or chronic prostatitis.

PRECAUTIONS

Contraindications: Children younger than 18 yrs (increased risk of arthropathy), hypersensitivity to other quinolones or their components. **Cautions:** Renal impairment, predisposition to seizures.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Antacids, sucralfate, didanosine** may decrease absorption. May increase effects of **oral anticoagulants.** May increase concentration of **cyclosporine.** Decreases clearance of **theophylline,** may increase concentration, risk of toxicity. **HERBAL:** **Dong quai, St. John's wort** may increase risk of photosensitization. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, LDH, AST, ALT, amylase.

AVAILABILITY (Rx)

Tablets: 400 mg.

ADMINISTRATION/HANDLING

PO

• Give 1 hr before or 2 hrs after meals with 8 oz of water. • Encourage additional glasses of water between meals. • Do not administer antacids with or within 2 hrs of norfloxacin dose. • Encourage cranberry juice, citrus fruits (to acidify urine).

INDICATIONS/ROUTES/DOSAGE

UTI

PO: ADULTS, ELDERLY: 400 mg twice daily for 3–21 days.

Prostatitis

PO: ADULTS: 400 mg twice daily for 4–6 wks.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine Clearance	Dosage
30 ml/min or higher	400 mg twice daily
Less than 30 ml/min	400 mg once daily

SIDE EFFECTS

Frequent: Nausea, headache, dizziness. **Rare:** Vomiting, diarrhea, dry mouth, bitter taste, anxiety, drowsiness, insomnia, photosensitivity, tinnitus, crystalluria, rash, fever, seizures.

ADVERSE EFFECTS/ TOXIC REACTIONS

Superinfection, anaphylaxis, Stevens-Johnson syndrome, arthropathy occur rarely. Hypersensitivity reactions, including photosensitivity, rash, pruritus, blisters, edema, burning skin, may be noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity to norfloxacin, quinolones.

INTERVENTION/EVALUATION

Assess for nausea, headache, dizziness. Evaluate food tolerance. Assess for chest, joint pain (arthropathy).

PATIENT/FAMILY TEACHING

• Take 1 hr before or 2 hrs after meals. • Complete full course of therapy. • Take with 8 oz of water; drink several glasses of water between meals. • May cause dizziness, drowsiness. • Do not take antacids with or within 2 hrs of norfloxacin dose (reduces or destroys effectiveness).

nortriptyline

nor-**trip**-ti-leen
(Apo-Nortriptyline, Aventyl, Norventyl, Novo-Nortriptyline, Pamelor)

BLACK BOX ALERT Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Aventyl with Bentyl, or nortriptyline with amitriptyline, desipramine, or Norpramin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic compound. **CLINICAL:** Antidepressant (see pp. 38C, 156C).

ACTION

Blocks reuptake of neurotransmitters (norepinephrine, serotonin) at neuronal presynaptic membranes, increasing their availability at postsynaptic receptor sites. **Therapeutic Effect:** Relieves depression, anxiety disorders, nocturnal enuresis.

USES

Treatment of various forms of depression, often in conjunction with psychotherapy. Treatment of nocturnal enuresis. **OFF-LABEL:** Treatment of neurogenic pain, panic disorder; prevention of migraine headache. Treatment of chronic pain, anxiety disorders, ADHD, adjunctive therapy for smoking cessation.

PRECAUTIONS

Contraindications: Acute recovery period after MI, MAOI use within 14 days. **Cautions:** Prostatic hyperplasia, history of urinary retention/obstruction, glaucoma, diabetes mellitus, history of seizures, hyperthyroidism, cardiac/hepatic/renal disease, schizophrenia, increased intraocular pressure, hiatal hernia. High risk for suicide. **Pregnancy Category C.**

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS effects, respiratory depression, hypotensive effects. **Cimetidine** may increase concentration, risk of toxicity. **MAOIs** may increase risk of neuroleptic malignant syndrome, seizures, hyperpyrexia, hypertensive crisis. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression and risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May alter serum glucose, EKG readings. **Therapeutic peak serum level:** 6–10 mcg/ml; **therapeutic trough serum level:** 0.5–2 mcg/ml. **Toxic peak serum level:** greater than 12 mcg/ml; **toxic trough serum level:** greater than 2 mcg/ml.

AVAILABILITY (Rx)

Capsules (Pamelor): 10 mg, 25 mg, 50 mg, 75 mg. **Oral Solution (Pamelor):** 10 mg/5 ml.

ADMINISTRATION/HANDLING

◀ALERT▶ At least 14 days must elapse between use of MAOIs and nortriptyline.

PO

• Give with food, milk if GI distress occurs. • Dilute oral solution in water, milk, or fruit juice. Give immediately. (Do not mix with grape juice/carbonated beverages.)

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: 25 mg 3–4 times a day up to 150 mg/day. **ELDERLY:** Initially, 10–25 mg at bedtime. May increase by 25 mg every 3–7 days. **Maximum:** 150 mg/day. **CHILDREN 12 YRS AND OLDER:** 1–3 mg/kg/day or 30–50 mg/day in 3–4 divided doses. **Maximum:** 150 mg/day. **CHILDREN 6–11 YRS:** 1–3 mg/kg/day or 10–20 mg/day in 3–4 divided doses.

Enuresis

PO: CHILDREN 12 YRS AND OLDER: 25–35 mg/day. **CHILDREN 8–11 YRS:** 10–20 mg/day. **CHILDREN 6–7 YRS:** 10 mg/day.

SIDE EFFECTS

Frequent: Drowsiness, fatigue, dry mouth, blurred vision, constipation, delayed micturition, orthostatic hypotension, diaphoresis, impaired concentration, increased appetite, urinary retention. **Occasional:** GI disturbances (nausea, GI distress, metallic taste), photosensitivity. **Rare:** Paradoxical reactions (agitation, restlessness, nightmares, insomnia), extrapyramidal symptoms (particularly fine hand tremor).

ADVERSE EFFECTS/ TOXIC REACTIONS

High dosage may produce cardiovascular effects (severe orthostatic hypotension, dizziness, tachycardia, palpitations, arrhythmias), altered temperature regulation (hyperpyrexia, hypothermia). Abrupt discontinuation from prolonged therapy may produce headache, malaise, nausea, vomiting, vivid dreams.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for suicidal ideation/tendencies, behavior, thought content, appearance. Obtain baseline glucose, cholesterol levels. For pts on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood. Monitor daily pattern of bowel activity, stool consistency. Avoid constipation with increased fluids, bulky foods. Monitor B/P, pulse for hypotension, arrhythmias, weight. Assess for urinary retention, including output estimate, bladder palpation if indicated. Therapeutic peak serum level: 6–10 mcg/ml; trough serum level: 0.5–2 mcg/ml. Toxic peak serum level: greater than 12 mcg/ml; toxic trough: greater than 2 mcg/ml.

PATIENT/FAMILY TEACHING

• Change positions slowly to avoid hypotensive effect. • Tolerance to postural hypotension, sedative, anticholinergic effects usually develops during early therapy. • Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established. • Therapeutic effect may be noted in 2 wks or longer. • Photosensitivity to sun may occur. • Use sunscreen, protective clothing. • Dry mouth may be relieved by sugarless gum, sips of tepid water. • Report visual disturbances, worsening depression, suicidal ideation, unusual changes in behavior (esp. at initiation of therapy or with changes in dosage). • Do not abruptly discontinue medication.

nystatin

nye-**stat**-in
(Candistatin, Mycostatin, Nystat-Rx, Nystop, Pedi-Dri)
Do not confuse Mycostatin with Nitrostat, or nystatin with atorvastatin, fluvastatin, lovastatin, Nitrostat, pitavastatin, pravastatin, rosuvastatin, or simvastatin.

FIXED-COMBINATION(S)

Mycolog, Myco-Triacet: nystatin/triamcinolone (a steroid): 100,000 units/0.1%.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Polyene antifungal antibiotic. **CLINICAL:** Antifungal (see p. 49C).

ACTION

Binds to sterols in cell membrane, increasing fungal cell membrane permeability, permitting loss of potassium, other cellular components. **Therapeutic Effect:** Fungistatic.

PHARMACOKINETICS

PO: Poorly absorbed from GI tract. Eliminated unchanged in feces. **Topical:** Not absorbed systemically from intact skin.

USES

Treatment of cutaneous, intestinal, oral cavity, vaginal fungal infections caused by *Candida* spp.

PRECAUTIONS

Contraindications: None known. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Vaginal applicators may be contraindicated, requiring manual insertion of tablets during pregnancy. **Pregnancy Category B (C: oral). Children:** No age-related precautions noted for suspension, topical use. Lozenges not recommended in those younger than 5 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Cream (Mycostatin Topical): 100,000 units/g. **Ointment:** 100,000 units/g. **Oral Suspension (Mycostatin):** 100,000 units/ml. **Tablets (Mycostatin):** 500,000 units. **Topical Powder (Mycostatin Topical, Nystop, Pedi-Dri):** 100,000 units/g. **Vaginal Tablets:** 100,000 units.

ADMINISTRATION/HANDLING

PO

• Shake suspension well before administration. • Place and hold suspension in mouth or swish throughout mouth as long as possible before swallowing. • For neonates and infants, paint into recesses of the mouth.

INDICATIONS/ROUTES/DOSAGE

Intestinal Infection

PO: ADULTS, ELDERLY: 500,000–1,000,000 units q8h.

Oral Candidiasis

PO: ADULTS, ELDERLY, CHILDREN: 400,000–600,000 units 4 times a day. **INFANTS:** 200,000 units 4 times a day. **PREMATURE INFANTS:** 100,000 units 4 times a day.

Vaginal Infections

Vaginal: ADULTS, ELDERLY: 1 tablet/day at bedtime for 14 days.

Cutaneous Candidal Infections

Topical: ADULTS, ELDERLY, CHILDREN: Apply 2–3 times a day.

SIDE EFFECTS

Occasional: PO: None known. **Topical:** Skin irritation. **Vaginal:** Vaginal irritation.

ADVERSE EFFECTS/ TOXIC REACTIONS

High dosages of oral form may produce nausea, vomiting, diarrhea, GI distress.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Confirm that cultures, histologic tests were done for accurate diagnosis. Inspect oral mucous membranes.

INTERVENTION/EVALUATION

Assess for increased skin irritation with topical, increased vaginal discharge with vaginal application.

PATIENT/FAMILY TEACHING

• Do not miss doses; complete full length of treatment (continue vaginal use during menses). • Notify physician if nausea, vomiting, diarrhea, stomach pain develops. • **Vaginal:** Insert high in vagina. • Check with physician regarding douching, sexual intercourse. • **Topical:** Rub well into affected areas. • Avoid contact with eyes. • Use cream (sparingly) or powder on erythematous areas. • Keep areas clean, dry; wear light clothing for ventilation. • Separate personal items in contact with affected areas.

octreotide

ock-**tree**-oh-tide
(Sandostatin, Sandostatin LAR Depot)
Do not confuse Sandostatin with Sandimmune, Sandostatin LAR, sargramostim, or simvastatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Somatostatin analogue. **CLINICAL:** Secretory inhibitory, growth hormone suppressant.

ACTION

Suppresses secretion of serotonin, gastroenteropancreatic peptides. Enhances fluid/electrolyte absorption from GI tract. **Therapeutic Effect:** Prolongs intestinal transit time.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Subcutaneous	N/A	N/A	Up to 12 hrs

Rapidly, completely absorbed from injection site. Protein binding: 65%. Metabolized in liver. Excreted in urine. Removed by hemodialysis. **Half-life:** 1.7–1.9 hrs.

USES

Controls diarrhea and flushing in pts with metastatic carcinoid tumors, treatment of watery diarrhea associated with vasoactive intestinal peptic-secreting tumors (VIPomas), secretory diarrhea, acromegaly. **OFF-LABEL:** Control of bleeding esophageal varices, treatment of AIDS-associated secretory diarrhea, chemotherapy-induced diarrhea, insulinomas, small-bowel fistulas, Zollinger-Ellison syndrome, Cushing's syndrome, hypothalamic obesity, malignant bowel obstruction, postgastrectomy dumping syndrome.

PRECAUTIONS

Contraindications: None known. **Cautions:** Diabetic pts with gastroparesis, renal failure, hepatic impairment, heart failure, concomitant medications altering heart rate or rhythm.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effectiveness of **cyclosporine. Glucagon, growth hormone, insulin, oral antidiabetics** may alter glucose concentrations. **HERBAL:** Avoid herbs that have hypoglycemic activity (e.g., **garlic, ginger, ginseng**). **FOOD:** None known. **LAB VALUES:** May decrease serum thyroxine (T_4). May increase serum alkaline phosphatase, ALT, AST, GGT.

AVAILABILITY (Rx)

Injection Solution (Sandostatin): 0.05 mg/ml, 0.1 mg/ml, 0.2 mg/ml, 0.5 mg/ml, 1 mg/ml. **Injection Suspension (Sandostatin LAR Depot):** 10-mg, 20-mg, 30-mg vials.

ADMINISTRATION/HANDLING

◀ALERT▶ Sandostatin may be given IV, IM, subcutaneous. Sandostatin LAR Depot may be given only IM.

IM

• Give immediately after mixing. • Administer deep IM in large muscle mass at 4-wk intervals. • Avoid deltoid injections.

Subcutaneous

• Do not use if discolored or particulates form. • Avoid multiple injections at same site within short periods.

IV

• Dilute in 50–100 ml 0.9% NaCl or D_5W and infuse over 15–30 min. In emergency, may give IV push over 3 min.

INDICATIONS/ROUTES/DOSAGE

Diarrhea

IV *(Sandostatin)*: ADULTS, ELDERLY: Initially, 50–100 mcg q8h. May increase by 100 mcg/dose q48h. **Maximum:** 500 mcg q8h.

IV, Subcutaneous *(Sandostatin)*: 1–10 mcg/kg q12h.

Carcinoid Tumor

IV, Subcutaneous *(Sandostatin)*: ADULTS, ELDERLY: Initial 2 wks, 100–600 mcg/day in 2–4 divided doses. Range: 50–1,500 mcg.

IM *(Sandostatin Lar Depot)*: ADULTS, ELDERLY: Must be stabilized on subcutaneous octreotide for at least 2 wks. 20 mg q4wks.

Vasoactive Intestinal Peptic-Secreting Tumor (VIPoma)

IV, Subcutaneous *(Sandostatin)*: ADULTS, ELDERLY: Initial 2 wks, 200–300 mcg/day in 2–4 divided doses. Range: 150–750 mcg.

IM *(Sandostatin Lar Depot)*: ADULTS, ELDERLY: Must be stabilized on subcutaneous octreotide for at least 2 wks. 20 mg q4wks.

Esophageal Varices

IV *(Sandostatin)*: ADULTS, ELDERLY: Bolus of 25–50 mcg followed by IV infusion of 25–50 mcg/hr for 48 hrs.

Acromegaly

IV, Subcutaneous *(Sandostatin)*: ADULTS, ELDERLY: 50 mcg 3 times a day. Increase as needed. Range: 300–1,500 mcg/day.

IM *(Sandostatin Lar Depot)*: ADULTS, ELDERLY: Must be stabilized on subcutaneous octreotide for at least 2 wks. 20 mg q4wks for 3 mos. **Maximum:** 40 mg q4wks.

SIDE EFFECTS

Frequent (10%–6%, 58%–30% in Acromegaly Pts): Diarrhea, nausea, abdominal discomfort, headache, injection site pain. **Occasional (5%–1%):** Vomiting, flatulence, constipation, alopecia, facial flushing, pruritus, dizziness, fatigue, arrhythmias, ecchymosis, blurred vision. **Rare (Less Than 1%):** Depression, diminished libido, vertigo, palpitations, dyspnea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk of cholelithiasis. Prolonged high-dose therapy may produce hypothyroidism. GI bleeding, hepatitis, seizures occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline B/P, weight, thyroid function, serum glucose, electrolytes.

INTERVENTION/EVALUATION

Monitor serum glucose, thyroid function tests; fluid, electrolyte balance; fecal fat. In acromegaly, monitor growth hormone levels. Weigh every 2–3 days, report over 5-lb gain per wk. Monitor B/P, pulse, respirations periodically during treatment. Be alert for decreased urinary output, peripheral edema (esp. ankles). Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Therapy should provide significant improvement of severe, watery diarrhea.

ocular lubricant

ock-yoo-lar **lube**-ri-cant
(Hypotears, Lacrilube, Tears Naturale)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Topical ophthalmic. **CLINICAL:** Lubricant, toner, buffer, viscosity agent.

ACTION

Forms an occlusive film on eye surface. **Therapeutic Effect:** Lubricates/protects eye from drying.

USES

Protection/lubrication of eye in exposure keratitis, decreased corneal sensitivity, recurrent corneal erosions, keratitis sicca (particularly for nighttime use), after removal of foreign body, during and following surgery.

PRECAUTIONS

Contraindications: None known. **Cautions:** None known. **Pregnancy Category Unknown.**

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Ophthalmic Ointment. Solution.

ADMINISTRATION/HANDLING

Ophthalmic

• Do not use with contact lenses. • Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place prescribed number of drops (¼–½ inch of ointment) into pocket. • Instruct pt to close eye gently (so medication will not be squeezed out of the sac).

Solution

• Instruct pt to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption.

Ointment

• Instruct pt to roll eyeball to increase contact area of drug to eye.

INDICATIONS/ROUTES/DOSAGE

Usual Ophthalmic Dosage

Ophthalmic: ADULTS, ELDERLY: Small amount in conjunctival sac as needed.

SIDE EFFECTS

Frequent: Temporary blurred vision after administration, esp. with ointment.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

PATIENT/FAMILY TEACHING

• Do not use with contact lenses. • Do not touch tip of tube or dropper to any surface (may contaminate). • Temporary blurred vision will occur, esp. with administration of ointment. • Avoid activities requiring visual acuity until blurring clears. • Notify physician if eye pain, change of vision, worsening of condition occur or if condition is unchanged after 72 hrs.

ofatumumab

oh-fa-**tue**-mue-mab
(Arzerra)
Do not confuse ofatumumab with omalizumab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic.

ACTION

Binds to CD20 molecule, the antigen on surface of B-cell lymphocytes; inhibits early-stage B-lymphocyte activation. **Therapeutic Effect:** Controls tumor growth, triggers cell death.

PHARMACOKINETICS

Eliminated through both a target-independent route and a B-cell–mediated route. Due to depletion of B cells, clearance of ofatumumab is decreased substantially after subsequent infusions compared to first infusion. **Half-life:** 12–16 days.

USES

Treatment of chronic lymphocytic leukemia (CLL) refractory to fludarabine and alemtuzumab.

PRECAUTIONS

Contraindications: None known. **Cautions:** Carriers of hepatitis B virus.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May decrease WBC count, platelets.

AVAILABILITY (Rx)

Solution for Injection: 100 mg/5 ml single-use vial.

ADMINSTRATION/HANDLING

IV

ALERT Do not give by IV push or bolus. Use in-line filter supplied with product.

Reconstitution • 300-mg dose: Withdraw and discard 15 ml from 1,000 ml 0.9% NaCl. • Withdraw 5 ml from each of 3 vials and add to bag. • Gently invert. • 2,000-mg dose: Withdraw and discard 100 ml from 1,000 ml 0.9% NaCl. • Withdraw 5 ml from each of 2 vials and add to bag. • Gently invert.

Rate of Administration • Dose 1: Initiate infusion at rate of 3.6 mg/hr (12 ml/hr). • Dose 2: Initiate infusion at rate of 24 mg/hr (12 ml/hr). • Doses 3–12: Initiate infusion at rate of 50 mg/hr (25 ml/hr). • If no infusion toxicity, rate of infusion may be increased every 30 min, using following table:

Interval After Start of Infusion (min)	Dose 1 (ml/hr)	Dose 2 (ml/hr)	Doses 3–12 (ml/hr)
0–30	12	12	25
31–60	25	25	50
61–90	50	50	100
91–120	100	100	200
Over 120	200	200	400

Storage • Refrigerate vials. • After dilution, solution should be used within first 12 hrs; discard preparation after 24 hrs. • Discard if discoloration is present, but solution may contain visible, translucent-to-white particulates (will be removed by in-line filter).

IV COMPATIBILITY

Prepare all doses with 0.9% NaCl. Do not mix with dextrose solutions or any other medications.

INDICATIONS/ROUTES/DOSAGE

ALERT Premedicate 30 min to 2 hrs before each infusion with acetaminophen, an antihistamine, and a corticosteroid. Flush IV line with 0.9% NaCl before and after each dose.

Chronic Lymphocytic Leukemia

IV Infusion: ADULTS, ELDERLY: Recommended dosage is 12 doses given on the following schedule: 300 mg initial dose

(dose 1), followed 1 wk later by 2,000 mg weekly for 7 doses (doses 2–8), followed 4 wks later by 2,000 mg every 4 wks for 4 doses (doses 9–12).

SIDE EFFECTS

Frequent (20%–14%): Fever, cough, diarrhea, fatigue, rash. **Occasional (13%–5%):** Nausea, bronchitis, peripheral edema, nasopharyngitis, urticaria, insomnia, headache, sinusitis, muscle spasm, hypertension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Most common serious adverse reactions were bacterial, viral, fungal infections (including pneumonia and sepsis), septic shock, neutropenia, thrombocytopenia. Infusion reactions occur more frequently with first 2 infusions. Severe infusion reactions manifested as angioedema, bronchospasm, dyspnea, fever, chills, back pain, hypotension. Progressive multifocal leukoencephalopathy may occur. Small bowel obstruction has been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Screen pts at high risk of hepatitis B virus. Assess baseline CBC, platelet count prior to therapy.

INTERVENTION/EVALUATION

Monitor CBC for evidence of myelosuppression during therapy, and increase frequency of monitoring in pts who develop grade 3 or 4 cytopenia. Monitor for blood dyscrasias (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (lowers body's resistance). • Avoid contact with those who have recently received live virus vaccine. • Avoid crowds, those with infection. • Promptly report fever, sore throat, signs of infection. • Report symptoms of infusion reactions (e.g., fever, chills, breathing problems, rash); bleeding, bruising, petechiae, worsening weakness or fatigue; new neurologic symptoms (e.g., confusion, loss of balance, vision problems); symptoms of hepatitis (e.g., fatigue, yellow discoloration of skin/eyes); worsening abdominal pain, nausea.

ofloxacin

o-**flox**-a-sin
(Apo-Oflox ✱, Floxin, Floxin Otic, Novo-Ofloxacin ✱, Ocuflox)

BLACK BOX ALERT May increase risk of tendonitis, tendon rupture.

Do not confuse Floxin with Flexeril, or Ocuflox with Ocufen.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fluoroquinolone. **CLINICAL:** Antibiotic (see p. 25C).

ACTION

Interferes with bacterial cell replication, repair by inhibiting DNA-gyrase in susceptible microorganisms. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Rapidly, well absorbed from GI tract. Protein binding: 20%–25%. Widely distributed (including CSF). Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 4.7–7 hrs (increased in renal impairment, cirrhosis, elderly).

USES

Treatment of susceptible infections due to *S. pneumoniae, S. aureus, S. pyogenes, H. influenzae, P. mirabilis, N. gonorrhoeae, C. trachomatis, E. coli, K. pneumoniae, P. aeruginosa,* including infections of urinary tract, lower respiratory

tract, skin/skin structure; sexually transmitted diseases; prostatitis due to *E. coli;* pelvic inflammatory disease (PID). **Ophthalmic:** Bacterial conjunctivitis, corneal ulcers. **Otic:** Otitis externa, acute or chronic otitis media. **OFF-LABEL:** Epididymitis, leprosy, traveler's diarrhea.

PRECAUTIONS

Contraindications: Hypersensitivity to any quinolones. **Oral:** Pregnancy, breastfeeding. **Otic:** Viral infection of external ear canal. **Cautions:** Renal impairment, CNS disorders, seizures, severe cerebral arteriosclerosis, prolongation of QT interval, bradycardia, cardiomyopathy, hypokalemia, hypomagnesemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk; potentially serious adverse reactions in breast-feeding infants. Risk of arthropathy to fetus. **Pregnancy Category C. Children:** Safety and efficacy not established (otic not established in those younger than 1 yr). **Elderly:** No age-related precautions for otic. Age-related renal impairment may require dosage adjustment for oral administration.

INTERACTIONS

DRUG: **Antacids, sucralfate** may decrease absorption, effect. **NSAIDs** may increase risk of CNS stimulation, seizures. May increase **theophylline** concentration, risk of toxicity. **HERBAL:** **Dong quai, St. John's wort** may increase photosensitization. **FOOD:** None known. **LAB VALUES:** May increase ALT, AST, alkaline phosphatase, amylase, LDH.

AVAILABILITY (Rx)

Ophthalmic Solution (Ocuflox): 0.3%. **Otic Solution (Floxin):** 0.3%. **Tablets (Floxin):** 200 mg, 300 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

• Do not give with food; preferred dosing time is 1 hr before or 2 hrs following meals. • Do not administer antacids (aluminum, magnesium) or iron/zinc-containing products within 2 hrs of ofloxacin. • Encourage cranberry juice, citrus fruits (to acidify urine). • Give with 8 oz of water; encourage fluid intake.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. Place prescribed number of drops into pocket. Instruct pt to close eye gently (so medication will not be squeezed out of the sac) and apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption.

Otic

• Instruct pt to lie down with head turned so affected ear is upright. • Instill toward canal wall, not directly on eardrum. • Pull auricle down and posterior in children; up and posterior in adults.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: 200–400 mg q12h.
Ophthalmic: ADULTS, ELDERLY, CHILDREN 1 YR AND OLDER: 1–2 drops q30min to 4 hrs initially, decreasing to q4–6h.
Otic: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 10 drops 1–2 times/day. **CHILDREN 6 MOS–12 YRS:** 5 drops once daily.

UTI

PO: ADULTS: 200 mg q12h for 3–10 days.

Pelvic Inflammatory Disease (PID)

PO: ADULTS: 400 mg q12h for 10–14 days.

Lower Respiratory Tract, Skin/Skin Structure Infection

PO: ADULTS: 400 mg q12h for 10 days.

Prostatitis, Sexually Transmitted Disease (Cervicitis, Urethritis)

PO: ADULTS: 400 mg once, then 300 mg q12h for 10 days.

Usual Elderly Dosage

PO: ELDERLY: 200–400 mg q12–24h for 7 days up to 6 wks.

Bacterial Conjunctivitis

Ophthalmic: ADULTS, ELDERLY: 1–2 drops q2–4h for 2 days, then 4 times a day for 5 days.

Corneal Ulcer

Ophthalmic: ADULTS: 1–2 drops q30min while awake and q4–6h at night for 2 days, then q60min while awake for 5–7 days, then 4 times a day until clinical cure achieved.

Acute Otitis Media

Otic: CHILDREN 1–12 YRS: 5 drops into affected ear twice a day for 10 days.

Otitis Externa

Otic: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 10 drops into affected ear once daily for 7 days. **CHILDREN 6 MOS–11 YRS:** 5 drops into affected ear once daily for 7 days.

Dosage in Renal Impairment

After normal initial dose, dosage and frequency are based on creatinine clearance.

Creatinine Clearance	Adjusted Dose	Dosage Interval
Greater than 50 ml/min	None	q12h
20–50 ml/min	None	q24h
Less than 20 ml/min	Half	q24h

SIDE EFFECTS

Frequent (10%–7%): Nausea, headache, insomnia. **Occasional (5%–3%):** Abdominal pain, diarrhea, vomiting, dry mouth, flatulence, dizziness, fatigue, drowsiness, rash, pruritus, fever. **Rare (Less Than 1%):** Constipation, paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may occur from altered bacterial balance. Hypersensitivity reaction (evidenced by rash, pruritus, blisters, edema, photosensitivity) occurs rarely. Arthropathy (swelling, pain, clubbing of fingers/toes, degeneration of stress-bearing portion of joint) may occur in children.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity to ofloxacin, other quinolones.

INTERVENTION/EVALUATION

Monitor signs/symptoms of infection, altered mental status. Monitor renal/hepatic function, WBC. Assess skin, discontinue medication at first sign of rash, other allergic reaction. Monitor daily pattern of bowel activity, stool consistency. Assess for insomnia. Check for dizziness, headache, visual difficulties, tremors; provide assistance with ambulation as needed. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Do not take antacids within 2 hrs before or 2 hrs after taking ofloxacin. • Best taken 1 hr before or 2 hrs after meals. • May cause insomnia, headache, drowsiness, dizziness. • Avoid tasks requiring alertness, motor skills until response to drug is established. • Notify physician if tendon pain/swelling, persistent diarrhea occurs.

olanzapine

TOP 200

oh-**lan**-za-peen

(Apo-Olanzapine, Zyprexa, Zyprexa Intramuscular, Zyprexa Relprevv, Zyprexa Zydis)

BLACK BOX ALERT Elderly pts with dementia-related psychosis are at increased risk for mortality due to cerebrovascular events.

Do not confuse olanzapine with olsalazine or quetiapine, or

Zyprexa with Celexa, Zestril, or Zyrtec.

FIXED-COMBINATION(S)

Symbyax: olanzapine/fluoxetine (an antidepressant): 6 mg/25 mg, 6 mg/50 mg, 12 mg/25 mg, 12 mg/50 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dibenzazepine derivative. **CLINICAL:** Antipsychotic (see p. 65C).

ACTION

Antagonizes alpha$_1$-adrenergic, dopamine, histamine, muscarinic, serotonin receptors. Produces anticholinergic, histaminic, CNS depressant effects. **Therapeutic Effect:** Diminishes psychotic symptoms.

PHARMACOKINETICS

Well absorbed after PO administration. Rapid absorption following IM administration. Protein binding: 93%. Extensively distributed throughout body. Undergoes extensive first-pass metabolism in liver. Excreted primarily in urine and, to lesser extent, in feces. Not removed by dialysis. **Half-life:** 21–54 hrs.

USES

PO: Management of manifestations of psychotic disorders. Treatment of acute mania associated with bipolar disorder. In combination with fluoxetine: treatment of depressive episodes associated with bipolar I disorder and treatment of treatment-resistant bipolar depression. **IM: Zyprexa Intramuscular:** Controls agitation in schizophrenia and bipolar mania. **Relprevv:** Long acting antipsychotic for IM injection for treatment of schizophrenia. **OFF-LABEL:** Psychosis/schizophrenia in children, chronic pain, prevention of chemotherapy-induced nausea/vomiting, psychosis/agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Pts with benign prostatic hyperplasia, suicidal pts, decrease GI motility, paralytic ileus, urinary retention, glaucoma, myasthenia gravis, breast cancer or history of breast cancer, hepatic impairment, elderly, concurrent use of potentially hepatotoxic drugs, dose escalation, known cardiovascular disease (history of MI, ischemia, heart failure, conduction abnormalities), cerebrovascular disease, conditions predisposing pts to hypotension (dehydration, hypovolemia, hypertensive medications), history of seizures, conditions lowering seizure threshold (e.g., Alzheimer's dementia), those at risk for aspiration pneumonia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol, CNS depressants may increase CNS depressant effects. **Anticholinergics** may increase anticholinergic effects. **Hepatotoxic medications** may increase hepatic function test levels. **HERBAL: Dong quai, St. John's wort** may increase photosensitization. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum GGT, cholesterol, prolactin, AST, ALT.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Zyprexa Intramuscular): 10 mg. **Suspension for IM Injection (Relprevv):** 210 mg, 300 mg, 405 mg. **Tablets (Zyprexa):** 2.5 mg, 5 mg, 7.5 mg, 10 mg, 15 mg, 20 mg. **Tablets (Orally-Disintegrating [Zyprexa Zydis]):** 5 mg, 10 mg, 15 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to meals.

ORALLY-DISINTEGRATING

- Remove by peeling back foil (do not push through foil). • Place in mouth im-

mediately. • Tablet dissolves rapidly with saliva and may be swallowed with or without liquid.

IM (Zyprexa Intramuscular)
• Reconstitute 10-mg vial with 2.1 ml Sterile Water for Injection to provide concentration of 5 mg/ml. • Use within 1 hr following reconstitution. • Discard unused portion.

IM (Relprevv)
• Dilute to final concentration of 150 mg/ml. • Shake vigorously to mix. • Store at room temperature for up to 24 hrs.

INDICATIONS/ROUTES/DOSAGE

Schizophrenia
PO: ADULTS: Initially, 5–10 mg once daily. May increase to 10 mg/day within 5–7 days. If further adjustments are indicated, may increase by 5 mg/day at 7-day intervals. Range: 10–30 mg/day. **ELDERLY:** Initially, 2.5 mg/day. May increase as indicated. Range: 2.5–10 mg/day. **CHILDREN:** Initially, 2.5–5 mg/day. Titrate in 2.5- or 5-mg increments at weekly intervals. **Maximum:** 20 mg/day.
IM *(Short-Acting [Zyprexa Intramuscular])*: ADULTS: 10 mg. May repeat after 2–4 hrs. **Maximum:** 30 mg/day.
IM *(Long-Acting [Relprevv])*: ADULTS, ESTABLISHED ON 10 MG/DAY ORALLY: 210 mg q2wks for 4 doses or 405 mg q4wks for 2 doses. Maintenance: 150 mg q2wks or 300 mg q4wks. **ESTABLISHED ON 15 MG/DAY ORALLY:** 300 mg q2wks for 4 doses. Maintenance: 210 mg q2wks or 405 mg q4wks. **ESTABLISHED ON 20 MG/DAY ORALLY:** 300 mg q2wks.

Depression Associated with Bipolar Disorder (with fluoxetine)
PO: ADULTS: Initially, 5 mg in evening. Range: 5–12.5 mg/day.

Bipolar Mania
PO: ADULTS: Initially, 10–15 mg/day. May increase by 5 mg/day at intervals of at least 24 hrs. **Maximum:** 20 mg/day. **CHILDREN:** Initially, 2.5–5 mg/day. Titrate as necessary up to 20 mg/day.

Dosage for Elderly, Debilitated Pts, Those Predisposed to Hypotensive Reactions
Initial dosage: 5 mg/day.

Control of Agitation
IM: ADULTS, ELDERLY: 2.5–10 mg. May repeat 2 hrs after first dose and 4 hrs after 2nd dose. **Maximum:** 30 mg/day.

SIDE EFFECTS

Frequent: Drowsiness (26%), agitation (23%), insomnia (20%), headache (17%), nervousness (16%), hostility (15%), dizziness (11%), rhinitis (10%). **Occasional:** Anxiety, constipation (9%); nonaggressive atypical behavior (8%); dry mouth (7%); weight gain (6%); orthostatic hypotension, fever, arthralgia, restlessness, cough, pharyngitis, visual changes (dim vision) (5%). **Rare:** Tachycardia; back, chest, abdominal, or extremity pain; tremor.

ADVERSE EFFECTS/ TOXIC REACTIONS

Rare reactions include seizures, neuroleptic malignant syndrome, a potentially fatal syndrome characterized by hyperpyrexia, muscle rigidity, irregular pulse or B/P, tachycardia, diaphoresis, cardiac arrhythmias. Extrapyramidal symptoms (EPS), dysphagia may occur. Overdose (300 mg) produces drowsiness, slurred speech.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT
Obtain baseline hepatic function tests, glucose, weight, lipid profile before initiating treatment. Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION
Monitor B/P, glucose, lipids, hepatic function tests. Assess for tremors, changes in gait, abnormal muscular movements, be-

havior. Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression). Assist with ambulation if dizziness occurs. Assess sleep pattern. Notify physician if extrapyramidal symptoms (EPS) occur.

PATIENT/FAMILY TEACHING

• Avoid dehydration, particularly during exercise, exposure to extreme heat, concurrent use of medication causing dry mouth, other drying effects. • Sugarless gum, sips of tepid water may relieve dry mouth. • Notify physician if pregnancy occurs or if there is intention to become pregnant during olanzapine therapy. • Take medication as ordered; do not stop taking or increase dosage. • Rise slowly from sitting/lying position. • Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established. • Monitor diet, exercise program to prevent weight gain.

O

olmesartan TOP 200

ol-me-**sar**-tan
(Benicar, Olmetec)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse Benicar with Mevacor.

FIXED-COMBINATION(S)

Azor: olmesartan/amlodipine (calcium channel blocker): 20 mg/5 mg, 40 mg/5 mg, 20 mg/10 mg, 40 mg/10 mg. **Benicar HCT:** olmesartan/hydrochlorothiazide (a diuretic): 20 mg/12.5 mg, 40 mg/12.5 mg, 40 mg/25 mg. **Tribenzor:** olmesartan/hydrochlorothiazide/amlodipine: 20 mg/12.5 mg/5 mg, 40 mg/12.5 mg/5 mg, 40 mg/25 mg/5 mg, 40 mg/12.5 mg/10 mg, 40 mg/25 mg/10 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive (see p. 10C, 61C).

ACTION

Blocks vasoconstrictor, aldosterone-secreting effects of angiotensin II by inhibiting binding of angiotensin II to AT_1 receptors in vascular smooth muscle. **Therapeutic Effect:** Causes vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Moderately absorbed after PO administration. Hydrolyzed in GI tract to olmesartan. Protein binding: 99%. Recovered primarily in feces and, to lesser extent, in urine. Not removed by hemodialysis. **Half-life:** 13 hrs.

USES

Treatment of hypertension alone or in combination with other antihypertensives.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment, unstented unilateral or bilateral renal arterial stenosis, significant aortic/mitral stenosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **NSAIDs** may decrease antihypertensive effect. **HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May slightly decrease Hgb, Hct. May increase BUN, serum creatinine, bilirubin, hepatic enzymes.

AVAILABILITY (Rx)

Tablets: 5 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 20 mg/day. May increase to 40 mg/day after 2 wks. Lower initial dose may be necessary in pts receiving volume-depleting medications (e.g., diuretics). **CHILDREN 6–16 YRS, WEIGHING 20 TO LESS THAN 35 KG:** Initially, 10 mg once daily. Range: 10–20 mg once daily. **WEIGHING 35 KG OR GREATER:** Initially, 20 mg once daily. Range: 20–40 mg once daily.

SIDE EFFECTS

Occasional (3%): Dizziness. **Rare (less than 2%):** Headache, diarrhea, upper respiratory tract infection.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdosage may manifest as hypotension, tachycardia. Bradycardia occurs less often. Rare cases of rhabdomyolysis have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated. Question for possibility of pregnancy (see Pregnancy Category). Assess medication history (esp. diuretics).

INTERVENTION/EVALUATION

Maintain hydration (offer fluids frequently). Assess for evidence of upper respiratory infection. Assist with ambulation if dizziness occurs. Monitor serum potassium level. Assess B/P for hypertension, hypotension.

PATIENT/FAMILY TEACHING

• Pts and/or their partner should take measures to avoid pregnancy. • Avoid tasks that require alertness, motor skills until response to drug is established (possible dizziness effect). • Report any signs of infection (sore throat, fever). • Therapy requires lifelong control, diet, exercise. • Maintain adequate hydration during hot weather (risk of dehydration, hypotension).

olsalazine

ol-**sal**-ah-zeen
(Dipentum)

Do not confuse Dipentum with Dilantin, or olsalazine with olanzapine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Salicylic acid derivative. **CLINICAL:** Anti-inflammatory.

ACTION

Converted to mesalamine in colon by bacterial action. Blocks prostaglandin production in bowel mucosa. **Therapeutic Effect:** Reduces colonic inflammation.

PHARMACOKINETICS

Small amount absorbed. Protein binding: 99%. Metabolized by bacteria in colon. Minimal elimination in urine, feces. **Half-life:** 0.9 hr.

USES

Maintenance of remission of ulcerative colitis in pts intolerant of sulfasalazine medication.

PRECAUTIONS

Contraindications: History of hypersensitivity to salicylates. **Cautions:** Renal/hepatic impairment, elderly, severe allergies, asthma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase risk of bleeding with **warfarin, heparin.** May increase risk of myelosuppression with **mercaptopurine, thioguanine.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT.

AVAILABILITY (Rx)

Capsules: 250 mg.

ADMINISTRATION/HANDLING

PO

- Give with food.

INDICATIONS/ROUTES/DOSAGE

Maintenance of Controlled Ulcerative Colitis

PO: ADULTS, ELDERLY: 1 g/day in 2 divided doses, preferably q12h.

SIDE EFFECTS

Frequent (10%–5%): Headache, diarrhea, abdominal pain/cramps, nausea. **Occasional (4%–2%):** Depression, fatigue, dyspepsia, upper respiratory tract infection, decreased appetite, rash, pruritus, arthralgia. **Rare (1%):** Dizziness, vomiting, stomatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Sulfite sensitivity may occur in susceptible pts (manifested as cramping, headache, diarrhea, fever, rash, urticaria, pruritus, wheezing). Discontinue drug immediately. Excessive diarrhea associated with extreme fatigue is rarely noted.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency; record time of evacuation. Assess for abdominal disturbances. Assess skin for rash, urticaria. Medication should be discontinued if rash, fever, cramping, diarrhea occur.

PATIENT/FAMILY TEACHING

- Notify physician if diarrhea, cramping continues or worsens or if rash, fever, pruritus occur.

omacetaxine

oh-ma-set-**ax**-een
(Synribo)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protein synthesis inhibitor. **CLINICAL:** Antineoplastic.

ACTION

Inhibits protein synthesis of Bcr-Abl tyrosine kinase, a translocation-created enzyme, created by the Philadelphia chromosome abnormality noted in chronic myeloid leukemia (CML). **Therapeutic Effect:** Inhibits tumor proliferation and growth during accelerated and chronic stages of CML.

PHARMACOKINETICS

Rapidly absorbed following subcutaneous administration. Maximum concentration: 30 min. Protein binding: Less than 50%. Hydrolyzed via plasma esterases. **Half-life:** 6 hrs.

USES

Treatment of adult pts with chronic or accelerated phase chonic myeloid leukemia (CML) with resistance and/or intolerance to two or more tyrosine kinase inhibitors.

PRECAUTIONS

Contraindications: None known. **Cautions:** Glucose intolerance, recent GI bleeding.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Not recommended in nursing mothers. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Increased risk for toxicity (e.g., hematologic).

INTERACTIONS

DRUG: NSAIDs, anticoagulants, antiplatelets may increase risk for bleeding. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease platelets, Hgb, Hct, leukocytes, lymphocytes. May increase serum ALT.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 3.5-mg vial.

ADMINISTRATION/HANDLING

◀ALERT▶ Must be administered by health care workers trained in proper chemotherapy handling and disposal procedures.

Subcutaneous

Reconstitution • Reconstitute with 1 ml 0.9% NaCl. • Gently swirl until powder is completely dissolved. • Inspect vial for particular matter or discoloration. • Reconstituted vial will provide a concentration of 3.5 mg/ml. • Avoid contact with skin.

Storage • Solution should appear clear. • May store solution at room temperature for up to 12 hrs or may refrigerate up to 24 hrs. • Discard unused solution.

INDICATIONS/ROUTES/DOSAGE

Chronic or Accelerated Myeloid Leukemia

Subcutaneous: ADULTS, ELDERLY: Induction dose: 1.25 mg/m^2 twice daily for 14 consecutive days every 28 days, over 28-day cycle. Continue induction dose until hematologic response achieved. **Maintenance dose:** 1.25 mg/m^2 twice daily for 7 consecutive days every 28 days over 28-day cycle.

Dosage Modification

Hematologic Toxicity: If neutrophils less than 0.5/mm^3 or platelet less than 50,000/mm^3, interrupt therapy. Restart when neutrophil count greater than or equal to 1.0/mm^3 or platelet count greater than or equal to 50,000/mm^3 and reduce number of dosing days by 2. **Nonhematologic Toxicity:** Interrupt therapy until toxicity/adverse effects resolved. Continue indefinitely until pt no longer benefits from therapy.

SIDE EFFECTS

Chronic Phase

Frequent (45%–25%): Diarrhea, nausea, fatigue, pyrexia, asthenia (loss of strength, energy). **Occasional (20%–11%):** Headache, arthralgia, cough, epistaxis, alopecia, constipation, abdominal pain, peripheral edema, vomiting, back pain, insomnia, rash.

Accelerated Phase

Occasional (19%–7%): Diarrhea, nausea, fatigue, pyrexia, asthenia, vomiting, cough, abdominal pain, chills, anorexia, headache. **Rare (7% or Less):** Dyspnea, epistaxis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombocytopenia, neutropenia, leukopenia, lymphopenia, or myelosuppression is an expected response to therapy, but more severe reactions including bone marrow failure, febrile neutropenia may result in life-threatening events. Pts with neutropenia are at increased risk for infection. Thrombocytopenia may increase risk for intracranial hemorrhage, GI bleeding. Avoid anticoagulants, antiplatelets, NSAIDs if platelet count less

than 50,000/mm^3. Hyperglycemic events including hyperglycemic hyperosmolar nonketotic syndrome (HHNK) may occur. Pts with uncontrolled diabetes are at increased risk for hyperglycemic emergency.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain lab chemistries, CBC; PT/INR if on anticoagulants. Question for possibility of pregnancy, current breast-feeding status. Obtain negative urine pregnancy before initiating treatment. Obtain full medication history including vitamins, supplements, herbal products, anticoagulants. Question for history of diabetes mellitus, GI bleeding.

INTERVENTION/EVALUATION

Monitor CBC weekly, then every 2 wks during maintenance phase. Obtain frequent blood glucose levels, especially in diabetic pts. Liver function panel if hepatic impairment suspected. If drug exposure occurs, immediately wash affected area with soap and water. Consider isolation protocol if pt develops neutropenia.

PATIENT/FAMILY TEACHING

• May cause male infertility. • Serum lab studies will be routinely monitored. • Notify physician if pregnant or planning to become pregnant. • Do not initiate therapy until negative urine pregnancy confirmed. • Use barrier methods during sexual activity. • Strictly avoid pregnancy during therapy. • Notify physician of yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine, dehydration, GI bleeding, nausea, vomiting, rash occurs. • Report fever, cough, night sweats, flu-like symptoms, skin changes. • Avoid tasks that require alertness, motor skills until response to drug is established. • Shortness of breath, pale skin, weakness may indicate bleeding or severe myelosuppression.

omalizumab

oh-mah-**liz**-ue-mab
(Xolair)

BLACK BOX ALERT Anaphylaxis (severe bronchospasm, hypotension, angioedema, syncope, urticaria) has occurred after first dose and in some cases after 1 yr of regular treatment.

Do not confuse omalizumab with ofatumumab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antiasthmatic.

ACTION

Selectively binds to human immunoglobulin E (IgE). Inhibits binding of IgE on surface of mast cells, basophiles. **Therapeutic Effect:** Prevents/reduces number of asthmatic attacks.

PHARMACOKINETICS

Absorbed slowly after subcutaneous administration, with peak concentration in 7–8 days. Excreted primarily via hepatic degradation. **Half-life:** 26 days.

USES

Treatment of moderate to severe persistent asthma in pts reactive to perennial allergen and inadequately controlled asthma symptoms with inhaled corticosteroids.

PRECAUTIONS

Contraindications: Acute bronchospasm, status asthmaticus. **Cautions:** Pts at risk for parasitic infections.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Because IgE is present in breast milk, omalizumab is expected to be present in breast milk. Use only if clearly needed. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum IgE levels.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 150 mg/1.2 ml after reconstitution.

ADMINISTRATION/HANDLING

Subcutaneous

Reconstitution • Use only Sterile Water for Injection to prepare for subcutaneous administration. • Medication takes 15–20 min to dissolve. • Draw 1.4 ml Sterile Water for Injection into 3-ml syringe with 1-inch, 18-gauge needle; inject contents into powdered vial. • Swirl vial for approximately 1 min (do not shake) and again swirl vial for 5–10 sec every 5 min until no gel-like particles appear in the solution. • Do not use if contents do not dissolve completely within 40 min. • Invert vial for 15 sec (allows solution to drain toward the stopper). • Using new 3-ml syringe with 1-inch 18-gauge needle, obtain required 1.2-ml dose, replace 18-gauge needle with 25-gauge needle for subcutaneous administration.

Rate of Administration • Subcutaneous administration may take 5–10 sec to administer due to its viscosity.

Storage • Use only clear or slightly opalescent solution; solution is slightly viscous. • Refrigerate. • Reconstituted solution is stable for 8 hrs if refrigerated or within 4 hrs of reconstitution when stored at room temperature.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage and frequency of administration is based upon total IgE levels and body weight (see table). IgE levels should be measured prior to initiating treatment and not during treatment. Pts should be observed a minimum of 2 hrs following each omalizumab treatment.

Asthma

Subcutaneous: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 150–375 mg every 2 or 4 wks; dose and dosing frequency are individualized based on body weight and pretreatment IgE level (as shown below). (Consult specific product labeling.)

4-Wk Dosing Table

Pretreatment Serum IgE Levels (units/ml)	Weight 30–60 kg	Weight 61–70 kg	Weight 71–90 kg	Weight 91–150 kg
30–100	150 mg	150 mg	150 mg	300 mg
101–200	300 mg	300 mg	300 mg	See next table
201–300	300 mg	See next table	See next table	See next table

2-Week Dosing Table

Pretreatment Serum IgE Levels (units/ml)	Weight 30–60 kg	Weight 61–70 kg	Weight 71–90 kg	Weight 91–150 kg
101–200	See preceding table	See preceding table	See preceding table	225 mg
201–300	See preceding table	225 mg	225 mg	300 mg
301–400	225 mg	225 mg	300 mg	Do not dose
401–500	300 mg	300 mg	375 mg	Do not dose
501–600	300 mg	375 mg	Do not dose	Do not dose
601–700	375 mg	Do not dose	Do not dose	Do not dose

SIDE EFFECTS

Frequent (45%–11%): Injection site ecchymosis, redness, warmth, stinging, urticaria; viral infection; sinusitis; headache; pharyngitis. **Occasional (8%–3%):** Arthralgia, leg pain, fatigue, dizziness. **Rare (2%):** Arm pain, earache, dermatitis, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anaphylaxis, occurring within 2 hrs of first dose or subsequent doses, occurs in 0.1% of pts. Malignant neoplasms occur in 0.5% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum total IgE levels before initiation of treatment (dosage is based on pretreatment levels). Drug is not for treatment of acute exacerbations of asthma, acute bronchospasm, status asthmaticus.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respirations, quality/rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Observe lips, fingernails for cyanosis (blue/dusky color in light-skinned pts, gray in dark-skinned pts).

PATIENT/FAMILY TEACHING

- Increase fluid intake (decreases viscosity of pulmonary secretions).
- Do not alter/stop other asthma medications.
- Notify physician of allergic reactions (e.g., breathing difficulty, swelling of throat/tongue).

omega-3 acid ethyl esters

TOP 200

oh-**meg**-ah 3 **as**-id **eth**-ill **eh**-stirs (Lovaza)

Do not confuse Lovaza with lorazepam.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Omega-3 fatty acid. **CLINICAL:** Antihypertriglyceride agent (see p. 58C).

ACTION

Inhibits esterification of fatty acids, prevents hepatic enzymes from catalyzing final step of triglyceride synthesis. **Therapeutic Effect:** Reduces serum triglyceride levels.

PHARMACOKINETICS

Well absorbed following PO administration. Incorporated into phospholipids. **Half-life:** N/A.

USES

Adjunct to diet to reduce very high (500 mg/dl or higher) serum triglyceride levels in adult pts. **OFF-LABEL:** Treatment of IgA nephropathy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Known sensitivity, allergy to fish.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase bleeding time with **anticoagulants.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, LDL.

AVAILABILITY (Rx)

Capsules, Soft Gelatin (Oil-Filled): 1 g.

ADMINISTRATION/HANDLING

PO

- Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Before initiating therapy, pt should be on standard cholesterol-low-

ering diet for minimum of 3–6 mos. Continue diet throughout therapy.

Usual Dosage

PO: ADULTS, ELDERLY: 4 g/day, given as a single dose (4 capsules) or 2 capsules twice daily.

SIDE EFFECTS

Occasional (5%–3%): Eructation, altered taste, dyspepsia. **Rare (2%–1%):** Rash, back pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline serum triglyceride level, hepatic function tests. Obtain diet history, esp. fat consumption.

INTERVENTION/EVALUATION

Monitor serum triglyceride levels for therapeutic response. Monitor serum ALT, LDL periodically during therapy. Discontinue therapy if no response after 2 mos of treatment.

PATIENT/FAMILY TEACHING

• Continue to adhere to lipid-lowering diet (important part of treatment). • Periodic lab tests are essential part of therapy to determine drug effectiveness.

omeprazole

TOP 200

oh-**mep**-rah-zole

(Apo-Omeprazole, Losec, Prilosec, Prilosec OTC)

Do not confuse omeprazole with aripiprazole, or Prilosec with Plendil, prednisone, Prevacid, Prinivil, or Prozac.

FIXED-COMBINATION(S)

Zegerid: omeprazole/sodium bicarbonate (an antacid): 20 mg/1,100 mg, 40 mg/1,100 mg. **Zegerid Powder:** 20 mg/1,680 mg, 40 mg/1,680 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzimidazole. **CLINICAL:** Proton pump inhibitor (see p. 148C).

ACTION

Converted to active metabolites that irreversibly bind to, inhibit hydrogen-potassium adenosine triphosphatase, an enzyme on the surface of gastric parietal cells. Inhibits hydrogen ion transport into gastric lumen. **Therapeutic Effect:** Increases gastric pH, reduces gastric acid production.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2 hrs	72 hrs

Rapidly absorbed from GI tract. Protein binding: 95%. Primarily distributed into gastric parietal cells. Metabolized extensively in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 0.5–1 hr (increased in hepatic impairment).

USES

Short-term treatment (4–8 wks) of erosive esophagitis (diagnosed by endoscopy), symptomatic gastroesophageal reflux disease (GERD) poorly responsive to other treatment. *H. pylori*–associated duodenal ulcer (with amoxicillin and clarithromycin). Long-term treatment of pathologic hypersecretory conditions; treatment of active duodenal ulcer or active benign gastric ulcer. Maintenance healing of erosive esophagitis. **OTC, short-term:** Treatment of frequent, uncomplicated heartburn occurring 2 or more days/wk. **OFF-LABEL:** Prevention/ treatment of NSAID-induced ulcers, stress ulcer prophylaxis in critically ill pts.

PRECAUTIONS

Contraindications: None known. **Cautions:** May increase risk of fractures,

gastrointestinal infections. Hepatic impairment, pts of Asian descent.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/effects of **atazanavir.** May increase concentration/effects of **diazepam, oral anticoagulants, phenytoin.** May decrease concentration/effects of **clopidogrel.** **HERBAL:** **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT.

AVAILABILITY (Rx)

Granules for Oral Suspension: 2.5 mg/packet, 10 mg/packet.

Capsules (Delayed-Release [Prilosec]): 10 mg, 20 mg, 40 mg. **Tablets (Delayed-Release [Prilosec OTC]):** 20 mg.

ADMINISTRATION/HANDLING

PO

• Give before meals (breakfast preferred). • Swallow whole. Do not crush or chew delayed-release forms. • May open, mix with applesauce and give immediately. • Do not chew or warm.

PO (Suspension)

• Following reconstitution, allow to thicken (2–3 min). • Administer within 30 min.

INDICATIONS/ROUTES/DOSAGE

Erosive Esophagitis, Poorly Responsive Gastroesophageal Reflux Disease (GERD), Active Duodenal Ulcer, Prevention/Treatment of NSAID-Induced Ulcers

PO: ADULTS, ELDERLY: 20 mg/day.

Maintenance Healing of Erosive Esophagitis

PO: ADULTS, ELDERLY: 20 mg/day for up to 12 mos.

Pathologic Hypersecretory Conditions

PO: ADULTS, ELDERLY: Initially, 60 mg/day up to 120 mg 3 times a day.

***H. Pylori* Duodenal Ulcer**

PO: ADULTS, ELDERLY: 20 mg once daily or 40 mg/day as a single or in 2 divided doses in combination therapy with antibiotics. Dose varies with regimen used.

Gastric Ulcer

PO: ADULTS, ELDERLY: 40 mg/day for 4–8 wks.

OTC Use (Frequent Heartburn)

PO: ADULTS, ELDERLY: 20 mg/day for 14 days. May repeat after 4 mos if needed.

Usual Pediatric Dosage

CHILDREN 1–16 YRS, WEIGHT 20 KG OR MORE: 20 mg/day. **CHILDREN OLDER THAN 2 YRS, WEIGHT 10–19 KG:** 10 mg/day. **WEIGHT 5–9 KG:** 5 mg/day.

SIDE EFFECTS

Frequent (7%): Headache. **Occasional (3%–2%):** Diarrhea, abdominal pain, nausea. **Rare (2%):** Dizziness, asthenia (loss of strength, energy), vomiting, constipation, upper respiratory tract infection, back pain, rash, cough.

ADVERSE EFFECTS/TOXIC REACTIONS

Pancreatitis, hepatotoxicity, interstitial nephritis occur rarely.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Evaluate for therapeutic response (relief of GI symptoms). Question if GI discomfort, nausea, diarrhea occurs.

PATIENT/FAMILY TEACHING

• Report headache, onset of black, tarry stools, diarrhea, abdominal pain. • Avoid alcohol. • Swallow capsules whole; do not chew/crush. • Take before eating.

ondansetron

on-**dan**-se-tron
(Apo-Ondansetron, Novo-Ondansetron, Zofran, Zofran ODT, Zuplenz)
Do not confuse ondansetron with dolasetron, granisetron, or palonosetron, or Zofran with Zantac or Zosyn.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective serotonin and 5-HT_3 receptor antagonist. **CLINICAL:** Antinausea, antiemetic.

ACTION

Blocks serotonin, both peripherally on vagal nerve terminals and centrally in chemoreceptor trigger zone. **Therapeutic Effect:** Prevents nausea/vomiting.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 70%–76%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 3–6 hrs (increased in hepatic impairment).

USES

Prevention/treatment of nausea/vomiting due to cancer chemotherapy (including high-dose cisplatin). Prevention and treatment of postop nausea, vomiting. Prevention of radiation-induced nausea, vomiting. **OFF-LABEL:** Breakthrough treatment of nausea and vomiting associated with chemotherapy, hyperemesis gravidarum.

PRECAUTIONS

Contraindications: Use of apomorphine. **Cautions:** Mild to moderate hepatic impairment, those at risk for QT prolongation or ventricular arrhythmia (congenital long QT prolongation, medications prolonging QT interval, electrolyte abnormalities).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Apomorphine may cause profound hypotension, altered LOC. **HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May transiently increase serum bilirubin, AST, ALT.

AVAILABILITY (Rx)

Injection (Premix): 32 mg/50 ml. **Injection Solution (Zofran):** 2 mg/ml. **Oral Soluble Film (Zuplenz):** 4 mg, 8 mg. **Oral Solution (Zofran):** 4 mg/5 ml. **Tablets (Zofran):** 4 mg, 8 mg, 24 mg. **Tablets (Orally-Disintegrating [Zofran ODT]):** 4 mg, 8 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • May give undiluted. • For IV infusion, dilute with 50 ml D_5W or 0.9% NaCl before administration.
Rate of Administration • Give IV push over 2–5 min. • Give IV infusion over 15–30 min.
Storage • Store at room temperature. • Stable for 48 hrs at room temperature following dilution.

IM

• Inject undiluted into large muscle mass.

PO

• Give without regard to food.

Orally-Disintegrating Tablets

• Do not remove from blister until needed. • Peel backing off; do not push through. • Place tablet on tongue; allow to dissolve. • Swallow with saliva.

Oral Soluble Film

• Keep film in pouch until ready to use. • Remove film strip from pouch and place on top of tongue, allow to dissolve. • Swallow after film dissolves. Do not chew or swallow film whole. • If using more than one, each should be allowed to dissolve before administering the next one.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), allopurinol (Aloprim), aminophylline, amphotericin B (Fungizone), amphotericin B complex (Abelcet, AmBisome, Amphotec), ampicillin (Polycillin), ampicillin and sulbactam (Unasyn), cefepime (Maxipime), cefoperazone (Cefobid), 5-fluorouracil, lipids, lorazepam (Ativan), meropenem (Merrem IV), methylprednisolone (Solu-Medrol).

IV COMPATIBILITIES

Carboplatin (Paraplatin), cisplatin (Platinol), cyclophosphamide (Cytoxan), cytarabine (Cytosar), dacarbazine (DTIC-Dome), daunorubicin (Cerubidine), dexamethasone (Decadron), diphenhydramine (Benadryl), docetaxel (Taxotere), dopamine (Intropin), etoposide (VePesid), gemcitabine (Gemzar), heparin, hydromorphone (Dilaudid), ifosfamide (Ifex), magnesium, mannitol, mesna (Mesnex), methotrexate, metoclopramide (Reglan), mitomycin (Mutamycin), mitoxantrone (Novantrone), morphine, paclitaxel (Taxol), potassium chloride, teniposide (Vumon), topotecan (Hycamtin), vinblastine (Velban), vincristine (Oncovin), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

Chemotherapy-Induced Nausea/Vomiting

IV: ADULTS, ELDERLY: 0.15 mg/kg 3 times a day beginning 30 min before chemotherapy or 0.45 mg/kg once daily or 8–10 mg 1–2 times a day or 24–32 mg once daily. **CHILDREN 6 MOS AND OLDER:** 0.15 mg/kg 3 times a day beginning 30 min before chemotherapy and again 4 and 8 hrs after first dose or 0.45 mg/kg as a single dose.

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: (highly emetogenic) 24 mg 30 min before start of chemotherapy, (moderately emetogenic) 8 mg q12h beginning 30 min before chemotherapy and continuing for 1–2 days after completion of chemotherapy. **Zuplenz:** 8 mg 30 min before chemotherapy, followed by 8 mg 8 hrs later, then continue q12h for 1–2 days after completion of chemotherapy. **CHILDREN 4–11 YRS:** 4 mg 30 min before chemotherapy, repeat 4 and 8 hrs after initial dose then q8h for 1–2 days after chemotherapy completed.

Prevention of Postop Nausea/Vomiting

IV, IM: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 4 mg as a single dose. **CHILDREN 1 MO–12 YRS, WEIGHING MORE THAN 40 KG:** 4 mg as a single dose. **CHILDREN 1 MO–12 YRS, WEIGHING 40 KG AND LESS:** 0.1 mg/kg as a single dose.

PO: ADULTS, ELDERLY: 16 mg 1 hr before induction of anesthesia.

Prevention of Radiation-Induced Nausea/Vomiting

PO: ADULTS, ELDERLY: (total body irradiation) 8 mg 1–2 hrs daily before each fraction of radiotherapy, (single high-dose radiotherapy to abdomen) 8 mg 1–2 hrs before irradiation, then 8 mg q8h after first dose for 1–2 days after completion of radiotherapy, (daily fractionated radiotherapy to abdomen) 8 mg 1–2 hrs before irradiation, then 8 mg 8 hrs after first dose for each day of radiotherapy. **Zuplenz:** 8 mg q8h.

Dosage in Hepatic Impairment

Severe Impairment: ADULTS, ELDERLY: **Maximum daily dose:** 8 mg.

SIDE EFFECTS

Frequent (13%–5%): Anxiety, dizziness, drowsiness, headache, fatigue, constipa-

tion, diarrhea, hypoxia, urinary retention. **Occasional (4%–2%):** Abdominal pain, xerostomia, fever, feeling of cold, redness/pain at injection site, paresthesia, asthenia (loss of strength, energy). **Rare (1%):** Hypersensitivity reaction (rash, pruritus), blurred vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypertension, acute renal failure, GI bleeding, respiratory depression, coma, extrapyramidal effects occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess degree of nausea, vomiting. Assess for dehydration if excessive vomiting occurs (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue). Provide emotional support.

INTERVENTION/EVALUATION

Monitor EKG in pts with electrolyte abnormalities (e.g., hypokalemia, hypomagnesemia), congestive heart failure, bradyarrhythmias, concurrent use of other medications that can lead to QT prolongation. Assess bowel sounds for peristalsis. Provide supportive measures. Assess mental status. Monitor daily pattern of bowel activity, stool consistency. Record time of evacuation.

PATIENT/FAMILY TEACHING

• Relief from nausea/vomiting generally occurs shortly after drug administration. • Avoid alcohol, barbiturates. • Report persistent vomiting. • Avoid tasks that require alertness, motor skills until response to drug is established (may cause drowsiness, dizziness).

oprelvekin (interleukin-2, IL-2)

oh-**prel**-vee-kin
(Neumega)

BLACK BOX ALERT Allergic or hypersensitivity reactions, including anaphylaxis, have occurred.

Do not confuse Neumega with Neulasta or Neupogen, or oprelvekin with aldesleukin or Proleukin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Hematopoietic. **CLINICAL:** Platelet growth factor.

ACTION

Stimulates production of blood platelets, essential to blood-clotting process. **Therapeutic Effect:** Increases platelet production.

PHARMACOKINETICS

Renal elimination as metabolite. **Half-life:** 5–8 hrs.

USES

Prevents severe thrombocytopenia, reduces need for platelet transfusions following myelosuppressive chemotherapy in pts with nonmyeloid malignancies.

PRECAUTIONS

Contraindications: None known. **Cautions:** CHF, left ventricular dysfunction, hypertension, cardiac arrhythmias, conduction defect; respiratory disease, history of thromboembolic disease, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, usually within 3–5 days of initiation of therapy;

reverses approximately 1 wk after discontinuation of therapy.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 5 mg.

ADMINISTRATION/HANDLING

Subcutaneous

Reconstitution • Add 1 ml Sterile Water for Injection directed at side of vial; swirl contents gently (avoid excessive agitation) to provide concentration of 5 mg/ml oprelvekin. • Discard unused portion.

Storage • Store in refrigerator. Once reconstituted, use within 3 hrs. • Give single injection in abdomen, thigh, hip, upper arm.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Give first dose 6–24 hrs after end of chemotherapy and stop at least 48 hrs before starting next cycle of chemotherapy.

Prevention of Thrombocytopenia

Subcutaneous: ADULTS: 50 mcg/kg once daily. **CHILDREN:** 25–50 mcg/kg once daily. Continue for 10–21 days or until platelet count reaches 50,000 cells/mcl after its nadir.

Dosage in Renal Impairment

ADULTS WITH CREATININE CLEARANCE LESS THAN 30 ML/MIN: 25 mcg once daily.

SIDE EFFECTS

Frequent: Nausea/vomiting (77%), fluid retention (59%), neutropenic fever (48%), diarrhea (43%), rhinitis (42%), headache (41%), dizziness (38%), fever (36%), insomnia (33%), cough (29%), rash, pharyngitis (25%), tachycardia (20%), vasodilation (19%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Transient atrial fibrillation/flutter occurs in 10% of pts (may be due to increased plasma volume; oprelvekin is not directly arrhythmogenic). Arrhythmias usually are brief in duration and spontaneously convert to normal sinus rhythm. Papilledema may occur in children.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC before chemotherapy and at regular intervals thereafter.

INTERVENTION/EVALUATION

Monitor platelet counts. Closely monitor fluid and electrolyte status, esp. in pts receiving diuretic therapy. Assess for fluid retention (peripheral edema, dyspnea on exertion, generally occurs during first wk of therapy and continues for duration of treatment). Monitor platelet count periodically to assess therapeutic duration of therapy. Dosing should continue until postnadir platelet count is more than 50,000 cells/mcl. Treatment should be stopped longer than 2 days before starting next round of chemotherapy.

PATIENT/FAMILY TEACHING

• Notify physician if swelling in arms or legs, shortness of breath, irregular heartbeat, hypersensitivity reaction occur.

orlistat

or-lye-stat
(Alli, Xenical)
Do not confuse Xenical with Xeloda.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Gastric/pancreatic lipase inhibitor. **CLINICAL:** Obesity management agent (see p. 137C).

ACTION

Inhibits absorption of dietary fats by inactivating gastric, pancreatic enzymes. **Therapeutic Effect:** Resulting caloric

deficit may have positive effects on weight control.

PHARMACOKINETICS

Minimal absorption after administration. Protein binding: 99%. Metabolized within GI wall. Primarily eliminated in feces. Unknown if removed by hemodialysis. **Half-life:** 1–2 hrs.

USES

Management of obesity, including weight loss/maintenance, when used in conjunction with reduced-calorie diet. Reduces risk of weight regain after previous weight loss. Indicated for pts with initial BMI of 30 kg/m^2 or greater or 27 kg/m^2 or greater with other risk factors (e.g., diabetes).

PRECAUTIONS

Contraindications: Cholestasis, chronic malabsorption syndrome. **Cautions:** History of hyperoxaluria or calcium oxalate nephrolithiasis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Not recommended during pregnancy. Breast-feeding not recommended. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/effects of **cyclosporine, levothyroxine.** May reduce absorption of **vitamin E.** May alter effect of **warfarin** by altering vitamin K level. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum glucose, cholesterol, LDL.

AVAILABILITY (Rx)

Capsules (Alli): 60 mg. **(Xenical):** 120 mg.

ADMINISTRATION/HANDLING

PO

• Multivitamin supplements containing fat-soluble vitamins should be taken once daily at least 2 hrs before or after taking orlistat. • Distribute daily fat intake over 3 main meals (GI effects may increase when taken with any 1 meal very high in fat). Administer during or up to 1 hr after each meal containing fat.

INDICATIONS/ROUTES/DOSAGE

Weight Reduction

PO: ADULTS, ELDERLY, CHILDREN 12–16 YRS: (XENICAL): 120 mg 3 times a day. **(ALLI):** 60 mg 3 times a day with each main meal containing fat (do not take if meal is occasionally missed or contains no fat).

SIDE EFFECTS

Frequent (30%–20%): Headache, abdominal discomfort, flatulence, fecal urgency, fatty/oily stool. **Occasional (14%–5%):** Back pain, menstrual irregularity, nausea, fatigue, diarrhea, dizziness. **Rare (Less Than 4%):** Anxiety, rash, myalgia, dry skin, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory tests. Obtain pt weight.

INTERVENTION/EVALUATION

Monitor serum cholesterol, LDL, glucose, changes in coagulation parameters. Monitor weight weekly.

PATIENT/FAMILY TEACHING

• Maintain nutritionally balanced, reduced-calorie diet. • Daily intake of fat, carbohydrates, protein to be distributed over 3 main meals.

oseltamivir

oh-sel-**tam**-i-veer
(Tamiflu)
Do not confuse Tamiflu with Thera-flu.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Neuraminidase inhibitor. **CLINICAL:** Antiviral (see p. 69C).

ACTION

Selective inhibitor of influenza virus neuraminidase, an enzyme essential for viral replication. Acts against influenza A and B viruses. **Therapeutic Effect:** Suppresses spread of infection within respiratory system, reduces duration of clinical symptoms.

PHARMACOKINETICS

Readily absorbed after PO administration. Protein binding: 3%. Extensively converted to active drug in liver. Primarily excreted in urine. **Half-life:** 6–10 hrs.

USES

Symptomatic treatment of uncomplicated acute illness caused by influenza A or B virus in adults and children 1 yr and older who are symptomatic no longer than 2 days. Prevention of influenza in adults, children 1 yr and older.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 1 yr. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Live attenuated influenza virus vaccine intranasal may interfere with oseltamivir. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 30 mg, 45 mg, 75 mg. **Powder for Oral Suspension:** 6 mg/ml.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • May open capsules and mix with sweetened liquid. • Oral suspension stable for 10 days following reconstitution.

INDICATIONS/ROUTES/DOSAGE

Treatment of Influenza

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 75 mg twice daily for 5 days. **CHILDREN 1–12 YRS, WEIGHING MORE THAN 40 KG:** 75 mg twice daily. **CHILDREN 1–12 YRS, WEIGHING 24–40 KG:** 60 mg twice daily. **CHILDREN 1–12 YRS, WEIGHING 15–23 KG:** 45 mg twice daily. **CHILDREN 1–12 YRS, WEIGHING LESS THAN 15 KG:** 30 mg twice daily.

Prevention of Influenza

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 75 mg once daily. **CHILDREN 1–12 YRS, WEIGHING MORE THAN 40 KG:** 75 mg once daily. **WEIGHING 24–40 KG:** 60 mg once daily. **WEIGHING 15–23 KG:** 45 mg once daily. **WEIGHING LESS THAN 15 KG:** 30 mg once daily.

Dosage in Renal Impairment

Creatinine clearance 10–30 ml/min: Treatment: 75 mg/day. Prevention: 75 mg every other day or 30 mg daily.

SIDE EFFECTS

Frequent (10%–7%): Nausea, vomiting, diarrhea. **Rare (2%–1%):** Abdominal pain, bronchitis, dizziness, headache, cough, insomnia, fatigue, vertigo.

ADVERSE EFFECTS/ TOXIC REACTIONS

Colitis, pneumonia, tympanic membrane disorder, fever occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory tests as indicated.

INTERVENTION/EVALUATION

Monitor serum glucose, renal function in pts with influenza symptoms, diabetes.

PATIENT/FAMILY TEACHING

• Begin as soon as possible from first appearance of flu symptoms. • Avoid contact with those who are at high risk for influenza. • Not a substitute for flu shot.

oxaliplatin HIGH ALERT

ox-**al**-i-**pla**-tin
(Eloxatin)

BLACK BOX ALERT Anaphylactic-like reaction may occur within minutes of administration; may be controlled with epinephrine, corticosteroids, antihistamines.

Do not confuse oxaliplatin with Aloxi, carboplatin, or cisplatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Platinum-containing complex. **CLINICAL:** Antineoplastic (see p. 86C).

ACTION

Inhibits DNA replication by cross-linking with DNA strands. Cell cycle–phase nonspecific. **Therapeutic Effect:** Prevents cell division.

PHARMACOKINETICS

Rapidly distributed. Protein binding: 90%. Undergoes rapid, extensive nonenzymatic biotransformation. Excreted in urine. **Half-life:** 391 hrs.

USES

Combination treatment of metastatic carcinoma of colon, rectum with 5-fluorouracil (5-FU)/leucovorin in pts whose disease has recurred or progressed during or within 6 mos of completion of first-line therapy with bolus 5-FU/leucovorin and irinotecan. **OFF-LABEL:** Treatment of ovarian cancer, pancreatic cancer, hepatobiliary cancer, testicular cancer, esophageal cancer, gastric cancer, non-Hodgkin's lymphoma.

PRECAUTIONS

Contraindications: History of allergy to other platinum compounds. **Cautions:** Previous therapy with other antineoplastic agents, radiation, renal impairment, infection, pregnancy, immunosuppression, presence or history of peripheral neuropathy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Breastfeeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Increased incidence of diarrhea, dehydration, hypokalemia, fatigue.

INTERACTIONS

DRUG: Bone marrow depressants may increase myelosuppression, GI effects. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **Nephrotic medications** may increase concentration. **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, bilirubin, AST, ALT.

AVAILABILITY (Rx)

Injection, Solution: 5 mg/ml (10 ml, 20 ml, 40 ml vials).

ADMINISTRATION/HANDLING

◀ALERT▶ Wear protective gloves during handling of oxaliplatin. If solution comes in contact with skin, wash skin immediately with soap, water. Do not use aluminum needles or administration sets that may come in contact with drug; may cause degradation of platinum compounds.

◀ALERT▶ Pt should avoid ice, drinking cold beverages, touching cold objects during infusion and for 5 days thereafter (can exacerbate acute neuropathy).

O

IV

Reconstitution • Dilute with 250–500 ml D_5W (never dilute with sodium chloride solution or other chloride-containing solutions) to final concentration of 0.2–0.6 mg/ml.

Rate of Administration • Infuse over 2–6 hrs.

Storage • Do not freeze; protect from light. • Store vials at room temperature. • After dilution, solution is stable for 6 hrs at room temperature, 24 hrs if refrigerated.

IV INCOMPATIBILITIES

Do not infuse oxaliplatin with alkaline medications.

INDICATIONS/ROUTES/DOSAGE

Refer to individual protocols.

◀ALERT▶ Pretreat pt with antiemetics. Repeat courses should not be given more frequently than every 2 wks.

Colorectal Cancer

IV: ADULTS: Day 1: Oxaliplatin 85 mg/m^2 in 250–500 ml D_5W and leucovorin 200 mg/m^2, given simultaneously over more than 2 hrs in separate bags using a Y-line, followed by 5-FU 400 mg/m^2 IV bolus given over 2–4 min, followed by 5-FU 600 mg/m^2 in 500 ml D_5W as a 22-hr continuous IV infusion. **Day 2:** Leucovorin 200 mg/m^2 IV infusion given over more than 2 hrs, followed by 5-FU 400 mg/m^2 IV bolus given over 2–4 min, followed by 5-FU 600 mg/m^2 in 500 ml D_5W as a 22-hr continuous IV infusion. Repeat cycle every 2 wks for total of 6 mos. Prior to subsequent therapy cycles, evaluate pt for clinical toxicities and laboratory tests.

Ovarian Cancer (Off-Label Use)

IV: ADULTS: Oxaliplatin 130 mg/m^2 q3wks. Prior to subsequent therapy cycles, evaluate pt for clinical toxicities and laboratory tests.

SIDE EFFECTS

Frequent (76%–20%): Peripheral/sensory neuropathy (usually occurs in hands, feet, perioral area, throat but may present as jaw spasm; abnormal tongue sensation; eye pain; chest pressure; difficulty walking, swallowing, writing), nausea (64%), fatigue, diarrhea, vomiting, constipation, abdominal pain, fever, anorexia. **Occasional (14%–10%):** Stomatitis, earache, insomnia, cough, difficulty breathing, backache, edema. **Rare (7%–3%):** Dyspepsia, dizziness, rhinitis, flushing, alopecia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Peripheral/sensory neuropathy can occur without any prior event by drinking or holding a glass of cold liquid during IV infusion. Pulmonary fibrosis (characterized as nonproductive cough, dyspnea, crackles, radiologic pulmonary infiltrates) may warrant drug discontinuation. Hypersensitivity reaction (rash, urticaria, pruritus) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline BUN, serum creatinine, WBC, platelet count.

INTERVENTION/EVALUATION

Monitor for decrease in WBC, platelets (myelosuppression is minimal). Monitor for diarrhea, GI bleeding (bright red, tarry stool), signs of neuropathy. Pt should avoid ice or drinking, holding glass of cold liquid during IV infusion and for 5 days following completion of infusion; can precipitate/exacerbate neurotoxicity (occurs within hrs or 1–2 days of dosing, lasts up to 14 days). Maintain strict I&O. Assess oral mucosa for stomatitis.

PATIENT/FAMILY TEACHING

• Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, persistent diarrhea, difficulty breathing. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with

those who have recently taken oral polio vaccine. • Avoid cold drinks, ice, cold objects (may produce neuropathy).

oxaprozin

ox-a-**pro**-zin
(Apo-Oxaprozin, Daypro)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA, new onset or worsening of preexisting hypertension. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines.

Do not confuse oxaprozin with oxazepam.

CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: Analgesic, anti-inflammatory (see p. 129C).

ACTION

Produces analgesic, anti-inflammatory effects by inhibiting prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 99%. Widely distributed. Metabolized in liver. Primarily excreted in urine; partially eliminated in feces. Not removed by hemodialysis. **Half-life:** 42–50 hrs.

USES

Acute, chronic treatment of osteoarthritis, juvenile rheumatoid arthritis (JRA), rheumatoid arthritis (RA).

PRECAUTIONS

Contraindications: History of hypersensitivity to aspirin, NSAIDs. Perioperative pain in the setting of CABG surgery. **Cautions:** Renal/hepatic impairment, asthma, history of GI tract disease, predisposition to fluid retention, heart failure, dehydration, coagulation disorders, concomitant anticoagulant therapy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category C (D if used in third trimester or near delivery). Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may increase risk of hepatic/renal toxicity; decreased dosage recommended. GI bleeding/ulceration more likely to cause serious adverse effects.

INTERACTIONS

DRUG: May decrease effects of **antihypertensives, diuretics. Aspirin, other salicylates** may increase risk of GI side effects, bleeding. May increase risk of bleeding with **heparin, oral anticoagulants, thrombolytics.** May increase concentration, risk of toxicity of **lithium.** May increase risk of **methotrexate** toxicity. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, horse chestnut, red clover** possess antiplatelet activity, may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum creatinine, AST, ALT, potassium, LDH, alkaline phosphatase. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 600 mg.

ADMINISTRATION/HANDLING

PO

• May give with food, milk, antacids if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Osteoarthritis

PO: ADULTS, ELDERLY: 600–1,200 mg once a day (600 mg in pts with low body weight or mild disease).

Rheumatoid Arthritis (RA)

PO: ADULTS, ELDERLY: 1,200 mg once daily. Range: 600–1,800 mg/day. **Maximum dose:** weight greater than 50 kg: 1,800 mg; weight 50 kg or less: 1,200 mg.

Juvenile Rheumatoid Arthritis (JRA)

PO: CHILDREN 6–16 YRS OF AGE WEIGHING MORE THAN 54 KG: 1,200 mg/day. **CHILDREN WEIGHING 32–54 KG:** 900 mg/day. **CHILDREN WEIGHING 22–31 KG:** 600 mg/day.

Dosage in Renal Impairment

Adults, elderly pts with renal impairment: Recommended initial dose is 600 mg/day; may be increased up to 1,200 mg/day.

SIDE EFFECTS

Occasional (9%–3%): Nausea, diarrhea, constipation, dyspepsia (heartburn, indigestion, epigastric pain), edema. **Rare (Less Than 3%):** Vomiting, abdominal cramps/pain, flatulence, anorexia, confusion, tinnitus, insomnia, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypertension, acute renal failure, respiratory depression, GI bleeding, coma occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation.

INTERVENTION/EVALUATION

Observe for weight gain, edema, bleeding, ecchymoses, mental confusion. Monitor renal/hepatic function tests. Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Avoid aspirin, alcohol during therapy (increases risk of GI bleeding). • If gastric upset occurs, take with food, milk, antacids. • If GI effects persist, inform physician. • Notify physician if blood in stool, weight gain, persistent abdominal pain occur. • Avoid tasks that require alertness, motor skills until response to drug is established.

oxcarbazepine

ox-kar-**baz**-e-peen
(Apo-Oxcarbazepine, Trileptal)
Do not confuse oxcarbazepine with carbamazepine, or Trileptal with TriLipix.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Carboxamide derivative, anticonvulsant. **CLINICAL:** Anticonvulsant (see p. 35C).

ACTION

Blocks sodium channels, stabilizing hyperexcited neural membranes, inhibiting repetitive neuronal firing, diminishing synaptic impulses. **Therapeutic Effect:** Prevents seizures.

PHARMACOKINETICS

Completely absorbed from GI tract. Extensively metabolized in liver to active metabolite. Protein binding: 40%. Primarily excreted in urine. **Half-life:** 2 hrs; metabolite, 6–10 hrs.

USES

Monotherapy, adjunctive therapy in adults, children 4 yrs and older for treatment of partial seizures. Adjunctive therapy in children 2 yrs and older for partial seizures. **OFF-LABEL:** Treatment of neuropathic pain, bipolar disorder.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment, sensitivity to carbamazepine, those at increased risk for suicide.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions in those older than 4 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, CNS depressants may have additive sedative effect. May decrease effectiveness of **felodipine, oral contraceptives, verapamil.** May increase concentration, risk of toxicity of **phenobarbital, phenytoin. HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **Evening primrose** may decrease seizure threshold. **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT. May decrease serum sodium.

AVAILABILITY (Rx)

Oral Suspension: 300 mg/5 ml. **Tablets:** 150 mg, 300 mg, 600 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Adjunctive Treatment of Seizures

PO: ADULTS, ELDERLY: Initially, 600 mg/day in 2 divided doses. May increase by up to 600 mg/day at weekly intervals. **Maximum:** 2,400 mg/day. **Usual maintenance dose:** 600 mg twice daily. **CHILDREN 4–16 YRS:** Initially 8–10 mg/kg in 2 divided doses. **Maximum:** 600 mg/day. Increase dose slowly over 2 wks. Maintenance (based on weight): 1,800 mg/day in 2 divided doses for children weighing more than 39 kg; 1,200 mg/day in 2 divided doses for children weighing 29.1–39 kg; and 900 mg/day in 2 divided doses for children weighing 20–29 kg. **CHILDREN 2–3 YRS:** Initially 8–10 mg/kg/day in 2 divided doses. **Maximum:** 600 mg/day in 2 divided doses. Increase dose slowly over 2 wks up to a **maximum** of 60 mg/kg/day in 2 divided doses.

Conversion to Monotherapy

PO: ADULTS, ELDERLY: 600 mg/day in 2 divided doses (while decreasing concomitant anticonvulsant over 3–6 wks). May increase by 600 mg/day at weekly intervals up to 2,400 mg/day. **CHILDREN 4–16 YRS:** Initially, 8–10 mg/kg/day in 2 divided doses with simultaneous initial reduction of dose of concomitant antiepileptic over 3–6 wks. May increase by maximum of 10 mg/kg/day at weekly intervals (see below for recommended daily dose by weight).

Initiation of Monotherapy

PO: ADULTS, ELDERLY: 600 mg/day in 2 divided doses. May increase by 300 mg/day every 3 days up to 1,200 mg/day. **CHILDREN 4–16 YRS:** Initially, 8–10 mg/kg/day in 2 divided doses. Increase at 3-day intervals by 5 mg/kg/day to achieve maintenance dose by weight as follows:

Weight	Dosage
70+ kg	1,500–2,100 mg/day
60–69 kg	1,200–2,100 mg/day
50–59 kg	1,200–1,800 mg/day
41–49 kg	1,200–1,500 mg/day
35–40 kg	900–1,500 mg/day
25–34 kg	900–1,200 mg/day
20–24 kg	600–900 mg/day

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min: Give 50% of normal starting dose, then titrate slowly to desired dose.

SIDE EFFECTS

Frequent (22%–13%): Dizziness, nausea, headache. **Occasional (7%–5%):** Vomiting, diarrhea, ataxia (muscular incoordination), nervousness, dyspepsia (heartburn, indigestion, epigastric pain), constipation. **Rare (4%):** Tremor, rash, back pain, epistaxis, sinusitis, diplopia.

O

ADVERSE EFFECTS/ TOXIC REACTIONS

Clinically significant hyponatremia may occur, manifested as leg cramping, hypotension, cold/clammy skin, increased pulse rate, headache, nausea, vomiting, diarrhea. Suicidal ideation occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (type, onset, intensity, frequency, duration, LOC), drug history (esp. other anticonvulsants). Provide safety precautions; quiet, dark environment.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness, ataxia occur. Assess for visual abnormalities, headache. Monitor serum sodium. Assess for signs of hyponatremia (nausea, malaise, headache, lethargy, confusion). Assess for clinical improvement (decrease in intensity, frequency of seizures). Monitor for worsening depression, suicidal ideation.

PATIENT/FAMILY TEACHING

• Do not abruptly stop taking medication (may increase seizure activity). • Inform physician if rash, nausea, headache, dizziness occurs. • May need periodic blood tests. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • May decrease effectiveness of oral contraceptives.

oxybutynin

ox-i-**bue**-ti-nin
(Anturol, Apo-Oxybutynin, Ditropan, Ditropan XL, Gelnique, Novo-Oxybutynin, Oxytrol)
Do not confuse Ditropan with Detrol, diazepam, or Diprivan, or oxybutynin with OxyContin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Antispasmodic.

ACTION

Exerts antispasmodic (papaverine-like), antimuscarinic (atropine-like) action on detrusor smooth muscle of bladder. **Therapeutic Effect:** Increases bladder capacity, delays desire to void.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–1 hr	3–6 hrs	6–10 hrs

Rapidly, well absorbed from GI tract. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 1–2.3 hrs; metabolite, 7–8 hrs.

USES

Relief of symptoms (urgency, incontinence, frequency, nocturia, urge incontinence) associated with uninhibited neurogenic bladder, reflex neurogenic bladder. Extended-release also indicated for treatment of symptoms associated with detrusor overactivity due to neurologic disorder. **Gel (Anturol):** Treatment of overactive bladder.

PRECAUTIONS

Contraindications: Partial or complete GI/GU obstruction, with or at risk for uncontrolled narrow-angle glaucoma, toxic megacolon. **Cautions:** Renal/hepatic impairment, cardiovascular disease, hyperthyroidism, reflux esophagitis, hypertension, prostatic hypertrophy, neuropathy, myasthenia gravis, ulcerative colitis, intestinal atony.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted in those older than 5 yrs. **Elderly:** May be more sensitive to anticholinergic effects (e.g., dry mouth, urinary retention).

INTERACTIONS

DRUG: Medications with anticholinergic action (e.g., antihistamines) may increase anticholinergic effects. **Clarithromycin, erythromycin, itraconazole, ketoconazole** may alter pharmacokinetic parameters. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Gel (Anturol): Metered pump delivers 28 mg per actuation. **Syrup (Ditropan):** 5 mg/5 ml. **Tablets (Ditropan):** 5 mg. **Topical Gel (Gelnique):** 100 mg/unit dose sachet. ***(3% Gel):*** 30 mg/ml. **Transdermal (Oxytrol):** 3.9 mg.

Tablets (Extended-Release [Ditropan XL]): 5 mg, 10 mg, 15 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Extended-release tablet must be swallowed whole; do not crush, divide, chew.

Gel

• Apply to clean, dry, intact skin on abdomen, upper arms/shoulders or thighs.

Transdermal

• Apply patch to dry, intact skin on abdomen, hip, buttock. • Use new application site for each new patch; avoid reapplication to same site within 7 days.

Topical Gel

• ***(Gelnique):*** Apply contents of 1 sachet once daily to dry, intact skin on abdomen, upper arms/shoulders, or thighs. • Do not bathe/shower until 1 hr after gel is applied. • ***(3% Gel):*** Apply 3 ml to thigh, upper arm, or shoulder.

INDICATIONS/ROUTES/DOSAGE

Neurogenic Bladder

PO: ADULTS: 5 mg 2–3 times a day up to 5 mg 4 times a day. **ELDERLY:** 2.5–5 mg 2–3 times a day. **CHILDREN OLDER THAN 5 YRS:** 5 mg twice a day up to 5 mg 3 times a day. **CHILDREN 1–5 YRS:** 0.2 mg/kg/dose 2–4 times a day.

PO *(Extended-Release)*: ADULTS, ELDERLY: 5–10 mg/day up to 30 mg/day. **CHILDREN 6 YRS AND OLDER:** Initially, 5–10 mg once a day. May increase in 5–10 mg increments. **Maximum:** 20 mg/day.

Transdermal: ADULTS: 3.9 mg applied twice a wk. Apply every 3–4 days.

Topical Gel: ADULTS, ELDERLY: 100 mg once daily.

Gel *(Anturol)*: ADULTS, ELDERLY: 3 actuations (84 mg) once daily.

Gel 3%: Apply 3 ml (84 mg) once daily.

SIDE EFFECTS

Frequent: Constipation, dry mouth, drowsiness, decreased perspiration. **Occasional:** Decreased lacrimation/salivation, impotence, urinary hesitancy/retention, suppressed lactation, blurred vision, mydriasis, nausea/vomiting, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces CNS excitation (nervousness, restlessness, hallucinations, irritability), hypotension/hypertension, confusion, tachycardia, facial flushing, respiratory depression.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess dysuria, urgency, frequency, incontinence.

INTERVENTION/EVALUATION

Monitor for symptomatic relief. Monitor I&O; palpate bladder for urine retention. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Avoid alcohol. • May cause dry mouth (sugarless candy/gum may reduce effect). • Avoid tasks that require alertness, motor skills until response to drug is established (may cause drowsiness). • Avoid strenuous activity in warm environment.

oxycodone

TOP 200 HIGH ALERT

ox-ee-**koe**-done
(ETH-Oxydose, OxyContin, OxyIR, Roxicodone, Roxicodone Intensol, Supeudol)

BLACK BOX ALERT OxyContin (controlled-release): Not intended as an "as needed" analgesic or for immediate postop pain control. Extended-release should not be crushed, broken, or chewed (otherwise leads to rapid release and absorption of potentially fatal dose). Be alert to signs of abuse, misuse, and diversion. CYP3A4 inhibitors or inducers can affect oxycodone levels.

Do not confuse oxycodone with hydrocodone, oxybutynin, or oxymorphone, OxyContin with MS Contin or oxybutynin, or Roxicodone with Roxanol.

FIXED-COMBINATION(S)

Combunox: oxycodone/ibuprofen (an NSAID): 5 mg/400 mg. **Endocet:** oxycodone/acetaminophen (a non-narcotic analgesic): 5 mg/325 mg, 7.5 mg/325 mg, 7.5 mg/500 mg, 10 mg/325 mg, 10 mg/650 mg. **Magnacet:** oxycodone/acetaminophen (a non-narcotic analgesic): 2.5 mg/400 mg, 7.5 mg/400 mg, 10 mg/400 mg. **Percocet:** oxycodone/acetaminophen: 2.5 mg/325 mg, 5 mg/325 mg, 5 mg/500 mg, 7.5 mg/325 mg, 7.5 mg/500 mg, 10 mg/325 mg, 10 mg/650 mg. **Percocet, Roxicet, Tylox:** oxycodone/acetaminophen (a non-narcotic analgesic): 5 mg/500 mg. **Percodan:** oxycodone/aspirin (a non-narcotic analgesic): 2.25 mg/325 mg, 4.5 mg/325 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid analgesic **(Schedule II). CLINICAL:** Narcotic analgesic (see p. 142C).

ACTION

Binds with opioid receptors within CNS. **Therapeutic Effect:** Alters perception of and emotional response to pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (immediate-release)	10–15 min	0.5–1 hr	3–6 hrs
PO (controlled-release)	10–15 min	0.5–1 hr	Up to 12 hrs

Moderately absorbed from GI tract. Protein binding: 38%–45%. Widely distributed. Metabolized in liver. Excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 2–3 hrs (5 hrs controlled-release).

USES

Relief of moderate to severe pain (usually in combination with nonopioid analgesics).

PRECAUTIONS

Contraindications: Acute or severe bronchial asthma, hypercarbia, paralytic ileus, significant respiratory depression. **Extreme Caution:** CNS depression, anoxia, hypercapnia, respiratory depression, seizures, acute alcoholism, shock, untreated myxedema, respiratory dysfunction. **Cautions:** Increased ICP, hepatic impairment, coma, debilitated pts, head injury, biliary tract disease, toxic psychosis, acute abdominal conditions, hypothyroidism, prostatic hypertrophy, Addison's disease, urethral stricture, COPD.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Respiratory depression may occur in neonate if mother received opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms in neonate (irritability, excessive crying, tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures). **Pregnancy Category B (D if used for prolonged periods or at high dosages at term). Children:** Paradoxical excitement may occur. Those younger

than 2 yrs are more susceptible to respiratory depressant effects. **Elderly:** Age-related renal impairment may increase risk of urinary retention. May be more susceptible to respiratory depressant effects.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS effects, respiratory depression, hypotension. **CYP3A4 inhibitors (clarithromycin, ketoconazole)** may increase concentration, toxicity. **CYP3A4 inducers (carbamazepine, rifampin)** may decrease concentration/effects. **MAOIs** may produce severe, sometimes fatal reaction (administer ¼ of usual oxycodone dose). **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD: Grapefruit** may increase potential for respiratory depression. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Note: New formulation of controlled-release intended to prevent medication from being cut, broken, chewed, crushed, or dissolved to reduce risk of overdose due to tampering, snorting, or injection.

Capsules (Immediate-Release [OxyIR]): 5 mg. **Oral Concentrate (Oxydose, Roxicodone Intensol):** 20 mg/ml. **Oral Solution (Roxicodone):** 5 mg/5 ml. **Tablets (Roxicodone):** 5 mg, 10 mg, 15 mg, 20 mg, 30 mg.

Tablets (Controlled-Release [Oxycontin]): 10 mg, 15 mg, 20 mg, 30 mg, 40 mg, 60 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Tablets may be crushed. • **Controlled-release:** Swallow whole; do not break, crush, dissolve or divide.

INDICATIONS/ROUTES/DOSAGE

Note: All doses should be titrated to desired effect.

Analgesia

PO *(Immediate-Release)*: ADULTS, ELDERLY: Initially, 5–15 mg q4–6h as needed. Range: 5–20 mg/dose. **CHILDREN, 6–18 YRS:** 0.05–0.15 mg/kg/dose q4–6h as needed. **Maximum initial dose:** 5 mg for moderate pain, 10 mg for severe pain.

Opioid Naive

PO *(Controlled-Release)*: ADULTS, ELDERLY: Initially, 10 mg q12h.

◀ALERT▶ To convert from other opioids or nonopioid analgesics to oxycodone controlled-release, refer to OxyContin package insert. Dosages are reduced in pts with severe hepatic disease.

SIDE EFFECTS

◀ALERT▶ Effects are dependent on dosage amount. Ambulatory pts, those not in severe pain may experience dizziness, nausea, vomiting, hypotension more frequently than those in supine position or having severe pain. **Frequent:** Drowsiness, dizziness, hypotension (including orthostatic hypotension), anorexia. **Occasional:** Confusion, diaphoresis, facial flushing, urinary retention, constipation, dry mouth, nausea, vomiting, headache. **Rare:** Allergic reaction, depression, paradoxical CNS hyperactivity, nervousness in children, paradoxical excitement, restlessness in elderly, debilitated pts.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Hepatotoxicity may occur with overdose of acetaminophen component of fixed-combination product. Tolerance to analgesic effect, physical dependence may occur with repeated use. **Antidote:** Naloxone (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain. Effect of medication is reduced if

full pain recurs before next dose. Obtain vital signs before giving medication. If respirations are 12/min or less (20/min or less in children), withhold medication, contact physician.

INTERVENTION/EVALUATION

Palpate bladder for urinary retention. Monitor daily pattern of bowel activity, stool consistency. Initiate deep breathing, coughing exercises, esp. in pts with pulmonary impairment. Monitor pain relief, respiratory rate, mental status, B/P.

PATIENT/FAMILY TEACHING

• May cause dry mouth, drowsiness. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • May be habit forming. • Do not chew, crush, dissolve or divide. controlled-release tablets. • Report severe constipation, absence of pain relief.

oxymorphone TOP 200 HIGH ALERT

ox-ee-**mor**-fone
(Opana, Opana ER, Opana Injectable)

BLACK BOX ALERT Has abuse liability. Concern about increased risk of abuse, misuse, or diversion.

Do not confuse oxymorphone with oxycodone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist **(Schedule II). CLINICAL:** Narcotic analgesic, antianxiety, preop anesthetic (see p. 142C).

ACTION

Binds to opiate receptor sites within CNS. **Therapeutic Effect:** Reduces intensity of pain stimuli, alters pain perception, emotional response to pain. Parenterally, 1 mg oxymorphone equivalent to 10 mg morphine.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Parenteral	5–10 min	N/A	3–6 hrs

Well absorbed. Protein binding: 10%. Widely distributed. Extensive hepatic metabolism. Excreted in urine. **Half-life:** 7–9 hrs; **extended-release:** 9–11 hrs.

USES

Injection: Relief of moderate to severe pain. **PO (Immediate-release):** Relief of moderate to severe acute pain. **(Extended-release):** Relief of moderate to severe pain in pts requiring continuous treatment for extended period of time.

PRECAUTIONS

Contraindications: Hypersensitivity to morphine, acute asthma attack, severe respiratory depression, paralytic ileus, pulmonary edema secondary to chemical respiratory irritants, moderate to severe hepatic function impairment, hypercarbia. **Extreme Cautions:** Anoxia, hypercapnia, seizures, acute alcoholism, shock, untreated myxedema. **Cautions:** Hypothyroidism, prostatic hypertrophy, Addison's disease, urethral stricture, prostatic hyperplasia, toxic psychosis, renal impairment, COPD, biliary tract disease, acute pancreatitis, head injury, increased ICP, morbid obesity, mild hepatic dysfunction.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. May prolong labor if administered in latent phase of first stage of labor or before cervical dilation of 4–5 cm has occurred. Respiratory depression may occur in neonate if mother received opiates during labor. Regular use of opiates during pregnancy may produce withdrawal symptoms in the neonate (irritability, excessive crying, tremors, hyperactive reflexes, fever, vomiting, diarrhea, yawning, sneezing, seizures). **Pregnancy Category C. (Category D if used for prolonged periods or high doses at term.) Children:** Safety and ef-

ficacy not established in those younger than 18 yrs. **Elderly:** May be more susceptible to respiratory depression, may cause paradoxical excitement. Age-related hepatic impairment, debilitation may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS effects, respiratory depression, hypotension. **Anticholinergics** may increase risk of urinary retention, severe constipation (may lead to paralytic ileus). **Propofol** increases risk of bradycardia. Decreased effect when given concurrently with **phenothiazines. HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may produce CNS depressant effects. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection: 1 mg/ml. **Tablets:** 5 mg, 10 mg. **Tablets (Extended-Release):** 5 mg, 7.5 mg, 10 mg, 15 mg, 20 mg, 30 mg, 40 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Administer IV push very slowly. • Rapid IV increases risk of severe adverse reactions (chest wall rigidity, apnea, peripheral circulatory collapse, anaphylactoid effects, cardiac arrest).

IM/Subcutaneous

• Inject deep IM, preferably in upper, outer quadrant of buttock. • Use short 30-gauge needle for subcutaneous injection. • Administer slowly, rotating injection sites. • Pts with circulatory impairment experience higher risk of overdosage due to delayed absorption of repeated administration.

Storage • Store parenteral form at room temperature. Refrigerate suppository form. • Discard parenteral form if discolored or particulate forms.

PO

• Give 1 hr before or 2 hrs after meals. • Do not chew, break, crush extended-release tablet.

IV COMPATIBILITIES

Glycopyrrolate, hydroxyzine, ranitidine.

INDICATIONS/ROUTES/DOSAGE

Analgesia

IV: ADULTS 18 YRS AND OLDER, ELDERLY: Initially, 0.5 mg. Dose may be cautiously increased until satisfactory response is achieved.

◀ALERT▶ IM preferred over subcutaneous route (subcutaneous rate of absorption is less reliable).

IM/Subcutaneous: ADULTS 18 YRS AND OLDER, ELDERLY: Initially, 1–1.5 mg every 4–6 hrs as needed.

PO: ADULTS, ELDERLY: (IMMEDIATE-RELEASE): 10–20 mg q4–6h. **(EXTENDED-RELEASE):** Initially, 5 mg q12h. May increase by 5–10 mg q12h every 3–7 days.

Analgesia during Labor

IM/Subcutaneous: ADULTS 18 YRS AND OLDER, ELDERLY: 0.5–1 mg.

SIDE EFFECTS

Note: Effects are dependent on dosage amount, route of administration. Ambulatory pts, those not in severe pain may experience dizziness, nausea, vomiting, hypotension more frequently than those in supine position or having severe pain. **Frequent (10% or higher):** Drowsiness, hypotension, dizziness, nausea, vomiting, constipation, weakness. **Occasional (9%–2%):** Nervousness, headache, restlessness, malaise, confusion, anorexia, abdominal cramps, dry mouth, decreased urinary output, ureteral spasm, pain at injection site. **Rare (1% or less):** Depression, paradoxical CNS stimulation, hallucinations, rash, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to convulsions, stupor, coma. Tolerance to analgesic effect, physical dependence may occur with repeated use. Prolonged duration of action, cumulative effect may occur in those with hepatic/renal impairment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain. Obtain vital signs before giving medication. If respirations are 12/min or lower, withhold medication, contact physician. Effect of medication is reduced if full pain recurs before next dose.

INTERVENTION/EVALUATION

Monitor vital signs 5–10 min after IV administration, 15–30 min after subcutaneous, IM. Be alert for decreased respirations, B/P. To prevent pain cycles, instruct pt to request pain medication as soon as discomfort begins. Assess for clinical improvement, record onset of pain relief. Consult physician if pain relief is not adequate.

PATIENT/FAMILY TEACHING

• Discomfort may occur with injection. • Change positions slowly to avoid postural hypotension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Tolerance/dependence may occur with prolonged use of high doses.

oxytocin

HIGH ALERT

ox-ee-**toe**-sin
(Pitocin, Syntocinon)

BLACK BOX ALERT Not to be given for elective labor induction, but when medically indicated.

Do not confuse Pitocin with Pitressin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Uterine smooth muscle stimulant. **CLINICAL:** Oxytocic agent.

ACTION

Affects uterine myofibril activity, stimulates mammary smooth muscle. **Therapeutic Effect:** Contracts uterine smooth muscle. Enhances lactation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	Immediate	N/A	1 hr
IM	3–5 min	N/A	2–3 hrs

Rapidly absorbed through nasal mucous membranes. Protein binding: 30%. Distributed in extracellular fluid. Metabolized in liver, kidney. Primarily excreted in urine. **Half-life:** 1–6 min.

USES

Induction of labor at term, control of postpartum bleeding. Adjunct in management of abortion.

PRECAUTIONS

Contraindications: Adequate uterine activity that fails to progress, cephalopelvic disproportion, fetal distress without imminent delivery, grand multiparity, hyperactive or hypertonic uterus, obstetric emergencies that favor surgical intervention, prematurity, unengaged fetal head, unfavorable fetal position/presentation, when vaginal delivery is contraindicated, (e.g., active genital herpes infection, invasive cervical cancer, placenta previa, cord presentation). **Cautions:** Induction of labor should be for medical, not elective, reasons.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Used as indicated, not expected to present risk of fetal abnormalities. Small amounts in breast

milk. Breast-feeding not recommended. **Pregnancy Category X. Children/Elderly:** Not used in these pt populations.

INTERACTIONS

DRUG: Caudal block anesthetics, vasopressors may increase pressor effects. **Other oxytocics** may cause cervical lacerations, uterine hypertonus, uterine rupture. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection (Pitocin): 10 units/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute 10–40 units (1–4 ml) in 1,000 ml of 0.9% NaCl, lactated Ringer's, or D_5W to provide concentration of 10–40 milliunits/ml solution.
Rate of Administration • Give by IV infusion (use infusion device to carefully control rate of flow as ordered by physician).
Storage • Store at room temperature.

IV INCOMPATIBILITIES

No known incompatibilities via Y-site administration.

IV COMPATIBILITIES

Heparin, insulin, multivitamins, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Induction or Stimulation of Labor

IV: ADULTS: 0.5–1 milliunit/min. May gradually increase in increments of 1–2 milliunits/min. Rates of 9–10 milliunits/min are rarely required.

Abortion

IV: ADULTS: 10–20 milliunits/min. **Maximum:** 30 units/12-hr dose.

Control of Postpartum Bleeding

IV Infusion: ADULTS: 10–40 units in 1,000 ml IV fluid at rate sufficient to control uterine atony.

IM: ADULTS: 10 units (total dose) after delivery.

SIDE EFFECTS

Occasional: Tachycardia, premature ventricular contractions, hypotension, nausea, vomiting. **Rare: Nasal:** Lacrimation/tearing, nasal irritation, rhinorrhea, unexpected uterine bleeding/contractions.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypertonicity may occur with tearing of uterus, increased bleeding, abruptio placentae (i.e., placental abruption), cervical/vaginal lacerations. **Fetal:** Bradycardia, CNS/brain damage, trauma due to rapid propulsion, low Apgar score at 5 min, retinal hemorrhage occur rarely. Prolonged IV infusion of oxytocin with excessive fluid volume has caused severe water intoxication with seizures, coma, death.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baselines for vital signs, B/P, fetal heart rate. Determine frequency, duration, strength of contractions.

INTERVENTION/EVALUATION

Monitor B/P, pulse, respirations, fetal heart rate, intrauterine pressure, contractions (duration, strength, frequency) q15min. Notify physician of contractions that last longer than 1 min, occur more frequently than every 2 min, or stop. Maintain careful I&O; be alert to potential water intoxication. Check for blood loss.

PATIENT/FAMILY TEACHING

• Keep pt, family informed of labor progress.

paclitaxel

HIGH ALERT

pak-li-**tak**-sel
(Abraxane, Apo-Paclitaxel, Taxol)

BLACK BOX ALERT Myelosuppression is major dose-limiting toxicity. Must be administered by certified chemotherapy personnel. Severe hypersensitivity reactions reported.

Do not confuse paclitaxel with docetaxel, paroxetine, or Paxil, or Taxol with Paxil or Taxotere.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Taxoid, antimitotic agent. **CLINICAL:** Antineoplastic (see p. 86C).

ACTION

Promotes the polymerization of tubulin, disrupting normal microtubule dynamics required for cell division in late G_2, M phases of cell cycle. **Therapeutic Effect:** Inhibits cellular mitosis, replication.

PHARMACOKINETICS

Does not readily cross blood-brain barrier. Protein binding: 89%–98%. Metabolized in liver to active metabolites; eliminated by bile. Not removed by hemodialysis. **Half-life:** 3-hr infusion: 13.1–20.2 hrs; 24-hr infusion: 15.7–52.7 hrs.

P

USES

Taxol: First-line treatment of advanced ovarian cancer, treatment of metastatic ovarian cancer following failure of first-line or subsequent chemotherapy. Treatment of breast cancer, AIDS-related Kaposi's sarcoma, non–small-cell lung cancer (NSCLC). **Abraxane:** Treatment of breast cancer after failure of combination chemotherapy or relapse within 6 mos of adjuvant chemotherapy. **OFF-LABEL:** Bladder, cervical, small-cell lung, head and neck cancers. Treatment of adenocarcinoma. **(Abraxane):** Treatment of advanced NSCLC.

PRECAUTIONS

Contraindications: Hypersensitivity to drugs developed with Cremophor EL (polyoxyethylated castor oil). **Cautions:** Hepatic impairment, severe neutropenia, peripheral neuropathy. Baseline neutropenia (neutrophil count 1,500 cells/mm^3 or less), 1,000 cells/mm^3 or less when treating AIDS-related Kaposi's sarcoma (Taxol).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce fetal harm. Unknown if distributed in breast milk. Avoid use in pregnancy. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4, CYP2C8 inhibitors (e.g., ritonavir, clarithromycin, ketoconazole) may increase level/increase side effects. **CYP3A4, CYP2C8 inducers (e.g., rifampin, carbamazepine)** may decrease levels. **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease levels. **FOOD:** None known. **LAB VALUES:** May elevate serum alkaline phosphatase, bilirubin, AST, ALT, triglycerides.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Abraxane): 100-mg vial. **Injection Solution (Taxol):** 6 mg/ml.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Wear gloves during handling; if contact with skin occurs, wash hands thoroughly with soap, water. If contact with mucous membranes occurs, flush with water.

Paclitaxel

Reconstitution • Dilute with 250–1,000 ml 0.9% NaCl, D_5W to final concentration of 0.3–1.2 mg/ml.

Rate of Administration • Administer at rate as ordered by physician (over 1–24

hrs) through in-line filter not greater than 0.22 microns. • Monitor vital signs during infusion, esp. during first hour. • Discontinue administration if severe hypersensitivity reaction occurs.
Storage • Store unopened vials at room temperature. • Prepared solution is stable at room temperature for 72 hrs. • Store diluted solutions in bottles or plastic bags. Administer through polyethylene-lined administration sets (avoid plasticized PVC equipment or devices).

Abraxane (Paclitaxel—Protein Bound)

Reconstitution • Reconstitute each vial with 20 ml 0.9% NaCl to provide concentration of 5 mg/ml. • Slowly inject onto inside wall of vial; gently swirl over 2 min to avoid foaming. • Inject appropriate amount into empty PVC-type bag.
Rate of Administration • Infuse over 30 min. Do not use in-line filter.
Storage • Store unopened vials at room temperature • Once reconstituted, use immediately but may refrigerate for up to 8 hrs.

IV INCOMPATIBILITIES

◄ALERT► IV compatibility: Data for Abraxane not known; avoid mixing with other medication. **Taxol:** Amphotericin B complex (Abelcet, AmBisome, Amphotec), chlorpromazine (Thorazine), doxorubicin liposomal (Doxil), hydroxyzine (Vistaril), methylprednisolone (Solu-Medrol), mitoxantrone (Novantrone).

IV COMPATIBILITIES

Taxol: Carboplatin (Paraplatin), cisplatin (Platinol AQ), cyclophosphamide (Cytoxan), cytarabine (Cytosar), dacarbazine (DTIC-Dome), dexamethasone (Decadron), diphenhydramine (Benadryl), doxorubicin (Adriamycin), etoposide (VePesid), gemcitabine (Gemzar), granisetron (Kytril), hydromorphone (Dilaudid), lipids, magnesium sulfate, mannitol, methotrexate, morphine, ondansetron (Zofran), potassium chloride, vinblastine (Velban), vincristine (Oncovin).

INDICATIONS/ROUTES/DOSAGE

Paclitaxel

Ovarian Cancer

IV: ADULTS: 135–175 mg/m²/dose over 3 hrs q3wks, 135 mg/m² over 24 hrs q3wks, or 50–80 mg/m² over 1–3 hrs weekly.

Breast Cancer

IV: ADULTS, ELDERLY: 175–250 mg/m² over 3 hrs q3wks or 50–80 mg/m² over 1–3 hrs weekly.

Non–Small-Cell Lung Cancer

IV: ADULTS, ELDERLY: 135 mg/m² over 24 hrs.

Kaposi's Sarcoma

IV: ADULTS, ELDERLY: 135 mg/m²/dose over 3 hrs q3wks or 100 mg/m²/dose over 3 hrs q2wks.

Dosage in Hepatic Impairment

Transaminase Level	Bilirubin	Dose
24-HR INFUSION		
Less than 2 times ULN	1.5 mg/dl or less	135 mg/m²
2 to less than 10 times ULN	1.5 mg/dl or less	100 mg/m²
Less than 10 times ULN	1.6–7.5 mg/dl or less	50 mg/m²
3-HR INFUSION		
Less than 10 times ULN	1.25 mg/dl or less	175 mg/m²
Less than 10 times ULN	1.26–2 times ULN	135 mg/m²
Less than 10 times ULN	2.01–5 times ULN	90 mg/m²
10 times ULN or greater	Greater than 5 times ULN	Avoid use

ULN: upper limit of normal

Abraxane

Breast Cancer

IV Infusion: ADULTS, ELDERLY: 260 mg/m² q3wks. For pts who experience severe neutropenia (neutrophils less than 500 cells/mm³ for a wk or longer) or severe sensory neuropathy, reduce dosage to 220 mg/m² for subsequent courses. For recurrence of severe neutropenia or se-

P

vere sensory neuropathy, reduce dosage to 180 mg/m^2 q3wks for subsequent courses. For grade 3 sensory neuropathy, hold until resolution to grade 1 or 2, followed by reduced dose for subsequent courses. Dosage of Abraxane for bilirubin greater than 1.5 mg/dl is not known.

SIDE EFFECTS

Expected (90%–70%): Diarrhea, alopecia, nausea, vomiting. **Frequent (48%–46%):** Myalgia, arthralgia, peripheral neuropathy. **Occasional (20%–13%):** Mucositis, hypotension during infusion, pain/redness at injection site. **Rare (3%):** Bradycardia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenic nadir occurs at median of 11 days. Anemia, leukopenia occur commonly; thrombocytopenia occurs occasionally. Severe hypersensitivity reaction (dyspnea, severe hypotension, angioedema, generalized urticaria) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support to pt, family. Use strict asepsis, protect pt from infection. Check blood counts, particularly neutrophil, platelet count, before each course of therapy or as clinically indicated.

INTERVENTION/EVALUATION

Monitor CBC, platelets, vital signs, hepatic enzymes. Monitor for hematologic toxicity (fever, sore throat, signs of local infections, unusual bleeding/bruising), symptoms of anemia (excessive fatigue, weakness). Assess response to medication; monitor, report diarrhea. Avoid IM injections, rectal temperatures, other traumas that may induce bleeding. Hold pressure to injection sites for full 5 min.

PATIENT/FAMILY TEACHING

• Alopecia is reversible, but new hair may have different color, texture. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid crowds, persons with known infections. • Report signs of infection at once (fever, flu-like symptoms). • Contact physician if nausea/vomiting continues at home. • Be alert for signs of peripheral neuropathy. • Avoid pregnancy during therapy. • Avoid tasks that may require alertness, motor skills until response to drug is established.

palifermin

pal-ee-**fer**-min
(Kepivance)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Keratinocyte growth factor. **CLINICAL:** Antineoplastic adjunct.

ACTION

Binds to keratinocyte growth factor receptor, present on epithelial cells of buccal mucosa, tongue, resulting in proliferation, differentiation, migration of epithelial cells. **Therapeutic Effect:** Reduces incidence, duration of severe oral mucositis.

PHARMACOKINETICS

Clearance is higher in cancer pts compared to healthy subjects. **Half-life:** 4.5 hrs.

USES

Reduces incidence, duration, severity of severe stomatitis in pts with hematologic malignancies receiving myelotoxic therapy requiring hematopoietic stem cell support.

PRECAUTIONS

Contraindications: Pts allergic to *Escherichia coli*–derived proteins. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is excreted in breast milk. Use only if potential benefit justifies fetal risk. **Pregnancy Category C. Children:**

Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Binds to **heparin, low molecular weight heparins (e.g., enoxaparin),** decreasing effectiveness. Administration during or within 24 hrs before or after **myelotoxic chemotherapy** results in increased severity, duration of oral mucositis. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May elevate serum lipase, amylase.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 6.25-mg vials.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute only with 1.2 ml Sterile Water for Injection, using aseptic technique. • Swirl gently to dissolve. Dissolution takes less than 3 min. Do not shake/agitate solution. • Yields final concentration of 5 mg/ml.

Rate of Administration • If heparin is being used to maintain an IV line, use 0.9% NaCl to rinse IV line before and after palifermin administration. • Administer by IV bolus injection.

Storage • Store intact vials in refrigerator. • If reconstituted solution is not used immediately, may be refrigerated for up to 24 hrs. • Before administration, may be warmed to room temperature for up to 1 hr. • Discard if left at room temperature for more than 1 hr, if discolored or particulate forms. • Protect from light.

INDICATIONS/ROUTES/DOSAGE

Mucositis (Premyelotoxic Therapy)

IV: ADULTS, ELDERLY: 60 mcg/kg/day for 3 consecutive days, with 3rd dose 24–48 hrs before chemotherapy.

Mucositis (Postmyelotoxic Therapy)

IV: ADULTS, ELDERLY: Last 3 doses of 60 mcg/kg/day should be administered after myelotoxic therapy; first of these doses should be administered after, but on the same day of, hematopoietic stem cell infusion and at least 4 days after most recent administration of palifermin.

SIDE EFFECTS

Frequent: Rash (62%), fever (39%), pruritus (35%), erythema (32%), edema (28%). **Occasional:** Mouth/tongue thickness/discoloration (17%), altered taste (16%), dysesthesia manifested as hyperesthesia, hypoesthesia, paresthesia (12%), arthralgia (10%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Transient hypertension occurs occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess oral mucous membranes for stomatitis (erythema, white patches, ulceration, bleeding).

INTERVENTION/EVALUATION

Assess for oral inflammation, difficulty swallowing, mucosal bleeding. Offer sponge sticks to wash mouth with water. Monitor pt's pain level; medicate as necessary for improved pain control. Offer pt/family emotional support.

PATIENT/FAMILY TEACHING

• Consume bland meals; avoid eating any spicy food. • Rinse mouth often with tepid water; avoid hot, cold liquids. • Take measures to prevent pregnancy.

P

paliperidone

TOP 200

pal-ee-**per**-i-doan
(Invega, Invega Sustenna)

BLACK BOX ALERT Elderly pts with dementia-related psychosis are at increased risk for mortality due to cerebrovascular events.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzisoxazole derivative. **CLINICAL:** Antipsychotic (see p. 65C).

ACTION

May antagonize dopamine and serotonin receptors. **Therapeutic Effect:** Suppresses behavioral response in psychosis.

PHARMACOKINETICS

Absorbed from GI tract. Metabolized in liver to active metabolite. Primarily excreted in urine. **Half-life:** 23 hrs.

USES

Oral: Treatment of acute (short-term) and long-term maintenance of schizophrenia. Acute treatment of schizoaffective disorder as monotherapy or as adjunct to mood stabilizers and/or antidepressants. **Injection:** Acute and maintenance treatment of schizophrenia. **OFF-LABEL:** Psychosis/agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: Sensitivity to risperidone. **Cautions:** History of cardiac arrhythmias, renal impairment, diabetes mellitus, heart failure, active seizures or predisposition to seizures, history of seizures, cardiovascular disease, congenital long QT syndrome, concomitant use with other medications that prolong QT interval (e.g., amiodarone, quinidine), pts at risk for aspiration pneumonia. May increase risk of stroke in pts with dementia-related psychosis. CNS depression, medications for hypertension, hypovolemia, high risk for suicide.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Potential for orthostatic hypotension. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease effects of **dopamine agonists, levodopa. Alcohol, CNS depressants** may increase CNS depression. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatine phosphatase, uric acid, triglycerides, AST, ALT, prolactin. May decrease serum potassium, sodium, protein, glucose. May cause EKG changes (including prolonged QT interval).

AVAILABILITY (Rx)

Injection Suspension: 39 mg/0.25 ml, 78 mg/0.5 ml, 117 mg/0.75 ml, 156 mg/ml, 234 mg/1.5 ml.

Tablets, Extended-Release: 1.5 mg, 3 mg, 6 mg, 9 mg, 12 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Do not chew, divide, crush extended-release tablets.

IM

• Administer 2 initial injections in deltoid muscle (helps attain therapeutic concentration rapidly). • Maintenance doses may be given in gluteal or deltoid muscle.

INDICATIONS/ROUTES/DOSAGE

Treatment of Schizophrenia

PO: ADULTS, ELDERLY: Initially, 6 mg once daily in the morning. May increase dose in increments of 3 mg/day at intervals of more than 5 days. Range: 3–12 mg/day. **ADOLESCENTS (51 KG OR GREATER):** Initially, 3 mg once daily. Range: 3–12 mg/day. **(50 KG OR LESS):** Initially, 3 mg once daily. Range: 3–6 mg/day.
IM: ADULTS, ELDERLY: 234 mg on day 1 followed by 156 mg 1 wk later. Maintenance: Initially, 117 mg monthly. Range: 39–234 mg.

Schizoaffective Disorder

PO: ADULTS, ELDERLY: 6 mg once daily in the morning. May increase in increments of 3 mg/day at intervals of more than 4 days. Range: 3–12 mg/day.

Dosage in Renal Impairment

Creatinine Clearance	Oral Dosage	IM Dosage
50–80 ml/min	6 mg/day maximum	156 mg on day 1, then 117 mg 1 wk later Maintenance: 78 mg once monthly
10–49 ml/min	3 mg/day maximum	Not recommended

SIDE EFFECTS

Occasional: Tachycardia (14%), headache (12%), drowsiness (9%), akathesia (motor restlessness), anxiety (7%), dizziness (5%), dyspepsia, nausea (4%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Neuroleptic malignant syndrome (NMS), hyperpyrexia, muscle rigidity, change in mental status, irregular pulse or B/P, tachycardia, diaphoresis, cardiac arrhythmias, rhabdomyolysis, acute renal failure, tardive dyskinesia (protrusion of tongue, puffing of cheeks, chewing/puckering of mouth) may occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Renal function tests should be performed before therapy. Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P, heart rate, weight, renal function tests, EKG. Monitor for fine tongue movement (may be first sign of tardive dyskinesia). Supervise suicidal-risk pt closely during early therapy (as depression lessons, energy level improves, increasing suicide potential). Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression). Monitor for potential neuroleptic malignant syndrome (fever, muscle rigidity, irregular B/P or pulse, altered mental status).

PATIENT/FAMILY TEACHING

• Avoid tasks that may require alertness, motor skills until response to drug is established. • Use caution when changing position from lying or sitting to standing. • Inform physician of trembling in fingers, altered gait, unusual muscle/skeletal movements, palpitations, severe dizziness, fainting, swelling/pain in breasts, visual changes, rash, difficulty in breathing.

palivizumab

pal-i-**viz**-u-mab
(Synagis)
Do not confuse Synagis with Synalgos-DC.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antiviral.

ACTION

Exhibits neutralizing activity against respiratory syncytial virus (RSV) in infants. **Therapeutic Effect:** Inhibits RSV replication in lower respiratory tract of children.

USES

Prevention of serious lower respiratory tract disease caused by RSV in pediatric pts younger than 2 yrs at high risk for RSV disease (e.g., hemodynamically significant congenital heart disease).

PRECAUTIONS

Contraindications: None known. **Cautions:** Thrombocytopenia, any coagulation disorder. Not to be used for treatment of established RSV disease. **Pregnancy Category C.**

P

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST.

AVAILABILITY (Rx)

Injection Solution: 100 mg/ml.

ADMINISTRATION/HANDLING

IM

• Refrigerate vials. • Give undiluted in anterolateral aspect of thigh.

INDICATIONS/ROUTES/DOSAGE

Prevention of Respiratory Syncytial Virus (RSV)

IM: CHILDREN: 15 mg/kg once/mo during RSV season.

SIDE EFFECTS

Frequent (49%–22%): Upper respiratory tract infection, otitis media, rhinitis, rash. **Occasional (10%–2%):** Pain, pharyngitis. **Rare (Less Than 2%):** Cough, diarrhea, vomiting, injection site reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anaphylaxis, severe acute hypersensitivity reaction occur very rarely.

P

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for sensitivity to palivizumab.

INTERVENTION/EVALUATION

Monitor potential side effects, esp. otitis media, rhinitis, skin rash, upper respiratory tract infection.

PATIENT/FAMILY TEACHING

• Discuss with family the purpose, potential side effects of medication.

palonosetron

pal-oh-**noe**-se-tron
(Aloxi)

Do not confuse Aloxi with Eloxatin or oxaliplatin, or palonosetron with dolasetron, granisetron, or ondansetron.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: 5-HT_3 receptor antagonist. **CLINICAL:** Antiemetic.

ACTION

Acts centrally in chemoreceptor trigger zone, peripherally at vagal nerve terminals. **Therapeutic Effect:** Prevents nausea/vomiting associated with chemotherapy.

PHARMACOKINETICS

Protein binding: 52%. Metabolized in liver. Eliminated in urine. **Half-life:** 40 hrs.

USES

Prevention of acute and delayed nausea/vomiting associated with initial/repeated courses of moderately or highly emetogenic chemotherapy. Prevention of postop nausea/vomiting for up to 24 hrs following surgery.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of cardiovascular disease. Congenital long QT syndrome, risk factors for QT prolongation (hypokalemia, hypomagnesemia), pts at risk for ventricular arrhythmias.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May transiently increase serum bilirubin, AST, ALT.

AVAILABILITY (Rx)

Injection Solution: 0.05 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Give undiluted as IV push.
Rate of Administration • Give IV push over 30 sec. • Flush infusion line with 0.9% NaCl before and following administration.
Storage • Store at room temperature. Solution should appear colorless, clear. Discard if cloudy precipitate forms.

IV COMPATIBILITIES

Lorazepam (Ativan), midazolam (Versed).

INDICATIONS/ROUTES/DOSAGE

Chemotherapy-Induced Nausea/Vomiting
IV: ADULTS, ELDERLY: 0.25 mg as single dose 30 min before starting chemotherapy.

Postop Nausea/Vomiting
IV: ADULTS, ELDERLY: 0.075 mg over 10 sec immediately before induction of anesthesia.

SIDE EFFECTS

Occasional (9%–5%): Headache, constipation. **Rare (Less Than 1%):** Diarrhea, dizziness, fatigue, abdominal pain, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce combination of CNS stimulation, depressant effects.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for dehydration if excessive vomiting occurs (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue). Provide emotional support.

INTERVENTION/EVALUATION

Monitor pt in environment. Provide supportive measures. Assess mental status. Monitor daily pattern of bowel activity, stool consistency. Record time of evacuation.

PATIENT/FAMILY TEACHING

• Relief from nausea/vomiting generally occurs shortly after drug administration. • Avoid alcohol, barbiturates. • Report persistent vomiting.

pamidronate

pam-i-**droe**-nate
(Aredia)
Do not confuse Aredia with Adriamycin, pamidronate with alendronate, ibandronate, or risedronate.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Bisphosphonate. **CLINICAL:** Hypocalcemic.

ACTION

Binds to bone, inhibits osteoclast-mediated calcium resorption. **Therapeutic Effect:** Lowers serum calcium concentration.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	24–48 hrs	3–7 days	N/A

After IV administration, rapidly absorbed by bone. Slowly excreted unchanged in urine. Unknown if removed by hemodialysis. **Half-life:** 21–35 hrs.

USES

Treatment of moderate to severe hypercalcemia associated with malignancy (with/without bone metastases). Treatment of moderate to severe Paget's disease, osteolytic bone lesions of multiple myeloma, breast cancer. **OFF-LABEL:** Inhibits bone resorption in osteogenesis imperfecta, treatment of bone metastases of thyroid cancer, prevention of bone loss associated with androgen deprivation treatment in prostate cancer.

P

PRECAUTIONS

Contraindications: Hypersensitivity to other bisphosphonates (e.g., etidronate, tiludronate, risedronate, alendronate). **Cautions:** Renal impairment, concurrent use with other nephrotoxic medications, history of thyroid surgery.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: No adequate, well-controlled studies in pregnant women; unknown if fetal harm can occur. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** May become overhydrated. Careful monitoring of fluid and electrolytes indicated; recommend dilution in smaller volume.

INTERACTIONS

DRUG: **Nephrotoxic medications** may increase potential for nephrotoxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 30 mg, 90 mg. **Injection Solution:** 3 mg/ml, 6 mg/ml, 9 mg/ml.

P

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each vial with 10 ml Sterile Water for Injection to provide concentration of 3 mg/ml or 9 mg/ml. • Allow drug to dissolve before withdrawing. • Further dilute with 250–1,000 ml sterile 0.45% or 0.9% NaCl or D_5W (1,000 ml for hypercalcemia of malignancy, 500 ml for Paget's disease, multiple myeloma, 250 ml for breast cancer). **Rate of Administration** • Adequate hydration is essential in conjunction with pamidronate therapy (avoid overhydration in pts with potential for cardiac failure). • Administer as IV infusion over 2–24 hrs for treatment of hypercalcemia; over 2–4 hrs for other indications. **Storage** • Store parenteral form at room temperature. • Reconstituted vial is stable for 24 hrs if refrigerated; IV solution is stable for 24 hrs after dilution.

IV INCOMPATIBILITIES

Calcium-containing IV fluids.

INDICATIONS/ROUTES/DOSAGE

Hypercalcemia

IV Infusion: ADULTS, ELDERLY: Moderate hypercalcemia (corrected serum calcium level 12–13.5 mg/dl): 60–90 mg. Severe hypercalcemia (corrected serum calcium level greater than 13.5 mg/dl): 90 mg.

Paget's Disease

IV Infusion: ADULTS, ELDERLY: 30 mg/day over 4 hrs for 3 consecutive days.

Osteolytic Bone Lesion (Multiple Myeloma)

IV Infusion: ADULTS, ELDERLY: 90 mg over 4 hrs once q mo.

Osteolytic Bone Lesion (Breast Cancer)

IV Infusion: ADULTS, ELDERLY: 90 mg over 2 hrs q3–4wks.

SIDE EFFECTS

Frequent (Greater Than 10%): Temperature elevation (at least 1°C) 24–48 hrs after administration (27%); erythema, swelling, induration, pain at catheter site in pts receiving 90 mg (18%); anorexia, nausea, fatigue. **Occasional (10%–1%):** Constipation, rhinitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypophosphatemia, hypokalemia, hypomagnesemia, hypocalcemia occur more frequently with higher dosages. Anemia, hypertension, tachycardia, atrial fibrillation, drowsiness occur more frequently with 90-mg doses. GI hemorrhage occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain corrected serum calcium level prior to therapy. Determine hydration status.

INTERVENTION/EVALUATION

Monitor serum calcium, potassium, magnesium, creatinine, Hgb, Hct, CBC. Provide adequate hydration; assess overhydration. Monitor I&O carefully; assess lungs for rales, dependent body parts for edema. Monitor B/P, temperature, pulse. Assess catheter site for redness, swelling, pain. Monitor food intake, daily pattern of bowel activity, stool consistency. Be alert for potential GI hemorrhage with 90-mg dosage.

pancrelipase

pan-kree-**lye**-pace
(Creon, Pancreaze, Zenpep, Pertyze, Ultresa, Viokace)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Digestive enzyme. **CLINICAL:** Pancreatic enzyme replenisher.

ACTION

Replaces endogenous pancreatic enzymes. **Therapeutic Effect:** Assists in digestion of protein, starch, fats.

USES

Creon, Pancreaze, Pertyze, Ultresa Zenpep: Treatment of exocrine pancreatic insufficiency (EPI) due to cystic fibrosis or other conditions. **Creon:** Chronic pancreatitis, pancreatectomy. **Viokace: (with a proton pump inhibitor):** Chronic pancreatitis, pancreatectomy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Gout, hyperuricemia, renal impairment, hypersensitivity to pork proteins. **Pregnancy Category C.**

INTERACTIONS

DRUG: May decrease absorption of **iron supplements.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Capsules, Delayed-Release: (Creon): 3,000 units lipase; 9,500 units protease; 15,000 units amylase. 6,000 units lipase; 19,000 units protease; 30,000 units amylase. 12,000 units lipase; 38,000 units protease; 60,000 units amylase. 24,000 units lipase; 76,000 units protease; 120,000 units amylase. **(Pancreaze):** 4,200 units lipase; 10,000 units protease; 17,500 units amylase; 10,500 units lipase; 25,000 units protease; 43,750 units amylase; 16,800 units lipase; 40,000 units protease; 70,000 units amylase; 21,000 units lipase; 37,000 units protease; 61,000 units amylase. **(Zenpep):** 3,000 units lipase; 10,000 units protease; 16,000 units amylase; 5,000 units lipase; 17,000 units protease; 27,000 units amylase. 10,000 units lipase; 34,000 units protease; 55,000 units amylase. 15,000 units lipase; 51,000 units protease; 82,000 units amylase. 20,000 units lipase; 68,000 units protease; 109,000 units amylase. 25,000 units lipase; 85,000 units protease; 136,000 units amylase. **Pertyze:** 8,000 units lipase; 28,750 units protease; 30,250 units amylase. 16,000 units lipase; 57,500 units protease; 60,500 units amylase. **Ultresa:** 13,800 units lipase; 27,600 units protease; 27,600 units amylase. 20,700 units lipase; 41,400 units protease; 41,400 units amylase. 23,000 units lipase; 46,000 units protease; 46,000 units amylase. **Tablets, Viokace:** 10,440 units lipase; 39,150 units protease; 39,150 units amylase. 20,880 units lipase; 78,300 units protease; 78,300 units amylase.

ADMINISTRATION/HANDLING

PO

• Swallow capsules whole with generous amount of liquid. • If unable to swallow intact capsule, contents may be given without crushing/chewing, followed by fluid. Contents may be sprinkled on soft acidic food such as applesauce. • Swallow immediately after mixing. Swallow tablets whole, do not break, crush, dissolve, or divide.

P

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage expressed as lipase units/kg. Individualize dose based on clinical symptoms, degree of steatorrhea, fat content in diet.

Pancreatic Enzyme Replacement Therapy

PO: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: Initially, 500 units/kg lipase/kg/meal up to 2,500 units lipase/kg/meal (or less than or equal to 10,000 lipase units/kg/day) or less than 4,000 lipase units/g of fat ingested/day. **CHILDREN OLDER THAN 12 MOS AND YOUNGER THAN 4 YRS:** Initially, 1,000 units lipase/kg/meal up to 2,500 units lipase/kg/meal (or less than or equal to 10,000 lipase units/kg/day) or less than 4,000 lipase units/g of fat ingested/day. **INFANTS UP TO 12 MOS:** 2,000–4,000 units lipase per 120 ml of formula or per breast-feeding. Do not mix Creon or Zenpep capsule contents directly into formula or breast milk prior to administration.

SIDE EFFECTS

Rare: Allergic reaction, mouth irritation, shortness of breath, wheezing.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive dosage may produce nausea, cramping, diarrhea. Hyperuricosuria, hyperuricemia reported with extremely high dosages.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Question for therapeutic relief from GI symptoms. Do not change brands without consulting physician.

PATIENT/FAMILY TEACHING

• Do not chew capsules. • Instruct pts with trouble swallowing to open capsules, spread contents over applesauce, mashed fruit, rice cereal or follow with glass of water or juice to ensure swallowing. • Do not break, crush, dissolve, or divide tablets. Swallow whole.

panitumumab

pan-i-**toom**-ue-mab
(Vectibix)

BLACK BOX ALERT 90% of pts experience dermatologic toxicities (dermatitis acneiform, pruritus, erythema, rash, skin exfoliation, skin fissures, abscess). Potential for severe infusion reaction (anaphylaxis, bronchospasm, fever, chills, hypotension) (fatal reactions have occurred).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic (see p. 87C).

ACTION

Binds specifically to epidermal growth factor receptor (EGFR) and competitively inhibits binding of epidermal growth factor. **Therapeutic Effect:** Prevents cell growth, proliferation, transformation, survival.

PHARMACOKINETICS

Clearance varies by body weight, gender, tumor burden. **Half-life:** 3–10 days.

USES

Monotherapy in metastatic colorectal carcinoma.

PRECAUTIONS

Contraindications: None known. **Cautions:** Interstitial pneumonitis, pulmonary fibrosis, pulmonary infiltrates.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Teratogenic. Potential for fertility impairment. May decrease fetal body weight; increase risk of skeletal fetal abnormalities. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VAL-**

UES: May decrease serum magnesium, calcium.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml vial (5-ml, 10-ml, 20-ml vials).

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Do not give by IV push or bolus. Use low protein-binding 0.2- or 0.22-micron in-line filter. Flush IV line before and after chemotherapy administration with 0.9% NaCl.

Reconstitution • Dilute in 100–150 ml 0.9% NaCl to provide concentration of 10 mg/ml or less. • Do not shake solution. Invert gently to mix. • Discard any unused portion.

Rate of Administration • Give as IV infusion over 60 min. • Infuse doses greater than 1,000 mg over 90 min.

Storage • Refrigerate vials. • After dilution, solution may be stored for up to 6 hrs at room temperature, up to 24 hrs if refrigerated. • Discard if discolored but solution may contain visible, translucent-to-white particulates (will be removed by in-line filter).

IV INCOMPATIBILITY

Do not mix with dextrose solutions or any other medications.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Stop infusion immediately in pts experiencing severe infusion reactions.

Metastatic Colorectal Carcinoma

IV Infusion: ADULTS, ELDERLY: 6 mg/kg given over 60 min once every 14 days. Doses greater than 1,000 mg should be infused over 90 min.

SIDE EFFECTS

Common (65%–57%): Erythema, acneiform dermatitis, pruritus. **Frequent (26%–20%):** Fatigue, abdominal pain, skin exfoliation, paronychia (inflammation involving folds of tissue surrounding fingernail), nausea, rash, diarrhea, constipation, skin fissures. **Occasional (19%–10%):** Vomiting, acne, cough, peripheral edema, dry skin. **Rare (7%–2%):** Stomatitis, mucosal inflammation, eyelash growth, conjunctivitis, increased lacrimation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pulmonary fibrosis, severe dermatologic toxicity (complicated by infectious sequelae), sepsis occur rarely. Severe infusion reactions manifested as bronchospasm, fever, chills, hypotension occur rarely. Hypomagnesemia occurs in 39% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline serum magnesium, calcium prior to therapy, periodically during therapy, and for 8 wks after completion of therapy.

INTERVENTION/EVALUATION

Assess for skin, ocular, mucosal toxicity; report effects. Median time to development of skin/ocular toxicity is 14–15 days; resolution after last dosing is 84 days. Monitor serum electrolytes for hypomagnesemia, hypocalcemia. Offer antiemetic if nausea/vomiting occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received a live virus vaccine. • Avoid crowds, those with infection. • There is a potential risk for development of fetal abnormalities if pregnancy occurs; take measures to prevent pregnancy.

P

pantoprazole

TOP 200

pan-**toe**-pra-zole
(Apo-Pantoprazole, Protonix, Protonix IV)
Do not confuse pantoprazole with aripiprazole, or Protonix with Lovenox.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzimidazole. **CLINICAL:** Proton pump inhibitor (see p. 1480).

ACTION

Irreversibly binds to, inhibits hydrogen-potassium adenosine triphosphate, an enzyme on surface of gastric parietal cells. Inhibits hydrogen ion transport into gastric lumen. **Therapeutic Effect:** Increases gastric pH, reduces gastric acid production.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	N/A	24 hrs

Well absorbed from GI tract. Protein binding: 98% (primarily albumin). Primarily distributed into gastric parietal cells. Metabolized extensively in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1 hr.

USES

PO: Treatment, maintenance of healing of erosive esophagitis associated with gastroesophageal reflux disease (GERD). Reduction of relapse rate of heartburn symptoms in GERD. Treatment of hypersecretory conditions including Zollinger-Ellison syndrome. **IV:** Short-term treatment of erosive esophagitis associated with GERD, treatment of hypersecretory conditions. **OFF-LABEL:** Peptic ulcer disease, active ulcer bleeding (injection), adjunct in treatment of *H. pylori,* stress ulcer prophylaxis in critically ill pts.

PRECAUTIONS

Contraindications: Hypersensitivity to proton pump inhibitors (e.g., omeprazole). **Cautions:** May increase risk of fractures, GI infections.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effects of **warfarin.** May decrease effects of **clopidogrel, atazanavir.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, cholesterol, uric acid, glucose, lipoprotein, ALT.

AVAILABILITY (Rx)

Granules for Suspension: 40 mg/packet. **Injection, Powder for Reconstitution (Protonix IV):** 40 mg.

Tablets (Delayed-Release [Protonix]): 20 mg, 40 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Mix 40-mg vial with 10 ml 0.9% NaCl injection. • May be further diluted with 100 ml D_5W, 0.9% NaCl, or lactated Ringer's.
Rate of Administration • Infuse 10 ml solution over at least 2 min. • Infuse 100 ml solution over at least 15 min.
Storage • Store undiluted vials at room temperature. • Once diluted with 10 ml 0.9% NaCl, stable for 96 hrs at room temperature; when further diluted with 100 ml, stable for 24 hrs at room temperature.

PO

• May be given without regard to food. Best given before breakfast. • Do not crush, chew, split tablets; swallow whole.

• Administer oral suspension only in apple juice or applesauce. Best taken 30 min before a meal.

IV INCOMPATIBILITIES

Do not mix with other medications. Flush IV with D_5W, 0.9% NaCl, or lactated Ringer's solution before and after administration.

INDICATIONS/ROUTES/DOSAGE

Erosive Esophagitis

PO: ADULTS, ELDERLY: 40 mg/day for up to 8 wks. If not healed after 8 wks, may continue an additional 8 wks. **CHILDREN 5 YRS AND OLDER:** 20–40 mg/day.
IV: ADULTS, ELDERLY: 40 mg/day for 7–10 days.

Maintenance of Healing of Erosive Esophagitis

PO: ADULTS, ELDERLY: 40 mg once daily.

Hypersecretory Conditions

PO: ADULTS, ELDERLY: Initially, 40 mg twice a day. May increase to 240 mg/day.
IV: ADULTS, ELDERLY: 80 mg twice a day. May increase to 80 mg q8h.

SIDE EFFECTS

Rare (less than 2%): Diarrhea, headache, dizziness, pruritus, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hyperglycemia occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab values, including serum creatinine, cholesterol.

INTERVENTION/EVALUATION

Evaluate for therapeutic response (relief of GI symptoms). Question if GI discomfort, nausea occur.

PATIENT/FAMILY TEACHING

• Report headache, onset of black, tarry stools, diarrhea. • Avoid alcohol. • Swallow tablets whole; do not chew, crush. • Best if given before breakfast. May give without regard to food.

paroxetine

TOP 200

par-**ox**-e-teen
(Apo-Paroxetine, Novo-Paroxetine, Paxil, Paxil CR, Pexeva)

BLACK BOX ALERT Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse paroxetine with piroxicam, fluoxetine or pyridoxine, or Paxil with Doxil, Plavix, Prozac, or Taxol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin uptake inhibitor. **CLINICAL:** Antidepressant, antiobsessive-compulsive, antianxiety (see pp. 14C, 39C).

ACTION

Selectively blocks uptake of neurotransmitter serotonin at CNS neuronal presynaptic membranes, increasing its availability at postsynaptic receptor sites. **Therapeutic Effect:** Relieves depression, reduces obsessive-compulsive behavior, decreases anxiety.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 95%. Widely distributed. Metabolized in liver. Excreted in urine. Not removed by hemodialysis. **Half-life:** 24 hrs.

USES

Treatment of major depression exhibited as persistent, prominent dysphoria (occurring nearly every day for at least 2 wks) manifested by 4 of 8 symptoms: change in appetite, change in sleep pattern, increased fatigue, impaired concentration,

P

feelings of guilt or worthlessness, loss of interest in usual activities, psychomotor agitation/retardation, suicidal tendencies. Treatment of panic disorder, obsessive-compulsive disorder (OCD) manifested as repetitive tasks producing marked distress, time-consuming, or significant interference with social/occupational behavior. Treatment of social anxiety disorder (SAD), generalized anxiety disorder (GAD), premenstrual dysphoric disorder (PMDD), post-traumatic stress disorder (PTSD). **OFF-LABEL:** Eating disorders, impulse disorders, menopause symptoms, premenstrual disorders, treatment of depression and OCD in children, mild dementia-associated agitation in nonpsychotic pts.

PRECAUTIONS

Contraindications: Use of MAOIs within 14 days, reversible MAOIs (e.g., linezolid), use of thioridazine. **Cautions:** History of seizures, mania, renal/hepatic impairment, cardiac disease, pts with suicidal tendencies, impaired platelet aggregation. Concurrent use of aspirin or NSAIDs, children, breastfeeding, those who are volume depleted or using diuretics.

P

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May impair reproductive function. Not distributed in breast milk. May increase risk of congenital malformations. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentration, risk of toxicity of **tricyclic antidepressants. Triptans, lithium, tramadol** may increase risk of serotonin syndrome. **Aspirin, NSAIDs, warfarin** may increase risk of bleeding. **MAOIs** may cause confusion, agitation, severe seizures; increase risk of serotonin syndrome, hypertensive crises. **Thioridazine** may prolong QT interval. **HERBAL: Kava kava, St. John's wort, valerian** may increase CNS depression, risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, WBC count.

AVAILABILITY (Rx)

Oral Suspension (Paxil): 10 mg/5 ml. **Tablets (Paxil, Pexeva):** 10 mg, 20 mg, 30 mg, 40 mg.

Tablets (Controlled-Release [Paxil CR]): 12.5 mg, 25 mg, 37.5 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Give with food, milk if GI distress occurs. • Scored tablet may be crushed. • Do not crush, break, or chew controlled-release tablets.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: Initially, 20 mg/day. May increase by 10 mg/day at intervals of more than 1 wk. **Maximum:** 50 mg/day.

PO *(Controlled-Release)*: ADULTS: Initially, 25 mg/day. May increase by 12.5 mg/day at intervals of more than 1 wk. **Maximum:** 62.5 mg/day.

Generalized Anxiety Disorder (GAD)

PO: ADULTS: Initially, 20 mg/day. May increase by 10 mg/day at intervals of more than 1 wk. Range: 20–50 mg/day.

Obsessive-Compulsive Disorder (OCD)

PO: ADULTS: Initially, 20 mg/day. May increase by 10 mg/day at intervals of more than 1 wk. Range: 20–60 mg/day.

Panic Disorder

PO: ADULTS: Initially, 10–20 mg/day. May increase by 10 mg/day at intervals of more than 1 wk. Range: 10–60 mg/day.

PO *(Controlled-Release)*: ADULTS, ELDERLY: Initially, 12.5 mg once daily. May increase by 12.5 mg/day at weekly intervals. **Maximum:** 75 mg/day.

Social Anxiety Disorder (SAD)

PO: ADULTS: Initially 20 mg/day. Range: 20–60 mg/day.

PO *(Controlled-Release)*: ADULTS, ELDERLY: Initially, 12.5 mg once daily. May increase by 12.5 mg/day at weekly intervals. **Maximum:** 37.5 mg/day.

Post-Traumatic Stress Disorder (PTSD)

PO: ADULTS: Initially, 20 mg/day. May increase by 10 mg/day at intervals of more than 1 wk. Range: 20–50 mg/day.

Premenstrual Dysphoric Disorder (PMDD)

PO *(Paxil CR)*: ADULTS: Initially, 12.5 mg/day. May increase by 12.5 mg at weekly intervals. **Maximum:** 25 mg/day.

Usual Elderly Dosage

PO: Initially, 10 mg/day. May increase by 10 mg/day at intervals of more than 1 wk. **Maximum:** 40 mg/day.

PO *(Controlled-Release)*: Initially, 12.5 mg/day. May increase by 12.5 mg/day at intervals of more than 1 wk. **Maximum:** 50 mg/day.

Dosage Renal/Hepatic Impairment

Creatinine clearance less than 30 ml/min, severe hepatic impairment. **Immediate-Release:** Initially, 10 mg/day. May increase by 10 mg/dose at weekly intervals. **Maximum:** 40 mg/day. **Extended-Release:** Initially, 12.5 mg/day. May increase by 12.5/day at weekly intervals. **Maximum:** 50 mg/day.

SIDE EFFECTS

Frequent: Nausea (26%); drowsiness (23%); headache, dry mouth (18%); asthenia (loss of strength, energy) (15%); constipation (15%); dizziness, insomnia (13%); diarrhea (12%); diaphoresis (11%); tremor (8%). **Occasional:** Decreased appetite, respiratory disturbance (e.g., increased cough) (6%); anxiety (5%); flatulence, paresthesia, yawning (4%); decreased libido, sexual dysfunction, abdominal discomfort (3%). **Rare:** Palpitations, vomiting, blurred vision, altered taste, confusion.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hyponatremia, seizures have been reported. Serotonin syndrome (agitation, confusion, diaphoresis, hallucinations, hyperreflexia) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess appearance, behavior, speech pattern, level of interest, mood.

INTERVENTION/EVALUATION

For those on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically. Assess mental status for depression, suicidal ideation (esp. at beginning of therapy or change in dosage), anxiety, social functioning, panic attacks. Assess appearance, behavior, speech pattern, level of interest, mood.

PATIENT/FAMILY TEACHING

• May cause dry mouth. • Avoid alcohol, St. John's wort. • Therapeutic effect may be noted within 1–4 wks. • Do not abruptly discontinue medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Inform physician of intention for pregnancy or if pregnancy occurs. • Report worsening depression, suicidal ideation, unusual changes in behavior.

P

pasireotide

pass-i-**re**-oh-tide
(Signifor)
Do not confuse pasireotide with eptifibatide, liraglutide, nesiritide, or octreotide, or signifor with singniair.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Somatostatin analog. **CLINICAL:** Cushing's disease agent.

ACTION

Binds and activates somatostatin receptors resulting in inhibition of ACTH (adrenocorticotropic hormone) secretion. **Therapeutic Effect:** Decreases cortisol levels.

PHARMACOKINETICS

Widely distributed between blood, plasma. Peak plasma concentration: 0.25–0.5h. Protein binding: 88%. Primarily excreted in feces with lesser amount eliminated in urine. **Half-life:** 12 hrs.

USES

Treatment of adult patients with Cushing's disease for whom pituitary surgery is not an option or has not been curative.

PRECAUTIONS

Contraindications: None known. **Cautions:** Cardiac disease, or risk factors for bradycardia (e.g., high grade heart block), those at risk for developing QT prolongation (e.g., recent MI, unstable angina, CHF, those on antiarrhythmic therapy, hypokalemia, hypomagnesemia) impaired hepatic function, diabetes mellitus, nursing women, elderly.

P

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Do not breastfeed. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related cardiac, hepatic/renal impairment require lowest initial dosing. Avoid use in those with severe hepatic impairment.

INTERACTIONS

DRUG: Concurrent use of medications that may increase risk for QT prolongation. May decrease **cyclosporine** concentration. May increase **bromocriptine** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, ALT, AST, GGT, Hgb A1c, cholesterol, amylase, lipase. May decrease serum potassium. May prolong PT/INR, aPTT.

AVAILABILITY (Rx)

Injection Solution: 0.3 mg/ml, 0.6 mg/ml, 0.9 mg/ml single-dose ampule.

ADMINISTRATION/HANDLING

Subcutaneous

• Choose injection sites clear from signs of inflammation, irritation. • Using top of thigh or abdomen, pinch skin at injection site holding needle/syringe at 45° angle and give subcutaneously. • Avoid same injection sites for at least two consecutive injections.

Storage • Store ampules at room temperature. • Solution should appear clear, colorless, free of particulate matter.

INDICATIONS/ROUTES/DOSAGE

Cushing's Disease

Subcutaneous: ADULTS, ELDERLY: Initially, 0.3 to 0.9 mg twice daily. Dose titrated based on response, tolerability.

Mild to Moderate Hepatic Impairment

◀ALERT▶ Avoid use in severe hepatic impairment.

Subcutaneous: ADULTS, ELDERLY: Initially, 0.3 mg twice daily. **Maximum:** 0.6 mg twice daily.

SIDE EFFECTS

Frequent (59%–23%): Diarrhea, nausea, headache, abdominal pain. **Occasional (15%–9%):** Fatigue, injection site reactions, nasopharyngitis, asthenia (loss of strength, energy), alopecia, myalgia, peripheral edema, hypertension, dizziness, anorexia, constipation. **Rare (7%–4%):** Pruritus, extremity pain, anxiety, hypotension, arthralgia, dry skin, back pain, abdominal distention, insomnia, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypergycemia occurs in almost all pts, hypoglycemia in 15%. Cholelithiasis occurs frequently (30%). Flu-like symptoms appear in 11%, sinus bradycardia in 10%. Hypocortisolism appears as weakness, fatigue, anorexia, nausea, vomiting, hypotension, hyponatremia, hypoglycemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pituitary function tests (e.g., TSH/free T_4, GH/IGF-I), fasting plasma glucose, Hgb A1c, serum chemistries, EKG), gallbladder ultrasound, cortisol levels (24-hr urine cortisol test) should be obtained prior to initiation of treatment and routinely thereafter. PT/INR (if pt takes concurrent warfarin, phenytoin, fosphenytoin) should be at baseline therapeutic levels before initiation of treatment.

INTERVENTION/EVALUATION

Closely monitor all lab values, gallbladder ultrasounds, EKGs. Observe pt signs/symptoms during treatment for evidence of cholelithiasis, hyponatremia, hyper/hypoglycemia, impaired hepatic function, hypocortisolism. Hepatic function tests should be obtained after 1 to 2 wks on treatment, then monthly for 3 mos, then every 6 mos thereafter. Obtain gallbladder ultrasound at 6-mo intervals. Expect frequent, routine testing to control signs/symptoms of Cushing's disease. Assess daily bowel activity, stool consistency. Offer antiemetics (high potential for nausea). Assess for abdominal pain. Question for evidence of headache.

PATIENT/FAMILY TEACHING

• Report diarrhea, abdominal pain, weakness, fatigue, loss of appetite, nausea, vomiting, any new bodily changes, signs/symptoms of Cushing's disease. • Intensive self-monitoring of blood glucose should be performed initially and routinely (may require dosage adjustment). • Ongoing lab visits are an essential part of therapy.

pazopanib

paz-**oh**-pa-nib
(Votrient)

BLACK BOX ALERT Severe, fatal hepatotoxicity has been observed.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

ACTION

Interferes with proliferation of tumor vasculature, preventing tumor growth. **Therapeutic Effect:** Inhibits angiogenesis, blocks tumor growth.

PHARMACOKINETICS

Peak concentration occurs 2–4 hrs following oral administration. Undergoes extensive hepatic metabolism. Protein binding: greater than 99%. Eliminated primarily in feces, with a lesser amount excreted in urine. **Half-life:** 31 hrs.

USES

Treatment of advanced renal cell carcinoma in adults. **OFF-LABEL:** Advanced thyroid cancer, metastatic soft tissue sarcomas.

PRECAUTIONS

Contraindications: None known. **Cautions:** Avoid use of strong CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir) or inducers (carbamazepine, dexamethasone, phenobarbital, phenytoin, rifabutin, rifampin) and grapefruit juice. Cautious use in those with increased risk or history of arterial thrombotic events (e.g., angina, MI, ischemic stroke), QT prolongation, hypertension, severe hepatic impairment, concomitant use of medications that may prolong QT interval, history of hemoptysis, cerebral hemorrhage or significant GI hemorrhage.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Concurrent use of **CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole, ritonavir)** may increase concentration. Concomitant use of **CYP3A4 inducers (e.g., carbamazepine, dexamethasone, phenobarbital, phenytoin, rifabutin, rifampin)** may decrease concentration. **Simvastatin** may increase incidence of serum ALT elevations. **HERBAL:** **St. John's wort** decreases concentration. **FOOD:** **Food** may increase concentration. Give 1 hr before or 2 hrs after meals. **Grapefruit, grapefruit juice** may increase concentration, potential for torsades, myelotoxicity. **LAB VALUES:** May decrease serum phosphorus, sodium, magnesium, glucose, WBC count. May increase serum ALT, AST.

AVAILABILITY (Rx)

Tablets: 200 mg.

ADMINISTRATION/HANDLING

PO

• Give at least 1 hr before or 2 hrs after ingestion of food. • Swallow tablets whole; do not crush, chew, or break.

P

INDICATIONS/ROUTES/DOSAGE

Renal Cell Carcinoma

PO: ADULTS, ELDERLY: 800 mg once daily. Initial dose reduction should be 400 mg with additional increases/decreases in 200-mg steps based on individual tolerability. Initial dose of 400 mg/day with concomitant strong CYP3A4 inhibitors.

Dosage in Hepatic Impairment

Reduce dose to 200 mg/day for moderate hepatic impairment. Not recommended in pts with severe hepatic impairment.

SIDE EFFECTS

Frequent (52%–19%): Diarrhea, hypertension, hair color changes, nausea, fatigue, anorexia, vomiting. **Occasional (14%–10%):** Asthenia (loss of strength, energy), abdominal pain, headache. **Rare (Less Than 10%):** Alopecia, chest pain, altered taste, dyspepsia, proteinuria, rash, decreased weight.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity, manifested as increase in serum bilirubin, ALT, AST, has been observed and may be fatal. Hemorrhagic events (hematuria, epistaxis, hemoptysis, GI bleeding or perforation, intracranial hemorrhage) have been noted and may be fatal. Hypertension (B/P greater than 150/100 mm Hg) is common (47%), usually occurring early in the first 18 wks of treatment. Hypothyroidism has been reported occasionally. Arterial thrombotic events (MI, CVA), QT prolongation, torsade de pointes have been seen rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess medical history, esp. hepatic function abnormalities. Obtain baseline EKG, CBC, serum chemistries, hepatic function tests (ALT, AST, bilirubin) before beginning therapy.

INTERVENTION/EVALUATION

Monitor B/P, serum hepatic function tests periodically for elevations. Monitor CBC, serum chemistries for changes from baseline. Observe for signs of hepatotoxicity (jaundice, dark-colored urine, unusual fatigue, right upper quadrant abdominal pain). Observe EKG for QT-interval prolongation. Monitor for evidence of bleeding, hemorrhage. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine; do not receive vaccinations. • No food should be taken at least 1 hr before and 2 hrs after dose is taken. Avoid grapefruit juice, grapefruit products. • Notify physician if diarrhea, abdominal pain, yellowing of skin or sclera, discolored urine, fatigue occur or diarrhea persists.

pegfilgrastim

peg-fil-**gras**-tim
(Neulasta)
Do not confuse Neulasta with Lunesta, Neumega, or Neupogen.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Colony-stimulating factor. **CLINICAL:** Hematopoietic, antineutropenic.

ACTION

Regulates production of neutrophils within bone marrow. A glycoprotein, primarily affects neutrophil progenitor proliferation, differentiation, selected end-cell functional activation. **Therapeutic Effect:** Increases phagocytic ability, antibody-dependent destruction; decreases incidence of infection.

PHARMACOKINETICS

Readily absorbed after subcutaneous administration. **Half-life:** 15–80 hrs.

USES

Decreases incidence of infection manifested by febrile neutropenia in cancer pts receiving moderately myelosuppressive chemotherapy. Stimulates granulocyte production in pts receiving myelosuppressive chemotherapy.

PRECAUTIONS

Contraindications: Hypersensitivity to *Escherichia coli*–derived protein. Do not administer within 14 days before and 24 hrs after cytotoxic chemotherapy. **Cautions:** Concurrent use with medications having mycoloid properties, sickle cell disease, respiratory impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in children younger than 12 yrs of age. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum LDH, alkaline phosphatase, uric acid.

AVAILABILITY (Rx)

Injection Solution: 6 mg/0.6 ml syringe.

ADMINISTRATION/HANDLING

Subcutaneous

Storage • Store in refrigerator. Warm to room temperature prior to administering injection. Discard if left at room temperature for more than 48 hrs. • Protect from light. • Avoid freezing; but if accidentally frozen, may allow to thaw in refrigerator before administration. Discard if freezing takes place a second time. • Discard if discolored or precipitate forms.

INDICATIONS/ROUTES/DOSAGE

Myelosuppression

Subcutaneous: ADULTS, ELDERLY, CHILDREN 12–17 YRS, WEIGHING MORE THAN 45 KG: Give as single 6-mg injection once per chemotherapy cycle beginning 24–72 hrs after completion of chemotherapy. ◄ALERT► Do not administer between 14 days before and 24 hrs after cytotoxic chemotherapy. Do not use in infants, children, adolescents weighing less than 45 kg.

SIDE EFFECTS

Frequent (72%–15%): Bone pain, nausea, fatigue, alopecia, diarrhea, vomiting, constipation, anorexia, abdominal pain, arthralgia, generalized weakness, peripheral edema, dizziness, stomatitis, mucositis, neutropenic fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Allergic reactions (anaphylaxis, rash, urticaria) occur rarely. Cytopenia resulting from antibody response to growth factors occurs rarely. Splenomegaly occurs rarely. Adult respiratory distress syndrome (ARDS) may occur in septic pts.

P

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, platelet count should be obtained before initiating therapy and routinely thereafter.

INTERVENTION/EVALUATION

Monitor for allergic-type reactions. Assess for peripheral edema, particularly behind medial malleolus (usually first area showing peripheral edema). Assess mucous membranes for evidence of stomatitis, mucositis (red mucous membranes, white patches, extreme mouth soreness). Assess muscle strength. Monitor daily pattern of bowel activity, stool consistency. Adult respiratory distress syndrome (ARDS) may occur in septic pts.

PATIENT/FAMILY TEACHING

• Inform pts of possible side effects, signs/symptoms of allergic reactions. • Counsel pt on importance of compliance with pegfilgrastim treatment, including regular monitoring of blood counts. • Notify physician of unusual fever or chills, severe bone pain, chest pain or palpitations.

P

peginesatide

peg-in-**es**-a-tide
(Omontys)

Do not confuse peginesatide with pasireotide, eptifibatide, liraglutide, nesiritide, octreotide, or Omontys with Omnaris.

BLACK BOX ALERT Increased risk for serious cardi[Recalled]ts, thromboembolic events, mortality, thrombosis of vascular access and tumor progression when administered to a target Hgb of more than 11 g/dL.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Erythropoiesis-stimulating agent (ESA). **CLINICAL:** Antianemic agent.

ACTION

Binds to and activates human erythropoietin receptor, induces erythropoiesis, stimulates formation of red blood cells in bone marrow. **Therapeutic Effect:** Increases reticulocyte count followed by increase in hemoglobin.

PHARMACOKINETICS

Maximum concentration reached in 48 hrs. Distributed into bone marrow, extramedullary hematopoietic sites, lymphatic and excretory tissues. Drug is not metabolized. Elimination is by kidneys.
Half-life: Dialysis pts: 31–63 hrs.
Intravenous Injection: 19–32 hrs.
Subcutaneous: 36–70 hrs.

USES

Treatment of anemia associated with chronic renal failure in adult pts on dialysis.

PRECAUTIONS

Contraindications: Uncontrolled hypertension, serio[Recalled]action (hypotension, generalized pruritus, bronchospasm, angioedema, anaphylaxis). **Cautions:** Cardiovascular disease, stroke.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Expected to increase transferrin saturation, serum ferritin, hemoglobin. May increase serum potassium.

AVAILABILITY (Rx)

Injection Solution: **Single-use vial:** 2 mg/0.5 ml, 3 mg/0.5 ml, 4 mg/0.5 ml, 5 mg/0.5ml, 6 mg/0.5 ml. **Single-use prefilled syringe:** 1 mg/0.5 ml, 2 mg/0.5 ml, 3 mg/0.5 ml, 4 mg/0.5 ml, 5

mg/0.5 ml, 6 mg/0.5 ml. **Multiple-use vial:** 10 mg/ml, 20 mg/2 ml.

ADMINISTRATION/HANDLING

Subcutaneous

• Do not dilute medication. • Use one dose per single-use vial or prefilled syringe. • Discard unused portion. • Use upper arms, middle thighs, abdomen (other than 2 inches around navel) or upper outer buttocks area.

Intravenous

• May be injected as an IV bolus through access port on hemodialysis tubing while dialysis is underway.

Storage

• Store single-use vials, single-use prefilled syringes, or multiple-use vials in refrigerator. • Continue to refrigerate multiple-use vial after opening; discard 28 days from first use. • Single-use prefilled syringes are supplied with a 27-gauge, ½-inch needle. • Solution should appear clear and colorless to slightly yellow. • Do not use if cloudy or particulate is present.

Recalled

IV INCOMPATIBILITIES

Do not mix injection form with other medications.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Initiate treatment only when Hgb level is less than 10 g/dl. Do not increase dose more frequently than once every 4 wks.

Anemia in Chronic Renal Failure (Not Currently Treated With an ESA)

Subcutaneous, IV Bolus: ADULTS, ELDERLY: Initially, 0.04 mg/kg once monthly. **Decrease dose by 25%:** If Hgb rises more than 1 g/dL in the 2-wk period prior to dosing, or more than 2 g/dL in 4 wks, reduce dose by 25% or more in order to reduce rapid response. If Hgb level approaches or exceeds 11 g/dL, reduce or interrupt dosing. After dosing has been withheld and Hgb begins to decrease, restart dose 25% below previously administered dose. **Increase dose by 25%:** If Hgb has not increased by more than 1 g/dl after 4 wks of treatment, increase dose by 25%. If there is inadequate response over a 12-wk period, increasing the dosing will unlikely improve the response. Use lowest dose that will maintain Hgb level sufficient enough to reduce need for RBC transfusions.

Conversion From Another ESA

Dose once-monthly based on weekly epoetin or darbepoetin alfa dose at time of conversion. For those receiving epoetin alfa, administer the first peginesatide dose 1 wk after the last given dose of epoetin alfa. For those receiving darbepoetin alfa, administer the first peginesatide dose at the next scheduled dose in place of darbepoetin alfa.

SIDE EFFECTS

Frequent (18%–12%): Diarrhea, shortness of breath, nausea, cough, headache, vomiting, muscular spasms, hypotension/hypertension, pyrexia. **Occasional (11%):** Procedural hypotension (during dialysis), extremity pain, [illegible] arthralgia.

Recalled

ADVERSE EFFECTS/ TOXIC REACTIONS

At hemodialysis vascular access site (A-V fistula site), there is increased risk for thrombosis in 16% of pts. Increased risk for CHF, unstable angina, stroke, myocardial infarction, arrhythmias, DVT, other thromboembolic events have been noted. Allergic and infusion-related reactions, including anaphylaxis, have been reported. Hyperkalemia, upper respiratory tract infection occurs in 11% of pts. Premonitory symptoms (auras), new-onset seizures noted. Increased risk for death in pts undergoing coronary artery bypass graft surgery (CABG).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess serum iron (transferrin saturation should be 20% or greater, and serum ferritin should be 100 ng/ml or greater) prior to and during therapy in all pts before and

P

during treatment; consider that all pts will eventually need supplemental iron therapy. Correct or exclude other causes of anemia (e.g., vitamin deficiency, metabolic or chronic inflammatory conditions, bleeding). Assess B/P before drug initiation (80% of pts with chronic renal failure have history of hypertension). B/P often rises during early therapy in those with history of hypertension.

INTERVENTION/EVALUATION

Monitor B/P aggressively for increased B/P (25% of those on medication require antihypertension therapy, dietary restrictions). Following initiation of therapy and after each dose adjustment, monitor Hgb every 2 wks until the Hgb is stable and at sufficient levels to minimize the need for RBC transfusion. Thereafter, Hgb should be monitored at least monthly. Monitor Hct level diligently (if level increases greater than 4 points in a 2-wk period, dosage should be reduced). Assess CBC routinely. Monitor serum BUN, uric acid, creatinine, phosphorus, potassium.

Recalled

PATIENT/FAMILY TEACHING

• Advise pts of the importance of compliance with antihypertensive therapy and dietary restrictions. • Undergo regular B/P monitoring, adhere to prescribed antihypertensive regimen, and follow recommended dietary restriction. • Regular laboratory tests are a routine part of therapy. • Compliance with dietary guidelines and frequency of dialysis is essential in chronic renal failure pts. • Teach self-administration technique. • Report premonitory symptoms, seizure activity. • Avoid reuse of needles, syringes, or unused portion of single-use vials or single-use prefilled syringes. • Teach proper disposal procedures.

P

peginterferon alfa-2a

peg-in-ter-**feer**-on
(Pegasys)

BLACK BOX ALERT Can cause or aggravate fatal or life-threatening autoimmune, neuropsychiatric (depression, suicidal ideation/behaviors), ischemic, including worsening hepatic function, and infectious disorders. Combination with ribavirin can cause fetal mortality, birth defects, hemolytic anemia. May be carcinogenic.

Do not confuse peginterferon alfa-2a with interferon alfa-2b, interferon alfa-n3, or peginterferon alfa-2b.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunomodulator. **CLINICAL:** Immunologic agent.

ACTION

Binds to specific membrane receptors on virus-infected cell surface, inhibiting viral replication. Suppresses cell proliferation, producing reversible decreases in leukocyte, platelet counts. **Therapeutic Effect:** Inhibits viral hepatitis.

PHARMACOKINETICS

Readily absorbed after subcutaneous administration. Excreted by kidneys. **Half-life:** 50–140 hrs.

USES

Treatment of chronic hepatitis C alone or in combination with ribavirin in pts who have compensated hepatic disease. Treatment of chronic hepatitis B with compensated hepatic disease and evidence of viral replication and hepatic inflammation.

PRECAUTIONS

Contraindications: Autoimmune hepatitis, decompensated hepatic disease in cirrhotic pts, infants, neonates. **Extreme Caution:** History of neuropsychiatric disorders. **Cautions:** Renal impairment (creatinine clearance less than 50 ml/min), elderly, pulmonary disorders, compromised CNS function, cardiac diseases, autoimmune disorders, endocrine abnormalities (e.g., diabetes, thyroid disor-

ders), colitis, ophthalmologic disorders, myelosuppression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May have abortifacient potential. Unknown if distributed in breast milk. **Pregnancy Category C (X when used with ribavirin). Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** CNS, cardiac, systemic effects may be more severe in the elderly, particularly in those with renal impairment.

INTERACTIONS

DRUG: Didanosine may cause hepatic failure, peripheral neuropathy, pancreatitis, lactic acidosis. May increase concentration, risk of toxicity of **methadone, theophylline.** Concurrent use of **ribavirin** may increase risk of hemolytic anemia. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT. May decrease absolute neutrophil, platelet, WBC counts.

AVAILABILITY (Rx)

Injection, Prefilled Syringe: 180 mcg/0.5 ml. **Injection Solution:** 180 mcg/ml.

ADMINISTRATION/HANDLING

Subcutaneous

• Refrigerate. • Vials are for single use only; discard unused portion. • Give subcutaneously in abdomen, thigh.

INDICATIONS/ROUTES/DOSAGE

Hepatitis C, Hepatitis B

Subcutaneous: ADULTS 18 YRS AND OLDER, ELDERLY: 180 mcg injected in abdomen or thigh once weekly for 48 wks.

Dosage in Renal Impairment

For pts who require hemodialysis or creatinine clearance less than 30 ml/min, dosage is 135 mg injected in abdomen or thigh once weekly for 48 wks.

Dosage in Hepatic Impairment

For pts with progressive ALT increases above baseline values, dosage is 135 mcg injected in abdomen or thigh once weekly for 48 wks.

SIDE EFFECTS

Frequent (54%): Headache. **Occasional (23%–13%):** Alopecia, nausea, insomnia, anorexia, dizziness, diarrhea, abdominal pain, flu-like symptoms, psychiatric reactions (depression, irritability, anxiety), injection site reaction. **Rare (8%–5%):** Impaired concentration, diaphoresis, dry mouth, nausea, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious, acute hypersensitivity reactions, (urticaria, angioedema, bronchoconstriction, anaphylaxis), pancreatitis, colitis, endocrine disorders (diabetes mellitus, hyperthyroidism, hypothyroidism), ophthalmologic disorders, pulmonary abnormalities occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, platelet count, blood chemistry, urinalysis, renal/hepatic function tests, EKG should be performed before initial therapy and routinely thereafter. Pts with diabetes, hypertension should have ophthalmologic exam before treatment begins.

INTERVENTION/EVALUATION

Monitor for evidence of depression. Offer emotional support. Monitor for abdominal pain, bloody diarrhea as evidence of colitis. Monitor chest X-ray for pulmonary infiltrates. Assess for pulmonary impairment. Encourage ample fluid intake, particularly during early therapy. Assess serum hepatitis C virus RNA levels after 24 wks of treatment.

PATIENT/FAMILY TEACHING

• Clinical response occurs in 1–3 mos. • Flu-like symptoms tend to diminish with continued therapy. • Immediately report symptoms of depression, suicidal ideation. • Avoid tasks requiring alert-

P

ness, motor skills until response to drug is established. • Do not drink alcohol.

peginterferon alfa-2b

peg-in-ter-**feer**-on
(PEG-Intron, PEG-Intron RediPen, Sylatron)

BLACK BOX ALERT Can cause or aggravate fatal or life-threatening autoimmune, neuropsychiatric (depression, suicidal ideation/behaviors), ischemic, including worsening hepatic function, and infectious disorders. Combination with ribavirin can cause fetal mortality, birth defects, hemolytic anemia. May be carcinogenic.

Do not confuse peginterferon alfa-2b with interferon alfa-2b, interferon alfa-n3, or peginterferon alfa-2a.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunomodulator. **CLINICAL:** Immunologic agent.

P

ACTION

Inhibits viral replication in virus-infected cells, suppresses cell proliferation, increases phagocytic action of macrophages, augments specific cytotoxicity of lymphocytes for target cells. **Therapeutic Effect:** Inhibits viral hepatitis.

PHARMACOKINETICS

Bioavailability is increased after multiple weekly doses. Excreted in urine. **Half-life:** 22–60 hrs.

USES

PEG-Intron: As monotherapy or in combination with ribavirin for treatment of chronic hepatitis C in pts not previously treated with interferon alfa who have compensated hepatic disease and are older than 18 yrs. **Sylatron:** Treatment of melanoma or gross nodal involvement within 84 days of definitive surgical resection including complete lymphadenectomy.

PRECAUTIONS

Contraindications: Autoimmune hepatitis, decompensated hepatic disease in cirrhotic pts. **Cautions:** Renal impairment (creatinine clearance less than 50 ml/min), elderly, pulmonary disorders, history of psychiatric disorders, compromised CNS function, cardiac diseases, autoimmune disorders, endocrine disorders (diabetes, hyperthyroidism, hypothyroidism), ophthalmologic disorders, myelosuppression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May have abortifacient potential. Unknown if distributed in breast milk. **Pregnancy Category C (X when used with ribavirin). Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** CNS, cardiac, systemic effects may be more severe in the elderly, particularly in those with renal impairment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT. May decrease neutrophil, platelet counts.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: (PEG-Intron): 50 mcg, 80 mcg, 120 mcg, 150 mcg. **(Sylatron):** 296 mcg, 444 mcg, 888 mcg. **Prefilled Syringe (RediPen):** 50 mcg, 80 mcg, 120 mcg, 150 mcg.

ADMINISTRATION/HANDLING

Subcutaneous

Reconstitution • To reconstitute, add 0.7 ml Sterile Water for Injection (supplied) to vial. • Gently swirl. Use immediately; after reconstituted may be refrigerated for up to 24 hrs before use. • Prefilled Syringe (RediPen): Hold cartridge upright, press two halves together until "click" is heard. • Gently invert to mix.

Storage • Store at room temperature. • Refrigerate RediPen. Once reconstituted, both products stable for 24 hrs if refrigerated.

INDICATIONS/ROUTES/DOSAGE

Melanoma

Subcutaneous: ADULTS, ELDERLY: (Sylatron): 6 mcg/kg/wk for 8 doses, then 3 mcg/kg/wk for up to 5 yrs.

Chronic Hepatitis C, Monotherapy

Subcutaneous: ADULTS 18 YRS AND OLDER, ELDERLY: (PEG-Intron): Initially, 1 mcg/kg/wk. Administer appropriate dosage (see chart below) once weekly for 1 yr on same day each wk.

Vial Strength	Weight (kg)	mcg*	ml*
100 mcg/ml	37–45	40	0.4
	46–56	50	0.5
160 mcg/ml	57–72	64	0.4
	73–88	80	0.5
240 mcg/ml	89–106	96	0.4
	107–136	120	0.5
300 mcg/ml	137–160	150	0.5

*Of peginterferon alfa-2b to administer.

Chronic Hepatitis C with Ribavirin

Subcutaneous: COMBINATION THERAPY WITH RIBAVIRIN (400 MG TWICE A DAY): ADULTS, ELDERLY: Initially, 1.5 mcg/kg/wk. **CHILDREN 3 YRS AND OLDER:** 60 mcg/m^2 once weekly.

Weight	Dosage
Less than 40 kg	50 mcg
40–50 kg	64 mcg
51–60 kg	80 mcg
61–75 kg	96 mcg
76–85 kg	120 mcg
Greater than 85 kg	150 mcg

◀ALERT▶ Do not use in pts with creatinine clearance less than 50 ml/min. Dosage adjustments needed for hematologic toxicity (hemoglobin, WBCs, neutrophils, platelets) and depression.

SIDE EFFECTS

Frequent (50%–47%): Flu-like symptoms; inflammation, bruising, pruritus, irritation at injection site. **Occasional (29%–18%):** Psychiatric reactions (depression, anxiety, emotional lability, irritability), insomnia, alopecia, diarrhea. **Rare:** Rash, diaphoresis, dry skin, dizziness, flushing, vomiting, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious, acute hypersensitivity reactions (urticaria, angioedema, bronchoconstriction, anaphylaxis), pulmonary disorders, endocrine disorders (diabetes mellitus, hypothyroidism, hyperthyroidism) pancreatitis occur rarely. Ulcerative colitis may occur within 12 wks of starting treatment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, platelet count, blood chemistry, urinalysis, renal/hepatic function tests, EKG should be performed before initial therapy and routinely thereafter. Pts with diabetes, hypertension should have ophthalmologic exam before treatment begins.

INTERVENTION/EVALUATION

Monitor for abdominal pain, bloody diarrhea as evidence of colitis. Monitor chest X-ray for pulmonary infiltrates. Assess for pulmonary impairment. Encourage adequate fluid intake, particularly during early therapy. Assess serum hepatitis C virus RNA levels after 24 wks of treatment. Monitor for depression, suicidal ideation.

PATIENT/FAMILY TEACHING

• Maintain adequate hydration, avoid drinking alcohol. • May experience flu-like syndrome (nausea, body aches, headache). • Inform physician of persistent abdominal pain, bloody diarrhea, fever, signs of depression, suicidal ideation, or infection, unusual bruising/bleeding.

P

pegloticase

peg-**loe**-ti-kase
(Krystexxa)

BLACK BOX ALERT Severe infusion reactions, anaphylaxis (bronchospasm, stridor, urticaria, hypotension, dyspnea, flushing, circumoral swelling) have occurred, especially within 2 hrs of first infusion. Pt to be premedicated with corticosteroids, antihistamines. Should be administered in health care setting by health care providers prepared to manage infusion reactions.

Do not confuse pegloticase with Activase, cholinesterase, or pegaspargase.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Uric acid enzyme. **CLINICAL:** Antigout agent.

ACTION

Decreases uric acid production by catalyzing oxidation of uric acid to allantoin, lowering serum uric acid. **Therapeutic Effect:** Lowers serum uric acid concentration.

PHARMACOKINETICS

Catalyzes oxidation of uric acid to allantoin, an inert and water-soluble purine metabolite. Readily eliminated, primarily by renal excretion. **Half-life:** 14.5 days.

USES

Treatment of chronic gout in adult pts refractory to conventional therapy. Not recommended for treatment of asymptomatic hyperuricemia.

PRECAUTIONS

Contraindications: Glucose-6-phosphate dehydrogenase (G6PD) deficiency due to hemodialysis, methemoglobinemia. **Cautions:** History of CHF, elderly, debilitated.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Decreases serum uric acid (expected).

AVAILABILITY (Rx)

Injection Solution: 2-ml (8 mg/ml) single-use vials.

ADMINISTRATION/HANDLING

IV

Reconstitution • Withdraw 1 ml from single-use vial and inject into 250 ml 0.9% NaCl or 0.45% NaCl. • Invert infusion bag a number of times to ensure thorough mixing; do not shake.

Rate of Administration • Infuse slowly over no less than 120 min.

Storage • Store in refrigerator. • Solution should appear clear; discard if particulate is present. • Allow diluted solution to reach room temperature prior to infusion. • Following dilution, solution remains stable for 4 hrs if refrigerated or at room temperature.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Give by IV infusion; do not give as IV push or IV bolus. Pt to be pretreated with corticosteroids, antihistamines to reduce risk of infusion reaction, anaphylaxis.

Gout

IV Infusion: ADULTS, ELDERLY: 8 mg every 2 wks.

SIDE EFFECTS

Occasional (12%–9%): Nausea, ecchymosis at IV site, nasopharyngitis. **Rare (6%–5%):** Constipation, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Exacerbation of CHF has been noted. Infusion-related reaction (urticaria, dys-

pnea, chest discomfort, chest pain, erythema, pruritus) occurs in 26% of pts; anaphylaxis occurs in 7% of pts. Increase in gout flares is frequently noted upon initiation of antihyperuricemic therapy due to changing serum uric acid levels.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If gout flare occurs during treatment, prophylaxis with an NSAID or colchicine is recommended. Pts at higher risk for G6PD deficiency (e.g., those of African or Mediterranean ancestry) should be screened for G6PD deficiency before starting therapy. Obtain serum uric acid levels prior to each infusion. If levels reach greater than 6 mg/dl, particularly when 2 consecutive levels greater than 6 mg/dl are observed, treatment should be discontinued.

INTERVENTION/EVALUATION

Monitor closely for infusion reaction during therapy and for 2 hrs post treatment. If infusion reaction occurs during administration, infusion may be slowed, or stopped and restarted at slower rate. If severe infusion reaction occurs, discontinue infusion and institute treatment as needed. Assess for therapeutic response (reduced joint tenderness, swelling, redness, limitation of motion).

PATIENT/FAMILY TEACHING

• Educate pts on the most common signs and symptoms of infusion reaction (rash, redness of skin, difficulty breathing, flushing, chest discomfort, chest pain). • Advise pts to seek medical care immediately if they experience any symptoms of allergic reaction during or at any time after infusion.

pegvisomant

peg-**vie**-soe-mant
(Somavert)
Do not confuse Somavert with somatrem or somatropin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protein analog of human growth hormone.
CLINICAL: Acromegaly agent.

ACTION

Selectively binds to growth hormone receptors on cell surfaces, blocking binding of endogenous growth hormones, interfering with growth hormone signal transduction. **Therapeutic Effect:** Decreases serum concentrations of insulin-like growth factor 1 (IGF-1) serum protein, normalizing serum IGF-1 levels.

PHARMACOKINETICS

Not distributed extensively into tissues after subcutaneous administration. Less than 1% excreted in urine. **Half-life:** 6 days.

USES

Treatment of acromegaly in pts with inadequate response to surgery, radiation, other medical therapies or those for whom these therapies are inappropriate.

PRECAUTIONS

Contraindications: None known. **Cautions:** Elderly, diabetes mellitus.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Initiation of treatment should begin at low end of dosage range.

INTERACTIONS

DRUG: May enhance effects of **insulin, oral antidiabetics** (may result in hypoglycemia); dosage should be decreased when initiating pegvisomant therapy. **Opioids** decrease serum concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, total bilirubin, AST, ALT. Interferes with measurement of serum growth hormone concentration. Glucose tolerance test results may be elevated.

P

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 10-mg, 15-mg, 20-mg vials.

ADMINISTRATION/HANDLING

Subcutaneous

Reconstitution • Withdraw 1 ml Sterile Water for Injection, inject into vial of pegvisomant, aiming stream against glass wall. • Hold vial between palms of both hands, roll to dissolve powder (do not shake).

Rate of Administration • Administer subcutaneously only 1 dose from each vial.

Storage • Refrigerate unreconstituted vials. • Administer within 6 hrs following reconstitution. • Solution should appear clear after reconstitution. Discard if cloudy or particulate forms.

INDICATIONS/ROUTES/DOSAGE

Acromegaly

Subcutaneous: ADULTS, ELDERLY: Initially, 40 mg, as a loading dose, then 10 mg daily. After 4–6 wks, adjust dosage in 5-mg increments if serum IGF-1 level is still elevated, or in 5-mg decrements if IGF-1 level has decreased below the normal range. **Maximum maintenance dose:** 30 mg daily.

Dosage in Hepatic Impairment

Baseline Hepatic Function Tests Greater Than 3 Times Upper Limit of Normal (ULN): Do not initiate without comprehensive workup to determine cause.

Hepatic Function Tests 3 Times or Greater but Less Than 5 Times ULN: Continue treatment but monitor for hepatitis, hepatic injury.

Hepatic Function Tests 5 Times or Greater or Serum Transaminase Greater Than 3 Times ULN Associated With Any Increase in Total Bilirubin: Discontinue immediately, perform comprehensive hepatic workup.

SIDE EFFECTS

Frequent (23%): Infection (cold symptoms, upper respiratory tract infection, blister, ear infection). **Occasional (8%–5%):** Back pain, dizziness, injection site reaction, peripheral edema, sinusitis, nausea. **Rare (Less Than 4%):** Diarrhea, paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS

May produce marked elevation of hepatic enzymes, including serum transaminase. Substantial weight gain occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline hepatic function tests.

INTERVENTION/EVALUATION

Monitor hepatic function tests. Monitor all pts with tumors that secrete growth hormone with periodic imaging scans of sella turcica for progressive tumor growth. Monitor diabetic pts for hypoglycemia. Obtain IGF-1 serum concentrations 4–6 wks after therapy begins and periodically thereafter; dosage adjustment based on results; dosage adjustment should not be based on growth hormone assays.

PATIENT/FAMILY TEACHING

• Routine monitoring of hepatic function tests is essential during treatment. • Contact physician if jaundice (yellowing of eyes, skin) occurs.

pemetrexed HIGH ALERT

pem-e-**trex**-ed
(Alimta)

Do not confuse pemetrexed with methotrexate or pralatrexate.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic (see p. 87C).

ACTION

Disrupts folate-dependent enzymes essential for cell replication. **Therapeutic Effect:** Inhibits growth of mesothelioma cell lines.

PHARMACOKINETICS

Protein binding: 81%. Not metabolized. Excreted in urine. **Half-life:** 3.5 hrs.

USES

Combination chemotherapy with cisplatin for treatment of malignant pleural mesothelioma. Single agent treatment of locally advanced or metastatic non–small-cell lung cancer (NSCLC) after prior chemotherapy. Initial treatment of NSCLC in combination with cisplatin. Maintenance treatment of NSCLC in those whose disease has not progressed following 4 cycles of platinum-based first-line chemotherapy. **OFF-LABEL:** Treatment of bladder, cervical, ovarian cancer; malignant pleural mesothelioma.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Breast-feeding not recommended. May cause fetal harm. Not recommended during pregnancy. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Higher incidence of fatigue, leukopenia, neutropenia, thrombocytopenia in those 65 yrs and older.

INTERACTIONS

DRUG: NSAIDs may increase concentration/effects. **Bone marrow depressants** may increase risk of myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, creatinine.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 100 mg; 500 mg.

ADMINISTRATION/HANDLING

IV Infusion

Reconstitution • Dilute 500-mg vial with 20 ml (4.2 ml to 100-mg vial) 0.9% NaCl to provide concentration of 25 mg/ml. • Gently swirl each vial until powder is completely dissolved. • Solution appears clear and ranges in color from colorless to yellow or green-yellow. • Further dilute reconstituted solution with 100 ml 0.9% NaCl.
Rate of Administration • Infuse over 10 min.
Storage • Store at room temperature. • Diluted solution is stable for up to 24 hrs at room temperature or if refrigerated.

IV INCOMPATIBILITIES

Use only 0.9% NaCl to reconstitute; flush line prior to and following infusion. Do not add any other medications to IV line.

INDICATIONS/ROUTES/DOSAGE

Refer to individual protocols.
◀ALERT▶ Pretreatment with dexamethasone (or equivalent) will reduce risk, severity of cutaneous reaction; treatment with folic acid and vitamin B_{12} beginning 1 wk before treatment and continuing for 21 days after last pemetrexed dose will reduce risk of side effects. Do not begin new treatment cycles unless ANC 1,500/mm^3 or greater, platelets 100,000/mm^3 or greater, and CrCl 45 ml/min or greater.

Malignant Pleural Mesothelioma

IV: ADULTS, ELDERLY: 500 mg/m^2 q3wks in combination with cisplatin 75 mg/m^2.

Non–Small-Cell Lung Cancer (NSCLC)

IV: ADULTS, ELDERLY: Initial treatment 500 mg/m^2 q3wks (in combination with cisplatin). Maintenance or second-line treat-

ment: 500 mg/m^2 on day 1 of each 21-day cycle (as single agent).

Dosage in Hepatic Impairment

Grade 3 ***(5.1–20 Times Upper Level Normal)*** **or Grade 4** ***(Greater Than 20 Times Upper Level Normal):*** 75% of previous dose.

SIDE EFFECTS

Frequent (12%–10%): Fatigue, nausea, vomiting, rash, desquamation. **Occasional (8%–4%):** Stomatitis, pharyngitis, diarrhea, anorexia, hypertension, chest pain. **Rare (Less Than 3%):** Constipation, depression, dysphagia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression, characterized as grade 1–4 neutropenia, thrombocytopenia, anemia, has been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy before initiating therapy (Pregnancy Category D). Breast-feeding not recommended once treatment has been initiated. Obtain CBC, serum chemistry tests before therapy and repeat throughout therapy.

INTERVENTION/EVALUATION

Monitor Hgb, Hct, WBC, platelet count, renal/hepatic function. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Assess skin for evidence of dermatologic toxicity. Keep pt well hydrated, urine alkaline. Monitor WBC count for nadir, recovery.

PATIENT/FAMILY TEACHING

• Maintain fastidious oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid crowds, those with infection. • Use contraceptive measures during therapy. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site.

penicillamine

pen-i-**sill**-ah-meen
(Cuprimine, Depen)

BLACK BOX ALERT Pt must remain under close medical supervision for signs of toxicity (fever, sore throat, chills, ecchymosis, bleeding).

Do not confuse penicillamine with penicillin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Heavy metal antagonist. **CLINICAL:** Chelating agent, anti-inflammatory.

ACTION

Chelates with lead, copper, mercury, iron to form soluble complexes; depresses circulating IgM rheumatoid factor levels; depresses T-cell activity; combines with cystine to form more soluble compound. **Therapeutic Effect:** Promotes excretion of heavy metals, acts as anti-inflammatory drug, prevents renal calculi (may dissolve existing stones).

USES

Promotes excretion of copper in treatment of Wilson's disease, decreases excretion of cystine, prevents renal calculi in cystinuria associated with nephrolithiasis. Treatment of active rheumatoid arthritis (RA) not controlled with conventional therapy. **OFF-LABEL:** Treatment of lead poisoning.

PRECAUTIONS

Contraindications: History of penicillamine-related aplastic anemia or agranulocytosis, rheumatoid arthritis with renal insufficiency, pregnancy (except for treatment of Wilson's disease), breast-feeding. **Cautions:** Elderly, debilitated, concurrent hematopoi-

etic depressant medications (e.g., immunosuppressants), renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy. Teratogenic; may cause fetal death. **Pregnancy Category D. Children:** Efficacy not established. **Elderly:** Age-related renal/hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: Iron supplements may decrease absorption. May decrease levels of **digoxin. Bone marrow depressants, gold compounds, immunosuppressants** may increase risk of adverse hematologic, renal effects. **HERBAL:** None significant. **FOOD: All foods** may decrease absorption. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules (Cuprimine): 250 mg. **Tablets (Depen):** 250 mg.

ADMINISTRATION/HANDLING

PO

• Administer 1 hr before or 2 hrs after meals, milk, other medication. • Contents of capsule may be mixed with fruit juice or pureed fruit. • For cystinuria, drink copious amounts of water.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA)

Note: Avoid use in pts with creatinine clearance 50 ml/min or less.

PO: ADULTS, ELDERLY: 125–250 mg/day. **Maximum (adults):** May increase at 1- to 3-mo intervals up to 1–1.5 g/day. **Maximum (elderly):** 750 mg/day.

◀ALERT▶ Dose more than 500 mg/day should be in divided doses.

CHILDREN YOUNGER THAN 12 YRS: Initially, 3 mg/kg/day (**maximum:** 250 mg) for 3 mos, then 6 mg/kg/day (**maximum:** 500 mg) in 2 divided doses for 3 mos. **Maximum:** 10 mg/kg/day (750 mg/day) in 3–4 divided doses.

Wilson's Disease

PO: ADULTS, CHILDREN 12 YRS AND OLDER: 750–1,500 mg/day in 4 divided doses. **Maximum:** 2 g/day. **ELDERLY:** 750 mg/day in 3–4 divided doses. **CHILDREN YOUNGER THAN 12 YRS:** 20 mg/kg/day in 2–4 doses. **Maximum:** 1 g/day.

◀ALERT▶ Dose that results in initial 24–hr urinary copper excretion greater than 2 mg/day should continue for 3 mos. Maintenance dose: less than 10 mcg serum-free copper/dl.

Cystinuria

PO: ADULTS, ELDERLY: Initially, 2 g/day in divided doses q6h. Range: 1–4 g/day. **CHILDREN:** 30 mg/kg/day in 4 divided doses. **Maximum:** 4 g/day.

◀ALERT▶ Titrate to maintain urinary cystine excretion at 100–200 mg/day.

SIDE EFFECTS

Frequent: Rash (pruritic, erythematous, maculopapular, morbilliform), reduced/altered sense of taste (hypogeusia), GI disturbances (anorexia, epigastric pain, nausea, vomiting, diarrhea), oral ulcers, glossitis. **Occasional:** Proteinuria, hematuria, hot flashes, drug-induced hyperthermia (drug fever). **Rare:** Alopecia, tinnitus, pemphigoid rash (water blisters).

ADVERSE EFFECTS/ TOXIC REACTIONS

Aplastic anemia, agranulocytosis, thrombocytopenia, leukopenia, myasthenia gravis, bronchiolitis, erythematous-like syndrome, evening hypoglycemia, skin friability at sites of pressure/trauma producing extravasation or white papules at venipuncture, surgical sites reported. Iron deficiency may develop, particularly in children, menstruating women.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Baseline CBC with differential, WBC, Hgb, platelet count should be performed before beginning therapy, q2wks thereafter

for first 6 mos, then monthly during therapy. Hepatic function tests (GGT, AST, ALT, LDH), CT scan for renal stones should also be ordered. A 2-hr interval is necessary between iron and penicillamine therapy. In event of upcoming surgery, dosage should be reduced to 250 mg/day until wound healing is complete.

INTERVENTION/EVALUATION

Encourage copious amounts of water in pts with cystinuria. Monitor WBC, differential, platelet count. If WBC less than 3,500, neutrophils less than 2,000/mm^3, monocytes more than 500/mm^3, or platelet counts less than 100,000, or if progressive fall in platelet count or WBC in 3 successive determinations noted, inform physician (drug withdrawal necessary). Assess for evidence of hematuria. Monitor urinalysis for hematuria, proteinuria (if proteinuria exceeds 1 g/24 hrs, inform physician).

PATIENT/FAMILY TEACHING

- Promptly report any missed menstrual periods/other indications of pregnancy.
- Report fever, sore throat, chills, bruising, bleeding, difficulty breathing on exertion, unexplained cough or wheezing.
- Take medication 1 hr before or 2 hrs after meals or at least 1 hr before or after any other drug, food, or milk.

P

penicillin G benzathine

pen-i-**sill**-in G **benz**-ah-theen (Bicillin LA)
Do not confuse penicillin G benzathine with penicillin G potassium.

FIXED-COMBINATION(S)

Bicillin CR: penicillin G benzathine/penicillin procaine: 600,000 units benzathine/600,000 units procaine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin.
CLINICAL: Antibiotic (see p. 28C).

ACTION

Inhibits bacterial cell wall synthesis by binding to one or more of the penicillin-binding proteins of bacteria. **Therapeutic Effect:** Bactericidal.

USES

Treatment of mild to moderate severe infections caused by organisms susceptible to low concentrations of penicillin including streptococcal (group A) upper respiratory infections, syphilis. Prophylaxis of infections caused by susceptible organisms (e.g., rheumatic fever prophylaxis).

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillin. **Cautions:** Renal/cardiac impairment, seizure disorder, hypersensitivity to cephalosporins, history of significant allergies and/or asthma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. **Pregnancy Category B. Children:** May delay renal excretion in neonates, young infants. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** increases concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause positive Coombs' test. May increase serum ALT, AST, alkaline phosphatase, LDH. May decrease WBC count.

AVAILABILITY (Rx)

Injection (Prefilled Syringe [Bicillin LA]): 600,000 units/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not give IV, intra-arterially, subcutaneously (may cause throm-

bosis, severe neurovascular damage, cardiac arrest, death).

IM

- Store in refrigerator. Do not freeze.
- Administer undiluted by deep IM injection.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IM: ADULTS, ELDERLY: 1.2–2.4 million units as single dose. **CHILDREN:** 25,000–50,000 units/kg as single dose. **Maximum:** 2.4 million units.

SIDE EFFECTS

Occasional: Lethargy, fever, dizziness, rash, pain at injection site. **Rare:** Seizures, interstitial nephritis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reactions, ranging from chills, fever, rash to anaphylaxis, may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly penicillins, cephalosporins.

INTERVENTION/EVALUATION

Monitor CBC, urinalysis, renal function tests.

penicillin G potassium

pen-i-**sill**-in G
(Crystapen, Pfizerpen)
Do not confuse penicillin with penicillamine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin.
CLINICAL: Antibiotic (see p. 28C).

ACTION

Inhibits bacterial cell wall synthesis by binding to one or more of the penicillin-binding proteins of bacteria. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Protein binding: 60%. Widely distributed (poor CNS penetration). Metabolized in liver. Primarily excreted in urine. **Half-life:** 0.5–1 hr (increased in renal impairment).

USES

Treatment of susceptible infections including sepsis, meningitis, endocarditis, pneumonia. Active against gram-positive organisms (except *S. aureus*), some gram-negative organisms (e.g., *N. gonorrhoeae*), and some anaerobes and spirochetes.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillin. **Cautions:** Renal/hepatic impairment, seizure disorder, hypersensitivity to cephalosporins.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. **Pregnancy Category B. Children:** May delay renal excretion in neonates, young infants. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Probenecid increases concentration. **HERBAL:** None significant. **FOOD: Food, milk** decrease absorption. **LAB VALUES:** May cause positive Coombs' test. May increase serum ALT, AST, alkaline phosphatase, LDH. May decrease WBC count.

AVAILABILITY (Rx)

Infusion (Premix): 1 million units/50 ml, 2 million units/50 ml, 3 million units/50 ml. **Injection, Powder for Reconstitution:** 5 million units.

ADMINISTRATION/HANDLING

IV

Reconstitution • Follow dilution guide per manufacturer. • After reconstitution, further dilute with 50–100 ml D_5W or 0.9% NaCl for final concentration of 100,000–500,000 units/ml (50,000 units/ml for infants, neonates).

Rate of Administration • Infuse over 15–60 min (15–30 min for infants, neonates).

Storage • Reconstituted solution is stable for 7 days if refrigerated.

IV INCOMPATIBILITIES

Amikacin (Amikin), aminophylline, amphotericin B, dopamine (Intropin), gentamicin, tobramycin.

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium gluconate, diltiazem (Cardizem), diphenhydramine (Benadryl), furosemide (Lasix), heparin, hydromorphone (Dilaudid), lidocaine, lipids, magnesium sulfate, methylprednisolone (Solu-Medrol), morphine, potassium chloride, total parenteral nutrition (TPN).

P

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV, IM: ADULTS, ELDERLY: 2–30 million units/day in divided doses q4–6h. **CHILDREN:** 100,000–400,000 units/kg/day in divided doses q4–6h. **NEONATES:** 50,000–450,000 units/kg/day in 2–3 divided doses.

Dosage in Renal Impairment

Dosage interval is modified based on creatinine clearance.

Creatinine Clearance	Dosage
10–30 ml/min	Usual dose q8–12h
Less than 10 ml/min	Usual dose q12–18h
Hemodialysis:	50%–100% normal dose q8–12h
Continuous renal replacement therapy	
Continuous venovenous hemofiltration:	Loading dose 4 million units, then 2 million units q4–6h
Continuous venovenous hemodialysis:	Loading dose 4 million units, then 2–3 million units q4–6h
Continuous venovenous hemodiafiltration:	Loading dose 4 million units, then 2–4 million units q4–6h

SIDE EFFECTS

Occasional: Lethargy, fever, dizziness, rash, electrolyte imbalance, diarrhea, thrombophlebitis. **Rare:** Seizures, interstitial nephritis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reactions ranging from rash, fever, chills to anaphylaxis occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly penicillins, cephalosporins.

INTERVENTION/EVALUATION

Monitor CBC, urinalysis electrolytes, renal function tests.

penicillin V potassium

TOP 200

pen-i-**sill**-in V
(Apo-Pen-VK, Novo-Pen-VK, NuPen VK)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin.
CLINICAL: Antibiotic (see p. 28C).

ACTION

Inhibits cell wall synthesis by binding to bacterial cell membranes. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: 80%. Widely distributed. Metabolized in liver. Primarily excreted in urine. **Half-life:** 1 hr (increased in renal impairment).

USES

Treatment of mild to moderate infections of respiratory tract, skin/skin structure, otitis media, necrotizing ulcerative gingivitis; prophylaxis for rheumatic fever, dental procedures.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillin. **Cautions:** Renal impairment, history of allergies (particularly cephalosporins), history of seizures.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Pregnancy Category B. Children:** Use caution in neonates and young infants (may delay renal elimination). **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: ACE inhibitors, potassium-sparing diuretics, potassium supplements may increase risk of hyperkalemia. May increase **methotrexate** concentration, toxicity. **Probenecid** may increase concentration, risk of toxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause positive Coombs' test. May increase serum ALT, AST, alkaline phosphatase, LDH. May decrease WBC count.

AVAILABILITY (Rx)

Powder for Oral Solution: 125 mg/5 ml, 250 mg/5 ml. **Tablets:** 250 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

• Give on empty stomach 1 hr before or 2 hrs after meals (increases absorption). • After reconstitution, oral solution is stable for 14 days if refrigerated. • Space doses evenly around the clock.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 125–500 mg q6–8h. **CHILDREN YOUNGER THAN 12 YRS:** 25–50 mg/kg/day in divided doses q6–8h. **Maximum:** 3 g/day.

Prophylaxis of Pneumococcal Infections, Recurrent Rheumatic Fever

PO: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 250 mg twice a day. **CHILDREN YOUNGER THAN 5 YRS:** 125 mg twice a day.

Dosage in Renal Impairment

Creatinine clearance less than 10 ml/min: 250 mg q6h.

SIDE EFFECTS

Frequent: Mild hypersensitivity reaction (chills, fever, rash), nausea, vomiting, diarrhea. **Rare:** Bleeding, allergic reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe hypersensitivity reactions, including anaphylaxis, may occur. Nephrotoxicity, antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from high dosages, prolonged therapy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly penicillins, cephalosporins.

INTERVENTION/EVALUATION

Hold medication, promptly report rash (hypersensitivity), diarrhea (with fever, abdominal pain, mucus or blood in stool may indicate antibiotic-associated colitis). Monitor I&O, urinalysis, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal change (ulceration, pain, erythema). Review Hgb levels; check for bleeding (overt/occult bleeding, ecchymosis, swelling of tissue).

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • Notify physician immediately if rash, diarrhea, bleeding, bruising, other new symptoms occur.

pentamidine

pen-**tam**-i-deen
(NebuPent, Pentam-300)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiinfective. **CLINICAL:** Antiprotozoal.

P

ACTION

Interferes with nuclear metabolism, incorporation of nucleotides, inhibiting DNA, RNA, phospholipid, protein synthesis. **Therapeutic Effect:** Produces antibacterial, antiprotozoal effects.

PHARMACOKINETICS

Well absorbed after IM administration; minimally absorbed after inhalation. Widely distributed. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 6.4–9.4 hrs (increased in renal impairment).

USES

Treatment of pneumonia caused by *Pneumocystis jiroveci* (PCP). Prevention of PCP in high-risk HIV-infected pts. **OFF-LABEL:** Treatment of African trypanosomiasis, cutaneous/visceral leishmaniasis. Prevention of PCP in non–HIV-infected pts.

PRECAUTIONS

Contraindications: None known. **Cautions:** Diabetes mellitus, renal/hepatic impairment, hypertension/hypotension, pancreatitis, anemia, thrombocytopenia, cardiac disease, hypocalcemia, congenital prolonged QT interval.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** No age-related information available.

INTERACTIONS

DRUG: **Nephrotoxic medications** may increase risk of nephrotoxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, BUN, creatinine, AST, ALT. May decrease serum calcium, magnesium. May alter serum glucose.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Pentam-300): 300 mg. **Powder for Nebulization (NebuPent):** 300 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Pt must be in supine position during IM, IV administration, with frequent B/P checks until stable (potential for life-threatening hypotensive reaction). Have resuscitative equipment immediately available.

IV

Reconstitution • For intermittent IV infusion (piggyback), reconstitute each vial with 3–5 ml D_5W or Sterile Water for Injection. • Withdraw desired dose; further dilute with 50–250 ml D_5W to concentration not to exceed 6 mg/ml.

Rate of Administration • Infuse over 60–120 min. • Do not give by IV injec-

tion or rapid IV infusion (increases potential for severe hypotension).

Storage • Store vials at room temperature. • After reconstitution, IV solution is stable for 48 hrs at room temperature (24 hrs if reconstituted with D_5W). • Discard unused portion.

IM

• Reconstitute 300-mg vial with 3 ml Sterile Water for Injection to provide concentration of 100 mg/ml. • Administer deep IM.

Aerosol (Nebulizer)

• Aerosol stable for 48 hrs at room temperature. • Reconstitute 300-mg vial with 6 ml Sterile Water for Injection. Avoid NaCl (may cause precipitate). • Do not mix with other medication in nebulizer reservoir.

IV INCOMPATIBILITIES

Cefazolin (Ancef), cefotaxime (Claforan), ceftazidime (Fortaz), ceftriaxone (Rocephin), fluconazole (Diflucan), foscarnet (Foscavir), interleukin (Proleukin).

IV COMPATIBILITIES

Diltiazem (Cardizem), total parenteral nutrition (TPN), zidovudine (Retrovir).

INDICATIONS/ROUTES/DOSAGE

Treatment of *Pneumocystis Jiroveci* Pneumonia (PCP)

IV, IM: ADULTS, ELDERLY, CHILDREN: 4 mg/kg/day once daily for 14–21 days.

Prevention of PCP

Inhalation: ADULTS, ELDERLY, CHILDREN: 300 mg once q4wks.

SIDE EFFECTS

Frequent: Injection (Greater Than 10%): Abscess, pain at injection site. **Inhalation (Greater Than 5%):** Fatigue, metallic taste, shortness of breath, decreased appetite, dizziness, rash, cough, nausea, vomiting, chills. **Occasional: Injection (10%–1%):** Nausea, decreased appetite, hypotension, fever, rash, altered taste, confusion. **Inhalation (5%–1%):** Diarrhea, headache, anemia, muscle pain. **Rare: Injection (less than 1%):** Neuralgia, thrombocytopenia, phlebitis, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Life-threatening/fatal hypotension, arrhythmias, hypoglycemia, leukopenia, nephrotoxicity, renal failure, anaphylactic shock, Stevens-Johnson syndrome, toxic epidural necrolysis occur rarely. Hyperglycemia, insulin-dependent diabetes mellitus (often permanent) may occur even mos after therapy has stopped.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Avoid concurrent use of nephrotoxic drugs. Establish baseline for B/P, serum glucose. Obtain specimens for diagnostic tests before giving first dose.

INTERVENTION/EVALUATION

Monitor B/P during administration until stable for both IM and IV administration (pt should remain supine). Check serum glucose levels; observe for clinical signs of hypoglycemia (diaphoresis, anxiety, tremor, tachycardia, palpitations, lightheadedness, headache, numbness of lips, double vision, incoordination), hyperglycemia (polyuria, polyphagia, polydipsia, malaise, visual changes, abdominal pain, headache, nausea/vomiting). Evaluate IM sites for pain, redness, induration; IV sites for phlebitis (heat, pain, red streaking over vein). Monitor renal, hepatic, hematology test results. Assess skin for rash. Evaluate equilibrium during ambulation. Be alert for respiratory difficulty when administering by inhalation route.

PATIENT/FAMILY TEACHING

• Remain flat in bed during administration of medication; get up slowly with assistance only when B/P stable. • Notify physician immediately of diaphoresis, shakiness, light-headedness, palpita-

P

tions. • Drowsiness, increased urination, thirst, anorexia may develop in mos following therapy. • Maintain adequate fluid intake. • Inform physician if fever, cough, shortness of breath occurs. • Avoid alcohol.

pentoxifylline

pen-tox-ih-**fye**-leen
(Albert, Apo-Pentoxifylline SR, Trental)
Do not confuse pentoxifylline with tamoxifen, or Trental with Bentyl, Tegretol, or Trandate.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Hemorheologic agent. **CLINICAL:** Hemorheologic.

ACTION

Alters flexibility of RBCs; inhibits production of tumor necrosis factor (TNF), neutrophil activation, platelet aggregation. **Therapeutic Effect:** Reduces blood viscosity, improves blood flow.

PHARMACOKINETICS

Well absorbed after PO administration. Undergoes first-pass metabolism in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 24–48 min; metabolite, 60–90 min.

USES

Symptomatic treatment of intermittent claudication associated with occlusive peripheral vascular disease, diabetic angiopathies. **OFF-LABEL:** Venous leg ulcers.

PRECAUTIONS

Contraindications: History of intolerance to xanthine derivatives, such as caffeine, theophylline, theobromine; recent cerebral/retinal hemorrhage. **Cautions:** Renal impairment, elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase effects of **antihypertensives, warfarin, oral hypoglycemic agents.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Controlled-Release [Trental]): 400 mg.

ADMINISTRATION/HANDLING

PO

• Do not break, crush, dissolve, or divide controlled-release tablets. • Give with meals to avoid GI upset.

INDICATIONS/ROUTES/DOSAGE

Intermittent Claudication

PO: ADULTS, ELDERLY: 400 mg 3 times daily. Decrease to 400 mg twice daily if adverse GI, CNS effects occur. Continue therapy for at least 8 wks.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
10–50 ml/min	400 mg q12–24h
Less than 10 ml/min	400 mg q24h

SIDE EFFECTS

Occasional (5%–2%): Dizziness, nausea, altered taste, dyspepsia (heartburn, epigastric pain, indigestion). **Rare (Less Than 2%):** Rash, pruritus, anorexia, constipation, dry mouth, blurred vision, edema, nasal congestion, anxiety.

ADVERSE EFFECTS/ TOXIC REACTIONS

Angina, chest pain occur rarely; may be accompanied by palpitations, tachycardia, arrhythmias. Signs/symptoms of overdose (flushing, hypotension, nervousness, agitation, hand tremor, fever, drowsiness) appear 4–5 hrs after ingestion, may last up to 12 hrs.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Assess for hand tremor. Monitor for relief of symptoms of intermittent claudication (pain, aching, cramping in calf muscles, buttocks, thigh, feet). Symptoms generally occur while walking/exercising and not at rest or with weight bearing in absence of walking/exercising.

PATIENT/FAMILY TEACHING

• Therapeutic effect generally noted in 2–4 wks. • Avoid tasks requiring alertness, motor skills until response to drug is established. • Do not smoke (causes constriction, occlusion of peripheral blood vessels). • Limit caffeine.

perampanel

per-**am**-pa-nel
(Fycompa)

BLACK BOX ALERT Risk for serious neuropsychiatric events, including irritability, aggression, anger, anxiety, paranoia, euphoric mood, agitation, mental status changes. Some of these events reported as serious and life-threatening. Violent thoughts or threatening behavior were also observed. Alert immediately if changes in mood or behavior that are not typical for the patient are observed. Health care professionals should closely monitor patients during titration period when higher doses are used.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Noncompetitive AMPA glutamate receptive antagonist. **CLINICAL:** Anticonvulsant.

ACTION

Non-competitive antagonist of AMPA glutamate receptors, a primary excitatory neurotransmitter on post-synaptic neurons. **Therapeutic Effect:** Reduces neuronal over excitation.

PHARMACOKINETICS

Rapidly, completely absorbed. Peak concentration: 0.5–2.5 hrs. Protein binding: 95%–96%. Steady-state levels reached in 2–3 wks. Extensively metabolized via oxidation/glucuronidation. Excreted mainly in feces, with a lesser amount eliminated in urine. **Half-life:** 105 hrs.

USES

Adjunctive treatment of partial-onset seizures with or without secondary generalized seizures in those with epilepsy age 12 yrs and older.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, elderly (increased falls, dizziness, gait disturbances), breast-feeding, pts at risk for suicidal behavior.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Use caution when breast-feeding. **Pregnancy Category C. Children:** Safety and efficacy not established in children less than 12 years of age. **Elderly:** Owing to greater likelihood for adverse reactions in the elderly, dosing titration should proceed very slowly.

INTERACTIONS

DRUG: Concurrent use with **CYP450 inducers (e.g., carbamazepine, oxcarbazepine, phenytoin)** decreases

P

concentration/effects. May decrease effectiveness of **hormonal contraceptives containing levonorgestrel. Alcohol, other CNS depressants** may increase CNS depression. **HERBAL: St. John's wort, kava kava, valerian** may increase CNS depression. **Evening primrose** may decrease seizure threshold. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets, Film-Coated: 2 mg, 4 mg, 6 mg, 8 mg, 10 mg, 12 mg.

ADMINISTRATION/HANDLING

PO

• Give at bedtime. • Swallow tablet whole; do not break, crush, dissolve, or divide tablet.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Initial starting dose should be increased when enzyme-inducing anticonvulsants are given concurrently. Individual dosing based on clinical response, tolerability. Do not use in severe hepatic/renal impairment, pts on hemodialysis.

P

Partial-Onset Seizures in Absence of an Enzyme-Inducing Anticonvulsant

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: Initially, 2 mg once daily at bedtime. May titrate in 2-mg increments at weekly intervals (in elderly, no more frequently than every 2 wks). **Maximum:** 4–8 mg.

Partial-Onset Seizures (Concurrently Taking an Enzyme-Inducing Anticonvulsant)

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: Initially, 4 mg once daily at bedtime. May titrate in 2-mg increments at weekly intervals (in elderly, no more frequently than every 2 wks). **Maximum:** 4–12 mg.

Mild to Moderate Hepatic Impairment

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 2 mg once daily with weekly increase of 2 mg daily every 2 wks until target dose is achieved. **Maximum (mild hepatic impairment):** 6 mg. **Maximum (moderate hepatic impairment):** 4 mg.

SIDE EFFECTS

Frequent (32%–11%): Dizziness, sleepiness, headache. **Occasional (8%–3%):** Fatigue, irritability, nausea, balance disorder, weight gain, gait disturbance, vertigo, blurred vision, vomiting, arthralgia, anxiety. **Rare (2%–1%):** Constipation, back pain, extremity pain, asthenia (lack of strength, energy), oropharyngeal pain, aggression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Irritability, aggression, anger, anxiety, affect lability, agitation occurred rarely (2%). Increased risk for seizures when anticonvulsants are withdrawn abruptly.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Initiate seizure precautions. Obtain medication history (esp. use of other anticonvulsant therapy; dosage based on concurrent seizure medication). Observe clinically. Provide safety precautions, quiet, dark environment. Assist with ambulation until response to drug is established (32% experience dizziness).

INTERVENTION/EVALUATION

Assess mental status, cognitive abilities, behavioral changes. Monitor for clinical response, tolerability to medication, dosing level during treatment and for at least 1 mo after last therapy dose. Report persistent, severe, or worsening psychiatric symptoms or behaviors. Assess for clinical improvement (decrease in intensity, frequency of seizures).

PATIENT/FAMILY TEACHING

• Avoid alcohol (greater risk for adverse effects). • The combination of alcohol and perampanel may significantly worsen mood, increase anger. • Counsel pts, families, and caregivers of need to monitor for emergence of anger, aggression, hostility, unusual changes in mental status. • Avoid tasks that require alertness, motor skills until response to drug is established (greater risk for dizziness, sleepiness).

pertuzumab

per-**tue**-zue-mab
(Perjeta)

BLACK BOX ALERT Can result in embryo-fetal death, birth defects. Pts must be made aware of danger to fetus, need for effective contraception.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: HER2 receptor antagonist. **CLINICAL:** Antineoplastic (see p. 87C).

ACTION

Targets human epidermal growth factor 2 (HER2), blocking ligand-initiated intercellular signaling which can result in cell growth arrest and cell death. **Therapeutic Effect:** Inhibits proliferation of human tumor cells.

PHARMACOKINETICS

Peak plasma concentration reached after first maintenance dose. **Half-life:** 18 days.

USES

Used in combination with trastuzumab and docetaxel for treatment of pts with *HER2*-positive metastatic breast cancer who have not received prior anti-*HER2* therapy or chemotherapy for metastatic disease.

PRECAUTIONS

Contraindications: None known. **Cautions:** Conditions that may impair left ventricular function (e.g., uncontrolled hypertension, recent MI, severe cardiac arrhythmia), history of sensitivity to medication, history of infusion-related reaction.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause embryo-fetal harm. Must use effective contraception in addition to barrier methods. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Injection Solution: 420 mg/14 ml (30 mg/ml) vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Withdraw ordered volume of solution from vial. • Dilute into 250 ml 0.9% NaCl only (do not use D_5W). • Gently invert solution (do not shake). • Once diluted, use immediately or refrigerate for up to 24 hrs.
Rate of Administration • Initial dose to be infused over 60 min. • Subsequent doses may be infused over 30–60 min.
Storage • Refrigerate vials. Store vials in outside cartons (protects from light). • Do not use if solution appears cloudy or contains particulate.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Give as an IV infusion only. Do not give by IV push or bolus. If diluted

P

solution is not used immediately, may refrigerate for up to 24 hrs.

Breast Carcinoma

IV Infusion: ADULTS/ELDERLY: Initially, 840 mg given over 60 min, followed every 3 wks thereafter by 420 mg given as a 30–60 min infusion.

Concurrent Dose With Trastuzumab

IV Infusion: ADULTS/ELDERLY: Initially, trastuzumab is given at 8 mg/kg over 90 min, followed every 3 wks thereafter by 6 mg/kg given as a 30- to 90-min infusion.

Concurrent Dose With Docetaxel

IV Infusion: ADULTS/ELDERLY: Initially, docetaxel is given at 75 mg/m^2. Dose may be escalated to 100 mg/m^2 every 3 wks if initial dose is well tolerated.

SIDE EFFECTS

Frequent (67%–21%): Diarrhea (67%), alopecia (60%), nausea (42%), fatigue, rash, peripheral neuropathy, anorexia, asthenia (loss of strength, energy), mucosal inflammation, vomiting, peripheral edema, myalgia, nail disorder, headache. **Occasional (19%–12%):** Stomatitis, pyrexia, dysgeusia (abnormal taste sensation [metallic, sour, sweet, salty, bitter]), arthralgia, constipation, increased lacrimation, pruritus, insomnia, dizziness. **Rare (10%–7%):** Nasopharyngitis, dry skin, paronychia (inflammation of folds around skin of nails).

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia occurs in 53% of pts, anemia occurs in 23%, and leucopenia occurs in 18%. Upper respiratory tract infection occurs in 17% of pts. Dyspnea, febrile neutropenia occurs in 14% of pts. Pleural effusion occurs in 5%, left ventricular dysfunction occurs in 4%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Negative pregnancy test must be confirmed before initiating treatment (Pregnancy Category D). Obtain *HER2* testing by an FDA-approved laboratory. Assess daily serum blood chemistries, CBC. Monitor daily ANC.

INTERVENTION/EVALUATION

Monitor left ventricular ejection fraction (LVEF) and withhold dosing as ordered. Assess skin, IV site for infusion-associated reactions, hypersensitivity reactions, anaphylaxis. If a significant infusion-associated reaction occurs, slow or interrupt infusion and administer appropriate medical treatment. If a reaction is noted, the most common is pyrexia. Chills, fatigue, headache, asthenia, or vomiting usually occurs during the infusion or on the same day as the infusion. Observe pt closely for 60 min after the first infusion and for 30 min after subsequent infusions. Offer antiemetics if nausea occurs.

PATIENT/FAMILY TEACHING

• Avoid pregnancy. • Use effective contraceptive measures, including barrier precautions during treatment and for 6 mos after treatment is completed in women of childbearing potential. • If pregnancy occurs, inform physician immediately. • Do not breast-feed.

P

phenazopyridine

fen-**ay**-zoe-**pir**-i-deen
(Azo-Gesic, Azo-Standard, Phenazo, Pyridium, Uristat)
Do not confuse phenazopyridine with pyridoxine, or Pyridium with Dyrenium.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Interstitial cystitis agent. **CLINICAL:** Urinary tract analgesic.

ACTION

Exerts topical analgesic effect on urinary tract mucosa. **Therapeutic Effect:** Re-

lieves urinary pain, burning, urgency, frequency.

PHARMACOKINETICS

Well absorbed from GI tract. Partially metabolized in liver. Primarily excreted in urine. **Half-life:** Unknown.

USES

Symptomatic relief of pain, burning, urgency, frequency resulting from lower urinary tract mucosa irritation (may be caused by infection, trauma, surgery).

PRECAUTIONS

Contraindications: Hepatic insufficiency, renal insufficiency (creatinine clearance less than 50 ml/min). **Cautions:** Renal impairment (creatinine clearance 50–80 ml/min).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted in those older than 6 yrs. **Elderly:** Age-related renal impairment may increase toxicity.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May interfere with urinalysis tests based on color reactions (e.g., urinary glucose, ketones, protein, 17-ketosteroids).

AVAILABILITY (Rx)

Tablets: (Azo-Gesic, Azo-Standard, Uristat): 95 mg. **(Pyridium):** 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

- Give with meals.

INDICATIONS/ROUTES/DOSAGE

Urinary Analgesic

PO: ADULTS: (PYRIDIUM): 100–200 mg 3–4 times a day. **(AZO-STANDARD):** 95–190 mg 3 times a day. **CHILDREN 6 YRS AND OLDER:** 12 mg/kg/day in 3 divided doses for 2 days.

Dosage in Renal Impairment

Dosage interval is modified based on creatinine clearance.

Creatinine Clearance	Dosage
50–80 ml/min	Usual dose q8–16h
Less than 50 ml/min	Avoid use

SIDE EFFECTS

Occasional: Headache, GI disturbance, rash, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose in pts with renal impairment, severe hypersensitivity may lead to hemolytic anemia, nephrotoxicity, hepatotoxicity. Methemoglobinemia generally occurs as result of massive, acute overdose.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess pt for dysuria, urinary urgency or frequency.

INTERVENTION/EVALUATION

Monitor for therapeutic response: relief of dysuria (pain, burning), urgency, frequency of urination.

PATIENT/FAMILY TEACHING

- Reddish orange discoloration of urine should be expected.
- May stain fabric.
- Take with meals (reduces possibility of GI upset).

phenelzine

fen-el-zeen
(Nardil)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse phenelzine with phenytoin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: MAOI.
CLINICAL: Antidepressant (see p. 38C).

ACTION

Inhibits activity of the enzyme monoamine oxidase at CNS storage sites, leading to increased levels of epinephrine, norepinephrine, serotonin, dopamine at neuronal receptor sites. **Therapeutic Effect:** Relieves depression.

USES

Treatment of depression refractory to other antidepressants, electroconvulsive therapy.

PRECAUTIONS

Contraindications: CHF, hepatic/renal impairment, pheochromocytoma. Concurrent use of sympathomimetics, CNS depressants, foods high in tyramine content, cyclobenzaprine, dextromethorphan, meperidine, bupropion, buspirone. **Cautions:** Cardiac arrhythmias, severe/frequent headaches, hypertension, cardiovascular/cerebrovascular disease, suicidal tendencies, glaucoma, hyperthyroidism, seizure disorder.

P

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Minimally distributed in breast milk. **Pregnancy Category C. Children:** Not recommended for children (increased risk of suicidal ideation). **Elderly:** Increased risk of drug toxicity may require dosage adjustment.

INTERACTIONS

DRUG: Fluoxetine, trazodone, paroxetine, citalopram, venlafaxine, tricyclic antidepressants may cause serotonin syndrome. **HERBAL: Valerian, St. John's wort, SAMe, kava kava** may increase risk of serotonin syndrome. **FOOD: Caffeine, chocolate, tyramine-containing foods** may cause sudden, severe hypertension. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 15 mg.

ADMINISTRATION/HANDLING

PO

• Store tablets at room temperature. • Give with food, milk if GI distress occurs. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: 15 mg 3 times daily. May increase to 60–90 mg/day. **ELDERLY:** Initially, 7.5 mg/day. May increase by 7.5–15 mg/day q3–4days up to 60 mg/day in 3–4 divided doses.

SIDE EFFECTS

Frequent: Orthostatic hypotension, restlessness, GI upset, insomnia, dizziness, headache, lethargy, asthenia (loss of strength, energy), dry mouth, peripheral edema. **Occasional:** Flushing, diaphoresis, rash, urinary frequency, increased appetite, transient impotence. **Rare:** Visual disturbances.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypertensive crisis occurs rarely, marked by severe hypertension, occipital headache radiating frontally, neck stiffness/soreness, nausea, vomiting, diaphoresis, fever, chills, clammy skin, dilated pupils, palpitations, tachycardia or bradycardia, constricting chest pain. **Antidote for hypertensive crisis:** 5–10 mg phentolamine IV.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Periodic hepatic function tests should be performed for pts requiring high dosage who are undergoing prolonged therapy.

INTERVENTION/EVALUATION

Assess appearance, behavior, speech pattern, level of interest, mood. Monitor for suicidal ideation, worsening depression. Monitor for occipital headache radiating frontally and/or neck stiffness/soreness

(may be first signal of impending hypertensive crisis). Monitor B/P, heart rate, diet, weight.

PATIENT/FAMILY TEACHING

• Notify physician if depression worsens, suicidal ideation, or unusual changes in behavior occur. • Antidepressant relief may be noted during first wk of therapy; maximum benefit noted in 2–6 wks. • Report headache, neck stiffness/soreness immediately. • Avoid foods that require bacteria/molds for their preparation/preservation or those that contain tyramine (e.g., cheese, sour cream, beer, wine, figs, raisins, bananas, avocados, soy sauce, yeast extracts, yogurt, papaya, broad beans, meat tenderizers), excessive amounts of caffeine (coffee, tea, chocolate), OTC preparations for hay fever, colds, weight reduction.

phenobarbital

fee-noe-**bar**-bih-tahl
(Luminal)
Do not confuse phenobarbital with Phenergan or phenytoin.

FIXED-COMBINATION(S)

Bellergal-S: phenobarbital/ergotamine/belladonna (an anticholinergic): 40 mg/0.6 mg/0.2 mg. **Dilantin with PB:** phenobarbital/phenytoin (an anticonvulsant): 15 mg/100 mg, 30 mg/100 mg. **Donnatal:** phenobarbital/atropine (an anticholinergic)/hyoscyamine (an anticholinergic)/scopolamine (an anticholinergic): 16.2 mg/0.0194 mg/0.1037 mg/0.0065 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Barbiturate **(Schedule IV). CLINICAL:** Anticonvulsant, hypnotic (see p. 35C).

ACTION

Enhances activity of gamma-aminobutyric acid (GABA) by binding to GABA receptor complex. **Therapeutic Effect:** Depresses CNS activity.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	20–60 min	N/A	6–10 hrs
IV	5 min	30 min	4–10 hrs

Well absorbed after PO, parenteral administration. Protein binding: 20%–45%. Rapidly and widely distributed. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 53–140 hrs.

USES

Management of generalized tonic-clonic (grand mal) seizures, partial seizures, control of acute seizure episodes (status epilepticus, eclampsia, febrile seizures). Used as sedative, hypnotic. **OFF-LABEL:** Prevention/treatment of neonatal hyperbilirubinemia and lowering of bilirubin in chronic cholestasis; neonatal seizures.

PRECAUTIONS

Contraindications: Hypersensitivity to other barbiturates, porphyria, preexisting CNS depression, severe uncontrolled pain, severe respiratory disease with dyspnea or obstruction, use in nephritic pts. **Cautions:** Renal/hepatic impairment, acute/chronic pain, depression, suicidal tendencies, history of drug abuse.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Produces respiratory depression in neonates during labor. May cause postpartum hemorrhage, hemorrhagic disease in newborn. Withdrawal symptoms may appear in neonates born to women receiving barbiturates during last trimester of pregnancy. Lowers serum bilirubin in neonates. **Pregnancy Category D. Children:** May cause paradoxical excitement. **Elderly:** May exhibit excitement, confusion, mental depression.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase effects. May decrease effects of **warfarin, oral contraceptives. Valproic acid** may increase concentration, risk of toxicity. **HERBAL:** **Evening primrose** may decrease seizure threshold. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May decrease serum bilirubin. **Therapeutic serum level:** 10–40 mcg/ml; **toxic serum level:** greater than 40 mcg/ml.

AVAILABILITY (Rx)

Elixir: 20 mg/5 ml. **Injection, Solution:** 65 mg/ml, 130 mg/ml. **Tablets:** 15 mg, 30 mg, 60 mg, 100 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • May give undiluted or may dilute with NaCl, D_5W, lactated Ringer's.

Rate of Administration • Adequately hydrate pt before and immediately after drug therapy (decreases risk of adverse renal effects). • Do not inject IV faster than 1 mg/kg/min and maximum of 30 mg/min for children and 60 mg/min for adults. Too-rapid IV may produce severe hypotension, marked respiratory depression. • Inadvertent intra-arterial injection may result in arterial spasm with severe pain, tissue necrosis. Extravasation in subcutaneous tissue may produce redness, tenderness, tissue necrosis. If this occurs, treat with 0.5% procaine solution into affected area, apply moist heat.

Storage • Store vials at room temperature.

IM

• Do not inject more than 5 ml in any one IM injection site (produces tissue irritation). • Inject deep IM into large muscle mass.

PO

• Give without regard to meals. • Tablets may be crushed. • Elixir may be mixed with water, milk, fruit juice.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), hydrocortisone (SoluCortef), hydromorphone (Dilaudid), insulin, lipids.

IV COMPATIBILITIES

Calcium gluconate, enalapril (Vasotec), fentanyl (Sublimaze), fosphenytoin (Cerebyx), morphine, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Status Epilepticus

IV: ADULTS, ELDERLY: 10–20 mg/kg. May repeat dose in 20-min intervals. **Maximum total dose:** 30 mg/kg. **CHILDREN, INFANTS:** 15–20 mg/kg (**maximum:** 1,000 mg). May repeat q15–30min until seizures controlled or total dose of 40 mg/kg administered.

Seizure Control

PO, IV: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 1–3 mg/kg/day or 50–100 mg 2–3 times daily. **CHILDREN 6–12 YRS:** 4–6 mg/kg/day. **CHILDREN 1–5 YRS:** 6–8 mg/kg/day. **CHILDREN YOUNGER THAN 1 YR:** 5–6 mg/kg/day. **NEONATES:** 3–4 mg/kg/day.

Sedation

PO, IM: ADULTS, ELDERLY: 30–120 mg/day in 2–3 divided doses.
PO: CHILDREN: 2 mg/kg 3 times daily.

SIDE EFFECTS

Occasional (3%–1%): Drowsiness. **Rare (less than 1%):** Confusion, paradoxical CNS reactions (hyperactivity, anxiety in children; excitement, restlessness in elderly, generally noted during first 2 wks of therapy, particularly in presence of uncontrolled pain).

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal after prolonged therapy may produce increased dreaming, nightmares, insomnia, tremor, diaphoresis, vomiting, hallucinations, delirium, seizures, status epilepticus. Skin eruptions appear as hypersensitivity reaction. Blood dyscrasias, hepatic disease, hypocalcemia occur rarely. Overdose produces cold/clammy skin, hypothermia, severe CNS depression, cyanosis, tachycardia, Cheyne-Stokes respirations. Toxicity may result in severe renal impairment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations immediately before administration. **Hypnotic:** Raise bed rails, provide environment conducive to sleep (back rub, quiet environment, low lighting). **Seizures:** Review history of seizure disorder (length, presence of auras, LOC). Observe frequently for recurrence of seizure activity. Initiate seizure precautions.

INTERVENTION/EVALUATION

Monitor CNS status, seizure activity, hepatic/renal function, respiratory rate, heart rate, B/P. Monitor for therapeutic serum level. **Therapeutic serum level:** 10–40 mcg/ml; **toxic serum level:** greater than 40 mcg/ml.

PATIENT/FAMILY TEACHING

• Avoid alcohol, limit caffeine. • May be habit forming. • Do not discontinue abruptly. • May cause dizziness/drowsiness; impair ability to perform tasks requiring mental alertness, coordination.

phentolamine

fen-**tol**-a-meen
(OraVerse, Regitine ✱, Rogitine ✱)
Do not confuse phentolamine with Ventolin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha-adrenergic blocking agent. **CLINICAL:** Antihypertensive agent.

ACTION

Blocks presynaptic ($alpha_2$), postsynaptic ($alpha_1$) adrenergic receptors, acting on arterial tree, venous bed. **Therapeutic Effect:** Decreases total peripheral resistance, diminishes venous return to heart.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IM	15–20 min	20 min	30–45 min
IV	Immediate	2 min	15–30 min

Metabolized in liver. Excreted in urine. **Half-life:** 19 min.

USES

Diagnosis of pheochromocytoma. Control/prevention of hypertensive episodes in pts with pheochromocytoma immediately before, during surgical excision. Prevention/treatment of dermal necrosis, sloughing after IV administration of alpha-adrenergic drugs (e.g., norepinephrine/dopamine). **OFF-LABEL:** Pralidoxime-induced hypertension.

PRECAUTIONS

Contraindications: Renal impairment; coronary or cerebral arteriosclerosis; concurrent use of sildenafil, tadalafil, or vardenafil. **Cautions:** Gastritis, peptic ulcer, history of arrhythmias, MI.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL: Yohimbe** may decrease effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 5-mg vials. **Injection Solution (OraVerse):** 0.4 mg/1.7 ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Maintain pt in supine position (preferably in quiet, darkened room) during pheochromocytoma testing. Decrease in B/P generally noted in less than 2 min.

IV

Reconstitution • Reconstitute 5-mg vial with 1 ml Sterile Water for Injection to provide concentration of 5 mg/ml.
Rate of Administration • Pheochromocytoma: Inject each 5 mg over 1 min. Monitor B/P immediately after injection, q30sec for 3 min, then q60sec for 7 min.
Storage • Store vials at room temperature. • After reconstitution, stable for 48 hrs at room temperature or 1 wk if refrigerated.

IV INCOMPATIBILITIES

None known.

IV COMPATIBILITIES

Amiodarone (Cordarone), dobutamine (Dobutrex), verapamil (Calan), papaverine.

INDICATIONS/ROUTES/DOSAGE

Diagnosis of Pheochromocytoma

IM, IV: ADULTS, ELDERLY: 5 mg. **CHILDREN:** 0.05–0.1 mg/kg/dose. **Maximum:** 5 mg.

Control/Prevention of Hypertension in Pheochromocytoma

IV: ADULTS, ELDERLY: 5 mg 1–2 hrs before surgery. May repeat q2–4h. **CHILDREN:** 0.05–0.1 mg/kg/dose 1–2 hrs before surgery. May repeat q2–4h. **Maximum single dose:** 5 mg.

Prevention/Treatment of Tissue Necrosis/Sloughing

ADULTS, ELDERLY: Infiltrate area with 1 ml of solution (reconstituted by diluting 5–10 mg in 0.9% NaCl) within 12 hrs of extravasation. Infiltrate with multiple small injections using only 27- or 30-gauge needles; change needles between each skin entry. **CHILDREN:** 0.1–0.2 mg/kg diluted in 10 ml 0.9% NaCl infiltrated into area of extravasation within 12 hrs. If dose is effective, normal skin color should return within 1 hr. **Maximum:** 0.1–0.2 mg/kg or 5 mg total.

SIDE EFFECTS

Occasional (3%–2%): Weakness, dizziness, flushing, nausea, vomiting, diarrhea, orthostatic hypotension.

ADVERSE EFFECTS/TOXIC REACTIONS

Tachycardia, arrhythmias, acute/prolonged hypotension may occur. Do not use epinephrine (will produce further drop in B/P).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Positive pheochromocytoma test indicated by decrease in B/P greater than 35 mm Hg systolic, greater than 25 mm Hg diastolic pressure. Negative test indicated by no change in B/P or elevation of B/P. B/P generally returns to baseline within 15–30 min following administration.

INTERVENTION/EVALUATION

Monitor B/P, heart rate. Assess for orthostatic hypotension. Monitor for extravasation (skin color streaking).

phenylephrine HIGH ALERT

fen-el-**eff**-rin
(AK-Dilate, Mydfrin, Neo-Synephrine, Sudafed PE)

BLACK BOX ALERT Intravenous use should be administered by adequately trained individuals familiar with its use.
Do not confuse Mydrin with Midrin, or Sudafed PE with Sudafed.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic, alpha-receptor stimulant. **CLINICAL:** Nasal decongestant, mydriatic, vasopressor (see p. 4C, 158C).

ACTION

Acts on alpha-adrenergic receptors of vascular smooth muscle. Causes vasoconstriction of arterioles of nasal mucosa/conjunctiva, activates dilator muscle of pupil, causing contraction, producing systemic arterial vasoconstriction. **Therapeutic Effect:** Decreases mucosal blood flow, relieves congestion. Increases systolic B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	Immediate	N/A	15–20 min
IM	10–15 min	N/A	0.5–2 hrs
Subcutaneous	10–15 min	N/A	1 hr

Minimal absorption after intranasal, ophthalmic administration. Metabolized in liver, GI tract. Primarily excreted in urine. **Half-life:** 2.5 hrs.

USES

Nasal decongestant: Topical application to nasal mucosa reduces nasal secretion, promoting drainage of sinus secretions. **Ophthalmic:** Topical application to conjunctiva relieves congestion, itching, minor irritation; whitens sclera of eye. **Parenteral:** Vascular failure in shock, supraventricular tachycardia, hypotension.

PRECAUTIONS

Contraindications: Acute pancreatitis, heart disease, hepatitis, narrow-angle glaucoma, pheochromocytoma, severe hypertension, thrombosis, asthma, ventricular tachycardia, MAOIs within 2 wks. **Cautions:** Hyperthyroidism, bradycardia, partial heart block, severe arteriosclerosis, myocardial disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** May exhibit increased absorption, toxicity with nasal preparation. No age-related precautions noted with systemic use. **Elderly:** More likely to experience adverse effects.

INTERACTIONS

DRUG: MAOIs may increase vasopressor effects. **Tricyclic antidepressants** may increase cardiovascular effects. **HERBAL: Ephedra, yohimbe** may increase CNS stimulation. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Injection, Solution: 1% (10 mg/ml). **Solution, Nasal Drops (Neo-Synephrine):** 0.125%, 0.25%. **Solution, Nasal Spray (Neo-Synephrine):** 0.25%, 0.5%, 1%. **Solution, Ophthalmic (AK-Dilate, Mydfrin, Neo-Synephrine):** 0.12%, 2.5%, 10%. **Tablets (Sudafed PE):** 10 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV push, dilute 1 ml of 10 mg/ml solution with 9 ml Sterile Water for Injection to provide concentration of 1 mg/ml. • For IV infusion, dilute with 0.9% NaCl or D_5W. Usual concentration: 20–60 mcg/ml.

Rate of Administration • For IV push, give over 20–30 sec. • For IV infusion, give as per physician order.

Storage • Store vials at room temperature.

Nasal

• Instruct pt to blow nose prior to administering medication. • With head tilted back, apply drops in 1 nostril. Wait 5 min before applying drops in other nostril. • Sprays should be administered into each nostril with head erect. • Pt should sniff briskly while squeezing container, then wait 3–5 min before blowing nose gently. • Rinse tip of spray bottle.

P

Ophthalmic

• Instruct pt to tilt head backward, look up. • Gently pull lower lid down to form pouch, then instill medication. • Do not touch tip of applicator to lids or any surface. • When lower lid is released, have pt keep eye open without blinking for at least 30 sec. • Apply gentle finger pressure to lacrimal sac (bridge of nose, inside corner of eye) for 1–2 min. • Remove excess solution around eye with tissue. • Wash hands immediately to remove medication on hands.

IV INCOMPATIBILITY

Thiopentothal (Pentothal).

IV COMPATIBILITIES

Amiodarone (Cordarone), dobutamine (Dobutrex), lidocaine, potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Nasal Decongestant

Intranasal: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 1–2 drops or 1–2 sprays of 0.25%–0.5% solution into each nostril q4h as needed. **CHILDREN 6–11 YRS:** 1–2 drops or 1–2 sprays of 0.25% solution into each nostril q4h as needed. **CHILDREN 2–5 YRS:** 1 drop of 0.125% solution (dilute 0.5% solution with 0.9% NaCl to achieve 0.125%) in each nostril. Repeat q2–4h as needed. Do not use for more than 3 days.

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: (SUDAFED PE): 10–20 mg q12h. **CHILDREN 6–12 YRS: (SUDAFED PE):** 5–10 mg q12h.

Conjunctival Congestion, Itching, Minor Irritation

Ophthalmic: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 1–2 drops of 0.12% solution q3–4h.

Hypotension, Shock

IV Bolus: ADULTS, ELDERLY: 0.1–0.5 mg/dose q10–15min as needed. **CHILDREN:** 5–20 mcg/kg/dose q10–15min.

IV Infusion: ADULTS, ELDERLY: 100–180 mcg/min or 0.5 mcg/kg/min. Titrate to desired response. When B/P is stabilized, maintenance rate: 0.4–9.1 mcg/kg/min. **CHILDREN:** 0.1–0.5 mcg/kg/min. Titrate to desired effect.

SIDE EFFECTS

Frequent: Nasal: Rebound nasal congestion due to overuse, esp. when used longer than 3 days. **Occasional:** Mild CNS stimulation (restlessness, nervousness, tremors, headache, insomnia, particularly in those hypersensitive to sympathomimetics, such as elderly pts). **Nasal:** Stinging, burning, drying of nasal mucosa. **Ophthalmic:** Transient burning/stinging, brow ache, blurred vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Large doses may produce tachycardia, palpitations (particularly in those with cardiac disease), light-headedness, nausea, vomiting. Overdose in those older than 60 yrs may result in hallucinations, CNS depression, seizures. Prolonged nasal use may produce chronic swelling of nasal mucosa, rhinitis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If phenylephrine 10% ophthalmic is instilled into denuded/damaged corneal epithelium, corneal clouding may result.

INTERVENTION/EVALUATION

Monitor B/P, heart rate. For severe hypotension or shock states, monitor arterial blood gas, central venous pressure.

PATIENT/FAMILY TEACHING

• Discontinue drug if adverse reactions occur. • Do not use for nasal decongestion for longer than 5 days (rebound congestion). • Discontinue drug if insomnia, dizziness, weakness, tremor, palpitations occur. • **Nasal:** Stinging/burning of nasal mucosa may occur. • **Ophthalmic:** Blurring of vision with eye instillation gen-

erally subsides with continued therapy. • Discontinue medication if redness/swelling of eyelids, itching occurs.

phenytoin

TOP 200

fen-ih-toyn
(Dilantin, Phenytek)

BLACK BOX ALERT Do not exceed IV rate of 50 mg/min in adults and 1–3 mg/kg/min in neonates.

Do not confuse Dilantin with Dilaudid or diltiazem, or phenytoin with phenelzine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydantoin. **CLINICAL:** Anticonvulsant, antiarrhythmic (see p. 35C).

ACTION

Anticonvulsant: Stabilizes neuronal membranes in motor cortex. **Therapeutic Effect:** Limits spread of seizure activity. Stabilizes threshold against hyperexcitability. Decreases post-tetanic potentiation, repetitive discharge.

PHARMACOKINETICS

Slowly, variably absorbed after PO administration. Protein binding: 90%–95%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 7–42 hrs.

USES

PO: Management of generalized tonic-clonic seizures (grand mal), complex partial seizures, status epilepticus. Prevention of seizures following head trauma/neurosurgery. **IV:** Management of status epilepticus, prevention and treatment of seizures occurring during neurosurgery. **OFF-LABEL:** Simple partial seizures, ventricular arrhythmias, epidermolysis bullosa.

PRECAUTIONS

Contraindications: Hypersensitivity to hydantoins, second- and third-degree AV block, sinoatrial block, sinus bradycardia. **Cautions:** Porphyria, renal/hepatic impairment, increased risk of suicidal behavior/thoughts, elderly/debilitated pts, low serum albumin.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in small amount in breast milk. Fetal hydantoin syndrome (craniofacial abnormalities, nail/digital hypoplasia, prenatal growth deficiency) has been reported. Increased frequency of seizures in pregnant women due to altered absorption of metabolism of phenytoin. May increase risk of hemorrhage in neonate, maternal bleeding during delivery. **Pregnancy Category D. Children:** More susceptible to gingival hyperplasia, coarsening of facial hair; excess body hair. **Elderly:** No age-related precautions noted but lower dosages recommended.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depression. **Amiodarone, cimetidine, disulfiram, fluoxetine, isoniazid, sulfonamides** may increase concentration/effects, risk of toxicity. **Calcium-containing antacids** may decrease absorption. May decrease effects of **glucocorticoids, anticoagulants, oral contraceptives. Lidocaine, propranolol** may increase cardiac depressant effects. **Valproic acid** may decrease metabolism, increase concentration. May increase metabolism, decrease effect of **xanthines. HERBAL: Evening primrose** may decrease seizure threshold. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, GGT, alkaline phosphatase. **Therapeutic serum level:** 10–20 mcg/ml; **toxic serum level:** greater than 20 mcg/ml.

P

AVAILABILITY (Rx)

Capsules, Extended-Release (Dilantin): 30 mg, 100 mg. **(Phenytek):** 200 mg, 300 mg. **Injection, Solution (Dilantin):** 50 mg/ml. **Suspension, Oral (Dilantin):** 100 mg/4 ml, 125 mg/5 ml. **Tablets, Chewable (Dilantin):** 50 mg.

ADMINISTRATION/HANDLING

IV

ALERT Give by IV push or IV piggyback. IV push very painful (chemical irritation of vein due to alkalinity of solution). To minimize effect, flush vein with sterile saline solution through same IV needle and catheter after each IV push.

Reconstitution • May give undiluted or may dilute with 0.9% NaCl to a concentration of 1–10 mg/ml.

Rate of Administration • Administer 50 mg over 2–3 min for elderly. In neonates, administer at rate not exceeding 1–3 mg/kg/min. • Severe hypotension, cardiovascular collapse occur if rate of IV injection exceeds 50 mg/min for adults. • IV toxicity characterized by CNS depression, cardiovascular collapse.

Storage • Precipitate may form if parenteral form is refrigerated (will dissolve at room temperature). • Slight yellow discoloration of parenteral form does not affect potency, but do not use if solution is cloudy or precipitate forms. Discard if not used within 4 hrs of preparation.

PO

• Give with food if GI distress occurs. • Tablets may be chewed. • Shake oral suspension well before using. • Separate administration of phenytoin with antacids or tube feeding by 2 hrs.

IV INCOMPATIBILITIES

Diltiazem (Cardizem), dobutamine (Dobutrex), enalapril (Vasotec), heparin, hydromorphone (Dilaudid), insulin, lidocaine, morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Status Epilepticus

IV: ADULTS, ELDERLY, CHILDREN: Loading dose: 15–20 mg/kg. Maintenance dose: 300 mg/day or 4–6 mg/kg/day in 2–3 divided doses for adults and elderly; 5 mg/kg/day in 2–3 divided doses for infants/children. Usual doses: 6–7 mg/kg/day for children 10–16 yrs; 7–8 mg/kg/day for children 7–9 yrs; 7.5–9 mg/kg/day for children 4–6 yrs; 8–10 mg/kg/day for children 6 mos–3 yrs. **NEONATES:** Loading dose: 15–20 mg/kg. Maintenance dose: 5–8 mg/kg/day.

Seizure Control

PO: ADULTS, ELDERLY, CHILDREN: Loading dose: 15–20 mg/kg in 3 divided doses 2–4 hrs apart. Maintenance dose: Same as for status epilepticus.

SIDE EFFECTS

Frequent: Drowsiness, lethargy, confusion, slurred speech, irritability, gingival hyperplasia, hypersensitivity reaction (fever, rash, lymphadenopathy), constipation, dizziness, nausea. **Occasional:** Headache, hirsutism, coarsening of facial features, insomnia, muscle twitching.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal may precipitate status epilepticus. Blood dyscrasias, lymphadenopathy, osteomalacia (due to interference of vitamin D metabolism) may occur. Toxic phenytoin blood concentration (25 mcg/ml or more) may produce ataxia (muscular incoordination), nystagmus (rhythmic oscillation of eyes), diplopia. As level increases, extreme lethargy to comatose state occurs.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Anticonvulsant: Review history of seizure disorder (intensity, frequency, duration, LOC). Initiate seizure precautions. Hepatic function tests, CBC, platelet count should be performed before beginning

therapy and periodically during therapy. Repeat CBC, platelet count 2 wks following initiation of therapy and 2 wks following administration of maintenance dose.

INTERVENTION/EVALUATION

Observe frequently for recurrence of seizure activity. Assess for clinical improvement (decrease in intensity/frequency of seizures). Monitor for signs/symptoms of depression, suicidal tendencies, unusual behavior. Monitor CBC with differential, hepatic/renal function tests, B/P (with IV use). Assist with ambulation if drowsiness, lethargy occurs. Monitor for therapeutic serum level (10–20 mcg/ml). **Therapeutic serum level:** 10–20 mcg/ml; **toxic serum level:** greater than 20 mcg/ml.

PATIENT/FAMILY TEACHING

• Pain may occur with IV injection. • To prevent gingival hyperplasia (bleeding, tenderness, swelling of gums), maintain good oral hygiene, gum massage, regular dental visits. • CBC should be performed every mo for 1 yr after maintenance dose is established and q3mos thereafter. • Report sore throat, fever, glandular swelling, skin reaction (hematologic toxicity). • Drowsiness usually diminishes with continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not abruptly withdraw medication after long-term use (may precipitate seizures). • Strict maintenance of drug therapy is essential for seizure control, arrhythmias. • Avoid alcohol. • Report any unusual changes in behavior.

phosphates

fos-fates
(Fleet Enema, Fleet Phospho-Soda, K-Phos MF, K-Phos Neutral, Uro-KP-Neutral)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Electrolyte supplement. **CLINICAL:** Mineral.

ACTION

Active in bone deposition, calcium metabolism, utilization of B complex vitamins. Acts as buffers in maintaining acid-base balance. Exerts osmotic effect in small intestine. **Therapeutic Effect:** Corrects hypophosphatemia, acidifies urine, prevents calcium deposits in urinary tract, promotes peristalsis in GI tract.

PHARMACOKINETICS

Poorly absorbed after PO administration. PO form excreted in feces; IV form excreted in urine.

USES

Short-term prevention and treatment of hypophosphatemia. Short-term treatment of constipation, for evacuation of colon for exams.

PRECAUTIONS

Contraindications: Abdominal pain/cramps, severe tissue trama, CHF, hyperkalemia, hypernatremia, hyperphosphatemia, hypocalcemia, hypomagnesemia, paralytic ileus, phosphate renal calculi, severe renal impairment. **Cautions:** Renal impairment, concomitant use of potassium-sparing drugs, adrenal insufficiency, cirrhosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Increased risk of dehydration in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: ACE inhibitors, NSAIDs, potassium-containing medications, potassium-sparing diuretics, salt substitutes containing potassium phosphate may increase serum potassium. **Antacids** may decrease absorp-

tion. **Calcium-containing medications** may increase risk of calcium deposition in soft tissues, decrease phosphate absorption. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Potassium Phosphate): 3 mmol phosphate and 4.4 mEq potassium per ml. **Injection Solution (Sodium Phosphate):** 3 mmol phosphate and 4 mEq sodium per ml. **Tablets:** 125 mg (4 mmol) phosphate, 250 mg (8 mmol) phosphate (K-Phos MF, K-Phos Neutral, Uro-KP-Neutral).

ADMINISTRATION/HANDLING

IV

Reconstitution • Must be diluted. Soluble in all commonly used IV solutions.
Rate of Administration • Infuse over minimum of 4 hrs (usually over 6 hrs). Maximum rate: 0.06 mmol/kg/hr.
Storage • Store at room temperature.

PO

• Give with food and full glass of water (decreases GI upset). • Maintain high fluid intake (prevents kidney stones).

P

IV INCOMPATIBILITY

Dobutamine (Dobutrex).

IV COMPATIBILITIES

Diltiazem (Cardizem), enalapril (Vasotec), famotidine (Pepcid), magnesium sulfate, metoclopramide (Reglan).

INDICATIONS/ROUTES/DOSAGE

Hypophosphatemia
PO *(K-Phos MF, K-Phos Neutral, Uro-KP-Neutral)*: ADULTS, ELDERLY: 50–150 mmol/day. **CHILDREN:** 2–3 mmol/kg/day.
IV: ADULTS, ELDERLY, CHILDREN: 0.08–1 mmol/kg.

SIDE EFFECTS

Frequent: Mild laxative effect (in first few days of therapy). **Occasional:** Diarrhea, nausea, abdominal pain, vomiting. **Rare:** Headache, dizziness, confusion, heaviness of lower extremities, fatigue, muscle cramps, paresthesia, peripheral edema, arrhythmias, weight gain, thirst.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hyperphosphatemia may produce extraskeletal calcification.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Routinely monitor serum calcium, phosphorus, potassium, sodium, AST, ALT, alkaline phosphatase, bilirubin.

PATIENT/FAMILY TEACHING

• Report diarrhea, nausea, vomiting.

pimecrolimus

pim-eh-**kroe**-li-mus
(Elidel)

BLACK BOX ALERT Rare cases of lymphoma, skin malignancy have occurred. Use only for short-term, intermittent treatment using minimum amount needed. Not recommended in children younger than 2 yrs.

Do not confuse Elidel with Elavil, or pimecrolimus with tacrolimus.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunomodulator. **CLINICAL:** Anti-inflammatory.

ACTION

Inhibits release of cytokine, an enzyme that produces an inflammatory reaction. **Therapeutic Effect:** Produces anti-inflammatory activity.

USES

Treatment of mild to moderate atopic dermatitis (eczema).

PRECAUTIONS

Contraindications: Active cutaneous viral infection, application on malignant or premalignant skin conditions. **Cautions:** Immunocompromised pts.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Embryotoxic. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** May be used in those 2 yrs and older. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Topical: 1% cream.

INDICATIONS/ROUTES/DOSAGE

Atopic Dermatitis (Eczema)

Topical: ADULTS, ELDERLY, CHILDREN 2–17 YRS: Apply to affected area twice daily. Rub in gently, completely. Reevaluate if symptoms persist for more than 6 wks.

SIDE EFFECTS

Rare: Transient sensation of burning/feeling of heat at application site.

ADVERSE EFFECTS/ TOXIC REACTIONS

Lymphadenopathy, phototoxicity occur rarely.

NURSING CONSIDERATIONS

PATIENT/FAMILY TEACHING

• Wash hands after application. • May cause mild to moderate feeling of warmth, sensation of burning at application site. • Inform physician if application site reaction is severe or lasts for longer than 1 wk. • Avoid exposure to sunlight, artificial sunlight, tanning beds. • Contact physician if no improvement in atopic dermatitis is seen following 6 wks of treatment or if condition worsens.

pioglitazone

TOP 200 HIGH ALERT

pie-oh-**glit**-ah-zone
(Actos, Apo-Pioglitazone, Novo-Pioglitazone)

BLACK BOX ALERT May cause or exacerbate CHF.

Do not confuse Actos with Actidose or Actonel.

FIXED-COMBINATION(S)

Actoplus Met: pioglitazone/metformin (an antidiabetic): 15 mg/500 mg, 15 mg/850 mg. **Duetact:** pioglitazone/glimepiride (an antidiabetic): 30 mg/2 mg, 30 mg/4 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thiazolidinedione antidiabetic. **CLINICAL:** Antidiabetic (see p. 44C).

ACTION

Improves target-cell response to insulin without increasing pancreatic insulin secretion. Decreases hepatic glucose output, increases insulin-dependent glucose utilization in skeletal muscle. **Therapeutic Effect:** Lowers serum glucose concentration.

PHARMACOKINETICS

Rapidly absorbed. Highly protein bound (99%), primarily to albumin. Metabolized in liver. Excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 16–24 hrs.

USES

Adjunct to diet, exercise to lower serum glucose in those with type 2 non–insulin-dependent diabetes mellitus (NIDDM). Used as monotherapy or in combination with sulfonylurea, metformin, or insulin to improve glycemic control.

PRECAUTIONS

Contraindications: NYHA class III/IV heart failure (at initiation of therapy). **Cautions:** Hepatic impairment, elevated transami-

nases, active liver disease, edematous pts, anemia, preexisting macular edema, diabetic retinopathy. For premenopausal, anovulatory women may result in ovulation resumption, increase risk of pregnancy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Not recommended in pregnant or breast-feeding women. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP2C8 inhibitors (e.g., **gemfibrozil**) may increase concentration/effects. **CYP2C8 inducers** (e.g., **rifampin**) may decrease concentration. **HERBAL: Garlic, ginger, ginseng** may cause hypoglycemia. **FOOD:** None known. **LAB VALUES:** May increase serum creatine kinase (CK). May decrease Hgb (by 2%–4%). May increase serum alkaline phosphatase, bilirubin, ALT. Less than 1% of pts experience ALT values 3 times the normal level.

AVAILABILITY (Rx)

Tablets: 15 mg, 30 mg, 45 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus, Combination Therapy

PO: ADULTS, ELDERLY: With insulin: Initially, 15–30 mg once a day. Initially, continue current insulin dosage, then decrease insulin dosage by 10%–25% if hypoglycemia occurs or plasma glucose level decreases to less than 100 mg/dl. **Maximum:** 45 mg/day. **With sulfonylureas:** Initially, 15–30 mg/day. Decrease sulfonylurea dosage if hypoglycemia occurs. **With metformin:** Initially, 15–30 mg/day.

Monotherapy

PO: ADULTS, ELDERLY: Monotherapy is not to be used if pt is well controlled with diet and exercise alone. Initially, 15–30 mg/day. May increase dosage in increments until 45 mg/day is reached.

Dosage Adjustment in CHF

PO: ADULTS, ELDERLY: Initially, 15 mg once a day. May increase after several mos of treatment.

SIDE EFFECTS

Frequent (13%–9%): Headache, upper respiratory tract infection. **Occasional (6%–5%):** Sinusitis, myalgia, pharyngitis, aggravated diabetes mellitus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity occurs rarely. May cause/worsen macular edema. Increased risk of CHF. May increase risk of fractures. Pts with ischemic heart disease are at high risk of MI.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline chemistries, esp. hepatic enzyme levels, before initiating therapy and periodically thereafter.

INTERVENTION/EVALUATION

Monitor serum glucose, Hgb A_{1c}, hepatic function tests, esp. AST, ALT. Assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, numbness in mouth, hunger, diplopia), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep rapid breathing). Be alert to conditions that alter serum glucose requirements: fever, increased activity, trauma, stress, surgical procedures. Monitor for signs/symptoms of CHF.

PATIENT/FAMILY TEACHING

- Be alert for signs/symptoms of hypoglycemia and take measures to manage it. • Avoid alcohol. • Inform

physician of chest pain, palpitations, abdominal pain, fever, rash, hypoglycemic reactions, yellowing of skin/eyes, dark urine, light stool, nausea, vomiting. • Report any change in vision. • Report rapid weight gain, edema, difficulty breathing. • Ensure follow-up instruction if pt, family do not thoroughly understand diabetes management, glucose-testing technique.

piperacillin sodium/tazobactam sodium

TOP 200

pye-per-a-**sil**-in/tay-zoe-**bak**-tam
(Tazocin, Zosyn)
Do not confuse Zosyn with Zofran or Zyvox.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin.
CLINICAL: Antibiotic (see p. 29C).

ACTION

Piperacillin: Inhibits cell wall synthesis by binding to bacterial cell membranes. **Therapeutic Effect:** Bactericidal. **Tazobactam:** Inactivates bacterial beta-lactamase. **Therapeutic Effect:** Protects piperacillin from enzymatic degradation, extends its spectrum of activity, prevents bacterial overgrowth.

PHARMACOKINETICS

Protein binding: 16%–30%. Widely distributed. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 0.7–1.2 hrs (increased in hepatic cirrhosis, renal impairment).

USES

Treatment of appendicitis (complicated by rupture, abscess); peritonitis; uncomplicated and complicated skin/skin structure infections, including cellulitis, cutaneous abscesses, ischemic/diabetic foot infections; postpartum endometritis; pelvic inflammatory disease (PID); community-acquired pneumonia (moderate severity only); moderate to severe nosocomial pneumonia. Tazobactam expands, piperacillin activity to include beta-lactamase-producing strains of *S. aureus, H. influenzae, Bacteroides*. **OFF-LABEL:** Treatment of UTI, bone and joint infections, septicemia, endocarditis, cystic fibrosis exacerbations.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillin. **Cautions:** History of allergies (esp. cephalosporins, other drugs), renal impairment, preexisting seizure disorder.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Pregnancy Category B. Children:** Dosage not established for those younger than 12 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Concurrent use of **aminoglycosides** may cause mutual inactivation (must give at least 1 hr apart). May increase concentration, toxicity of **methotrexate. Probenecid** may increase concentration, risk of toxicity. High-dose piperacillin may increase risk of bleeding with **heparin, NSAIDs, platelet inhibitors, thrombolytic agents, warfarin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum sodium, alkaline phosphatase, bilirubin, LDH, AST, ALT, BUN, creatinine, PT, PTT. May decrease serum potassium. May cause positive Coombs' test.

AVAILABILITY (Rx)

◀ALERT▶ Piperacillin/tazobactam is a combination product in an 8:1 ratio of piperacillin to tazobactam. **Injection**

P

Powder: 2.25 g, 3.375 g, 4.5 g. **Premix Ready to Use:** 2.25 g (50 ml), 3.375 g (50 ml), 4.5 g (100 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 1 g with 5 ml D_5W or 0.9% NaCl. Shake vigorously to dissolve. • Further dilute with at least 50 ml D_5W or 0.9% NaCl.
Rate of Administration • Infuse over 30 min. Expanded infusion over 3–4 hrs.
Storage • Reconstituted vial is stable for 24 hrs at room temperature or 48 hrs if refrigerated. • After further dilution, stable for 24 hrs at room temperature or 7 days if refrigerated.

IV INCOMPATIBILITIES

Amphotericin B (Fungizone), amphotericin B complex (Abelcet, AmBisome, Amphotec), chlorpromazine (Thorazine), dacarbazine (DTIC), daunorubicin (Cerubidine), dobutamine (Dobutrex), doxorubicin (Adriamycin), doxorubicin liposomal (Doxil), droperidol (Inapsine), famotidine (Pepcid), haloperidol (Haldol), hydroxyzine (Vistaril), idarubicin (Idamycin), minocycline (Minocin), nalbuphine (Nubain), prochlorperazine (Compazine), promethazine (Phenergan), vancomycin (Vancocin).

IV COMPATIBILITIES

Aminophylline, bumetanide (Bumex), calcium gluconate, diphenhydramine (Benadryl), dopamine (Intropin), enalapril (Vasotec), furosemide (Lasix), granisetron (Kytril), heparin, hydrocortisone (Solu-Cortef), hydromorphone (Dilaudid), lipids, lorazepam (Ativan), magnesium sulfate, methylprednisolone (Solu-Medrol), metoclopramide (Reglan), morphine, ondansetron (Zofran), potassium chloride, total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Severe Infections

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 4 g/0.5 g q6–8h or 3 g/0.375 g q6h. **Maximum:** 18 g/2.25 g daily. **CHILDREN 9 MOS AND OLDER AND 40 KG OR LESS:** 100 mg piperacillin component/kg/dose q8h. **CHILDREN 2–8 MOS:** 80 mg piperacillin component/kg/dose q8h. **NEONATES:** 75 mg piperacillin component/kg/dose q6–12h.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine Clearance	Dosage
20–40 ml/min	2.25 g q6h (3.375 g q6h for nosocomial pneumonia)
Less than 20 ml/min	2.25 g q8h (2.25 g q6h for nosocomial pneumonia)

Dosage for Hemodialysis

IV: ADULTS, ELDERLY: 2.25 g q8–12h with additional dose of 0.75 g after each dialysis session.

Dosage for CRRT

CVVH	2.25–3.375 g q6–8h
CVVHD	2.25–3.375 g q6h
CVVHDF	3.375 g q6h

SIDE EFFECTS

Frequent: Diarrhea, headache, constipation, nausea, insomnia, rash. **Occasional:** Vomiting, dyspepsia (heartburn, indigestion, epigastric pain), pruritus, fever, agitation, candidiasis, dizziness, abdominal pain, edema, anxiety, dyspnea, rhinitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Overdose, more often with renal impairment, may produce seizures, neurologic reactions. Severe hypersensitivity reactions, including anaphylaxis, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to penicillins, cephalosporins.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency; mild GI effects may be tolerable, but increasing severity may indicate onset of antibiotic-associated colitis. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor I&O, urinalysis. Monitor serum electrolytes, esp. potassium, renal function tests.

piroxicam

peer-**ox**-i-kam
(Apo-Piroxicam, Feldene, Novo-Pirocam, Pexi-cam)

BLACK BOX ALERT May increase risk of serious, potentially fatal cardiovascular thrombotic events, MI, stroke. Increased risk of serious GI events (bleeding, ulceration, perforation).

Do not confuse Feldene with fluoxetine, or piroxicam with paroxetine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: Anti-inflammatory, analgesic (see p. 129C).

ACTION

Produces analgesic, anti-inflammatory effects by inhibiting prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	3–5 hrs	—

Well absorbed following PO administration. Protein binding: 99%. Extensively metabolized in liver. Primarily excreted in urine; small amount eliminated in feces. **Half-life:** 50 hrs.

USES

Symptomatic treatment of acute or chronic rheumatoid arthritis (RA), osteoarthritis. **OFF-LABEL:** Treatment of acute gouty arthritis, ankylosing spondylitis, dysmenorrhea.

PRECAUTIONS

Contraindications: Perioperative pain in setting of CABG surgery, history of hypersensitivity to aspirin/NSAIDs. **Cautions:** Advanced renal disease, decreased hepatic function, asthma, coagulation disorders, concomitant use of anticoagulants.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closing of ductus arteriosus). **Pregnancy Category C (D if used in third trimester or near delivery). Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may increase risk of hepatotoxicity, renal toxicity; reduced dosage recommended. More likely to have serious adverse effects with GI bleeding/ulceration.

INTERACTIONS

DRUG: May decrease effects of **antihypertensives, diuretics. Aspirin, other salicylates** may increase risk of GI side effects, bleeding. May increase effects of **heparin, oral anticoagulants, thrombolytics.** May increase concentration, risk of toxicity of **lithium.** May increase risk of **methotrexate** toxicity. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, horse chestnut, red clover** possess antiplatelet activity, may increase risk of bleeding. **St. John's wort** may increase risk of phototoxicity. **FOOD:** None known.

LAB VALUES: May increase BUN, serum creatinine, LDH, alkaline phosphatase, AST, ALT. May decrease serum uric acid, Hgb, Hct, platelets, leukocytes.

AVAILABILITY (Rx)

Capsules: 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

• Do not crush/break capsules. • May give with food, milk, antacids if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA), Osteoarthritis

PO: ADULTS, ELDERLY: Initially, 10–20 mg/day as a single dose or in divided doses. Some pts may require up to 30–40 mg/day. **CHILDREN:** 0.2–0.3 mg/kg/day. **Maximum:** 15 mg/day.

SIDE EFFECTS

Frequent (9%–4%): Dyspepsia (heartburn, indigestion, epigastric pain), nausea, dizziness. **Occasional (3%–1%):** Diarrhea, constipation, abdominal cramps/pain, flatulence, stomatitis. **Rare (less than 1%):** Hypertension, urticaria, dysuria, ecchymosis, blurred vision, insomnia, phototoxicity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Peptic ulcer, GI bleeding, gastritis, severe hepatic reaction (cholestasis, jaundice) occur rarely. Nephrotoxicity (dysuria, hematuria, proteinuria, nephrotic syndrome), hematologic toxicity (anemia, leukopenia, eosinophilia, thrombocytopenia), severe hypersensitivity reaction (fever, chills, bronchospasm) occur rarely with long-term treatment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor for evidence of nausea, GI distress. Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Monitor CBC, renal/hepatic function tests.

PATIENT/FAMILY TEACHING

• Avoid aspirin, alcohol during therapy (increases risk of GI bleeding). • If GI upset occurs, take with food, milk, antacids. • Avoid tasks that require alertness until response to drug is established.

pitavastatin

pit-a-va-**stat**-in
(Livalo)
Do not confuse pitavastatin with atorvastatin, lovastatin, pravastatin, or simvastatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: HMG-CoA reductase inhibitor. **CLINICAL:** Antihyperlipidemic (see p. 58C).

ACTION

Interferes with cholesterol biosynthesis by inhibiting conversion of HMG-CoA reductase to a precursor to cholesterol. **Therapeutic Effect:** Lowers total cholesterol, LDL cholesterol, apolipoprotein B (Apo B), plasma triglycerides; increases HDL cholesterol.

PHARMACOKINETICS

Poorly absorbed from GI tract. Protein binding: greater than 99%. Metabolized in liver (minimal active metabolites). Primarily excreted in feces via biliary system. **Half-life:** 12 hrs.

USES

Reduces elevated total cholesterol, low-density lipoproteins (LDLs), apolipopro-

tein B, triglycerides; increases low high-density lipoproteins (HDLs) in primary hyperlipidemia and mixed dyslipidemia.

PRECAUTIONS

Contraindications: Active hepatic disease or unexplained, persistent elevations of hepatic function tests; concurrent cyclosporine use, pregnancy, breast-feeding. **Cautions:** History of hepatic disease, substantial alcohol consumption, moderate renal impairment. Withholding/discontinuing pitavastatin may be necessary when pt at risk for renal failure. Pts at risk for myopathy: advanced age, renal impairment, inadequately treated hypothyroidism.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (suppression of cholesterol biosynthesis may cause fetal toxicity) and lactation. Unknown if drug is distributed in breast milk (risk of serious adverse reactions in nursing infants). **Pregnancy Category X. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS:

DRUG: Increased risk of rhabdomyolysis, acute renal failure with **gemfibrozil, niacin, other fibrates. Cyclosporine, erythromycin, rifampin** significantly increase serum pitavastatin levels. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatine kinase (CPK), AST, ALT concentrations.

AVAILABILITY (Rx)

Tablets: 1 mg, 2 mg, 4 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals or time of day.

INDICATIONS/ROUTES/DOSAGE

◄ALERT► Before initiating therapy, pt should be on standard cholesterol-lowering diet for minimum of 3–6 mos. Continue diet throughout pitavastatin therapy.

Usual Dosage

PO: ADULTS: Initially, 2 mg/day. **Maximum:** 4 mg/day. Range: 1–4 mg/day. Dosage with erythromycin: 1 mg/day; with rifampin: 2 mg/day.

Dosage in Renal Impairment

CrCl 15–59 or end-stage renal disease in those on hemodialysis. Initially, 1 mg/day. **Maximum:** 2 mg/day. Severe renal disease not on hemodialysis: Not recommended.

SIDE EFFECTS

Generally well tolerated. Side effects usually mild and transient. **Rare (Less Than 4%):** Myalgia, constipation/diarrhea, back/extremity pain, arthralgia, headache, nasopharyngitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity (rash, pruritus, urticaria) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy before initiating therapy (Pregnancy Category X). Assess baseline lab results: cholesterol, triglycerides, hepatic function tests.

INTERVENTION/EVALUATION

Monitor cholesterol and triglyceride lab results for therapeutic response. Monitor hepatic function tests. Monitor daily pattern of bowel activity, stool consistency. Check for myalgia, arthralgia, headache. Assess for rash, pruritus. Be alert for malaise, muscle cramping/weakness.

PATIENT/FAMILY TEACHING

• Follow special diet (important part of treatment). • Periodic lab tests are essential part of therapy. • Report promptly any muscle pain/weakness. • Use nonhormonal contraception.

plerixafor

pler-**ix**-ah-for
(Mozobil)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Chemokine receptor inhibitor. **CLINICAL:** Hematopoietic stem cell mobilizer.

ACTION

Immobilizes hematopoietic stem cells in bone marrow. Once in the marrow, acts to help anchor these cells to marrow matrix through induction of adhesion molecules. **Therapeutic Effect:** Results in leukocytosis, elevation in circulating hematopoietic progenitor cells in peripheral blood system.

PHARMACOKINETICS

Readily absorbed after subcutaneous administration. Generally confines to extravascular fluid space. Protein binding: 58%. Peak plasma concentration: 30–60 min. Eliminated in urine. Clearance reduced with renal impairment. **Half-life:** 3–5 hrs.

P

USES

Indicated in combination with granulocyte colony-stimulating factor (G-CSF) to mobilize stem cells to peripheral blood for collection and transplantation in pts with non-Hodgkin's lymphoma and multiple myeloma.

PRECAUTIONS

Contraindications: None known. **Cautions:** Avoid use in leukemic pts, in pts with neutrophil count greater than 50,000/mm^3, those with renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Potential for teratogenic effects. May cause fetal harm. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase WBC count. May decrease platelet count.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml (1.2-ml vial).

ADMINISTRATION/HANDLING

Subcutaneous

• Aspirate syringe before injection (avoid intra-arterial administration).

Storage • Store at room temperature. • Discard if particulate matter is present or if solution is discolored. • Use single-dose vial; discard unused drug.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Begin therapy after pt has received daily morning doses of G-CSF, 10 mcg/kg once daily for 4 days prior to the first evening dose of plerixafor and approximately 11 hrs prior to initiation of apheresis for up to 4 consecutive days.

Daily Dosage

Subcutaneous: ADULTS, ELDERLY: 0.24 mg/kg using following formula: 0.012 × pt's actual body weight (in kg) = volume to be administered (in ml). **Maximum:** 40 mg/day.

Moderate to Severe Renal Impairment (Creatinine Clearance Equal to or Less Than 50 ml/min):

Subcutaneous: ADULTS, ELDERLY: Decrease dose by one-third to 0.16 mg/kg, not to exceed 27 mg/day.

SIDE EFFECTS

Frequent (37%–22%): Diarrhea, nausea, injection site irritation, fatigue, headache. **Occasional (13%–7%):** Arthralgia, dizziness, vomiting, insomnia, flatulence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombocytopenia may occur. Dyspnea, hypoxia, vasovagal reaction, periorbital

edema, urticaria have been noted; may resolve spontaneously, generally responds to antihistamines, corticosteroids.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC should be obtained before initiation of therapy as baseline.

INTERVENTION/EVALUATION

Monitor WBC, platelet count during therapy. Assess for potential systemic reaction (periorbital edema, dyspnea, urticaria), orthostatic hypotension during or shortly after injection. Advise female pt with reproductive potential to use effective contraceptive method (Pregnancy Category D).

PATIENT/FAMILY TEACHING

• Manage gastrointestinal disorders; inform physician if severe diarrhea, nausea, vomiting occur. • Report upper quadrant pain or scapular/shoulder pain.

polyethylene glycol (MiraLax)

TOP 200

polyethylene glycol-electrolyte solution (PEG-ES)

poly-**eth**-ah-leen **glye**-col
(CoLyte, GoLYTELY, Klean-Prep, NuLytely, Peglyte, TriLyte)
Do not confuse MiraLax with Mirapex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Laxative.
CLINICAL: Bowel evacuant (see p. 122C).

ACTION

Osmotic effect. **Therapeutic Effect:** Induces diarrhea, cleanses bowel without depleting electrolytes.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (bowel cleansing)	1–2 hrs	N/A	N/A
PO (constipation)	2–4 days	N/A	N/A

USES

Polyethylene glycol-electrolyte solution: Bowel cleansing before GI examination, colon surgery. **MiraLax:** Treatment of occasional constipation.

PRECAUTIONS

Contraindications: Bowel perforation, gastric retention, GI obstruction, megacolon, toxic colitis, toxic ileus. **Cautions:** Ulcerative colitis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease absorption of **oral medications** if given within 1 hr (may be flushed from GI tract). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Powder for Oral Solution: (CoLyte, GoLYTELY, MiraLax, NuLytely, TriLyte).

ADMINISTRATION/HANDLING

PO

Polyethylene glycol-electrolyte solution

• Refrigerate reconstituted solutions; use within 48 hrs. • May use tap water to prepare solution. Shake vigorously for several min to ensure complete

dissolution of powder. • Fasting should occur for more than 3 hrs prior to ingestion of solution (always avoid solid food less than 2 hrs prior to administration). • Only clear liquids permitted after administration. • May give via NG tube. • Rapid drinking preferred. Chilled solution is more palatable.

Polyethylene glycol

• Add to 4- to 8-oz beverage.

INDICATIONS/ROUTES/DOSAGE

Bowel Evacuant

PO: ADULTS, ELDERLY: Before GI examination: 240 ml (8 oz) q10min until 4 liters consumed or rectal effluent clear. NG tube: 20–30 ml/min until 4 liters given. **CHILDREN:** 25–40 ml/kg/hr until rectal effluent clear.

Constipation

PO *(Miralax)*: ADULTS: 17 g or 1 heaping tbsp a day. **CHILDREN 6 MOS AND OLDER:** 0.5–1.5 g/kg/day. **Maximum:** 17 g/day.

SIDE EFFECTS

Frequent (50%): Some degree of abdominal fullness, nausea, bloating. **Occasional (10%–1%):** Abdominal cramping, vomiting, anal irritation. **Rare (less than 1%):** Urticaria, rhinorrhea, dermatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Do not give oral medication within 1 hr of start of therapy (may not adequately be absorbed before GI cleansing).

INTERVENTION/EVALUATION

Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency; record time of evacuation. Assess for abdominal disturbances. Monitor serum electrolytes, BUN, glucose, urine osmolality.

PATIENT/FAMILY TEACHING

• May take 2–4 days to produce a bowel movement. • Report unusual cramps, bloating, diarrhea.

ponatinib

poe-**na**-ti-nib
(Iclusig)

BLACK BOX ALERT Cardiovascular, cerebrovascular, peripheral vascular thrombosis including fatal stroke and MI reported in 8% of pts. Hepatotoxicity, including fatal hepatic failure, occurred during treatment.

Do not confuse ponatinib with bosutinib, axitinib, dasatinib, geftinib, imatinib, nilotinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

ACTION

Inhibits Bcr-Abl tyrosine kinase, a translocation-created enzyme, created by the Philadelphia chromosome (Ph+) abnormality noted in chronic myelogenous leukemia (CML). Inhibits Abl and T3151-mutant Bcr-Abl. **Therapeutic Effect:** Inhibits tumor cell growth and proliferation in chronic, accelerated, or blast phase CML.

PHARMACOKINETICS

Well absorbed following PO administration. Metabolized in liver. Protein binding: 99%. Peak concentration: 6 hrs. Eliminated primarily in feces. **Half life:** 24 hrs.

USES

Treatment of chronic, accelerated, or blast phase chronic myeloid leukemia (CML) or Ph+ acute lymphoblastic leukemia (Ph^+ ALL) that is resistant or intolerant to prior kinase inhibitor therapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** CHF, fluid retention, diabetes, hepatic impairment, angina, hypertension, hyperlipidemia, neutropenia, pulmonary edema, thrombocytopenia; history of CVA, MI, pancreatitis; smoking.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established in pts younger than 18 yrs old. **Elderly:** Age-related cardiac, renal, hepatic impairment increases risk for side effects/adverse reactions.

INTERACTIONS

DRUG: Strong **CYP3A4 inducers (e.g., rifampin, phenytoin)** may decrease concentration/effects. Strong **CYP3A4 inhibitors (ketoconazole, ritonavir)** may increase concentration/effects. **Proton pump inhibitors, H_2 blockers, antacids** may decrease concentration/effects. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD: Grapefruit** may increase concentration/adverse effects. **LAB VALUES:** May increase serum alkaline phosphatase, amylase, AST, ALT, bilirubin, creatinine, lipase, triglycerides, uric acid. May decrease serum albumin, bicarbonate, Hgb, Hct, lymphocytes, phosphorous, neutrophils, platelets. May alter serum calcium, glucose, potassium, sodium.

AVAILABILITY (Rx)

Tablets, Film-Coated: 15 mg, 45 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Swallow tablet whole; do not break, dissolve, or crush.

INDICATIONS/ROUTES/DOSAGE

Chronic Myelogenous Leukemia (CML)/Ph+
Acute Lymphoblastic Leukemia (Ph+ALL)
PO: ADULTS/ELDERLY: 45 mg once daily.

Dosage Modification

Neutropenia: Interrupt and resume initial 45 mg dose when neutrophils greater than 1500/mm^3 and platelets greater than 75,000/mm^3 for first occurrence. Reduce dose to 30 mg, or 15 mg if recovery does not occur. **Hepatotoxicity:** Interrupt treatment until AST/ALT less than 3 × UNL with any dose change. Reduce dose to 30 mg, or 15 mg if recovery does not occur. Discontinue if 15 mg intolerable, or AST/ALT elevation includes bilirubin greater than 2 × ULN and alkaline phosphatase less than 2 × UNL. **Pancreatitis/Elevated Lipase:** Withhold treatment until lipase less than 1.5 × ULN with any dose change. Reduce dose to 30 mg, or 15 mg if recovery does not occur. Discontinue if 15 mg intolerable or symptomatic pancreatitis occurs. **Concurrent use of Strong CYP3A4 inhibitors:** Begin dose at 30 mg when initiating treatment.

SIDE EFFECTS

Frequent (68%–37%): Hypertension, rash, abdominal pain, dry skin, headache, fatigue, constipation. **Occasional (26%–8%):** Arthralgia, nausea, pyrexia, myalgia, generalized pain, diarrhea, back pain, vomiting, peripheral neuropathy, cough, muscle spasm, peripheral edema, bone pain, dizziness, shortness of breath, oral mucositis, nasopharyngitis, anorexia. **Rare (7%–2%):** Chills, insomnia, weight loss.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombocytopenia, neutropenia, leukopenia, lymphopenia is expected response to therapy, but more severe reactions including bone marrow failure, febrile neutropenia, may result in life-threatening event. Thrombocytopenia may increase risk for intracranial hemorrhage, GI bleeding. Pts with neutropenia are at increased risk for infection. Life threatening events may include hepatotoxicity (56%), arterial thrombosis requiring revascularization (8%), pleural effusion (7%), pancreatitis (6%), hemorrhage

(5%), MI (5%), CHF (4%), pericardial effusion, pneumonia, venous thrombosis (3%), CVA, hypertensive crisis (2%), sepsis (1%), ascites, Tumor Lysis Syndrome. May compromise wound healing or increase risk for GI perforation. Cardiac bradyarrhythmias requiring pacemaker implantation may include complete heart block, sick sinus syndrome, atrial fibrillation with bradycardic pauses. Supraventricular tachyarrhythmias (5%) may include atrial fibrillation with rapid ventricular response (RVR), SVT, atrial tachycardia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Baseline vital signs, amylase, CBC, CMP, ionized calcium, magnesium, lipase, phosphate, PT/INR, urinalysis, urine pregnancy. Receive full medication history including vitamins, herbal products. Screen for recent hepatic/renal impairment, peripheral edema, CHF, anemia, GI bleed, diabetes mellitus, hypertension, arrhythmias, pancreatitis, smoking history.

INTERVENTION/EVALUATION

Obtain vital signs, hepatic function tests at least monthly, CBC and lipase every 2 wks for 3 mos, then monthly. Persistent diastolic hypertension may indicate hypertensive emergency. Stat EKG for palpitation, chest pain, bradycardia, ventricular arrhythmias. Encourage PO intake. Immediately report any hemorrhaging, melena, hematuria, abdominal pain, hemoptysis (may indicate GI perforation/fistula formation). Perform routine vascular checks, neurological checks.

PATIENT/FAMILY TEACHING

• Blood levels will be routinely monitored. • Avoid pregnancy. • Report any yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine. • Contact physician before any planned surgical/dental procedures. • Immediately report bleeding of any kind. • Do not take herbal products. • Do not eat grapefruit or drink grapefruit juice. • Smoking can increase risk for heart problems and clot formation. • Fever, cough, burning with urination, body aches, chills may indicate infection. • Report any chest pain, palpitation, shortness of breath, fainting, confusion, one-sided weakness, trouble speaking. • Extremity pain with swelling may indicate clot.

poractant alfa

pore-**ack**-tant
(Curosurf)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Natural porcine lung extract. **CLINICAL:** Pulmonary surfactant.

ACTION

Reduces alveolar surface tension during ventilation; stabilizes alveoli against collapse that may occur at resting transpulmonary pressures. **Therapeutic Effect:** Improves lung compliance, respiratory gas exchange.

USES

Rescue treatment for respiratory distress syndrome (RDS), hyaline membrane disease in premature infants.

PRECAUTIONS

Contraindications: None known. **Cautions:** Pts at risk for circulatory overload. Acidosis, hypotension, anemia, hypoglycemia, hypothermia should be corrected prior to administration.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Neonate: No age-related precautions noted for neonates.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Intratracheal Suspension: 80 mg/ml (1.5 ml, 3 ml), 1.5 ml (120 mg), 3 ml (240 mg).

ADMINISTRATION/HANDLING

Intratracheal

Administration • Attach syringe to catheter and instill through catheter inserted into infant's endotracheal tube. • Monitor for bradycardia, decreased O_2 saturation during administration. • Stop dosing procedure if these effects occur; begin appropriate measures before reinstituting therapy.

Storage • Refrigerate vials. • Warm by standing vial at room temperature for 20 min or warm in hand 8 min. • To obtain uniform suspension, turn upside down gently, swirl vial (do not shake). • After warming, may return to refrigerator one time only. • Withdraw entire contents of vial into 3- or 5-ml plastic syringe through large-gauge needle (20 gauge or larger).

INDICATIONS/ROUTE/DOSAGE

Respiratory Distress Syndrome (RDS)

Intratracheal: INFANTS: Initially, 2.5 ml/kg of birth weight. May give up to 2 subsequent doses of 1.25 ml/kg of birth weight at 12-hr intervals. **Maximum:** 5 ml/kg (total dose).

SIDE EFFECTS

Frequent: Transient bradycardia, oxygen (O_2) desaturation, increased carbon dioxide (CO_2) retention. **Occasional:** Endotracheal tube reflux. **Rare:** Hypotension, hypertension, apnea, pallor, vasoconstriction.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Immediately before administration, change ventilator setting to 40–60 breaths/min, inspiratory time 0.5 sec, supplemental O_2 sufficient to maintain SaO_2 over 92%. Drug must be administered in highly supervised setting. Clinicians caring for neonate must be experienced with intubation, ventilator management. Offer emotional support to parents.

INTERVENTION/EVALUATION

Monitor infant with arterial or transcutaneous measurement of systemic O_2 and CO_2. Assess lung sounds for rales, moist breath sounds. Monitor heart rate.

posaconazole

poe-sa-**kon**-a-zole
(Noxafil, Posanol ✤)
Do not confuse Noxafil with minoxidil.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Azole derivative. **CLINICAL:** Antifungal (see p. 47C).

ACTION

Inhibits synthesis of ergosterol, a vital component of fungal cell wall formation. **Therapeutic Effect:** Damages fungal cell wall membrane, altering its function.

PHARMACOKINETICS

Moderately absorbed following PO administration. Absorption increased if drug is taken with food. Widely distributed. Protein binding: 98%. Not significantly metabolized. Primarily excreted in feces. **Half-life:** 20–66 hrs.

USES

Prophylaxis of invasive *Aspergillus* and *Candida* infections in pts 13 yrs and older who are at high risk for developing

these infections due to severely immunocompromised conditions. Treatment of oropharyngeal candidiasis. **OFF-LABEL:** Salvage therapy of refractory invasive fungal infections, mucomycosis, pulmonary infections.

PRECAUTIONS

Contraindications: Coadministration with pimozide, quinidine, simvastatin, sirolimus, ergot alkaloids (may cause QT prolongation, torsade de pointes). **Cautions:** Renal/hepatic impairment, hypersensitivity to other antifungal agents, pts at increased risk of arrhythmias.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 13 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentrations of **atorvastatin, cyclosporine, ergot alkaloids, felodipine, midazolam, phenytoin, pimozide, quinidine, rifabutin, simvastatin, sirolimus, tacrolimus, vinblastine, vincristine. Cimetidine, phenytoin** may decrease concentration. **HERBAL:** None significant. **FOOD:** Concentration higher when given with **food or nutritional supplements. Grapefruit juice** may decrease concentration/effects. **LAB VALUES:** May decrease WBC, RBC, Hgb, Hct, platelets, serum calcium, potassium, magnesium. May increase serum glucose, bilirubin, ALT, AST, alkaline phosphatase.

AVAILABILITY (Rx)

Oral Suspension: 40 mg/ml.

ADMINISTRATION/HANDLING

PO

• Administer with or within 20 min of full meal, liquid nutritional supplement, or acidic carbonated beverage (e.g., ginger ale) (enhances absorption). • Store oral suspension at room temperature. • Shake suspension well before use.

INDICATIONS/ROUTES/DOSAGE

Prophylaxis of Invasive *Aspergillus* and *Candida*

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 200 mg (5 ml) 3 times daily, given with full meal or liquid nutritional supplement.

Oropharyngeal Candidiasis

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 100 mg twice daily for 1 day, then 100 mg once daily for 13 days.

Refractory Oropharyngeal Candidiasis

PO: ADULTS, ELDERLY: 400 mg twice daily.

SIDE EFFECTS

Common (42%–24%): Diarrhea, nausea, vomiting, headache, abdominal pain, cough. **Frequent (20%–15%):** Constipation, rigors, rash, hypertension, fatigue, insomnia, mucositis, musculoskeletal pain, edema of lower extremities, herpes simplex, anorexia. **Occasional (14%–8%):** Hypotension, epistaxis, tachycardia, pharyngitis, dizziness, pruritus, arthralgia, dyspepsia (heartburn, indigestion, epigastric pain), back pain, generalized edema, weakness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bacteremia occurs in 18% of pts; upper respiratory tract infection occurs in 7%. Allergic/hypersensitivity reactions, QT prolongation, hemolytic uremic syndrome, thrombotic thrombocytopenic purpura, pulmonary embolus have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baselines for hepatic enzyme serum levels, CBC, serum chemistries prior to therapy.

INTERVENTION/EVALUATION

Monitor hepatic function tests periodically. Monitor daily pattern of bowel ac-

tivity, stool consistency. Obtain order for antiemetic if excessive vomiting occurs. Monitor B/P for hypertension, hypotension. Assess for lower extremity edema (first sign of edema appears behind medial malleolus).

PATIENT/FAMILY TEACHING

• Take each dose with full meal or liquid nutritional supplement. • Report severe diarrhea, vomiting, chest pain, yellowing of skin/eyes. • Maintain fastidious oral hygiene.

potassium acetate

TOP 200 HIGH ALERT

potassium bicarbonate/citrate

(Effer-K, Klor-Con EF, K-Lyte, K-Lyte DS)

potassium chloride

(Apo-K, Kaon-Cl, Kay Ciel, K-Dur, K-Lor, Klor-Con, Klor-Con M10, Klor-Con M20, Micro-K)

potassium gluconate

(Glu-K)

poe-**tass**-ee-um

Do not confuse K-Dur with Cardura, K-Lor with Klor-Con, or MicroK with Macrobid or Micronase.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Electrolyte. **CLINICAL:** Potassium replenisher.

ACTION

Necessary for multiple cellular metabolic processes. Primary action is intracellular. **Therapeutic Effect:** Required for nerve impulse conduction, contraction of cardiac, skeletal, smooth muscle; maintains normal renal function, acid-base balance.

PHARMACOKINETICS

Well absorbed from GI tract. Enters cells by active transport from extracellular fluid. Primarily excreted in urine.

USES

Potassium acetate, potassium bicarbonate/citrate: Treatment, prevention of hypokalemia when necessary to avoid chloride or acid/base imbalance (requires bicarbonate). **Potassium chloride, potassium gluconate:** Treatment, prevention of hypokalemia.

PRECAUTIONS

Contraindications: Severe renal impairment, untreated Addison's disease, heat cramps, hyperkalemia, severe tissue trauma. **Cautions:** Cardiac disease, concurrent use of potassium-sparing medications, impaired renal function.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** May be at increased risk for hyperkalemia. Age-related ability to excrete potassium is reduced.

INTERACTIONS

DRUG: Angiotensin-converting enzyme (ACE) inhibitors, potassium-containing medications, potassium-sparing diuretics, salt substitutes may increase serum potassium concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

POTASSIUM ACETATE
Injection, Solution: 2 mEq/ml.
POTASSIUM BICARBONATE AND POTASSIUM CITRATE
Tablets for Solution: 25 mEq (Klor-Con EF, Effer-K, K-Lyte), 50 mEq (K-Lyte DS).

P

POTASSIUM CHLORIDE
Injection, Solution: 2 mEq/ml. **Oral Solution (Kaon-Cl, Kay Ciel):** 20 mEq/15 ml. **Powder for Oral Solution (K-Lor, Klor-Con):** 20 mEq/packet.

Capsules, Extended-Release (Micro-K): 8 mEq, 10 mEq. **Tablets, Extended-Release: (K-Dur):** 10 mEq, 20 mEq. **(Klor-Con M10):** 10 mEq. **(Klor-Con M20):** 20 mEq.
POTASSIUM GLUCONATE
Tablets (Glu-K): 550 mg, 595 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV infusion only, must dilute before administration, mix well, infuse slowly. • Avoid adding potassium to hanging IV.
Rate of Administration • Routinely, give at concentration of no more than 40 mEq/L, no faster than 10 mEq/hr for peripheral infusion, 40 mEq/hr for central infusion. • Check IV site closely during infusion for evidence of phlebitis (heat, pain, red streaking of skin over vein, hardness to vein), extravasation (swelling, pain, cool skin, little/no blood return).
Storage • Store at room temperature.

PO

• Take with or after meals, with full glass of water (decreases GI upset). • Liquids, powder, effervescent tablets: Mix, dissolve with juice, water before administering. • Do not chew, crush tablets; swallow whole.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), phenytoin (Dilantin).

IV COMPATIBILITIES

Aminophylline, amiodarone (Cordarone), atropine, aztreonam (Azactam), calcium gluconate, cefepime (Maxipime), ciprofloxacin (Cipro), clindamycin (Cleocin), dexamethasone (Decadron), digoxin (Lanoxin), diltiazem (Cardizem), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), enalapril (Vasotec), famotidine (Pepcid), fluconazole (Diflucan), furosemide (Lasix), granisetron (Kytril), heparin, hydrocortisone (Solu-Cortef), insulin, lidocaine, lipids, lorazepam (Ativan), magnesium sulfate, methylprednisolone (Solu-Medrol), metoclopramide (Reglan), midazolam (Versed), milrinone (Primacor), morphine, norepinephrine (Levophed), ondansetron (Zofran), oxytocin (Pitocin), piperacillin and tazobactam (Zosyn), procainamide (Pronestyl), propofol (Diprivan), propranolol (Inderal).

INDICATIONS/ROUTES/DOSAGE

Prevention of Hypokalemia with Diuretic Therapy

PO: ADULTS, ELDERLY: 20–40 mEq/day in 1–2 divided doses. **CHILDREN:** 1–2 mEq/kg/day in 1–2 divided doses.

Treatment of Hypokalemia

PO: ADULTS, ELDERLY: 40–100 mEq/day in divided doses (generally limit amount per dose to 40 mEq); further doses based on laboratory values. **CHILDREN:** Initially, 1–2 mEq/kg; further doses based on laboratory values.
IV: ADULTS, ELDERLY: 5–10 mEq/hr. **Maximum:** 400 mEq/day. **CHILDREN:** 0.5–1 mEq/kg per dose. **Maximum dose:** 40 mEq per dose to infuse at 0.3–0.5 mEq/kg/hr. **Maximum rate:** 1 mEq/kg/hr.

SIDE EFFECTS

Occasional: Nausea, vomiting, diarrhea, flatulence, abdominal discomfort with distention, phlebitis with IV administration (particularly when potassium concentration of greater than 40 mEq/L is infused).
Rare: Rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hyperkalemia (more common in elderly, those with renal impairment) manifested as paresthesia, feeling of heaviness in lower extremities, cold skin, grayish pal-

lor, hypotension, confusion, irritability, flaccid paralysis, cardiac arrhythmias.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for hypokalemia (weakness, fatigue, polyuria, polydipsia). PO should be given with food or after meals with full glass of water, fruit juice (minimizes GI irritation).

INTERVENTION/EVALUATION

Monitor serum potassium (particularly in renal impairment). If GI disturbance is noted, dilute preparation further or give with meals. Be alert to decreased urinary output (may be indication of renal insufficiency). Monitor daily pattern of bowel activity, stool consistency. Assess I&O diligently during diuresis, IV site for extravasation, phlebitis. Be alert to evidence of hyperkalemia (skin pallor/coldness, complaints of paresthesia, feeling of heaviness of lower extremities).

PATIENT/FAMILY TEACHING

- Foods rich in potassium include beef, veal, ham, chicken, turkey, fish, milk, bananas, dates, prunes, raisins, avocados, watermelon, cantaloupe, apricots, molasses, beans, yams, broccoli, Brussels sprouts, lentils, potatoes, spinach.
- Report paresthesia, feeling of heaviness of lower extremities, tarry or bloody stools, weakness, unusual fatigue.

pralatrexate

pral-a-**trex**-ate
(Folotyn)
Do not confuse Folotyn with Focalin, or pralatrexate with methotrexate or pemetrexed.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic.

ACTION

Folate analogue metabolic inhibitor that competes with enzymes necessary for tumor cell reproduction. **Therapeutic Effect:** Inhibits tumor growth.

PHARMACOKINETICS

Protein binding: 67%. Partially excreted in urine. **Half-life:** 12–18 hrs.

USES

Treatment of relapsed or refractory peripheral T-cell lymphoma (PTCL). **OFF-LABEL:** Treatment of relapsed/refractory cutaneous T-cell lymphoma.

PRECAUTIONS

Contraindications: None known. **Cautions:** Moderate to severe renal impairment, hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if drug is distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: NSAIDs, probenecid, trimethoprim/sulfamethoxazole may delay clearance, increase concentration. **HERBAL: Echinacea** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May decrease RBC, WBC, Hgb, Hct, serum potassium, platelet count. May increase serum ALT, AST.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml.

ADMINISTRATION/HANDLING

◄ALERT► May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration. Wear gloves when preparing solution. If powder or solution comes in contact with skin, wash immediately, thoroughly with soap, water.

◀ALERT▶ Pt should begin taking oral folic acid (1 mg) daily starting 10 days prior to first IV pralatrexate dose and continue for 30 days after last dose. Pt should also receive vitamin B_{12} (1 mg) IM injection no more than 10 wks prior to first IV pralatrexate dose and every 8–10 wks thereafter.

IV

Reconstitution • Withdraw calculated dose into syringe for immediate use. • Intended for single use only. • Do not dilute.

Rate of Administration • Administer as IV push over 3–5 min into IV infusion of 0.9% NaCl.

Storage • Refrigerate vials until use, protect from light. Stable at room temperature for 72 hrs. • Discard vial if solution is discolored (solution should appear clear to yellow) or particulate matter is present.

IV INCOMPATIBILITY

Do not mix with any other medication.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Prior to any dose, mucositis should be no higher than grade 1, platelets 100,000/mm^3 or greater for first dose and 50,000/mm^3 or greater for subsequent doses, and absolute neutrophil count (ANC) 1,000/mm^3 or greater.

Refractory/Relapsed Peripheral T-Cell Lymphoma

IV: ADULTS, ELDERLY: 30 mg/m^2 administered once weekly for 6 wks in 7-wk cycles. Dose may be decreased to 20 mg/m^2 to manage adverse reactions.

SIDE EFFECTS

Common (70%–36%): Mucositis, nausea, fatigue. **Frequent (34%–10%):** Constipation/diarrhea, pyrexia, edema, cough, epistaxis, vomiting, dyspnea, anorexia, rash, throat/abdominal/back pain, night sweats, asthenia (loss of strength, energy), tachycardia, upper respiratory infection.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity, resulting from blood dyscrasias, may manifest as thrombocytopenia (41%), anemia (34%), neutropenia (24%), leukopenia (11%). High potential for development of mucositis (70%). Mucositis is less severe when folic acid, vitamin B_{12} therapy is ongoing. Sepsis, pyrexia, febrile neutropenia, dehydration have been known to occur. Overdosage requires general supportive care. Prompt administration of leucovorin should be considered in case of overdose, based on mechanism of action of pralatrexate.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy before initiating therapy (Pregnancy Category D). Assess baseline vital signs, temperature. Evaluate baseline CBC with differential, hepatic/renal function, serum potassium level. Antiemetics before and during therapy may alleviate nausea/vomiting. Initiate folic acid, vitamin B_{12} administration prior to and throughout therapy.

INTERVENTION/EVALUATION

Prior to any dose: mucositis should be grade 1 or less. Platelet count 100,000 or greater for 1st dose (50,000 or greater for all subsequent doses). Absolute neutrophil count (ANC) 1,000 or greater. Assess for signs of mucositis (oropharyngeal ulcers, oral/throat pain, local infection). Monitor for signs of hematologic toxicity, sepsis (fever, signs of local infection, altered CBC results). Monitor hepatic/renal function. Monitor for hypokalemia (muscle cramps, weakness, EKG changes).

PATIENT/FAMILY TEACHING

• Explain importance of folic acid, vitamin B_{12} therapy to reduce adverse effects. • Maintain fastidious oral hygiene. • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid crowds, those with infection. • Promptly report fever, sore

throat, signs of local infection, unusual bruising/bleeding from any site. • Use nonhormonal contraception. • Contact physician if nausea/vomiting continues at home.

pramipexole

pram-ih-**pex**-ole
(Apo-Pramipexole, Mirapex, Mirapex ER)
Do not confuse Mirapex with Mifeprex or MiraLax.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopamine receptor agonist. **CLINICAL:** Antiparkinson agent (see p. 146C).

ACTION

Stimulates dopamine receptors in striatum. **Therapeutic Effect:** Relieves signs/symptoms of Parkinson's disease.

PHARMACOKINETICS

Rapidly, extensively absorbed after PO administration. Protein binding: 15%. Widely distributed. Steady-state concentrations achieved within 2 days. Primarily eliminated in urine. Not removed by hemodialysis. **Half-life:** 8 hrs (12 hrs in pts older than 65 yrs).

USES

Mirapex: Treatment of signs/symptoms of idiopathic Parkinson's disease, restless legs syndrome. **Mirapex ER:** Treatment of Parkinson's disease. **OFF-LABEL:** Depression (due to bipolar disorder), fibromyalgia.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of orthostatic hypotension, syncope, hallucinations, renal impairment, concomitant use of CNS depressants, preexisting dyskinesia, elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Increased risk of hallucinations.

INTERACTIONS

DRUG: May increase plasma concentrations of **carbidopa, levodopa. HERBAL: Gotu kola, kava kava, St. John's wort, SAMe, valerian** may increase CNS depression, risk of serotonin syndrome. **FOOD: All foods** delay peak drug plasma levels by 1 hr (extent of absorption not affected). **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 0.125 mg, 0.25 mg, 0.5 mg, 0.75 mg, 1 mg, 1.5 mg.

Tablets (Extended-Release [Mirapex ER]): 0.375 mg, 0.75 mg, 1.5 mg, 2.25 mg, 3 mg, 3.75 mg, 4.5 mg.

ADMINISTRATION/HANDLING

PO (Mirapex)
• Give without regard to food.

PO (Mirapex ER)
• Give once daily, without regard to food.
• Swallow whole; do not break, crush, dissolve, or divide tablets.

INDICATIONS/ROUTES/DOSAGE

Parkinson's Disease (Mirapex)
PO: ADULTS, ELDERLY: Initially, 0.375 mg/day in 3 divided doses. Increase dosage by 0.125–0.25 mg/dose no more frequently than every 5–7 days. Maintenance: 1.5–4.5 mg/day in 3 equally divided doses.

Parkinson's Disease (Mirapex ER)
Initially, 0.375 mg once daily. May increase to 0.75 mg, then by 0.75-mg increments no more frequently than 5–7 days. Note: May switch overnight from

P

immediate-release to extended-release at same daily dose.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Mirapex

Creatinine Clearance	Dosage	
	Initial	Maximum
Greater than 60 ml/min	0.125 mg 3 times a day	1.5 mg 3 times a day
35–60 ml/min	0.125 mg twice daily	1.5 mg twice daily
15–34 ml/min	0.125 mg once daily	1.5 mg once daily

Mirapex ER

Creatinine Clearance 30–50 ml/min: Initially, 0.375 mg q other day. May increase to 0.375 mg daily after 1 wk, then 0.375 mg/dose not more frequently than q7days. **Maximum:** 2.25 mg/day.

Restless Legs Syndrome

PO: ADULTS, ELDERLY: Initially, 0.125 mg once daily 2–3 hrs before bedtime. May increase to 0.25 mg after 4–7 days, then to 0.5 mg after 4–7 days (interval is 14 days in pts with renal impairment). **Maximum:** 0.5 mg/day.

SIDE EFFECTS

Frequent: Early Parkinson's disease (28%–10%): Nausea, asthenia (loss of strength, energy), dizziness, drowsiness, insomnia, constipation. **Advanced Parkinson's disease (53%–17%):** Orthostatic hypotension, extrapyramidal reactions, insomnia, dizziness, hallucinations. **Occasional: Early Parkinson's disease (5%–2%):** Edema, malaise, confusion, amnesia, akathisia, anorexia, dysphagia, peripheral edema, vision changes, impotence. **Advanced Parkinson's disease (10%–7%):** Asthenia (loss of strength, energy), drowsiness, confusion, constipation, abnormal gait, dry mouth. **Rare: Advanced Parkinson's disease (6%–2%):** General edema, malaise, angina, amnesia, tremor, urinary frequency/incontinence, dyspnea, rhinitis, vision changes. **Restless legs syndrome: Frequent (16%):** Headache, nausea. **Occasional (13%–9%):** Insomnia, fatigue. **Rare (6%–3%):** Drowsiness, constipation, diarrhea, dry mouth.

ADVERSE EFFECTS/ TOXIC REACTIONS

Vascular disease, atrial fibrillation, arrhythmias, pulmonary embolism, impulsive/compulsive behavior (pathological gambling, hypersexuality, binge eating) have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Parkinson's disease: Assess for tremor, muscle weakness and rigidity, ataxia. **Restless legs syndrome:** Assess frequency of symptoms, sleep pattern.

INTERVENTION/EVALUATION

Instruct pt to rise from lying to sitting or sitting to standing position slowly to prevent risk of postural hypotension. Assess for clinical improvement. Assist with ambulation if dizziness occurs. Assess for constipation; encourage fiber, fluids, exercise.

PATIENT/FAMILY TEACHING

• Inform pt that hallucinations may occur, esp. in the elderly. • Postural hypotension may occur more frequently during initial therapy (rise slowly from sitting or lying position). • Avoid tasks that require alertness, motor skills until response to drug is established. • If nausea occurs, take medication with food. • Avoid abrupt withdrawal. • Avoid alcohol. • Report new or increased impulsive/compulsive behaviors (gambling, sexual urges, compulsive eating or buying).

pramlintide

HIGH ALERT

pram-lin-tide
(Symlin, SymlinPen 60, SymlinPen 120)

BLACK BOX ALERT Increased risk of severe hypoglycemia; usually occurs within 3 hrs of injection.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihyperglycemic. **CLINICAL:** Antidiabetic (see p. 44C).

ACTION

Cosecreted with insulin by pancreatic beta cells, reduces postprandial glucose increases by slowing gastric emptying time, reducing postprandial glucagon secretion, reducing caloric intake through centrally mediated appetite suppression. **Therapeutic Effect:** Improves glycemic control by reducing postprandial glucose concentrations in pts with type 1, type 2 diabetes mellitus.

PHARMACOKINETICS

	Onset	Peak	Duration
Subcutaneous	NA	20 min	3 hrs

Metabolized primarily by kidneys. Protein binding: 60%. Excreted in urine. **Half-life:** 48 min.

USES

Adjunctive treatment with mealtime insulin in type 1, type 2 diabetes mellitus pts who have failed to achieve desired glucose control despite optimal insulin therapy, with/without concurrent sulfonylurea and/or metformin in type 2 diabetes mellitus.

PRECAUTIONS

Contraindications: Diagnosed gastroparesis, presence of hypoglycemia or recurrent severe hypoglycemic episodes in the past 6 mos. **Cautions:** Coadministration with insulin may induce severe hypoglycemia (usually within 3 hrs following administration); concurrent use of other glucose-lowering agents may increase risk of hypoglycemia. History of nausea, visual or dexterity impairment, poor compliance with insulin monitoring or current insulin therapy, those with hemoglobin A_{1c} greater than 9%, pts with conditions or taking concurrent medications likely to impair gastric motility (e.g., anticholinergics), pts requiring medication to stimulate gastric emptying.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Anticholinergics** may cause additive impairment of gastric motility. **HERBAL:** **Garlic** may increase hypoglycemia. **FOOD:** **Ethanol** may increase risk of hypoglycemia. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Solution (Symlin): 0.6 mg/ml in 5-ml vials. **(SymlinPen 120):** Delivers fixed doses of 120 mcg. **(SymlinPen 60):** Delivers fixed doses of 60 mcg.

ADMINISTRATION/HANDLING

Subcutaneous

• Administer immediately before each major meal (350 or more kcal or containing 30 g or more carbohydrate). • Give in abdomen or thigh; do not give in arm (variable absorption). • Injection site should be distinct from insulin injection site. • Rotation of injection sites is essential. • Use U-100 insulin syringe for accuracy. • Always give pramlintide and insulin as separate injections.

Storage • Store unopened vials in refrigerator. • Discard if freezing occurs. • Vials that have been opened (punctured) may be stored in refrigerator or kept at room temperature for up to 30 days.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Initially, current insulin dosage in all pts with type 1, type 2 diabetes mellitus should be reduced by

50%. This includes preprandial, rapid-acting, short-acting, fixed-mixed insulins.

Type 1 Diabetes Mellitus

Subcutaneous: ADULTS, ELDERLY: Initially, 15 mcg immediately before major meal. Titrate in 15-mcg increments every 3 days (if no significant nausea occurs) to target dose of 30–60 mcg.

Type 2 Diabetes Mellitus

Subcutaneous: ADULTS, ELDERLY: Initially, 60 mcg immediately before major meal. After 3–7 days, increase to 120 mcg if no significant nausea occurs (if nausea occurs at 120 mcg dose, reduce to 60 mcg).

SIDE EFFECTS

TYPE 1 DIABETES MELLITUS

Frequent (48%): Nausea. **Occasional (17%–11%):** Anorexia, vomiting. **Rare (7%–5%):** Fatigue, arthralgia, allergic reaction, dizziness.

TYPE 2 DIABETES MELLITUS

Frequent (28%): Nausea. **Occasional (13%–8%):** Headache, anorexia, vomiting, abdominal pain. **Rare (7%–5%):** Fatigue, dizziness, cough, pharyngitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces severe nausea, vomiting, diarrhea, vasodilation, dizziness. No hypoglycemia was reported. Increased risk of severe hypoglycemia when given concurrently with nontitrated insulin.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose concentration before administration, both before and after meals and at bedtime. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt, family does not thoroughly understand diabetes management, glucose testing technique.

INTERVENTION/EVALUATION

Risk for hypoglycemia occurs within first 3 hrs following drug administration if given concurrently with insulin. Assess for hypoglycemia (diaphoresis, tremors, dizziness, anxiety, headache, tachycardia, numbness in mouth, hunger, diplopia, difficulty concentrating). Be alert to conditions that alter glucose requirements (fever, increased activity, stress, surgical procedures).

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. • Prescribed diet, exercise are principal parts of treatment; do not skip/delay meals. • Continue to adhere to dietary instructions, regular exercise program, regular testing of serum glucose. • When taking combination drug therapy, have source of glucose available to treat symptoms of low blood sugar.

prasugrel

pra-soo-grel
(Effient)

BLACK BOX ALERT Serious, sometimes fatal, hemorrhage may occur.

Do not confuse Effient with Effexor, or prasugrel with praziquantel.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thienopyridine derivative inhibitor. **CLINICAL:** Antiplatelet agent (see p. 33C).

ACTION

Inhibits binding of the enzyme adenosine phosphate (ADP) to its platelet receptor and subsequent ADP-mediated activation of a glycoprotein complex. **Therapeutic Effect:** Inhibits platelet aggregation.

PHARMACOKINETICS

Rapidly absorbed, with peak concentration occurring 30 min following administration. Undergoes extensive hepatic

metabolism. Protein binding: 98%. Eliminated primarily in urine, with a lesser amount excreted in feces. **Half-life:** 7 hrs.

USES

Reduction of thrombotic cardiovascular events (MI, CVA, stent thrombosis) in pts with acute coronary syndrome (unstable angina, non–ST-segment elevation MI, ST-segment MI) who are to be managed with percutaneous coronary intervention (PCI).

PRECAUTIONS

Contraindications: Active bleeding, prior transient ischemic attack (TIA), CVA. **Cautions:** Pts who undergo coronary artery bypass graft (CABG) after receiving prasugrel, those at risk for bleeding (age 75 yrs or older, body weight less than 60 kg, recent trauma/surgery, recent GI bleeding or active peptic ulcer disease, severe hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** May have increased risk for intracranial hemorrhage; caution advised in pts 75 yrs and older.

INTERACTIONS

DRUG: Aspirin, NSAIDs, warfarin may increase risk of bleeding. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginseng, green tea, horse chestnut, red clover** may have additive platelet effects. **Ginkgo biloba** may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, WBC, platelet count. May increase bleeding time, serum cholesterol, AST, ALT.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg.

ADMINSTRATION/HANDLING

PO

• Give without regard to food. • Do not crush tablet.

INDICATIONS/ROUTES/DOSAGE

Acute Coronary Syndrome

◀ALERT▶ Consider 5 mg once daily for pts weighing less than 60 kg.

PO: ADULTS, ELDERLY: Initially, 60-mg loading dose, then 10 mg once daily (in combination with aspirin).

SIDE EFFECTS

Occasional (8%–4%): Hypertension, headache, back pain, dyspnea, nausea, dizziness. **Rare (Less Than 4%):** Cough, hypotension, fatigue, noncardiac chest pain, bradycardia, rash, pyrexia, peripheral edema, extremity pain, minor bleeding, diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Major bleeding (intracranial hemorrhage, epistaxis, GI bleeding, hemoptysis, subcutaneous hematoma, postprocedural hemorrhage, retroperitoneal hemorrhage, retinal hemorrhage) has been reported. Severe thrombocytopenia, anemia, abnormal hepatic function, anaphylactic reaction, angioedema, atrial fibrillation occur rarely. Overdosage may require platelet transfusion to restore clotting ability.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline vital signs, CBC, platelet count, EKG, hepatic function tests.

INTERVENTION/EVALUATION

Monitor vital signs for changes in B/P, pulse. Assess for signs of unusual bleeding or hemorrhage, pain. Monitor CBC, platelet count, hepatic function tests, EKG for changes from baseline.

PATIENT/FAMILY TEACHING

• It may take longer to stop minor bleeding during drug therapy. Report unusual

bleeding/bruising, blood noted in stool or urine, chest/back pain, extremity pain. • Monitor for dyspnea. • Report fever, weakness, extreme skin paleness, purple skin patches, yellowing of skin or eyes, changes in mental status. • Do not discontinue drug therapy without physician approval. • Inform physicians, dentists before undergoing any invasive procedure or surgery.

pravastatin

TOP 200

pra-vah-sta-tin
(Apo-Pravastatin, Novo-Pravastatin, Pravachol)
Do not confuse pravastatin with atorvastatin, lovastatin, nystatin, pitavastatin, or simvastatin, or Pravachol with Prevacid, Prinivil, or propranolol.

FIXED-COMBINATION(S)

Pravigard: pravastatin/aspirin (anticoagulant): 20 mg/81 mg, 40 mg/81 mg, 80 mg/81 mg, 20 mg/325 mg, 40 mg/325 mg, 80 mg/325 mg.

P

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydroxymethylglutaryl CoA (HMG-CoA) reductase inhibitor. **CLINICAL:** Antihyperlipidemic (see p. 580).

ACTION

Interferes with cholesterol biosynthesis by preventing conversion of HMG-CoA reductase to mevalonate, a precursor to cholesterol. **Therapeutic Effect:** Lowers LDL, VLDL cholesterol, plasma triglycerides; increases HDL.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 50%. Metabolized in liver (minimal active metabolites). Primarily excreted in feces via biliary system. Not removed by hemodialysis. **Half-life:** 2–3 hrs.

USES

Treatment of primary hyperlipidemias and mixed dyslipidemias to reduce total cholesterol, LDL cholesterol, apolipoprotein B, triglycerides; increase HDL cholesterol. Reduces risk of MI, revascularization, and mortality in hypercholesterolemia without clinically evident CHD. Reduces mortality risk in pts with CHD. Reduces elevated triglycerides in hypertriglyceridemia. Treatment of dysbetalipoproteinemia not responding to diet. Treatment of heterozygous familial hypercholesterolemia in pediatric pts 8–18 yrs.

PRECAUTIONS

Contraindications: Active hepatic disease or unexplained, persistent elevations of hepatic function test results. Pregnancy, nursing mothers. **Cautions:** History of hepatic disease, substantial alcohol consumption. Withholding/discontinuing pravastatin may be necessary when pt is at risk for renal failure secondary to rhabdomyolysis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (suppression of cholesterol biosynthesis may cause fetal toxicity) and lactation. Unknown if drug is distributed in breast milk, but there is risk of serious adverse reactions in breast-feeding infants. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Cyclosporine, clarithromycin, colchicine, erythromycin, gemfibrozil, immunosuppressants, niacin increase risk of myopathy, rhabdomyolysis. **HERBAL: St. John's wort** may decrease concentration. **FOOD: Red yeast rice** contains 2.4 mg **lovastatin** per 600 mg rice. **LAB VALUES:** May increase serum creatine kinase (CK), transaminase.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Prior to initiating therapy, pt should be on standard cholesterol-lowering diet for 3–6 mos. Low-cholesterol diet should be continued throughout pravastatin therapy.

Usual Dosage

PO: ADULTS, ELDERLY: Initially, 40 mg/day. Titrate to desired response. Range: 10–80 mg/day. **CHILDREN 14–18 YRS:** 40 mg/day. **CHILDREN 8–13 YRS:** 20 mg/day.

Dosage in Hepatic/Renal Impairment

For adults, give 10 mg/day initially. Titrate to desired response.

Dosage with Cyclosporine

ADULTS, ELDERLY: Initially, 10 mg/day. **Maximum:** 20 mg/day.

SIDE EFFECTS

Pravastatin is generally well tolerated. Side effects are usually mild and transient. **Occasional (7%–4%):** Nausea, vomiting, diarrhea, constipation, abdominal pain, headache, rhinitis, rash, pruritus. **Rare (3%–2%):** Heartburn, myalgia, dizziness, cough, fatigue, flu-like symptoms, depression, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Potential for malignancy, cataracts. Hypersensitivity, myopathy occur rarely. Rhabdomyolysis has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain dietary history, esp. fat consumption. Question for possibility of pregnancy before initiating therapy (Pregnancy Category X). Assess baseline serum lab results (cholesterol, triglycerides, hepatic function tests).

INTERVENTION/EVALUATION

Monitor serum cholesterol, triglyceride lab results for therapeutic response. Monitor hepatic function tests, CPK. Monitor daily pattern of bowel activity, stool consistency. Check for headache, dizziness (provide assistance as needed). Assess for rash, pruritus. Be alert for malaise, muscle cramping/weakness; if accompanied by fever, may require discontinuation of medication.

PATIENT/FAMILY TEACHING

• Follow special diet (important part of treatment). • Periodic lab tests are essential part of therapy. • Report promptly any muscle pain/weakness, esp. if accompanied by fever, malaise. • Avoid tasks that require alertness, motor skills until response to drug is established (potential for dizziness). • Use nonhormonal contraception. • Avoid direct exposure to sunlight.

prazosin

praz-oh-sin
(Apo-Prazo, Minipress, Novo-Prazin)
Do not confuse prazosin with prednisone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha-adrenergic blocker. **CLINICAL:** Antihypertensive, antidote, vasodilator (see p. 60C).

ACTION

Selectively blocks $alpha_1$-adrenergic receptors, decreasing peripheral vascular resistance. **Therapeutic Effect:** Produces vasodilation of veins, arterioles; decreases total peripheral resistance; relaxes smooth muscle in bladder neck, prostate.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (B/P reduction)	2 hrs	2–4 hrs	10–24 hrs

Well absorbed following PO administration. Protein binding: 92%–97%. Metabolized in liver. Primarily excreted in feces. **Half-life:** 2–4 hrs.

USES

Treatment of mild to moderate hypertension. Used alone or in combination with other antihypertensives. **OFF-LABEL:** Treatment of benign prostate hyperplasia, Raynaud's phenomenon, post-traumatic stress disorder with related nightmares and sleep disruption.

PRECAUTIONS

Contraindications: Hypersensitivity to quinazolines. **Cautions:** Chronic renal failure, hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta; is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

P

INTERACTIONS

DRUG: Antihypertensives, diuretics, hypotension-producing medications may increase hypotensive effects. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. Avoid **saw palmetto. Garlic** may increase antihypertensive effect. **Licorice** causes sodium and water retention, potassium loss. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 1 mg, 2 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Administer first dose at bedtime (minimizes risk of fainting due to "first-dose syncope").

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 1 mg 2–3 times a day. Maintenance: 3–15 mg/day in divided doses. **Maximum:** 20 mg/day. **CHILDREN:** Initially, 0.05–0.1 mg/kg/day in 3 divided doses. **Maximum:** 0.5 mg/kg/day or 20 mg.

SIDE EFFECTS

Frequent (10%–7%): Dizziness, drowsiness, headache, asthenia (loss of strength, energy). **Occasional (5%–4%):** Palpitations, nausea, dry mouth, nervousness. **Rare (Less Than 1%):** Angina, urinary urgency.

ADVERSE EFFECTS/ TOXIC REACTIONS

First-dose syncope (hypotension with sudden loss of consciousness) may occur 30–90 min following initial dose of more than 2 mg, too-rapid increase in dosage, addition of another antihypertensive agent to therapy. May be preceded by tachycardia (pulse rate of 120–160 beats/min).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Give first dose at bedtime. If initial dose is given during daytime, pt must remain recumbent for 3–4 hrs. Assess B/P, pulse immediately before each dose and q15–30min until stabilized (be alert to B/P fluctuations).

INTERVENTION/EVALUATION

Monitor B/P, pulse diligently (first-dose syncope may be preceded by tachycardia). Monitor daily pattern of bowel activity, stool consistency. Assist with ambulation if dizziness occurs.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Use caution when rising from sitting or lying position. • Report continued dizziness, palpitations.

*prednisoLONE

pred-**niss**-oh-lone
(Millipred, Novo-Prednisolone, Omnipred, Orapred, Orapred ODT, Pediapred, Pred Forte, Pred Mild, Prelone, Veripred)
Do not confuse Pediapred with Pediazole, prednisolone with prednisone or primidone, or Prelone with Prozac.

FIXED-COMBINATION(S)

Blephamide: prednisolone/sulfacetamide (an anti-infective): 0.2%/10%. **Vasocidin:** prednisolone/sulfacetamide: 0.25%/10%.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenal corticosteroid. **CLINICAL:** Glucocorticoid (see pp. 98C, 140C).

ACTION

Inhibits accumulation of inflammatory cells at inflammation sites, phagocytosis, lysosomal enzyme release/synthesis, release of mediators of inflammation. **Therapeutic Effect:** Prevents/suppresses cell-mediated immune reactions. Decreases/prevents tissue response to inflammatory process.

PHARMACOKINETICS

Protein binding: 65%–91%. Metabolized in liver. Excreted in urine. **Half-life:** 3.6 hrs.

USES

Endocrine, rheumatic, hematologic disorders; collagen, respiratory, neoplastic, GI diseases; allergic states; acute or chronic solid organ rejection. **Ophthalmic:** Treatment of conjunctivitis, corneal injury (from chemical/thermal burns, foreign body).

PRECAUTIONS

Contraindications: Acute superficial herpes simplex keratitis, systemic fungal infections, varicella, live or attenuated virus vaccines. **Cautions:** Hyperthyroidism, cirrhosis, ocular herpes simplex, respiratory tuberculosis, untreated systemic infections, renal/hepatic impairment, diabetes, cataracts, glaucoma, history of seizure disorder, peptic ulcer disease, osteoporosis, myasthenia gravis, hypertension, CHF, ulcerative colitis, thromboembolic disorders.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Fetal cleft palate often occurs with chronic, first-trimester use. Breast-feeding not recommended. **Pregnancy Category C (D if used in first trimester). Children:** Prolonged treatment or high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** May be more susceptible to developing hypertension or osteoporosis.

INTERACTIONS

DRUG: Hepatic enzyme inducers (e.g., phenobarbital, phenytoin, rifampin) may decrease effects. **Live virus vaccines** increase vaccine side effects, potentiate virus replication, decrease pt's antibody response to vaccine. **HERBAL: St. John's wort** may decrease concentration. **Cat's claw, echinacea** have immunostimulant properties. **Echinacea** may decrease levels/effects. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, lipids, sodium, uric acid. May decrease serum calcium, WBC, hypothalamic pituitary adrenal (HPA) axis function, potassium.

AVAILABILITY (Rx)

Solution, Ophthalmic: 1%. **Solution, Oral (Orapred):** 15 mg/5 ml. **(Pediapred):** 5 mg/5 ml. **(Millipred):** 10 mg/5 ml. **(Veripred):** 20 mg/5 ml. **Suspension, Ophthalmic (Pred Forte):** 1%; **(Pred Mild):** 0.12%. **Syrup (Prelone):** 5 mg/5 ml, 15 mg/5 ml. **Tablets:** 5 mg.

Tablets, Orally-Disintegrating: 10 mg, 15 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

• Give with food or fluids.

Orally-Disintegrating Tablets

• Do not cut, split, break, or use partial tablets. • Remove from blister just prior to giving, place on tongue. • May swallow whole or allow to dissolve in mouth with/without water.

Ophthalmic

• For ophthalmic solution, shake well before using. • Instill drops into conjunctival sac, as prescribed. • Avoid touching applicator tip to conjunctiva to avoid contamination.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 5–60 mg/day in divided doses. **CHILDREN:** 0.1–2 mg/kg/day in 1–4 divided doses.

Treatment of Conjunctivitis, Corneal Injury

Ophthalmic: ADULTS, ELDERLY, CHILDREN: 1–2 drops every hr during day and q2h during night. After response, decrease dosage to 1 drop q4h, then 1 drop 3–4 times a day.

P

SIDE EFFECTS

Frequent: Insomnia, heartburn, nervousness, abdominal distention, diaphoresis, acne, mood swings, increased appetite, facial flushing, delayed wound healing, increased susceptibility to infection, diarrhea, constipation. **Occasional:** Headache, edema, change in skin color, frequent urination. **Rare:** Tachycardia, allergic reaction (rash, urticaria), psychological changes, hallucinations, depression. **Ophthalmic:** Stinging/burning, posterior subcapsular cataracts.

ADVERSE EFFECTS/ TOXIC REACTIONS

LONG-TERM THERAPY: Hypocalcemia, hypokalemia, muscle wasting (esp. arms, legs) osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer, CHF. **ABRUPT WITHDRAWAL FOLLOWING LONG-TERM THERAPY:** Anorexia, nausea, fever, headache, severe/sudden joint pain, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension. Sudden discontinuance may be fatal.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baselines for height, weight, B/P, serum glucose, electrolytes. Check results of initial tests (tuberculosis [TB] skin test, X-rays, EKG). Never give live virus vaccine (e.g., smallpox).

INTERVENTION/EVALUATION

Monitor B/P, weight, serum electrolytes, glucose, results of bone mineral density test, height, weight in children. Be alert to infection (sore throat, fever, vague symptoms); assess oral cavity daily for signs of candida infection (white patches, painful tongue/mucous membranes).

PATIENT/FAMILY TEACHING

• Notify physician if fever, sore throat, muscle aches, sudden weight gain, swelling, loss of appetite, fatigue occurs. • Avoid alcohol, limit caffeine. • Do not abruptly discontinue without physician's approval. • Avoid exposure to chickenpox, measles.

*predniSONE

TOP 200

pred-ni-sone
(Apo-Prednisone, Novo-Prednisone, Prednisone Intensol, Rayos, Winpred)

Do not confuse prednisone with methylprednisolone, prazosin, prednisolone, Prilosec, primidone, or promethazine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenal corticosteroid. **CLINICAL:** Glucocorticoid (see p. 98C).

ACTION

Inhibits accumulation of inflammatory cells at inflammation sites, phagocytosis, lysosomal enzyme release/synthesis, release of mediators of inflammation. **Therapeutic Effect:** Prevents/suppresses cell-mediated immune reactions. Decreases/prevents tissue response to inflammatory process.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 70%–90%. Widely distributed. Metabolized in liver, converted to prednisolone. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2.5–3.5 hrs.

USES

Substitution therapy in deficiency states: Acute or chronic adrenal insufficiency, congenital adrenal hyperplasia, adrenal insufficiency secondary to pituitary insufficiency. **Nonendocrine disorders:** Arthritis; rheumatic carditis; allergic, collagen, intestinal tract, multiple sclerosis exacerbations; liver, ocular, renal, skin diseases; bronchial asthma; cerebral edema; malignancies. **OFF-LABEL:** Prevention of postherpetic neuralgia, relief of acute pain in pts with herpes zoster, adjunct therapy for PCP.

PRECAUTIONS

Contraindications: Acute superficial herpes simplex keratitis, systemic fungal infections, varicella, administration of live or attenuated virus vaccines. **Cautions:** Hyperthyroidism, cirrhosis, ocular herpes simplex, respiratory tuberculosis, untreated systemic infections, renal/hepatic impairment; following acute MI, diabetes, cataracts, glaucoma, seizures, peptic ulcer disease, osteoporosis, myasthenia gravis, hypertension, CHF, ulcerative colitis, thromboembolic disorders.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Fetal cleft palate often occurs with chronic, first trimester use. Breast-feeding not recommended. **Pregnancy Category C (D if used in first trimester). Children:** Prolonged treatment or high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** May be more susceptible to developing hypertension or osteoporosis.

INTERACTIONS

DRUG: Hepatic enzyme inducers (e.g., **phenobarbital, phenytoin, rifampin**) may decrease effects. **Live virus vaccines** may increase vaccine side effects, potentiate virus replication, decrease pt's antibody response to vaccine. **HERBAL: St. John's wort** may decrease concentration. **Cat's claw, echinacea** have immunostimulant properties. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, lipids, sodium, uric acid. May decrease serum calcium, potassium, WBC, hypothalamic pituitary adrenal (HPA) axis function.

AVAILABILITY (Rx)

Solution, Oral: 1 mg/ml. **Solution, Oral Concentrate (Prednisone Intensol):** 5 mg/ml. **Tablets:** 1 mg, 2.5 mg, 5 mg, 10 mg, 20 mg, 50 mg. **Tablet:** (Delayed Release [Rayos]: 1 mg, 2 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

• Give with food or fluids. • Give single doses before 9 AM, multiple doses at evenly spaced intervals. • Swallow delayed-release tablet whole. • Do not break, crush, dissolve, or divide.

INDICATIONS/ROUTES/DOSAGE

Note: Dose dependent upon condition treated, pt response rather than by rigid adherence to age, weight, or body surface area.

Usual Dosage

PO: ADULTS, ELDERLY: 5–60 mg/day in divided doses. **CHILDREN:** 0.05–2 mg/kg/day in 1–4 divided doses.

SIDE EFFECTS

Frequent: Insomnia, heartburn, nervousness, abdominal distention, diaphoresis, acne, mood swings, increased appetite, facial flushing, delayed wound healing, increased susceptibility to infection, diarrhea, constipation. **Occasional:** Headache, edema, change in skin color, frequent urination. **Rare:** Tachycardia, allergic reaction (rash, urticaria), psychological changes, hallucinations, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

LONG-TERM THERAPY: Muscle wasting (esp. in arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer, CHF. **ABRUPT WITHDRAWAL FOLLOWING LONG-TERM THERAPY:** Anorexia, nausea, fever, headache, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension. Sudden discontinuance may be fatal.

P

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baselines for height, weight, B/P, serum glucose, electrolytes. Check results of initial tests (tuberculosis [TB] skin test, X-rays, EKG). Never give live virus vaccine (e.g., smallpox).

Monitor B/P, serum electrolytes, glucose, results of bone mineral density test, height, weight in children. Be alert to infection (sore throat, fever, vague symptoms); assess oral cavity daily for signs of candida infection (white patches, painful tongue/mucous membranes).

PATIENT/FAMILY TEACHING

• Notify physician if fever, sore throat, muscle aches, sudden weight gain, swelling, loss of appetite, or fatigue occurs. • Avoid alcohol, minimize use of caffeine. • Do not abruptly discontinue without physician's approval. • Avoid exposure to chickenpox, measles.

pregabalin

TOP 200

pre-**gab**-ah-lin
(Lyrica)

◆CLASSIFICATION

CLINICAL: Anticonvulsant, antineuralgic, analgesic **(Schedule V)** (see p. 36C).

ACTION

Binds to calcium channel sites in CNS tissue, inhibiting excitatory neurotransmitter release. Exerts antinociceptive, anticonvulsant activity. **Therapeutic Effect:** Decreases symptoms of painful peripheral neuropathy; decreases frequency of partial seizures.

PHARMACOKINETICS

Well absorbed following PO administration. Eliminated in urine unchanged. **Half-life:** 6 hrs.

USES

Adjunctive therapy in treatment of partial-onset seizures. Management of neuropathic pain associated with diabetic peripheral neuropathy or spinal cord injury. Management of postherpetic neuralgia. Management of fibromyalgia.

PRECAUTIONS

Contraindications: None known. **Cautions:** CHF, renal impairment, hypertension, diabetes, history of angioedema, pts at high risk for suicide.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Increased risk of fetal skeletal abnormalities. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy

not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, barbiturates, narcotic analgesics, other sedative agents may increase sedative effect. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase CPK. May cause mild PR interval prolongation. May decrease platelet count.

AVAILABILITY (Rx)

Capsules (Lyrica): 25 mg, 50 mg, 75 mg, 100 mg, 150 mg, 200 mg, 225 mg, 300 mg.

ADMINISTRATION/HANDLING

• Give without regard to food. • Do not open/crush capsule.

INDICATIONS/ROUTES/DOSAGE

Partial-Onset Seizures

PO: ADULTS, ELDERLY: Initially, 75 mg twice a day or 50 mg 3 times a day. May increase dose based on tolerability/effect. **Maximum:** 600 mg/day.

Neuropathic Pain

PO: ADULTS, ELDERLY: Initially, 50 mg 3 times a day. **Maximum:** 300 mg/day, increased dose based on efficacy and tolerability.

Postherpetic Neuralgia, Neuropathic Pain Associated with Spinal Cord Injury

PO: ADULTS, ELDERLY: Initially, 75 mg twice a day or 50 mg 3 times a day. May increase to 300 mg/day within 1 wk. May further increase to 600 mg/day after 2–4 wks. **Maximum:** 600 mg/day.

Fibromyalgia

PO: ADULTS, ELDERLY: Initially, 75 mg twice a day. May increase to 150 mg twice a day within 1 wk. **Maximum:** 225 mg twice a day.

Dosage in Renal Impairment

Creatinine Clearance	Daily Dosage
30–60 ml/min	75–300 mg in 2–3 divided doses
15–29 ml/min	25–150 mg in 1 or 2 doses
Less than 15 ml/min	25–75 mg once daily

Dosage for Hemodialysis

◀ALERT▶ Take supplemental dose immediately following dialysis.

Daily Dosage	Supplemental Dosage
25 mg	Single dose of 25 mg or 50 mg
25–50 mg	Single dose of 50 mg or 75 mg
75 mg	Single dose of 100 mg or 150 mg

SIDE EFFECTS

Frequent (32%–12%): Dizziness, drowsiness, ataxia, peripheral edema. **Occasional (12%–5%):** Weight gain; blurred vision; diplopia; difficulty with concentration, attention, cognition; tremor; dry mouth; headache; constipation; asthenia (loss of strength, energy). **Rare (4%–2%):** Abnormal gait, confusion, incoordination, twitching, flatulence, vomiting, edema, myopathy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal increases risk of seizure frequency in pts with seizure disorders; withdraw gradually over a minimum of 1 wk.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Seizure: Review history of seizure disorder (type, onset, intensity, frequency, duration, LOC). **Pain:** Assess onset, type, location, and duration of pain.

INTERVENTION/EVALUATION

Provide safety measures as needed. Assess for seizure activity. Assess for clinical improvement; record onset of relief of pain. Assess for evidence of peripheral edema behind medial malleolus (usually first area of edema). Question for changes in visual acuity.

PATIENT/FAMILY TEACHING

• Do not abruptly stop taking drug because seizure frequency may be increased. • Do not drive, operate machinery, perform activities requiring mental acuity due to potential dizziness, drowsiness, ataxia. • Avoid alcohol. • Carry identification card, bracelet to note anticonvulsant therapy.

primidone

prim-i-done
(Apo-Primidone, Mysoline)
Do not confuse primidone with prednisone or pyridoxine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Barbiturate. **CLINICAL:** Anticonvulsant (see p. 36C).

P

ACTION

Decreases motor activity from electrical/chemical stimulation, stabilizes seizure threshold against hyperexcitability. **Therapeutic Effect:** Reduces seizure activity.

PHARMACOKINETICS

Rapidly, usually completely absorbed following PO administration. Protein binding: 99%. Extensively metabolized in liver to phenobarbital and phenylethylmalonamide (PEMA). Minimal excretion in urine. **Half-life:** 10–12 hrs.

USES

Management of partial seizures with complex symptomatology (psychomotor seizures), generalized tonic-clonic (grand mal) seizures, focal seizures. **OFF-LABEL:** Treatment of essential tremor (familial tremor).

PRECAUTIONS

Contraindications: Hypersensitivity to phenobarbital, porphyria. **Cautions:** Renal/hepatic impairment, pulmonary insufficiency, pts at risk for suicidal thoughts/behavior.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category D. Children, Elderly:** May produce paradoxical excitement, restlessness.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase effects. **Valproic acid** increases concentration, risk of toxicity. **HERBAL: Evening primrose** may decrease seizure threshold. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May decrease serum bilirubin. **Therapeutic serum level:** 4–12 mcg/ml; **toxic serum level:** greater than 12 mcg/ml.

AVAILABILITY (Rx)

Tablets: 50 mg, 250 mg.

ADMINISTRATION/HANDLING

PO

• Give with food to minimize GI effects.

INDICATIONS/ROUTES/DOSAGE

Seizure Control

PO: ADULTS, ELDERLY, CHILDREN 8 YRS AND OLDER: Initially, 125–250 mg/day at bedtime. May increase by 125–250 mg/day every 3–7 days. Usual dose: 750–1,500 mg/day. **Maximum:** 2 g/day. **CHILDREN YOUNGER THAN 8 YRS:** Initially, 50–125 mg/day at bedtime. May increase by 50–125 mg/day every 3–7 days. Usual dose: 10–25 mg/kg/day in divided doses. **NEONATES:** 12–20 mg/kg/day in divided doses 2–4 times a day.

Dosage Interval in Renal Impairment

Creatine Clearance	Interval
50 ml/min or greater	q12h
10–49 ml/min	q12–24h
Less than 10 ml/min	q24h

SIDE EFFECTS

Frequent: Ataxia, dizziness. **Occasional:** Anorexia, drowsiness, altered mental status, nausea, vomiting, paradoxical excitement. **Rare:** Rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal after prolonged therapy may produce effects ranging from markedly increased dreaming, nightmares, insomnia, tremor, diaphoresis, vomiting to hallucinations, delirium, seizures, status epilepticus. Skin eruptions may appear as hypersensitivity reaction. Blood dyscrasias, hepatic disease, hypocalcemia occur rarely. Overdose produces cold/clammy skin, hypothermia, severe CNS depression, followed by high fever, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Observe frequently for recurrence of seizure activity. Initiate seizure precautions.

INTERVENTION/EVALUATION

Monitor for changes in behavior, depression, suicidal ideation. Monitor serum primidone concentrations; CBC; neurologic status (frequency, duration, severity of seizures). Monitor for **therapeutic serum level:** 4–12 mcg/ml; **toxic serum level:** more than 12 mcg/ml.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication after long-term use (may precipitate seizures). • Strict maintenance of drug therapy is essential for seizure control. • Avoid tasks that require alertness, motor skills until response to drug is established. • Drowsiness usually disappears during continued therapy. • If dizziness occurs, change positions slowly from recumbent to sitting position before standing. • Avoid alcohol. • Notify physician if depression, thoughts of suicide occur.

probenecid

pro-**ben**-e-sid
(Benuryl)
Do not confuse probenecid with procainamide or Procanbid.

FIXED-COMBINATION(S)

Probenecid/colchicine (an antigout agent): 500 mg/0.5 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Uricosuric. **CLINICAL:** Antigout agent.

ACTION

Competitively inhibits reabsorption of uric acid at proximal convoluted tubule. Inhibits renal tubular secretion of weak organic acids (e.g., penicillins). **Therapeutic Effect:** Promotes uric acid excretion, reduces serum uric acid level, increases plasma levels of penicillins, cephalosporins.

PHARMACOKINETICS

Rapidly, completely absorbed following PO administration. Extensively metabolized in liver. Excreted in urine. Excretion is dependent upon urinary pH, is increased in alkaline urine. **Half-life:** 6–12 hrs.

USES

Treatment of hyperuricemia associated with gout, gouty arthritis. Adjunctive therapy with penicillins, cephalosporins to elevate/prolong antibiotic plasma levels. **OFF-LABEL:** Prolongation/elevation of beta-lactam plasma levels.

P

PRECAUTIONS

Contraindications: Blood dyscrasias, children younger than 2 yrs, concurrent high-dose aspirin therapy, uric acid calculi. **Cautions:** Peptic ulcer, hematuria, renal colic, severe renal impairment (creatinine clearance less than 30 ml/min).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Increases effect, toxicity of **methotrexate.** Increases concentration of **cephalosporins, ketorolac, NSAIDs, penicillins.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May inhibit renal excretion of serum PSP (phenolsulfonphthalein), 17-ketosteroids, BSP (sulfobromophthalein).

AVAILABILITY (Rx)

Tablets: 500 mg.

P

ADMINISTRATION/HANDLING

PO

• Give with or immediately after meals, milk. • Instruct pt to drink at least 6–8 glasses (8 oz) of water/day (prevents kidney stone development).

INDICATIONS/ROUTES/DOSAGE

Gout

PO: ADULTS, ELDERLY: Initially, 250 mg twice daily for 1 wk, then 500 mg twice daily. May increase by 500 mg q4wks. **Maximum:** 2 g/day. Maintenance: Dosage that maintains normal uric acid level.

Adjunct to Penicillin, Cephalosporin Therapy

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 14 YRS: 2 g/day in 4 divided doses. **CHILDREN 2–14 YRS:** Initially, 25 mg/kg. Maintenance: 40 mg/kg/day in 4 divided doses. **Maximum:** 500-mg dose.

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min: Avoid use.

SIDE EFFECTS

Frequent (10%–6%): Headache, anorexia, nausea, vomiting. **Occasional (5%–1%):** Lower back or side pain, rash, urticaria, pruritus, dizziness, flushed face, urinary urgency, gingivitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe hypersensitivity reactions, including anaphylaxis, occur rarely (usually within few hrs after administration following previous use); discontinue drug immediately, contact physician. Pruritic maculopapular rash should be considered a toxic reaction. May be accompanied by malaise, fever, chills, arthralgia, nausea, vomiting, leukopenia, aplastic anemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Do not initiate therapy until acute gouty attack has subsided. Question for hypersensitivity to probenecid or if taking penicillin, cephalosporin antibiotics.

INTERVENTION/EVALUATION

If exacerbation of gout recurs after therapy, use other agents for gout. Discontinue medication immediately if rash, other evidence of allergic reaction appears. Encourage high fluid intake (3,000 ml/day). Monitor I&O (output should be at least 2,000 ml/day). Assess CBC, serum uric acid levels. Assess urine for cloudiness, unusual color, odor. Assess for therapeutic response (reduced joint tenderness, swelling, redness, limitation of motion).

PATIENT/FAMILY TEACHING

• Drink plenty of fluids to decrease risk of uric acid kidney stones. • Avoid alco-

hol, large doses of aspirin, other salicylates. • Consume low-purine food (reduce/omit meat, fowl, fish; use eggs, cheese, vegetables). Foods high in purine: kidney, liver, sweetbreads, sardines, anchovies, meat extracts. • May take over 1 wk for full therapeutic effect. • Drink 6–8 glasses (8 oz) of fluid daily while on medication.

procainamide HIGH ALERT

proe-**kane**-ah-mide
(Apo-Procainamide, Procan-SR)

BLACK BOX ALERT Prolonged use results in positive ANA tests in 50% of pts, may lead to lupus erythematosus-like syndrome. Agranulocytosis, neutropenia, hypoplastic anemia, thrombocytopenia reported; 20%–25% mortality with agranulocytosis.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Class 1 antiarrhythmic. **CLINICAL:** Antiarrhythmic (see p. 16C).

ACTION

Increases electrical stimulation threshold of ventricles, His-Purkinje system. Decreases myocardial excitability, conduction velocity; depresses myocardial contractility. Exerts direct cardiac effects. **Therapeutic Effect:** Suppresses arrhythmias.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: 15%–20%. Widely distributed. Metabolized in liver to active metabolite. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 2.5–4.5 hrs; metabolite, 6–8 hrs.

USES

IV: Treatment of life-threatening ventricular arrhythmias. **OFF-LABEL:** Paroxysmal supraventricular tachycardia (PSVT); prevention of ventricular tachycardia, symptomatic premature ventricular contractions (PVCs).

PRECAUTIONS

Contraindications: Complete heart block, second-degree heart block, systemic lupus erythematosus, torsade de pointes. **Cautions:** Marked AV conduction disturbances, bundle-branch block, severe digoxin toxicity, CHF, supraventricular tachyarrhythmias, renal/hepatic impairment, preexisting QT prolongation, myasthenia gravis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** More susceptible to hypotensive effect. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase effects of **neuromuscular blockers. Other antiarrhythmics** may increase cardiac effects. **HERBAL:** **Ephedra** may worsen arrhythmias. **FOOD:** None known. **LAB VALUES:** May cause EKG changes, positive ANA titers, Coombs' test. May increase serum alkaline phosphatase, bilirubin, AST, ALT, LDH. **Therapeutic serum level:** 4–8 mcg/ml; **toxic serum level:** greater than 10 mcg/ml.

AVAILABILITY (Rx)

Injection Solution: 100 mg/ml, 500 mg/ml.

ADMINISTRATION/HANDLING

IV, IM

◀ALERT▶ May give by IM injection, IV push, IV infusion.

Reconstitution • For IV push, dilute with 5–10 ml D_5W. Maximum concentration: 20 mg/ml. • For initial loading infusion, add 1 g to 50 ml D_5W to provide concentration of 20 mg/ml. • For IV infusion, add 1 g to 250–500 ml D_5W to provide concentration of 2–4 mg/ml. Maximum concentration: 4 g/250 ml.

P

Rate of Administration • For IV push, with pt in supine position, administer at rate not exceeding 25–50 mg/min. • For initial loading infusion, infuse 1 ml/min for up to 25–30 min. • For IV infusion, infuse at 1–3 ml/min. • Check B/P q5–10min during infusion. If fall in B/P exceeds 15 mm Hg, discontinue drug, contact physician. Notify physician of any significant interval changes. • B/P, EKG should be monitored continuously during IV administration and rate of infusion adjusted to eliminate arrhythmias.

Storage • Solution appears clear, colorless to light yellow. • Discard if solution darkens or is discolored or if precipitate forms. • When diluted with 0.9% NaCl or D_5W, solution is stable for 24 hrs at room temperature, for 7 days if refrigerated.

IV INCOMPATIBILITY

Milrinone (Primacor).

IV COMPATIBILITIES

Amiodarone (Cordarone), dobutamine (Dobutrex), heparin, lidocaine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Management of Arrhythmias

IV: ADULTS, ELDERLY: Loading dose: 15–18 mg/kg given as slow infusion over 25–30 min. Maintenance infusion: 1–4 mg/min. **CHILDREN:** Loading dose: 3–6 mg/kg over 5 min (**maximum:** 100 mg). May repeat q5–10min to maximum total dose of 15 mg/kg. Maintenance dose: 20–80 mcg/kg/min. **Maximum:** 2 g/day.

SIDE EFFECTS

Frequent: Transient, but at times, marked hypotension. **Rare:** Confusion, mental depression, psychosis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Paradoxical, extremely rapid ventricular rate may occur during treatment of atrial fibrillation/flutter. Systemic lupus erythematosus-like syndrome (fever, myalgia, pleuritic chest pain) may occur with prolonged therapy. Cardiotoxic effects occur most commonly with IV administration and appear as conduction changes (50% widening of QRS complex, frequent ventricular premature contractions, ventricular tachycardia, complete AV block). Prolonged PR and QT intervals, flattened T waves occur less frequently.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check B/P, pulse for 1 full min (unless pt is on continuous monitor) before giving medication.

INTERVENTION/EVALUATION

Check B/P q5–10 min during infusion. If fall in B/P exceeds 15 mm/Hg, discontinue drug, contact physician. Monitor EKG for cardiac changes, particularly widening of QRS, prolongation of PR and QT intervals. Assess pulse for strength/weakness, irregular rate. Monitor I&O, serum electrolyte levels (potassium, chloride, sodium). Assess for complaints of GI upset, headache, arthralgia. Monitor daily pattern of bowel activity, stool consistency. Assess for dizziness. Assess skin for evidence of hypersensitivity reaction (esp. in pts on high-dose therapy). Monitor for therapeutic serum level. **Therapeutic serum level:** 4–8 mcg/ml; **toxic serum level:** greater than 10 mcg/ml.

procarbazine

HIGH ALERT

proe-**kar**-ba-zeen
(Matulane, Natulan)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents.

Do not confuse procarbazine with dacarbazine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Methylhydrazine derivative. **CLINICAL:** Antineoplastic (see p. 87C).

ACTION

Inhibits DNA, RNA, protein synthesis. May directly damage DNA. Cell cycle–phase specific for S phase of cell division. **Therapeutic Effect:** Causes cell death.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Crosses blood-brain barrier. Metabolized primarily in liver, kidneys. Excreted in urine, feces. **Half-life:** 1 hr.

USES

Treatment of Hodgkin's disease. **OFF-LABEL:** Non-Hodgkin's lymphoma, primary brain tumors.

PRECAUTIONS

Contraindications: Preexisting bone marrow aplasia, alcohol ingestion, pregnancy. **Cautions:** Renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. May cause fetal harm. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Alcohol** may cause disulfiram-like reaction. May increase anticholinergic effects of **anticholinergics, antihistamines. Bone marrow depressants** may increase myelosuppression. **CNS depressants** may increase CNS depression. **Tricyclic antidepressants** may increase anticholinergic effects; may cause seizures, hyperpyretic crisis. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease levels/effects. **FOOD:** **Caffeine** may increase B/P. **Foods containing tyramine** may cause clinically severe (possibly life-threatening) hypertension. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 50 mg.

ADMINISTRATION/HANDLING

PO

- Administer with food or immediately after meals.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Base dosage on ideal body weight.

Advanced Hodgkin's Disease

PO: ADULTS, ELDERLY: Initially, 2–4 mg/kg/day as single dose or in divided doses for 1 wk, then 4–6 mg/kg/day. Maintenance: 1–2 mg/kg/day. **CHILDREN:** 100 mg/m^2/day for 14 days of a 28-day cycle and repeated q4wks. Continue until maximum response occurs, leukocyte count falls below 4,000/mm^3, or platelet count falls below 100,000/mm^3.

SIDE EFFECTS

Frequent: Severe nausea, vomiting, respiratory disorders (cough, effusion), myalgia, arthralgia, drowsiness, nervousness, insomnia, nightmares, diaphoresis, hallucinations, seizures. **Occasional:** Hoarseness, tachycardia, nystagmus, retinal hemorrhage, photophobia, photosensitivity, urinary frequency, nocturia, hypotension, diarrhea, stomatitis, paresthesia, unsteadiness, confusion, decreased reflexes, foot drop. **Rare:** Hypersensitivity reaction (dermatitis, pruritus, rash, urticaria), hyperpigmentation, alopecia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Major toxic effects are myelosuppression manifested as hematologic toxicity (principally leukopenia, thrombocytopenia, anemia), hepatotoxicity mani-

P

fested as jaundice, ascites. UTIs secondary to leukopenia may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain bone marrow tests, Hgb, Hct, leukocyte, differential, reticulocyte, platelet, urinalysis, serum transaminase, alkaline phosphatase, BUN results before therapy and periodically thereafter. Therapy should be interrupted if WBC falls below 4,000/mm^3 or platelet count falls below 100,000/mm^3.

INTERVENTION/EVALUATION

Monitor hematologic status, renal/hepatic function studies. Assess for stomatitis. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Inform physician of fever, sore throat, bleeding, bruising. • Avoid alcohol (may cause disulfiram reaction: nausea, vomiting, headache, sedation, visual disturbances). • Avoid tyramine-containing foods.

prochlorperazine

proe-klor-**per**-a-zeen
(Apo-Prochlorperazine, Compro, Stemetil)

BLACK BOX ALERT Increased risk for death in elderly with dementia-related psychosis.

Do not confuse prochlorperazine with chlorpromazine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenothiazine. **CLINICAL:** Antiemetic.

ACTION

Acts centrally to inhibit/block dopamine receptors in chemoreceptor trigger zone, peripherally to block vagus nerve in GI tract. **Therapeutic Effect:** Relieves nausea/vomiting, improves psychosis.

PHARMACOKINETICS

Route	Onset*	Peak	Duration
PO	30–40 min	N/A	3–4 hrs
IM	10–20 min	N/A	4–6 hrs
Rectal	60 min	N/A	12 hrs

*As an antiemetic.

Variably absorbed after PO administration. Widely distributed. Metabolized in liver, GI mucosa. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life: PO:** 3–5 hrs, **IV:** 7 hrs.

USES

Management of nausea/vomiting. Treatment of acute or chronic psychosis. **OFF-LABEL:** Behavior syndromes in dementia, psychosis/agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, severe CNS depression, coma, severe cardiac/hepatic impairment, pediatric surgery. **Cautions:** Seizures, Parkinson's disease, children younger than 2 yrs or less than 9 kg, elderly, pts at risk for pneumonia, severe renal impairment, decreased GI motility, urinary retention, visual problems.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those weighing less than 9 kg or younger than 2 yrs. **Elderly:** More susceptible to orthostatic hypotension, anticholinergic effects (e.g., dry mouth), sedation, extrapyramidal symptoms (EPS); lower dosage recommended.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS, respiratory depression, hypotensive effects. **Extrapyramidal symptom (EPS)–producing medications** may increase EPS. **Lithium** may decrease absorption, produce adverse neurologic effects. **MAOIs, tricyclic antidepressants** may increase anticholinergic, sedative effects. **HERBAL:** **Dong quai, St. John's wort** may increase photosensitization. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 5 mg/ml. **Suppositories (Compro):** 25 mg. **Tablets:** 5 mg, 10 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give by IV push slowly. Maximum rate: 5 mg/min. **Storage** • Store at room temperature. • Protect from light. • Clear or slightly yellow solutions may be used.

IM

• Inject deep IM into outer quadrant of buttocks.

PO

• Should be administered with food or water.

Rectal

• Moisten suppository with cold water before inserting well into rectum.

IV INCOMPATIBILITIES

Atropine, furosemide (Lasix), hydrocortisone, hydromorphone (Dilaudid), midazolam (Versed).

IV COMPATIBILITIES

Calcium gluconate, diphenhydramine (Benadryl), fentanyl, glycopyrrolate (Robinul), heparin, metoclopramide (Reglan), morphine, nalbuphine (Nubain), potassium chloride, promethazine (Phenergan), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Nausea/Vomiting

PO: ADULTS, ELDERLY: 5–10 mg 3–4 times a day. **CHILDREN:** 0.4 mg/kg/day in 3–4 divided doses.
IV: ADULTS, ELDERLY: 2.5–10 mg. May repeat q3–4h. **Maximum:** 10 mg/dose or 40 mg/day. **CHILDREN:** 0.1–0.15 mg/kg/dose q8–12h. **Maximum:** 40 mg/day.
IM: ADULTS, ELDERLY: 5–10 mg q3–4h. **CHILDREN:** 0.1–0.15 mg/kg/dose q8–12h. **Maximum:** 40 mg/day.
Rectal: ADULTS, ELDERLY: 25 mg twice a day.

Psychosis

PO: ADULTS, ELDERLY: 5–10 mg 3–4 times a day. **Maximum:** 150 mg/day. **CHILDREN 2–12 YRS:** 2.5 mg 2–3 times a day. **Maximum daily dose:** 25 mg for children 6–12 yrs; 20 mg for children 2–5 yrs.
IM: ADULTS, ELDERLY: 10–20 mg q4h. **CHILDREN:** 0.13 mg/kg/dose.

SIDE EFFECTS

Frequent: Drowsiness, hypotension, dizziness, fainting (commonly occurring after first dose, occasionally after subsequent doses, rarely with oral form). **Occasional:** Dry mouth, blurred vision, lethargy, constipation, diarrhea, myalgia, nasal congestion, peripheral edema, urinary retention.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extrapyramidal symptoms (EPS) appear dose related and are divided into three categories: akathisia (e.g., inability to sit still, tapping of feet), parkinsonian symptoms (mask-like face, tremors, shuffling gait, hypersalivation), acute dystonias (torticollis [neck muscle spasm], opisthotonos [rigidity of back muscles], oculogyric crisis [rolling back of eyes]). Dystonic reaction may produce diaphoresis, pallor. Tardive dyskinesia (tongue

protrusion, puffing of cheeks, puckering of mouth) occurs rarely and may be irreversible. Abrupt withdrawal after long-term therapy may precipitate nausea, vomiting, gastritis, dizziness, tremors. Blood dyscrasias, particularly agranulocytosis, mild leukopenia, may occur. May lower seizure threshold.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Avoid skin contact with solution (contact dermatitis). **Antiemetic:** Assess for dehydration (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue). **Antipsychotic:** Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P for hypotension. Assess for EPS. Monitor WBC, differential count for blood dyscrasias. Monitor for fine tongue movement (may be early sign of tardive dyskinesia). Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

• Limit caffeine. • Avoid alcohol. • Avoid tasks requiring alertness, motor skills until response to drug is established (may cause drowsiness, impairment).

progesterone

TOP 200

pro-**jes**-te-rone
(Crinone, Endometrin Vaginal Insert, Prochieve, Prometrium)

BLACK BOX ALERT Not to be used to prevent coronary heart disease. Risk of dementia may be increased in postmenopausal women.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Progestin.
CLINICAL: Hormone.

ACTION

Promotes mammary gland development, relaxes uterine smooth muscle. **Therapeutic Effect:** Decreases abnormal uterine bleeding; transforms endometrium from proliferative to secretory in estrogen-primed endometrium.

PHARMACOKINETICS

Protein binding: 96%–99%. Metabolized in liver. Excreted in bile, urine. **Half-life (vaginal gel):** 5–20 min.

USES

PO: Prevent endometrial hyperplasia, secondary amenorrhea. **IM:** Amenorrhea, abnormal uterine bleeding due to hormonal imbalance. **Vaginal gel:** Treatment of infertility, secondary amenorrhea. **Vaginal insert:** Treatment of infertility. **OFF-LABEL:** Treatment of corpus luteum dysfunction.

PRECAUTIONS

Contraindications: History of or suspected carcinoma of breast, active breast cancer, history of thromboembolic disorders, history of thrombophlebitis, missed abortion or ectopic pregnancy, severe hepatic dysfunction, undiagnosed abnormal vaginal bleeding, use as a pregnancy test. **Cautions:** Diabetes, conditions aggravated by fluid retention (e.g., asthma, epilepsy, migraine, cardiac/renal dysfunction), history of mental depression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Avoid use during pregnancy. **Pregnancy Category B (Prometrium).** None established for vaginal gel, vaginal insert, or injection. **Children:** Safety and

efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CYP3A4 inducers** (e.g., **carbamazepine, phenobarbital, phenytoin, rifampin**) may decrease effects of progesterone. **HERBAL:** **St. John's wort** may decrease effect. **FOOD:** None known. **LAB VALUES:** May alter HDL, cholesterol, triglycerides, LDL. May increase hepatic function values.

AVAILABILITY (Rx)

Capsules (Prometrium): 100 mg, 200 mg. **Injection Oil:** 50 mg/ml. **Vaginal Gel (Crinone, Prochieve):** 4% (45 mg/dose), 8% (90 mg/dose). **Vaginal Insert (Endometrin Vaginal Insert):** 100 mg.

ADMINISTRATION/HANDLING

IM

• Store at room temperature. • Administer only deep IM in large muscle mass.

PO

• If given in morning, administer 2 hrs after breakfast with full glass of water.

Vaginal Gel

• Remove applicator from sealed wrapper. Do not remove twist-off tab at this time. • Hold applicator by thick end. Shake down several times like a thermometer to ensure contents are at thin end. • Hold applicator by flat section of thick end and twist off tab at other end. Do not squeeze thick end while twisting tab (could force some gel to be released before insertion). • Insert applicator into vagina either in sitting position or lying on back with knees bent. • Insert thin end well into vagina. • Squeeze thick end of applicator to deposit gel. • Remove applicator, discard.

INDICATIONS/ROUTES/DOSAGE

Amenorrhea

PO: ADULTS: 400 mg daily in evening for 10 days.

IM: ADULTS: 5–10 mg for 6–8 days. Withdrawal bleeding expected in 48–72 hrs if ovarian activity produced proliferative endometrium.

Vaginal: ADULTS: Apply 45 mg (4% gel) every other day for 6 or fewer doses.

Abnormal Uterine Bleeding

IM: ADULTS: 5–10 mg/day for 6 days. When estrogen given concomitantly, begin progesterone after 2 wks of estrogen therapy; discontinue when menstrual flow begins.

Prevention of Endometrial Hyperplasia

PO: ADULTS: 200 mg in evening for 12 days per 28-day cycle in combination with daily conjugated estrogen.

Infertility

Vaginal: ADULTS: 90 mg (8% gel) once a day (twice a day in women with partial or complete ovarian failure). If pregnancy occurs, may continue up to 10–12 wks.

Support of Embryo/Early Pregnancy

Vaginal Insert: 100 mg 2–3 times a day for up to 10 wks.

SIDE EFFECTS

Frequent: Breakthrough bleeding/spotting at beginning of therapy, amenorrhea, change in menstrual flow, breast tenderness. **Gel:** Drowsiness. **Occasional:** Edema, weight gain/loss, rash, pruritus, photosensitivity, skin pigmentation. **Rare:** Pain/swelling at injection site, acne, depression, alopecia, hirsutism.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombophlebitis, cerebrovascular disorders, retinal thrombosis, pulmonary embolism occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy, hypersensitivity to progestins before initiating therapy. Obtain baseline weight, serum glucose level, B/P.

INTERVENTION/EVALUATION

Check weight daily; report weekly gain over 5 lbs. Assess skin for rash, urticaria. Immediately report development of chest pain, sudden shortness of breath, sudden decrease in vision, migraine headache, pain (esp. with swelling, warmth, redness) in calves, numbness of arm/leg (thrombotic disorders). Check B/P periodically. Note progesterone therapy on pathology specimens.

PATIENT/FAMILY TEACHING

• Use sunscreen, protective clothing to protect from sunlight, ultraviolet light until tolerance determined. • Notify physician of abnormal vaginal bleeding, other symptoms. • Stop taking medication, contact physician at once if pregnancy suspected. • If using vaginal gel, avoid tasks that require alertness, motor skills until response to drug is established.

promethazine TOP 200

proe-**meth**-a-zeen
(Phenadoz, Phenergan, Promethegan)

BLACK BOX ALERT Fatalities due to respiratory depression reported in children 2 yrs and younger. Severe tissue injury, including gangrene, may occur with intravenous injection (preferred route is deep intramuscular). Be alert for signs and symptoms of tissue injury including burning or pain at injection site, phlebitis, swelling, blistering. Risk reduced by diluting promethazine with 10–20 ml 0.9% NaCl or diluting in a minibag (piggyback); administer slowly over 10–15 min; use large veins or central venous site (no hand or wrist veins).

Do not confuse Phenergan with phenobarbital, or promethazine with chlorpromazine or prednisone.

FIXED-COMBINATION(S)

Phenergan with codeine: promethazine/codeine (a cough suppressant): 6.25 mg/10 mg/5 ml. **Phenergan VC:** promethazine/phenylephrine (a vasoconstrictor): 6.25 mg/5 mg/5 ml. **Phenergan VC with codeine:** promethazine/phenylephrine/codeine: 6.25 mg/5 mg/10 mg/5 ml.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenothiazine. **CLINICAL:** Antihistamine, antiemetic, sedative-hypnotic (see p. 55C).

ACTION

Antihistamine: Inhibits histamine at histamine receptor sites. **Antiemetic:** Diminishes vestibular stimulation, depresses labyrinthine function, acts on chemoreceptor trigger zone. **Sedative-hypnotic:** Produces CNS depression by decreasing stimulation to brain stem reticular formation. **Therapeutic Effect:** Prevents allergic responses mediated by histamine (urticaria, pruritus). Prevents, relieves nausea/vomiting. Produces mild sedative effect.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	20 min	N/A	2–8 hrs
IV	3–5 min	N/A	2–8 hrs
IM	20 min	N/A	2–8 hrs
Rectal	20 min	N/A	2–8 hrs

Well absorbed from GI tract after IM administration. Protein binding: 83%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 9–16 hrs.

USES

Treatment of allergic conditions, motion sickness, nausea, vomiting. May be used as mild sedative. Adjunct to postoperative analgesia.

PRECAUTIONS

Contraindications: Children 2 yrs and younger (may cause fatal respiratory depression), hypersensitivity to phenothiazines, severe CNS depression, coma,

treatment of lower respiratory tract symptoms including asthma. **Cautions:** Cardiovascular/hepatic impairment, narrow-angle glaucoma, prostatic hypertrophy, GI/GU obstruction, bone marrow depression, asthma, peptic ulcer, history of seizures, sleep apnea, pts suspected of Reye's syndrome.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Unknown if drug is distributed in breast milk. May inhibit platelet aggregation in neonates if taken within 2 wks of birth. May produce jaundice, extrapyramidal symptoms (EPS) in neonates if taken during pregnancy. **Pregnancy Category C. Children:** May experience increased excitement. Not recommended for those younger than 2 yrs. **Elderly:** More sensitive to dizziness, sedation, confusion, hypotension, hyperexcitability, anticholinergic effects (e.g., dry mouth).

INTERACTIONS

DRUG: **Alcohol, CNS depressants** may increase CNS depressant effects. **Anticholinergics** may increase anticholinergic effects. **MAOIs** may prolong, intensify anticholinergic, CNS depressant effects. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May suppress wheal/flare reactions to antigen skin testing unless discontinued 4 days before testing.

AVAILABILITY (Rx)

Injection Solution (Phenergan): 25 mg/ml, 50 mg/ml. **Suppositories (Phenadoz, Phenergan, Promethegan):** 12.5 mg, 25 mg, 50 mg. **Syrup (Phenergan):** 6.25 mg/5 ml. **Tablets (Phenergan):** 12.5 mg, 25 mg, 50 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ IM is preferred route; avoid IV if possible. Significant tissue necrosis may occur if given subcutaneously. Inadvertent intra-arterial injection may produce severe arteriospasm, resulting in severe circulation impairment.

IV

Reconstitution • Dilute with 10–20 ml 0.9% NaCl or prepare minibag.

Rate of Administration • Administer slowly over 10–15 min. • Use large vein or central venous site (no hand or wrist veins). • Too-rapid rate of infusion may result in transient fall in B/P, producing orthostatic hypotension, reflex tachycardia, serious tissue injury.

Storage • Store at room temperature.

IM

• Inject deep IM.

PO

• Give with food or fluids to reduce GI distress. • Scored tablets may be crushed.

Rectal

• Refrigerate suppository. • Moisten suppository with cold water before inserting well into rectum.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotec), heparin, ketorolac (Toradol), nalbuphine (Nubain), piperacillin and tazobactam (Zosyn).

IV COMPATIBILITIES

Atropine, diphenhydramine (Benadryl), glycopyrrolate (Robinul), hydromorphone (Dilaudid), hydroxyzine (Vistaril), meperidine (Demerol), midazolam (Versed), morphine, prochlorperazine (Compazine).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Contraindicated in children 2 yrs and younger.

Allergic Symptoms

PO: ADULTS, ELDERLY: 6.25–12.5 mg 3 times a day plus 25 mg at bedtime. **CHILDREN:** 0.1 mg/kg/dose (**Maximum:** 12.5 mg) 3 times a day plus 0.5 mg/kg/dose (**Maximum:** 25 mg) at bedtime.

IV, IM: ADULTS, ELDERLY: 6.25–25 mg. May repeat in 2 hrs.

Motion Sickness

PO: ADULTS, ELDERLY: 25 mg 30–60 min before departure; may repeat in 8–12 hrs, then every morning on rising and before evening meal. **CHILDREN:** 0.5 mg/kg 30–60 min before departure; may repeat in 8–12 hrs, then every morning on rising and before evening meal. **Maximum:** 25 mg twice a day.

Prevention of Nausea/Vomiting

PO, IV, IM, Rectal: ADULTS, ELDERLY: 6.25–25 mg q4–6h as needed. **CHILDREN:** 0.25–1 mg/kg q4–6h as needed.

Preop/Postop Sedation, Adjunct to Analgesics

IV, IM: ADULTS, ELDERLY: 25–50 mg. **CHILDREN:** 1.1 mg/kg not to exceed 1/2 suggested adult dose.

Sedative

PO, IV, IM, Rectal: ADULTS, ELDERLY: 12.5–50 mg/dose. May repeat q4–6h as needed. **CHILDREN:** 0.5–1 mg/kg/dose q6h as needed. **Maximum:** 50 mg/dose.

SIDE EFFECTS

Expected: Drowsiness. **Frequent:** Dry mouth, nose, throat; urinary retention; thickening of bronchial secretions. **Occasional:** Epigastric distress, flushing, visual disturbances, hearing disturbances, wheezing, paresthesia, diaphoresis, chills, disorientation, hypotension, confusion, syncope in elderly. **Rare:** Dizziness, urticaria, photosensitivity, nightmares.

ADVERSE EFFECTS/ TOXIC REACTIONS

Paradoxical reaction (particularly in children) manifested as excitation, anxiety, tremor, hyperactive reflexes, seizures. Long-term therapy may produce extrapyramidal symptoms (EPS) noted as dystonia (abnormal movements), pronounced motor restlessness (most frequently in children), parkinsonism (esp. noted in elderly). Blood dyscrasias, particularly agranulocytosis, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess allergy symptoms. Assess B/P, pulse for bradycardia, tachycardia if pt is given parenteral form. If used as antiemetic, assess for dehydration (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue).

INTERVENTION/EVALUATION

Monitor serum electrolytes in pts with severe vomiting. Assist with ambulation if drowsiness, light-headedness occurs. Monitor for relief of nausea, vomiting, allergic symptoms.

PATIENT/FAMILY TEACHING

• Drowsiness, dry mouth may be expected response to drug. • Avoid tasks that require alertness, motor skills until response to drug is established. • Sugarless gum, sips of tepid water may relieve dry mouth. • Coffee, tea may help reduce drowsiness. • Report visual disturbances, involuntary movements, restlessness. • Avoid alcohol, other CNS depressants. • Avoid prolonged exposure to sunlight.

propafenone

proe-**pa**-fen-own
(Rythmol, Rythmol SR)

BLACK BOX ALERT Mortality or nonfatal cardiac arrest rate (7.7%) in asymptomatic non–life-threatening ventricular arrhythmia pts with recent MI (more than 6 days but less than 2 years prior) reported.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Class 1c antiarrhythmic. **CLINICAL:** Antiarrhythmic (see p. 17C).

ACTION

Decreases fast sodium current in Purkinje/myocardial cells. Decreases excitability, automaticity; prolongs conduction

velocity, refractory period. **Therapeutic Effect:** Suppresses arrhythmias.

PHARMACOKINETICS

Nearly completely absorbed following PO administration. Protein binding: 85%–97%. Metabolized in liver; undergoes first-pass metabolism. Primarily excreted in feces. **Half-life:** 2–10 hrs.

USES

Treatment of documented, life-threatening ventricular arrhythmias (e.g., sustained ventricular tachycardias). Treatment of paroxysmal atrial fibrillation/flutter (PAF) or paroxysmal supraventricular tachycardia (PSVT) in pts with disabling symptoms and without structural heart disease. **Rythmol SR:** Maintenance of normal sinus rhythm in pts with symptomatic atrial fibrillation. **OFF-LABEL:** Treatment following cardioversion of recent-onset atrial fibrillation; supraventricular tachycardia in pts with Wolff-Parkinson-White syndrome.

PRECAUTIONS

Contraindications: Bradycardia; bronchospastic disorders; cardiogenic shock; electrolyte imbalance; sinoatrial, AV, intraventricular impulse generation or conduction disorders (e.g., sick sinus syndrome, AV block) without pacemaker; uncontrolled CHF; hypotension; concurrent use with ritonavir. **Cautions:** Renal/hepatic impairment, myasthenia gravis, concurrent use of other medications that prolong QT interval.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Amiodarone** may affect conduction, repolarization. May increase **digoxin** concentration. May increase effects of **warfarin. CYP3A4 inhibitors (e.g., ketoconazole, erythromycin)** may increase concentration. **HERBAL: St. John's wort** may decrease concentration/effect. **Ephedra** may worsen arrhythmias. **FOOD: Grapefruit juice** may increase concentration. **LAB VALUES:** May cause EKG changes (e.g., QRS widening, PR interval prolongation), positive ANA titers.

AVAILABILITY (Rx)

Tablets (Rythmol): 150 mg, 225 mg, 300 mg.

Capsules (Extended-Release [Rythmol SR]): 225 mg, 325 mg, 425 mg.

ADMINISTRATION/HANDLING

PO

- May take without regard to meals.
- Swallow whole; do not break, crush, divide, or open capsules.

INDICATIONS/ROUTES/DOSAGE

Ventricular Arrhythmias, PAT, PSVT

PO: ADULTS, ELDERLY: Initially, 150 mg q8h. May increase at 3- to 4-day intervals to 225 mg q8h, then to 300 mg q8h. **Maximum:** 900 mg/day.

Atrial Fibrillation (Prevention of Recurrence)

PO *(Extended-Release)*: ADULTS, ELDERLY: Initially, 225 mg q12h. May increase at 5-day intervals. **Maximum:** 425 mg q12h.

Dosage in Hepatic Impairment

Reduce dose by 70%–80% (immediate-release).

SIDE EFFECTS

Frequent (13%–7%): Dizziness, nausea, vomiting, altered taste, constipation. **Occasional (6%–3%):** Headache, dyspnea, blurred vision, dyspepsia (heartburn, indigestion, epigastric pain). **Rare (Less Than 2%):** Rash, weakness, dry mouth, diarrhea, edema, hot flashes.

ADVERSE EFFECTS/ TOXIC REACTIONS

May produce/worsen existing arrhythmias. Overdose may produce hypoten-

sion, drowsiness, bradycardia, atrioventricular conduction disturbances.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Correct electrolyte imbalance before administering medication.

INTERVENTION/EVALUATION

Assess pulse for quality, irregular rate. Monitor EKG for cardiac performance or changes, particularly widening of QRS, prolongation of PR interval. Question for visual disturbances, headache, GI upset. Monitor fluid, serum electrolyte levels. Monitor daily pattern of bowel activity, stool consistency. Assess for dizziness, unsteadiness. Monitor hepatic enzymes results. Monitor for therapeutic serum level (0.06–1 mcg/ml).

PATIENT/FAMILY TEACHING

• Compliance with therapy regimen is essential to control arrhythmias. • Altered taste sensation may occur. • Report headache, blurred vision. • Avoid tasks that require alertness, motor skills until response to drug is established.

P

propofol

HIGH ALERT

pro-poe-fole
(Diprivan)
Do not confuse Diprivan with Diflucan or Ditropan, or propafol with fospropofol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Rapid-acting general anesthetic. **CLINICAL:** Sedative-hypnotic (see p. 6C).

ACTION

Inhibits sympathetic vasoconstrictor nerve activity; decreases vascular resistance. **Therapeutic Effect:** Produces hypnosis rapidly.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	40 sec	N/A	3–10 min

Rapidly, extensively distributed. Protein binding: 97%–99%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 3–12 hrs.

USES

Induction/maintenance of anesthesia. Continuous sedation in intubated and respiratory controlled adult pts in ICU. **OFF-LABEL:** Postop antiemetic, refractory delirium tremens.

PRECAUTIONS

Contraindications: Hypersensitivity to eggs, egg products, soybean or soy products. **Cautions:** Hemodynamically unstable pts, hypovolemia, severe cardiac/respiratory disease, increased ICP, impaired cerebral circulation, preexisting pancreatitis, hyperlipidemia, history of epilepsy, seizure disorder.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta. Distributed in breast milk. Not recommended for obstetrics, breast-feeding mothers. **Pregnancy Category B. Children:** Safety and efficacy not established. FDA approved for use in those 2 mos and older. **Elderly:** No age-related precautions noted; lower dosages recommended.

INTERACTIONS

DRUG: Alcohol, CNS depressants may increase CNS, respiratory depression, hypotensive effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Emulsion: 10 mg/ml.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Do not give through same IV line with blood or plasma.

Reconstitution • May give undiluted, or dilute only with D_5W. • Do not dilute to concentration less than 2 mg/ml (4 ml D_5W to 1 ml propofol yields 2 mg/ml).

Rate of Administration • Too-rapid IV administration may produce marked severe hypotension, respiratory depression, irregular muscular movements. • Observe for signs of intra-arterial injection (pain, discolored skin patches, white or blue color to peripheral IV site area, delayed onset of drug action).

Storage • Store at room temperature. • Discard unused portions. • Do not use if emulsion separates. • Shake well before using.

IV INCOMPATIBILITIES

Amikacin (Amikin), amphotericin B complex (Abelcet, AmBisome, Amphotec), bretylium (Bretylol), calcium chloride, ciprofloxacin (Cipro), diazepam (Valium), digoxin (Lanoxin), doxorubicin (Adriamycin), gentamicin (Garamycin), methylprednisolone (Solu-Medrol), minocycline (Minocin), phenytoin (Dilantin), tobramycin (Nebcin), verapamil (Isoptin).

IV COMPATIBILITIES

Acyclovir (Zovirax), bumetanide (Bumex), calcium gluconate, ceftazidime (Fortaz), dobutamine (Dobutrex), dopamine (Intropin), enalapril (Vasotec), fentanyl, heparin, insulin, labetalol (Normodyne, Trandate), lidocaine, lorazepam (Ativan), magnesium, milrinone (Primacor), nitroglycerin, norepinephrine (Levophed), potassium chloride, vancomycin (Vancocin).

INDICATIONS/ROUTES/DOSAGE

Anesthesia

IV: ADULTS, ELDERLY: Induction, 20–40 mg every 10 sec until induction onset, then infusion of 50–200 mcg/kg/min with 20–50 mg bolus as needed. **CHILDREN 3–16 YRS:** Induction, 2.5–3.5 mg/kg over 20–30 sec, then infusion of 125–300 mcg/kg/min.

Sedation in ICU

IV: ADULTS, ELDERLY: Initially, 5 mcg/kg/min (0.3 mg/kg/hr) for 5 min, then titrate to 5–80 mcg/kg/min (0.3–4.8 mg/kg/hr) in 5–10 mcg/kg/min (0.3–0.6 mg/kg/hr) increments allowing minimum of 5 min between dose adjustments. Usual maintenance: 5–50 mcg/kg/min (0.3–3 mg/kg/hr).

SIDE EFFECTS

Frequent: Involuntary muscle movements, apnea (common during induction; lasts longer than 60 sec), hypotension, nausea, vomiting, IV site burning/stinging. **Occasional:** Twitching, thrashing, headache, dizziness, bradycardia, hypertension, fever, abdominal cramps, paresthesia, coldness, cough, hiccups, facial flushing, green-tinted urine. **Rare:** Rash, dry mouth, agitation, confusion, myalgia, thrombophlebitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Continuous infusion or repeated intermittent infusions of propofol may result in extreme drowsiness, respiratory depression, circulatory depression. Too-rapid IV administration may produce severe hypotension, respiratory depression, involuntary muscle movements. Pt may experience acute allergic reaction, characterized by abdominal pain, anxiety, restlessness, dyspnea, erythema, hypotension, pruritus, rhinitis, urticaria.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Resuscitative equipment, suction, O_2 must be available. Obtain vital signs before administration.

INTERVENTION/EVALUATION

Monitor respiratory rate, B/P, heart rate, O_2 saturation, ABGs, depth of sedation, serum lipid, triglycerides if used longer

P

than 24 hrs. May change urine color to green.

propranolol

HIGH ALERT

proe-**pran**-oh-lol
(Apo-Propranolol, Inderal, Inderal LA, InnoPran XL, Nu-Propranolol)

BLACK BOX ALERT Severe angina exacerbation, MI, ventricular arrhythmias may occur in angina pts after abrupt discontinuation; must taper gradually over 1–2 wks.

Do not confuse Inderal with Adderall, Imdur, Isordil, or Toradol, or propranolol with Pravachol.

FIXED-COMBINATION(S)

Inderide: propranolol/hydrochlorothiazide (a diuretic): 40 mg/25 mg, 80 mg/25 mg. **Inderide LA:** propranolol/hydrochlorothiazide (a diuretic): 80 mg/50 mg, 120 mg/50 mg, 160 mg/50 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta-adrenergic blocker. **CLINICAL:** Antihypertensive, antianginal, antiarrhythmic, antimigraine (see pp. 17C, 72C).

P

ACTION

Blocks beta$_1$-, beta$_2$-adrenergic receptors. Decreases oxygen requirements. Slows AV conduction, increases refractory period in AV node. Large doses increase airway resistance. **Therapeutic Effect:** Slows heart rate; decreases cardiac output, B/P, myocardial ischemia severity. Exhibits antiarrhythmic activity.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1–2 hrs	N/A	6 hrs

Well absorbed from GI tract. Protein binding: 93%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 4–6 hrs.

USES

Treatment of angina pectoris, arrhythmias, essential tremors, hypertension, hypertrophic subaortic stenosis, migraine headache, pheochromocytoma, prevention of MI. **OFF-LABEL:** Treatment adjunct for anxiety, tremor due to Parkinson's disease, alcohol withdrawal, aggressive behavior, schizophrenia, antipsychotic-induced akathisia, variceal hemorrhage, acute panic.

PRECAUTIONS

Contraindications: Asthma, bradycardia, cardiogenic shock, COPD, heart block greater than first-degree (unless pt has functional pacemaker), Raynaud's syndrome, uncompensated CHF. **Cautions:** Diabetes, renal/hepatic impairment, peripheral vascular disease, skeletal muscle disease, concurrent use of calcium blockers when using IV form.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Avoid use during first trimester. May produce low birth-weight infants, bradycardia, apnea, hypoglycemia, hypothermia during delivery. **Pregnancy Category C (D if used in second or third trimester). Children:** No age-related precautions noted. **Elderly:** Age-related peripheral vascular disease may increase susceptibility to decreased peripheral circulation.

INTERACTIONS

DRUG: Diuretics, other antihypertensives may increase hypotensive effect. May mask symptoms of hypoglycemia, prolong hypoglycemic effect of **insulin, oral hypoglycemics. Digoxin** may increase risk for bradycardia. **NSAIDs** may decrease antihypertensive effect. **HERBAL: Ephedra, ginger, licorice, ginseng, yohimbe** may worsen hypertension. **Licorice** may increase water retention. **Garlic, periwinkle** has antihypertensive

effects. **FOOD:** None known. **LAB VALUES:** May increase serum antinuclear antibody (ANA) titer, BUN, serum LDH, lipoprotein, alkaline phosphatase, potassium, uric acid, AST, ALT, triglycerides.

AVAILABILITY (Rx)

Injection Solution (Inderal): 1 mg/ml. **Oral Solution (Inderal):** 20 mg/5 ml, 40 mg/5 ml. **Tablets (Inderal):** 10 mg, 20 mg, 40 mg, 60 mg, 80 mg.

Capsules (Extended-Release [Inno-Pran XL]): 80 mg, 120 mg. **Capsules (Sustained-Release [Inderal LA]):** 60 mg, 80 mg, 120 mg, 160 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Give undiluted for IV push. • For IV infusion, may dilute each 1 mg in 10 ml D_5W.

Rate of Administration • Do not exceed 1 mg/min injection rate. • For IV infusion, give over 30 min.

Storage • Store at room temperature. • Once diluted, stable for 24 hrs at room temperature.

PO

• May crush scored tablets. • Do not crush extended- or sustained-release capsules. • Give immediate-release tablets on empty stomach. • Give extended-release, sustained-release without regard to food.

IV INCOMPATIBILITY

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Alteplase (Activase), heparin, milrinone (Primacor), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 40 mg twice daily. May increase dose q3–7days. **Maximum:** 640 mg/day. **CHILDREN:** Initially, 0.5–1 mg/kg/day in divided doses q6–12h. May increase at 3- to 5-day intervals. Usual dose: 1–5 mg/kg/day. **Maximum:** 16 mg/kg/day.

PO *(Long-Acting)*: *(Inderal LA)*: Initially, 80 mg once daily. Usual maintenance: 120–160 mg/day.

***(Innopran XL)*:** Initially, 80 mg at bedtime. **Maximum:** 120 mg.

Angina

PO: ADULTS, ELDERLY: 80–320 mg/day in 2–4 divided doses.

PO *(Long-Acting)*: Initially, 80 mg/day. **Maximum:** 320 mg/day.

Arrhythmia

IV: ADULTS, ELDERLY: 1–3 mg. Repeat q5min up to total of 5 mg. **CHILDREN:** 0.01–0.1 mg/kg. **Maximum:** Infants, 1 mg; children, 3 mg.

PO: ADULTS, ELDERLY: Initially, 10–30 mg q6–8h. May gradually increase dose. Range: 40–320 mg/day. **CHILDREN:** Initially, 0.5–1 mg/kg/day in divided doses q6–8h. May increase q3days. Usual dosage: 2–6 mg/kg/day. **Maximum:** 16 mg/kg/day or 60 mg/day.

Hypertrophic Subaortic Stenosis

PO: ADULTS, ELDERLY: 20–40 mg 3–4 times/day or 80–160 mg once daily as extended-release capsule.

Adjunct to Alpha-Blocking Agents to Treat Pheochromocytoma

PO: ADULTS, ELDERLY: 30–60 mg/day in divided doses.

Migraine Headache

PO: ADULTS, ELDERLY: 80 mg/day in divided doses or 80 mg once daily as extended-release capsule. Increase up to 160–240 mg/day in divided doses. **CHILDREN WEIGHING 35 KG OR LESS:** 10–20 mg 3 times a day. **CHILDREN WEIGHING OVER 35 KG:** 20–40 mg 3 times a day.

Extended-Release *(Inderal LA)*: ADULTS, ELDERLY: Initially, 80 mg daily. Effective range: 160–240 mg/day.

Reduction of Cardiovascular Mortality, Reinfarction in Pts With Previous MI

PO: ADULTS, ELDERLY: Initially, 40 mg 3 times/day. Range: 180–240 mg/day in 3–4 divided doses.

Essential Tremor

PO: ADULTS, ELDERLY: Initially, 40 mg twice daily increased up to 120–320 mg/day in 3 divided doses.

SIDE EFFECTS

Frequent: Diminished sexual function, drowsiness, difficulty sleeping, unusual fatigue/weakness. **Occasional:** Bradycardia, depression, sensation of coldness in extremities, diarrhea, constipation, anxiety, nasal congestion, nausea, vomiting. **Rare:** Altered taste, dry eyes, pruritus, paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremulousness. May precipitate CHF, MI in pts with cardiac disease; thyroid storm in those with thyrotoxicosis; peripheral ischemia in those with existing peripheral vascular disease. Hypoglycemia may occur in pts with previously controlled diabetes. **Antidote:** Glucagon (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function tests. Assess B/P, apical pulse immediately before administering drug (if pulse is 60/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician). **Anginal:** Record onset, quality, radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress).

INTERVENTION/EVALUATION

Assess pulse for quality, irregular rate, bradycardia. Monitor EKG for cardiac arrhythmias. Assess fingers for color, numbness (Raynaud's). Assess for evidence of CHF (dyspnea [particularly on exertion or lying down], night cough, peripheral edema, distended neck veins). Monitor I&O (increase in weight, decrease in urinary output may indicate CHF). Assess for rash, fatigue, behavioral changes. Therapeutic response ranges from a few days to several wks. Measure B/P near end of dosing interval (determines if B/P is controlled throughout day).

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control hypertension, arrhythmia, anginal pain. • To avoid hypotensive effect, rise slowly from lying to sitting position, wait momentarily before standing. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report excessively slow pulse rate (less than 50 beats/min), peripheral numbness, dizziness. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician approval. • Restrict salt, alcohol intake.

propylthiouracil

proe-pil-**thye**-oh-**ure**-a-sil (Propyl-Thyracil)

BLACK BOX ALERT May cause severe hepatic injury, acute hepatic failure, death.

Do not confuse propylthiouracil with purinethol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Thiourea derivative. **CLINICAL:** Antithyroid agent.

ACTION

Blocks oxidation of iodine in thyroid gland, blocks synthesis of thyroxine, tri-

iodothyronine. **Therapeutic Effect:** Inhibits synthesis of thyroid hormone.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 80%. Metabolized in liver. Excreted in urine. **Half-life:** 1.5–5 hrs.

USES

Palliative treatment of hyperthyroidism; adjunct to ameliorate hyperthyroidism in preparation for surgical treatment, radioactive iodine therapy. **OFF-LABEL:** Management of thyrotoxic crises, Graves' disease, thyroid storm.

PRECAUTIONS

Contraindications: None known. **Cautions:** In combination with other agranulocytosis-inducing drugs. **Pregnancy Category D.**

INTERACTIONS

DRUG: May increase concentration of **digoxin** (as pt becomes euthyroid). May increase effect of **oral anticoagulants.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase LDH, serum alkaline phosphatase, bilirubin, AST, ALT, prothrombin time.

AVAILABILITY (Rx)

Tablets: 50 mg.

ADMINISTRATION/HANDLING

PO

- Give with food.

INDICATIONS/ROUTES/DOSAGE

Hyperthyroidism

PO: ADULTS, ELDERLY: Initially, 300–400 mg/day (**ELDERLY:** 150–300 mg/day) in divided doses q8h. Maintenance: 100–150 mg/day in divided doses q8–12h. **CHILDREN:** Initially, 5–7 mg/kg/day in divided doses q8h. Maintenance: 33%–66% of initial dose in divided doses q8–12h. **NEONATES:** Initially, 5 mg/kg/day in divided doses q8h. May increase in 36–48 hrs by 50% if no response. Range: 5–10 mg/kg/day in divided doses q8h.

SIDE EFFECTS

Frequent: Urticaria, rash, pruritus, nausea, skin pigmentation, hair loss, headache, paresthesia. **Occasional:** Drowsiness, lymphadenopathy, vertigo. **Rare:** Drug fever, lupus-like syndrome.

ADVERSE EFFECTS/ TOXIC REACTIONS

Agranulocytosis (may occur as long as 4 mos after therapy), pancytopenia, fatal hepatitis have occurred.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline weight, pulse.

INTERVENTION/EVALUATION

Monitor pulse, weight daily. Check for skin eruptions, pruritus, swollen lymph glands. Be alert to hepatitis (nausea, vomiting, drowsiness, jaundice). Monitor for signs, symptoms of hepatic injury. Monitor hematology results for bone marrow suppression; check for signs of infection, bleeding.

PATIENT/FAMILY TEACHING

• Space doses evenly around the clock. • Take resting pulse daily. • Report pulse rate less than 60 beats/min. • Seafood, iodine products may be restricted. • Report fever, sore throat, yellowing of skin/eyes, unusual bleeding/bruising immediately. • Inform physician of sudden or continuous weight gain, cold intolerance, depression.

protamine

proe-ta-meen
(Protamine, Protamine sulfate)

BLACK BOX ALERT May cause severe hypotension, cardiovascular collapse, noncardiogenic pulmonary edema, pulmonary hypertension.

Do not confuse protamine with ProAmatine or Protonix.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protein.
CLINICAL: Heparin antagonist, antidote.

ACTION

Combines with heparin to form stable salt. **Therapeutic Effect:** Reduces anticoagulant activity of heparin.

PHARMACOKINETICS

Metabolized by fibrinolysin. **Half-life:** 7.4 min. Heparin neutralized in 5 min.

USES

Treatment of severe heparin overdose (causing hemorrhage). Neutralizes effects of heparin administered during extracorporeal circulation. **OFF-LABEL:** Treatment of low molecular weight heparin toxicity.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of allergy to fish, seafood; vasectomized/infertile men; those on isophane (NPH) insulin, previous protamine therapy (propensity to hypersensitivity reaction).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give undiluted over 10 min. Do not exceed 5 mg/min (50 mg in any 10-min period).

Storage • Store vials at room temperature.

INDICATIONS/ROUTES/DOSAGE

Heparin Overdose (Antidote, Treatment)

IV: ADULTS, ELDERLY: 1–1.5 mg protamine neutralizes 100 units heparin. Heparin disappears rapidly from circulation, reducing dosage demand for protamine as time elapses.

SIDE EFFECTS

Frequent: Decreased B/P, dyspnea. **Occasional:** Hypersensitivity reaction (urticaria, angioedema); nausea/vomiting, which generally occur in those sensitive to fish/seafood, vasectomized men, infertile men, those on isophane (NPH) insulin, those previously on protamine therapy. **Rare:** Back pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Too-rapid IV administration may produce acute hypotension, bradycardia, pulmonary hypertension, dyspnea, transient flushing, feeling of warmth. Heparin rebound may occur several hrs after heparin has been neutralized by protamine (usually evident 8–9 hrs after protamine administration). Heparin rebound occurs most often after arterial/cardiac surgery.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check PT, aPTT, Hct; assess for bleeding.

INTERVENTION/EVALUATION

Monitor coagulation tests, aPTT or ACT, B/P, cardiac function.

pseudoephedrine

soo-doe-e-**fed**-rin
(Balminil Decongestant, Genaphed, PMS-Pseudoephedrine, Robidrine, Sudafed, Sudafed 12

Hour, Sudafed 24 Hour, Sudafed Children's)

FIXED-COMBINATION(S)

Advil Cold, Motrin Cold: pseudoephedrine/ibuprofen (an NSAID): 30 mg/200 mg, 15 mg/100 mg per 5 ml. **Allegra-D:** pseudoephedrine/fexofenadine (an antihistamine): 120 mg/60 mg. **Allegra-D 24 Hour:** pseudoephedrine/fexofenadine: 240 mg/180 mg. **Claritin-D:** pseudoephedrine/loratadine (an antihistamine): 120 mg/5 mg, 240 mg/10 mg. **Clarinex-D 24-Hour:** pseudoephedrine/desloratadine (an antihistamine): 240 mg/5 mg. **Clarinex-D 12-Hour:** pseudoephedrine/desloratadine: 120 mg/2.5 mg. **Rezira:** pseudoephedrine/hydrocodone (an opioid analgesic): 60 mg/5 mg per 5 ml. **Zyrtec-D:** pseudoephedrine/cetirizine (an antihistamine): 120 mg/5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic. **CLINICAL:** Nasal decongestant.

ACTION

Directly stimulates alpha-adrenergic, beta-adrenergic receptors. **Therapeutic Effect:** Produces vasoconstriction of respiratory tract mucosa; shrinks nasal mucous membranes; reduces edema, nasal congestion.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (tablets, syrup)	15–30 min	30–60 min	4–6 hrs
PO (extended-release)	N/A	N/A	8–12 hrs

Well absorbed from GI tract. Partially metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 9–16 hrs.

USES

Temporary relief of nasal congestion due to common cold, upper respiratory allergies, sinusitis. Enhances nasal, sinus drainage.

PRECAUTIONS

Contraindications: Coronary artery disease, severe hypertension, use of MAOIs within 14 days. **Extended-release:** Children younger than 12 yrs. **Cautions:** Elderly, hyperthyroidism, diabetes, ischemic heart disease, prostatic hypertrophy, mild-to-moderate hypertension, arrhythmias, renal impairment, seizure disorder.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 2 yrs. **Elderly:** Age-related prostatic hypertrophy may require dosage adjustment.

INTERACTIONS

DRUG: May decrease effects of **antihypertensives, beta-blockers, diuretics. HERBAL: Ephedra, yohimbe** may cause hypertension. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Liquid (Sudafed Children's): 15 mg/5 ml, 30 mg/5 ml. **Syrup:** 30 mg/5 ml. **Tablets (Genaphed, Sudafed):** 30 mg, 60 mg.

Caplets, Extended-Release: (Sudafed 12 Hour): 120 mg. **Tablets, Extended-Release: (Sudafed 24 Hour):** 240 mg.

◀ALERT▶ Pseudoephedrine is key ingredient in synthesizing methamphetamine. Many pharmacies have moved pseudoephedrine behind the counter due to concerns about its purchase and theft for purposes of methamphetamine manufacture.

ADMINISTRATION/HANDLING

PO

• Administer with water or milk to decrease GI upset. • Do not crush, chew

P

extended-release forms; swallow whole.

INDICATIONS/ROUTES/DOSAGE

Decongestant

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 30–60 mg q4–6h. **Maximum:** 240 mg/day. **CHILDREN 6–11 YRS:** 30 mg q4–6h. **Maximum:** 120 mg/day. **CHILDREN 4–5 YRS:** 15 mg q4–6h. **Maximum:** 60 mg/day. **CHILDREN YOUNGER THAN 4 YRS:** 1 mg/kg/dose q6h. **Maximum:** 15 mg.

PO *(Extended-Release)*: ADULTS, CHILDREN 12 YRS AND OLDER: 120 mg q12h or 240 mg once daily.

SIDE EFFECTS

Occasional (10%–5%): Nervousness, restlessness, insomnia, tremor, headache. **Rare (4%–1%):** Diaphoresis, weakness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Large doses may produce tachycardia, palpitations (particularly in pts with cardiac disease), light-headedness, nausea, vomiting. Overdose in those older than 60 yrs may result in hallucinations, CNS depression, seizures.

P

NURSING CONSIDERATIONS

PATIENT/FAMILY TEACHING

• Discontinue drug if adverse reactions occur. • Report insomnia, dizziness, tremors, tachycardia, palpitations.

psyllium

sill-ee-yum
(Fiberall, Hydrocil, Konsyl, Metamucil)
Do not confuse Fiberall with Feverall.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Bulk-forming laxative (see p. 121C).

ACTION

Dissolves and swells in water providing increased bulk, moisture content in stool. **Therapeutic Effect:** Promotes peristalsis, bowel motility.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	12–24 hrs	2–3 days	N/A

Acts in small, large intestines.

USES

Treatment of occasional constipation, constipation associated with rectal disorders. Dietary fiber supplement. Reduce risk of CHD. **OFF-LABEL:** Diarrhea, chronic constipation, inflammatory bowel disease, colon cancer, diabetes.

PRECAUTIONS

Contraindications: Fecal impaction, GI obstruction, undiagnosed abdominal pain. **Cautions:** Esophageal strictures, ulcers, stenosis, intestinal adhesions, difficulty swallowing, management of irritable bowel syndrome (IBS).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Safe for use in pregnancy. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 6 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose. May decrease serum potassium.

AVAILABILITY (OTC)

Capsules (Konsyl, Metamucil): 500 mg. **Powder (Fiberall, Hydrocil, Konsyl, Metamucil):** 4.1 g/5 ml. **Wafer (Metamucil):** 3.4 g/dose.

ADMINISTRATION/HANDLING

PO

• Administer at least 2 hrs before or after other medication. • All doses

should be followed with 8 oz liquid. • Drink 6–8 glasses of water/day (aids stool softening). • Do not swallow in dry form; mix with at least 1 full glass (8 oz) of liquid.

INDICATIONS/ROUTES/DOSAGE

Constipation, Irritable Bowel Syndrome (IBS)

Refer to specific dosing guidelines on product labeling.

PO: ADULTS, ELDERLY: (2.5–30 g/day in divided doses) 2–5 capsules/dose up to 3 times daily. 1 rounded tsp or 1 tbsp of powder up to 3 times daily. 2 wafers up to 3 times daily. **CHILDREN 6–11 YRS:** (1.25–15 g/day in divided doses). Approximately ½ adult dose up to 3 times daily.

CHD

PO: ADULTS, ELDERLY: 7 g or more daily.

SIDE EFFECTS

Rare: Some degree of abdominal discomfort, nausea, mild abdominal cramps, griping, faintness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Esophageal/bowel obstruction may occur if administered with insufficient liquid (less than 250 ml).

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. Monitor serum electrolytes in pts exposed to prolonged, frequent, excessive use of medication.

PATIENT/FAMILY TEACHING

• Take each dose with full glass (250 ml) of water. • Inadequate fluid intake may cause GI obstruction. • Institute measures to promote defecation (increase fluid intake, exercise, high-fiber diet).

pyrazinamide

peer-ah-**zin**-a-mide
(Tebrazid)

FIXED-COMBINATION(S)

Rifater: pyrazinamide/isoniazid/rifampin (an antitubercular): 300 mg/50 mg/120 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic pyrazine analogue. **CLINICAL:** Antitubercular.

ACTION

May disrupt mycobacterium tuberculosis membrane transport. **Therapeutic Effect:** Bacteriostatic or bactericidal, depending on drug concentration at infection site, susceptibility of infecting bacteria.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 5%–10%. Widely distributed. Metabolized in liver. Excreted in urine. **Half-life:** 9–10 hrs.

USES

Treatment of clinical tuberculosis in conjunction with other antitubercular agents.

PRECAUTIONS

Contraindications: Acute gout, severe hepatic dysfunction. **Cautions:** Diabetes mellitus, porphyria, renal impairment, history of gout, children (safety not established), history of alcoholism, concurrent medication associated with hepatotoxicity.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, uric acid.

AVAILABILITY (Rx)

Tablets: 500 mg.

INDICATIONS/ROUTES/DOSAGE

Tuberculosis (in Combination With Other Antituberculars)

PO: ADULTS: Based on lean body weight. **40–55 KG:** 1,000 mg daily; **56–75 KG:** 1,500 mg daily; **76–90 KG:** 2,000 mg (**maximum dose** regardless of weight). **CHILDREN:** 15–30 mg/kg/day in 1 or 2 doses. **Maximum:** 2 g/day.

Dosage in Renal/Hepatic Impairment

Creatinine clearance less than 30 ml/min or receiving HD: 25–35 mg/kg/dose 3 times/wk (give after dialysis).

SIDE EFFECTS

Frequent: Arthralgia, myalgia (usually mild, self-limited). **Rare:** Hypersensitivity reaction (rash, pruritus, urticaria), photosensitivity, gouty arthritis.

P

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity, gouty arthritis, thrombocytopenia, anemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to pyrazinamide, isoniazid, ethionamide, niacin. Ensure collection of specimens for culture, sensitivity. Evaluate results of initial CBC, hepatic function tests, serum uric acid levels.

INTERVENTION/EVALUATION

Monitor hepatic function test results; be alert for hepatic reactions: jaundice, malaise, fever, abdominal (RUQ) tenderness, anorexia, nausea, vomiting (stop drug, notify physician promptly). Check serum uric acid levels; assess for hot, painful, swollen joints, esp. big toe, ankle, knee (gout). Evaluate serum blood glucose levels, diabetic status carefully (pyrazinamide makes management difficult). Assess for rash, skin eruptions. Monitor CBC for thrombocytopenia, anemia.

PATIENT/FAMILY TEACHING

• Do not skip doses; complete full length of therapy (may be mos or yrs). • Office visits, lab tests are essential part of treatment. • Take with food to reduce GI upset. • Avoid excessive exposure to sun, ultraviolet light until photosensitivity is determined. • Notify physician of any new symptom, immediately for jaundice (yellowing sclera of eyes/skin); unusual fatigue; fever; loss of appetite; hot, painful, swollen joints.

pyridostigmine

peer-id-oh-**stig**-meen
(Mestinon, Mestinon SR, Mestinon Timespan, Regonol)
Do not confuse pyridostigmine with physostigmine, or Regonol with Reglan or Renagel.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinesterase. **CLINICAL:** Cholinergic muscle stimulant (see p. 91C).

ACTION

Prevents destruction of acetylcholine by inhibiting the enzyme acetylcholinesterase, enhancing impulse transmission across myoneural junction. **Therapeutic Effect:** Produces miosis; increases intestinal, skeletal muscle tone; stimulates salivary, sweat gland secretions.

PHARMACOKINETICS

Poorly absorbed from GI tract. Metabolized in liver. Excreted primarily unchanged in urine. **Half-life:** 1–2 hrs.

USES

Improvement of muscle strength in control of myasthenia gravis, reversal of effects of nondepolarizing neuromuscular blocking agents after surgery.

PRECAUTIONS

Contraindications: Mechanical GI/urinary tract obstruction, hypersensitivity to anticholinesterase agents. **Cautions:** Bronchial asthma, bradycardia, epilepsy, recent coronary occlusion, vagotonia, hyperthyroidism, cardiac arrhythmias, peptic ulcer, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antagonizes effects of **neuromuscular blockers. Anticholinergics** prevent, reverse effects. **Cholinesterase inhibitors** may increase risk of toxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Regonol): 5 mg/ml. **Syrup (Mestinon):** 60 mg/5 ml. **Tablets (Mestinon):** 60 mg.

Tablets (Extended-Release [Mestinon Timespan]): 180 mg.

ADMINISTRATION/HANDLING

IV, IM

• Give large parenteral doses concurrently with 0.6–1.2 mg atropine sulfate IV to minimize side effects.

PO

• Give with food, milk. • Tablets may be crushed; do not chew, crush extended-release tablets (may be broken). • Give larger dose at times of increased fatigue (e.g., for those with difficulty in chewing, 30–45 min before meals).

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

Myasthenia Gravis

PO: ADULTS, ELDERLY: Initially, 60 mg 3 times a day. Dosage increased at 48-hr intervals. Maintenance: 60 mg–1.5 g a day. **CHILDREN:** 7 mg/kg/24 hr divided into 5–6 doses. **NEONATES:** 5 mg q4–6h.
PO *(Extended-Release)*: ADULTS, ELDERLY: 180–540 mg 1–2 times a day with at least a 6-hr interval between doses.
IV, IM: ADULTS, ELDERLY: 2 mg or 1/30th of oral dose q2–3h. **CHILDREN, NEONATES:** 0.05–0.15 mg/kg/dose. **Maximum single dose:** 10 mg.

Reversal of Nondepolarizing Neuromuscular Blockade

IV: ADULTS, ELDERLY: 10–20 mg with, or shortly after, 0.6–1.2 mg atropine sulfate or 0.3–0.6 mg glycopyrrolate. **CHILDREN:** 0.1–0.25 mg/kg/dose preceded by atropine or glycopyrrolate.

SIDE EFFECTS

Frequent: Miosis, increased GI/skeletal muscle tone, bradycardia, constriction of bronchi/ureters, diaphoresis, increased salivation. **Occasional:** Headache, rash, temporary decrease in diastolic B/P with mild reflex tachycardia, short periods of atrial fibrillation (in hyperthyroid pts), marked drop in B/P (in hypertensive pts).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce cholinergic crisis, manifested as increasingly severe muscle weakness (appears first in muscles involving chewing, swallowing, followed by muscle weakness of shoulder girdle, upper extremities), respiratory muscle paralysis, followed by pelvis girdle/leg muscle paralysis. Requires withdrawal of all cholinergic drugs and immediate use of 1–4 mg atropine sulfate

P

IV for adults, 0.01 mg/kg for infants and children younger than 12 yrs.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Larger doses should be given at time of greatest fatigue. Assess muscle strength before testing for diagnosis of myasthenia gravis and following drug administration. Avoid large doses in pts with megacolon, reduced GI motility.

INTERVENTION/EVALUATION

Have tissues readily available at pt's bedside. Monitor respirations closely during myasthenia gravis testing or if dosage is increased. Assess diligently for cholinergic reaction, bradycardia in myasthenic pt in crisis. Coordinate dosage time with periods of fatigue and increased/decreased muscle strength. Monitor for therapeutic response to medication (increased muscle strength, decreased fatigue, improved chewing/swallowing functions).

PATIENT/FAMILY TEACHING

- Report nausea, vomiting, diarrhea, diaphoresis, profuse salivary secretions, palpitations, muscle weakness, severe abdominal pain, difficulty breathing.

P

pyridoxine (vitamin B_6)

peer-i-**dox**-een
(Aminoxin, Pyri-500)
Do not confuse pyridoxine with paroxetine, pralidoxime, or Pyridium.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Coenzyme.
CLINICAL: Vitamin (B_6) (see p. 161C).

ACTION

Coenzyme for various metabolic functions, including metabolism of proteins, carbohydrates, fats. Aids in breakdown of glycogen and in synthesis of gamma-aminobutyric acid (GABA) in CNS. **Therapeutic Effect:** Prevents pyridoxine deficiency. Increases excretion of certain drugs (e.g., isoniazid) that are pyridoxine antagonists.

PHARMACOKINETICS

Readily absorbed, primarily in jejunum. Stored in liver, muscle, brain. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 15–20 days.

USES

Prevention/treatment of vitamin B_6 deficiency, pyridoxine-dependent seizures in infants, drug-induced neuritis (e.g., isoniazid).

PRECAUTIONS

Contraindications: None known. **Cautions:** Impaired renal function, neonates.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. High dosages in utero may produce seizures in neonates. **Pregnancy Category A. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Decreases effects of **levodopa.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Capsules: 50 mg, 250 mg. **Injection Solution (Vitamin B_6):** 100 mg/ml. **Tablets:** 25 mg, 50 mg, 100 mg, 250 mg, 500 mg. **Tablet, Sustained-Release (Pyri-500):** 500 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Give PO unless nausea, vomiting, malabsorption occurs. Avoid IV use in cardiac pts.

IV

- Give undiluted or may be added to IV solutions and given as infusion.

PO
• Give without regard to food.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

Pyridoxine Deficiency
PO: ADULTS, ELDERLY: 10–20 mg/day for 3 wks. **CHILDREN:** Initially, 5–25 mg/day for 3 wks, then 1.5–2.5 mg/day in multivitamin product.

Drug-Induced Neuritis
PO *(Treatment)*: ADULTS, ELDERLY: 100–200 mg/day in divided doses. **CHILDREN:** 10–50 mg/day.
PO *(Prophylaxis)*: ADULTS, ELDERLY: 25–100 mg/day. **CHILDREN:** 1–2 mg/kg/day.

SIDE EFFECTS

Occasional: Stinging at IM injection site. **Rare:** Headache, nausea, drowsiness, sensory neuropathy (paresthesia, unstable gait, clumsiness of hands) with high doses.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term megadoses (2–6 g for longer than 2 mos) may produce sensory neuropathy (reduced deep tendon reflexes, profound impairment of sense of position in distal limbs, gradual sensory ataxia). Toxic symptoms subside when drug is discontinued. Seizures have occurred after IV megadoses.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Observe for improvement of deficiency symptoms, glossitis. Evaluate for nutritional adequacy.

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection.
• Consume foods rich in pyridoxine (legumes, soybeans, eggs, sunflower seeds, hazelnuts, organ meats, tuna, shrimp, carrots, avocados, bananas, wheat germ, bran).

quetiapine

TOP 200

kwe-**tye**-a-peen
(Apo-Quetiapine, Seroquel, Seroquel XR)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders. Elderly with dementia-related psychosis are at increased risk for death.

Do not confuse quetiapine with olanzapine, or Seroquel with Sinequan.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dibenzapine derivative. **CLINICAL:** Antipsychotic (see p. 65C).

ACTION

Antagonizes dopamine, serotonin, histamine, alpha$_1$-adrenergic receptors. **Therapeutic Effect:** Diminishes psychotic disorders. Produces moderate sedation, few extrapyramidal effects. No anticholinergic effects.

PHARMACOKINETICS

Rapidly, well absorbed after PO administration. Protein binding: 83%. Widely distributed in tissues; CNS concentration exceeds plasma concentration. Undergoes extensive first-pass metabolism in liver. Primarily excreted in urine. **Half-life:** 6 hrs.

USES

Treatment of schizophrenia. Treatment of acute manic episodes with bipolar disorder (alone or in combination with lithium or valproate). Maintenance treatment of bipolar disorder. Treatment of acute depressive episodes associated with bipolar disorder. Adjunctive treatment in major depressive disorder (MDD). **OFF-LABEL:** Autism, delirium in critically ill pts, psychosis/agitation related to Alzheimer's dementia.

Q

PRECAUTIONS

Contraindications: None known. **Cautions:** Alzheimer's dementia, history of breast cancer, cardiovascular disease (e.g., CHF, history of MI), cerebrovascular disease, hepatic impairment, dehydration, hypovolemia, history of drug abuse/dependence, seizures, hypothyroidism, pts at risk for suicide, Parkinson's disease, decreased GI motility, urinary retention, narrow-angle glaucoma, diabetes, visual problems.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. Not recommended for breast-feeding mothers. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted, but lower initial and target dosages may be necessary.

INTERACTIONS

DRUG: Medications prolonging QT interval (e.g., amiodarone) may increase risk of QT prolongation. **Alcohol, other CNS depressants** may increase CNS depression. May increase hypotensive effects of **antihypertensives. Hepatic enzyme inducers (e.g., phenytoin)** may increase clearance. **CYP3A4 inhibitors (e.g., clarithromycin, erythromycin, fluconazole, itraconazole)** may increase effects. **HERBAL: St. John's wort** may decrease concentration. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May decrease total free thyroxine (T_4) serum levels. May increase serum cholesterol, triglycerides, AST, ALT, WBC, GGT. May produce false-positive pregnancy test result.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 100 mg, 150 mg, 200 mg, 300 mg, 400 mg.

Tablets, Extended-Release: 50 mg, 150 mg, 200 mg, 300 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

• Give immediate-release tablets without regard to food. • Do not crush, split, chew extended-release tablets. • Extended-release tablets should be given without regard to food or with a light meal in evening.

INDICATIONS/ROUTES/DOSAGE

Note: When restarting pts who have been off quetiapine for less than 1 wk, titration is not required and maintenance dose can be reinstituted. • When restarting pts who have been off quetiapine for longer than 1 wk, follow initial titration schedule.

Psychotic Disorders, Schizophrenia

PO: ADULTS, ELDERLY: Initially, 25 mg twice a day, then 25–50 mg 2–3 times a day on the second and third days, up to 300–400 mg/day in divided doses 2–3 times a day by the fourth day. Further adjustments of 25–50 mg twice a day may be made at intervals of 2 days or longer. Maintenance: 300–800 mg/day (adults); 50–200 mg/day (elderly). **CHILDREN 13 YRS AND OLDER:** Initially, 25 mg twice daily on day 1, 50 mg twice daily on day 2, then increase by 100 mg/day to target dose of 400 mg/day on day 5. **Seroquel XR:** Initially, 300 mg/day in evening. May increase at intervals as short as 1 day up to 300 mg/day. Range: 400–800 mg/day.

Mania in Bipolar Disorder

PO: ADULTS, ELDERLY: Initially, 50 mg twice a day for 1 day. May increase in increments of 100 mg/day to 200 mg twice a day on day 4. May increase in increments of 200 mg/day to 800 mg/day on day 6. Range: 400–800 mg/day. **CHILDREN 10 YRS AND OLDER:** 25 mg twice daily on day 1, 50 mg twice daily on day 2, then increase by 100 mg/day until target dose of 400 mg/day reached on day 5. **Seroquel XR:** Initially, 300 mg on day 1 in the evening; 600 mg on day 2 and adjust between 400–800 mg/day thereafter.

Depression in Bipolar Disorder

PO: ADULTS, ELDERLY: Initially, 50 mg/day on day 1, increase to 100 mg/day on day 2, then increase by 100 mg/day up to target dose of 300 mg/day. **Seroquel XR:** Initially, 50 mg on day 1 in the evening, 100 mg on day 2, 200 mg on day 3, 300 mg on day 4 and thereafter.

Adjunctive Therapy in MDD

PO: ADULTS, ELDERLY: (SEROQUEL XR): Initially, 50 mg on days 1 and 2; then 150 mg on days 3 and 4; then 150–300 mg/day thereafter.

Dosage in Hepatic Impairment

Immediate-Release: Initially, 25 mg/day. Increase by 25–50 mg/day to effective dose.

Extended-Release: Initially, 50 mg/day, increase by 50 mg/day until effective dose.

SIDE EFFECTS

Frequent (19%–10%): Headache, drowsiness, dizziness. **Occasional (9%–3%):** Constipation, orthostatic hypotension, tachycardia, dry mouth, dyspepsia (heartburn, indigestion, epigastric pain), rash, asthenia (loss of strength, energy), abdominal pain, rhinitis. **Rare (2%):** Back pain, fever, weight gain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce heart block, hypotension, hypokalemia, tachycardia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content. Obtain baseline CBC, hepatic enzyme levels before initiating treatment and periodically thereafter.

INTERVENTION/EVALUATION

Monitor mental status, onset of extrapyramidal symptoms. Assist with ambulation if dizziness occurs. Supervise suicidal-risk pt closely during early therapy (as psychosis, depression lessens, energy level improves, increasing suicide potential). Monitor B/P for hypotension, lipid profile, blood glucose, CBC, or worsening depression, unusual behavior. Assess pulse for tachycardia (esp. with rapid increase in dosage). Assess bowel activity for evidence of constipation. Assess for therapeutic response (improved thought content, increased ability to concentrate, improvement in self-care). Eye exam to detect cataract formation should be obtained q6mos during treatment.

PATIENT/ FAMILY TEACHING

• Avoid exposure to extreme heat. • Drink fluids often, esp. during physical activity. • Take medication as ordered; do not stop taking or increase dosage. • Drowsiness generally subsides during continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Change positions slowly to reduce hypotensive effect. • Report suicidal ideation, unusual changes in behavior.

quinapril

TOP 200

kwin-a-pril
(Accupril)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse Accupril with Accolate, Accutane, Aciphex, or Monopril.

FIXED-COMBINATION(S)

Accuretic: quinapril/hydrochlorothiazide (a diuretic): 10 mg/12.5 mg, 20 mg/12.5 mg, 20 mg/25 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin-converting enzyme (ACE) inhibitor. **CLINICAL:** Antihypertensive (see p. 9C, 60C).

Q

ACTION

Suppresses renin-angiotensin-aldosterone system, preventing conversion of angiotensin I to angiotensin II, a potent vasoconstrictor; may inhibit angiotensin II at local vascular renal sites. **Therapeutic Effect:** Reduces peripheral arterial resistance, B/P, pulmonary capillary wedge pressure; improves cardiac output.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	N/A	24 hrs

Readily absorbed from GI tract. Protein binding: 97%. Rapidly hydrolyzed to active metabolite. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 1–2 hrs; metabolite, 3 hrs (increased in renal impairment).

USES

Treatment of hypertension. Used alone or in combination with other antihypertensives. Adjunctive therapy in management of heart failure. **OFF-LABEL:** Treatment of pediatric hypertension, treatment of left ventricular dysfunction following MI. Delays progression of nephropathy and reduces risk of cardiovascular events in hypertensive pts with diabetes.

Q

PRECAUTIONS

Contraindications: History of angioedema from previous treatment with ACE inhibitors. **Cautions:** Renal impairment, hypertrophic cardiomyopathy, major surgery, CHF, collagen vascular disease, hypovolemia, bilateral renal artery stenosis, hyperkalemia, severe aortic stenosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. May cause fetal, neonatal mortality or morbidity. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: Alcohol, antihypertensives, diuretics may increase effects. May increase concentration, risk of toxicity of **lithium. NSAIDs** may decrease effects. **Potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. **HERBAL: Black cohosh, periwinkle** may increase antihypertensive effect. **Ginseng, yohimbe, licorice** may worsen hypertension. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, potassium, AST, ALT. May decrease serum sodium. May cause positive antinuclear antibody (ANA) titer.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Hypertension (Monotherapy)

PO: ADULTS: Initially, 10–20 mg/day. May adjust dosage at intervals of at least 2 wks or longer. Maintenance: 10–40 mg/day as single dose or 2 divided doses. **Maximum:** 40 mg/day. **ELDERLY:** Initially, 2.5–5 mg/day. May increase by 2.5–5 mg q1–2wks.

Hypertension (Combination Diuretic Therapy)

PO: ADULTS: Initially, 5 mg/day titrated to pt's needs. **ELDERLY:** Initially, 2.5–5 mg/day. May increase by 2.5–5 mg q1–2wks.

Adjunct to Manage Heart Failure

PO: ADULTS, ELDERLY: Initially, 5 mg once or twice a day. Titrate at weekly intervals. Range: 20–40 mg/day.

Dosage in Renal Impairment

Dosage is titrated to pt's needs after the following initial doses:

Hypertension

Creatinine Clearance	Initial Dose
More than 60 ml/min	10 mg
30–60 ml/min	5 mg
10–29 ml/min	2.5 mg

CHF

Creatinine Clearance	Initial Dose
Greater than 30 ml/min	5 mg
10–30 ml/min	2.5 mg

SIDE EFFECTS

Frequent (7%–5%): Headache, dizziness. **Occasional (4%–2%):** Fatigue, vomiting, nausea, hypotension, chest pain, cough, syncope. **Rare (less than 2%):** Diarrhea, cough, dyspnea, rash, palpitations, impotence, insomnia, drowsiness, malaise.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive hypotension ("first-dose syncope") may occur in pts with CHF, those who are severely salt/volume depleted. Angioedema, hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in those with collagen vascular disease (scleroderma, systemic lupus erythematosus), renal impairment. Nephrotic syndrome may be noted in those with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position with legs slightly elevated. Renal function tests should be performed before beginning therapy. In pts with prior renal disease, urine test for protein by dipstick method should be made with first urine of day before beginning therapy and periodically thereafter. In those with renal impairment, autoimmune disease, or taking drugs that affect leukocytes or immune response, CBC, differential count should be performed before beginning therapy and q2wks for 3 mos, then periodically thereafter.

INTERVENTION/EVALUATION

Monitor B/P, renal function, serum potassium, WBC. Assist with ambulation if dizziness occurs. Question for evidence of headache. Noncola carbonated beverage, unsalted crackers, dry toast may relieve nausea.

PATIENT/ FAMILY TEACHING

• Rise slowly from lying to sitting position, permit legs to dangle from bed momentarily before standing to reduce hypotensive effect. • Full therapeutic effect may take 1–2 wks. • Report any sign of infection (sore throat, fever). • Skipping doses or voluntarily discontinuing drug may produce severe rebound hypertension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol.

quinupristin-dalfopristin

kwi-**nyoo**-pris-tin **dal**-foe-pris-tin (Synercid)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Streptogramin. **CLINICAL:** Antimicrobial.

ACTION

Two chemically distinct compounds that, when given together, bind to different sites on bacterial ribosomes, inhibiting protein synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

After IV administration, both are extensively metabolized in liver, with dalfopristin to active metabolite. Protein binding: quinupristin, 23%–32%; dalfopristin,

50%–56%. Primarily eliminated in feces. **Half-life:** quinupristin, 0.85 hr; dalfopristin, 0.7 hr.

USES

Complicated skin/skin structure infections caused by *S. aureus, S. pyogenes*. **OFF-LABEL:** Treatment of serious or life-threatening infections caused by vancomycin-resistant *Enterococcus faecium* (VRE).

PRECAUTIONS

Contraindications: Hypersensitivity to pristinamycin, virginiamycin. **Cautions:** Hepatic/renal dysfunction.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration, risk of toxicity of **cyclosporine.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, creatinine, LDH, AST, ALT, BUN, alkaline phosphatase, glucose. May decrease Hgb, Hct; alter platelets.

Q

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500-mg vial (150 mg quinupristin/350 mg dalfopristin).

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute vial by slowly adding 5 ml D_5W or Sterile Water for Injection to make 100 mg/ml solution. • Gently swirl vial contents to minimize foaming. • Further dilute with D_5W to final concentration of 2 mg/ml (5 mg/ml using central line).

Rate of Administration • Infuse over 60 min. • After infusion, flush line with D_5W to minimize vein irritation. Do not flush with 0.9% NaCl (incompatible).

Storage • Refrigerate unopened vials. • Reconstituted vials are stable for 1 hr at room temperature. Diluted infusion bag is stable for 5 hrs at room temperature or 54 hrs if refrigerated.

IV INCOMPATIBILITIES

Heparin, sodium chloride.

IV COMPATIBILITIES

Aztreonam (Azactam), ciprofloxacin (Cipro), fluconazole (Diflucan), haloperidol (Haldol), metoclopramide (Reglan), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Infections Due to Vancomycin-Resistant *Enterococcus Faecium* (VRE)

IV: ADULTS, ELDERLY: 7.5 mg/kg/dose q8h.

Skin/Skin Structure Infections

IV: ADULTS, ELDERLY: 7.5 mg/kg/dose q12h.

SIDE EFFECTS

Frequent: Mild erythema, pruritus, pain/burning at infusion site (with doses greater than 7 mg/kg). **Occasional:** Headache, diarrhea. **Rare:** Vomiting, arthralgia, myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Hepatic function abnormalities, severe venous pain, inflammation may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess temperature, B/P, respiratory rate, pulse. Obtain baseline hepatic function tests, BUN, CBC, urinalysis.

INTERVENTION/EVALUATION

Monitor CBC, hepatic function tests. Observe infusion site for redness, vein irritation. Hold medication, promptly inform

physician of diarrhea (with fever, abdominal pain, mucus/blood in stool may indicate antibiotic-associated colitis). Evaluate IV site for erythema, pruritus, pain, burning. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

rabeprazole

TOP 200

rah-**bep**-rah-zole
(Aciphex, Pariet[C])
Do not confuse Aciphex with Accupril or Aricept, or rabeprazole with aripiprazole, lansoprazole, omeprazole, or raloxifene.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Proton pump inhibitor. **CLINICAL:** Gastric acid inhibitor (see p. 148C).

ACTION

Converts to active metabolites that irreversibly bind to, inhibit hydrogen-potassium adenosine triphosphate, an enzyme on surface of gastric parietal cells. Actively secretes hydrogen ions for potassium ions, resulting in accumulation of hydrogen ions in gastric lumen. **Therapeutic Effect:** Increases gastric pH, reducing gastric acid production.

PHARMACOKINETICS

Rapidly absorbed from GI tract after passing through stomach relatively intact as delayed-release tablet. Protein binding: 96%. Metabolized extensively in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 1–2 hrs (increased with hepatic impairment).

USES

Short-term treatment (4–8 wks) in healing, maintenance of erosive or ulcerative gastroesophageal reflux disease (GERD). Treatment of daytime/nighttime heartburn, other symptoms of GERD. Short-term treatment (4 wks or less) in healing, symptomatic relief of duodenal ulcers. Long-term treatment of pathologic hypersecretory conditions, including Zollinger-Ellison syndrome. Treatment of NSAID-induced ulcers. Treatment of *H. pylori* (in combination with other medication). **OFF-LABEL:** Maintenance treatment of duodenal ulcers.

PRECAUTIONS

Contraindications: Hypersensitivity to proton pump inhibitors (e.g., omeprazole). **Cautions:** Severe hepatic impairment. May increase risk of fractures, GI infections.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/effects of **cyclosporine, warfarin.** May decrease concentration of **ketoconazole.** May decrease effects of **clopidogrel, atazanavir. HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, thyroid stimulating hormone (TSH).

AVAILABILITY (Rx)

Tablets (Delayed-Release): 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to meals; best taken before breakfast. • Do not crush, chew, split tablet; swallow whole.

INDICATIONS/ROUTES/DOSAGE

Gastroesophageal Reflux Disease (GERD)
PO: ADULTS, ELDERLY: 20 mg/day for 4–8 wks. Maintenance: 20 mg/day.

R

Short-Term Treatment of GERD in Children 12 Yrs and Older
PO: 20 mg/day for up to 8 wks.

Duodenal Ulcer
PO: ADULTS, ELDERLY: 20 mg/day after morning meal for 4 wks.

NSAID-Induced Ulcer
PO: ADULTS, ELDERLY: 20 mg/day.

Pathologic Hypersecretory Conditions
PO: ADULTS, ELDERLY: Initially, 60 mg once a day. May increase to 60 mg twice a day.

***H. Pylori* Infection**
PO: ADULTS, ELDERLY: 20 mg twice a day for 10–14 days (given with amoxicillin 1,000 mg and clarithromycin 500 mg).

SIDE EFFECTS

Rare (less than 2%): Headache, nausea, dizziness, rash, diarrhea, malaise.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hyperglycemia, hypokalemia, hyponatremia, hyperlipemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab values, esp. serum chemistries.

INTERVENTION/EVALUATION

Monitor ongoing laboratory results. Evaluate for therapeutic response (relief of GI symptoms). Question if GI discomfort, nausea, diarrhea, headache occurs. Assess skin for evidence of rash. Observe for evidence of dizziness; utilize appropriate safety precautions.

PATIENT/FAMILY TEACHING

• Swallow tablets whole; do not chew, split, crush tablets. • Report headache.

raloxifene

TOP 200

ra-**lox**-i-feen
(Evista, Apo-Raloxifene, Novo-Raloxifene)

BLACK BOX ALERT Increases risk of deep vein thrombosis, pulmonary embolism. Women with coronary heart disease or those at risk for coronary events are at increased risk for death due to stroke.

Do not confuse Evista with Avinza.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective estrogen receptor modulator. **CLINICAL:** Osteoporosis preventive (see p. 144C).

ACTION

Selective estrogen receptor modulator that binds to estrogen receptors, increasing bone mineral density. **Therapeutic Effect:** Reduces bone resorption, decreases bone turnover, prevents bone loss.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Highly bound to plasma proteins (greater than 95%) and albumin. Undergoes extensive first-pass metabolism in liver. Excreted mainly in feces and, to a lesser extent, in urine. Unknown if removed by hemodialysis. **Half-life:** 27.7–32.5 hrs.

USES

Prevention/treatment of osteoporosis in postmenopausal women. Reduces risk of invasive breast cancer in postmenopausal women with osteoporosis and postmenopausal women at high risk for invasive breast cancer.

PRECAUTIONS

Contraindications: Active or history of venous thromboembolic events, such as deep vein thrombosis (DVT), pulmonary embolism, retinal vein thrombosis; women who are or may become pregnant, or are breast-feeding. **Cautions:** Cardiovas-

cular disease, history of cervical/uterine cancer, renal/hepatic impairment, risk for venous thromboembolism, unexplained uterine bleeding, elevated triglycerides in response to oral estrogen therapy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Not recommended for breast-feeding mothers. **Pregnancy Category X. Children:** Not used in this population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Cholestyramine** reduces peak levels, extent of absorption. Do not use concurrently with **hormone replacement therapy, systemic estrogen.** May decrease effect of **warfarin** (decreases PT). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Lowers serum total cholesterol, LDL. Slightly decreases platelet count, serum inorganic phosphate, albumin, calcium, protein.

AVAILABILITY (Rx)

Tablets: 60 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Prophylaxis/Treatment of Osteoporosis, Breast Cancer Risk Reduction

PO: ADULTS, ELDERLY: 60 mg a day.

SIDE EFFECTS

Frequent (25%–10%): Hot flashes, flu-like symptoms, arthralgia, sinusitis. **Occasional (9%–5%):** Weight gain, nausea, myalgia, pharyngitis, cough, dyspepsia, leg cramps, rash, depression. **Rare (4%–3%):** Vaginitis, UTI, peripheral edema, flatulence, vomiting, fever, migraine, diaphoresis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pneumonia, gastroenteritis, chest pain, vaginal bleeding, breast pain occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy (Pregnancy Category X). Drug should be discontinued 72 hrs before and during prolonged immobilization (postop recovery, prolonged bed rest). Therapy may be resumed only after pt is fully ambulatory. Determine serum total, LDL cholesterol before therapy and routinely thereafter.

INTERVENTION/EVALUATION

Monitor serum total, LDL cholesterol, total calcium, inorganic phosphate, total protein, albumin, bone mineral density, platelet count.

PATIENT/FAMILY TEACHING

• Avoid prolonged restriction of movement during travel (increased risk of venous thromboembolic events). • Take supplemental calcium, vitamin D if daily dietary intake is inadequate. • Engage in regular weight-bearing exercise. • Modify, discontinue habits of cigarette smoking, alcohol consumption.

raltegravir

TOP 200

ral-**teg**-ra-veer
(Isentress)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Integrase inhibitor. **CLINICAL:** Antiviral (see p. 69C, 118C).

ACTION

Inhibits activity of HIV-1 integrase, an enzyme required for viral replication. **Therapeutic Effect:** Prevents integration and replication of viral HIV-1.

PHARMACOKINETICS

Variably absorbed following PO administration. Protein binding: 83%. Metabolized in liver. Eliminated mainly in feces

R

(51%) with a lesser amount eliminated in urine (32%). **Half-life:** 9 hrs.

USES

Treatment of HIV-1 infection in adults and children 2 yrs of age and older and weighing at least 10 kg. Used in combination with other antiretroviral agents.

PRECAUTIONS

Contraindications: None known. **Cautions:** Elderly, those at increased risk for myopathy, rhabdomyolysis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cross placenta. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** Age-related hepatic, renal, cardiac impairment requires strict monitoring.

INTERACTIONS

DRUG: **Proton pump inhibitors** may increase concentration. **HERBAL:** **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, bilirubin, aminotransferase, alkaline phosphatase, amylase, lipase, creatine kinase. May decrease lymphocytes/neutrophil count (ANC), WBC count, Hgb, platelets.

R

AVAILABILITY (Rx)

Tablets, Chewable: 25 mg, 100 mg.

Tablets, Film-Coated: 400 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not crush, split, chew film-coated tablets. • Chewable tablets may be chewed or taken whole.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 400 mg twice a day. Dosage increased to 800 mg twice a day when given with rifampin. **CHILDREN 6–11 YRS, WEIGHING 25 KG OR GREATER:** 400-mg tablet twice daily or chewable tablet based on weight. **Maximum chewable dose:** 300 mg twice daily. **WEIGHING LESS THAN 25 KG:** Chewable tablets based on weight. **Maximum chewable dose:** 300 mg twice daily. **CHILDREN 2–5 YRS AND AT LEAST 10 KG:** Chewable tablet based on weight to maximum of 300 mg twice daily (see table).

SIDE EFFECTS

Frequent (17%–10%): Diarrhea, nausea, headache. **Occasional (5%):** Fever. **Rare (2%–1%):** Vomiting, abdominal pain, fatigue, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity, anemia, neutropenia, MI, gastritis, hepatitis, herpes simplex, toxic nephropathy, renal failure, chronic renal failure, renal tubular necrosis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory testing before beginning therapy and at periodic intervals during therapy. Offer emotional support. Obtain medication history.

INTERVENTION/EVALUATION

Closely monitor for evidence of GI discomfort. Monitor daily pattern of bowel

Body Weight (kg)	Dose	Number of Chewable Tablets
10–13	75 mg twice daily	3 × 25 mg
14–19	100 mg twice daily	1 × 100 mg
20–27	150 mg twice daily	1.5 × 100 mg
28–39	200 mg twice daily	2 × 100 mg
40 or greater	300 mg twice daily	3 × 100 mg

activity, stool consistency. Monitor serum chemistry tests for marked laboratory abnormalities. Assess for opportunistic infections: onset of fever, cough, other respiratory symptoms.

PATIENT/FAMILY TEACHING

• Contact physician if fever, abdominal pain, yellowing of skin/eyes, dark urine occurs. • Avoid tasks that require alertness, motor skills until response to drug is established. • Raltegravir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pt may continue to experience illnesses, including opportunistic infections.

ramelteon

ra-**mel**-tee-on
(Rozerem)
Do not confuse ramelteon with Remeron, or Rozerem with Razadyne or Remeron.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Melatonin receptor agonist. **CLINICAL:** Hypnotic (see p. 150C).

ACTION

Selectively targets melatonin receptors thought to be involved in maintenance of circadian rhythm underlying normal sleep-wake cycle. **Therapeutic Effect:** Prevents insomnia characterized by difficulty with sleep onset.

PHARMACOKINETICS

Rapidly absorbed following PO administration. Protein binding: 82%. Substantial tissue distribution. Metabolized in liver. Excreted mainly in urine, with small amount eliminated in feces. **Half-life:** 2–5 hrs.

USES

Long-term treatment of insomnia in pts who experience difficulty with sleep onset.

PRECAUTIONS

Contraindications: Concurrent fluvoxamine therapy, history of angioedema with previous ramelteon therapy. **Cautions:** Clinical depression, alcohol consumption, moderate to severe hepatic impairment, severe sleep apnea, COPD.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: Concurrent use with **alcohol** produces additive effect. **Fluconazole, ketoconazole** may increase serum concentration/effects. **Donepezil, doxepin, fluvoxamine** may cause marked increase in serum level, toxicity. **Rifampin** may decrease serum level, effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** Onset of action may be reduced if taken with or immediately after a **high-fat meal.** **LAB VALUES:** May decrease serum cortisol.

AVAILABILITY (Rx)

Tablets, Film-Coated: 8 mg (Rozerem).

ADMINISTRATION/HANDLING

PO

• Administer within 30 min before bedtime. • Do not give with, or immediately following, a high-fat meal. • Do not crush/break tablet.

INDICATIONS/ROUTES/DOSAGE

Insomnia

PO: ADULTS, ELDERLY: 8 mg 30 min before bedtime.

SIDE EFFECTS

Frequent (7%–5%): Headache, dizziness, drowsiness (expected effect). **Occasional**

R

(4%–3%): Fatigue, nausea, exacerbated insomnia. **Rare (2%):** Diarrhea, myalgia, depression, altered taste, arthralgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

May affect reproductive hormones in adults (decreased testosterone levels, increased prolactin levels), resulting in unexplained amenorrhea, galactorrhea, decreased libido, impaired fertility.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations. Raise bed rails, provide call light. Provide environment conducive to sleep (quiet environment, low/no lighting, TV off).

INTERVENTION/EVALUATION

Assess sleep pattern of pt. Evaluate for therapeutic response: rapid induction of sleep onset, decrease in number of nocturnal awakenings.

PATIENT/FAMILY TEACHING

• Take within 30 min before going to bed; confine activities to those necessary to prepare for bed. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Do not take medication with or immediately after a high-fat meal.

R

ramipril

TOP 200

ram-i-pril
(Altace, Apo-Ramipril)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse Altace with alteplase, Amaryl, Amerge, or Artane, or ramipril with enalapril or Monopril.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Renin-angiotensin system antagonist. **CLINICAL:** Antihypertensive (see p. 9C, 60C).

ACTION

Suppresses renin-angiotensin-aldosterone system. Decreases plasma angiotensin II, increases plasma renin activity, decreases aldosterone secretion. **Therapeutic Effect:** Reduces peripheral arterial resistance, decreasing B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1–2 hrs	3–6 hrs	24 hrs

Well absorbed from GI tract. Protein binding: 73%. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 5.1 hrs.

USES

Treatment of hypertension. Used alone or in combination with other antihypertensives. Treatment of left ventricular dysfunction following MI. Prevention of heart attack, stroke. **OFF-LABEL:** CHF. Delay progression of nephropathy, reduce risks of cardiovascular events in hypertensive pts with type 1 or type 2 diabetes.

PRECAUTIONS

Contraindications: Hypersensitivity to ACE inhibitors. History of ACE-inhibitor induced angioedema. **Cautions:** Renal impairment, collagen vascular disease, hypovolemia, aortic stenosis, hyperkalemia, angioedema, ischemic heart disease, cerebrovascular disease, hypertrophic cardiomyopathy with outflow tract obstruction, bilateral renal artery stenosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May cause fetal or neonatal mortality or morbidity. **Pregnancy Category C (D if used in**

second or third trimester). Children: Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: Alcohol, antihypertensives, diuretics may increase effects. May increase **lithium** concentration, risk of toxicity. **NSAIDs** may decrease effects. **Potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. **HERBAL: Black cohosh, periwinkle** may increase antihypertensive effect. **Ginseng, ginger, licorice, yohimbe** may worsen hypertension. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, potassium, AST, ALT. May decrease serum sodium. May cause positive antinuclear antibody (ANA) titer.

AVAILABILITY (Rx)

Capsules: 1.25 mg, 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • May mix with water, apple juice/sauce.

INDICATIONS/ROUTES/DOSAGE

Hypertension (Monotherapy)

PO: ADULTS, ELDERLY: Initially, 2.5 mg/day. Maintenance: 2.5–20 mg/day as single dose or in 2 divided doses.

Hypertension (in Combination with Other Antihypertensives)

PO: ADULTS, ELDERLY: Initially, 1.25 mg/day titrated to pt's needs.

Left Ventricular Dysfunction Following MI

PO: ADULTS, ELDERLY: Initially, 1.25–2.5 mg twice a day. **Maximum:** 5 mg twice a day.

Risk Reduction for MI/Stroke

PO: ADULTS, ELDERLY: Initially, 2.5 mg/day for 7 days, then 5 mg/day for 21 days, then 10 mg/day as a single dose or in divided doses.

Dosage in Renal Impairment

Creatinine Clearance Equal To or Less Than 40 ml/min: 25% of normal dose.

Renal Failure and Hypertension

Initially, 1.25 mg/day titrated upward. **Maximum:** 5 mg/day.

CHF: Initially, 1.25 mg/day, titrated up to 2.5 mg twice a day.

SIDE EFFECTS

Frequent (12%–5%): Cough, headache. **Occasional (4%–2%):** Dizziness, fatigue, nausea, asthenia (loss of strength, energy). **Rare (less than 2%):** Palpitations, insomnia, nervousness, malaise, abdominal pain, myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive hypotension ("first-dose syncope") may occur in pts with CHF, severely salt or volume depleted. Angioedema, hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in those with collagen vascular disease (scleroderma, systemic lupus erythematosus), renal impairment. Nephrotic syndrome may be noted in those with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position with legs elevated. Renal function tests should be performed before beginning therapy. In pts with prior renal disease, urine test for protein (by dipstick method) should be made with first urine of day before beginning therapy and periodically thereafter. In those with renal impairment, autoimmune disease, or taking drugs that affect leukocytes or immune response, CBC, differential count should be performed before beginning therapy and q2wks for 3 mos periodically thereafter.

R

INTERVENTION/EVALUATION

Monitor B/P, renal function, serum potassium, WBC. Assess for cough (frequent effect). Assist with ambulation if dizziness occurs. Assess lung sounds for rales, wheezing in pts with CHF. Monitor urinalysis for proteinuria. Monitor serum potassium in those on concurrent diuretic therapy.

PATIENT/FAMILY TEACHING

• Do not discontinue medication without physician's approval. • Rise slowly from sitting/lying position to reduce hypotensive effect. • Report palpitations, cough, chest pain. • Dizziness, light-headedness may occur in first few days. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol.

ranitidine

TOP 200

ra-**nit**-i-deen
(Apo-Ranitidine, Zantac, Zantac-75, Zantac-150, Zantac EFFERdose)
Do not confuse ranitidine with amantadine or rimantadine, or Zantac with Xanax, Ziac, Zofran, or Zyrtec.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Histamine H_2 receptor antagonist. **CLINICAL:** Antiulcer (see p. 108C).

R

ACTION

Inhibits histamine action at histamine 2 receptors of gastric parietal cells. **Therapeutic Effect:** Inhibits gastric acid secretion (fasting, nocturnal, when stimulated by food, caffeine, insulin). Reduces volume, hydrogen ion concentration of gastric juice.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 15%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life: PO:** 2.5 hrs; **IV:** 2–2.5 hrs (increased with renal impairment).

USES

Short-term treatment of active duodenal ulcer. Prevention of duodenal ulcer recurrence. Treatment of active benign gastric ulcer, pathologic GI hypersecretory conditions, acute gastroesophageal reflux disease (GERD), including erosive esophagitis. Maintenance of healed erosive esophagitis. Part of regimen for *H. pylori* eradication to reduce risk of duodenal ulcer recurrence. **OTC:** Relieve heartburn, acid indigestion, sour stomach. **OFF-LABEL:** Prevention of aspiration pneumonia, treatment of recurrent postop ulcer, upper GI bleeding, prevention of acid aspiration pneumonitis during surgery, prevention of stress-induced ulcers.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, elderly, history of acute porphyria.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Confusion more likely with hepatic/renal impairment.

INTERACTIONS

DRUG: Magnesium or aluminum antacids may decrease absorption. May decrease absorption of **atazanavir, itraconazole, ketoconazole. HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Interferes with skin tests using allergen extracts. May increase serum AST, ALT, gamma-glutamyl transpeptidase, creatinine.

AVAILABILITY (Rx)

Capsules (Zantac): 150 mg, 300 mg. **Injection Solution (Zantac):** 25 mg/ml. **Syrup (Zantac):** 15 mg/ml. **Tablets**

(Zantac): 75 mg, 150 mg, 300 mg. **Tablet for Solution (Zantac EFFERdose):** 25 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV push, dilute each 50 mg with 20 ml 0.9% NaCl, D_5W. • For intermittent IV infusion (piggyback), dilute each 50 mg with 0.9% NaCl, D_5W to a maximum concentration of 0.5 mg/ml. • For IV infusion, dilute with 0.9% NaCl, D_5W to a maximum concentration of 2.5 mg/ml.

Rate of Administration • Administer IV push over minimum of 5 min (prevents arrhythmias, hypotension). • Infuse IV piggyback over 15–20 min. • Infuse IV infusion over 24 hrs.

Storage • IV solutions appear clear, colorless to yellow (slight darkening does not affect potency). • IV infusion (piggyback) is stable for 48 hrs at room temperature (discard if discolored or precipitate forms).

IM

• May be given undiluted. • Give deep IM into large muscle mass.

PO

• Give without regard to meals (best given with meals or at bedtime). • Do not administer within 1 hr of magnesium- or aluminum-containing antacids (decreases absorption). • **EFFERdose:** Do not chew; swallow whole or dissolve on tongue.

IV INCOMPATIBILITY

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), heparin, hydromorphone (Dilaudid), insulin, lidocaine, lipids, lorazepam (Ativan), morphine, norepinephrine (Levophed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Duodenal Ulcer, Gastric Ulcer, GERD

PO: ADULTS, ELDERLY: 150 mg twice a day or 300 mg at bedtime. Maintenance: 150 mg at bedtime. **CHILDREN:** 4–8 mg/kg/day in divided doses twice a day. **Maximum:** 300 mg/day. Maintenance: 2–4 mg/kg/day once daily. **Maximum** (Duodenal Ulcer): 150 mg/day. **Maximum** (GERD): 300 mg/day.

Duodenal Ulcer Associated with *H. Pylori* Infection

PO: ADULTS, ELDERLY: 150 mg twice a day for 4 wks in combination with amoxicillin and clarithromycin.

Erosive Esophagitis

PO: ADULTS, ELDERLY: 150 mg 4 times a day. Maintenance: 150 mg twice a day or 300 mg at bedtime. **CHILDREN:** 5–10 mg/kg/day in 2 divided doses. **Maximum:** 600 mg/day.

Hypersecretory Conditions

PO: ADULTS, ELDERLY: 150 mg twice a day. May increase up to 6 g/day.

IV: 50 mg q6–8h.

Continuous IV Infusion: 50 mg, then 1 mg/kg/hr infusion. May increase up to 2.5 mg/kg/hr.

OTC Use

PO: ADULTS, ELDERLY: 75 mg 30–60 min before eating food, drinking beverages that cause heartburn. **Maximum:** 150 mg per 24-hr period. Do not use longer than 14 days.

Usual Parenteral Dosage

IV Infusion: ADULTS, ELDERLY: 6.25 mg/hr. **CHILDREN:** 1 mg/kg for one dose then 0.08–0.17 mg/kg/hr (2–4 mg/kg/day).

Usual Neonatal Dosage

PO: NEONATES: 2 mg/kg/day in divided doses q12h.

IV: NEONATES: Initially, 1.5 mg/kg/dose, then 1.5–2 mg/kg/day in divided doses q12h.

R

IV Infusion: NEONATES: Loading dose: 1.5 mg/kg, then 1–2 mg/kg/day.

Dosage in Renal Impairment

Creatinine clearance less than 50 ml/min: Give 150 mg PO q24h or 50 mg IV or IM q18–24h.

SIDE EFFECTS

Occasional (2%): Diarrhea. **Rare (1%):** Constipation, headache (may be severe).

ADVERSE EFFECTS/ TOXIC REACTIONS

Reversible hepatitis, blood dyscrasias occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain history of epigastric/abdominal pain. Obtain baseline hepatic/renal function tests.

INTERVENTION/EVALUATION

Monitor serum AST, ALT levels, creatinine, BUN. Assess mental status in elderly. Question present abdominal pain, GI distress.

PATIENT/FAMILY TEACHING

• Smoking decreases effectiveness of medication. • Do not take medicine within 1 hr of magnesium- or aluminum-containing antacids. • Transient burning/pruritus may occur with IV administration. • Report headache. • Avoid alcohol, aspirin.

R

ranolazine

TOP 200

rah-**noe**-la-zeen
(Ranexa)
Do not confuse Ranexa with Celexa.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sodium current inhibitor. **CLINICAL:** Antianginal, anti-ischemic.

ACTION

Thought to elicit changes in cardiac metabolism. Does not reduce heart rate, B/P. **Therapeutic Effect:** Exerts antianginal, anti-ischemic effects on cardiac tissue.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	2–5 hrs	N/A

Absorption highly variable. Rapidly, extensively metabolized in intestine, liver. Protein binding: 62%. Eliminated mainly in urine, with lesser amount excreted in feces. **Half-life:** 7 hrs.

USES

Treatment of chronic angina, used alone or in combination with beta-blockers, calcium channel blockers, or nitrates.

PRECAUTIONS

Contraindications: Significant hepatic impairment, concurrent use of potent **CYP3A inhibitors (rifampin, carbamazepine)** or **inducers (ketoconazole, itraconazole, fluconazole, clarithromycin, erythromycin). Cautions:** Renal/hepatic impairment. Preexisting QT prolongation, concurrent use with medications known to cause QT interval prolongation, pts 75 yrs of age or older.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: See contraindications. **Diltiazem, verapamil** may increase serum concentration. May increase concentration of **cyclosporine, digoxin, simvastatin, sirolimus, tacrolimus. Antiarrhythmic agents, dofetilide, quinidine, sotalol, thioridazine, ziprasidone** may increase risk of QT prolongation. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD: Grapefruit, grape-**

fruit juice may increase plasma concentration, risk of QT prolongation. **LAB VALUES:** May slightly elevate BUN, serum creatinine.

AVAILABILITY (Rx)

Tablets (Extended-Release): 500 mg, 1,000 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Limit use of grapefruit, grapefruit juice. • Do not crush, chew, break extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Chronic Angina

PO: ADULTS, ELDERLY: Initially, 500 mg twice daily. May increase to 1,000 mg twice daily, based on clinical response. Dose should not exceed 500 mg twice daily when used concurrently with moderate CYP3A inhibitors (e.g., diltiazem, verapamil).

SIDE EFFECTS

Occasional (6%–4%): Dizziness, headache, constipation, nausea. **Rare (2%–1%):** Peripheral edema, abdominal pain, dry mouth, vomiting, tinnitus, vertigo, palpitations.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose manifested as confusion, diplopia, dizziness, paresthesia, syncope.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress). Obtain baseline EKG.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Give with food if nausea occurs. Monitor daily pattern of bowel activity, stool consistency. Assess for relief of anginal pain. Monitor EKG, pulse for irregularities.

PATIENT/FAMILY TEACHING

• Limit use of grapefruit, grapefruit juice. • Do not chew/crush extended-release tablets. • Avoid tasks requiring alertness, motor skills until response to drug is established.

rasagiline

ra-**sa**-ji-leen
(Azilect)
Do not confuse Azilect with Aricept.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: MAOI.
CLINICAL: Antiparkinson agent (see p. 146C).

ACTION

Inhibits monoamine oxidase, an enzyme that plays a major role in catabolism of dopamine. Inhibition of dopamine depletion reduces symptomatic motor deficits of Parkinson's disease. **Therapeutic Effect:** Reduces symptoms of Parkinson's disease, appears to delay disease progression.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	N/A	1 wk

Rapidly absorbed following PO administration. Protein binding: 88%–94%. Metabolized in liver. Mainly eliminated in urine, with lesser amount excreted in feces. **Half-life:** 1.3–3 hrs.

USES

Treatment of signs/symptoms of Parkinson's disease as initial monotherapy or as adjunct therapy to levodopa.

PRECAUTIONS

Contraindications: Concurrent use with meperidine, methadone, tramadol, dex-

tromethorphan, St. John's wort, other MAOIs (selective or nonselective), cyclobenzaprine. **Cautions:** Hepatic impairment; cardiovascular, cerebrovascular disease. Avoid foods high in tyramine.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Amphetamines, other MAOIs (phenelzine, tranylcypromine), sympathomimetics (dopamine, metaraminol, phenylephrine, pseudoephedrine)** may cause hypertensive crisis. **Anorexiants (dexfenfluramine, fenfluramine, sibutramine), CNS stimulants (methylphenidate), cyclobenzaprine, dextromethorphan, meperidine, methadone, mirtazapine, serotonin or norepinephrine reuptake inhibitors, sibutramine, tramadol, trazodone, tricyclic antidepressants, venlafaxine** may cause serotonin syndrome. May increase risk of **atomoxetine, bupropion** toxicity. **Ciprofloxacin, entacapone, tolcapone** may increase concentration (reduced dosage recommended). **Levodopa** may cause hypertensive/hypotensive reaction. **HERBAL:** **Kava kava, SAMe, St. John's wort, valerian** may increase risk of serotonin syndrome, excessive sedation. **FOOD:** **Caffeine, foods/beverages containing tyramine** may result in hypertensive reaction, hypertensive crisis. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, ALT, AST. May cause leukopenia.

AVAILABILITY (Rx)

Tablets: 0.5 mg, 1 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Avoid food, beverages containing tyramine (cheese, sour cream, yogurt, pickled herring, liver, canned figs, raisins, bananas, avocados, soy sauce, broad beans, yeast extracts, meats prepared with tenderizers, red wine, beer).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ When used in combination with levodopa, dosage reduction of levodopa should be considered.

Parkinson's Disease

PO: ADULTS, ELDERLY, MONOTHERAPY: 1 mg once daily.

PO: ADULTS, ELDERLY, ADJUNCTIVE THERAPY: Initially, 0.5 mg once daily. If therapeutic response is not achieved, dose may be increased to 1 mg once daily.

Mild Hepatic Impairment, Concurrent Use of Ciprofloxacin, Other CYP1A2 Inhibitors

PO: ADULTS, ELDERLY: 0.5 mg once daily.

SIDE EFFECTS

Frequent (14%–12%): Headache, nausea. **Occasional (9%–5%):** Orthostatic hypotension, weight loss, dyspepsia (heartburn, indigestion, epigastric pain), dry mouth, arthralgia, depression, hallucinations, constipation. **Rare (4%–2%):** Fever, vertigo, ecchymosis, rhinitis, neck pain, arthritis, paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increase in dyskinesia (impaired voluntary movement), dystonia (impaired muscular tone) occur in 18% of pts, angina occurs in 9%. Gastroenteritis, conjunctivitis occur rarely (3%).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline hepatic enzyme levels, blood pressure.

INTERVENTION/EVALUATION

Give with food if nausea occurs. Monitor B/P. Instruct pt to rise from lying to sitting or sitting to standing position slowly to prevent orthostatic hypotension. Assess for clinical reversal of symptoms (improve-

ment of tremor of head/hands at rest, mask-like facial expression, shuffling gait, muscular rigidity). If hallucinations or dyskinesia occur, symptoms may be eliminated if levodopa dosage is reduced. Hallucinations generally are accompanied by confusion and, to a lesser extent, insomnia.

PATIENT/FAMILY TEACHING

• Orthostatic hypotension may occur more frequently during initial therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Hallucinations may occur (more so in the elderly with Parkinson's disease), typically within first 2 wks of therapy. • Avoid foods that contain tyramine (cheese, sour cream, beer, wine, pickled herring, liver, figs, raisins, bananas, avocados, soy sauce, yeast extracts, yogurt, papaya, broad beans, meat tenderizers), excessive amounts of caffeine (coffee, tea, chocolate), OTC preparations for hay fever, colds, weight reduction (may produce significant rise in B/P).

rasburicase

ras-**bur**-ih-kase
(Elitek, Fasturtec)

BLACK BOX ALERT Severe hypersensitivity reactions including anaphylaxis reported. May cause severe hemolysis in pts with glucose-6-phosphate dehydrogenase (G6PD) deficiency. Screen pts at high risk for G6PD (African or Mediterranean descent) prior to therapy. Methemoglobinemia has been reported. Blood samples left at room temperature may interfere with uric acid measurements. Must collect blood samples in prechilled tubes containing heparin and immediately immerse in ice water bath. Assay plasma samples within 4 hrs of collection. Elitek enzymatically degrades uric acid in blood samples left at room temperature.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Urate-oxidase inhibitor. **CLINICAL:** Antihyperuricemic.

ACTION

Catalyzes enzymatic oxidation of poorly soluble uric acid into soluble, inactive metabolites by converting uric acid into allantoin. Does not inhibit formation of uric acid. **Therapeutic Effect:** Decreases uric acid levels.

PHARMACOKINETICS

Half-life: 16–23 hrs.

USES

Initial management of uric acid levels in pts with leukemia, lymphoma, and solid tumor malignancies who are receiving anticancer therapy expected to result in tumor lysis and subsequent elevation of plasma uric acid.

PRECAUTIONS

Contraindications: Prior drug reaction including hypersensitivity reactions, hemolysis, methemoglobinemia, G6PD deficiency. **Cautions:** G6PD deficiency risk.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Unknown if it crosses placenta and causes fetal harm. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, ALT. May decrease serum phosphate.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1.5 mg/vial, 7.5 mg/vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Must use diluent provided in carton. • Reconstitute 1.5-mg vial with 1 ml of diluent or 7.5-mg vial with 5 ml of diluent to provide concentration of 1.5 mg/ml. • Gently swirl to mix. Do not shake or vortex vial. • In-

R

spect for particulate matter or discoloration. • Inject calculated dose into appropriate volume of 0.9% NaCl to achieve a final volume of 100 ml.

Rate of Administration • Infuse over 30 min. • Do not use filter during reconstitution or infusion.

Storage • Refrigerate solution until time of use. • Discard after 24 hrs following reconstitution.

IV INCOMPATIBILITIES

Do not mix with other IV medications.

INDICATIONS/ROUTES/DOSAGE

Management of Hyperuricemia

IV: ADULTS/CHILDREN: 0.2 mg/kg daily up to 5 days.

SIDE EFFECTS

Frequent (50%–46%): Vomiting, fever. **Occasional (27%–13%):** Nausea, headache, abdominal pain, constipation, diarrhea, mucositis, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reactions occurred in 4.3% of pts including injection irritation, peripheral edema, urticaria, pruritus. Anaphylaxis, hemolysis, methemoglobinemia occurred in less than 1%. Pulmonary hemorrhage, respiratory failure, supraventricular arrhythmias, ischemic coronary artery disorders, sepsis, abdominal, gastrointestinal infections occurred in greater than 2% of pts. Clinical tumor lysis syndrome (TLS), manifested by hyperuricemia, hyperkalemia, hyperphosphatemia, seizure, increased serum creatinine, renal failure reported in 3% of pts. Anti-rasburicase antibodies reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, CMP, phosphate, uric acid level, urine pregnancy if applicable. Question for history of prior hypersensitivity reactions. Assess G6PD deficiency risk in potential candidates.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor CBC, CMP, uric acid level, phosphorus. If hypersensitivity reaction occurs, stop infusion and immediately notify physician. Screen for clinical tumor lysis syndrome, hemolysis, methemoglobinemia. Follow strict procedure when collecting uric acid levels. Obtain EKG for chest pain/tightness, hyperkalemia, dyspnea. Assess skin for rash.

PATIENT/FAMILY TEACHING

• Report any allergic reaction, bronchospasm, chest pain or tightness, dyspnea, hypoxia, hypotension, shock, or urticaria.

regorafenib

re-goe-**raf**-e-nib
(Stivarga)

BLACK BOX ALERT Severe, sometimes fatal, hepatotoxicity reported. Monitor hepatic function prior to and during treatment. Interrupt, reduce, or discontinue therapy if hepatotoxicity or hepatocellular necrosis occurs.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Multikinase inhibitor. **CLINICAL:** Antineoplastic.

ACTION

Inhibits tyrosine kinase activity involved with tumor angiogenesis, oncogenesis, and maintenance of tumor microenvironment. **Therapeutic Effect:** Inhibits colorectal tumor cell growth and metastasis.

PHARMACOKINETICS

Readily absorbed following PO administration. Metabolized in liver to active metabolite. Protein binding: 99.5%. Peak plasma concentration: 4 hrs. Excreted in feces (71%), urine (19%). **Half-life:** 28 hrs (Range: 14–58 hrs).

USES

Treatment of metastatic colorectal cancer in pts who have been previously treated with fluoropyrimidine/oxaliplatin/irinotecan-based chemotherapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Mild to moderate hepatic impairment (not recommended with severe hepatic impairment), hypertension (not recommended with severe or uncontrolled hypertension), recent surgical/dental procedures, chronic open wounds/ulcers, hemoptysis, dehydration.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Not recommended in nursing mothers. Unknown if distributed in breast milk. Contraception recommended during treatment and up to 2 mos after discontinuation of therapy. **Pregnancy Category D. Children:** Safety and efficacy not established in pts younger than 18 years old. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong **CYP3A4 inducers (e.g., carbamazepine, phenytoin)** may decrease concentration/effects. Strong **CYP3A4 inhibitors (e.g., clurithromycin, ketoconazole)** may increase concentration/effects. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD: Grapefruit, grapefruit juice** may increase concentration/effects. **High-fat meal** may increase absorption/concentration. **LAB VALUES:** May decrease lymphocytes, neutrophils, platelets, serum calcium, phosphorus, potassium, sodium. May increase serum bilirubin, AST, ALT, lipase, amylase, INR, urine protein.

AVAILABILITY (Rx)

Tablets: 40 mg.

ADMINISTRATION/HANDLING

PO

• Take at same time each day with low-fat (less than 30%) breakfast. • Swallow whole; do not break, crush, dissolve, or divide tablet.

INDICATIONS/ROUTES/DOSAGE

Metastatic Colorectal Cancer

PO: ADULTS/ELDERLY: 160 mg once daily for first 21 days, of each 28-day cycle.

Dosage Modification

Symptomatic Hypertension, Toxic Skin Reactions, Severe Side Effects (Grades 3–4)

PO: ADULTS/ELDERLY: Reduce dose to 120 mg once daily. If recovery does not occur within 7 days (despite dose reduction), interrupt treatment for minimum of 7 days and reassess. If recovery does not occur after interruption, reduce dose to 80 mg once daily. Discontinue for intolerance of 80-mg dose, hepatic function tests greater than 20 times upper limit of normal, recovery failure of grades 3–4 side effects, toxic skin reaction.

SIDE EFFECTS

Frequent (64%–26%): Asthenia/fatigue, anorexia, diarrhea, mucositis, weight loss, hypertension, dysphonia, generalized pain, fever, rash. **Occasional (10%–5%):** Headache, alopecia, dysgeusia, musculoskeletal stiffness, dry mouth. **Rare (2% or Less):** Tremor, gastric reflux.

ADVERSE EFFECTS/ TOXIC REACTIONS

May cause GI perforation, GI fistula formation. Hemorrhaging of respiratory, GI, genitourinary tracts reported in 21% of pts. Hypertension (30% of pts) may lead to hypertensive crisis. May cause ineffective wound healing or wound dehiscence requiring medical intervention. Palmar-plantar erythrodysesthesia syndrome (PPES), a chemotherapy-induced skin condition that presents with redness, swelling, numbness, skin sloughing of hands, feet (45% of pts). Reversible posterior leukoencephalopathy syndrome (RPLS) reported in less than 1% of pts. May induce cardiac ischemia and/or MI. Severe, sometimes fatal, hepatotoxicity

R

including hepatocellular necrosis reported in less than 1%. Various, unspecified infections reported in 31% of pts (most likely due to neutropenia).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline vital signs, CBC with differential, CMP, magnesium, phosphate, ionized calcium, urinalysis, urine pregnancy, urine protein, amylase, lipase, PT/INR. Assess recent surgical/dental procedures. Question possibility of pregnancy, current breast-feeding status. Obtain full medication history including vitamins, supplements, herbal products. Question for history of hypertension, hepatic impairment, cardiovascular disease. Assess skin for open/unhealed wounds.

INTERVENTION/EVALUATION

Monitor CBC, electrolytes, urinalysis. Monitor hepatic function tests q2wks for 2 mos, then monthly; or every week if elevated hepatic function tests occur. Persistent diastolic hypertension may indicate hypertensive emergency. Stat EKG for palpitation, chest pain, hypokalemia, hyperkalemia, hypocalcemia, bradycardia, ventricular arrhythmias. Reverse Posterior Leukoencephalopathy Syndrome (RPLS) should be considered in pts with seizure, headache, visual disturbances, altered mental status, malignant hypertension. Assess hydration status. Encourage PO intake. Immediately report any hemorrhaging, bloody stools, hematuria, abdominal pain, hemoptysis (may indicate GI perforation/fistula formation).

PATIENT/FAMILY TEACHING

• Serum laboratory testing will be routinely monitored. • Avoid pregnancy. • Contraception should be practiced during treatment and up to 2 mos after discontinuation. • Report any yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine, decreased urine output, skin changes. • Neurological changes including confusion, seizures, vision loss, high blood pressure crisis may indicate RPLS. • Do no take herbal products. • Contact doctor before any planned surgical/dental procedures. • Do not eat grapefruit or drink grapefruit juice. • Take with low-fat food only. • Drink liquids often if diarrhea occurs (may lead to dehydration). • Immediately report bleeding of any kind. • Swallow tablet whole; do not chew, crush, dissolve, or divide.

repaglinide

HIGH ALERT

re-**pag**-li-nide
(GlucoNorm, Prandin)
Do not confuse Prandin with Avandia.

FIXED-COMBINATION(S)

Prandimet: repaglinide/metformin (an antidiabetic): 1 mg/500 mg, 2 mg/500 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihyperglycemic. **CLINICAL:** Antidiabetic agent (see p. 44C).

ACTION

Stimulates release of insulin from beta cells of pancreas by depolarizing beta cells, leading to opening of calcium channels. Resulting calcium influx induces insulin secretion. **Therapeutic Effect:** Lowers serum glucose concentration.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: 98%. Metabolized in liver to inactive metabolites. Excreted primarily in feces, with lesser amount in urine. Unknown if removed by hemodialysis. **Half-life:** 1 hr.

USES

Adjunct to diet, exercise to lower serum glucose in pts with type 2 diabetes mellitus. Used as monotherapy or in combina-

tion with metformin, pioglitazone, rosiglitazone. Used primarily to reduce postprandial glucose levels in pts taking another medication.

PRECAUTIONS

Contraindications: Diabetic ketoacidosis, type 1 diabetes mellitus, concurrent gemfibrozil therapy. **Cautions:** Hepatic/renal impairment, adrenal/pituitary dysfunction.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted, but hypoglycemia may be more difficult to recognize.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., ketoconazole, erythromycin), CYP2C8 inhibitors (e.g., gemfibrozil) may increase concentration/toxicity. **CYP3A4 inducers (e.g., carbamazepine, rifampin)** may decrease effects. **Beta blockers, NSAIDs** may increase hypoglycemic effect. **HERBAL: St. John's wort** may decrease concentration. **Garlic, ginger, ginseng** may cause hypoglycemia. **FOOD: Food** decreases concentration. **LAB VALUES:** Serum alkaline phosphatase, ALT, AST may be elevated.

AVAILABILITY (Rx)

Tablets: 0.5 mg, 1 mg, 2 mg.

ADMINISTRATION/HANDLING

PO

• Ideally, give within 15 min of a meal but may be given immediately before a meal to as long as 30 min before a meal.

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus

PO: ADULTS, ELDERLY: 0.5–4 mg 2–4 times daily. **Maximum:** 16 mg/day.

Dosage in Renal Impairment

Creatinine clearance 20–40 ml/min: Initially, 0.5 mg with meals, titrate carefully.

SIDE EFFECTS

Frequent (10%–6%): Upper respiratory tract infection, headache, rhinitis, bronchitis, back pain. **Occasional (5%–3%):** Diarrhea, dyspepsia (heartburn, indigestion, epigastric pain), sinusitis, nausea, arthralgia, UTI. **Rare (2%):** Constipation, vomiting, paresthesia, allergy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypoglycemia occurs in 16% of pts. Chest pain occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check fasting serum glucose, glycosylated Hgb A_{1c} levels periodically to determine minimum effective dose. Ensure follow-up instruction if pt, family do not thoroughly understand diabetes management, glucose-testing technique. At least 1 wk should elapse to assess response to drug before new dosage adjustment is made.

INTERVENTION/EVALUATION

Monitor fasting serum glucose, glycosylated Hgb A_{1c} levels, food intake. Assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, numbness in mouth, hunger, diplopia), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep or rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity/stress, surgical procedures).

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. • Prescribed diet, exercise is principal part of treatment; do not skip, delay meals. • Continue to adhere to dietary instructions, regular exercise program, regular testing of urine or serum glucose. • When taking combination drug therapy with a sulfonylurea or insulin, have source of glucose available to treat symptoms of low blood sugar.

R

reteplase

HIGH ALERT

reh-te-plase
(Retavase)
Do not confuse reteplase or Retavase with Restasis.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tissue plasminogen activator. **CLINICAL:** Thrombolytic (see p. 33C).

ACTION

Activates fibrinolytic system by directly cleaving plasminogen to generate plasmin, an enzyme that degrades fibrin clot within a thrombus. **Therapeutic Effect:** Exerts thrombolytic action.

PHARMACOKINETICS

Rapidly cleared from plasma. Onset: 30–90 min. Eliminated primarily by liver, kidney. **Half-life:** 13–16 min.

USES

Management of acute myocardial infarction (AMI), improvement of ventricular function following AMI, reduction of incidence of CHF, reduction of mortality associated with AMI.

PRECAUTIONS

Contraindications: Active internal bleeding, AV malformation/aneurysm, bleeding diathesis, history of CVA, intracranial neoplasm, recent intracranial/intraspinal surgery or trauma, severe uncontrolled hypertension. **Cautions:** Recent major surgery (coronary artery bypass graft, OB delivery, organ biopsy), cerebrovascular disease, recent GI/GU bleeding, hypertension, mitral stenosis with atrial fibrillation, acute pericarditis, bacterial endocarditis, hepatic/renal impairment, diabetic retinopathy, ophthalmic hemorrhage, septic thrombophlebitis, occluded AV cannula at infected site, advanced age (75 yrs of age or older), pts receiving oral anticoagulants.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** More susceptible to bleeding; caution advised.

INTERACTIONS

DRUG: Heparin, platelet aggregation antagonists (e.g., abciximab, aspirin, dipyridamole), warfarin increase risk of bleeding. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, red clover** possess antiplatelet action, may increase bleeding. **FOOD:** None known. **LAB VALUES:** May decrease serum fibrinogen, plasminogen.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 10.4 units (18.1 mg) (packaged with Sterile Water for Injection).

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute only with Sterile Water for Injection immediately before use. Use diluent, syringe, needle, dispensing pin provided with each kit. • Reconstituted solution contains 1 unit/ml. • Do not shake. • Slight foaming may occur; let stand for a few minutes to allow bubbles to dissipate.

Rate of Administration • Give through dedicated IV line. • Administer each IV bolus over 2-min period. • Give second bolus 30 min after first bolus injection. • Do not add other medications to bolus injection solution. • Do not give second bolus if serious bleeding occurs after first IV bolus is given.

Storage • Use within 4 hrs of reconstitution. • Discard any unused portion.

IV INCOMPATIBILITIES

Do not mix with other medications.

INDICATIONS/ROUTES/DOSAGE

Acute MI, CHF

IV Bolus: ADULTS, ELDERLY: 10 units over 2 min; repeat in 30 min.

SIDE EFFECTS

Frequent: Bleeding at superficial sites, such as venous injection sites, catheter insertion sites, venous cutdowns, arterial punctures, sites of recent surgical procedures, gingival bleeding.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bleeding at internal sites (intracranial, retroperitoneal, GI, GU, respiratory) occurs occasionally. Lysis of coronary thrombi may produce atrial or ventricular arrhythmias, stroke.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline B/P, apical pulse. Evaluate 12-lead EKG, CPK, CPK-MB, serum electrolytes. Assess Hct, platelet count, thrombin time (TT), aPTT, PT, serum plasminogen, fibrinogen levels before therapy is instituted. Type, hold blood.

INTERVENTION/EVALUATION

Carefully monitor all needle puncture sites, catheter insertion sites for bleeding. Observe continuous cardiac monitoring for arrhythmias; monitoring B/P, pulse, respiration is essential until pt is stable. Check peripheral pulses, lung sounds. Monitor for chest pain relief; notify physician of continuation/recurrence of chest pain (note location, type, intensity). Avoid any trauma that may increase risk of bleeding (injections, shaving).

Rh$_o$ (D) immune globulin

row D im-**myoon glob**-yoo-lin (Hyper-RHO S/D Full Dose, Hyper-RHO S/D Mini Dose, MICRhoGAM UF Plus, RhoGAM UF Plus, Rhophylac, WinRho SDF)

BLACK BOX ALERT May cause intravascular hemolysis in pts treated for idiopathic thrombocytopenic purpura (ITP).

◆CLASSIFICATION

CLINICAL: Immune globulin.

ACTION

Suppresses active antibody response, formation of anti-Rh$_o$(D) in Rh$_o$(D)-negative women exposed to Rh$_o$-positive blood from pregnancy with Rh$_o$(D)-positive fetus or transfusion with Rh$_o$(D)-positive blood. Injection of Rh$_o$(D) immune globulin into Rh-positive pt with ITP coats pt's own D-positive RBCs with antibody; as RBCs are cleared by spleen, they saturate capacity of spleen to clear antibody-coated cells. **Therapeutic Effect:** Prevents antibody response, hemolytic disease of newborn in women who previously conceived Rh$_o$(D)-positive fetus. Prevents Rh$_o$(D) sensitization in pts who have received Rh$_o$(D)-positive blood. Decreases bleeding in pts with ITP.

PHARMACOKINETICS

	Onset	Peak	Duration
ITP (increase platelets)	1–2 days	7–14 days	30 days

Half-life: 21–30 days.

USES

Suppression of Rh isoimmunization: Used in situations when an Rh$_o$(D)-negative individual is exposed to Rh$_o$(D)-positive blood: delivery of an Rh$_o$(D)-positive infant, abortion, amniocentesis, chorionic villus sampling, ruptured tubal pregnancy, abdominal pregnancy, transplacental hemorrhage. Used when the mother is Rh$_o$(D) negative, the father is either Rh$_o$(D) positive or Rh$_o$(D) unknown, the baby is either Rh$_o$(D) positive or Rh$_o$(D) unknown. **Transfusion:** Suppression of Rh isoim-

munization in Rh$_o$(D)-negative female children and female adults in their childbearing years transfused with Rh$_o$(D) antigen-positive RBCs or blood components containing Rh$_o$(D) antigen-positive RBCs. **Treatment of ITP:** Children with acute or chronic ITP, adults with chronic ITP, children and adults with ITP secondary to HIV infection.

PRECAUTIONS

Contraindications: Hypersensitivity to any component, IgA deficiency, mothers whose Rh group or immune status is uncertain, prior sensitization to Rh$_o$(D), Rh$_o$(D)-positive mother or pregnant woman, transfusion of Rh$_o$(D)-positive blood in previous 3 mos. **Cautions:** Thrombocytopenia, bleeding disorders. Hgb less than 8 g/dl.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Does not appear to harm fetus. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May interfere with pt's immune response to **live virus vaccines.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: (Hyper-RHO): 50 mcg, 300 mcg. **(MICRhoGAM UF Plus):** 50 mcg. **(RhoGAM UF Plus):** 300 mcg. **(Rhophylac):** 300 mcg/2 ml. **(WinRho SDF):** 120 mcg/0.5 ml, 300 mcg/1.3 ml, 500 mcg/2.2 ml, 1,000 mcg/4.4 ml, 3,000 mcg/13 ml.

ADMINISTRATION/HANDLING

IM

• Administer into deltoid muscle of upper arm, anterolateral aspect of upper thigh.

INDICATIONS/ROUTES/DOSAGE

Idiopathic Thrombocytopenic Purpura (ITP)

IV *(WinRho SDF)*: ADULTS, ELDERLY, CHILDREN: Initially, 50 mcg/kg as single dose (reduce to 25–40 mcg/kg if Hgb is less than 10 g/dl). Maintenance: 25–60 mcg/kg based on platelet count and Hgb level. ***(Rhophylac)*:** 50 mcg/kg.

Suppression of Active Antibody Response in Pregnancy

IM *(Hyper-RHO Full Dose, RhoGAM UF Plus)*: ADULTS: 300 mcg preferably within 72 hrs of delivery.

IV, IM *(WinRho SDF)*: ADULTS: 300 mcg at 28 wks' gestation. After delivery: 120 mcg preferably within 72 hrs.

Suppression of Active Antibody Response in Threatened Abortion

IM *(Hyper-RHO Full Dose, RhoGAM UF Plus)*: ADULTS: 300 mcg as soon as possible.

Suppression of Active Antibody Response in Abortion, Miscarriage, Termination of Ectopic Pregnancy

IM *(Hyper-RHO, RhoGAM UF Plus)*: ADULTS: 300 mcg if more than 13 wks' gestation, 50 mcg if less than 13 wks' gestation.

IV, IM *(WinRho SDF)*: ADULTS: 120 mcg after 34 wks' gestation.

Transfusion Incompatibility

◀ALERT▶ Must give within 72 hrs after exposure to incompatible blood transfusion, massive fetal hemorrhage. Dose is calculated based on exposure to Rh$_o$(D)-positive whole blood or red blood cells.

IV: ADULTS: 3,000 units (600 mcg) q8h until total dose given.

IM: ADULTS: 6,000 units (1,200 mcg) q12h until total dose given.

SIDE EFFECTS

Hypotension, pallor, vasodilation (IV formulation), fever, headache, chills, dizziness, drowsiness, lethargy, rash, pruritus, abdominal pain, diarrhea, discomfort/swelling at injection site, back pain, myalgia, arthralgia, asthenia (loss of strength, energy).

ADVERSE EFFECTS/ TOXIC REACTIONS

Acute renal failure occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine existence of bleeding disorders. Assess pt's Hgb level; give drug cautiously to pts with Hgb level less than 8 g/dl.

INTERVENTION/EVALUATION

Monitor CBC (esp. Hgb, platelet count), BUN, serum creatinine, reticulocyte count, urinalysis results. Assess for signs/symptoms of hemolysis.

PATIENT/FAMILY TEACHING

• IM injection may be painful. • Notify physician if chills, dizziness, fever, headache, rash occur.

ribavirin

rye-ba-**vye**-rin
(Copegus, Rebetol, Ribasphere, Virazole)

BLACK BOX ALERT Pregnancy Category X. Significant teratogenic/embryocidal effects. Hemolytic anemia is significant toxicity, usually occurring within 1–2 wks. May worsen cardiac disease and lead to fatal or nonfatal MI. May interfere with safe and effective assisted ventilation.

Do not confuse ribavirin with riboflavin, rifampin, or Robaxin.

FIXED-COMBINATION(S)

With interferon alfa 2b (**Rebetron**). Individually packaged.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic nucleoside. **CLINICAL:** Antiviral (see p. 69C).

ACTION

Inhibits replication of viral RNA, DNA, influenza virus RNA polymerase activity, interferes with expression of messenger RNA. **Therapeutic Effect:** Inhibits viral protein synthesis.

USES

Inhalation: Treatment of respiratory syncytial virus (RSV) infections (esp. in pts with underlying compromising conditions such as chronic lung disorders, congenital heart disease, recent transplant recipients). **Capsule/tablet/oral solution:** Treatment of chronic hepatitis C in pts with compensated hepatic disease. **OFF-LABEL:** Treatment of influenza A or B, West Nile virus. **Inhalation:** Treatment for respiratory syncytial virus (RSV) in adult hematopoietic stem cell or heart/lung transplant recipients.

PRECAUTIONS

Contraindications: Autoimmune hepatitis, creatinine clearance less than 50 ml/min, hemoglobinopathies (e.g., sickle cell anemia), hepatic decompensation, hypersensitivity to ribavirin products, men whose female partner is pregnant, pancreatitis, pregnancy, significant or unstable cardiac disease, women of childbearing age who do not use contraception reliably, concomitant use of didanosine. **Cautions: Inhalation:** Pts requiring assisted ventilation, COPD, asthma. **PO:** Cardiac or pulmonary disease, elderly, history of psychiatric disorders, renal impairment, pts with sarcoidosis. **Pregnancy Category X.**

INTERACTIONS

DRUG: Didanosine may increase risk of pancreatitis, peripheral neuropathy. May decrease effects of **didanosine. Nucleoside analogues (e.g., adefovir, didanosine, lamivudine, stavudine, zalcitabine, zidovudine)** may increase risk of lactic acidosis. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules (Rebetol, Ribasphere): 200 mg. **Powder for Aerosol (Virazole):** 6 g. **Pow-**

R

der for Solution, Nebulization (Virazole): 6 g. **Solution, Oral (Rebetol):** 40 mg/ml. **Tablet (Copegus):** 200 mg. **(Ribasphere):** 200 mg, 400 mg, 600 mg.

ADMINISTRATION/HANDLING

PO

• Capsules may be taken without regard to food. • Do not break, crush, open, or divide capsules. • Use oral solution in children 5 yrs or younger, those 25 kg or less, or those unable to swallow. • Give capsules with food when combined with peginterferon alfa-2b. • Tablets should be given with food.

Inhalation

◀ALERT▶ May be given via nasal or oral inhalation.

• Solution appears clear, colorless; is stable for 24 hrs at room temperature. • Discard solution for nebulization after 24 hrs. • Discard if discolored or cloudy. • Add 50–100 ml Sterile Water for Injection or Inhalation to 6-g vial. • Transfer to a flask, serving as reservoir for aerosol generator. • Further dilute to final volume of 300 ml, giving solution concentration of 20 mg/ml. • Use only aerosol generator available from manufacturer of drug. • Do not give concomitantly with other drug solutions for nebulization. • Discard reservoir solution when fluid levels are low and at least q24h. • Controversy exists over safety in ventilator-dependent pts; only experienced personnel should administer drug.

INDICATIONS/ROUTES/DOSAGE

Chronic Hepatitis C

PO ***(Capsule Combination with Interferon ALFA-2B)*: ADULTS, ELDERLY:** 1,000–1,200 mg/day in 2 divided doses. **CHILDREN WEIGHING 61 KG OR MORE:** Use adult dosage. **CHILDREN WEIGHING 50–60 KG:** 400 mg twice a day. **CHILDREN WEIGHING 37–49 KG:** 200 mg in morning, 400 mg in evening. **CHILDREN WEIGHING 24–36 KG:** 200 mg twice a day.

PO ***(Capsules in Combination with Peginterferon ALFA-2B)*: ADULTS, ELDERLY:** 800 mg/day (with food) in 2 divided doses.

PO ***(Tablets in Combination With Peginterferon ALFA-2B)*: ADULTS, ELDERLY:** 800–1,200 mg/day in 2 divided doses.

Severe Lower Respiratory Tract Infection Caused by Respiratory Syncytial Virus (RSV)

Inhalation: CHILDREN, INFANTS: Use with Viratek small-particle aerosol generator at concentration of 20 mg/ml (6 g reconstituted with 300 ml Sterile Water for Injection) over 12–18 hrs/day for 3–7 days.

SIDE EFFECTS

Frequent (greater than 10%): Dizziness, headache, fatigue, fever, insomnia, irritability, depression, emotional lability, impaired concentration, alopecia, rash, pruritus, nausea, anorexia, dyspepsia, vomiting, decreased hemoglobin, hemolysis, arthralgia, musculoskeletal pain, dyspnea, sinusitis, flu-like symptoms. **Occasional (10%–1%):** Nervousness, altered taste, weakness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiac arrest, apnea, ventilator dependence, bacterial pneumonia, pneumonia, pneumothorax occur rarely. If treatment exceeds 7 days, anemia may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain sputum specimens before giving first dose or at least during first 24 hrs of therapy. Assess respiratory status for baseline. **PO:** CBC with differential, pretreatment and monthly pregnancy test for women of childbearing age.

INTERVENTION/EVALUATION

Monitor Hgb, Hct, platelets, hepatic function tests, I&O, fluid balance carefully. Check hematology reports for anemia due to reticulocytosis when therapy exceeds 7 days. For ventilator-assisted pts,

watch for "rainout" in tubing and empty frequently; be alert to impaired ventilation/gas exchange due to drug precipitate. Assess skin for rash. Monitor B/P, respirations; assess lung sounds.

PATIENT/FAMILY TEACHING

• Report immediately any difficulty breathing, itching/swelling/redness of eyes, severe abdominal pain, bloody diarrhea, unusual bleeding/bruising. • Female pts should take measures to avoid pregnancy. • Male pts should take contraceptive measures.

rifabutin

rif-a-**bue**-tin
(Mycobutin)
Do not confuse rifabutin with rifampin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antitubercular. **CLINICAL:** Antibacterial (antimycobacterial).

ACTION

Inhibits DNA-dependent RNA polymerase, an enzyme in susceptible strains of *Escherichia coli, Bacillus subtilis*. Broad-spectrum activity, including mycobacteria such as *Mycobacterium avium* complex (MAC). **Therapeutic Effect:** Prevents MAC disease.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 85%. Widely distributed. Crosses blood-brain barrier. Extensive intracellular tissue uptake. Metabolized in liver to active metabolite. Excreted in urine; eliminated in feces. Unknown if removed by hemodialysis. **Half-life:** 16–69 hrs.

USES

Prevention of disseminated *Mycobacterium avium* complex (MAC) disease in those with advanced HIV infection. **OFF-LABEL:** Part of multidrug regimen for treatment of MAC. Prophylaxis for latent tuberculosis infection, part of multidrug regimen for treatment of active tuberculosis infection.

PRECAUTIONS

Contraindications: Hypersensitivity to other rifamycins (e.g., rifampin). **Cautions:** Safety in children not established. Renal/hepatic impairment, active tuberculosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effectiveness of **oral contraceptives.** May decrease concentration/effects of **non-nucleoside reverse transcriptase inhibitors (e.g., delavirdine, efavirenz, nevirapine), protease inhibitors (e.g., amprenavir, indinavir, ritonavir, saquinavir).** May decrease effect of **clarithromycin, itraconazole.** **HERBAL:** None significant. **FOOD:** **High fat meals** may delay absorption. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT.

AVAILABILITY (Rx)

Capsules: 150 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. Give with food if GI irritation occurs. • May mix with applesauce if pt is unable to swallow capsules whole.

INDICATIONS/ROUTES/DOSAGE

Prophylaxis of MAC Disease

PO: ADULTS, ELDERLY: 300 mg as single dose or in 2 divided doses if GI upset occurs. 150 mg/day when given concurrently with nelfinavir or indinavir; 450–

R

600 mg/day or 600 mg 3 times/wk when given concurrently with efavirenz. **CHILDREN:** 5 mg/kg daily. **Maximum dose:** 300 mg.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance. If creatinine clearance is less than 30 ml/min, reduce dosage by 50%.

SIDE EFFECTS

Frequent (30%): Red-orange or red-brown discoloration of urine, feces, saliva, skin, sputum, sweat, tears. **Occasional (11%–3%):** Rash, nausea, abdominal pain, diarrhea, dyspepsia, belching, headache, altered taste, uveitis, corneal deposits. **Rare (Less Than 2%):** Anorexia, flatulence, fever, myalgia, vomiting, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatitis, anemia, thrombocytopenia, neutropenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain chest X-ray; sputum, blood cultures. Biopsy of suspicious node(s) must be done to rule out active tuberculosis. Obtain baseline CBC, serum hepatic function tests.

INTERVENTION/EVALUATION

Monitor serum hepatic function tests, CBC, platelet count, Hgb, Hct. Avoid IM injections, rectal temperatures, other trauma that may induce bleeding. Check temperature; notify physician of flu-like syndrome, rash, GI intolerance.

PATIENT/FAMILY TEACHING

• Urine, feces, saliva, sputum, perspiration, tears, skin may be discolored brown-orange. • Soft contact lenses may be permanently discolored. • Rifabutin may decrease efficacy of oral contraceptives; nonhormonal methods should be considered. • Avoid crowds, those with infection. • Report flu-like symptoms, nausea, vomiting, dark urine, unusual bruising/bleeding from any site, any visual disturbances.

rifampin

rif-**am**-pin
(Rifadin, Rofact)
Do not confuse Rifadin with Rifater or Ritalin, or rifampin with ribavirin, rifabutin, Rifamate, rifapentine, rifaximin, or Ritalin.

FIXED-COMBINATION(S)

Rifamate: rifampin/isoniazid (an antitubercular): 300 mg/150 mg. **Rifater:** rifampin/isoniazid/pyrazinamide (an antitubercular): 120 mg/50 mg/300 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Semisynthetic agent. **CLINICAL:** Antibiotic, antitubercular, miscellaneous.

ACTION

Interferes with bacterial RNA synthesis by binding to DNA-dependent RNA polymerase, preventing attachment to DNA, thereby blocking RNA transcription. **Therapeutic Effect:** Bactericidal in susceptible microorganisms.

PHARMACOKINETICS

Well absorbed from GI tract (food delays absorption). Protein binding: 80%. Widely distributed. Metabolized in liver to active metabolite. Primarily eliminated by biliary system. Not removed by hemodialysis. **Half-life:** 3–5 hrs (increased in hepatic impairment).

USES

In conjunction with at least one other antitubercular agent for initial treatment, re-treatment of clinical tuberculosis. Eliminates *Neisseria* meningococci from

nasopharynx of asymptomatic carriers in situations with high risk for meningococcal meningitis (prophylaxis, not cure). **OFF-LABEL:** Prophylaxis of *H. influenzae* type b infection, *Legionella* pneumonia, serious infections caused by *Staphylococcus* spp.

PRECAUTIONS

Contraindications: Concomitant therapy with amprenavir, saquinavir, ritonavir; hypersensitivity to other rifamycins. **Cautions:** Hepatic impairment, active or treated alcoholism, porphyria.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol, hepatotoxic medications, ritonavir, saquinavir may increase risk of hepatotoxicity. May decrease effects of **digoxin, disopyramide, fluconazole, methadone, mexiletine, oral anticoagulants, oral antidiabetics, oral contraceptives, tacrolimus, tricyclic antidepressants, phenytoin, quinidine, tocainide, verapamil. HERBAL: St. John's wort** may decrease concentration. **FOOD: Food** decreases extent of absorption. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, uric acid, AST, ALT.

AVAILABILITY (Rx)

Capsules (Rifadin): 150 mg, 300 mg. **Injection, Powder for Reconstitution:** 600 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 600-mg vial with 10 ml Sterile Water for Injection to provide concentration of 60 mg/ml. • Withdraw desired dose and further dilute with 0.9% NaCl or D_5W to concentration not to exceed 6 mg/ml.

Rate of Administration • For IV infusion only. Avoid IM, subcutaneous administration. • Avoid extravasation (local irritation, inflammation). • Infuse over 30 min to 3 hrs.

Storage • Reconstituted vial is stable for 24 hrs. • Once reconstituted vial is further diluted, it is stable for 4 hrs in D_5W or 24 hrs in 0.9% NaCl.

PO

• Preferably give 1 hr before or 2 hrs following meals with 8 oz of water (may give with food to decrease GI upset; will delay absorption). • For those unable to swallow capsules, contents may be mixed with applesauce, jelly. • Administer at least 1 hr before antacids, esp. those containing aluminum.

IV INCOMPATIBILITY

Diltiazem (Cardizem).

IV COMPATIBILITY

D_5W if infused within 4 hrs (risk of precipitation beyond this time period).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

ADULTS, ELDERLY: 600 mg once or twice daily. **CHILDREN, INFANTS:** 10–20 mg/kg/day. **Maximum:** 600 mg/day.

Tuberculosis

PO, IV: ADULTS, ELDERLY: 10 mg/kg/day. **Maximum:** 600 mg/day. **CHILDREN:** 10–20 mg/kg/day in divided doses q12–24h. **Maximum:** 600 mg/day.

Prevention of Meningococcal Infections

PO, IV: ADULTS, ELDERLY: 600 mg q12h for 2 days. **CHILDREN 1 MO AND OLDER:** 20 mg/kg/day in divided doses q12–24h. **Maximum:** 600 mg/dose. **INFANTS YOUNGER THAN 1 MO:** 10 mg/kg/day in divided doses q12h for 2 days.

Staphylococcal Infections

PO, IV: ADULTS, ELDERLY: 600 mg once daily for 5–10 days. **CHILDREN:** 15 mg/kg/day in divided doses q12h for 5–10 days.

R

***Staphylococcus Aureus* Infections (in Combination with Other Anti-Infectives)**
PO: ADULTS, ELDERLY: 300–600 mg twice daily. **NEONATES:** 5–20 mg/kg/day in divided doses q12h.

***H. Influenzae* Prophylaxis**
PO: ADULTS, ELDERLY: 600 mg/day for 4 days. **CHILDREN 1 MO AND OLDER:** 20 mg/kg/day q24h for 4 days. **Maximum:** 600 mg. **CHILDREN YOUNGER THAN 1 MO:** 10 mg/kg/day q24h for 4 days.

SIDE EFFECTS

Expected: Red-orange or red-brown discoloration of urine, feces, saliva, skin, sputum, sweat, tears. **Occasional (5%–3%):** Hypersensitivity reaction (flushing, pruritus, rash). **Rare (2%–1%):** Diarrhea, dyspepsia, nausea, oral candida (sore mouth, tongue).

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity (risk is increased when rifampin is taken with isoniazid), hepatitis, blood dyscrasias, Stevens-Johnson syndrome, antibiotic-associated colitis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to rifampin, rifamycins. Ensure collection of diagnostic specimens. Evaluate initial serum hepatic/renal function, CBC results.

INTERVENTION/EVALUATION

Assess IV site at least hourly during infusion; restart at another site at the first sign of irritation or inflammation. Monitor hepatic function tests, assess for hepatitis: jaundice, anorexia, nausea, vomiting, fatigue, weakness (hold rifampin, inform physician at once). Report hypersensitivity reactions promptly: any type of skin eruption, pruritus, flu-like syndrome with high dosage. Monitor daily pattern of bowel activity, stool consistency (potential for antibiotic-associated colitis). Monitor CBC results for blood dyscrasias, be alert for infection (fever, sore throat), unusual bruising/bleeding, unusual fatigue/weakness.

PATIENT/FAMILY TEACHING

• Preferably take on empty stomach with 8 oz of water 1 hr before or 2 hrs after meal (with food if GI upset). • Avoid alcohol during treatment. • Do not take **any** other medications without consulting physician, including antacids; must take rifampin at least 1 hr before antacid. • Urine, feces, sputum, sweat, tears may become red-orange; soft contact lenses may be permanently stained. • Notify physician of **any** new symptom, immediately for yellow eyes/skin, fatigue, weakness, nausea/vomiting, sore throat, fever, flu, unusual bruising/bleeding. • If taking oral contraceptives, check with physician (reliability may be affected).

rifaximin

rif-**ax**-i-min
(Xifaxan)
Do not confuse rifaximin with rifampin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-infective. **CLINICAL:** Site-specific antibiotic.

ACTION

Inhibits bacterial RNA synthesis by binding to a subunit of bacterial DNA-dependent RNA polymerase. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Less than 0.4% absorbed after PO administration. Primarily eliminated in feces; minimal excretion in urine. **Half-life:** 5.85 hrs.

USES

Treatment of traveler's diarrhea caused by noninvasive strains of *E. coli*. Re-

duction of risk for recurrence of overt hepatic encephalopathy. **OFF-LABEL:** Treatment of hepatic encephalopathy. Treatment of *C. difficile*–associated diarrhea.

PRECAUTIONS

Contraindications: Hypersensitivity to other rifamycin antibiotics. **Cautions:** Severe hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 200 mg, 550 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Store at room temperature. • Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Traveler's Diarrhea

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 200 mg 3 times daily for 3 days.

Hepatic Encephalopathy

PO: ADULTS, ELDERLY: 550 mg 2 times a day.

SIDE EFFECTS

Occasional (11%–5%): Flatulence, headache, abdominal discomfort, rectal tenesmus, defecation urgency, nausea. **Rare (4%–2%):** Constipation, fever, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction, superinfection occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check baseline hydration status: skin turgor, mucous membranes for dryness, urinary status.

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. Assess for GI disturbances, blood in stool.

PATIENT/FAMILY TEACHING

• Notify physician if diarrhea worsens or if blood occurs in stool, fever develops within 48 hrs.

rilpivirine

ril-pi-**vir**-een
(Edurant)
Do not confuse rilpivirine with delavirdine, etravirine, or nevirapine.

FIXED-COMBINATION(S)

Complera: rilpivirine/emtricitabine (an antiretroviral)/tenofovir (an antiretroviral): 25 mg/200 mg/300 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Non-nucleoside reverse transcriptase inhibitor. **CLINICAL:** Antiretroviral (see p. 116C).

ACTION

Inhibits HIV-1 replication by noncompetitive inhibition of HIV-1 reverse transcriptase (RT). **Therapeutic Effect:** Interferes with HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Readily absorbed after PO administration. Peak concentration: 4–5 hrs. Protein binding: 99.7%. Extensively metabolized in liver. Excreted primarily in feces. **Half-life:** 50 hrs.

USES

Used in combination with at least two other antiretroviral agents for treatment of HIV-1 infection.

PRECAUTIONS

Contraindications: Medications where significant decreases in concentration occurs (e.g., carbamazepine, proton pump inhibitors, rifampin). **Cautions:** Severe depressive disorders, medications that increase risk of prolongation of QT interval (torsades de pointes).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. HIV-infected mothers should not breast-feed infants due to risk of postnatal HIV transmission. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Caution due to higher risk of impaired renal/hepatic function.

INTERACTIONS

DRUG: **CYP3A4 inducers (e.g., carbamazepine, oxcarbazepine, phenobarbital, phenytoin, proton pump inhibitors, rifabutin, rifampin, rifapentine)** may significantly decrease effectiveness. **Antacids, H_2-receptor antagonists** may decrease plasma concentration. **CYP3A4 inhibitors (e.g., azole antifungal agents, macrolide antibiotics, protease inhibitors)** may increase plasma concentration. **HERBAL:** **St. John's wort** may decrease concentration/effects. **FOOD:** **Grapefruit, grapefruit juice** may increase potential for torsades de pointes. **LAB VALUES:** May increase serum creatinine, AST, ALT, bilirubin, cholesterol, triglycerides.

AVAILABILITY (Rx)

Tablets: 25 mg.

ADMINISTRATION/HANDLING

PO

• Give with a meal. Administer antacids 2 hrs before or 4 hrs after rilpivirine; H_2-receptor antagonist 12 hrs before or 4 hrs after rilpivirine.

INDICATIONS/ROUTES/DOSAGE

HIV Infection (in Combination with Other Antiretrovirals)

PO: ADULTS: 25 mg once daily with a meal.

SIDE EFFECTS

Occasional (3%): Headache, insomnia, rash. **Rare (1%):** Nausea, vomiting, abdominal pain, fatigue, dizziness, abnormal dreams.

ADVERSE EFFECTS/ TOXIC REACTIONS

Psychiatric disorders including depression, dysphoria, altered mood, suicidal ideation reported in 3% of pts. May prolong QT interval. May develop redistribution/accumulation of body fat (lipodystrophy) or immune reconstitution syndrome.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, CMP, hepatic panel, lipid panel, CD4 count, viral load. Receive full medication history including herbal products. Question for history of prolonged QT interval, torsade de pointes, psychiatric disorder.

INTERVENTION/EVALUATION

Closely monitor for evidence of rash. Monitor lab tests, renal/hepatic function.

PATIENT/FAMILY TEACHING

• Offer emotional support. • Take with food (optimizes absorption). • Report any signs of depression, thoughts of suicide, decreased urine output, abdominal pain, yellowing of skin, darkened urine, clay-colored stools, chest tightness, diffi-

culty breathing, palpitations. • Report any newly prescribed medications. • Rilpivirine does not cure HIV infection nor reduce risk of transmission to others. • Continue to practice safe sex with barrier methods or abstinence.

rimantadine

rye-**man**-ta-deen
(Flumadine)
Do not confuse Flumadine with fludarabine, flunisolide, or flutamide, or rimantadine with ranitidine or amantadine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Adamantane antiviral. **CLINICAL:** Antiviral agent.

ACTION

Exerts inhibitory effect early in viral replication cycle. May inhibit uncoating of virus. **Therapeutic Effect:** Prevents replication of influenza A virus.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 40%. Metabolized in liver. Excreted in urine. **Half-life:** 19–36 hrs.

USES

Adults: Prophylaxis, treatment of illness due to influenza A virus. **Children:** Prophylaxis against influenza A virus.

PRECAUTIONS

Contraindications: Hypersensitivity to amantadine. **Cautions:** Hepatic disease, seizures, history of recurrent eczematoid dermatitis, uncontrolled psychosis, renal impairment, concomitant use of CNS stimulant medications, epilepsy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in infants. **Elderly:** May be more susceptible to CNS side effects.

INTERACTIONS

DRUG: Acetaminophen, aspirin may decrease concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 100 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Treatment of Influenza A Virus

PO: ADULTS: 100 mg twice a day for 7 days. **ELDERLY, DEBILITATED PTS, PTS WITH SEVERE HEPATIC/RENAL IMPAIRMENT:** 100 mg once a day for 7 days.

Prevention of Influenza A Virus

PO: ADULTS, CHILDREN 10 YRS AND OLDER AND GREATER THAN 40 KG: 100 mg twice a day for at least 10 days after known exposure (usually for 6–8 wks). **CHILDREN 10 YRS AND OLDER AND LESS THAN 40 KG:** 5 mg/kg/day in 2 divided doses. **CHILDREN YOUNGER THAN 10 YRS:** 5 mg/kg/day in 1 or 2 doses per day. **Maximum:** 150 mg. **ELDERLY, DEBILITATED PTS, PTS WITH SEVERE HEPATIC/RENAL IMPAIRMENT:** (creatinine clearance less than 30 ml/min): 100 mg once a day.

SIDE EFFECTS

Occasional (3%–2%): Insomnia, nausea, nervousness, impaired concentration, dizziness. **Rare (Less Than 2%):** Vomiting, anorexia, dry mouth, abdominal pain, asthenia (loss of strength, energy), fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Assess for anxiety, nervousness; evaluate sleep pattern for insomnia. Provide assistance if dizziness occurs.

PATIENT/FAMILY TEACHING

• Avoid contact with those who are at high risk for influenza A (rimantadine-resistant virus may be shed during therapy). • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not take aspirin, acetaminophen, compounds containing these drugs. May cause dry mouth.

risedronate

TOP 200

rize-droe-nate
(Actonel, Atelvia, Apo-Risedronate, Novo-Risedronate)
Do not confuse Actonel with Actos, or risedronate with alendronate.

FIXED-COMBINATION(S)

Actonel with Calcium: risedronate/calcium: 35 mg/6 × 500 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Bisphosphonate. **CLINICAL:** Calcium regulator (see p. 144C).

R

ACTION

Binds to bone hydroxyapatite, inhibits osteoclasts. **Therapeutic Effect:** Reduces bone turnover (number of sites at which bone is remodeled), bone resorption.

PHARMACOKINETICS

Rapidly absorbed following PO administration. Bioavailability decreased when administered with food. Protein binding: 24%. Not metabolized. Excreted unchanged in urine, feces. Not removed by hemodialysis. **Half-life:** 1.5 hrs (initial); 480 hrs (terminal).

USES

Actonel: Treatment of Paget's disease of bone (osteitis deformans). Treatment/prophylaxis for postmenopausal, glucocorticoid-induced osteoporosis. Used to increase bone mass in men with osteoporosis. **Atelvia:** Treatment of osteoporosis in postmenopausal women.

PRECAUTIONS

Contraindications: Hypersensitivity to other bisphosphonates, including etidronate, tiludronate, alendronate; hypocalcemia; inability to stand or sit upright for at least 30 min; abnormalities of esophagus that delay esophageal emptying. **Cautions:** GI diseases (duodenitis, dysphagia, esophagitis, gastritis, ulcers [drug may exacerbate these conditions]), severe renal impairment (creatinine clearance less than 30 ml/min). **Pregnancy Category C.**

INTERACTIONS

DRUG: **Antacids containing aluminum, calcium, magnesium; vitamin D** may decrease absorption (avoid administration within 30 min of **risedronate**). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets (Actonel): 5 mg, 30 mg, 35 mg, 150 mg. **(Atelvia):** 35 mg.

ADMINISTRATION/HANDLING

PO

Actonel: • Administer 30–60 min before any food, drink, other oral medications to avoid interference with absorption. • Give on empty stomach with full glass of plain water (not mineral water). • Pt must avoid lying down for 30 min after swallowing tablet (assists with delivery to stomach, reduces risk of esophageal irritation). • Swallow whole; do not crush, chew tablet. **Atelvia:** • Take in morning immediately following breakfast with at least 4 oz wa-

ter. • Remain upright for 30 min after taking dose.

INDICATIONS/ROUTES/DOSAGE

Paget's Disease

PO: ADULTS, ELDERLY: 30 mg/day for 2 mos. Retreatment may occur after 2-mo post-treatment observation period.

Prophylaxis, Treatment of Postmenopausal Osteoporosis

PO *(Actonel)*: ADULTS, ELDERLY: 5 mg/day or 35 mg once weekly or 150 mg once per mo.

Treatment of Postmenopausal Osteoporosis

PO: ADULTS, ELDERLY (ATELVIA): 35 mg once weekly.

Treatment of Male Osteoporosis

PO: ADULTS, ELDERLY: 35 mg once weekly.

Glucocorticoid-Induced Osteoporosis

PO: ADULTS, ELDERLY: 5 mg/day.

Dosage in Renal Impairment

Not recommended with creatinine clearance less than 30 ml/min.

SIDE EFFECTS

Frequent (30%): Arthralgia. **Occasional (12%–8%):** Rash, diarrhea, constipation, nausea, abdominal pain, dyspepsia, flu-like symptoms, peripheral edema. **Rare (5%–3%):** Bone pain, sinusitis, asthenia (loss of strength, energy), dry eye, tinnitus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces hypocalcemia, hypophosphatemia, significant GI disturbances, osteonecrosis of jaw.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess symptoms of Paget's disease (bone pain, bone deformities). Hypocalcemia, vitamin D deficiency must be corrected before therapy. Obtain lab baselines, esp. serum electrolytes, renal function.

INTERVENTION/EVALUATION

Check serum electrolytes (esp. calcium, phosphorus, alkaline phosphatase levels). Monitor I&O, BUN, creatinine in pts with renal impairment.

PATIENT/FAMILY TEACHING

• Expected benefits occur only when medication is taken with full glass (6–8 oz) of plain water, first thing in the morning and at least 30 min before first food, beverage, medication of the day. Any other beverage (mineral water, orange juice, coffee) significantly reduces absorption of medication. • Do not lie down for at least 30 min after taking medication (potentiates delivery to stomach, reduces risk of esophageal irritation). • Report swallowing difficulties, pain when swallowing, chest pain, new/worsening heartburn. • Consider weight-bearing exercises, modify behavioral factors (cigarette smoking, alcohol consumption). • Report jaw pain, incapacitating bone, joint, or muscle pain.

risperidone

TOP 200

ris-**per**-i-done

(Apo-Risperidone, Novo-Risperidone, Risperdal, Risperdal Consta, Risperdal M-Tabs)

BLACK BOX ALERT Increased risk of mortality in elderly pts with dementia-related psychosis, mainly due to pneumonia, heart failure.

Do not confuse Risperdal with lisinopril or Restoril, or risperidone with ropinirole.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzisoxazole derivative. **CLINICAL:** Antipsychotic (see p. 66C).

R

ACTION

May antagonize dopamine, serotonin receptors. **Therapeutic Effect:** Suppresses psychotic behavior.

PHARMACOKINETICS

Well absorbed from GI tract; unaffected by food. Protein binding: 90%. Extensively metabolized in liver to active metabolite. Primarily excreted in urine. **Half-life:** 3–20 hrs; metabolite, 21–30 hrs (increased in elderly). **Injection:** 3–6 days.

USES

Management of manifestations of psychotic disorders (e.g., schizophrenia), irritability associated with autistic disease in children. Treatment of acute mania associated with bipolar disorder. Short-term treatment of bipolar disorder in pediatric and adolescent pts. **OFF-LABEL:** Behavioral symptoms associated with dementia, Tourette's syndrome. Psychosis/agitation associated with Alzheimer's dementia. Post-traumatic stress syndrome.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, seizure disorders, cardiac disease, recent MI, breast cancer or other prolactin-dependent tumors, suicidal pts, those at risk for aspiration pneumonia. May increase risk of stroke in pts with dementia. May increase risk of hyperglycemia, cerebrovascular disease, dehydration, hypovolemia.

R

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** More susceptible to postural hypotension. Age-related renal/hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depression. **Carbamazepine** may decrease concentration. May decrease effects of **dopamine agonists, levodopa. Paroxetine, fluoxetine** may increase concentration, risk of extrapyramidal symptoms (EPS). **Antihypertensives, hypotension-producing medications** may increase hypotensive effect. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum prolactin. May cause EKG changes.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Risperdal Consta): 12.5 mg, 25 mg, 37.5 mg, 50 mg. **Oral Solution (Risperdal):** 1 mg/ml. **Tablets (Risperdal):** 0.25 mg, 0.5 mg, 1 mg, 2 mg, 3 mg, 4 mg.

Tablets (Orally-Disintegrating [Risperdal M-Tabs]): 0.5 mg, 1 mg, 2 mg, 3 mg, 4 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not administer via IV route.

IM

Reconstitution • Use only diluent and needle supplied in dose pack. • Prepare suspension according to manufacturer's directions. • May be given up to 6 hrs after reconstitution, but immediate administration is recommended. • If 2 min pass between reconstitution and injection, shake upright vial vigorously back and forth to resuspend solution.

Rate of Administration • Inject IM into upper outer quadrant of gluteus maximus or into deltoid muscle in upper arm.

Storage • Store at room temperature.

PO

• Give without regard to food. • May mix oral solution with water, coffee, orange juice, low-fat milk. Do not mix with cola, tea.

Orally-Disintegrating Tablet

• Remove from blister pak immediately before administration. • Using dry hands, place immediately on tongue. • Tablet

dissolves in seconds. • May swallow with or without liquid. • Do not split or chew.

INDICATIONS/ROUTES/DOSAGE

Psychotic Disorders

PO: ADULTS: Initially, 1 mg twice a day. May increase gradually (1–2 mg/day at intervals of at least 24 hrs) to target dose of 6 mg/day. Range: 4–8 mg/day. Maintenance: Target dose of 4 mg once a day (range: 2–8 mg/day). **ELDERLY:** Initially, 0.5 mg twice a day. May increase slowly at increments of no more than 0.5 mg twice a day. Range: 2–6 mg/day. **CHILDREN 13–17 YRS:** Initially, 0.5 mg/day (as single daily dose). May increase by 0.5–1 mg/day at intervals of greater than 24 hrs to recommended dose of 3 mg/day.
IM: ADULTS, ELDERLY: 25 mg q2wks. **Maximum:** 50 mg q2wks. Dosage adjustments should not be made more frequently than every 4 wks.

Mania

PO: ADULTS, ELDERLY: Initially, 2–3 mg as a single daily dose. May increase by 1 mg/day at 24-hr intervals. Range: 1–6 mg/day. **IM: ADULTS, ELDERLY:** 25 mg q2wks. **Maximum:** 50 mg q2wks. Dosage adjustments should not be made more frequently than every 4 wks.

Irritability with Autistic Disease

PO: CHILDREN 5 YRS AND OLDER: Initially, 0.25 mg/day (0.5 mg in children weighing 20 kg or greater). May increase to 0.5 mg/day (1 mg/day in children weighing 20 kg or greater) after minimum of 4 days. Dose should be maintained for at least 14 days, after which dose may be increased by 0.25 mg/day (0.5 mg/day in children weighing 20 kg or more). **Maximum:** 1 mg (2.5 mg in children weighing 20 kg or more).

Bipolar Disorder

PO: CHILDREN 10–17 YRS: Initially, 0.5 mg/day. May increase by 0.5 mg/day at intervals of greater than 24 hrs to recommended dose of 2.5 mg/day.

Dosage in Renal/Hepatic Impairment

Initial dosage for adults, elderly pts is 0.25–0.5 mg twice a day. Dosage is titrated slowly to desired effect.

SIDE EFFECTS

Frequent (26%–13%): Agitation, anxiety, insomnia, headache, constipation. **Occasional (10%–4%):** Dyspepsia, rhinitis, drowsiness, dizziness, nausea, vomiting, rash, abdominal pain, dry skin, tachycardia. **Rare (3%–2%):** Visual disturbances, fever, back pain, pharyngitis, cough, arthralgia, angina, aggressive behavior, orthostatic hypotension, breast swelling.

ADVERSE EFFECTS/ TOXIC REACTIONS

Rare reactions include tardive dyskinesia (characterized by tongue protrusion, puffing of the cheeks, chewing or puckering of mouth), neuroleptic malignant syndrome (marked by hyperpyrexia, muscle rigidity, altered mental status, irregular pulse or B/P, tachycardia, diaphoresis, cardiac arrhythmias, rhabdomyolysis, acute renal failure). Hyperglycemia, in some cases extreme and associated with ketoacidosis, hyperosmolar coma, death, has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Serum renal/hepatic function tests should be performed before therapy. Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content, baseline weight. Obtain fasting serum glucose value.

INTERVENTION/EVALUATION

Monitor B/P, heart rate, weight, hepatic function tests, EKG. Monitor for fine tongue movement (may be first sign of tardive dyskinesia, which may be irreversible). Monitor for suicidal ideation. Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression). Monitor for potential neuroleptic malignant syndrome: fever,

R

muscle rigidity, irregular B/P or pulse, altered mental status. Monitor fasting serum glucose periodically during therapy.

PATIENT/FAMILY TEACHING

• Avoid tasks that may require alertness, motor skills until response to drug is established (may cause dizziness/drowsiness). • Avoid alcohol. • Use caution when changing position from lying or sitting to standing. • Inform physician of trembling in fingers, altered gait, unusual muscular/skeletal movements, palpitations, severe dizziness/fainting, swelling/pain in breasts, visual changes, rash, difficulty breathing.

ritonavir

TOP 200

rit-**oh**-na-veer
(Norvir, Norvir SEC)

BLACK BOX ALERT Concurrent use with other medications (nonsedating antihistamines, sedative hypnotics, antiarrhythmics, ergot alkaloids) may result in potentially serious, life-threatening events.

Do not confuse Norvir with Norvasc, or ritonavir with Retrovir.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antiviral (see pp. 69C, 117C).

R

ACTION

Inhibits HIV-1 and HIV-2 proteases, rendering these enzymes incapable of processing polypeptide precursors leading to production of noninfectious, immature HIV particles. **Therapeutic Effect:** Slows HIV replication, reducing progression of HIV infection.

PHARMACOKINETICS

Well absorbed after PO administration (absorption increased with food). Protein binding: 98%–99%. Extensively metabolized in liver to active metabolite. Primarily eliminated in feces. Unknown if removed by hemodialysis. **Half-life:** 2.7–5 hrs.

USES

Treatment of HIV infection in combination with other antiretroviral agents. May be used as "booster" for other protease inhibitors.

PRECAUTIONS

Contraindications: Due to potential serious and/or life-threatening drug interactions (e.g., arrhythmias, hematologic abnormalities, seizures), the following medications should not be given concomitantly with ritonavir: alfuzosin, amiodarone, bepridil, dihydroergotamine, ergotamine, lovastatin, midazolam, propafenone, quinidine, saquinavir, sildenafil (when used for pulmonary arterial hypertension), simvastatin, St. John's wort, triazolam, voriconazole. Concurrent use of alprazolam, clorazepate, diazepam, estazolam, flurazepam, midazolam, triazolam, zolpidem may produce extreme sedation and respiratory depression. **Cautions:** Hepatic impairment, cardiomyopathy, ischemic heart disease, preexisting cardiac conduction abnormalities, concurrent use of CYP3A4 inhibitors and inducers.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breast-feeding not recommended (possibility of HIV transmission). **Pregnancy Category B. Children:** No age-related precautions noted in those older than 2 yrs. **Elderly:** None known.

INTERACTIONS

DRUG: See contraindications. May increase concentration of **clarithromycin, fluticasone, ketoconazole, protease inhibitors, sildenafil, statins.** May decrease concentration/effects of **methadone, phenytoin, warfarin. Rifampin** may decrease concentration/effects. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum creatine kinase (CK), GGT, triglycerides, uric acid, AST, ALT, glucose. May decrease Hgb, Hct, WBC, neutrophils.

AVAILABILITY (Rx)

Capsules: 100 mg. **Oral Solution:** 80 mg/ml.

Tablets: 100 mg.

ADMINISTRATION/HANDLING

PO

• Store capsules in refrigerator. Store tablets, oral solution at room temperature. • Protect from light. • Give without regard to meals (preferably give with food). • Swallow tablets whole; do not chew, break, crush. • May improve taste of oral solution by mixing with chocolate milk, Ensure, Advera, Boost within 1 hr of dosing.

INDICATIONS/ROUTES/DOSAGE

Note: Not recommended as primary protease inhibitor in any regimen.

Treatment of HIV Infection

PO: ADULTS, CHILDREN 12 YRS AND OLDER: 600 mg twice daily. If nausea occurs at this dosage, give 300 mg twice daily for 1 day, then increase by 100 mg twice daily every 2–3 days to recommended dose of 600 mg twice daily. **CHILDREN 1 MO–11 YRS:** Initially, 250 mg/m^2/dose twice daily. Increase by 50 mg/m^2/dose q2–3days up to 350–400 mg/m^2/dose. **Maximum:** 600 mg/dose twice daily.

Booster Therapy

PO: ADULTS, ELDERLY: 100–400 mg/day usually as 100–200 mg 1–2 times/day.

SIDE EFFECTS

Frequent: GI disturbances (abdominal pain, anorexia, diarrhea, nausea, vomiting), circumoral and peripheral paresthesia, altered taste, headache, dizziness, fatigue, asthenia (loss of strength, energy). **Occasional:** Allergic reaction, flu-like symptoms, hypotension. **Rare:** Diabetes mellitus, hyperglycemia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatitis, pancreatitis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pts beginning combination therapy with ritonavir and nucleosides may promote GI tolerance by beginning ritonavir alone and subsequently adding nucleosides before completing 2 wks of ritonavir monotherapy. Obtain baseline laboratory testing, esp. serum hepatic function tests, triglycerides before beginning ritonavir therapy and at periodic intervals during therapy. Offer emotional support to pt/family.

INTERVENTION/EVALUATION

Closely monitor for evidence of GI disturbances, neurologic abnormalities (particularly paresthesia). Monitor serum hepatic function tests, serum glucose, CD4 cell count, plasma levels of HIV RNA.

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • Ritonavir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pts may continue to acquire illnesses associated with advanced HIV infection. • If possible, take ritonavir with food. • Taste of solution may be improved when mixed with chocolate milk, Ensure, Advera, Boost. • Inform physician of increased thirst, frequent urination, nausea, vomiting, abdominal pain.

R

rituximab

TOP 200 HIGH ALERT

ri-**tux**-i-mab
(Rituxan)

BLACK BOX ALERT Profound, occasionally fatal infusion-related reactions reported during first 30–120 min of first infusion. Tumor lysis syndrome leading to acute renal failure may occur 12–24 hrs following first dose. Severe, sometimes fatal mucocutaneous reactions resulting in multifocal leukoencephalopathy (PML) and death reported.

Do not confuse Rituxan with Remicade, or rituximab with bevacizumab or infliximab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic (see p. 87C).

ACTION

Binds to CD20, the antigen found on surface of B lymphocytes, B-cell non-Hodgkin's lymphoma (NHL). **Therapeutic Effect:** Produces cytotoxicity, reduces tumor size.

PHARMACOKINETICS

Rapidly depletes B cells. **Half-life:** 59.8 hrs after first infusion, 174 hrs after fourth infusion.

USES

Treatment of relapsed or refractory low-grade or follicular B-cell non-Hodgkin's lymphoma (NHL). First-line treatment for diffuse large B-cell, CD20-positive, NHL. First-line treatment of previously untreated pts with follicular NHL in combination with cyclophosphamide, vincristine, and prednisolone (CVP therapy). Treatment of low-grade NHL in pts with stable disease or who achieve partial or complete response following CVP therapy, chronic lymphocytic leukemia (CLL), maintenance treatment for advanced follicular lymphoma in those responding to initial treatment of rituximab plus chemotherapy, moderate to severe rheumatoid arthritis (RA). In combination with glucocorticoids, treatment of Wegener's granulomatosis and microscopic polyangitis. **OFF-LABEL:** Treatment of autoimmune hemolytic anemia, chronic immune thrombocytopenic purpura (ITP), systemic autoimmune disease (other than rheumatoid arthritis), Burkitt's lymphoma, CNS lymphoma, Hodgkin's lymphoma.

PRECAUTIONS

Contraindications: Hypersensitivity to murine proteins. **Cautions:** Those with history of cardiac disease or pulmonary conditions, renal impairment. Pts at risk for developing tumor lysis syndrome.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential to cause fetal B-cell depletion. Unknown if distributed in breast milk. Those with childbearing potential should use contraceptive methods during treatment and up to 12 mos following therapy. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** **Echinacea** may decrease therapeutic effect. **Garlic, ginger, ginseng** may increase hypoglycemic effect. **FOOD:** None known. **LAB VALUES:** May increase creatinine, LDH. May decrease Hgb, Hct, neutrophils, platelets, B-cell counts, immunoglobulin concentrations.

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Do not give by IV push or bolus.

Reconstitution • Dilute with 0.9% NaCl or D_5W to provide final concentration of 1–4 mg/ml into infusion bag.

Rate of Administration • Infuse at rate of 50 mg/hr. If no hypersensitivity or infusion-related reaction, may increase infusion rate in 50 mg/hr increments q30min to maximum 400 mg/hr. • Subsequent infusion can be given at 100 mg/hr and increased by 100 mg/hr increments q30min to maximum 400 mg/hr.

Storage • Refrigerate vials. • Diluted solution is stable for 24 hrs if refrigerated or at room temperature.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

Note: Refer to specific protocols.

Non-Hodgkin's Lymphoma (NHL)
IV: ADULTS: 375 mg/m^2 once weekly for 4–8 wks. May administer a second 4-wk course.

Rheumatoid Arthritis
IV: ADULTS: 1,000 mg every 2 wks times 2 doses in combination with methotrexate.

CLL
IV: ADULTS: 375 mg/m^2 in first cycle (on day prior to fludarabine/cyclophosphamide) and 500 mg/m^2 in cycles 2–6, administered every 28 days.

Wegener's Granulomatosis, Microscopic Polyangitis
IV: ADULTS: 375 mg/m^2 once weekly for 4 wks.

SIDE EFFECTS

Frequent: Fever (49%), chills (32%), nausea (18%), asthenia (loss of strength, energy) (16%), headache (14%), angioedema (13%), hypotension (10%), rash/pruritus (10%). **Occasional (less than 10%):** Myalgia, dizziness, weakness, abdominal pain, throat irritation, vomiting, neutropenia, rhinitis, bronchospasm, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction produces hypotension, bronchospasm, angioedema. Arrhythmias may occur, particularly in those with history of preexisting cardiac conditions.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pretreatment with acetaminophen and diphenhydramine before each infusion may prevent infusion-related effects. CBC, platelet count should be obtained at regular intervals during therapy.

INTERVENTION/EVALUATION

Monitor for an infusion-related symptoms complex consisting mainly of fever, chills, rigors that generally occurs within 30 min–2 hrs of beginning first infusion. Slowing infusion resolves symptoms. Monitor renal/hepatic function, CBC, platelet count.

PATIENT/FAMILY TEACHING

- Notify physician if fever, sore throat, abdominal pain, yellowing of eyes/skin, unusual bruising/bleeding occur.

rivaroxaban

rye-va-**rox**-ah-ban
(Xarelto)

BLACK BOX ALERT Epidural/spinal hematomas may occur in pts receiving neuraxial anesthesia or spinal puncture, resulting in long-term or permanent paralysis. Factors increasing risk of epidural/spinal hematoma include indwelling epidural catheters, concomitant drugs such as NSAIDs, platelet inhibitors, other anticoagulants, history of traumatic or repeated spinal or epidural punctures, history of spinal deformity or spinal surgery. Monitor for signs and symptoms of neurologic impairment. Consider benefits and risks before neuraxial intervention in anticoagulated pts or planned thromboprophylaxis.

Do not confuse rivaroxaban with argatroban.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Factor Xa inhibitor. **CLINICAL:** Anticoagulant (see p. 31C).

ACTION

Selectively blocks active site of factor Xa, a key factor in the intrinsic and extrinsic pathway of blood coagulation cascade. Prevents new clot formation, secondary thromboembolic complications. **Therapeutic Effect:** Inhibits blood coagulation.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Peak plasma concentration: 2–4 hrs. Absorption dependent on site of drug release within GI tract. Avoid ad-

ministration into small intestine due to reduced absorption. Protein binding: 92%–95%. Metabolized in liver. Excreted primarily in urine (66%), feces (28%). **Half-life:** 5–9 hrs, 11–13 hrs (elderly).

USES

Prophylaxis of deep vein thrombosis (DVT) in pts undergoing knee or hip replacement surgery. Reduces risk of thromboembolism/stroke in pts with nonvalvular atrial fibrillation.

PRECAUTIONS

Contraindications: Active major bleeding. **Cautions:** Renal/hepatic impairment, those at increased risk of bleeding (e.g., thrombocytopenia).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if excreted in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May be at increased risk for bleeding due to age-related renal impairment.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., ketoconazole, itraconazole, clarithromycin, erythromycin, fluconazole, ritonavir)** may increase concentration, risk of bleeding. **Anticoagulants, antiplatelets, NSAIDs** may increase bleeding risk. **HERBAL:** **St. John's wort** may decrease effect. **FOOD:** **Grapefruit, grapefruit juice** may increase risk of bleeding. **LAB VALUES:** May decrease platelets. May increase serum AST, ALT, bilirubin.

AVAILABILITY (Rx)

Tablets: 10 mg, 15 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

• **DVT prophylaxis:** Give without regard to meals. • **Thromboembolism/stroke prophylaxis:** Give with evening meal.

INDICATIONS/ROUTES/DOSAGE

DVT Prophylaxis, Knee Replacement

PO: ADULTS: 10 mg daily for 12 days. Initiate at least 6–10 hrs after surgery once hemostasis established. **CrCl less than 30 ml/min:** Avoid use.

DVT Prophylaxis, Hip Replacement

PO: ADULTS: 10 mg daily for 35 days. Initiate at least 6–10 hrs after surgery once hemostasis established. **CrCl less than 30 ml/min:** Avoid use.

Nonvalvular Atrial Fibrillation, Stroke Prophylaxis

PO: ADULTS: CrCl greater than 50 ml/min: 20 mg daily. **CrCl 15–50 ml/min:** 15 mg daily. **CrCl less than 15 ml/min:** Avoid use.

SIDE EFFECTS

Rare (3%–1%): Wound secretion/oozing, extremity pain, muscle spasm, syncope, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk of bleeding/hemorrhagic events including retroperitoneal hemorrhage, cerebral hemorrhage, subdural hematoma, epidural/spinal hematoma (esp. with epidural catheters, spinal trauma). Serious reactions including jaundice, cholestasis, cytolytic hepatitis, Stevens-Johnson syndrome, hypersensitivity reaction, anaphylaxis reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, CMP, PT/INR, vital signs, urine pregnancy if applicable. Obtain EKG for pts with a history of atrial fibrillation. Question for history of bleeding disorders, recent surgery, spinal punctures, intracranial hemorrhage, bleeding ulcers, open wounds, anemia, renal/hepatic impairment. Receive full medication history including herbal products.

INTERVENTION/EVALUATION

Monitor CBC, CMP, CrCl, occult urine/stool. Be alert for complaints of abdominal/back pain, headache, confusion, weakness, vision change (may indicate hemorrhage). Question for increased menstrual bleeding/discharge. Assess peripheral pulses; skin for ecchymosis, petechiae. Check for excessive bleeding from minor cuts, scratches. Assess urine output for hematuria. Immediately report suspected pregnancy.

PATIENT/FAMILY TEACHING

• Do not take/discontinue any medication except on advice of physician. • Avoid alcohol, aspirin, NSAIDs. • Consult physician before surgery, dental work. • Use electric razor, soft toothbrush to prevent bleeding. • Report any unusual bleeding/bruising, spinal/epidural hematomas (e.g., tingling, numbness, muscular weakness). • Inform physician if pregnant or planning to become pregnant.

rivastigmine

TOP 200

riv-a-**stig**-meen
(Exelon, Novo-Rivastigmine)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cholinesterase inhibitor. **CLINICAL:** Anti-Alzheimer's dementia agent.

ACTION

Inhibits the enzyme acetylcholinesterase, increasing acetylcholine concentration at cholinergic synapses, enhancing cholinergic function. **Therapeutic Effect:** Slows progression of symptoms of Alzheimer's disease.

PHARMACOKINETICS

Rapidly, completely absorbed. Protein binding: 40%. Widely distributed throughout body. Rapidly, extensively metabolized. Primarily excreted in urine. **Half-life:** 1.5 hrs.

USES

Treatment of mild to moderate dementia of the Alzheimer's type. Treatment of dementia associated with Parkinson's disease. **OFF-LABEL:** Severe dementia associated with Alzheimer's disease, Lewy body dementia.

PRECAUTIONS

Contraindications: Hypersensitivity to other carbamate derivatives. **Cautions:** Peptic ulcer disease, concurrent use of NSAIDs, sick sinus syndrome, bradycardia or supraventricular conduction defects, urinary obstruction, seizure disorders, asthma, COPD, pts with body weight less than 50 kg.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Not indicated for use in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May interfere with **anticholinergics** effects. May have additive effect with **bethanechol. NSAIDs** may increase GI effects, irritation. **HERBAL: Ginkgo biloba** may increase cholinergic effects. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Capsules: 1.5 mg, 3 mg, 4.5 mg, 6 mg. **Oral Solution:** 2 mg/ml. **Transdermal Patch:** 4.6 mg/24 hrs, 9.5 mg/24 hrs.

ADMINISTRATION/HANDLING

PO

• Give with food in divided doses morning and evening. • Swallow capsule whole.

Oral Solution

• Using oral syringe provided by manufacturer, withdraw prescribed amount from container. • May be swallowed directly from syringe or mixed in small glass of water, cold fruit juice, soda (use within 4 hrs of mixing).

R

Transdermal Patch

• May apply the day following the last oral dose. • Apply to upper or lower back, upper arm, or chest. • Avoid reapplication to same spot of skin for 14 days. • Do not apply to red, irritated, or broken skin. • Avoid eye contact. • After removal, fold patch to press adhesive together and discard.

INDICATIONS/ROUTES/DOSAGE

Alzheimer's Disease

PO: ADULTS, ELDERLY: Initially, 1.5 mg twice daily. May increase at intervals of at least 2 wks to 3 mg twice daily, then 4.5 mg twice daily, and finally 6 mg twice daily. **Maximum:** 6 mg twice daily.

Parkinson's Disease

PO: ADULTS, ELDERLY: Initially, 1.5 mg twice daily. May increase at intervals of at least 4 wks to 3 mg twice daily, then 4.5 mg twice daily, and finally 6 mg twice daily. **Maximum:** 6 mg twice daily.

Transdermal: ADULTS, ELDERLY: Initially, 4.6 mg/24 hrs. May increase after 4 wks to 9.5 mg/24 hrs. Pts currently on oral rivastigmine, use 4.6 mg/24 hrs for those taking less than 6 mg/day and 9.5 mg/24 hrs for those taking 6–12 mg/day. Maintenance: 9.5 mg/24 hrs.

SIDE EFFECTS

Frequent (47%–17%): Nausea, vomiting, dizziness, diarrhea, headache, anorexia. **Occasional (13%–6%):** Abdominal pain, insomnia, dyspepsia (heartburn, indigestion, epigastric pain), confusion, UTI, depression. **Rare (5%–3%):** Anxiety, drowsiness, constipation, malaise, hallucinations, tremor, flatulence, rhinitis, hypertension, flu-like symptoms, weight loss, syncope.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose can produce cholinergic crisis, characterized by severe nausea/vomiting, increased salivation, diaphoresis, bradycardia, hypotension, respiratory depression, seizures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline vital signs. Assess history for peptic ulcer, urinary obstruction, asthma, COPD. Assess cognitive, behavioral, functional deficits.

INTERVENTION/EVALUATION

Monitor for cholinergic reaction: GI discomfort/cramping, feeling of facial warmth, excessive salivation, diaphoresis, lacrimation, pallor, urinary urgency, dizziness. Monitor for nausea, diarrhea, headache, insomnia.

PATIENT/ FAMILY TEACHING

• Take with meals (at breakfast, dinner). • Swallow capsule whole. Do not chew, break, crush capsules. • Report nausea, vomiting, diarrhea, diaphoresis, increased salivary secretions, severe abdominal pain, dizziness.

rizatriptan

TOP 200

rye-zah-**trip**-tan
(Maxalt, Maxalt-MLT, Maxalt RPD)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor agonist. **CLINICAL:** Antimigraine (see p. 63C).

ACTION

Binds selectively to vascular receptors, producing vasoconstrictive effect on cranial blood vessels. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 14%. Crosses blood-brain barrier. Metabolized by liver to inactive metabolite. Eliminated primarily in urine and, to a lesser extent, in feces. **Half-life:** 2–3 hrs.

USES

Treatment of acute migraine headache with or without aura.

PRECAUTIONS

Contraindications: Basilar or hemiplegic migraine, ischemic heart disease (including angina pectoris, history of MI, silent ischemia, and Prinzmetal's angina), uncontrolled hypertension, use within 24 hrs of ergotamine-containing preparations or another serotonin receptor agonist, MAOI use within 14 days. **Cautions:** Mild to moderate renal/hepatic impairment, dialysis pts, pt profile suggesting cardiovascular risks.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Ergotamine-containing medications** may produce vasospastic reaction. **Fluoxetine, fluvoxamine, paroxetine, sertraline** may produce hyperreflexia, incoordination, weakness. **MAOIs, propranolol** may dramatically increase concentration (avoid concurrent use). **HERBAL:** None significant. **FOOD:** **All foods** delay peak drug concentration by 1 hr. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets (Maxalt): 5 mg, 10 mg. **Tablets (Orally-Disintegrating [Maxalt-MLT]):** 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Orally-disintegrating tablet is packaged in individual aluminum pouch. • Open packet with dry hands. • Place tablet onto tongue, allow to dissolve, swallow with saliva. Administration with water is not necessary.

INDICATIONS/ROUTES/DOSAGE

Acute Migraine Headache

PO: ADULTS OLDER THAN 18 YRS, ELDERLY: 5–10 mg. If significant improvement is not attained, dose may be repeated after 2 hrs. **Maximum:** 30 mg/24 hrs. (Use 5 mg/dose in pts taking propranolol with maximum of 15 mg/24 hrs.)

SIDE EFFECTS

Frequent (9%–7%): Dizziness, drowsiness, paresthesia, fatigue. **Occasional (6%–3%):** Nausea, chest pressure, dry mouth. **Rare (2%):** Headache; neck, throat, jaw pressure; photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiac reactions (ischemia, coronary artery vasospasm, MI), noncardiac vasospasm-related reactions (hemorrhage, CVA) occur rarely, particularly in pts with hypertension, diabetes, strong family history of coronary artery disease; obesity; smokers; males older than 40 yrs; postmenopausal women.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of peripheral vascular disease, renal/hepatic impairment. Question pt regarding onset, location, duration of migraine, possible precipitating symptoms.

INTERVENTION/EVALUATION

Monitor for evidence of dizziness. Assess for photophobia, phonophobia (sound sensitivity, nausea, vomiting), relief of migraine headache.

PATIENT/FAMILY TEACHING

• Take single dose as soon as symptoms of an actual migraine headache appear. • Medication is intended to relieve migraine, not to prevent or reduce number of attacks. • Avoid tasks that require alertness, motor skills until response to drug is established. • Contact physician immediately if palpitations, pain/tight-

R

ness in chest/throat, pain/weakness of extremities occurs. • Do not remove orally-disintegrating tablet from blister pack until just before dosing. • Use protective measures (sunscreen, protective clothing) against exposure to UV light, sunlight.

roflumilast

roe-**floo**-mi-last
(Daliresp, Daxas)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphodiesterase 4 (PDE4) inhibitor. **CLINICAL:** Anti-COPD agent.

ACTION

Selectively inhibits PDE4, a major enzyme found in inflammatory cells and involved in pathogenesis of COPD. **Therapeutic Effect:** Slows progression of COPD.

PHARMACOKINETICS

Readily absorbed after PO administration. Maximum plasma concentration: 0.5–2 hrs. Protein binding: 99%. Metabolized in liver. Primarily excreted in urine (70%). **Half-life:** 17 hrs.

USES

ALERT Not indicated as bronchodilator or relief of acute bronchospasm. Treatment to reduce risk of COPD exacerbations in pts with severe COPD-associated chronic bronchitis with history of exacerbations.

PRECAUTIONS

Contraindications: Moderate to severe hepatic impairment. **Cautions:** Mild hepatic impairment, depression, suicidal ideation.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Not recommended for nursing mothers. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifabutin, rifampin) may decrease efficacy. **CYP3A4 inhibitors (e.g., erythromycin, ketoconazole)** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 500 mcg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Prevention of COPD Exacerbations

PO: ADULTS, ELDERLY: 500 mcg once daily.

SIDE EFFECTS

Occasional (10%–4%): Diarrhea, nausea, headache. **Rare (3%–2%):** Back pain, flu-like symptoms, insomnia, dizziness, decreased appetite, vomiting, abdominal pain, rhinitis, muscle spasm, tremor, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Psychiatric events including worsening depression, suicidal ideation, anxiety reported in less than 2%. Moderate to severe weight loss may result in discontinuation.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess vital signs, O_2 saturation, lungs sounds, body weight. Question for history of depression, anxiety, suicidal ideation, dehydration, COPD exacerbations, hepatic impairment. Assess plans

of breast-feeding. Obtain full medication history.

INTERVENTION/EVALUATION

Monitor vital signs, O_2 saturation, psychiatric changes, body weight. Assess for dehydration if diarrhea occurs (skin turgor, mucous membranes, decreased urine output, dizziness, dry mouth).

PATIENT/FAMILY TEACHING

• Report changes in mood or behavior, thoughts of suicide, insomnia, anxiety. • Report any weight loss. • Increase fluid intake if dehydration suspected. • Worsening cough, fever, difficulty breathing may indicate exacerbation/infection. • Immediately notify physician if pregnancy is suspected.

romidepsin

roe-mi-**dep**-sin
(Istodax)
Do not confuse romidepsin with romiplostim.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Histone deacetylase inhibitor. **CLINICAL:** Antineoplastic.

ACTION

Inhibits activity of specific enzymes that catalyze removal of acetyl groups of proteins, causing accumulation of acetylated histones. **Therapeutic Effect:** Induces cell cycle arrest, cell death.

PHARMACOKINETICS

Extensively metabolized. Protein binding: 92%–94%. **Half-life:** 3 hrs.

USES

Treatment of cutaneous T-cell lymphoma in pts who have received at least 1 prior systemic therapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Moderate or severe hepatic impairment, end-stage renal impairment, preexisting cardiac disease, those with QT interval prolongation, concomitant administration of medications prolonging QT interval.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Coumarin-derivative anticoagulants prolong PT, INR. Strong **CYP3A4 inhibitors (atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, voriconazole)** may increase concentration. Potent **CYP3A4 inducers (carbamazepine, dexamethasone, phenobarbital, phenytoin, rifabutin, rifampin, rifapentine)** may decrease concentration. **HERBAL: St. John's wort** may increase metabolism and decrease concentration. **FOOD: Grapefruit juice** may increase concentration/effects. **LAB VALUES:** May decrease Hgb, Hct, WBC count, platelets, serum magnesium, calcium, potassium, sodium, albumin, phosphates. May increase serum glucose, AST, ALT, uric acid. May alter serum magnesium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution, 2-Vial Kit: 10 mg.

ADMINISTRATION/HANDLING

Reconstitution • Reconstitute powder with 2 ml of supplied diluent (80% propylene glycol, 20% dehydrated alcohol). • Swirl contents gently to dissolve powder. • Reconstituted solution provides 5 mg/ml. Further dilute in 500 ml 0.9% NaCl.

R

Rate of Administration • Infuse over 4 hrs.

Storage • Reconstituted solution is stable for at least 24 hrs at room temperature. • Solution appears clear, colorless. Discard if precipitate is present or solution is discolored.

INDICATIONS/ROUTES/DOSAGE

Cutaneous T-Cell Lymphoma

IV: ADULTS, ELDERLY: 1$\frac{4}{}$ mg/m^2 administered over 4 hrs on days 1, 8, and 15 of a 28-day cycle. Repeat cycles every 28 days if pt continues to benefit from and tolerates therapy.

SIDE EFFECTS

Frequent (57%–23%): Nausea, fatigue, vomiting, anorexia. **Occasional (20%–7%):** Diarrhea, fever, distorted sense of taste, constipation, hypotension, pruritus. **Rare (4%–2%):** Dermatitis, T-wave and ST-wave changes on EKG.

ADVERSE EFFECTS/ TOXIC REACTIONS

Infection is very common (47%), including sepsis, arrhythmias, acute respiratory distress syndrome, acute renal failure. Anemia occurs in 19% of pts, thrombocytopenia in 17%, neutropenia in 11%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Provide emotional support to pt, family. Baseline PT, INR, CBC, chemistry tests, esp. potassium, sodium, calcium, magnesium, glucose, hepatic enzymes, renal function tests, EKG, should be obtained prior to therapy at baseline and routinely thereafter. Inform women of childbearing potential of risk to fetus if pregnancy occurs.

INTERVENTION/EVALUATION

Calculate daily absolute neutrophil count (ANC) using the formula: % neutrophils + % bands × WBC = ANC. Closely monitor hematologic, chemistry parameters, EKG; assess Hgb, administer blood transfusions per protocol. Diligently monitor for fever and obtain blood cultures 2 times from separate injection sites. Provide antiemetics to control nausea/vomiting.

PATIENT/FAMILY TEACHING

• Diarrhea may cause dehydration, electrolyte depletion. • Do not have immunizations without physician's approval (lowers body's resistance). • Avoid contact with those who recently received live virus vaccine. • Avoid crowds, those with infection. • May reduce effectiveness of estrogen-containing contraceptives. • Report excessive nausea or vomiting, abnormal heartbeat, chest pain, shortness of breath. Seek immediate medical attention if unusual bleeding occurs.

romiplostim

roe-mye-**ploe**-stim
(Nplate)

Do not confuse romiplostim with romidepsin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Recombinant fusion protein, thrombopoietin receptor agonist. **CLINICAL:** Hematologic agent.

ACTION

Binds and activates thrombopoietin (TPO) receptors on hematopoietic cells. **Therapeutic Effect:** Increases platelet production.

PHARMACOKINETICS

Concentration is dependent on dose and baseline platelet count. Peak concentration occurs in 7–50 hrs (median, 14 hrs). **Half-life:** 1–34 days (median, 3.5 days).

USES

Treatment of thrombocytopenia in pts with chronic immune (idiopathic)

thrombocytopenic purpura (ITP) who have had an insufficient response to corticosteroids, immunoglobulins, or splenectomy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Myelodysplastic syndrome, hematologic malignancy, pregnancy, hepatic impairment, renal impairment, history of cerebrovascular disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Studies suggest drug crosses placenta, is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Age-related renal, hepatic, cardiac abnormalities may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Increases platelet count.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 250-mcg, 500-mcg single-use vial.

ADMINISTRATION/HANDLING

◄ALERT► Use syringe with 0.01-ml graduations for reconstitution.

Subcutaneous

Reconstitution • Reconstitute 0.72 ml Sterile Water for Injection to 250-mcg single-use vial for final concentration of 500 mcg/ml. • Reconstitute 1.2 ml Sterile Water for Injection to 500-mcg single-use vial for final concentration of 500 mcg/ml. • Gently swirl and invert vial to reconstitute; do not shake. • Dissolution takes less than 2 min. • Inject at abdomen, thigh, upper arm. • Do not inject at sites that are bruised, red, tender, or hard.

Storage • Refrigerate unreconstituted vial. • Reconstituted solution can be kept at room temperature or refrigerated for up to 24 hrs. • Protect reconstituted solution from light. • Do not use if discolored or particulate is present. • Discard unused portion.

INDICATIONS/ROUTES/DOSAGE

Thrombocytopenia

Subcutaneous: ADULTS, ELDERLY: Initially, 1 mcg/kg once weekly based on actual body weight. Adjust weekly doses by increments of 1 mcg/kg to achieve platelet count 50,000/mm^3 or greater and reduce risk of bleeding. **Maximum:** 10 mcg/kg weekly.

Dosage Adjustments

Platelet Count	Dose
Less than 50,000/mm^3	Increase by 1 mcg/kg
Greater than 200,000/mm^3 for 2 consecutive wks	Reduce by 1 mcg/kg
Greater than 400,000/mm^3	Hold dose

SIDE EFFECTS

Frequent (35%–26%): Headache, arthralgia. **Occasional (17%–6%):** Dizziness, insomnia, myalgia, extremity pain, abdominal pain, shoulder pain, paresthesia, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Reticulin fiber deposits within the bone marrow, progressing to bone marrow fibrosis may occur. Worsening thrombocytopenia may be noted. Discontinuation of therapy may result in thrombocytopenia of greater severity than was present prior to drug therapy, increasing risk of bleeding. Thromboembolic effects may occur. Increases risk of hematologic malignancies.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline CBC, including platelet count, differential count prior to initiation, weekly during therapy and for 2 wks following discontinuation of therapy. Assess extent of RBC, WBC abnormalities.

INTERVENTION/EVALUATION

Monitor CBC, including platelet count, differential count weekly during dose adjustment phase and then monthly following establishment of a stable romiplostim dose.

PATIENT/FAMILY TEACHING

• Contact physician if bruising, bleeding occur. • Essential to receive drug therapy at scheduled times or risk of bleeding may occur.

ropinirole

roe-**pin**-i-role
(Requip, Requip XL)
Do not confuse Requip with Reglan, or ropinirole with Risperdal or risperidone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopamine agonist. **CLINICAL:** Antiparkinson agent (see p. 147C).

ACTION

Stimulates dopamine receptors in striatum. **Therapeutic Effect:** Relieves signs/symptoms of Parkinson's disease.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 40%. Extensively distributed throughout body. Extensively metabolized. Steady-state concentrations achieved within 2 days. Eliminated in urine. Unknown if removed by hemodialysis. **Half-life:** 6 hrs.

USES

Treatment of signs/symptoms of idiopathic Parkinson's disease. Treatment of moderate to severe primary restless legs syndrome.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of orthostatic hypotension, syncope, hallucinations (esp. in elderly), concurrent use of CNS depressants, preexisting dyskinesia, hepatic or severe renal dysfunction, major psychotic disorder.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Drug activity possible in breast-feeding infant. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted, but hallucinations may occur more frequently.

INTERACTIONS

DRUG: Ciprofloxacin may increase concentration. **Alcohol, CNS depressants** may increase CNS depressant effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD: All foods** delay peak plasma levels by 1 hr but do not affect drug absorption. **LAB VALUES:** May increase serum alkaline phosphatase.

AVAILABILITY (Rx)

Tablets: 0.25 mg, 0.5 mg, 1 mg, 2 mg, 3 mg, 4 mg, 5 mg.

Tablets, Extended-Release: 2 mg, 4 mg, 6 mg, 8 mg, 12 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to meals. • Do not break, crush, dissolve, or divide extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Parkinson's Disease

PO *(Immediate-Release)*: ADULTS, ELDERLY: Initially, 0.25 mg 3 times a day based on individual pt response. Dosage should be titrated with weekly increments as noted:
Week 1: 0.25 mg 3 times a day; total daily dose: 0.75 mg.
Week 2: 0.5 mg 3 times a day; total daily dose: 1.5 mg.
Week 3: 0.75 mg 3 times a day; total daily dose: 2.25 mg.
Week 4: 1 mg 3 times a day; total daily dose: 3 mg.

After week 4, may increase dose by 1.5 mg/day on weekly basis up to dose of 9 mg/day. May then further increase by 3 mg/day on weekly basis up to total dose of 24 mg/day.
***(Extended-Release)*:** Initially, 2 mg once daily for 1–2 wks. May increase by 2 mg/day at 1 wk or longer interval. **Maximum:** 24 mg/day.

Discontinuation Taper
Gradually taper over 7 days as follows: Decrease frequency from 3 times a day to twice a day for 4 days, then decrease from twice a day to once daily for remaining 3 days.

Restless Legs Syndrome
PO *(Immediate-Release)*: ADULTS, ELDERLY: 0.25 mg for days 1 and 2; 0.5 mg for days 3–7; 1 mg for wk 2; 1.5 mg for wk 3; 2 mg for wk 4; 2.5 mg for wk 5; 3 mg for wk 6; 4 mg for wk 7. Give all doses 1–3 hrs before bedtime.

SIDE EFFECTS

Frequent (60%–40%): Nausea, dizziness, extreme drowsiness. **Occasional (12%–5%):** Syncope, vomiting, fatigue, viral infection, dyspepsia, diaphoresis, asthenia (loss of strength, energy), orthostatic hypotension, abdominal discomfort, pharyngitis, abnormal vision, dry mouth, hypertension, hallucinations, confusion. **Rare (Less Than 4%):** Anorexia, peripheral edema, memory loss, rhinitis, sinusitis, palpitations, impotence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Dyskinesia, impulsive/compulsive behavior (pathological gambling, hypersexuality, binge eating) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Parkinson's disease: Assess signs/symptoms (e.g., tremor, gait). **Restless legs syndrome:** Assess frequency of symptoms, sleep pattern.

INTERVENTION/EVALUATION

Assess for clinical improvement, clinical reversal of symptoms (improvement of tremors of head/hands at rest, mask-like facial expression, shuffling gait, muscular rigidity). Assist with ambulation if dizziness occurs. Monitor B/P, daytime alertness.

PATIENT/FAMILY TEACHING

• Drowsiness, dizziness may be an initial response to drug. • Postural hypotension may occur more frequently during initial therapy. Rise from lying to sitting or sitting to standing position slowly to prevent risk of postural hypotension. • Avoid tasks that require alertness, motor skills until response to drug is established. • If nausea occurs, take medication with food. • Hallucinations may occur, more so in the elderly than in younger pts with Parkinson's disease. • Report occurrence of falling asleep during activities of daily living, new or worsening symptoms, changes in B/P, fainting, unusual urges. • Avoid alcohol.

rosiglitazone

HIGH ALERT

roe-zi-**glit**-a-zone
(Avandia)

BLACK BOX ALERT May cause or exacerbate congestive heart failure.

Do not confuse Avandia with Avalide or Avinza, or Avandaryl with Benadryl.

FIXED-COMBINATION(S)

Avandamet: rosiglitazone/metformin: 1 mg/500 mg, 2 mg/500 mg, 4 mg/500 mg, 2 mg/1 g, 4 mg/1 g. **Avandaryl:** rosiglitazone/glimepiride (an antidiabetic): 4 mg/1 mg, 4 mg/2 mg, 4 mg/4 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thiazolidinedione. **CLINICAL:** Antidiabetic agent (see p. 44C).

R

ACTION

Improves target-cell response to insulin without increasing pancreatic insulin secretion. Decreases hepatic glucose output, increases insulin-dependent glucose utilization in skeletal muscle. **Therapeutic Effect:** Lowers serum glucose concentration.

PHARMACOKINETICS

Rapidly absorbed. Protein binding: 99%. Metabolized in liver. Excreted primarily in urine, with lesser amount in feces. Not removed by hemodialysis. **Half-life:** 3–4 hrs.

USES

Adjunct to diet/exercise to lower serum glucose in those with type 2 non–insulin-dependent diabetes mellitus (NIDDM). Used as monotherapy or in combination with metformin, sulfonylurea to improve glycemic control.

PRECAUTIONS

Contraindications: Active hepatic disease, pregnancy, NYHA class III or IV heart failure. **Cautions:** Hepatic impairment, edematous pts, preexisting macular edema, diabetic retinopathy, pts at risk for cardiovascular events.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Not recommended in pregnant or breast-feeding women. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Rifampin** may decrease concentration/effects. **Gemfibrozil** may increase concentration, toxicity. **HERBAL:** **Garlic, ginger, ginseng** may cause hypoglycemia. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, cholesterol, HDL, LDL. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 2 mg, 4 mg, 8 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus, Combination Therapy

PO *(with Sulfonylureas, Metformin)*: ADULTS, ELDERLY: Initially, 4 mg as single daily dose or in divided doses twice a day. May increase to 8 mg/day after 12 wks of therapy if fasting glucose level is not adequately controlled.

Diabetes Mellitus, Monotherapy

ADULTS, ELDERLY: Initially, 4 mg as single daily dose or in divided doses twice a day. May increase to 8 mg/day after 12 wks of therapy.

SIDE EFFECTS

Frequent (9%): Upper respiratory tract infection. **Occasional (4%–2%):** Headache, edema, back pain, fatigue, sinusitis, diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity occurs rarely. Increased risk of CHF. May cause or worsen macular edema. May increase risk of fractures. Pts with ischemic heart disease are at high risk of MI.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain hepatic enzyme levels before initiation of therapy and periodically thereafter. Ensure follow-up instruction if pt, family do not thoroughly understand diabetes management, glucose-testing technique.

INTERVENTION/EVALUATION

Monitor Hgb, serum glucose, hepatic function tests, esp. AST, ALT. Assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia,

numbness in mouth, hunger, diplopia), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep/rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity/stress, trauma, surgical procedures).

PATIENT/ FAMILY TEACHING

• Diabetes mellitus requires lifelong control. • Prescribed diet, exercise are principal parts of treatment; do not skip/delay meals. • Wear medical alert identification. • Continue to adhere to dietary instructions, regular exercise program, regular testing of urine or blood glucose. • When taking combination drug therapy with a sulfonylurea or insulin, have source of glucose available to treat symptoms of low blood sugar. • Notify physician of rapid increase in weight, edema, shortness of breath, chest pain, abdominal pain, yellowing of skin/eyes.

rosuvastatin TOP 200

roe-**su**-va-**stat**-in
(Crestor)
Do not confuse rosuvastatin with atorvastatin, lovastatin, nystatin, pitavastatin, or simvastatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: HMG-CoA reductase inhibitor. **CLINICAL:** Antihyperlipidemic (see p. 58C).

ACTION

Interferes with cholesterol biosynthesis by inhibiting conversion of the enzyme HMG-CoA to mevalonate, a precursor to cholesterol. **Therapeutic Effect:** Decreases LDL, VLDL, plasma triglyceride levels; increases HDL concentration.

PHARMACOKINETICS

Protein binding: 88%. Minimal hepatic metabolism. Primarily eliminated in feces. **Half-life:** 19 hrs (increased in severe renal dysfunction).

USES

Adjunct to diet therapy in pts with primary hyperlipidemia and mixed dyslipidemia; to decrease elevated total, LDL cholesterol, serum triglyceride levels; increases HDL. Adjunct to diet to slow progression of atherosclerosis in pts with elevated cholesterol. Treatment of primary dysbetalipoproteinemia, homozygous familial hypercholesterolemia (FH). Treatment of pts ages 10–17 yrs with heterozygous familial hypercholesterolemia (HeFH) to reduce elevated total cholesterol, LDL cholesterol, and apolipoprotein B. Primary prevention of cardiovascular disease (risk reduction of MI, stroke, arterial revascularization) without clinically evident CAD, but with multiple risk factors.

PRECAUTIONS

Contraindications: Active hepatic disease, breast-feeding, pregnancy, unexplained, persistent elevations of serum transaminase levels. **Cautions:** Anticoagulant therapy, history of hepatic disease, substantial alcohol consumption, major surgery, renal impairment, renal failure, hypothyroidism, severe metabolic or endocrine disorders.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (suppression of cholesterol biosynthesis may cause fetal toxicity), lactation. Risk of serious adverse reactions in breast-feeding infants. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Aluminum- and magnesium-containing antacids may decrease concentration/effects. Increased risk of myopathy with **cyclosporine, fibrate,**

R

gemfibrozil, niacin. Increases concentrations of **estradiol, ethinyl, norgestrel.** Enhances anticoagulant effect of **warfarin.** **HERBAL:** None significant. **FOOD:** **Red yeast rice** contains 2.4 mg **lovastatin** per 600 mg rice. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, creatinine phosphokinase, glucose, transaminases. May produce hematuria, proteinuria.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. May give at any time of day.

INDICATIONS/ROUTES/DOSAGE

Hyperlipidemia, Dyslipidemia, Atherosclerosis, Dysbetalipoproteinemia, Primary Prevention of Cardiovascular Disease

PO: ADULTS, ELDERLY: Usual starting dosage is 10 mg/day, with adjustments based on lipid levels; monitor q2–4wks until desired level is achieved. Lower starting dose of 5 mg is recommended in Asians. **Maximum:** 40 mg/day. Range: 5–40 mg/day.

FH

PO: ADULTS, ELDERLY: Initially, 20 mg/day. **Maximum:** 40 mg/day.

HeFH

PO: CHILDREN 10–17 YRS: Initially, 20 mg once daily. Range: 5–20 mg once daily.

Renal Impairment (Creatinine Clearance Less Than 30 ml/min)

PO: ADULTS, ELDERLY: 5 mg/day; do not exceed 10 mg/day.

Concurrent Cyclosporine Use

PO: ADULTS, ELDERLY: 5 mg/day maximum.

Concurrent Gemfibrozil Therapy

PO: ADULTS, ELDERLY: 10 mg/day maximum.

SIDE EFFECTS

Generally well tolerated. Side effects are usually mild, transient. **Occasional (9%–3%):** Pharyngitis, headache, diarrhea, dyspepsia (heartburn, epigastric distress, indigestion), nausea, depression. **Rare (less than 3%):** Myalgia, asthenia (loss of strength, energy), back pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Potential for lens opacities. Hypersensitivity reaction, hepatitis, rhabdomyolysis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain dietary history, esp. fat consumption. Question for possibility of pregnancy before initiating therapy (Pregnancy Category X). Assess baseline lab results: serum cholesterol, triglycerides, hepatic function tests.

INTERVENTION/EVALUATION

Monitor serum cholesterol, triglycerides for therapeutic response. Lipid levels should be monitored within 2–4 wks of initiation of therapy or change in dosage. Monitor hepatic function tests. Hepatic function tests should be performed at 12 wks following initiation of therapy, at any elevation of dose, and periodically (e.g., semiannually) thereafter. Monitor CPK if myopathy is suspected. Monitor daily pattern of bowel activity, stool consistency. Assess for headache, sore throat. Be alert for myalgia, weakness.

PATIENT/FAMILY TEACHING

• Use appropriate contraceptive measures (Pregnancy Category X). • Periodic lab tests are essential part of therapy. • Maintain appropriate diet (important part of treatment). • Report unexplained muscle pain, tenderness, weakness, esp. if associated with fever, malaise.

rufinamide

rue-**fin**-a-mide
(Banzel)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticonvulsant. **CLINICAL:** Anticonvulsant.

ACTION

Modulates activity of sodium channels. Prolongs inactive state of the sodium channel in cortical neurons, limits sustained repetitive firing of sodium-dependent action potential, inhibiting excitatory neurotransmitter release. **Therapeutic Effect:** Exerts anticonvulsant activity.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 34%. Extensively metabolized. Eliminated in urine. **Half-life:** 6–10 hrs.

USES

Adjunctive therapy in treatment of seizures associated with Lennox-Gastaut syndrome in adults and children 4 yrs and older.

PRECAUTIONS

Contraindications: Familial short QT syndrome. **Cautions:** Other drugs that shorten QT interval, clinical depression, pts at high risk for suicide, mild to moderate hepatic impairment (not recommended in those with severe hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce fetal skeletal abnormalities. May be distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 4 yrs. **Elderly:** Age-related renal, hepatic, or cardiac impairment may require initiation of therapy at low end of dosing range.

INTERACTIONS

DRUG: May increase concentration of **phenobarbital, phenytoin.** May decrease concentration of **carbamazepine, lamotrigine. Valproate** may increase concentration. May decrease effect of **estradiol, norethindrone. Alcohol, CNS depressants** may increase CNS depressant effect. **HERBAL: Evening primrose** may decrease seizure threshhold. **FOOD:** None known. **LAB VALUES:** May decrease WBC count.

AVAILABILITY (Rx)

Oral Suspension: 40 mg/ml. **Tablets, Film-Coated:** 200 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

• Give with food. • Film-coated tablets may be cut or crushed for dosing flexibility. • Shake oral suspension well before each dose; use bottle adapter and dosing syringes provided.

INDICATIONS/ROUTES/DOSAGE

Lennox-Gastaut Seizures

PO: ADULTS, ELDERLY: Initially, 400–800 mg/day, given in 2 equally divided doses. Dose should be increased by 400–800 mg/day every 2 days. **Maximum:** 3,200 mg/day, administered in 2 equally divided doses. **CHILDREN 4 YRS AND OLDER:** Treatment should be initiated at a daily dose of approximately 10 mg/kg/day, given in 2 equally divided doses. Increase by approximately 10-mg/kg increments every other day to a target dose of 45 mg/kg/day or 3,200 mg/day, whichever is less, administered in 2 equally divided doses. Renal impairment pts with creatinine clearance less than 30 ml/min do not require any dosage change.

SIDE EFFECTS

Children: Frequent (27%–11%): Headache, dizziness, fatigue, nausea, drowsiness, diplopia. **Occasional (6%–4%):** Tremor, nystagmus, blurred vision, vomiting. **Rare (3%):** Ataxia, upper abdominal pain, anxi-

R

ety, constipation, dyspepsia, back pain, gait disturbance, vertigo.
Adults: Frequent (17%–7%): Lethargy, vomiting, headache, fatigue, dizziness, nausea. **Occasional (5%–4%):** Influenza, nasopharyngitis, anorexia, rash, ataxia, diplopia. **Rare (3%):** Bronchitis, sinusitis, psychomotor hyperactivity, upper abdominal pain, aggression, ear infection, inattention, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Suicidal ideation or behavior occur rarely, noted as early as 1 wk after initiation of therapy and persisting for at least 24 wks. Shortening of the QT interval (up to 20 msec), hypersensitivity reaction (rash, fever, urticaria) have been noted. Abrupt withdrawal may precipitate seizure, status epilepticus.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, level of consciousness). Initiate seizure precautions.

INTERVENTION/EVALUATION

Provide safety measures as needed. Observe frequently for recurrence of seizure activity. Assess for clinical improvement (decrease in intensity, frequency of seizures). Assist with ambulation if drowsiness, lethargy occur. Question for evidence of headache.

PATIENT/FAMILY TEACHING

• Do not abruptly withdraw medication (may precipitate seizures). • Avoid tasks that require alertness, motor skills until response to drug is established. • Strict maintenance of drug therapy is essential for seizure control. • Avoid alcohol. • Female pts of childbearing age should be informed that concurrent use of rufinamide with hormonal contraceptives may render contraceptive less effective; nonhormonal forms of contraception are recommended. • Be alert for any unusual changes in mood/behavior (may increase risk of suicidal ideation/behavior).

ruxolitinib

rux-oh-**li**-ti-nib
(Jakafi)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Kinase inhibitor. **CLINICAL:** Antineoplastic.

ACTION

Inhibits Janus-associated kinases (JAKs) JAK1 and JAK2, which mediate the signaling of cytokines and growth factor important for hematopoiesis and immune function. **Therapeutic Effect:** Reduces symptoms of myelofibrosis, including enlarged spleen.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Widely distributed. Protein binding: 97%. Metabolized in liver. Excreted in urine (74%), feces (22%). **Half-life:** 3–5 hrs.

USES

Treatment of intermediate or high-risk myelofibrosis, including primary myelofibrosis, post-polycythemia vera myelofibrosis, post-essential thrombocythemia myelofibrosis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Pts at risk for developing bacterial, fungal, or viral infections.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Not recommended in nursing mothers. Must either discontinue drug or discontinue breast-feeding. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., boceprevir, clarithromycin, cyclosporine, HIV protease inhibitors, itraconazole, ketoconazole) may increase concentration/effects. **HERBAL:** None known. **FOOD: Grapefruit** may increase concentration. **LAB VALUES:** May decrease platelets, RBC, Hgb, Hct, WBC. May increase serum bilirubin, AST, ALT, cholesterol.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 15 mg, 20 mg, 25 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

FEEDING TUBE

- Suspend tablet in 40 ml water and stir for 10 min. • May administer suspension within 6 hrs after tablet has dispersed. • Flush with 75 ml water after administration.

INDICATIONS/ROUTES/DOSAGE

Myelofibrosis

PO: ADULTS: 20 mg twice daily if platelets greater than 200,000 or 15 mg twice daily if platelets 100,000–200,000. Dose reduction based on platelet response. **Maximum:** 25 mg twice daily.

Dosage in Renal Impairment

Creatinine clearance 15–59 ml/min	Platelets 100,000–150,000/mm^3	10 mg twice daily
Creatinine clearance 15–59 ml/min	Platelets less than 100,000/mm^3	Avoid use
End-stage renal disease (ESRD) on dialysis	Platelets 100,000–200,000/mm^3	15 mg after dialysis on days of dialysis
ESRD on dialysis	Platelets greater than 200,000/mm^3	20 mg after dialysis on days of dialysis
ESRD not requiring dialysis		Avoid use

Dosage in Hepatic Impairment

Hepatic impairment	Platelets 100,000–150,000/mm^3	10 mg twice daily
Hepatic impairment	Platelets less than 100,000/mm^3	Avoid use

SIDE EFFECTS

Frequent (23%–14%): Bruising, dizziness, vertigo, labyrinthitis, headache. **Occasional (9%–7%):** Weight gain, flatulence.

ADVERSE EFFECTS/ TOXIC REACTIONS

May cause severe thrombocytopenia (70%), anemia (96%), neutropenia (18%), which may improve with reduced dose or temporarily withholding regimen. Anemic pts may require blood transfusions. Increased risk of developing opportunistic bacterial, mycobacterial, fungal, viral infections including herpes zoster, urinary tract infection, urosepsis, renal infection, pyuria. Increased risk of bleeding disorders including ecchymosis, hematoma, injection site hematoma, periorbital hematoma, petechiae, purpura.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, CMP, urinalysis, hepatic panel, cholesterol level. Assess recent vaccinations status. Receive full medication history including herbal products. Question for possibility of pregnancy, renal/hepatic impairment, HIV.

INTERVENTION/EVALUATION

Monitor CBC (every 2–4 wks until doses stabilized), CMP, cholesterol, hepatic panel. Urinalysis with reflex culture for suspected UTI. Routinely assess vital signs, I&O, breath sounds, gait. Monitor temperature; be alert for fever, infectious process. Avoid IM injections, rectal temperatures, other traumas that induce bleeding. Assess skin for petechiae, hematoma, purpura.

PATIENT/FAMILY TEACHING

• Report any new bruising/bleeding, bloody stools or urine, fever, chills, rash, painful urination, suspected infection, fatigue, shortness of breath. • Do not breast-feed. • Avoid grapefruit, grapefruit juice. • Open blisters may signal herpes infection. • Need to monitor CBC during treatment. If on dialysis, take only following dialysis.

salmeterol

TOP 200

sal-**met**-er-all
(Serevent Diskhaler, Serevent Diskus)

BLACK BOX ALERT Long-acting beta$_2$-adrenergic agonists may increase risk of asthma-related deaths. Use only as adjuvant therapy.

Do not confuse salmeterol with Solu-Medrol, or Serevent with Atrovent, Combivent, Serentil, or Sinemet.

FIXED-COMBINATION(S)

Advair Diskus: salmeterol/fluticasone (a corticosteroid): 50 mcg/100 mcg, 50 mcg/250 mcg, 50 mcg/500 mcg. **Advair HFA:** salmeterol/fluticasone (a corticosteroid): 21 mcg/45 mcg, 21 mcg/115 mcg, 21 mcg/230 mcg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic (adrenergic agonist). **CLINICAL:** Bronchodilator (see pp. 75C, 76C).

ACTION

Stimulates beta$_2$-adrenergic receptors in lungs, resulting in relaxation of bronchial smooth muscle. **Therapeutic Effect:** Relieves bronchospasm, reducing airway resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Inhalation (asthma)	30–45 min	2–4 hrs	12 hrs
Inhalation (COPD)	2 hrs	3.25–4.75 hrs	12 hrs

Low systemic absorption; acts primarily in lungs. Protein binding: 95%. Metabolized in liver by hydroxylation. Primarily eliminated in feces. **Half-life:** 5.5 hrs.

USES

Maintenance therapy for asthma; prevention of exercise-induced bronchospasm, bronchospasm in pts with reversible obstructive airway disease. Long-term maintenance treatment of bronchospasm associated with COPD, including emphysema, chronic bronchitis.

PRECAUTIONS

Contraindications: Status asthmaticus, acute episodes of asthma or COPD. Use without concurrent long-term asthma control medications (e.g., inhaled corticosteroids). **Cautions:** Not for acute symptoms; may cause paradoxical bronchospasm, severe asthma. Pts with cardiovascular disorders (coronary insufficiency, arrhythmias, hypertension), seizure disorders, diabetes, glaucoma, hyperthyroidism, hepatic impairment, hypokalemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions in those older than 4 yrs. **Elderly:** Lower dosages may be needed (may be more susceptible to tachycardia, tremors).

INTERACTIONS

DRUG: Beta-blockers reduce effect, may produce bronchospasm. **CYP3A4 inhibitors** (e.g., **ketoconazole, protease inhibitors**) may increase concentration, risk of QT prolongation. **MAOIs, tricyclic antidepressants** may increase concentration/effects, toxicity (wait 14 days after

stopping MAOIs, tricyclic antidepressants before starting salmeterol). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium. May increase serum glucose.

AVAILABILITY (Rx)

Powder for Oral Inhalation: 50 mcg/inhalation.

ADMINISTRATION/HANDLING

Inhalation

• Shake container well, instruct pt to exhale completely through mouth; place mouthpiece between lips, holding inhaler upright. • Inhale deeply through mouth while fully depressing top of canister. Pt should hold breath as long as possible before exhaling slowly. • Allow at least 2 min before second dose (allows for deeper bronchial penetration). • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness).

INDICATIONS/ROUTES/DOSAGE

Maintenance and Prevention Therapy for Asthma

Inhalation *(Diskus)*: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: 1 inhalation (50 mcg) q12h.

Prevention of Exercise-Induced Bronchospasm

Inhalation *(Diskus)*: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: 1 inhalation at least 30 min before exercise. Additional doses should not be given for 12 hrs. Do not administer if already giving salmeterol twice daily.

Maintenance Therapy for COPD

Inhalation *(Diskus)*: ADULTS, ELDERLY: 1 inhalation (50 mcg) q12h.

SIDE EFFECTS

Frequent (28%): Headache. **Occasional (7%–3%):** Cough, tremor, dizziness, vertigo, throat dryness/irritation, pharyngitis. **Rare (less than 3%):** Palpitations, tachycardia, nausea, heartburn, GI distress, diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

May prolong QT interval (can precipitate ventricular arrhythmias). Hypokalemia, hyperglycemia may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline EKG and monitor for changes.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality/rate of pulse, B/P. Assess lungs for wheezing, rales, rhonchi. Periodically evaluate serum potassium levels.

PATIENT/FAMILY TEACHING

• Not for relief of acute episodes. • Keep canister at room temperature (cold decreases effects). • Do not stop medication or exceed recommended dosage. • Notify physician promptly of chest pain, dizziness. • Wait at least 1 full min before second inhalation. • Administer dose 30–60 min before exercise when used to prevent exercise-induced bronchospasm. • Avoid excessive use of caffeine derivatives (coffee, tea, colas, chocolate).

saquinavir

sa-**kwin**-a-veer
(Invirase)
Do not confuse saquinavir with Sinequan.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antiretroviral (see pp. 69C, 117C).

ACTION

Inhibits HIV protease, rendering the enzyme incapable of processing polyprotein precursors needed to generate functional proteins in HIV-infected cells.

Therapeutic Effect: Interferes with HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Poorly absorbed after PO administration (absorption increased with high-calorie, high-fat meals). Protein binding: 99%. Metabolized in liver to inactive metabolite. Primarily eliminated in feces. Unknown if removed by hemodialysis. **Half-life:** 13 hrs.

USES

Treatment of HIV infection in combination with at least two other antiretroviral agents.

PRECAUTIONS

Contraindications: Concurrent use with alfuzosin, amiodarone, bepridil, dofetilide, ergot derivatives, flecainide, lidocaine, lovastatin, midazolam (oral), propafenone, quinidine, rifampin, ritonavir, sildenafil (when used for pulmonary arterial hypertension), simvastatin, trazodone, triazolam. Congenital or acquired QT prolongation, refractory hypokalemia or hypomagnesemia, concurrent medications that prolong QT interval, complete AV block (without pacemaker), severe hepatic impairment. **Cautions:** Preexisting conduction abnormalities, cardiovascular disease, mild to moderate hepatic impairment, hepatitis B or C, hemophilia, chronic alcoholism, cirrhosis, history of QT prolongation.

S

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breast-feeding not recommended (possibility of HIV transmission). **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal/hepatic/cardiac impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentration/effects of **atorvastatin, cyclosporine, tacrolimus, calcium channel-blocking agents, rifabutin, sildenafil, tadalafil, vardenafil.** May decrease concentration/effects of **efavirenz, methadone, oral contraceptives. CYP3A4 inhibitors (e.g., carbamazepine), phenobarbital, phenytoin, rifabutin** may decrease concentration/effects. **Delavirdine, atazanavir** may increase concentration, toxicity. **HERBAL: Garlic, St. John's wort** may decrease concentration/effects. **FOOD: High calorie, high fat meal** increases absorption. **Grapefruit, grapefruit juice** may increase concentration (clinical significance unknown). **LAB VALUES:** May increase serum ALT, AST, amylase, creatine kinase, GGT, LDH, bilirubin, calcium, potassium, sodium, cholesterol, triglycerides. May decrease neutrophils, platelets, WBC count.

AVAILABILITY (Rx)

Capsules (Invirase): 200 mg. **Tablets (Invirase):** 500 mg.

ADMINISTRATION/HANDLING

PO

• Give within 2 hrs after a full meal. • Avoid grapefruit juice.

INDICATIONS/ROUTES/DOSAGE

Note: Do not initiate therapy if QT interval greater than 450 msec.

HIV Infection in Combination with Other Antiretrovirals

PO: ADULTS, ELDERLY: 1,000 mg (5 × 200 mg or 2 × 500 mg) twice a day in combination with ritonavir 100 mg twice a day.

SIDE EFFECTS

Occasional: Diarrhea, abdominal discomfort/pain, nausea, photosensitivity, stomatitis. **Rare:** Confusion, ataxia, asthenia (loss of strength, energy), headache, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory testing, esp. hepatic function tests, before beginning

saquinavir therapy and at periodic intervals during therapy. Offer emotional support. Obtain medication history.

INTERVENTION/EVALUATION

Monitor serum hepatic function tests, triglycerides, glucose, CD4 cell count, HIV RNA levels. Closely monitor for evidence of GI discomfort. Monitor daily pattern of bowel activity, stool consistency. Inspect mouth for signs of mucosal ulceration. Monitor serum chemistry tests for marked laboratory abnormalities. If serious or severe toxicities occur, interrupt therapy, contact physician.

PATIENT/FAMILY TEACHING

• Report persistent abdominal pain, nausea, vomiting. • Avoid exposure to sunlight, artificial light sources. • Continue therapy for full length of treatment. • Doses should be evenly spaced. • Saquinavir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pts may continue to acquire illnesses associated with advanced HIV infection. • Take within 2 hrs after a full meal. • Avoid administration with grapefruit products.

sargramostim (granulocyte macrophage colony-stimulating factor, GM-CSF)

sar-gram-**o**-stim
(Leukine)
Do not confuse Leukine with leucovoran or Leukerin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Colony-stimulating factor. **CLINICAL:** Hematopoietic, antineutropenic agent.

ACTION

Stimulates proliferation/differentiation of hematopoietic cells to activate mature granulocytes and macrophages. **Therapeutic Effect:** Assists bone marrow in making new WBCs, increases their chemotactic, antifungal, antiparasitic activity. Increases cytoneoplastic cells, activates neutrophils to inhibit tumor cell growth.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV (increase WBCs)	7–14 days	N/A	1 wk

Detected in serum within 5 min after subcutaneous administration. **Half-life: IV:** 1 hr; **Subcutaneous:** 3 hrs.

USES

Accelerates myeloid recovery in pts undergoing autologous or allogeneic bone marrow transplant or in pts who have undergone hematopoietic stem cell transplant following myeloablative chemotherapy. Prolongs survival in pts following bone marrow transplant in whom engraftment has been delayed or has failed. Enhances peripheral progenitor cell yield in autologous hematopoietic stem cell transplant. Shortens time to neutrophil recovery following induction chemotherapy of acute myelogenous leukemia (AML). **OFF-LABEL:** Treatment of AIDS-related neutropenia; chronic, severe neutropenia; drug-induced neutropenia; myelodysplastic syndrome.

PRECAUTIONS

Contraindications: Concurrent (24 hrs preceding or following) myelosuppressive chemotherapy or radiation, excessive leukemic myeloid blasts in bone marrow or peripheral blood (greater than 10%), known hypersensitivity to yeast-derived products. **Cautions:** Preexisting CHF, fluid retention; autoimmune, chronic inflammatory disease; hypertention; cardiovascular disease; pulmonary disease; renal/hepatic impairment.

S

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, creatinine, hepatic enzymes. May decrease serum albumin.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 250 mcg. **Injection Solution:** 500 mcg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • To 250-mcg vial, add 1 ml Sterile Water for Injection (preservative free) or Bactiostatic Water for Injection. Direct diluent to side of vial, gently swirl contents to avoid foaming; do not shake or vigorously agitate. • After reconstitution, further dilute in 25–50 ml 0.9% NaCl to a concentration of 10 mcg/ml or greater. If final concentration less than 10 mcg/ml, add 1 mg albumin/ml 0.9% NaCl to provide a final albumin concentration of 0.1% (e.g., 1 ml 5% albumin per 50 ml 0.9% NaCl).

◀ALERT▶ Albumin is added before addition of sargramostim (prevents drug adsorption to components of drug delivery system).

Rate of Administration • Give each single dose over 30 min, 2 hr, 6 hr, or continuous infusion.

Storage • Refrigerate powder, reconstituted solution, diluted solution for injection. • Do not shake. • Reconstituted solutions are clear, colorless. • Use within 6 hrs; discard unused portions. • Use 1 dose per vial; do not reenter vial.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), chlorpromazine (Thorazine).

IV COMPATIBILITIES

Cimetidine (Tagamet), dexamethasone (Decadron), diphenhydramine (Benadryl), famotidine (Pepcid), heparin, meperidine (Demerol), metoclopramide (Reglan), promethazine (Phenergan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Neutrophil Recovery Following Chemotherapy in AML

IV Infusion: ADULTS, ELDERLY: 250 mcg/m^2/day (as 4-hr infusion) starting approximately 4 days following completion of induction chemotherapy. Continue until ANC is greater than 1,500 cells/mm^3 for 3 consecutive days to a maximum of 42 days.

Myeloid Recovery Following Bone Marrow Transplant (BMT)

IV Infusion: ADULTS, ELDERLY: Usual parenteral dosage: 250 mcg/m^2/day (as 2-hr infusion). Begin 2–4 hrs after autologous bone marrow infusion and not less than 24 hrs after last dose of chemotherapy or last radiation treatment. Continue until ANC is over 1,500 cells/mm^3 for 3 consecutive days. Discontinue if blast cells appear or underlying disease progresses.

Bone Marrow Transplant Failure, Engraftment Delay

IV Infusion: ADULTS, ELDERLY: 250 mcg/m^2/day for 14 days. Infuse over 2 hrs. May repeat after 7 days off therapy if engraftment has not occurred. A third course with 500 mcg/m^2/day for 14 days may be tried if engraftment still has not occurred.

Stem Cell Transplant, Mobilization of Peripheral Blood Progenitor Cells

IV, Subcutaneous: ADULTS: 250 mcg/m^2/day (IV as 24-hr infusion). Continue

until ANC is over 1,500 cells/mm^3 for 3 consecutive days.

SIDE EFFECTS

Frequent: GI disturbances (nausea, diarrhea, vomiting, stomatitis, anorexia, abdominal pain), arthralgia or myalgia, headache, malaise, rash, pruritus. **Occasional:** Peripheral edema, weight gain, dyspnea, asthenia (loss of strength, energy), fever, leukocytosis, capillary leak syndrome (fluid retention, irritation at local injection site, peripheral edema). **Rare:** Rapid/irregular heartbeat, thrombophlebitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pleural/pericardial effusion occurs rarely after infusion.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline pulmonary function testing, weight, vital signs. Obtain baseline chemistry studies (CBC with differential, platelet count, serum renal/hepatic function tests).

INTERVENTION/EVALUATION

Monitor CBC with differential, platelets, serum renal/hepatic function, pulmonary function, vital signs, weight. Monitor for supraventricular arrhythmias during administration (particularly in pts with history of cardiac arrhythmias). Assess closely for dyspnea during and immediately following infusion (particularly in pts with history of lung disease). If dyspnea occurs during infusion, cut infusion rate by half. If dyspnea continues, stop infusion immediately. If neutrophil count exceeds 20,000 cells/mm^3 or platelet count exceeds 500,000/mm^3, stop infusion or reduce dose by half, based on clinical condition of pt. Blood counts return to normal or baseline 3–7 days after discontinuation of therapy.

saxagliptin

TOP 200

sax-a-**glip**-tin
(Onglyza)
Do not confuse saxagliptin with sitagliptin or sumatriptan.

FIXED-COMBINATION(S)

Kombiglyze XR: saxagliptin/metformin (an antidiabetic): 2.5 mg/1,000 mg, 5 mg/500 mg, 5 mg/1,000 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: DDP-4 inhibitor (gliptins). **CLINICAL:** Antidiabetic agent (see p. 43C).

ACTION

Slows the inactivation of incretin hormones by inhibiting DDP-4 enzyme. Incretin hormones increase insulin synthesis/release from pancreas and decrease glucagon secretion. **Therapeutic Effect:** Regulates glucose homeostasis.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Oral	—	—	24 hrs

Rapidly absorbed following PO administration. Extensively metabolized (metabolite is active). Eliminated by both renal and hepatic pathways. **Half-life:** 2.5 hrs; metabolite, 3.1 hrs.

USES

Adjunctive treatment to diet and exercise to improve glycemic control in pts with type 2 diabetes mellitus as monotherapy or in combination with other antidiabetic agents.

PRECAUTIONS

Contraindications: None known. **Cautions:** Concurrent use of other glucose-lowering agents may increase risk of hypoglycemia, moderate to severe renal impairment, end-stage renal disease requiring hemodialysis.

S

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., clarithromycin, itraconazole, ketoconazole) may increase concentration. **CYP3A4 inducers (e.g., rifampin)** may decrease concentration. **HERBAL: Herbal supplements** that have hypoglycemic effects increase risk of hypoglycemia. **FOOD: Grapefruit juice** may increase concentration. **LAB VALUES:** May slightly decrease WBCs, particularly lymphocyte count. May increase serum creatinine.

AVAILABILITY (Rx)

Tablets, Film-Coated: 2.5 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Do not crush, break, chew film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Type 2 Diabetes Mellitus

PO: ADULTS OVER 18 YRS, ELDERLY: 2.5 or 5 mg once daily. **Moderate to Severe Renal Impairment (CrCl Less Than 50 ml/min):** 2.5 mg once daily. **Concurrent Strong CYP3A4 Inhibitors (e.g., ketoconazole):** 2.5 mg once daily. **Hemodialysis:** Give dose after dialysis.

SIDE EFFECTS

Occasional (7%): Headache. **Rare (3%–1%):** Peripheral edema, sinusitis, abdominal pain, gastroenteritis, vomiting, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Lymphopenia, rash occur rarely. Upper respiratory tract infection, urinary tract infection occur in approximately 7% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check blood glucose concentration before administration. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt or family does not thoroughly understand diabetes management or glucose-testing technique.

INTERVENTION/EVALUATION

Assess for hypoglycemia (diaphoresis, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia, difficulty concentrating), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep, rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity or stress, surgical procedures).

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. Prescribed diet and exercise are principal parts of treatment; do not skip or delay meals. • Continue to adhere to dietary instructions, regular exercise program, regular testing of blood glucose. • When taking combination drug therapy or when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity), have a source of glucose available to treat symptoms of hypoglycemia.

scopolamine

skoe-**pol**-a-meen
(Trans-Derm Scop, Transderm-V)

FIXED-COMBINATION(S)

Donnatal: scopolamine/atropine (anticholinergic)/hyoscyamine (anticholinergic)/phenobarbital (sedative): 0.0065 mg/0.0194 mg/0.1037 mg/16.2 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Antinausea, antiemetic.

ACTION

Competitively inhibits action of acetylcholine at muscarinic receptors. Reduces excitability of labyrinthine receptors, depressing conduction in vestibular cerebellar pathway. **Therapeutic Effect:** Prevents motion-induced nausea/vomiting.

USES

Prevention of motion sickness, postop nausea/vomiting.

PRECAUTIONS

Contraindications: Angle-closure glaucoma, GI/GU obstruction, myasthenia gravis, paralytic ileus, tachycardia secondary to cardiac insufficiency, thyrotoxicosis, acute hemorrhage. **Cautions:** Hepatic/renal impairment, cardiac disease (hypertension, heart failure), seizures, psychoses, coronary artery disease, prostatic hyperplasia, urinary retention, reflux esophagitis, ulcerative colitis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. **Pregnancy Category C. Children:** May be more susceptible to adverse effects. **Elderly:** Dizziness, hallucinations, confusion may require dosage adjustment.

INTERACTIONS

DRUG: **Anticholinergics, antihistamines, tricyclic antidepressants** may increase anticholinergic effects. **CNS depressants** may increase CNS depression. **HERBAL:** None significant. **FOOD:** **Grapefruit, grapefruit juice** may increase concentration/effects. **LAB VALUES:** May interfere with gastric secretion test.

AVAILABILITY (Rx)

Transdermal System (Trans-Derm Scop): 1.5 mg.

ADMINISTRATION/HANDLING

Transdermal

• Apply patch to hairless area behind one ear. • If dislodged or on for more than 72 hrs, replace with fresh patch.

INDICATIONS/ROUTES/DOSAGE

Prevention of Motion Sickness

Transdermal: ADULTS: One system at least 4 hrs prior to exposure and q72h as needed.

Postop Nausea/Vomiting

Transdermal: ADULTS, ELDERLY: 1 system no sooner than 1 hr before surgery and removed 24 hrs after surgery.

SIDE EFFECTS

Frequent (Greater Than 15%): Dry mouth, drowsiness, blurred vision. **Rare (5%–1%):** Dizziness, restlessness, hallucinations, confusion, difficulty urinating, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline hepatic function tests. Assess for use of other CNS depressants, drugs with anticholinergic action, history of narrow-angle glaucoma.

INTERVENTION/EVALUATION

Monitor serum hepatic/renal function tests. Observe for improvement of symptoms.

PATIENT/FAMILY TEACHING

• Avoid tasks requiring alertness, motor skills until response to drug is established (may cause drowsiness, disorientation, confusion). • Use only 1 patch at a time; do not cut. • Wash hands after administration.

S

selegiline

se-**le**-ji-leen
(Apo-Selegiline, Eldepryl, Emsam, Novo-Selegiline, Zelapar)

BLACK BOX ALERT Transdermal: Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Eldepryl with Elavil or enalapril, selegiline with Salagen, sertraline, or Stelazine, or Zelapar with Zaleplon, Zemplar, or Zyprexa.

CLASSIFICATION

PHARMACOTHERAPEUTIC: MAOI.
CLINICAL: Antiparkinson agent (see p. 147C).

ACTION

Irreversibly inhibits activity of monoamine oxidase type B (enzyme that breaks down dopamine), thereby increasing dopaminergic action. **Therapeutic Effect:** Relieves signs/symptoms of Parkinson's disease (tremor, akinesia, posture/equilibrium disorders, rigidity).

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	—	24–72 hrs

Rapidly absorbed from GI tract. Crosses blood-brain barrier. Protein binding: 90%. Metabolized in liver to active metabolites. Primarily excreted in urine. **Half-life: PO:** 10 hrs. **Transdermal:** 18–25 hrs.

USES

Adjunct to levodopa/carbidopa in treatment of Parkinson's disease. **Transdermal:** Treatment of major depressive disorder (MDD). **OFF-LABEL:** Treatment of ADHD, early Parkinson's disease.

PRECAUTIONS

Contraindications: Concurrent use of meperidine. ***Orally-disintegrating tablet (additional):*** Concurrent use of dextromethorphan, methadone, tramadol, oral selegine, other MAOIs. ***Transdermal (additional):*** Pheochromocytoma; concurrent use of bupropion, selective serotonin reuptake inhibitors (e.g., fluoxetine), dual serotonin/norepinephrine reuptake inhibitors (e.g., duloxetine), tricyclic antidepressants, buspirone, tramadol, methadone, dextromethorphan, St. John's wort, mirtazapine, cyclobenzaprine, oral selegine, other MAOIs, carbamazepine, oxcarbazepine. **Cautions:** Pts at high risk for suicide, depression, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Fluoxetine, fluvoxamine, paroxetine, sertraline, venlafaxine may cause mania, serotonin syndrome (altered mental status, restlessness, diaphoresis, diarrhea, fever). **Meperidine** may cause potentially fatal reaction (e.g., excitation, diaphoresis, rigidity, hypertension/hypotension, coma, death). **Tricyclic antidepressants** may cause asystole, diaphoresis, hypertension, syncope, altered mental status, hyperpyrexia, seizures, tremors (wait 14 days between stopping selegiline and starting tricyclic antidepressants). **HERBAL: Kava kava, SAMe, St. John's wort, valerian** may increase risk of serotonin syndrome, excessive sedation. **FOOD: Tyramine-rich foods** may produce hypertensive reactions. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules (Eldepryl): 5 mg. **Tablets (Eldepryl):** 5 mg. **Tablets (Orally-Disintegrating [Zelapar]):** 1.25 mg. **Transdermal (Emsam):** 6 mg/24 hrs, 9 mg/24 hrs, 12 mg/24 hrs.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Avoid tyramine-containing foods, large quantities of caffeine-containing beverages.

PO (Orally-Disintegrating Tablets)

• Give in morning before breakfast and without liquid. • Peel off backing with dry hands (do not push tablets through foil). • Immediately place on top of tongue, allow to disintegrate. • Avoid food, liquids for 5 min before and after taking selegiline.

Transdermal

• Apply to dry, intact skin on upper torso or thigh, outer surface of upper arm.

INDICATIONS/ROUTES/DOSAGE

Adjunctive Treatment of Parkinson's Disease

PO: ADULTS (ELDEPRYL): 10 mg/day in divided doses, such as 5 mg at breakfast and lunch, given concomitantly with each dose of carbidopa and levodopa. **ELDERLY:** Initially, 5 mg in the morning. May increase up to 10 mg/day. **ADULTS, ELDERLY (ZELAPAR):** Initially, 1.25 mg daily for at least 6 wks. May increase to 2.5 mg/day.

Major Depressive Disorder

Transdermal: ADULTS: Initially, 6 mg/24 hrs. May increase in 3 mg/24 hrs increments at minimum of 2 wks. **Maximum:** 12 mg/24 hrs. **ELDERLY:** 6 mg/24 hrs.

SIDE EFFECTS

Frequent (10%–4%): Nausea, dizziness, light-headedness, syncope, abdominal discomfort. **Occasional (3%–2%):** Confusion, hallucinations, dry mouth, vivid dreams, dyskinesia. **Rare (1%):** Headache, myalgia, anxiety, diarrhea, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Symptoms of overdose may vary from CNS depression (sedation, apnea, cardiovascular collapse, death) to severe paradoxical reactions (hallucinations, tremor, seizures). Impaired motor coordination, (loss of balance, blepharospasm [uncontrolled blinking], facial grimaces, feeling of heaviness in lower extremities), depression, nightmares, delusions, overstimulation, sleep disturbance, anger, hallucinations, confusion may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain accurate medication history, diet history. Assess current state of mental health.

INTERVENTION/EVALUATION

Be alert to neurologic effects (headache, lethargy, mental confusion, agitation). Monitor for evidence of dyskinesia (difficulty with movement). Assess for clinical reversal of symptoms (improvement of tremors of head/hands at rest, mask-like facial expression, shuffling gait, muscular rigidity). Monitor for unusual behavior, worsening depression, suicidal ideation, especially at initiation of therapy or with changes in dosage.

PATIENT/FAMILY TEACHING

• Tolerance to feeling of light-headedness develops during therapy. • To reduce hypotensive effect, rise slowly from lying to sitting position, permit legs to dangle momentarily before standing. • Avoid tasks that require alertness, motor skills until response to drug is established. • Dry mouth, drowsiness, dizziness may be an expected response to drug. • Avoid alcohol during therapy. • Coffee, tea may help reduce drowsiness. • Notify physician of worsening depression, unusual behavior, thoughts of suicide.

S

senna

sen-na
(Ex-Lax, Perdiem, Senexon, Senna-Gen, Senokot)

Do not confuse Perdiem with Pyridium, or Senokot with Depakote.

FIXED-COMBINATION(S)

Gentlax-S, Senokot-S: senna/docusate (a laxative): 8.6 mg/50 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: GI stimulant. **CLINICAL:** Laxative (see p. 122C).

ACTION

Direct effect on intestinal smooth musculature (stimulates intramural nerve plexi). **Therapeutic Effect:** Increases peristalsis, promotes laxative effect.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	6–12 hrs	N/A	N/A
Rectal	0.5–2 hrs	N/A	N/A

Minimal absorption after PO administration. Hydrolyzed to active form by enzymes of colonic flora. Absorbed drug metabolized in the liver. Eliminated in feces via biliary system.

USES

Short-term use for constipation, to evacuate colon before bowel/rectal examinations.

PRECAUTIONS

Contraindications: Undiagnosed abdominal pain, appendicitis, intestinal obstruction, nausea, vomiting. **Cautions:** Prolonged use (longer than 1 wk).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 6 yrs. **Elderly:** No age-related precautions noted; monitor for signs of dehydration, electrolyte loss.

INTERACTIONS

DRUG: May decrease transit time of concurrently administered **oral medications,** decreasing absorption. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose. May decrease serum potassium.

AVAILABILITY (OTC)

Syrup (Senokot): 8.8 mg/5 ml. **Tablets (Senexon, Senna-Gen, Senokot):** 8.6 mg. **(Ex-Lax, Perdiem):** 15 mg.

ADMINISTRATION/HANDLING

PO

• Give on an empty stomach (decreases time to effect). • Offer at least 6–8 glasses of water/day (aids stool softening). • Avoid giving within 1 hr of other oral medication (decreases drug absorption). • Syrup can be mixed with juice, milk, ice cream.

INDICATIONS/ROUTES/DOSAGE

Constipation

PO *(Tablets)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2 tablets at bedtime. **Maximum:** 4 tablets twice daily. **CHILDREN 6–11 YRS:** 1 tablet at bedtime. **Maximum:** 2 tablets twice daily. **CHILDREN 2–5 YRS:** ½ tablet at bedtime. **Maximum:** 1 tablet twice daily.

PO *(Syrup)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 10–15 ml at bedtime. **Maximum:** 15 ml twice daily. **CHILDREN 6–11 YRS:** 5–7.5 ml at bedtime. **Maximum:** 7.5 ml twice daily. **CHILDREN 2–5 YRS:** 2.5–3.75 ml at bedtime. **Maximum:** 3.75 ml twice daily.

Bowel Evacuation

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 1 YR: 75 ml between 2 PM and 4 PM on day prior to procedure.

SIDE EFFECTS

Frequent: Pink-red, red-violet, red-brown, or yellow-brown discoloration of urine. **Occasional:** Some degree of abdominal discomfort, nausea, mild cramping, faintness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term use may result in laxative dependence, chronic constipation, loss of normal bowel function. Prolonged use/ overdose may result in electrolyte, metabolic disturbances (e.g., hypokalemia, hypocalcemia, metabolic acidosis or alkalosis), vomiting, muscle weakness, persistent diarrhea, malabsorption, weight loss.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. Assess for GI disturbances. Monitor serum electrolytes in pts exposed to prolonged, frequent, excessive use of medication.

PATIENT/FAMILY TEACHING

• Urine may turn pink-red, red-violet, red-brown, yellow-brown (only temporary and not harmful). • Institute measures to promote defecation (increase fluid intake, exercise, high-fiber diet). • Laxative effect generally occurs in 6–12 hrs but may take 24 hrs. • Do not take other oral medication within 1 hr of taking senna (decreased effectiveness).

sertraline

TOP 200

sir-trah-leen
(Apo-Sertraline, PMS-Sertraline, Zoloft)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse sertraline with selegiline, Serentil, or Serevent, or Zoloft with Zocor.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin reuptake inhibitor. **CLINICAL:** Antidepressant, anxiolytic, obsessive-compulsive disorder adjunct (see p. 39C).

ACTION

Blocks reuptake of the neurotransmitter serotonin at CNS neuronal presynaptic membranes, increasing availability at postsynaptic receptor sites. **Therapeutic Effect:** Relieves depression, reduces obsessive-compulsive behavior, decreases anxiety.

PHARMACOKINETICS

Incompletely, slowly absorbed from GI tract; food increases absorption. Protein binding: 98%. Widely distributed. Undergoes extensive first-pass metabolism in liver to active compound. Excreted in urine, feces. Not removed by hemodialysis. **Half-life:** 26 hrs.

USES

Treatment of major depressive disorders, panic disorder, obsessive-compulsive disorder (OCD), post-traumatic stress disorder (PTSD), premenstrual dysphoric disorder (PMDD), social anxiety disorder. **OFF-LABEL:** Eating disorders, generalized anxiety disorder (GAD), impulse control disorders, mild dementia-associated agitation in nonpsychotic pts.

PRECAUTIONS

Contraindications: MAOI use within 14 days. Concurrent use of oral concentrate with disulfiram. **Cautions:** Seizure disorders, hepatic/renal impairment, suicidal pts, pts at risk for uric acid nephropathy, pts in third trimester of pregnancy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Children and adolescents are at increased risk for suicidal ideation and behavior or worsening of depression, esp. during the first few mos of therapy. **Elderly:** No age-related precautions noted, but lower initial dosages recommended.

S

INTERACTIONS

DRUG: May increase risk of bleeding with **aspirin, NSAIDs, warfarin.** May increase concentration, risk of toxicity of **highly protein-bound medications (e.g., digoxin, warfarin). MAOIs** may cause neuroleptic malignant syndrome, hypertensive crisis, hyperpyrexia, seizures, serotonin syndrome (diaphoresis, diarrhea, fever, mental changes, restlessness, shivering). May increase concentration, toxicity of **tricyclic antidepressants. HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May increase total serum cholesterol, triglycerides, AST, ALT. May decrease serum uric acid.

AVAILABILITY (Rx)

Oral Concentrate: 20 mg/ml. **Tablets:** 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Give with food, milk if GI distress occurs. • Oral concentrate must be diluted before administration. Mix with 4 oz water, ginger ale, lemon/lime soda, or orange juice *only.* Give immediately after mixing.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: Initially, 50 mg/day. May increase by 50 mg/day at 7-day intervals up to 200 mg/day. **ELDERLY:** Initially, 25 mg/day. May increase by 25–50 mg/day at 7-day intervals up to 200 mg/day.

Obsessive-Compulsive Disorder (OCD)

PO: ADULTS, CHILDREN 13–17 YRS: Initially, 50 mg/day with morning or evening meal. May increase by 50 mg/day at 7-day intervals up to 200 mg/day. **ELDERLY, CHILDREN 6–12 YRS:** Initially, 25 mg/day. May increase by 25–50 mg/day at 7-day intervals. **Maximum:** 200 mg/day.

Panic Disorder, Post-Traumatic Stress Disorder (PTSD), Social Anxiety Disorder (SAD)

PO: ADULTS, ELDERLY: Initially, 25 mg/day. May increase by 50 mg/day at 7-day intervals. Range: 50–200 mg/day. **Maximum:** 200 mg/day.

Premenstrual Dysphoric Disorder (PMDD)

PO: ADULTS: Initially, 50 mg/day. May increase up to 150 mg/day per menstrual cycle in 50-mg increments.

SIDE EFFECTS

Frequent (26%–12%): Headache, nausea, diarrhea, insomnia, drowsiness, dizziness, fatigue, rash, dry mouth. **Occasional (6%–4%):** Anxiety, nervousness, agitation, tremor, dyspepsia (heartburn, indigestion, epigastric pain), diaphoresis, vomiting, constipation, sexual dysfunction, visual disturbances, altered taste. **Rare (less than 3%):** Flatulence, urinary frequency, paresthesia, hot flashes, chills.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serotonin syndrome (seizures, arrhythmias, high fever), neuroleptic malignant syndrome (muscle rigidity, cognitive changes), suicidal ideation have occurred.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess appearance, behavior, speech patterns, level of interest, mood. For those on long-term therapy, serum hepatic/renal function tests, blood counts should be performed periodically.

INTERVENTION/EVALUATION

Assess mental status for depression, suicidal ideation (esp. at beginning of therapy or change in dosage), anxiety, social function, panic attack. Monitor daily pattern of bowel activity, stool consistency. Assist with ambulation if dizziness occurs.

PATIENT/FAMILY TEACHING

• Dry mouth may be relieved by sugarless gum, sips of tepid water. • Report headache, fatigue, tremor, sexual dysfunction. • Avoid tasks that require alertness, motor skills until response to drug is established (may cause dizziness, drowsiness). • Take with food if nausea occurs. • Inform physician if pregnancy occurs. • Avoid alcohol. • Do not take OTC medications without consulting physician. • Report worsening of depression, suicidal ideation.

sevelamer

se-**vel**-a-mer
(Renagel, Renvela)
Do not confuse Renagel with Reglan, Regonol, or Renvela, or sevelamer with Savella.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Polymeric phosphate binder. **CLINICAL:** Antihyperphosphatemia agent.

ACTION

Binds with dietary phosphorus in GI tract, allowing phosphorus to be eliminated through normal digestive process, decreasing serum phosphorus level. **Therapeutic Effect:** Decreases incidence of hypercalcemic episodes in pts receiving calcium acetate treatment.

PHARMACOKINETICS

Not absorbed systemically. Unknown if removed by hemodialysis.

USES

Reduction of serum phosphorus in pts with chronic renal disease on hemodialysis.

PRECAUTIONS

Contraindications: Bowel obstruction, hypophosphatemia. **Cautions:** Dysphagia, severe GI tract motility disorders, major GI tract surgery, swallowing disorders.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Powder for Oral Suspension (Renvela): 0.8 g/pack, 2.4 g/pack.

Tablets (Renagel): 400 mg, 800 mg. **(Renvela):** 800 mg.

ADMINISTRATION/HANDLING

PO

• Give with meals. • Space other medication by at least 1 hr before or 3 hrs after sevelamer. • Swallow tablets whole; do not break, crush, dissolve, or divide. • **Oral Suspension:** Mix 0.8 g with 30 ml water (2.4 g with 60 ml water). Stir vigorously to suspend (does not dissolve) just prior to drinking.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ 667 mg calcium acetate equivalent to 800 mg sevelamer.

Hyperphosphatemia

PO: ADULTS, ELDERLY: 800–1,600 mg with each meal, depending on severity of hyperphosphatemia (5.5–7.4 mg/dl: 800 mg 3 times daily; 7.5–8.9 mg/dl: 1,200–1,600 mg 3 times daily; 9 mg/dl or greater: 1,600 mg 3 times daily). Maintenance: Based on serum phosphorus concentrations. Goal range: 3.5–5.5 mg/dl.

Serum Phosphorus Concentration	Dosage
Greater than 5.5 mg/dl	Increase by 400–800 mg per meal at 2-wk intervals
3.5–5.5 mg/dl	Maintain current dosage
Less than 3.5 mg/dl	Decrease by 400–800 mg per meal

S

SIDE EFFECTS

Frequent (20%–11%): Infection, pain, hypotension, diarrhea, dyspepsia, nausea, vomiting. **Occasional (10%–1%):** Headache, constipation, hypertension, increased cough.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombosis occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum phosphorus; assess for bowel obstruction.

INTERVENTION/EVALUATION

Monitor serum phosphorus, bicarbonate, chloride, calcium.

PATIENT/FAMILY TEACHING

• Take with meals, swallow tablets whole; do not chew, crush, dissolve, or divide tablets. • Report persistent headache, nausea, vomiting, diarrhea, hypotension.

sildenafil

TOP 200

sill-**den**-a-fill
(Revatio, Viagra)
Do not confuse Revatio with ReVia, sildenafil with silodosin, tadalafil, or vardenafil, or Viagra with Allegra or Vaniqa.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphodiesterase-5 enzyme (PDE5) inhibitor. **CLINICAL:** Erectile dysfunction adjunct.

ACTION

Inhibits type 5 cyclic guanosine monophosphate (a specific phosphodiesterase), a predominant isoenzyme of pulmonary vascular smooth muscle, corpus cavernosum of penis. **Therapeutic Effect:** Relaxes smooth muscle, increases blood flow, facilitating erection.

USES

Viagra: Treatment of male erectile dysfunction. **Revatio:** Treatment of pulmonary arterial hypertension. **OFF-LABEL:** Treatment of pulmonary arterial hypertension in children.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	—	2–4 hrs

Rapidly absorbed. Protein binding: 96%. Metabolized in liver. Primarily eliminated in feces. **Half-life:** 4 hrs.

PRECAUTIONS

Contraindications: Concurrent use of nitrates in any form. Concurrent use of protease inhibitors when used for pulmonary arterial hypertension. **Cautions:** Cardiac, hepatic/renal impairment; resting hypotension or hypertension; anatomic deformation of penis; pts who may be predisposed to priapism (sickle cell anemia, multiple myeloma, leukemia). **Pregnancy Category B.**

INTERACTIONS

DRUG: **Alpha-adrenergic blocking agents** may increase symptomatic hypotension. **Protease inhibitors** may increase concentration, toxicity. **Cimetidine, CYP3A4 inhibitors** (e.g., **erythromycin, itraconazole, ketoconazole**) may increase concentration. Potentiates hypotensive effects of **nitrates.** **HERBAL:** **St. John's wort** may decrease concentration. **FOOD:** **High-fat meals** delay maximum effectiveness by 1 hr. Grapefruit may decrease blood pressure, increase heart rate. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Injection, Solution: 0.8 mg/ml. **Tablets: (Revatio):** 20 mg. **(Viagra):** 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• **Viagra:** May take approximately 1 hr before sexual activity but may be taken any time from 30 min–4 hrs before sexual activity. • Revatio may be given without regard to meals. • Give tablets at least 4–6 hrs apart.

IV

• Give as bolus injection.

INDICATIONS/ROUTES/DOSAGE

Erectile Dysfunction

PO: ADULTS: 50 mg (30 min–4 hrs before sexual activity). Range: 25–100 mg. Maximum dosing frequency is once a day. **ELDERLY OLDER THAN 65 YRS, CREATININE CLEARANCE LESS THAN 30 ML/MIN:** Consider starting dose of 25 mg. **CONCURRENT PROTEASE INHIBITOR:** 25 mg q48h.

Pulmonary Arterial Hypertension

PO: ADULTS, ELDERLY: 20 mg 3 times daily taken 4–6 hrs apart. **CHILDREN:** 0.25–2 mg/kg/dose q4–6h. May increase to 2 mg/kg/dose.
IV: ADULTS, ELDERLY: 10 mg 3 times daily.

SIDE EFFECTS

Frequent: Headache (16%), flushing (10%). **Occasional (7%–3%):** Dyspepsia (heartburn, indigestion, epigastric pain), nasal congestion, UTI, abnormal vision, diarrhea. **Rare (2%):** Dizziness, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged erections (lasting over 4 hrs), priapism (painful erections lasting over 6 hrs) occur rarely. Sudden hearing decrease or loss; sudden loss of vision in one or both eyes noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Viagra: Determine if pt has other medical conditions, including angina, cardiac disease, benign prostatic hyperplasia (BPH). Assess pt's baseline serum renal/hepatic function. **Revatio:** Obtain baseline ABGs; assess pulmonary function, cardiovascular status.

INTERVENTION/EVALUATION

Monitor pulse, B/P, oxygen saturation, PaO_2.

PATIENT/FAMILY TEACHING

• Sildenafil has no effect in absence of sexual stimulation. • Seek treatment immediately if erection lasts longer than 4 hrs. • Avoid nitrate drugs while taking sildenafil. • Inform pt that Revatio is not to be taken with Viagra or other PDE5 inhibitors. • Seek medical attention in event of sudden loss of vision or sudden decrease or loss of hearing (may be accompanied by tinnitus or dizziness).

silodosin

sil-oh-**doe**-sin
(Rapaflo)
Do not confuse Rapaflo with Rapamune.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Alpha_1$-adrenergic blocker. **CLINICAL:** Benign prostatic hyperplasia agent.

ACTION

Blocks alpha-adrenergic receptors. Produces vasodilation, decreases peripheral resistance, targets receptors around bladder neck, prostate. **Therapeutic Effect:** Relaxes smooth muscle, improves urinary flow.

PHARMACOKINETICS

Well absorbed following PO administration. Widely distributed. Protein binding: 97%. Metabolized in liver. Primarily excreted in feces with a lesser amount eliminated in urine. **Half-life:** 9–13 hrs.

USES

Treatment of signs and symptoms of benign prostatic hyperplasia.

S

PRECAUTIONS

Contraindications: Severe renal impairment (creatinine clearance less than 30 ml/min), severe hepatic impairment (Child-Pugh score equal to or less than 10), concurrent administration with ketoconazole, clarithromycin, itraconazole, ritonavir. **Cautions:** Moderate renal/hepatic impairment.

LIFESPAN CONSIDERATIONS:

Pregnancy/Lactation: Not indicated for use in women. **Pregnancy Category B. Children:** Not indicated for this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Other alpha-adrenergic blocking agents (alfuzosin, doxazosin, prazosin, tamsulosin, terazosin)** may have additive effect. **Diltiazem, erythromycin, verapamil** may increase concentration. **CYP3A4 inhibitors (e.g., clarithromycin, itraconazole, ketoconazole, ritonavir)** significantly increase concentration (concurrent use contraindicated). **HERBAL:** None significant. **FOOD:** **Grapefruit, grapefruit juice** may increase risk of orthostatic hypotension. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 4 mg, 8 mg.

ADMINISTRATION/HANDLING

PO

• Give with a meal. • Swallow whole; do not break, crush, dissolve, or divide capsule.

INDICATIONS/ROUTES/DOSAGE

Benign Prostatic Hyperplasia

PO: ADULTS, MILD RENAL IMPAIRMENT: 8 mg once daily, with a meal.

Moderate Renal Impairment (Creatinine Clearance 30–50 ml/min)

PO: ADULTS: 4 mg once daily, with a meal (contraindicated with creatinine clearance less than 30 ml/min).

SIDE EFFECTS

Frequent: (28%): Retrograde ejaculation. **Occasional (3%–2%):** Dizziness, diarrhea, orthostatic hypotension, headache nasopharyngitis, nasal congestion. **Rare: (1% or Less):** Insomnia, sinusitis, abdominal pain, asthenia (loss of strength, energy).

ADVERSE EFFECTS/ TOXIC REACTIONS

First-dose syncope (orthostatic hypotension with sudden loss of consciousness) may occur shortly after giving initial dose. May be preceded by tachycardia (120–160 beats/min). Recovery occurs spontaneously.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline renal/hepatic function tests. Give first dose at bedtime. If initial dose is given during daytime, assess B/P, pulse immediately before dose, and q15–30 min after (be alert to B/P fluctuations, postural hypotension).

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Monitor renal/hepatic function. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Use caution when getting up from sitting or lying position. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not chew, crush, or open capsule.

silver sulfadiazine

sul-fa-**dye**-ah-zeen
(Flamazine, Silvadene, SSD, SSD AF, Thermazene)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-infective. **CLINICAL:** Anti-bacterial burn preparation.

ACTION

Acts on cell wall/cell membrane in concentrations selectively toxic to bacteria. **Therapeutic Effect:** Produces bactericidal effect.

USES

Prevention, treatment of infection in second- and third-degree burns.

PRECAUTIONS

Contraindications: Premature neonates, infants younger than 2 mos. **Cautions:** Renal/hepatic impairment, G6PD deficiency. **Pregnancy Category B.**

INTERACTIONS

DRUG: Concurrent use may inactivate **collagenase, papain, sutilains.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Topical Cream (Silvadene, SSD, SSD AF, Thermazene): 1% (10 mg/g).

ADMINISTRATION/HANDLING

Topical

• Apply to cleansed, debrided burns using sterile glove. • Keep burn areas covered with silver sulfadiazine cream at all times; reapply to areas where removed by pt activity. • Dressings may be ordered on individual basis.

INDICATIONS/ROUTES/DOSAGE

Usual Topical Dosage

Topical: ADULTS, ELDERLY, CHILDREN: Apply 1–2 times daily.

SIDE EFFECTS

Side effects characteristic of all sulfonamides may occur when systemically absorbed (extensive burn areas [over 20% of body surface]): anorexia, nausea, vomiting, headache, diarrhea, dizziness, photosensitivity, arthralgia. **Frequent:** Burning, stinging sensation at treatment site. **Occasional:** Brown-gray skin discoloration, rash, itching. **Rare:** Increased sensitivity of skin to sunlight.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hemolytic anemia, hypoglycemia, diuresis, peripheral neuropathy, Stevens-Johnson syndrome, agranulocytosis, disseminated lupus erythematosus, anaphylaxis, hepatitis, toxic nephrosis possible with significant systemic absorption. Fungal superinfections may occur. Interstitial nephritis occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine initial CBC, serum renal/hepatic function test results.

INTERVENTION/EVALUATION

Monitor serum electrolytes, urinalysis, renal function, CBC if burns are extensive, therapy prolonged.

PATIENT/FAMILY TEACHING

• For external use only; may discolor skin.

simethicone

sye-**meth**-i-kone
(Gas-X, Genasyme, Infant Mylicon, Mylanta Gas, Ovol, Phazyme)
Do not confuse simethicone with cimetidine, Mylicon with Myleran.

FIXED-COMBINATION(S)

Mylanta, Extra Strength Maalox, Aludrox: simethicone/magnesium and aluminum hydroxide (antacids): 20 mg/200 mg/200 mg, 40 mg/400 mg/400 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiflatulent. **CLINICAL:** Antiflatulent.

ACTION

Changes surface tension of gas bubbles, allowing easier elimination of gas. **Ther-**

S

apeutic Effect: Disperses, prevents formation of gas pockets in GI tract.

PHARMACOKINETICS

Does not appear to be absorbed from GI tract. Excreted unchanged in feces.

USES

Treatment of flatulence, gastric bloating, postop gas pain, when gas retention may be problem (i.e., peptic ulcer, spastic colon, air swallowing).

PRECAUTIONS

Contraindications: None known. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Oral Drops (Infant Mylicon): 40 mg/0.6 ml. **Softgel:** 125 mg (Gas-X, Mylanta Gas), 180 mg (Phazyme). **Tablets (Chewable):** 80 mg (Gas-X, Genasyme, Mylanta Gas), 125 mg (Gas-X, Mylanta Gas).

ADMINISTRATION/HANDLING

PO

• Give after meals and at bedtime as needed. • Chewable tablets are to be chewed thoroughly before swallowing. • Shake suspension well before using.

INDICATIONS/ROUTES/DOSAGE

Antiflatulent

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 40–125 mg after meals and at bedtime. **Maximum:** 500 mg/day. **CHILDREN 2–11 YRS:** 40 mg 4 times a day.

CHILDREN YOUNGER THAN 2 YRS: 20 mg 4 times a day.

SIDE EFFECTS

None known.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Evaluate for therapeutic response (relief of flatulence, abdominal bloating).

PATIENT/FAMILY TEACHING

• Avoid carbonated beverages. • To reduce air swallowing, take after meals and at bedtime for best results.

simvastatin

TOP 200

sim-vah-**stat**-tin
(Apo-Simvastatin, Zocor)
Do not confuse simvastatin with atorvastatin, lovastatin, nystatin, pitavastatin, or pravastatin, or Zocor with Cozaar, Lipitor, Zoloft, or Zyrtec.

FIXED-COMBINATION(S)

Juvisync: simvastatin/sitagliptin (an antidiabetic agent): 10 mg/100 mg, 20 mg/100 mg, 40 mg/100 mg. **Simcor:** simvastatin/niacin (an antilipemic agent): 20 mg/500 mg, 40 mg/500 mg, 20 mg/750 mg, 20 mg/1,000 mg, 40 mg/1,000 mg. **Vytorin:** simvastatin/ezetimibe (a cholesterol absorption inhibitor): 10 mg/10 mg, 20 mg/10 mg, 40 mg/10 mg, 80 mg/10 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydroxymethylglutaryl-CoA (HMG-CoA) reductase inhibitor. **CLINICAL:** Antihyperlipidemic (see p. 58C).

ACTION

Interferes with cholesterol biosynthesis by inhibiting conversion of the enzyme HMG-CoA to mevalonate. **Therapeutic Effect:** Decreases LDL, cholesterol, VLDL, triglyceride levels; slight increase in HDL concentration.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 95%. Undergoes extensive first-pass metabolism. Hydrolyzed to active metabolite. Primarily eliminated in feces. Unknown if removed by hemodialysis.

Route	Onset	Peak	Duration
PO (to reduce cholesterol)	3 days	14 days	N/A

USES

Secondary prevention of cardiovascular events in pts with hypercholesterolemia and coronary heart disease (CHD) or at high risk for CHD. Treatment of hyperlipidemias to reduce elevations in total serum cholesterol, LDL-C, apolipoprotein B, triglycerides, VLDL-C and increase HDL-C. Treatment of homozygous familial hypercholesterolemia. Treatment of heterozygous familial hypercholesterolemia in adolescents (10–17 yrs, females more than 1 yr postmenarche).

PRECAUTIONS

Contraindications: Active hepatic disease or unexplained, persistent elevations of hepatic function test results, pregnancy, breast-feeding. **Cautions:** History of hepatic disease, diabetes, renal impairment, substantial alcohol consumption. Withholding or discontinuing simvastatin may be necessary when pt is at risk for renal failure secondary to rhabdomyolysis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (suppression of cholesterol biosynthesis may cause fetal toxicity), lactation. Risk of serious adverse reactions in breast-feeding infants. **Pregnancy Category X. Children:** Safety and efficacy not established in children less than 10 yrs of age or in premenarcheal girls. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Cyclosporine, CYP3A4 inhibitors (e.g., **ketoconazole, erythromycin,**), **amiodarone, calcium channel blockers, colchicine, fibrates, gemfibrozil, niacin, ranolazine** may increase risk of acute renal failure, rhabdomyolysis. **HERBAL: St. John's wort** may decrease concentration. **FOOD: Grapefruit, grapefruit juice** may increase concentration, toxicity. **Red yeast rice** contains 2.4 mg **lovastatin** per 600 mg rice. **LAB VALUES:** May increase serum creatine kinase (CK), transaminase.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Administer in evening for maximum efficacy.

INDICATIONS/ROUTES/DOSAGE

Note: Limit 80 mg dose to pts taking simvastatin longer than 12 months without evidence of myopathy.

Prevention of Cardiovascular Events, Hyperlipidemias

PO: ADULTS, ELDERLY: 20–40 mg once a day. Range: 5–80 mg/day. (80 mg not recommended).

Homozygous Familial Hypercholesterolemia

PO: ADULTS, ELDERLY: 40 mg once a day in evening.

Heterozygous Familial Hypercholesterolemia

PO: CHILDREN 10–17 YRS: 10 mg once a day in evening. Range: 10–40 mg/day.

Dosing Adjustment with Medications

Cyclosporine, gemfibrozil: Do not exceed 10 mg/day. **Amiodarone, amlo-**

S

dipine, ranolazine: Do not exceed 20 mg/day. **Diltiazem, verapamil:** Do not exceed 10 mg/day.

Dosage In Renal Impairment
Creatinine clearance less than 30 ml/min: initially, 5 mg/day.

SIDE EFFECTS

Generally well tolerated. Side effects are usually mild and transient. **Occasional (3%–2%):** Headache, abdominal pain/cramps, constipation, upper respiratory tract infection. **Rare (less than 2%):** Diarrhea, flatulence, asthenia (loss of strength, energy), nausea/vomiting, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Potential for lens opacities. Hypersensitivity reaction, hepatitis occur rarely. Myopathy (muscle pain, tenderness, weakness with elevated serum creatine kinase [CK], sometimes taking the form of rhabdomyolysis) has occurred.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain dietary history, esp. fat consumption. Question for possibility of pregnancy before initiating therapy (Pregnancy Category X). Question for history of hypersensitivity to simvastatin. Assess baseline lab results: serum cholesterol, triglycerides, hepatic function tests.

INTERVENTION/EVALUATION

Monitor serum cholesterol, triglyceride lab results for therapeutic response. Monitor hepatic function tests. Monitor daily pattern of bowel activity, stool consistency. Assess for headache, myopathy.

PATIENT/FAMILY TEACHING

• Use appropriate contraceptive measures (Pregnancy Category X). • Periodic lab tests are essential part of therapy. • Maintain appropriate diet. • Report unexplained muscle pain, tenderness, weakness.

sirolimus

sir-oh-**lee**-mus
(Rapamune)

BLACK BOX ALERT Increased susceptibility to infection and potential for development of lymphoma. Not recommended for liver or lung transplant pts.

Do not confuse Rapamune with Rapaflo, or sirolimus with everolimus, pimecrolimus, tacrolimus, or temsirolimus.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunosuppressant. **CLINICAL:** Immunosuppressant (see p. 119C).

ACTION

Inhibits T-lymphocyte proliferation induced by stimulation of cell surface receptors, mitogens, alloantigens, lymphokines. Prevents activation of enzyme target of rapamycin (TOR), a key regulatory kinase in cell cycle progression. **Therapeutic Effect:** Inhibits proliferation of T and B cells (essential components of immune response), prevents organ transplant rejection.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 92%. Extensively metabolized in liver. Primarily eliminated in feces; minimal excretion in urine. **Half-life:** 57–63 hrs.

USES

Prophylaxis of organ rejection in pts after renal transplant in combination with cyclosporine and corticosteroids, including treatment of high immunologic risk in renal transplant recipient. **OFF-LABEL:** Immunosuppression in peripheral stem cell/bone marrow transplantation. Prophylaxis of organ rejection in heart transplant recipients. Treatment of soft tissue sarcoma.

PRECAUTIONS

Contraindications: None known. **Cautions:** Cardiovascular disease (CHF, hypertension); pulmonary disease, hepatic impairment, renal impairment, hyperlipidemia, perioperative period due to increased chance of surgical complications from impaired wound and tissue healing.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 13 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifabutin, rifampin, rifapentine) may decrease concentration/effects. **CYP3A4 inhibitors (e.g., clarithromycin, diltiazem, erythromycin, itraconazole, ketoconazole, verapamil, voriconazole)** may increase concentration, toxicity. May increase concentration/effects of **cyclosporine. HERBAL: St. John's wort** may decrease concentration. **Cat's claw, echinacea** possess immunostimulant properties. **Garlic, ginger, ginseng** may increase hypoglycemia. **FOOD: Grapefruit, grapefruit juice** may increase risk of myelotoxicity nephrotoxicity. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, LDH, BUN, creatine phosphate, cholesterol, triglycerides, creatinine. May alter WBC, serum glucose, calcium. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Oral Solution: 1 mg/ml.

Tablets: 0.5 mg, 1 mg, 2 mg.

ADMINISTRATION/HANDLING

• Doses should be taken 4 hrs after cyclosporine. • Take consistently with or without food. • Do not break, crush, dissolve, or divide tablets. • Mix oral solution with only water or orange juice, stir vigorously, drink immediately.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Tablets and oral solution are not bioequivalent.

Prevention of Organ Transplant Rejection (Low to Moderate Risk)

PO: ADULTS, CHILDREN 13 YRS AND OLDER WEIGHING MORE THAN 40 KG: Loading dose: 6 mg. Maintenance: 2 mg/day. **ADULTS, CHILDREN 13 YRS AND OLDER WEIGHING LESS THAN 40 KG:** Loading dose: 3 mg/m^2. Maintenance: 1 mg/m^2/day.

Prevention of Organ Transplant Rejection (High Risk)

PO: ADULTS: Loading dose: Up to 15 mg on day 1. Maintenance: 5 mg/day.

Dosage in Hepatic Impairment

Loading dose: No change. Maintenance dose: Mild to moderate impairment: reduce dose by 33%; severe impairment: reduce dose by 50%.

SIDE EFFECTS

Occasional: Hypercholesterolemia, hyperlipidemia, hypertension, rash. **High doses (5 mg/day):** Anemia, arthralgia, diarrhea, hypokalemia, thrombocytopenia. **Rare:** Peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity occurs rarely. Skin carcinoma (including basal cell, squamous cell, melanoma) has been observed.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum hepatic profile. Assess for pregnancy, lactation. Question for medication usage (esp. cyclosporine, diltiazem, ketoconazole, rifampin). Determine if pt has chickenpox, herpes zoster, malignancy, infection.

S

INTERVENTION/EVALUATION

Monitor serum renal/hepatic function periodically. Monitor cholesterol, triglycerides, platelets, Hgb.

PATIENT/FAMILY TEACHING

• Avoid those with colds, other infections. • Avoid grapefruit juice, grapefruit. • Avoid exposure to sunlight, artificial light sources. • Strict monitoring is essential in identifying, preventing symptoms of organ rejection. • Do not chew, crush, dissolve, or divide tablets.

sitagliptin

TOP 200 HIGH ALERT

sit-ah-**glip**-tin
(Januvia)
Do not confuse Januvia with Enjuvia, Jantoven, or Janumet, or sitagliptin with saxagliptin or sumatriptan.

FIXED-COMBINATION(S)

Janumet, Janumet XR: sitagliptin/metformin (an antidiabetic): 50 mg/500 mg, 50 mg/1,000 mg. **Juvisync:** sitagliptin/simvastatin (an antilipidemic agent): 100 mg/10 mg, 100 mg/20 mg, 100 mg/40 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: DPP-4 inhibitors (gliptins). **CLINICAL:** Antidiabetic agent (see p. 43C).

S

ACTION

Slows inactivation of incretin hormones (involved in regulation of glucose homeostasis). **Therapeutic Effect:** Increases synthesis, postmeal release of insulin from pancreatic cells; lowers postmeal glucagon secretion leading to reduced glucose output from liver.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	1–4 hrs	24 hrs

Rapidly absorbed following PO administration. Protein binding: 38%. Eliminated mainly in urine, with lesser amount excreted in feces. **Half-life:** 12 hrs.

USES

Adjunctive treatment to diet, exercise to improve glycemic control in pts with type 2 diabetes mellitus as monotherapy or in combination with metformin or glimepiride when a single agent alone, with diet and exercise, does not provide glycemic control.

PRECAUTIONS

Contraindications: None known. **Cautions:** Type I diabetes, diabetic ketoacidosis, renal impairment, end-stage renal disease, history of pancreatitis. Concurrent use of other glucose-lowering agents may increase risk of hypoglycemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May slightly increase WBCs, particularly neutrophil count. May increase serum creatinine.

AVAILABILITY (Rx)

Tablets (Film-Coated): 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Do not crush, break, chew film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Type 2 Diabetes

PO: ADULTS OVER 18 YRS, ELDERLY: 100 mg once daily.

Moderate Renal Impairment

Creatinine Clearance Equal to or Greater Than 30 ml/min to Less Than 50 ml/min: 50 mg once daily.

Severe Renal Impairment

Creatinine Clearance Less Than 30 ml/min: Dialysis: 25 mg once daily.

SIDE EFFECTS

Occasional (5% and greater): Headache, nasopharyngitis. **Rare (3%–1%):** Diarrhea, abdominal pain, nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reactions including angioedema, Stevens-Johnson syndrome reported. Acute pancreatitis occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose concentration before administration. Assess renal function. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt, family do not thoroughly understand diabetes management, glucose-testing technique.

INTERVENTION/EVALUATION

Monitor serum glucose, $HbgA_{1C}$, BUN, creatinine. Assess for hypoglycemia (diaphoresis, tremor, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia, difficulty concentrating), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep, rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity, stress, trauma, surgical procedures).

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. • Prescribed diet, exercise are principal part of treatment; do not skip, delay meals. • Continue to adhere to dietary instructions, regular exercise program, regular testing of serum glucose. • When taking combination drug therapy or when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity), have source of glucose available to treat symptoms of hypoglycemia. • Report nausea, vomiting, anorexia, severe abdominal pain, pancreatitis.

sodium bicarbonate

soe-dee-um bye-**kar**-boe-nate (Neut)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkalinizing agent. **CLINICAL:** Antacid electrolyte, urinary/systemic alkalinizer.

ACTION

Dissociates to provide bicarbonate ion. **Therapeutic Effect:** Neutralizes hydrogen ion concentration, raises blood, urinary pH.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15 min	N/A	1–3 hrs
IV	Immediate	N/A	8–10 min

Well absorbed following PO administration, sodium bicarbonate dissociates to sodium and bicarbonate ions. With increased hydrogen ion concentrations, bicarbonate ions combine with hydrogen ions to form carbonic acid, which then dissociates to CO_2, which is excreted by the lungs. Plasma concentration regulated by kidney (ability to form, excrete bicarbonate).

USES

Management of metabolic acidosis, antacid, alkalinization of urine, stabilizes acid-base status in cardiac arrest, life-threatening hyperkalemia. **OFF-LABEL:** Prevention of contrast-induced nephropathy.

S

PRECAUTIONS

Contraindications: Hypernatremia; unknown abdominal pain; excessive chloride loss; hypocalcemia; metabolic, respiratory alkalosis; severe pulmonary edema. **Cautions:** CHF, edematous states, renal insufficiency.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce hypernatremia, increase tendon reflexes in neonate or fetus whose mother is administered chronically high doses. May be distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. Do not use as antacid in those younger than 6 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentration, toxicity of **quinidine, quinine.** May decrease effect of **lithium. HERBAL:** None significant. **FOOD: Milk, other dairy products** may result in milk-alkali syndrome. **LAB VALUES:** May increase serum, urinary pH.

AVAILABILITY

Injection Solution (Rx): 0.5 mEq/ml (4.2%), 1 mEq/ml (8.4%). **Tablets (OTC):** 325 mg, 650 mg.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ For direct IV administration in neonates or infants, use 0.5 mEq/ml concentration.

Reconstitution • May give undiluted.

Rate of Administration • For IV push, give up to 1 mEq/kg over 1–3 min for cardiac arrest. • For IV infusion, do not exceed rate of infusion of 1 mEq/kg/hr. • For children younger than 2 yrs, premature infants, neonates, administer by slow infusion, up to 10 mEq/min.

Storage • Store at room temperature.

PO

• Do not give other PO medication within 1–2 hrs of antacid administration. • Give 1–3 hrs after meals.

IV INCOMPATIBILITIES

Amiodarone (Cordarone), ascorbic acid, calcium chloride, diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), hydromorphone (Dilaudid), magnesium sulfate, midazolam (Versed), norepinephrine (Levophed), total parenteral nutrition (TPN).

IV COMPATIBILITIES

Aminophylline, furosemide (Lasix), heparin, insulin, lidocaine, lipids, mannitol, milrinone (Primacor), morphine, phenylephrine (Neo-Synephrine), potassium chloride, propofol (Diprivan), vancomycin (Vancocin).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ May give by IV push, IV infusion, or orally. Dose individualized based on severity of acidosis, laboratory values, pt age, weight, clinical conditions. Do not fully correct bicarbonate deficit during the first 24 hrs (may cause metabolic alkalosis).

Cardiac Arrest

◀ALERT▶ Routine use not recommended.

IV: ADULTS, ELDERLY: Initially, 1 mEq/kg. May repeat with 0.5 mEq/kg in 10 min one time during continued cardiopulmonary arrest. Use in postresuscitation phase is based on arterial blood pH, partial pressure of carbon dioxide in arterial blood ($PaCO_2$), base deficit calculation. **CHILDREN, INFANTS:** Initially, 0.5–1 mEq/kg. Repeat in 10 min one time, or as indicated by pt's acid-base status.

Metabolic Acidosis (Mild to Moderate)

IV: ADULTS, ELDERLY, CHILDREN: 2–5 mEq/kg over 4–8 hrs. May repeat based on acid-base status.

Prevention of Contrast-Induced Nephropathy

IV Infusion: ADULTS, ELDERLY: 154 mEq/L sodium bicarbonate in D_5W solution: 3 ml/kg/hr 1 hr immediately before contrast injection, then 1 ml/kg/hr during contrast exposure and for 6 hrs after procedure.

Metabolic Acidosis (Associated With Chronic Renal Failure)

PO: ADULTS, ELDERLY: Initially, 20–36 mEq/day in divided doses. Titrate to bicarbonate level of 18–20 mEq/L. **CHILDREN:** 1–3 mEq/kg/day.

Renal Tubular Acidosis (Distal)

PO: ADULTS, ELDERLY: 0.5–2 mEq/kg/day in 4–6 divided doses. **CHILDREN:** 2–3 mEq/kg/day in divided doses.

Renal Tubular Acidosis (Proximal)

PO: ADULTS, ELDERLY, CHILDREN: 5–10 mEq/kg/day in divided doses.

Urine Alkalinization

PO: ADULTS, ELDERLY: Initially, 4 g, then 1–2 g q4h. **Maximum:** 16 g/day (8g/day in adults older than 60 yrs). **CHILDREN:** 84–840 mg/kg/day in divided doses q4–6h.

Antacid

PO: ADULTS, ELDERLY: 300 mg–2 g 1–4 times a day.

Hyperkalemia

IV: ADULTS, ELDERLY: 50 mEq over 5 min.

SIDE EFFECTS

Frequent: Abdominal distention, flatulence, belching.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive, chronic use may produce metabolic alkalosis (irritability, twitching, paresthesia, cyanosis, slow or shallow respirations, headache, thirst, nausea). Fluid overload results in headache, weakness, blurred vision, behavioral changes, incoordination, muscle twitching, elevated B/P, bradycardia, tachypnea, wheezing, coughing, distended neck veins. Extravasation may occur at the IV site, resulting in tissue necrosis, ulceration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for signs and symptoms of acidosis, alkalosis. Do not give PO medication within 1 hr of antacids.

INTERVENTION/EVALUATION

Monitor serum, urinary pH, CO_2 level, serum electrolytes, plasma bicarbonate levels. Watch for signs of metabolic alkalosis, fluid overload. Assess for clinical improvement of metabolic acidosis (relief from hyperventilation, weakness, disorientation). Monitor daily pattern of bowel activity, stool consistency. Monitor serum phosphate, calcium, uric acid levels. Assess for relief of gastric distress.

sodium chloride HIGH ALERT

so-dee-um **klor**-ide
(Muro 128, Nasal Moist, Ocean, SalineX)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Salt. **CLINICAL:** Electrolyte, isotonic volume expander, ophthalmic adjunct, bronchodilator.

ACTION

Sodium is a major cation of extracellular fluid. **Therapeutic Effect:** Controls water distribution, fluid and electrolyte balance, osmotic pressure of body fluids; maintains acid-base balance.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed. Primarily excreted in urine and, to a lesser degree, in sweat, tears, saliva.

S

USES

Parenteral: Source of hydration; prevention/treatment of sodium, chloride deficiencies (hypertonic for severe deficiencies). Prevention of muscle cramps, heat prostration occurring with excessive perspiration. **Nasal:** Restores moisture, relieves dry, inflamed nasal membranes. **Ophthalmic:** Therapy in reduction of corneal edema, diagnostic aid in ophthalmoscopic exam.

PRECAUTIONS

Contraindications: Fluid retention, hypernatremia, hypertonic uterus. **Cautions:** CHF, renal impairment, cirrhosis, hypertension, edema. Do not use sodium chloride preserved with benzyl alcohol in neonates.

LIFESPAN CONSIDERATIONS

Pregnancy Category C. Children/Elderly: No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effect of **lithium.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY

Injection (Concentrate) (Rx): 23.4% (4 mEq/ml). **Injection Solution (Rx):** 0.45%, 0.9%, 3%. **Irrigation (Rx):** 0.45%, 0.9%. **Nasal Gel (Nasal Moist) (OTC):** 0.65%. **Nasal Solution (OTC):** 0.4% (SalineX), 0.65% (Nasal Moist, Ocean). **Ophthalmic Ointment (OTC [Muro 128]):** 5%. **Ophthalmic Solution (OTC [Muro 128]):** 2%, 5%.

Tablets (OTC): 1 g.

ADMINISTRATION/HANDLING

IV

• Hypertonic solutions (3% or 5%) are administered via large vein; avoid infiltration; do not exceed 100 ml/hr. • Vials containing 2.5–4 mEq/ml (concentrated NaCl) must be diluted with D_5W or $D_{10}W$ before administration.

PO

• Do not crush/break enteric-coated or extended-release tablets. • Administer with full glass of water.

Nasal

• Instruct pt to begin inhaling slowly just before releasing medication into nose. • Instruct pt to inhale slowly, then release air gently through mouth. • Continue technique for 20–30 sec.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until pocket is formed between eye and lower lid. • Place prescribed number of drops (or ¼–½ inch of ointment) into pocket. • Instruct pt to close eye gently for 1–2 min so that medication will not be squeezed out of sac. • When lower lid is released, have pt keep eye open without blinking for at least 30 sec for solution; for ointment have pt close eye, roll eyeball around to distribute medication. • When using drops, apply gentle finger pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage based on age, weight, clinical condition; fluid, electrolyte, acid-base balance status.

Usual Parenteral Dosage

IV: ADULTS, ELDERLY, CHILDREN: Determined by laboratory determinations (mEq). Dosage varies widely based on clinical conditions.

Usual Oral Dosage

PO: ADULTS, ELDERLY: 1–2 g 3 times a day.

Usual Nasal Dosage

Intranasal: ADULTS, ELDERLY, CHILDREN: 2–3 sprays as needed.

Usual Ophthalmic Dosage

Ophthalmic Solution: ADULTS, ELDERLY: Apply 1–2 drops q3–4h.

Ophthalmic Ointment: ADULTS, ELDERLY: Apply once a day or as directed.

SIDE EFFECTS

Frequent: Facial flushing. **Occasional:** Fever; irritation, phlebitis, extravasation at injection site. **Ophthalmic:** Temporary burning, irritation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Too-rapid administration may produce peripheral edema, CHF, pulmonary edema. Excessive dosage may produce hypokalemia, hypervolemia, hypernatremia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum electrolyte studies. Assess fluid balance (I&O, daily weight, lung sounds, edema).

INTERVENTION/EVALUATION

Monitor fluid balance (I&O, daily weight, lung sounds, edema), IV site for extravasation. Monitor serum electrolytes, acid-base balance, B/P. Hypernatremia associated with edema, weight gain, elevated B/P; hyponatremia associated with muscle cramps, nausea, vomiting, dry mucous membranes.

PATIENT/FAMILY TEACHING

- Temporary burning, irritation may occur upon instillation of eye medication.
- Discontinue eye medication and contact physician if severe pain, headache, rapid change in vision (peripheral, direct), sudden appearance of floating spots, acute redness of eyes, pain on exposure to light, double vision occurs.

sodium ferric gluconate complex

so-dee-um **fair**-ick **glu**-koe-nate
com-plex
(Ferrlecit)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Trace element. **CLINICAL:** Hematinic.

ACTION

Repletes total iron content in body. Replaces iron found in Hgb, myoglobin, specific enzymes; allows oxygen transport via Hgb. **Therapeutic Effect:** Prevents, corrects iron deficiency.

PHARMACOKINETICS

Half-life: 1 hr.

USES

Treatment of iron deficiency anemia in pts undergoing chronic hemodialysis who are receiving supplemental erythropoietin therapy.

PRECAUTIONS

Contraindications: All anemias not associated with iron deficiency, hypersensitivity to iron products, hemochromatosis, hemolytic anemia, pts with iron overload. **Cautions:** Significant allergies, asthma, hepatic impairment, rheumatoid arthritis (RA).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted; lower initial dosages recommended.

INTERACTIONS

DRUG: May decrease absorption of **oral iron.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 12.5 mg/ml elemental iron.

ADMINISTRATION/HANDLING

IV

Reconstitution • Must be diluted. • Test dose: Dilute 25 mg (2 ml) with 50 ml 0.9% NaCl. • Recommended dose: Dilute 125 mg (10 ml) with 100 ml 0.9% NaCl.

Rate of Administration • Infuse both test dose, recommended dose over 1 hr. **Storage** • Store at room temperature. • Use immediately after dilution.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

Iron Deficiency Anemia

IV Infusion: ADULTS, ELDERLY: 125 mg in 100 ml 0.9% NaCl infused over 1 hr. Minimum cumulative dose 1 g elemental iron given over 8 sessions at sequential dialysis treatments. May be given during dialysis session. **CHILDREN 6 YRS AND OLDER:** 1.5 mg/kg diluted in 25 ml 0.9% NaCl administered over 60 min at sequential dialysis sessions. **Maximum:** 125 mg/dose.

SIDE EFFECTS

Frequent (Greater Than 3%): Flushing, hypotension, hypersensitivity reaction. **Occasional (3%–1%):** Injection site reaction, headache, abdominal pain, chills, flu-like syndrome, dizziness, leg cramps, dyspnea, nausea, vomiting, diarrhea, myalgia, pruritus, edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Potentially fatal hypersensitivity reaction occurs rarely, characterized by cardiovascular collapse, cardiac arrest, dyspnea, bronchospasm, angioedema, urticaria. Rapid administration may cause hypotension associated with flushing, light-headedness, fatigue, weakness, severe pain in chest, back, groin.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Do not give concurrently with oral iron form (excessive iron may produce excessive iron storage [hemosiderosis]). Be alert to pts with rheumatoid arthritis (RA), iron deficiency anemia (acute exacerbation of joint pain, swelling may occur).

INTERVENTION/EVALUATION

Monitor vital signs, lab tests, esp. CBC, serum iron concentrations (may not be accurate until 3 wks after administration).

PATIENT/FAMILY TEACHING

• Stools frequently become black with iron therapy (condition is harmless). Report to physician any red streaking, sticky consistency of stool, abdominal pain/cramping.

sodium polystyrene sulfonate

so-dee-um pol-ee-**stye**-reen (Kayexalate, Kionex, PMS-Sodium Polystyrene Sulfonate, SPS)
Do not confuse Kayexalate with Kaopectate.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cation exchange resin. **CLINICAL:** Antihyperkalemic.

ACTION

Releases sodium ions in exchange primarily for potassium ions. **Therapeutic Effect:** Moves potassium from blood into intestine to be expelled from the body.

PHARMACOKINETICS

Onset: 2–24 hrs. Eliminated only in feces.

USES

Treatment of hyperkalemia.

PRECAUTIONS

Contraindications: Hypokalemia, neonates with reduced GI motility, intestinal obstruction/perforation, any postoperative pt until normal bowel function resumes. **Cautions:** Severe CHF, hypertension, edema.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Increased risk for fecal impaction.

INTERACTIONS

DRUG: Cation-donating antacids, laxatives (e.g., magnesium hydroxide) may decrease effect; may cause systemic alkalosis in pts with renal impairment. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum calcium, magnesium, potassium. May increase serum sodium.

AVAILABILITY (Rx)

Powder for Suspension (Kayexalate, Kionex): 15 g/4 level tsp (480 g). **Suspension (SPS):** 15 g/60 ml.

ADMINISTRATION/HANDLING

PO

• Shake suspension well prior to administration. • Do not mix with orange juice. • Chilling suspension will increase palatability.

Rectal

• After initial cleansing enema, insert large rubber tube into rectum well into sigmoid colon, tape in place. • Introduce suspension (with 100 ml sorbitol) via gravity. • Flush with 50–100 ml fluid and clamp. • Pt must retain for several hrs if possible. • Irrigate colon with non–sodium-containing solution to remove resin.

INDICATIONS/ROUTES/DOSAGE

Hyperkalemia

PO: ADULTS, ELDERLY: 60 ml (15 g) 1–4 times daily. **CHILDREN:** 1 g/kg/dose q6h.
Rectal: ADULTS, ELDERLY: 30–50 g as needed q6h. **CHILDREN:** 1 g/kg/dose q2–6h.

SIDE EFFECTS

Frequent: High dosage: Anorexia, nausea, vomiting, constipation. **High dosage in elderly:** Fecal impaction (severe stomach pain with nausea/vomiting). **Occasional:** Diarrhea, sodium retention (decreased urination, peripheral edema, increased weight).

ADVERSE EFFECTS/ TOXIC REACTIONS

Potassium deficiency may occur. Early signs of hypokalemia include confusion, delayed thought processes, extreme weakness, irritability, EKG changes (often associated with prolonged QT interval; widening, flattening, or inversion of T wave; prominent U waves). Hypocalcemia, manifested by abdominal/muscle cramps, occurs occasionally. Arrhythmias, severe muscle weakness may be noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Does not rapidly correct severe hyperkalemia (may take hrs to days). Consider other measures in medical emergency (IV calcium, IV sodium bicarbonate/glucose/insulin, dialysis).

INTERVENTION/EVALUATION

Monitor serum potassium levels frequently. Assess pt's clinical condition, EKG (valuable in determining when treatment should be discontinued). Also monitor serum magnesium, calcium levels. Monitor daily pattern of bowel activity, stool consistency (fecal impaction may occur in pts on high dosages, particularly in elderly).

solifenacin

TOP 200

sol-ih-**fen**-ah-sin
(VESIcare)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic agent. **CLINICAL:** Urinary antispasmodic.

ACTION

Acts as direct antagonist at muscarinic acetylcholine receptors in cholinergically innervated organs. Reduces tonus (elastic tension) of smooth muscle in bladder, slows parasympathetic contractions. **Therapeutic Effect:** Decreases urinary bladder contractions, increases residual urine volume, decreases detrusor muscle pressure.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 98%. Metabolized in liver. Excreted in feces, urine. **Half-life:** 40–68 hrs.

USES

Treatment of overactive bladder with symptoms of urinary incontinence, urgency, frequency.

PRECAUTIONS

Contraindications: GI obstruction, uncontrolled angle-closure glaucoma, urinary retention. **Cautions:** Bladder outflow obstruction, GI obstructive disorders, decreased GI motility, controlled narrow-angle glaucoma, renal/hepatic impairment, congenital or acquired QT prolongation.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed is breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

S

INTERACTIONS

DRUG: **CYP3A4 inhibitors** (e.g., **ketoconazole, erythromycin, azole antifungals, clarithromycin**) may increase concentration/effects. **HERBAL:** **St. John's wort** may decrease concentration/effects. **FOOD:** **Grapefruit, grapefruit juice** may increase effects. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food. Swallow tablets whole, with liquids.

INDICATIONS/ROUTES/DOSAGE

Overactive Bladder

PO: ADULTS, ELDERLY: 5 mg/day; if tolerated, may increase to 10 mg/day.

Dosage in Renal/Hepatic Impairment

Severe renal impairment (creatinine clearance less than 30 ml/min) or moderate hepatic impairment: Maximum dosage is 5 mg/day.

Dosage with CYP3A4 Inhibitors

Maximum: 5 mg/day.

SIDE EFFECTS

Frequent (11%–6%): Dry mouth, constipation, blurred vision. **Occasional (5%–3%):** UTI, dyspepsia (heartburn, indigestion, epigastric pain), nausea. **Rare (2%–1%):** Dizziness, dry eyes, fatigue, depression, edema, hypertension, epigastric pain, vomiting, urinary retention.

ADVERSE EFFECTS/ TOXIC REACTIONS

Angioneurotic edema, GI obstruction occur rarely. Overdose can result in severe anticholinergic effects.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess symptoms of overactive bladder before beginning the drug.

INTERVENTION/EVALUATION

Monitor I&O, anticholinergic effects, creatinine clearance. Assess for decrease in symptoms.

PATIENT/FAMILY TEACHING

- Avoid tasks requiring alertness, motor skills until response to drug is established. • Anticholinergic side effects include constipation, urinary retention, blurred vision, heat prostration in hot

environment. • Use caution during exercise, exposure to heat.

somatropin

soe-ma-**troe**-pin
(Genotropin, Genotropin Miniquick, Humatrope, Norditropin, Nutropin, Nutropin AQ, Omnitrope, Saizen, Serostim, Zorbitive)
Do not confuse somatropin with sumatriptan.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Polypeptide hormone. **CLINICAL:** Growth hormone.

ACTION

Stimulates cartilaginous growth areas of long bones; increases number, size of skeletal muscle cells; influences size of organs; increases RBC mass by stimulating erythropoietin. Influences metabolism of carbohydrates (decreases insulin sensitivity), fats (mobilizes fatty acids), minerals (retains phosphorus, sodium, potassium by promotion of cell growth), proteins (increases protein synthesis). **Therapeutic Effect:** Stimulates growth.

PHARMACOKINETICS

Well absorbed after subcutaneous, IM administration. Localized primarily in kidneys, liver. **Half-life: IV:** 20–30 min; **Subcutaneous, IM:** 3–5 hrs.

USES

Adults: Growth deficiency due to pituitary disease, hypothalamic disease, surgery, radiation, or trauma; AIDS-related wasting or cachexia; short bowel syndrome. **Children:** Long-term treatment of growth failure due to lack of or inadequate endogenous growth hormone secretion; chronic renal insufficiency; short stature associated with Turner's syndrome, Noonan's syndrome, or homeobox gene deficiency; idiopathic short stature. **OFF-LABEL:** Treatment of pediatric HIV pts with wasting/cachexia; HIV adipose redistribution syndrome.

PRECAUTIONS

Contraindications: Pts with Prader-Will syndrome who are severely obese or have severe respiratory impairment; children with closed epiphyses; acute critical illness due to complications after open heart or abdominal surgery; multiple accidental trauma; acute respiratory failure; active neoplasia; diabetic retinopathy. **Cautions:** Diabetes mellitus; active malignancy; progression of active growing intracranial lesion or tumor.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category B (Genotropin, Genotropin Miniquick, Omnitrope, Saizen, Serostim, Zorbitive); C (Humatrope, Norditropin, Nutropin, Nutropin AQ). Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Corticosteroids may inhibit growth response. **Oral estrogens** may decrease response to somatropin. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, inorganic phosphorus, parathyroid hormone. May decrease glucose tolerance. May slightly decrease thyroid function.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Genotropin): 5.8 mg, 13.8 mg. **(Genotropin Miniquick):** 0.2 mg, 0.4 mg, 0.6 mg, 0.8 mg, 1 mg, 1.2 mg, 1.4 mg, 1.6 mg, 1.8 mg, 2 mg. **(Humatrope):** 5 mg, 6 mg, 12 mg, 24 mg. **(Nutropin):** 5 mg, 10 mg. **(Omnitrope):** 5.8 mg. **(Saizen):** 5 mg, 8.8 mg. **(Serostim):** 4 mg, 5 mg, 6 mg. **(Zorbitive):** 8.8 mg. **Injection Solution: (Norditropin):** 5 mg/1.5 ml, 15 mg/1.5 ml. **(Nutropin AQ):** 5 mg/ml. **(Omnitrope):** 5 mg/1.5 ml, 10 mg/1.5 ml. **(Norditropin**

S

FlexPro Pen): 5 mg/1.5 ml, 10 mg/1.5 ml, 30 mg/3 ml.

ADMINISTRATION/HANDLING

◀ALERT▶ **Neonate:** Benzyl alcohol as a preservative has been associated with fatal toxicity (gasping syndrome) in premature infants. Reconstitute with Sterile Water for Injection only. Use only 1 dose per vial. Discard unused portion.

Reconstitution

Genotropin, Genotropin Miniquick: Reconstitute with diluent provided.
Humatrope: Reconstitute with 1.5–5 ml diluent provided, swirl gently, do not shake.
Humatrope Cartridge: Dilute with solution provided with cartridge only.
Nutropin: Reconstitute each 5 mg with 1.5–5 ml diluent, swirl gently, do not shake.
Omnitrope: Reconstitute with diluents provided, swirl gently, do not shake.
Saigen: 5 mg: Reconstitute with 1–3 ml diluent provided, swirl gently, do not shake. 8.8 mg: Reconstitute with 2–3 ml diluent provided, swirl gently, do not shake.
Serostim: Reconstitute with Sterile Water for Injection.
Zorbitive: Reconstitute with 1–2 ml Bacteriostatic Water for Injection.

Storage

Long-term storage: Refrigerate all products except Zorbitive. Once reconstituted, Humatrope, Nutropin, Saigen, Zorbitive stable for 14 days, Genotrope for 21 days, Humatrope Cartridge for 28 days. **Genotropin Miniquick:** Refrigerate, use within 24 hrs.

S

INDICATIONS/ROUTES/DOSAGE

Growth Hormone Deficiency

Subcutaneous *(Genotropin, Omnitrope)*: ADULTS: 0.04 mg/kg weekly divided into 6–7 equal doses/wk. May increase at 4- to 8-wk intervals to maximum of 0.08 mg/kg/wk. **CHILDREN:** 0.16–0.24 mg/kg weekly divided into daily doses.
Subcutaneous *(Humatrope)*: ADULTS: 0.006 mg/kg once daily. May increase to maximum of 0.0125 mg/kg/day. **CHILDREN:** 0.18–0.3 mg/kg weekly divided into alternate-day doses or 6 doses/wk.
Subcutaneous *(Norditropin)*: ADULTS: 0.004 mg/kg/day. May increase after 6 wks up to 0.016 mg/kg/day. **CHILDREN:** 0.024–0.036 mg/kg/dose 6–7 times a wk.
Subcutaneous *(Nutropin)*: ADULTS: 0.006 mg/kg once daily. May increase to maximum of 0.025 mg/kg/day (younger than 35 yrs) or 0.0125/kg/day (35 yrs and older). **CHILDREN:** 0.3–0.7 mg/kg weekly divided into daily doses.
Subcutaneous *(Nutropin AQ)*: ADULTS: 0.006 mg/kg once daily. May increase to maximum of 0.0125 mg/kg/day.
Subcutaneous *(Saizen)*: ADULTS: 0.005 mg/kg/day. May increase up to 0.01 mg/kg/day after 4 wks. **CHILDREN:** 0.06 mg/kg 3 times a wk.

Chronic Renal Insufficiency

Subcutaneous *(Nutropin, Nutropin AQ)*: CHILDREN: 0.35 mg/kg weekly divided into daily doses.

Turner's Syndrome

Subcutaneous *(Humatrope, Nutropin, Nutropin AQ)*: CHILDREN: 0.375 mg/kg weekly divided into equal doses 3–7 times a wk. ***(Genotropin)*:** 0.33 mg/kg weekly divided into 6–7 doses.

AIDS-Related Wasting

Subcutaneous *(Serostim)*: ADULTS WEIGHING MORE THAN 55 KG: 6 mg once daily at bedtime. **ADULTS WEIGHING 45–55 KG:** 5 mg once daily at bedtime. **ADULTS WEIGHING 35–44 KG:** 4 mg once daily at bedtime. **ADULTS WEIGHING LESS THAN 35 KG:** 0.1 mg/kg once daily at bedtime.

Short Bowel Syndrome

Subcutaneous *(Zorbitive)*: ADULTS: 0.1 mg/kg/day. **Maximum:** 8 mg/day.

SIDE EFFECTS

Frequent: Otitis media, other ear disorders (with Turner's syndrome). **Occa-**

sional: Carpal tunnel syndrome, gynecomastia, myalgia, peripheral edema, fatigue, asthenia (loss of strength, energy). **Rare:** Rash, pruritus, visual changes, headache, nausea, vomiting, injection site pain/swelling, abdominal pain, hip/knee pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pancreatitis occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab chemistries, thyroid function, serum glucose level.

INTERVENTION/EVALUATION

Monitor bone growth, growth rate in relation to pt's age. Monitor serum calcium, glucose, phosphorus levels; renal, parathyroid, thyroid function. Observe for decreased muscle wasting in AIDS pts.

PATIENT/FAMILY TEACHING

• Follow correct procedure to reconstitute drug for administration, safe handling/disposal of needles. • Regular follow-up with physician is important part of therapy. • Report development of severe headache, visual changes, pain in hip/knee, limping.

sorafenib

soe-**raf**-e-nib
(Nexavar)
Do not confuse Nexavar with Nexium, or sorafenib with imatinib or sunitinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Multikinase inhibitor. **CLINICAL:** Antineoplastic (see p. 87C).

ACTION

Decreases tumor cell proliferation by interacting with multiple intracellular, cell surface kinases. **Therapeutic Effect:** Inhibits tumor growth.

PHARMACOKINETICS

Metabolized in liver. Protein binding: 99.5%. Eliminated mainly in feces, with lesser amount excreted in urine. **Half-life:** 25–48 hrs.

USES

Treatment of advanced renal cell carcinoma, unresectable hepatocellular carcinoma. **OFF-LABEL:** Recurrent or metastatic angiosarcoma, advanced thyroid cancer, resistant gastrointestinal stromal tumor.

PRECAUTIONS

Contraindications: Use in combination with carboplatin and paclitaxel in pts with squamous cell lung cancer. **Cautions:** Underlying or poorly controlled hypertension, pts with congenital long QT syndrome, medications that prolong QT interval, electrolyte imbalance, heart failure, bradyarrhythmias.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Adequate contraception should be used during therapy and for at least 2 wks after therapy completion. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, dexamethasone, phenobarbital, phenytoin, rifampin) may decrease concentration. **HERBAL: St. John's wort** may decrease concentration. **FOOD: High-fat meals** decrease effectiveness. **LAB VALUES:** May increase serum lipase, amylase, bilirubin, alkaline phosphatase, transaminases. May de-

S

crease serum phosphorus, lymphocytes, WBCs, Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 200 mg (Nexavar).

ADMINISTRATION/HANDLING

PO

• Give 1 hr before or 2 hrs after eating (high-fat meal reduces effectiveness).
• Swallow tablet whole; do not break, crush, dissolve, or divide tablet.

INDICATIONS/ROUTES/DOSAGE

Renal Cell Carcinoma, Hepatocellular Carcinoma

PO: ADULTS, ELDERLY: 400 mg (2 tablets) twice daily without food.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
40–59 ml/min	400 mg twice daily
20–39 ml/min	200 mg twice daily
Hemodialysis	200 mg once daily

Dosage in Hepatic Impairment

Bilirubin greater than 1 to 1.5 times ULN and/or AST greater than ULN: 400 mg twice daily. **Bilirubin greater than 1.5 to 3 times ULN and any AST:** 200 mg twice daily. **Albumin less than 2.5 g/dl (any bilirubin/AST):** 200 mg once daily.

SIDE EFFECTS

Frequent (43%–16%): Diarrhea, rash, fatigue, exfoliative dermatitis, alopecia, nausea, pruritus, hypertension, anorexia, vomiting. **Occasional (15%–10%):** Constipation, minor bleeding, dyspnea, sensory neuropathy, cough, abdominal pain, dry skin, weight loss, joint pain, headache. **Rare (9%–1%):** Acne, flushing, stomatitis, mucositis, dyspepsia (heartburn, indigestion, epigastric pain), arthralgia, myalgia, hoarseness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anemia, neutropenia, thrombocytopenia, leukopenia occur in less than 10% of pts. Pancreatitis, gastritis, erectile dysfunction occur occasionally. Hemorrhage, cardiac ischemia/infarction, hypertensive crisis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Monitor B/P weekly during first 6 wks of therapy and routinely thereafter. CBC, serum chemistries including electrolytes, renal/hepatic function tests, chest X-ray should be performed before therapy begins and routinely thereafter.

INTERVENTION/EVALUATION

Determine serum amylase, lipase, phosphorus concentrations frequently during therapy. Monitor CBC for evidence of myelosuppression. Monitor for blood dyscrasias (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Monitor for signs of neuropathy (gait disturbances, fine motor control difficulties, numbness).

PATIENT/FAMILY TEACHING

• Report any episode of chest pain. • Do not have immunizations without physician's approval (drug lowers resistance). Avoid contact with those who have recently taken live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site. • Swallow whole; do not chew, crush, dissolve, or divide tablet.

sotalol

HIGH ALERT

soe-ta-lol
(Apo-Sotalol, Betapace, Betapace AF, Novo-Sotalol, PMS-Sotalol, Sorine)

BLACK BOX ALERT Initiation, titration to occur in a hospital setting with continuous EKG to monitor potential onset of life-threatening arrhythmias. Betapace should not be substituted for Betapace AF.

Do not confuse Betapace with Betapace AF, or sotalol with Stadol or Sudafed.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta-adrenergic blocking agent. **CLINICAL:** Antiarrhythmic (see pp. 18C, 72C).

ACTION

Prolongs cardiac action potential, effective refractory period, QT interval. Decreases heart rate, AV node conduction; increases AV node refractoriness. **Therapeutic Effect:** Produces antiarrhythmic activity.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1–2 hrs	2.5–4 hrs	8–16 hrs

Well absorbed from GI tract. Protein binding: None. Widely distributed. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 12 hrs (increased in elderly, renal impairment).

USES

Betapace, Sorine: Treatment of documented, life-threatening ventricular arrhythmias. **Betapace AF:** Maintain normal sinus rhythm in pts with symptomatic atrial fibrillation/flutter. **OFF-LABEL:** Fetal tachycardia, treatment of atrial fibrillation with hypertrophic cardiomyopathy.

PRECAUTIONS

Contraindications: Cardiogenic shock, congenital or acquired long QT syndrome, second- or third-degree heart block (unless functioning pacemaker is present), sinus bradycardia, uncontrolled cardiac failure. **Betapace AF** (additional): Baseline QT interval greater than 450 msec, bronchospastic conditions, creatinine clearance less than 40 ml/min, serum potassium less than 4 mEq/L, sick sinus syndrome. **Cautions:** Pts with history of ventricular tachycardia, ventricular fibrillation, cardiomegaly, compensated CHF, diabetes mellitus, excessive prolongation of QT interval, hypokalemia, hypomagnesemia, renal impairment, within first 2 wks post MI, peripheral vascular disease, myasthenia gravis, psychiatric disease, bronchospastic disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category B (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** Age-related peripheral vascular disease may increase susceptibility to decreased peripheral circulation. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Calcium channel blockers may increase effect on AV conduction, B/P. May mask symptoms of hypoglycemia, prolong hypoglycemic effects of **insulin, oral hypoglycemics. QT prolonging medications** may increase risk of prolonged QT interval. **HERBAL: Ephedra** may worsen arrhythmias. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum glucose, alkaline phosphatase, LDH, lipoprotein, AST, ALT, triglycerides, potassium, uric acid.

AVAILABILITY (Rx)

Tablets: 80 mg (Betapace, Betapace AF, Sorine), 120 mg (Betapace, Betapace AF, Sorine), 160 mg (Betapace, Betapace AF, Sorine), 240 mg (Betapace, Sorine).

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Give at same time each day.

INDICATIONS/ROUTES/DOSAGE

Documented, Life-Threatening Arrhythmias

PO *(Betapace, Sorine)*: ADULTS, ELDERLY: Initially, 80 mg twice daily. May

S

increase gradually at 2- to 3-day intervals. Range: 240–320 mg/day in 2–3 divided doses.

Atrial Fibrillation, Atrial Flutter

PO *(Betapace AF)*: ADULTS, ELDERLY: 80 mg twice daily. May increase up to 160 mg twice daily.

Dosage in Renal Impairment

Dosage interval is modified based on creatinine clearance.

BETAPACE, SORINE

Creatinine Clearance	Dosage
31–60 ml/min	24 hrs
10–30 ml/min	36–48 hrs
Less than 10 ml/min	Individualized

BETAPACE AF

Creatinine Clearance	Dosage
Greater than 60 ml/min	12 hrs
40–60 ml/min	24 hrs
Less than 40 ml/min	Contraindicated

SIDE EFFECTS

Frequent: Diminished sexual function, drowsiness, insomnia, asthenia (loss of strength, energy). **Occasional:** Depression, cold hands/feet, diarrhea, constipation, anxiety, nasal congestion, nausea, vomiting. **Rare:** Altered taste, dry eyes, pruritus, paresthesia of fingers, toes, scalp.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bradycardia, CHF, hypotension, bronchospasm, hypoglycemia, prolonged QT interval, torsade de pointes, ventricular tachycardia, premature ventricular complexes may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pt must be on continuous cardiac monitoring upon initiation of therapy. Do not administer without consulting physician if pulse is 60 beats/min or less. Assess creatinine clearance before dosing.

INTERVENTION/EVALUATION

Diligently monitor for arrhythmias. Assess B/P for hypotension, pulse for bradycardia. Assess for CHF: dyspnea, peripheral edema, jugular vein distention, increased weight, rales in lungs, decreased urinary output.

PATIENT/FAMILY TEACHING

• Do not discontinue, change dose without physician approval. • Avoid tasks requiring alertness, motor skills until response to drug is established (may cause drowsiness). • Periodic lab tests, EKGs are necessary part of therapy. • Notify physician of rapid heartbeat, chest pain, swelling of ankles/legs, difficulty breathing.

spironolactone TOP 200

speer-on-oh-**lak**-tone
(Aldactone, Novo-Spiroton)

BLACK BOX ALERT Has been shown to produce tumors in chronic toxicity studies.

Do not confuse Aldactone with Aldactazide.

FIXED-COMBINATION(S)

Aldactazide: spironolactone/hydrochlorothiazide (a thiazide diuretic): 25 mg/25 mg, 50 mg/50 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aldosterone antagonist. **CLINICAL:** Potassium-sparing diuretic, antihypertensive, antihypokalemic (see p. 102C).

ACTION

Interferes with sodium reabsorption by competitively inhibiting action of aldosterone in distal tubule, promoting sodium and water excretion, increasing potassium retention. **Therapeutic Effect:** Produces diuresis, lowers B/P.

PHARMACOKINETICS

Well absorbed from GI tract (absorption increased with food). Protein binding: 91%–98%. Metabolized in liver to active metabolite. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 78–84 min.

USES

Management of edema associated with severe CHF, cirrhosis, nephrotic syndrome. Treatment of hypertension, male hirsutism, hypokalemia, CHF. Diagnosis/treatment of primary hyperaldosteronism. **OFF-LABEL:** Treatment of edema, hypertension in children, female acne, female hirsutism.

PRECAUTIONS

Contraindications: Acute renal insufficiency, anuria, hyperkalemia. **Cautions:** Dehydration, hyponatremia, renal/hepatic impairment, concurrent use of supplemental potassium.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Active metabolite excreted in breast milk. Breastfeeding not recommended. **Pregnancy Category C (D if used in pregnancy-induced hypertension). Children:** No age-related precautions noted. **Elderly:** May be more susceptible to developing hyperkalemia. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **ACE inhibitors (e.g., captopril), potassium-containing medications, potassium supplements** may increase risk of hyperkalemia. May increase half-life of **digoxin. NSAIDs** may decrease antihypertensive effect. **HERBAL:** Avoid **natural licorice** (possesses mineralocorticoid activity). **FOOD:** **Food** increases absorption. **LAB VALUES:** May increase urinary calcium excretion, BUN, serum glucose, creatinine, magnesium, potassium, uric acid. May decrease serum sodium.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Oral suspension containing crushed tablets in cherry syrup is stable for up to 30 days if refrigerated. • Drug absorption enhanced if taken with food. • Scored tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Edema

PO: ADULTS, ELDERLY: 25–200 mg/day as single dose or in 2 divided doses. **CHILDREN:** 1–3.3 mg/kg/day in divided doses q6–12h. **Maximum:** 100 mg. **NEONATES:** 1–3 mg/kg/day in 1–2 divided doses.

Hypertension

PO: ADULTS, ELDERLY: 25–50 mg/day in 1–2 doses/day. **CHILDREN:** 1–3.3 mg/kg/day in divided doses q6–12h. **Maximum:** 100 mg.

Hypokalemia

PO: ADULTS, ELDERLY: 25–100 mg/day as single dose or in 2 divided doses.

Hirsutism

PO: ADULTS, ELDERLY: 50–200 mg/day as single dose or in 2 divided doses.

Primary Aldosteronism

PO: ADULTS, ELDERLY: 400 mg/day for 4 days up to 3–4 wks, then maintenance dose of 100–400 mg/day as single dose or in 2 divided doses. **CHILDREN:** 100–400 mg/m^2/day as single dose or in 2 divided doses.

CHF

PO: ADULTS, ELDERLY: 12.5–25 mg/day adjusted based on pt response, evidence of hyperkalemia. **Maximum:** 50 mg.

Dosage in Renal Impairment

Dosage interval is modified based on creatinine clearance.

Creatinine Clearance	Dosage
31–50 ml/min	Decrease initial dose to 12.5 mg once daily
30 ml/min or less	Not recommended

S

SIDE EFFECTS

Frequent: Hyperkalemia (in pts with renal insufficiency, those taking potassium supplements), dehydration, hyponatremia, lethargy. **Occasional:** Nausea, vomiting, anorexia, abdominal cramps, diarrhea, headache, ataxia, drowsiness, confusion, fever. **Male:** Gynecomastia, impotence, decreased libido. **Female:** Menstrual irregularities (amenorrhea, postmenopausal bleeding), breast tenderness. **Rare:** Rash, urticaria, hirsutism.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe hyperkalemia may produce arrhythmias, bradycardia, EKG changes (tented T waves, widening QRS complex, ST segment depression). May proceed to cardiac standstill, ventricular fibrillation. Cirrhosis pts at risk for hepatic decompensation if dehydration, hyponatremia occurs. Pts with primary aldosteronism may experience rapid weight loss, severe fatigue during high-dose therapy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Weigh pt; initiate strict I&O. Evaluate hydration status by assessing mucous membranes, skin turgor. Obtain baseline serum electrolytes, renal/hepatic function, urinalysis. Assess for edema; note location, extent. Check baseline vital signs, note pulse rate/regularity.

INTERVENTION/EVALUATION

Monitor serum electrolyte values, esp. for increased potassium, BUN, creatinine. Monitor B/P. Monitor for hyponatremia: mental confusion, thirst, cold/clammy skin, drowsiness, dry mouth. Monitor for hyperkalemia: colic, diarrhea, muscle twitching followed by weakness/paralysis, arrhythmias. Obtain daily weight. Note changes in edema, skin turgor.

PATIENT/FAMILY TEACHING

• Expect increase in volume, frequency of urination. • Therapeutic effect takes several days to begin and can last for several days when drug is discontinued. This may not apply if pt is on a potassium-losing drug concomitantly (diet, use of supplements should be established by physician). • Notify physician of irregular or slow pulse, electrolyte imbalance (see previous Intervention/Evaluation). • Avoid foods high in potassium, such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins. • Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established (may cause drowsiness).

stavudine (d4T)

sta-vue-deen
(Zerit)

BLACK BOX ALERT Lactic acidosis, severe hepatomegaly with steatosis (fatty liver), pancreatitis have occurred. Fatalities reported.

Do not confuse Zerit with Zestril, Ziac, or Zyrtec.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nucleoside reverse transcriptase inhibitor. **CLINICAL:** Antiviral (see pp. 69C, 115C).

ACTION

Inhibits HIV reverse transcriptase by terminating viral DNA chain. Inhibits RNA-, DNA-dependent DNA polymerase, an enzyme necessary for HIV replication. **Therapeutic Effect:** Impedes HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Rapidly, completely absorbed after PO administration. Undergoes intracellular phosphorylation to an active metabolite. Excreted in urine. **Half-life:** 1–1.6 hrs (increased in renal impairment).

USES

Treatment of HIV infection in combination with other agents.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of peripheral neuropathy, renal/hepatic impairment, previous hypersensitivity to zidovudine, didanosine, or zalcitabine; preexisting bone marrow suppression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breast-feeding not recommended (possibility of HIV transmission). **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Information not available.

INTERACTIONS

DRUG: Zidovudine may have antagonistic antiviral effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, GGT, amylase, bilirubin.

AVAILABILITY (Rx)

Capsules: 15 mg, 20 mg, 30 mg, 40 mg. **Powder for Oral Solution:** 1 mg/ml.

ADMINISTRATION/HANDLING

PO

- Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS, ELDERLY, CHILDREN WEIGHING 60 KG AND MORE: 40 mg q12h. **ADULTS, ELDERLY, CHILDREN WEIGHING 30–59 KG:** 30 mg q12h. **NEONATES 14 DAYS AND OLDER, INFANTS, CHILDREN WEIGHING LESS THAN 30 KG:** 1 mg/kg/dose q12h. **Maximum:** 30 mg q12h. **NEONATES 0–13 DAYS:** 0.5–1 mg/kg/dose q12h.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and pt weight.

Creatinine Clearance	Weight 60 kg or More	Weight Less Than 60 kg
Greater than 50 ml/min	40 mg q12h	30 mg q12h
26–50 ml/min	20 mg q12h	15 mg q12h
10–25 ml/min	20 mg q24h	15 mg q24h

SIDE EFFECTS

Frequent: Headache (55%), diarrhea (50%), chills, fever (38%), nausea, vomiting, myalgia (35%), rash (33%), asthenia (loss of strength, energy) (28%), insomnia, abdominal pain (26%), anxiety (22%), back pain (20%), diaphoresis (19%), arthralgia (18%), malaise (17%), depression (14%). **Occasional:** Anorexia, weight loss, nervousness, dizziness, conjunctivitis, dyspepsia, dyspnea. **Rare:** Constipation, vasodilation, confusion, migraine, urticaria, abnormal vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Peripheral neuropathy (numbness, tingling, pain in hands/feet) occurs in 15%–21% of pts. Ulcerative stomatitis (erythema, ulcers of oral mucosa, glossitis, gingivitis), pneumonia, benign skin neoplasms occur occasionally. Pancreatitis, hepatomegaly, lactic acidosis have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory testing, esp. serum hepatic function tests, before beginning stavudine therapy and at periodic intervals during therapy. Offer emotional support to pt, family. Question for history of peripheral neuropathy.

INTERVENTION/EVALUATION

Monitor for peripheral neuropathy (characterized by paresthesia in extremities). Symptoms resolve promptly if therapy is discontinued (symptoms may worsen temporarily after drug is withdrawn). If symptoms resolve completely, reduced dosage may be resumed. Assess for headache, nausea, vomiting, myalgia.

Monitor skin for evidence of rash, signs of fever. Monitor daily pattern of bowel activity, stool consistency. Assess for myalgia, arthralgia, dizziness. Monitor sleep patterns. Assess eating pattern; monitor for weight loss. Check eyes for signs of conjunctivitis. Monitor CBC, Hgb, serum hepatic/renal function, CD4 cell count, HIV RNA levels.

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • Do not take any medications, including OTC drugs, without consulting physician. • Stavudine is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pt may continue to experience illnesses, including opportunistic infections. • Report tingling, burning, pain, numbness, abdominal discomfort, nausea, vomiting, fatigue, dyspnea, weakness.

Stribild

el-vye-**teg**-ra-veer/koe-**bis**-i-stat (elvitegravir/cobicistat/emtricitabine/tenofovir)

Do not confuse elvitegravir/cobicistat/emtricitabine/tenofovir (Stribild) with emtricitabine/rilpivirine/tenofovir (Complera), or efavirenz/emtricitabine/tenofovir (Atripla), or emtricitabine/tenofovir (Truvada).

BLACK BOX ALERT Serious, sometimes, fatal lactic acidosis and severe hepatomegaly with steatosis (fatty liver) have been reported. Severe exacerbations of hepatitis B virus (HBV) reported in pts coinfected with HIV-1 and HBV following discontinuation. If discontinuation occurs, monitor hepatic function for at least several months. Initiate anti-HBV therapy if warranted.

FIXED-COMBINATION(S)

Stribild: elvitegravir/cobicistat/emtricitabine/tenofovir: 150 mg/150 mg/200 mg/300 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Integrase inhibitor, reverse transcriptase inhibitor. **CLINICAL:** Combination antiretroviral agent.

ACTION

Elvitegravir inhibits catalytic activity of integrase, preventing integration into human DNA. Cobicistat inhibits CYP3A enzymes, enhancing elvitegravir exposure Emtricitibine and fenofovir interfere with viral RNA-dependent DNA polymerase activities. **Therapeutic Effect:** Interferes with HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Readily absorbed after oral administration. Peak concentration: 2–4 hrs. Protein binding: (elvitegravir, cobicistat) 98%, (emtricitabine) 4%, (tenofovir) 0.7%. Extensively metabolized in liver. Excreted primarily in feces, urine (various). **Half-life:** (elvitegravir): 12.9 hrs, (cobicistat): 3.5 hrs.

USES

Treatment of HIV-1 infection in adults who are antiretroviral treatment naïve.

PRECAUTIONS

◀ALERT▶ Therapy not recommended in pts with creatinine clearance less than 70 ml/min, severe hepatic impairment, or suspected lactic acidosis.

Contraindications: Concurrent use with alfuzosin, ergot derivatives (e.g., ergotamine), lovastatin, nephrotoxic agents, other antiretrovirals, pimozide, rifampin, sildenafil (when used for pulmonary hypertension), simvastatin, St. John's wort; midazolam (oral), may produce extreme sedation and/or respiratory depression.

Cautions: Renal impairment, mild to moderate hepatic impairment, pathologic fracture history, osteoporosis, osteopenia, preexisting cardiac conduction abnormalities, obesity.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Do not breastfeed infants because of risk for postnatal HIV transmission. Secreted in breast milk (see individual agents). **Pregnancy Category B. Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** Increased risk of side effects/adverse reactions, osteopenia.

INTERACTIONS

DRUG: **Antacids** may decrease Stribild concentration. May increase concentration/effects of **antifungals (e.g., ketoconazole), atorvastatin, clarithromycin, colchicine, cyclosporine, PDE-5 inhibitors (e.g., sildenafil, tadalafil).** May alter effectiveness of **hormonal contraceptives.** **HERBAL:** **St. John's wort** may decrease effectiveness. **Red yeast** may increase risk for myopathy, rhabdomyolysis. **FOOD:** None known. **LAB VALUES:** May increase ALT/AST, amylase, bilirubin, BUN, 1,25-vitamin D, cholesterol, creatine kinase (CK), creatinine, serum glucose, parathyroid hormone, urine protein, triglycerides. May decrease creatinine clearance, neutrophils.

AVAILABILITY (Rx)

Tablets: (elvitegravir) 150 mg/(cobicistat) 150 mg/(emtricitabine) 200 mg/(tenofovir) 300 mg.

ADMINISTRATION/HANDLING

PO

- Give with food.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Supplementation of calcium and vitamin D may slow progression of bone density loss.

HIV Infection

PO: ADULTS/ELDERLY: One tablet daily with food.

Dosage in Renal Impairment

Discontinue if creatinine clearance less than 50 ml/min.

SIDE EFFECTS

Frequent (16%–12%): Nausea, asthenia, cough, diarrhea (loss of strength, energy). **Occasional (10%–4%):** Headache, vomiting, abnormal dreams, abdominal pain, depression, paresthesia, fatigue, dyspepsia, arthralgia, neuropathy, hyperpigmentation. **Rare (3%–1%):** Dizziness, eczema, insomnia, flatulence, somnolence, pruritus, urticaria.

ADVERSE EFFECTS/TOXIC REACTIONS

May cause new or worsening renal failure including Fanconi's syndrome (nonabsorption of essential electrolytes, acids, buffers in renal tubules). May decrease bone mineral density, leading to pathologic fractures. May cause redistribution/accumulation of body fat (lipodystrophy). Fatal lactic acidosis and severe hepatomegaly with steatosis (fatty liver) reported. Pts coinfected with HBV may experience hepatic decompensation and/or failure if therapy discontinued. May induce immune recovery syndrome (inflammatory response to dormant opportunistic infections such as *Mycobacterium avium*, cytomegalovirus, PCP, tuberculosis, or acceleration of autoimmune disorders including Graves' disease, polymyositis, Guillain-Barré syndrome).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, CMP, $CD4^+$ count, viral load, GFR, lipid panel, phosphate (with renal impairment), urine glucose, urine protein. Screen all pts for hepatitis B virus (HBV). Receive full medication history including herbal products. Question possibility of pregnancy.

INTERVENTION/EVALUATION

Monitor labs routinely. Obtain serum lactate level if lactic acidosis suspected. Monitor digoxin level if applicable. Assess for hepatic impairment (bruising, hematuria, jaundice, right upper abdom-

S

inal pain, nausea, vomiting, weight loss). Monitor for immune recovery syndrome. Offer antiemetics if nausea occurs. Assess skin for urticaria, pruritus.

PATIENT/FAMILY TEACHING

• Offer emotional support. • Take with food (optimizes absorption). • Blood levels will be monitored routinely. • Report any signs of decreased urine output, abdominal pain, yellowing of skin or eyes, darkened urine, clay-colored stools, weight loss. • Report any newly prescribed medications. • Stribild does not cure HIV infection nor reduce risk for transmission. • Practice safe sex with barrier methods or abstinence. • Decreased bone density may lead to pathologic fractures. • As immune system strengthens, it may respond to dormant infections hidden within the body. • Report any new fever, chills, body aches, cough, night sweats, shortness of breath. • Antiretrovirals may cause excess body fat in upper back, neck, breast, trunk; and may cause decreased body fat in legs, arms, face.

sucralfate

TOP 200

soo-**kral**-fate
(Apo-Sucralfate, Carafate, Novo-Sucralate)
Do not confuse Carafate with Cafergot, or sucralfate with salsalate.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Gastrointestinal agent. **CLINICAL:** Antiulcer.

ACTION

Forms ulcer-adherent complex with proteinaceous exudate (e.g., albumin) at ulcer site. Forms viscous, adhesive barrier on surface of intact mucosa of stomach, duodenum. **Therapeutic Effect:** Protects damaged mucosa from further destruction by absorbing gastric acid, pepsin, bile salts.

PHARMACOKINETICS

Minimally absorbed from GI tract. Eliminated in feces, with small amount excreted in urine. Not removed by hemodialysis.

USES

Short-term treatment (up to 8 wks) of duodenal ulcer. Maintenance therapy of duodenal ulcer after healing of acute ulcers. **OFF-LABEL:** Prevention, treatment of stress-related mucosal damage, esp. in acutely or critically ill pts; treatment of gastric ulcer; relief of GI symptoms associated with NSAIDs; treatment of gastroesophageal reflux disease (GERD).

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal failure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease absorption of **digoxin, ketoconazole, levothyroxine, phenytoin, quinidine, quinolones (e.g., ciprofloxacin), ranitidine, tetracycline, theophylline.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Oral Suspension: 1 g/10 ml. **Tablets:** 1 g.

ADMINISTRATION/HANDLING

PO

• Administer 1 hr before meals and at bedtime. • Tablets may be crushed and

dissolved in water. • Avoid antacids for 30 min before or after giving sucralfate. • Shake suspension well before using.

INDICATIONS/ROUTES/DOSAGE

Active Duodenal Ulcers

PO: ADULTS, ELDERLY: 1 g 4 times a day (before meals and at bedtime) or 2 g 2 times a day for up to 8 wks.

Maintenance Therapy of Duodenal Ulcers

PO: ADULTS, ELDERLY: 1 g twice a day.

SIDE EFFECTS

Frequent (2%): Constipation. **Occasional (less than 2%):** Dry mouth, backache, diarrhea, dizziness, drowsiness, nausea, indigestion, rash, urticaria, pruritus, abdominal discomfort.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bezoars (compacted, undigestible material that does not pass into intestine) have been reported.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Take medication on an empty stomach. • Antacids may be given as an adjunct but should not be taken for 30 min before or after sucralfate (formation of sucralfate gel is activated by stomach acid). • Dry mouth may be relieved by sour hard candy, sips of tepid water.

TOP 200

sulfamethoxazole-trimethoprim

sull-fah-meh-**thocks**-ah-zoll-try-**meth**-oh-prim

(Apo-Sulfatrim, Bactrim, Bactrim DS, Novo-Trimel, Septra, Septra DS, Sulfatrim)

Do not confuse Bactrim with bacitracin or Bactroban, or Septra with Sectral.

FIXED-COMBINATION(S)

Bactrim, Septra: sulfamethoxazole/trimethoprim: 5:1 ratio remains constant in all dosage forms (e.g., 400 mg/80 mg).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sulfonamide/folate antagonist. **CLINICAL:** Antibiotic.

ACTION

Blocks bacterial synthesis of essential nucleic acids. **Therapeutic Effect:** Bactericidal in susceptible microorganisms.

PHARMACOKINETICS

Rapidly, well absorbed from GI tract. Protein binding: 45%–60%. Widely distributed. Metabolized in liver. Excreted in urine. Minimally removed by hemodialysis. **Half-life:** sulfamethoxazole, 6–12 hrs; trimethoprim, 6–17 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to *S. pneumoniae, H. influenzae, E. coli, Klebsiella* spp., *Enterobacter* spp., *M. morganii, P. mirabilis, P. vulgaris, S. flexneri, Pneumocystis jiroveci* including acute or complicated and recurrent or chronic UTI, *Pneumocystis jiroveci* pneumonia (PCP), shigellosis, enteritis, otitis media, chronic bronchitis, traveler's diarrhea. Prophylaxis of PCP. **OFF-LABEL:** Chronic prostatitis, prophylaxis for UTI, MRSA infections.

PRECAUTIONS

Contraindications: Renal/hepatic impairment, pregnancy (at term), breast-feed-

S

ing, hypersensitivity to trimethoprim or any sulfonamides, infants younger than 2 mos, megaloblastic anemia due to folate deficiency. **Cautions:** Those with G6PD deficiency.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated during pregnancy at term and during lactation. Readily crosses placenta. Distributed in breast milk. May produce kernicterus in newborn. **Pregnancy Category C (D at term). Children:** Contraindicated in those younger than 2 mos; may increase risk of kernicterus in newborn. **Elderly:** Increased risk for severe skin reaction, myelosuppression, decreased platelet count.

INTERACTIONS

DRUG: May increase/prolong effects, increase adverse effects of **phenytoin, digoxin, oral hypoglycemics, warfarin.** May increase effects of **methotrexate. HERBAL: Dong quai, St. John's wort** may increase photosensitization reaction. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum creatinine, AST, ALT, bilirubin.

AVAILABILITY (Rx)

ALERT All dosage forms have same 5:1 ratio of sulfamethoxazole (SMZ) to trimethoprim (TMP).

Injection Solution: SMZ 80 mg and TMP 16 mg per ml. **Oral Suspension (Sulfatrim):** SMZ 200 mg and TMP 40 mg per 5 ml. **Tablets (Bactrim, Septra):** SMZ 400 mg and TMP 80 mg. **Tablets (Double Strength [Bactrim DS, Septra DS]):** SMZ 800 mg and TMP 160 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV infusion (piggyback), dilute each 5 ml with 75–125 ml D_5W. • Do not mix with other drugs or solutions.

Rate of Administration • Infuse over 60–90 min. Must avoid bolus or rapid infusion. • Do not give IM. • Ensure adequate hydration.

Storage • IV infusion (piggyback) stable for 2 hrs (5 ml/75 ml D_5W), 4 hrs (5 ml/100 ml D_5W), 6 hrs (5 ml/125 ml D_5W). • Discard if cloudy or precipitate forms.

PO

• Store tablets, suspension at room temperature. • Administer on empty stomach with 8 oz water. • Give several extra glasses of water/day.

IV INCOMPATIBILITIES

Fluconazole (Diflucan), foscarnet (Foscavir), midazolam (Versed), total parenteral nutrition (TPN), vinorelbine (Navelbine).

IV COMPATIBILITIES

Diltiazem (Cardizem), heparin, hydromorphone (Dilaudid), lorazepam (Ativan), magnesium sulfate, morphine.

INDICATIONS/ROUTES/DOSAGE

Usual Adult/Elderly Dosage Range

PO: One double-strength tablet q12–24h.
IV: 8–20 mg/kg/day as trimethoprim in divided doses q6–12h.

Mild to Moderate Infection

PO: CHILDREN: 8–12 mg/kg/day as trimethoprim in divided doses q12h.

Severe Infections

PO: CHILDREN: 20 mg/kg/day as trimethoprim in divided doses q6h.
IV: CHILDREN: 8–12 mg/kg/day as trimethoprim in divided doses q6h.

Chronic Bronchitis

PO: ADULTS, ELDERLY: 1 double-strength or 2 single-strength tablets or 20 ml suspension q12h for 10–14 days.

Pneumocystis jiroveci Pneumonia (PCP) Prophylaxis

PO: ADULTS, ELDERLY: 1 double-strength tablet daily or 3 times a wk or 1 single-strength tablet daily. **CHILDREN 2 MOS AND**

OLDER: 150 mg/m²/day as trimethoprim in 2 divided doses 3 times a wk on consecutive days.

PCP Treatment

PO, IV: ADULTS, ELDERLY, CHILDREN 2 MOS AND OLDER: 15–20 mg/kg/day as trimethoprim in 4 divided doses for 14–21 days.

Shigellosis

PO: ADULTS, ELDERLY: 1 double-strength tablet or 2 single-strength tablets or 20 ml suspension q12h for 5 days.
IV: ADULTS, CHILDREN: 8–10 mg/kg/day as trimethoprim in 2–4 divided doses for up to 5 days.

Otitis Media

PO: CHILDREN 2 MOS AND OLDER: 8 mg/kg/day trimethoprim q12h for 10 days.

UTI

PO: ADULTS, ELDERLY: 1 double-strength or 2 single-strength tablets or 20 ml suspension q12h for 3–14 days depending on severity. **CHILDREN 2 MOS AND OLDER:** 8 mg/kg/day as trimethoprim in 2 divided doses for 10 days.

Traveler's Diarrhea

PO: ADULTS, ELDERLY: 1 double-strength or 2 single-strength tablets or 20 ml suspension q12h for 5 days.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
15–30 ml/min	50% of usual dosage
Less than 15 ml/min	Not recommended

SIDE EFFECTS

Frequent: Anorexia, nausea, vomiting, rash (generally 7–14 days after therapy begins), urticaria. **Occasional:** Diarrhea, abdominal pain, pain/irritation at IV infusion site. **Rare:** Headache, vertigo, insomnia, seizures, hallucinations, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Rash, fever, sore throat, pallor, purpura, cough, shortness of breath may be early signs of serious adverse effects. Fatalities are rare but have occurred in sulfonamide therapy following Stevens-Johnson syndrome, toxic epidermal necrolysis, fulminant hepatic necrosis, agranulocytosis, aplastic anemia, other blood dyscrasias. Myelosuppression, decreased platelet count, severe dermatologic reactions may occur, esp. in the elderly.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain history for hypersensitivity to trimethoprim or any sulfonamide, sulfite sensitivity, bronchial asthma. Determine renal, hepatic, hematologic baselines.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash, pallor, purpura. Check IV site, flow rate. Monitor renal, hepatic, hematology reports. Assess I&O. Check for CNS symptoms (headache, vertigo, insomnia, hallucinations). Monitor vital signs at least twice a day. Monitor for cough, shortness of breath. Assess for overt bleeding, ecchymosis, edema.

PATIENT/FAMILY TEACHING

• Continue medication for full length of therapy. • Space doses evenly around the clock. • Take oral doses with 8 oz water and drink several extra glasses of water daily. • Notify physician immediately of new symptoms, esp. rash, other skin changes, bleeding/bruising, fever, sore throat, diarrhea. • Avoid prolonged exposure to direct sunlight.

S

sulfasalazine

sul-fa-**sal**-a-zeen
(Alti-Sulfasalazine, Azulfidine, Azulfidine EN-tabs, Salazopyrin, Salazopyrin EN-Tabs)
Do not confuse Azulfidine with Augmentin or azathioprine, or sulfasalazine with sulfadiazine or sulfisoxazole.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sulfonamide. **CLINICAL:** Anti-inflammatory.

ACTION

Inhibits prostaglandin synthesis, acting locally in colon. **Therapeutic Effect:** Decreases inflammatory response, interferes with GI secretion. Effect may be result of antibacterial action with change in intestinal flora.

PHARMACOKINETICS

Poorly absorbed from GI tract. Cleaved, absorbed in colon by intestinal bacteria, forming sulfapyridine and mesalamine (5-ASA). Widely distributed. Metabolized via colonic intestinal flora. Primarily excreted in urine. **Half-life:** 5.7–10 hrs.

USES

Treatment of ulcerative colitis, rheumatoid arthritis (RA), juvenile rheumatoid arthritis. **OFF-LABEL:** Treatment of ankylosing spondylitis, Crohn's disease, psoriasis, psoriatic arthritis.

PRECAUTIONS

Contraindications: Hypersensitivity to sulfa, salicylates; porphyria; GI or GU obstruction. **Cautions:** Severe allergies, bronchial asthma, impaired hepatic/renal function, G6PD deficiency, blood dyscrasias.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce infertility, oligospermia in men while taking medication. Readily crosses placenta; if given near term, may produce jaundice, hemolytic anemia, kernicterus in newborn. Distributed in breast milk. Pt should not breast-feed premature infant or those with hyperbilirubinemia or G6PD deficiency. **Pregnancy Category B (D if given near term). Children:** No age-related precautions noted in those older than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Hepatotoxic medications may increase risk of hepatotoxicity. **HERBAL: Dong quai, St. John's wort** may increase photosensitization. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Azulfidine): 500 mg.

Tablets (Delayed-Release [Azulfidine EN-tabs]): 500 mg.

ADMINISTRATION/HANDLING

PO

• Space doses evenly (intervals not to exceed 8 hrs). • Administer after meals or with food. • Swallow enteric-coated tablets whole; do not break, crush, dissolve, or divide. • Give with 8 oz of water; encourage several glasses of water between meals.

INDICATIONS/ROUTES/DOSAGE

Ulcerative Colitis

PO: ADULTS, ELDERLY: Initially, 1 g 3–4 times a day in divided doses q4–6h. **Maximum:** 6 g/day. Maintenance: 2 g/day in divided doses at intervals less than or equal to q8h. **CHILDREN 2 YRS AND OLDER:** Initially, 40–60 mg/kg/day in 3–6 divided doses. **Maximum:** Initial Dose: 4 g/day. Maintenance: 30–50 mg/kg/day in 4 divided doses at intervals less than or equal to q8h. **Maximum:** Maintenance Dose: 2 g/day.

Rheumatoid Arthritis (RA)

PO: *(Delayed-Release Tablets)*: ADULTS, ELDERLY: Initially, 0.5–1 g/day for 1 wk. In-

crease by 0.5 g/wk, up to 2 g/day in 2 divided doses. **Maximum:** 3 g/day.

Juvenile Rheumatoid Arthritis (JRA)
PO: ***(Delayed-Release Tablets)*****: CHILDREN:** Initially, 10 mg/kg/day. May increase by 10 mg/kg/day at weekly intervals. Range: 30–50 mg/kg/day. **Maximum:** 2 g/day.

Dosage in Renal Impairment
Not recommended.

Dosage in Hepatic Impairment
Avoid use.

SIDE EFFECTS

Frequent (33%): Anorexia, nausea, vomiting, headache, oligospermia (generally reversed by withdrawal of drug). **Occasional (3%):** Hypersensitivity reaction (rash, urticaria, pruritus, fever, anemia). **Rare (Less Than 1%):** Tinnitus, hypoglycemia, diuresis, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anaphylaxis, Stevens-Johnson syndrome, hematologic toxicity (leukopenia, agranulocytosis), hepatotoxicity, nephrotoxicity occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to medications. Check initial urinalysis, CBC, serum hepatic/renal function tests.

INTERVENTION/EVALUATION

Monitor I&O, urinalysis, renal function tests; ensure adequate hydration (minimum output 1,500 ml/24 hrs) to prevent nephrotoxicity. Assess skin for rash (discontinue drug, notify physician at first sign). Monitor daily pattern of bowel activity, stool consistency. (Dosage increase may be needed if diarrhea continues, recurs.) Monitor CBC closely; assess for and report immediately any hematologic effects (bleeding, ecchymoses, fever, pharyngitis, pallor, weakness, purpura). Monitor hepatic function tests; observe for jaundice.

PATIENT/FAMILY TEACHING

• May cause orange-yellow discoloration of urine, skin. • Space doses evenly around the clock. • Take after or with food with 8 oz of water; drink several glasses of water between meals. • Swallow enteric-coated tablets whole; do not chew, crush, dissolve, or divide tablets. • Continue for full length of treatment; may be necessary to take drug even after symptoms relieved. • Follow-up, lab tests are essential. • Inform dentist, surgeon of sulfasalazine therapy. • Avoid exposure to sun, ultraviolet light until photosensitivity determined (may last for mos after last dose).

sulindac

sul-**in**-dak
(Apo-Sulin, Clinoril, Novo-Sundac)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines.

Do not confuse Clinoril with Cleocin or Clozaril.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: Anti-inflammatory, antigout (see p. 129C).

ACTION

Produces analgesic, anti-inflammatory effects by inhibiting prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain.

S

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (antirheumatic)	7 days	2–3 wks	N/A
Analgesic	1 hr	—	12–24 hrs

Well absorbed from GI tract. Protein binding: 93%–98%. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 7.8 hrs; metabolite, 16.4 hrs.

USES

Treatment of pain of rheumatoid arthritis (RA), osteoarthritis, ankylosing spondylitis, acute painful shoulder, bursitis, tendonitis, acute gouty arthritis. **OFF-LABEL:** Management of preterm labor.

PRECAUTIONS

Contraindications: Perioperative pain in setting of CABG surgery, history of hypersensitivity to aspirin, NSAIDs. **Cautions:** Renal/hepatic impairment, history of GI tract disease, predisposition to fluid retention, concurrent anticoagulant use, CHF, hypertension, GI bleeding, asthma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category C (D if used in third trimester near delivery). Children:** Safety and efficacy not established. **Elderly:** GI bleeding/ulceration more likely to cause serious adverse effects. Age-related renal impairment may increase risk of hepatic/renal toxicity; lower dosage recommended.

INTERACTIONS

DRUG: **Antacids** may decrease concentration. May decrease effects of **antihypertensives, diuretics. Aspirin, other salicylates** may increase risk of GI side effects, bleeding. May increase concentration/adverse effects of **cyclosporine.** May increase effects of **heparin, oral anticoagulants, thrombolytics.** May increase concentration, risk of toxicity of **lithium.** May increase risk of **methotrexate** toxicity. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo, ginseng** possess antiplatelet activity, may increase bleeding. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT, bleeding time.

AVAILABILITY (Rx)

Tablets: 150 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

- Give with food, milk, antacids if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA), Osteoarthritis, Ankylosing Spondylitis

PO: ADULTS, ELDERLY: Initially, 150 mg twice a day. May increase up to 400 mg/day.

Acute Shoulder Pain, Gouty Arthritis, Bursitis, Tendonitis

PO: ADULTS, ELDERLY: 200 mg twice a day for 7–14 days.

SIDE EFFECTS

Frequent (9%–4%): Diarrhea, constipation, indigestion, nausea, maculopapular rash, dermatitis, dizziness, headache. **Occasional (3%–1%):** Anorexia, abdominal cramps, flatulence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Rare reactions with long-term use include peptic ulcer disease, GI bleeding, gastritis, nephrotoxicity (glomerular nephritis, interstitial nephritis, nephrotic syndrome), severe hepatic reactions (cholestasis, jaundice), severe hypersensitivity reactions (fever, chills, joint pain).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline renal/hepatic function tests. Assess onset, type, location, dura-

tion of pain, fever, inflammation. Inspect affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Monitor daily pattern of bowel activity, stool consistency. Assess for evidence of rash. Evaluate for therapeutic response (relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength). Monitor serum hepatic/renal function, CBC, platelets.

PATIENT/FAMILY TEACHING

• Therapeutic antiarthritic effect noted 1–3 wks after therapy begins. • Avoid aspirin, alcohol during therapy (increases risk of GI bleeding). • Take with food, milk if GI upset occurs. • Avoid tasks that require alertness, motor skills until response to drug is established (may cause dizziness).

sumatriptan TOP 200

soo-ma-**trip**-tan
(Alsuma, Apo-Sumatriptan, Imitrex, Sumavel DosePro)
Do not confuse sumatriptan with saxagliptin, sitagliptin, somatropin, or zolmitriptan.

FIXED-COMBINATION(S)

Treximet: sumatriptan/naproxen (an NSAID): 85 mg/500 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin 5-HT_1 receptor agonist. **CLINICAL:** Antimigraine (see p. 63C).

ACTION

Binds selectively to vascular receptors, producing vasoconstrictive effect on cranial blood vessels. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Nasal	15 min	N/A	24–48 hrs
PO	30 min	2 hrs	24–48 hrs
Subcutaneous	10 min	1 hr	24–48 hrs

Rapidly absorbed after subcutaneous administration. Absorption after PO administration is incomplete; significant amounts undergo hepatic metabolism, resulting in low bioavailability (about 14%). Protein binding: 10%–21%. Widely distributed. Undergoes first-pass metabolism in liver. Excreted in urine. **Half-life:** 2 hrs.

USES

PO, Subcutaneous, Intranasal: Acute treatment of migraine headache with or without aura. **Subcutaneous:** Treatment of cluster headaches.

PRECAUTIONS

Contraindications: Management of hemiplegic or basilar migraine, peripheral vascular disease, CVA, ischemic heart disease (including angina pectoris, history of MI, silent ischemia, Prinzmetal's angina), severe hepatic impairment, transient ischemic attack, uncontrolled hypertension, MAOI use within 14 days, use within 24 hrs of ergotamine preparations or another 5-HT_1 agonist. **Cautions:** Hepatic impairment, history of seizure disorder, controlled hypertension.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Ergotamine-containing medications may produce vasospastic reaction. **MAOIs** may increase concentration, half-life. **SSRIs** and **SNRI antidepressants** may increase risk of serotonin syndrome. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Injection, Prefilled Autoinjector (Alsuma): 6 mg/0.5 ml. **Injection Solution (Imitrex):** 4 mg/0.5 ml, 6 mg/0.5 ml. **(Sumavel DosePro):** 6 mg/0.5 ml. **Nasal Spray (Imitrex Nasal):** 5 mg/0.1 ml, 20 mg/0.1 ml. **Tablets (Imitrex):** 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

Subcutaneous

• Follow manufacturer's instructions for autoinjection device use. • Administer needleless (Sumavel DosePro) only to abdomen or thigh.

PO

• Swallow tablets whole. Do not split. • Take with full glass of water.

Nasal

• Unit contains only one spray—do not test before use. • Instruct pt to gently blow nose to clear nasal passages. • With head upright, close one nostril with index finger, breathe out gently through mouth. • Have pt insert nozzle into open nostril about ½ inch, close mouth and, while taking a breath through nose, release spray dosage by firmly pressing plunger. • Instruct pt to remove nozzle from nose and gently breathe in through nose and out through mouth for 10–20 sec; do not breathe in deeply.

INDICATIONS/ROUTES/DOSAGE

Acute Migraine Headache

PO: ADULTS, ELDERLY: 25–100 mg. Dose may be repeated after at least 2 hrs. **Maximum:** 100 mg/single dose; 200 mg/24 hrs.

Subcutaneous: ADULTS, ELDERLY: Up to 6 mg. **Maximum:** Up to two 6-mg injections/24 hrs (separated by at least 1 hr).

Intranasal: ADULTS, ELDERLY: 5–20 mg; may repeat in 2 hrs. **Maximum:** 40 mg/24 hrs.

SIDE EFFECTS

Frequent: PO (10%–5%): Tingling, nasal discomfort. **Subcutaneous (greater than 10%):** Injection site reactions, tingling, warm/hot sensation, dizziness, vertigo. **Nasal (greater than 10%):** Altered taste, nausea, vomiting. **Occasional: PO (5%–1%):** Flushing, asthenia (loss of strength, energy), visual disturbances. **Subcutaneous (10%–2%):** Burning sensation, numbness, chest discomfort, drowsiness, asthenia (loss of strength, energy). **Nasal (5%–1%):** Nasopharyngeal discomfort, dizziness. **Rare: PO (less than 1%):** Agitation, eye irritation, dysuria. **Subcutaneous (less than 2%):** Anxiety, fatigue, diaphoresis, muscle cramps, myalgia. **Nasal (less than 1%):** Burning sensation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive dosage may produce tremor, redness of extremities, reduced respirations, cyanosis, seizures, paralysis. Serious arrhythmias occur rarely, esp. in pts with hypertension, obesity, smokers, diabetes, strong family history of coronary artery disease. Serotonin syndrome may occur (agitation, confusion, hallucinations, hyper-reflexia, myoclonus, shivering, tachycardia).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of peripheral vascular disease, renal/hepatic impairment, possibility of pregnancy. Question regarding onset, location, duration of migraine, possible precipitating symptoms.

INTERVENTION/EVALUATION

Evaluate for relief of migraine headache and resulting photophobia, phonophobia (sound sensitivity), nausea, vomiting.

PATIENT/FAMILY TEACHING

• Follow proper technique for loading of autoinjector, injection technique, discarding of syringe. • Do not use more than 2 injections during any 24-hr period and allow at least 1 hr between injections. • Contact physician immediately if wheezing, palpitations, skin rash, facial

swelling, pain/tightness in chest/throat occur.

sunitinib HIGH ALERT

soo-**nit**-in-ib
(Sutent)

BLACK BOX ALERT Hepatotoxicity may be severe and/or result in fatal liver failure.

Do not confuse sunitinib with imatinib or sorafenib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor, vascular endothelial growth factor. **CLINICAL:** Antineoplastic (see p. 88C).

ACTION

Inhibitory action against multiple kinases, growth factor receptors, stem cell factor receptors, colony-stimulating factor receptors, glial cell-line neurotrophic factor receptors. **Therapeutic Effect:** Prevents tumor cell growth, produces tumor regression, inhibits metastasis.

PHARMACOKINETICS

Metabolized in liver. Protein binding: 95%. Excreted mainly in feces, with lesser amount eliminated in urine. **Half-life:** 40–60 hrs.

USES

Treatment of GI stromal tumor after disease progression while on or demonstrating intolerance to imatinib. Treatment of advanced renal cell carcinoma. Treatment of pancreatic neuroendocrine tumor (PNET). **OFF-LABEL:** Non-GI stromal tumor, soft tissue sarcomas, advanced thyroid cancer.

PRECAUTIONS

Contraindications: None known. **Cautions:** Cardiac abnormalities, bradycardia, electrolyte imbalance, bleeding tendencies, hypertension, history of prolonged QT interval, medications that prolong QT interval.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential for embryotoxic, teratogenic effects. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, voriconazole) may increase concentration, toxicity. **CYP3A4 inducers (e.g., carbamazepine, dexamethasone, phenobarbital, phenytoin, rifabutin, rifampin, rifapentin)** may decrease concentration/effects. **HERBAL: St. John's wort** may decrease concentration. **FOOD: Grapefruit, grapefruit juice** may increase concentration, potential for torsades, myelotoxicity. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, amylase, lipase, creatinine, AST, ALT. May alter serum potassium, sodium, uric acid. May produce thrombocytopenia, neutropenia. May decrease serum phosphates, thyroid function levels.

AVAILABILITY (Rx)

Capsules: 12.5 mg, 25 mg, 50 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

GI Stromal Tumor, Renal Cell Carcinoma

PO: ADULTS, ELDERLY: 50 mg once daily for 4 wks, followed by 2 wks off of 6-wk cycle.

Pancreatic Neuroendocrine Tumor

PO: ADULTS, ELDERLY: 37.5 mg once daily continuously without a scheduled off-treatment period.

S

Dose Modification

PO: ADULTS, ELDERLY: Dosage increase or reduction in 12.5-mg increments is recommended based on safety and tolerability.

SIDE EFFECTS

Stromal tumor: Common (42%–30%): Fatigue, diarrhea, anorexia, abdominal pain, nausea, hyperpigmentation. **Frequent (29%–18%):** Mucositis/stomatitis, vomiting, asthenia (loss of strength, energy), altered taste, constipation, fever. **Occasional (15%–8%):** Hypertension, rash, myalgia, headache, arthralgia, back pain, dyspnea, cough. **Renal carcinoma: Common (74%–43%):** Fatigue, diarrhea, nausea, mucositis/stomatitis, dyspepsia (heartburn, indigestion, epigastric pain), altered taste. **Frequent (38%–20%):** Rash, vomiting, constipation, hyperpigmentation, anorexia, arthralgia, dyspnea, hypertension, headache, abdominal pain. **Occasional (18%–11%):** Limb pain, peripheral/periorbital edema, dry skin, hair color change, myalgia, cough, back pain, dizziness, fever, tongue pain, flatulence, alopecia, dehydration.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hand-foot syndrome occurs occasionally (14%), manifested as blistering/rash/peeling of skin on palms of hands, soles of feet. Bleeding, decrease in left ventricular ejection fraction, deep vein thrombosis (DVT), pancreatitis, neutropenia, seizures occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question possibility of pregnancy. Obtain baseline CBC, platelets, serum chemistries including electrolytes, renal/hepatic function tests (alkaline phosphatase, bilirubin, ALT, AST) before beginning therapy and prior to each treatment. Obtain baseline EKG, thyroid function tests.

INTERVENTION/EVALUATION

Assess eye area, lower extremities for early evidence of fluid retention. Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Monitor CBC for evidence of neutropenia, thrombocytopenia; assess hepatic function tests for hepatotoxicity.

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid pregnancy; use effective contraceptive measures. • Promptly report fever, unusual bruising/bleeding from any site.

tacrolimus

TOP 200

tak-roe-**li**-mus

(Advagraf, Prograf, Protopic)

BLACK BOX ALERT Increased susceptibility to infection and potential for development of lymphoma. Topical form associated with rare cases of malignancy. Topical form should be used only for short-term and intermittent treatment. Use in children less than 2 yrs of age not recommended. Use only 0.03% ointment for children 2–15 yrs of age.

Do not confuse Protopic with Protonix, or tacrolimus with everolimus, pimcrolimus, sirolimus, or temsirolimus.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunologic agent. **CLINICAL:** Immunosuppressant (see p. 119C).

ACTION

Inhibits T-lymphocyte activation by binding to intracellular proteins, forming a complex, inhibiting phosphatase activity. **Therapeutic Effect:** Suppresses immunologically mediated inflammatory response; prevents organ transplant rejection.

PHARMACOKINETICS

Variably absorbed after PO administration (food reduces absorption). Protein binding: 99%. Extensively metabolized in liver. Primarily eliminated in feces. Not removed by hemodialysis. **Half-life:** 21–61 hrs.

USES

PO/injection: Prophylaxis of organ rejection in pts receiving allogeneic liver, kidney, heart transplant. Should be used concurrently with adrenal corticosteroids. In heart and kidney transplants pts, should be used in conjunction with azathioprine or mycophenolate. **Topical:** Moderate to severe atopic dermatitis. **OFF-LABEL:** Prevention of organ rejection in lung, small bowel recipients; prevention and treatment of graft-vs-host disease in allogeneic hematopoietic stem cell transplantation.

PRECAUTIONS

Contraindications: Hypersensitivity to HCO-60 polyoxyl 60 hydrogenated castor oil (used in solution for injection). **Cautions:** Immunosuppressed pts, renal/hepatic impairment, concurrent use with cyclosporine (increases risk of nephrotoxicity). **Topical:** Exposure to sunlight.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Hyperkalemia, renal dysfunction noted in neonates. Distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** May require higher dosages (decreased bioavailability, increased clearance). May make post-transplant lymphoproliferative disorder more common, esp. in those younger than 3 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Aluminium-containing antacids** may increase **tacrolimus** concentration. **CYP3A4 inhibitors (e.g., erythromycin, ketoconazole)** may increase concentration/effects. **CYP3A4 inducers (e.g., rifampin)** may decrease concentration/effects. **Protease inhibitors, calcium channel blockers** may increase concentration. **HERBAL:** **Echinacea, St. John's wort** may decrease concentration/effects. **FOOD:** **Food** decreases rate/extent of absorption. **Grapefruit, grapefruit juice** may increase concentration, toxicity (potential for nephrotoxicity). **LAB VALUES:** May increase serum glucose, BUN, creatinine, potassium, triglycerides, cholesterol, bilirubin, amylase, AST, ALT. May decrease serum magnesium, Hgb, Hct, platelets. May alter leukocytes.

AVAILABILITY (Rx)

Capsules (Prograf): 0.5 mg, 1 mg, 5 mg. **Injection Solution (Prograf):** 5 mg/ml. **Ointment (Protopic):** 0.03%, 0.1%.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute with appropriate amount (250–1,000 ml, depending on desired dose) 0.9% NaCl or D_5W to provide concentration between 0.004 and 0.02 mg/ml.

Rate of Administration • Give as continuous IV infusion. • Continuously monitor pt for anaphylaxis for at least 30 min after start of infusion. • Stop infusion immediately at first sign of hypersensitivity reaction.

Storage • Store diluted infusion solution in glass or polyethylene containers and discard after 24 hrs. • Do not store in PVC container (decreased stability, potential for extraction).

PO

• Administer on empty stomach. • Do not give with grapefruit, grapefruit juice or within 2 hrs of antacids.

Topical

• For external use only. • Do not cover with occlusive dressing. • Rub gently, completely onto clean, dry skin.

IV INCOMPATIBILITIES

No known drug incompatibilities.

IV COMPATIBILITIES

Calcium gluconate, dexamethasone (Decadron), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), furosemide (Lasix), heparin, hydromorphone (Dilaudid), insulin, leucovorin, lipids, lorazepam (Ativan), morphine, nitroglycerin, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Prevention of Liver Transplant Rejection

PO: ADULTS, ELDERLY: 0.1–0.15 mg/kg/day in 2 divided doses 12 hrs apart. Begin oral therapy no sooner than 6 hrs post-transplant. **CHILDREN:** 0.15–0.2 mg/kg/day in 2 divided doses 12 hrs apart. Begin oral therapy no sooner than 6 hrs post-transplant.

IV: ADULTS, ELDERLY, CHILDREN: 0.03–0.05 mg/kg/day as continuous infusion.

Prevention of Kidney Transplant Rejection

PO: ADULTS, ELDERLY: 0.2 mg/kg/day in 2 divided doses 12 hrs apart or 0.1 mg/kg/day in combination with mycophenolate. May be given within 24 hrs of transplant.

IV: ADULTS, ELDERLY: 0.03–0.05 mg/kg/day as continuous infusion.

Prevention of Heart Transplant Rejection

PO: ADULTS, ELDERLY: Initially, 0.075 mg/kg/day in 2 divided doses 12 hrs apart. Begin oral therapy no sooner than 6 hrs post-transplant.

IV: ADULTS, ELDERLY: 0.01 mg/kg/day as continuous infusion.

T

Atopic Dermatitis

Topical: ADULTS, ELDERLY, CHILDREN 2 YRS AND OLDER: Apply 0.03% or 0.1% ointment to affected area twice daily. Continue treatment for 1 wk after symptoms have resolved. If no improvement within 6 wks, re-examine to confirm diagnosis.

SIDE EFFECTS

Frequent (greater than 30%): Headache, tremor, insomnia, paresthesia, diarrhea, nausea, constipation, vomiting, abdominal pain, hypertension. **Occasional (29%–10%):** Rash, pruritus, anorexia, asthenia (loss of strength, energy), peripheral edema, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Nephrotoxicity (characterized by increased serum creatinine, decreased urinary output), neurotoxicity (tremor, headache, altered mental status), pleural effusion occur commonly. Thrombocytopenia, leukocytosis, anemia, atelectasis, sepsis, infection occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess medical, drug history, esp. renal function, use of other immunosuppressants. Have aqueous solution of epinephrine 1:1,000 available at bedside as well as O_2 before beginning IV infusion. Assess pt continuously for first 30 min following start of infusion and at frequent intervals thereafter.

INTERVENTION/EVALUATION

Closely monitor pts with renal impairment. Monitor lab values, esp. serum creatinine, potassium levels, CBC with differential, serum hepatic function tests. Monitor I&O closely. CBC should be performed weekly during first mo of therapy, twice monthly during second and third mos of treatment, then monthly throughout the first yr. Report any major change in pt assessment.

PATIENT/FAMILY TEACHING

• Take dose at same time each day. • Avoid crowds, those with infection. • Inform physician if decreased urination, chest pain, headache, dizziness, respiratory infection, rash, unusual bleeding/bruising occur. • Avoid exposure to sun, artificial light (may cause photosensitivity reaction).

tadalafil

TOP 200

tah-**dal**-ah-fill

(Adcirca, Cialis)

Do not confuse Adcirca with Advair or Advicor, or tadalafil with sildenafil or vardenafil.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphodiesterase inhibitor. **CLINICAL:** Erectile dysfunction adjunct.

ACTION

Inhibits phosphodiesterase type 5, the enzyme responsible for degrading cyclic guanosine monophosphate in corpus cavernosum of penis, pulmonary vascular smooth muscle, resulting in smooth muscle relaxation, increased blood flow. **Therapeutic Effect:** Facilitates erection, improves exercise ability.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	60 min	—	36 hrs

Rapidly absorbed after PO administration. Protein binding: 94% Metabolized in liver. Primarily eliminated in feces. Drug has no effect on penile blood flow without sexual stimulation. **Half-life:** 17.5 hrs.

USES

Cialis: Treatment of erectile dysfunction (ED). Treatment of benign prostatic hyperplasia (BPH). Simultaneous treatment of ED and BPH. **Adcirca:** Treatment of pulmonary arterial hypertension (PAH). **OFF-LABEL:** Raynaud's phenomenon.

PRECAUTIONS

Contraindications: Concurrent use of nitrates in any form, severe hepatic impairment. **Cautions:** Concurrent use of alpha-adrenergic blockers (other than minimum dose tamsulosin), renal/hepatic impairment, anatomical deformation of penis, pts who may be predisposed to priapism (sickle cell anemia, multiple myeloma, leukemia), left ventricular outflow obstruction (e.g., aortic stenosis), bleeding disorders, peptic ulcer.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Pregnancy Category B. Children: Not indicated in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol increases risk of orthostatic hypotension. Potentiates hypotensive effects of **alpha-adrenergic blockers, nitrates. CYP3A4 inhibitors** (e.g., **erythromycin, itraconazole, ketoconazole, ritonavir, saquinavir**) may increase concentration. **HERBAL: St. John's wort** may alter concentration/effects. **FOOD: Grapefruit, grapefruit juice** may increase concentration, toxicity. **LAB VALUES:** May alter hepatic function levels, increase GGTP.

AVAILABILITY (Rx)

Tablets (Cialis): 2.5 mg, 5 mg, 10 mg, 20 mg. **(Adcirca):** 20 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Take at least 30 min before anticipated sexual activity. • Administer Adcirca dose all at same time.

INDICATIONS/ROUTES/DOSAGE

Erectile Dysfunction

PO: ADULTS, ELDERLY: Once daily dosing: 2.5 mg. Range: 2.5–5 mg based on tolerability. **Maximum:** 2.5 mg (with CYP3A4 inhibitors). As needed dosing: 10 mg at least 30 min prior to anticipated sexual activity. Range: 5–20 mg. No more than one dose/24 hr. **Maximum:** 10 mg (with CYP3A4 inhibitors) no more frequently than q72h.

BPH

PO: ADULTS, ELDERLY: (Cialis) 5 mg once daily. With CYP3A4 inhibitors: 2.5 mg once daily.

T

ED and BPH

PO: ADULTS, ELDERLY: (Cialis) 5 mg once daily. With CYP3A4 inhibitors: 2.5 mg once daily.

PAH

PO: ADULTS, ELDERLY: (Adcirca) 40 mg once daily.

Dosage in Renal Impairment

Erectile Dysfunction

Creatinine clearance 31–50 ml/min: As needed dosing: Starting dose is 5 mg before sexual activity once daily. **Maximum dose:** 10 mg no more frequently than once q48h. No dose adjustment for once daily dosing. **Creatinine clearance less than 31 ml/min:** Starting dose is 5 mg before sexual activity. Not to be given more often than q72h. Daily dosing not recommended.

PAH

Creatinine clearance 31–80 ml/min: Initially, 20 mg daily. May increase to 40 mg based on tolerance. Avoid use if creatinine clearance less than 31 ml/min.

Dosage in Mild to Moderate Hepatic Impairment

Pts with Child-Pugh class A or B hepatic impairment should take no more than 10 mg once daily. Not recommended in severe hepatic impairment.

SIDE EFFECTS

Occasional: Headache, dyspepsia (heartburn, indigestion, epigastric pain), back pain, myalgia, nasal congestion, flushing, sudden hearing loss, visual field loss, postural hypotension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged erections (lasting over 4 hrs), priapism (painful erections lasting over 6 hrs) occur rarely. Angina, chest pain, MI have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess cardiovascular status before initiating treatment for erectile dysfunction. Assess renal/hepatic function tests.

INTERVENTION/EVALUATION

Monitor B/P.

PATIENT/FAMILY TEACHING

• Has no effect in absence of sexual stimulation. • Seek treatment immediately if erection persists for over 4 hrs. • Report sudden decrease or loss of hearing or vision. • Avoid alcohol (may increase risk of postural hypotension).

tamoxifen

HIGH ALERT

tam-**ox**-ih-fen

(Apo-Tamox, Nolvadex-D)

BLACK BOX ALERT Serious, possibly life-threatening stroke, pulmonary emboli, uterine malignancy (endometrial adenocarcinoma, uterine sarcoma) have occurred.

Do not confuse tamoxifen with pentoxifylline, tamsulosin, or temazepam.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonsteroidal antiestrogen. **CLINICAL:** Antineoplastic (see p. 88C).

ACTION

Competes with estradiol for estrogen-receptor binding sites in breast, uterus, vaginal cells. **Therapeutic Effect:** Inhibits DNA synthesis, estrogen response.

PHARMACOKINETICS

Well absorbed from GI tract. Metabolized in liver. Primarily eliminated in feces by biliary system. **Half-life:** 7 days.

USES

Adjunct treatment in advanced breast cancer after primary treatment with surgery

and radiation, reduce risk of breast cancer in women at high risk, reduce risk of invasive breast cancer in women with ductal carcinoma *in situ* (DCIS), metastatic breast cancer in women and men. **OFF-LABEL:** Induction of ovulation, treatment of desmoid tumors. Treatment of mastalgia, gynecomastia; ovarian, endometrial cancer; uterine sarcoma; precocious puberty in females; risk reduction in women with Paget's disease of breast.

PRECAUTIONS

Contraindications: Concomitant coumarin-type therapy when used in treatment of breast cancer in high-risk women, history of deep vein thrombosis (DVT) or pulmonary embolism in high-risk women. **Cautions:** Leukopenia, thrombocytopenia, pregnancy, history of thromboembolic events, hyperlipidemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safe and effective in girls 2–10 yrs with McCune Albright syndrome, precocious puberty. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effects of **warfarin.** May decrease effects of **anastrozole. Cytotoxic agents** may increase risk of thromboembolic events. **HERBAL:** Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum cholesterol, calcium, triglycerides, hepatic enzymes.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Metastatic Breast Cancer

PO: ADULTS, ELDERLY: 20–40 mg/day. Give doses greater than 20 mg/day in divided doses.

Prevention of Breast Cancer in High-Risk Women, Ductal Carcinoma *in Situ*, Adjunctive Treatment of Breast Cancer

PO: ADULTS, ELDERLY: 20 mg/day for 5 yrs.

SIDE EFFECTS

Frequent: Women (greater than 10%): Hot flashes, nausea, vomiting. **Occasional: Women (9%–1%):** Changes in menstruation, genital itching, vaginal discharge, endometrial hyperplasia, polyps. **Men:** Impotence, decreased libido. **Men and women:** Headache, nausea, vomiting, rash, bone pain, confusion, weakness, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Retinopathy, corneal opacity, decreased visual acuity noted in pts receiving extremely high dosages (240–320 mg/day) for longer than 17 mos.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain estrogen receptor assay prior to therapy. Obtain baseline breast and gynecologic exams, mammogram results. CBC, platelet count, serum calcium levels should be checked before and periodically during therapy.

INTERVENTION/EVALUATION

Be alert to increased bone pain, ensure adequate pain relief. Monitor I&O, weight. Observe for edema, esp. of dependent areas, signs and symptoms of DVT. Assess for hypercalcemia (increased urinary volume, excessive thirst, nausea, vomiting, constipation, hypotonicity of muscles, deep bone/flank pain, renal stones).

PATIENT/FAMILY TEACHING

- Report vaginal bleeding/discharge/itching, leg cramps, weight gain, short-

T

ness of breath, weakness. • May initially experience increase in bone, tumor pain (appears to indicate good tumor response). • Contact physician if nausea, vomiting continue at home. • Nonhormonal contraceptives are recommended during treatment.

tamsulosin

TOP 200

tam-**sool**-o-sin
(Flomax, Ava-Tamsulosin)
Do not confuse Flomax with Flonase, Flovent, Foltx, Fosamax, or Volmax, or tamsulosin with tacrolimus, tamoxifen, or terazosin.

FIXED-COMBINATION(S)

Jalyn: tamsulosin/dutasteride (an androgen hormone inhibitor): 0.4 mg/0.5 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: $Alpha_1$-adrenergic blocker. **CLINICAL:** Benign prostatic hyperplasia agent.

ACTION

Targets receptors around bladder neck, prostate capsule. **Therapeutic Effect:** Relaxes smooth muscle, improves urinary flow, symptoms of prostatic hyperplasia.

PHARMACOKINETICS

Well absorbed, widely distributed. Protein binding: 94%–99%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 9–13 hrs.

USES

Treatment of symptoms of benign prostatic hyperplasia (BPH), alone or in combination with dutasteride (Avodart). **OFF-LABEL:** Treatment of bladder outlet obstruction or dysfunction. Facilitate expulsion of ureteral stones.

PRECAUTIONS

Contraindications: None known. **Cautions:** Concurrent use of phosphodiesterase (PDE5) inhibitors (sildenafil, tadalafil, vardenafil).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated for use in women. **Pregnancy Category B. Children:** Not indicated in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Other alpha-adrenergic blocking agents (e.g., doxazosin, prazosin, terazosin) may increase alpha-blockade effects of both drugs. **Sildenafil, tadalafil, vardenafil** may cause symptomatic hypotension. **CYP3A4 inhibitors (e.g., ketoconazole)** may increase concentration. **HERBAL:** Avoid **saw palmetto** (limited experience with this combination). **Black cohosh, periwinkle** may increase hypotensive effect. **St. John's wort** may decrease concentration/effects. **FOOD: Grapefruit** may increase potential for orthostatic hypotension. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Capsules: 0.4 mg.

ADMINISTRATION/HANDLING

PO

• Give at same time each day, 30 min after the same meal. • Do not crush/open or chew capsule.

INDICATIONS/ROUTES/DOSAGE

Benign Prostatic Hyperplasia (BPH)

PO: ADULTS: 0.4 mg once a day, approximately 30 min after same meal each day. May increase dosage to 0.8 mg if inadequate response in 2–4 wks.

SIDE EFFECTS

Frequent (9%–7%): Dizziness, drowsiness. **Occasional (5%–3%):** Headache, anxiety, insomnia, orthostatic hypotension. **Rare (less than 2%):** Nasal conges-

tion, pharyngitis, rhinitis, nausea, vertigo, impotence.

ADVERSE EFFECTS/ TOXIC REACTIONS

First-dose syncope (hypotension with sudden loss of consciousness) may occur within 30–90 min after initial dose. May be preceded by tachycardia (pulse rate of 120–160 beats/min).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess history of prostatic hyperplasia (difficulty initiating urine stream, dribbling, sense of urgency, leaking). Question for sensitivity to tamsulosin, use of other alpha-adrenergic blocking agents, warfarin.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Monitor renal function, I&O, weight changes, peripheral edema, B/P. Monitor for first-dose syncope.

PATIENT/FAMILY TEACHING

• Take at same time each day, 30 min after the same meal. • Use caution when getting up from sitting or lying position. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not chew, crush, open capsule.

tapentadol

ta-**pen**-ta-dol
(Nucynta, Nucynta CR, Nucynta ER)
Do not confuse tapentadol with tramadol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Centrally-acting synthetic analgesic. **CLINICAL:** Analgesic.

ACTION

Binds to and activates mu-opioid receptors in the central nervous system, increases norepinephrine by inhibiting its reabsorption into nerve cells. **Therapeutic Effect:** Produces analgesia.

PHARMACOKINETICS

Metabolized in liver. Primarily excreted in the urine. Widely distributed. Protein binding: 20%. **Half-life:** 4 hrs.

USES

Nucynta: Relief of moderate to severe acute pain in adults 18 yrs and older. **Nucynta ER:** Management of moderate to severe chronic pain when around-the-clock analgesic needed for extended period. Treatment of diabetic neuropathy pain.

PRECAUTIONS

Contraindications: Severe respiratory depression, acute or severe bronchial asthma or hypercapnia, paralytic ileus, concurrent use or ingestion within 14 days of MAOI use. **Cautions:** Conditions accompanied by hypoxia, hypercapnia, or decreased respiratory reserve (asthma, COPD, severe obesity, sleep apnea syndrome, myxedema coma, CNS depression); pts with head injury, intracranial lesions, pancreatic or biliary disease, renal or hepatic impairment, history of seizures, conditions that increase risk of seizures, pts at risk for hypotension, adrenal insufficiency, hypothyroidism, prostatic hyperplasia/urinary stricture.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Not recommended for use in this pt population. **Elderly:** Age-related renal impairment may increase risk of side effects.

INTERACTIONS

DRUG: Alcohol, CNS depressants may increase CNS depression, respiratory

T

depression. Serotonin syndrome may occur with use of **MAOIs, SSRIs (e.g., fluoxetine), tricyclic antidepressants (e.g., amitriptyline), triptans (e.g., sumatriptan).** **HERBAL:** **Kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may increase risk for serotonin syndrome. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 50 mg, 75 mg, 100 mg.

Tablets, Extended-Release: 50 mg, 100 mg, 150 mg, 200 mg, 250 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed. • Swallow extended-release tablets whole; do not split, break, chew, crush, or dissolve.

INDICATIONS/ROUTES/DOSAGE

Note: Not recommended in severe renal or hepatic impairment.

Pain Control

PO: ADULTS, ELDERLY: Nucynta: 50–100 mg q4–6h as needed. **Maximum:** 600 mg/day. **Nucynta ER:** Initially, 50 mg twice daily (12 hr apart). May increase by 50 mg twice daily q3days to effective dose. Range: 100–250 mg twice daily.

Dosage in Hepatic Impairment

Immediate-Release: Moderate impairment: 50 mg q8h. **Maximum:** 3 doses/24 hrs. Extended-Release: Initially, 50 mg/day. **Maximum:** 100 mg/day.

SIDE EFFECTS

Frequent (greater than 10%): Nausea, dizziness, vomiting, sleepiness, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Respiratory depression, serotonin syndrome have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, and duration of pain. Obtain vital signs before giving medication. If respirations are 12/min or lower, withhold medication, contact physician.

INTERVENTION/EVALUATION

Be alert for decreased respirations or B/P. Initiate deep breathing and coughing exercises, particularly in those with impaired pulmonary function. Assess for clinical improvement and record onset of pain relief.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, CNS depressants. • Report nausea, vomiting, shortness of breath, difficulty breathing.

tbo-filgrastim

tea-bee-oh fill-**gras**-tim (Neutroval)

Do not confuse tbo-filgrastim with filgrastim, pegfilgrastim, or sargramostim or Neutroval with Neulasta, Neumega, or Neupogen.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic modifier. **CLINICAL:** Human granulocyte colony-stimulating factor (G-CSF).

ACTION

Binds to G-CSF receptors and stimulates neutrophil proliferation, differentiation, maturation, and activation. **Therapeutic Effect:** Stimulates neutrophil production by bone marrow. Reduces duration of chemotherapy-induced neutropenia.

T

PHARMACOKINETICS

Peak concentration: 4–6 hrs. **Half-life:** 3.2–3.8 hrs.

USES

Indicated to reduce duration of severe neutropenia in pts with nonmyeloid malignancies receiving myelosuppressive antineoplastic medications associated with clinically significant incidence of febrile neutropenia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Sickle cell disease, splenomegaly, prior splenic rupture, airway disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Neutrophil count expected to increase.

AVAILABILITY (Rx)

Injection, Prefilled Syringe: 300 mcg/0.5 ml, 480 mcg/0.8 ml.

ADMINISTRATION/HANDLING

Subcutaneous

• Visually inspect solution for clarity, color. • Calculate required dose and discard excess volume. • Choose injection site: abdomen (except for 2-inch area around navel), middle anterior thigh, lateral area of upper buttocks, posterior area of upper arms. • Alternate daily injection sites; do not use area that is bruised, red, tender, or hard, or that has scars or stretch marks. Inject entire contents to activate needle guard. • With plunger still pressed down, remove needle. • Allow empty syringe to slide inside device until entire needle is guarded.

Storage • Store in refrigerator. • May be removed from refrigerator in a single period for up to 5 days. • If not used in 5 days, may return to refrigerator until expiration date. • Discard if precipitate is present or appears cloudy. • Use only clear, colorless solution, without particulate matter. • Avoid shaking.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Do not use in the period of 24 hrs before or 24 hrs after chemotherapy.

Chemotherapy-Induced Neutropenia

Subcutaneous: ADULTS, ELDERLY: 5 mcg/kg once daily. Continue until nadir has passed and neutrophil count has recovered to normal range.

Discontinuation

Permanently discontinue if: splenic rupture, acute respiratory distress syndrome (ARDS), sickle cell crisis occurs.

SIDE EFFECTS

Rare (3%): Bone pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Fatal cases of splenic rupture may occur. ARDS (bilateral lung infiltrates, hypoxia, sepsis, multiorgan failure), serious allergic reactions, including anaphylaxis reported. Severe, and sometimes fatal, sickle cell crisis can occur in pts with sickle cell disease. Potential for tumor growth stimulatory effects on malignant cells reported. Increased hematopoietic activity of bone marrow in response to growth factor treatment has been associated with transient positive bone imaging changes.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC prior to initiation and twice weekly until recovery. Question for history of sickle cell disease, splenomegaly, restrictive airway disease. Auscultate lung sounds.

T

INTERVENTION/EVALUATION

Monitor for acute dyspnea, hypoxia, fever, hypotension if ARDS suspected. Assess sign/symptoms of splenic rupture (upper abdominal, left abdominal bruising, left shoulder pain, acute blood loss). If sickle cell crisis suspected, obtain Hgb, Hct, reticulocyte count, and initiate therapies. Offer analgesics for bone pain.

PATIENT/FAMILY TEACHING

• Immediately report difficulty breathing, rash, itching, signs of infection (fever, sore throat, redness, swelling). • Discuss potential risks and benefits for pts with sickle cell disease. • Avoid pregnancy. • Bone pain is common side effect.

teduglutide

te-due-**glue**-tide
(Gattex)
Do not confuse teduglutide with glutamine or Gattex with Gas-X.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Human glucagon-like peptide-2. **CLINICAL:** Short bowel syndrome (short gut syndrome, short gut) agent.

ACTION

Analogue of naturally occurring peptide secreted by L cells of distal intestine, known to increase intestinal, portal blood flow and inhibit gastric secretion. **Therapeutic Effect:** Improves intestinal absorption.

PHARMACOKINETICS

Degrades into small peptides, amino acids via catabolic pathway. Primarily excreted in urine. 86–89% bioavailability following subcutaneous injection. Peak plasma concentration: 3–5 hrs. **Half-life:** 1.3–2 hrs.

USES

Treatment of adults with short bowel syndrome (SBS) who are dependent on parenteral support.

PRECAUTIONS

Contraindications: None known. **Cautions:** Cardiovascular disease, CHF, those at increased risk for malignancy, biliary tract (gallbladder, pancreatic) disease, hypervolemia, stenosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase absorption of any **concomitant oral medication.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 5 mg (delivers maximum of 0.38 ml containing 3.8 mg teduglutide).

ADMINISTRATION/HANDLING

Subcutaneous

Reconstitution • If diluent syringe (contains 0.5 ml Sterile Water for Injection) has a white snap-off cap, snap or twist off white cap. • If diluent syringe has a gray screw top, unscrew top counter clockwise. • Push prefilled syringe into vial containing teduglutide. • After all diluent has gone into vial, remove syringe, needle and discard. • Allow vial to sit for 30 sec. • Gently roll vial for 15 sec (do not shake) and let stand for 2 min. • Withdraw prescribed dose, discard remaining fluid. • Use within 3 hrs following reconstitution. • Use abdomen, thighs, upper arms for injection. • Avoid injection sites where skin is tender, bruised, red, or hard.

Storage • Store kit in refrigerator. • Reconstituted solution should appear as a clear, colorless to light straw-colored liquid. • Discard if particulate is present. • Drug should be completely dissolved before solution is withdrawn from vial.

INDICATIONS/ROUTES/DOSAGE

Short Bowel Syndrome

Subcutaneous: ADULTS/ELDERLY: 0.05 mg/kg.

Moderate to Severe Renal Impairment

Subcutaneous: ADULTS/ELDERLY: 50% dose reduction.

SIDE EFFECTS

Frequent (30%–22%): Abdominal pain, nausea, injection site reactions. **Occasional (18%–14%):** Headache, abdominal distention, vomiting. **Rare (9%):** Flatulence, hypersensitivity, appetite disorders, sleep disturbances.

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory tract infection occurs in 12% of pts. Fluid overload (hypervolemia) has been noted in 7% of pts. Potential for hypovolemia is increased in those with cardiovascular disease, CHF. Increases risk for acceleration for neoplastic growth. Cholecystitis, cholangitis, cholelithiasis, pancreatitis has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain serum chemistries, hepatic function testing (including bilirubin, alkaline phosphatase, lipase, amylase) before starting treatment. Colonoscopy (or alternate imaging) with removal of polyps should be completed within 5 mos prior to initiating treatment.

INTERVENTION/EVALUATION

Follow-up colonoscopy (or alternate imaging) is recommended at the end of 1 year. If no polyp is found, subsequent colonoscopies should be done no less frequently than every 5 years. If a polyp is found, adherence to current polyp follow-up guidelines is recommended. Discovery of intestinal obstruction, intestinal malignancy necessitates discontinuation of treatment. Subsequent laboratory assessments, hepatic functions tests are recommended every 6 mos. If clinically meaningful elevation is seen, further diagnostic workup is recommended as clinically indicated.

PATIENT/FAMILY TEACHING

• Teach use of administration of medication. • Be aware of need for any new supplies. • Instruct pt in preparation of medication and observe correct administration technique. • Report yellowing of skin or eyes, dark urine, changes in stool color or consistency, severe abdominal pain, nausea, vomiting, sudden weight gain, swelling, or difficulty breathing.

telaprevir

tel-**a**-pre-veer
(Incivek)
Do not confuse telaprevir with boceprevir.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antiviral.

ACTION

Inhibits hepatitis C virus (HCV) protease needed for cleavage of HCV-encoded polyproteins by binding to active serine protease sites. **Therapeutic Effect:** Inhibits viral replication of hepatitis C virus.

PHARMACOKINETICS

Well absorbed in small intestine after PO administration. Peak concentration: 4–5 hrs. Protein binding: 59%–75%. Extensively metabolized in liver. Excreted primarily in feces. Minimal removal by hemodialysis. **Half-life:** 9–11 hrs.

USES

Treatment of chronic hepatitis C genotype 1 in combination with peginterferon alfa and ribavirin. Indicated for compensated

T

liver disease, including cirrhosis, in pts who are previously untreated or who have failed previous interferon and ribavirin therapy.

PRECAUTIONS

◀ALERT▶ Safety and efficacy not established in decompensated cirrhosis, organ transplant, HIV, hepatitis B, previous failed therapies with protease inhibitors.

Contraindications: Pregnancy, male partners of pregnant women, drugs utilizing CYP3A for clearance (see drug interactions), any contraindications to peginterferon alfa or ribavirin. **Cautions:** Baseline anemia, moderate to severe hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Strictly avoid pregnancy. May cause birth defects or fetal demise. **Pregnancy Category B (X when used with ribavirin).** Women of childbearing age must use 2 different forms of birth control: intrauterine device and barrier methods during treatment and at least 6 mos after treatment. Hormonal contraceptives may have decreased effectiveness. Do not initiate therapy until negative pregnancy test confirmed. Unknown if drug crosses placenta or is distributed in breast milk. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Contraindicated with **alfuzosin, atorvastatin, dihydroergotamine, ergonovine, ergotamine, lovastatin, methylergonovine, midazolam, pimozide, rifampin, sildenafil, simvastatin, tadalafil, triazolam.** May increase concentrations of **antiarrhythmics (amiodarone, bepridil, digoxin, flecanide, propafenone, quinidine), antifungals (itraconazole, ketoconazole, posaconazole, voriconazole), calcium channel blockers (amlodipine, diltiazem, felodipine, nicardipine, nifedipine), clarithromycin, colchicine, desipramine, dexamethasone, fluticasone, immunosuppressants, oral contraceptives, rifabutin, tadalafil, trazadone, vardenafil.** **HERBAL:** **St. John's wort** may decrease effectiveness. **FOOD:** **Low-fat meals** may decrease absorption. **LAB VALUES:** May decrease RBC, Hgb, Hct, neutrophils, leukocytes, platelets. May increase serum bilirubin, uric acid levels.

AVAILABILITY (Rx)

Tablets: 375 mg.

ADMINISTRATION/HANDLING

- Give with food containing approximately 20 grams of fat.

INDICATIONS/ROUTES/DOSAGE

Chronic Hepatitis C

PO: ADULTS, ELDERLY: 750 mg 3 times a day with food for 12 wks. Use triple therapy with peginterferon alfa, ribavirin. Duration based on response-guided therapy (RGT) guidelines.

Response-Guided Therapy Guidelines with HCV-RNA Level

Based on prior treatment and HCV-RNA results at wks 4 and 12. If level undetectable at 4 and 12 wks, continue peginterferon alfa, ribavirin for 12 more wks. If level detectable (1,000 international units/ml or less), continue peginterferon alfa, ribavirin for 36 wks.

Treatment Futility

Discontinue treatment if HCV-RNA viral load greater than or equal to 1,000 international units/ml at wks 4 and 12. If HCV-RNA detectable at wk 24, discontinue triple therapy.

Chronic Hepatitis C with Cirrhosis, or Poor Responders to Interferon

PO: ADULTS: 750 mg 3 times a day with food for 12 wks. Continue peginterferon alfa, ribavirin for 36 wks.

Dosage Modification

Do not reduce telaprevir during treatment. If adverse reaction or neutropenia

occurs, recommend reduction/discontinuation of peginterferon and/or ribavirin. If Hgb less than 10 g/dl, reduce or interrupt ribavirin. If Hgb less than 8.5 g/dl, discontinue ribavirin.

SIDE EFFECTS

Frequent (56%–26%): Rash, fatigue, pruritus, nausea, diarrhea. **Occasional (13%–6%):** Vomiting, hemorrhoids, anorectal discomfort, dysgeusia, anal pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk of thromboembolic events associated with peginterferon, erythropoiesis-stimulating agent. Serious skin reactions including drug rash with eosinophilia and systemic symptoms, Stevens-Johnson syndrome reported. Simultaneous use of contraindicated medications may result in hypertension/hypotension, peripheral vasospasm/ischemia (ergot toxicity), arrhythmias, rhabdomyolysis (statins), hyperkalemia (oral contraception), visual abnormalities, syncope, increased sedation or respiratory depression (sedative/hypnotics), loss of virologic response.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess vital signs, O_2 saturation. Obtain CBC, HCV-RNA level, CMP, TSH. Receive full history of home medications including vitamins, minerals, herbal products; screen contraindications. Confirm negative pregnancy test before initiating treatment. Question history of anemia, HIV, hepatitis B.

INTERVENTION/EVALUATION

Assess vital signs, O_2 saturation routinely. Monitor CBC with differential (wks 4, 8, 12), and HCV-RNA levels (wks 4, 8, 12, 24), urine pregnancy every month and 6 mos after final treatment. Assess for anemia-related dizziness, exertional dyspnea, fatigue, weakness, syncope. Report decreases in Hgb, Hct, platelets, neutrophils. Check INR if on warfarin. Monitor for acute infection (fever, diaphoresis, lethargy, oral mucosal changes, productive cough), bloody stools, bruising, hematuria, DVT, pulmonary embolism. Encourage nutritional intake and assess for anorexia, weight loss. Monitor for intrauterine device failures if applicable. Obtain EKG for palpitations, tachycardia. Reinforce birth control compliance.

PATIENT/FAMILY TEACHING

• Must be used in combination with peginterferon, ribavirin. • Inform pt of side effects/contraindications of triple-medication regimen. • Blood levels will be drawn routinely. • Immediately report any newly prescribed medications. • Women of childbearing age must use two different forms of birth control: intrauterine device and barrier methods during treatment and for at least 6 mos after treatment. Hormonal birth control (oral, vaginal rings, injections) may be ineffective. Immediately notify physician if female partner becomes pregnant. • May alter taste of food or decrease appetite. • Report bloody stool/urine, increased bruising, difficulty breathing, weakness, dizziness, palpitations, weight loss. • Avoid alcohol. • Take with meals.

telavancin

tel-a-**van**-sin
(Vibativ)

BLACK BOX ALERT May cause fetal harm (low birth weight, limb malformations). Women of childbearing potential should have pregnancy test before treatment; avoid use during pregnancy unless benefit to pt outweighs fetal risk.

Do not confuse Vibativ with Vibramycin, Vibra-Tabs, or vigabatrin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Lipoglycopeptide antibacterial. **CLINICAL:** Antibiotic.

T

ACTION

Inhibits bacterial cell wall synthesis by blocking polymerization and cross-linking of peptidoglycan. Also disrupts membrane potential and changes cell wall permeability. **Therapeutic Effect:** Bactericidal. Antibiotic.

PHARMACOKINETICS

Not metabolized in liver. Protein binding: 93%. Primarily excreted unchanged in urine. Not removed by hemodialysis. **Half-life:** 8–9 hrs.

USES

Treatment of complicated skin, soft tissue infections caused by gram-positive microorganisms, including methicillin-susceptible or methicillin-resistant *S. aureus,* vancomycin-susceptible *Enterococcus.*

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal dysfunction, concurrent therapy with other nephrotoxic medications. Avoid use in pts with history of congenital QT syndrome, known prolongation of QT interval, uncompensated heart failure, severe left ventricular hypertrophy, or receiving treatment with other drugs known to prolong QT interval.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm at regular dosage. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may increase risk of nephrotoxicity; dosage adjustment recommended.

INTERACTIONS

DRUG: Telavancin may increase levels/effects of **dronedarone, nilotinib, pimozide, quinine, tetrabenazene, thioridazine, ziprasidone. Ciprofloxacin** may increase levels/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May alter serum potassium. May increase serum bilirubin, AST, ALT, BUN, creatinine, PT, aPTT, INR. May decrease Hgb, Hct, WBC count.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 250-mg, 750-mg single-dose vial.

ADMINISTRATION/HANDLING

IV

ALERT Give by intermittent IV infusion (piggyback). Do not give by IV push (may result in exaggerated hypotension).

Reconstitution • **250-mg vial:** Reconstitute with 15 ml Sterile Water for Injection, D_5W, or 0.9% NaCl to provide concentration of 15 mg/ml (total volume approximately 17 ml). • **750-mg vial:** Reconstitute with 45 ml Sterile Water for Injection, D_5W, or 0.9% NaCl to provide concentration of 15 mg/ml (total volume approximately 50 ml). • Prior to administration, further dilute with D_5W or 0.9% NaCl to final concentration of 0.6–8 mg/ml.

Rate of Administration • Infuse over at least 60 min.

Storage • Discard if particulate is present. • Following reconstitution, drug is stable for 4 hrs at room temperature or 72 hrs if refrigerated in vial or infusion bag.

IV COMPATIBILITY

Do not mix with any other medication.

INDICATIONS/ROUTES/DOSAGE

Usual Parenteral Dosage

IV Infusion: ADULTS, ELDERLY: 10 mg/kg once every 24 hrs for 7–14 days. Duration based on severity and infection site and clinical progress of pt.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
50 ml/min or greater	10 mg/kg every 24 hrs
30–49 ml/min	7.5 mg/kg every 24 hrs
10–29 ml/min	10 mg/kg every 48 hrs

SIDE EFFECTS

Frequent (33%–27%): Taste disturbance (metallic or soapy), nausea. **Occasional (14%–6%):** Vomiting, foamy urine, diarrhea, dizziness, pruritus. **Rare (4%–2%):** Rigors, rash, infusion site pain, anorexia, infusion site erythema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Nephrotoxicity (change in amount/frequency of urination, increased thirst), diarrhea due to *C. difficile* may occur. "Red-neck syndrome" characterized by erythema on face, neck, upper torso, tachycardia, hypotension, myalgia, angioedema may occur from too-rapid rate of infusion.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pregnancy test should be obtained prior to treatment. Obtain baseline serum creatinine, creatinine clearance prior to initiating telavancin therapy, every 48–72 hrs, and after treatment is completed. Obtain culture and sensitivity test before giving first dose (therapy may begin before results are known).

INTERVENTION/EVALUATION

Monitor renal function tests, I&O. Assess skin for rash. Avoid administering infusion at too-rapid rate ("red-neck syndrome"). Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Use effective contraception during treatment. • Notify physician if rash, signs/symptoms of nephrotoxicity, diarrhea occur. • Routine lab tests are important part of total therapy.

telmisartan

TOP 200

tel-meh-**sar**-tan
(Micardis)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

FIXED-COMBINATION(S)

Micardis HCT: telmisartan/hydrochlorothiazide (a diuretic): 40 mg/12.5 mg, 80 mg/12.5 mg. **Twynsta:** telmisartan/amlodipine (a calcium channel blocker): 40 mg/5 mg, 40 mg/10 mg, 80 mg/5 mg, 80 mg/10 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive (see p. 10C).

ACTION

Blocks vasoconstrictor and aldosterone-secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT_1 receptors. **Therapeutic Effect:** Causes vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (reduce B/P)	1–2 hrs	—	24 hrs

Rapidly, completely absorbed after PO administration. Protein binding: greater than 99%. Undergoes metabolism in liver to inactive metabolite. Excreted in feces. Unknown if removed by hemodialysis. **Half-life:** 24 hrs.

USES

Treatment of hypertension alone or in combination with other antihypertensives. Reduces risk of stroke, MI, death in pts 55 yrs of age or older with cardiovascular abnormalities (e.g., coronary artery disease, high-risk diabetes mellitus). **OFF-LABEL:** Treatment of CHF.

PRECAUTIONS

Contraindications: None known. **Cautions:** Volume-depleted pts, hepatic/renal impairment, renal artery stenosis (unilateral, bilateral), biliary obstruc-

T

tive disease, significant aortic/mitral stenosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if drug is distributed in breast milk. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **NSAIDs** may decrease antihypertensive effect. May increase **digoxin** concentration, risk of toxicity. **HERBAL:** **Ephedra, ginger, licorice, ginseng, yohimbe** may worsen hypertension. **Black cohosh, periwinkle** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, BUN, uric acid, cholesterol. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: 40 mg once daily. **ELDERLY:** 20 mg once daily. Range: 20–80 mg/day.

Cardiovascular Risk Reduction

PO: ADULTS, ELDERLY: 80 mg once daily.

T

SIDE EFFECTS

Occasional (7%–3%): Upper respiratory tract infection, sinusitis, back/leg pain, diarrhea. **Rare (1%):** Dizziness, headache, fatigue, nausea, heartburn, myalgia, cough, peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdosage may manifest as hypotension, tachycardia; bradycardia occurs less often.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated. Assess medication history (esp. diuretics). Question for history of hepatic/renal impairment, renal artery stenosis. Obtain BUN, serum creatinine, Hgb, Hct, vital signs (particularly B/P, pulse rate).

INTERVENTION/EVALUATION

Monitor B/P, pulse, serum electrolytes, renal function. Monitor for hypotension when initiating therapy.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established (possible dizziness effect). • Maintain proper fluid intake. • Pts should take measures to avoid pregnancy. • Inform physician as soon as possible if pregnancy occurs. • Report any sign of infection (sore throat, fever). • Avoid excessive exertion during hot weather (risk of dehydration, hypotension).

temazepam

te-**maz**-eh-pam
(Apo-Temazepam, Novo-Temazepam, PMS-Temazepam, Restoril)

Do not confuse Restoril with Risperdal, Vistaril, or Zestril, or temazepam with flurazepam, lorazepam, or tamoxifen.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Sedative-hypnotic (see p. 149C).

ACTION

Enhances action of inhibitory neurotransmitter gamma-aminobutyric acid (GABA), resulting in CNS depression. **Therapeutic Effect:** Induces sleep.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 96%. Widely distributed. Crosses blood-brain barrier. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 9.5–12.4 hrs.

USES

Short-term treatment of insomnia (5 wks or less). Reduces sleep-induction time, number of nocturnal awakenings; increases length of sleep. **OFF-LABEL:** Treatment of anxiety, depression, panic attacks.

PRECAUTIONS

Contraindications: Angle-closure glaucoma; CNS depression; pregnancy, breast-feeding; severe, uncontrolled pain; sleep apnea. **Cautions:** Mental impairment, pts with drug dependence potential.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. May be distributed in breast milk. Chronic ingestion during pregnancy may produce withdrawal symptoms, CNS depression in neonates. **Pregnancy Category X. Children:** Not recommended in those younger than 18 yrs. **Elderly:** Use small initial doses with gradual dosage increases to avoid ataxia, excessive sedation.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depression. **HERBAL:** **St. John's wort** may decrease concentration. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 7.5 mg, 15 mg, 22.5 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Capsules may be emptied and mixed with food.

INDICATIONS/ROUTES/DOSAGE

Insomnia

PO: ADULTS, CHILDREN 18 YRS AND OLDER: 15–30 mg at bedtime. **ELDERLY, DEBILITATED:** 7.5–15 mg at bedtime.

SIDE EFFECTS

Frequent: Drowsiness, sedation, rebound insomnia (may occur for 1–2 nights after drug is discontinued), dizziness, confusion, euphoria. **Occasional:** Asthenia (loss of strength, energy), anorexia, diarrhea. **Rare:** Paradoxical CNS excitement, restlessness (particularly in elderly, debilitated pts).

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt or too-rapid withdrawal may result in pronounced restlessness, irritability, insomnia, hand tremor, abdominal/ muscle cramps, vomiting, diaphoresis, seizures. Overdose results in drowsiness, confusion, diminished reflexes, respiratory depression, coma. **Antidote:** Flumazenil (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy before initiating therapy (Pregnancy Category X). Assess B/P, pulse, respirations immediately before administration. Raise bed rails. Provide environment conducive to sleep (back rub, quiet environment, low lighting). Assess mental status, sleep patterns.

INTERVENTION/EVALUATION

Assess elderly or debilitated pts for paradoxical reaction, particularly during early therapy. Monitor respiratory, cardiovascular, mental status. Evaluate for therapeutic response: decrease in number of nocturnal awakenings, increase in length of sleep.

T

PATIENT/FAMILY TEACHING

• Avoid alcohol, other CNS depressants. • May cause daytime drowsiness. • Avoid tasks that require alertness, motor skills until response to drug is established. • Take approximately 30 min before bedtime. • Inform physician if pregnant or planning to become pregnant.

temozolomide

HIGH ALERT

teh-moe-**zol**-oh-mide
(Temodal, Temodar)
Do not confuse Temodar with Tambocor, or temozolomide with temsirolimus.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Imidazotetrazine derivative. **CLINICAL:** Antineoplastic (see p. 88C).

ACTION

Acts as prodrug and is converted to highly active cytotoxic metabolite. Cytotoxic effect is associated with methylation of DNA. **Therapeutic Effect:** Inhibits DNA replication, causing cell death.

PHARMACOKINETICS

Rapidly, completely absorbed after PO administration. Protein binding: 15%. Peak plasma concentration occurs in 1 hr. Penetrates blood-brain barrier. Eliminated primarily in urine and, to much lesser extent, in feces. **Half-life:** 1.6–1.8 hrs.

USES

Treatment of adults with refractory anaplastic astrocytoma; newly diagnosed glioblastoma multiforme (concomitantly with radiotherapy, then as maintenance therapy). **OFF-LABEL:** Malignant glioma, metastatic melanoma, metastatic CNS lesions, cutaneous T-cell lymphomas, advanced neuroendocrine tumors, soft tissue sarcoma, pediatric neuroblastoma.

PRECAUTIONS

Contraindications: Hypersensitivity to dacarbazine. **Cautions:** Severe renal/hepatic impairment, pregnancy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. May produce malformation of external organs, soft tissue, skeleton. If possible, avoid use during pregnancy. Unknown if drug is distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Those older than 70 yrs may experience higher risk of developing grade 4 neutropenia, grade 4 thrombocytopenia.

INTERACTIONS

DRUG: Medications causing blood dyscrasias (altering blood cell counts) may increase leukopenic, thrombocytopenic effects. **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: Echinacea** may decrease effects. **FOOD: All foods** decrease rate, extent of drug absorption. **LAB VALUES:** May decrease Hgb, neutrophil, platelet, WBC counts.

AVAILABILITY (Rx)

Capsules: 5 mg, 20 mg, 100 mg, 140 mg, 180 mg, 250 mg. **Injection, Powder for Reconstitution:** 100 mg.

ADMINISTRATION/HANDLING

IV

• Reconstitute each 100-mg vial with 41 ml Sterile Water for Injection to provide concentration of 2.5 mg/ml. • Swirl gently; do not shake. • Do NOT further dilute. • Infuse over 90 min. • Stable for 14 hrs (includes infusion time).

PO

• Food reduces rate, extent of absorption; increases risk of nausea, vomiting. • For

best results, administer at bedtime. • Swallow capsule whole with glass of water. Do not break, open, or crush capsules. • If unable to swallow, may open capsule and dissolve in apple juice, applesauce (avoid exposure to cytotoxic agent).

INDICATIONS/ROUTES/DOSAGE

Anaplastic Astrocytoma

IV Infusion, PO: ADULTS, ELDERLY: Initially, 150 mg/m^2/day for 5 consecutive days of 28-day treatment cycle. Subsequent doses based on platelet count, absolute neurophil count (ANC) during previous cycle. ANC greater than 1,500 per microliter and platelets more than 100,000 per microliter. Maintenance: 200 mg/m^2/day for 5 days q4wks. Continue until disease progression is observed. Minimum: 100 mg/m^2/day for 5 days q4wks.

Glioblastoma Multiforme

IV Infusion, PO: ADULTS, ELDERLY: 75 mg/m^2 daily for 42 days. Maintenance: (Cycle 1): 150 mg/m^2 once daily for 5 days followed by 23 days without treatment. (Cycles 2–6): May increase to 200 mg/m^2 once daily for 5 days followed by 23 days without treatment if ANC greater than 1,500/mm^3, platelets greater than 100,000/mm^3, and nonhematologic toxicity with previous cycle.

SIDE EFFECTS

Frequent (53%–33%): Nausea, vomiting, headache, fatigue, constipation, seizure. **Occasional (16%–10%):** Diarrhea, asthenia (loss of strength, energy), fever, dizziness, peripheral edema, incoordination, insomnia. **Rare (9%–5%):** Paresthesia, drowsiness, anorexia, urinary incontinence, anxiety, pharyngitis, cough.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression is characterized by neutropenia and thrombocytopenia, with elderly and women showing higher incidence of developing severe myelosuppression. Usually occurs within first few cycles; is not cumulative. Nadir occurs in approximately 26–28 days, with recovery within 14 days of nadir.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Before dosing, ANC must be greater than 1,500/mm^3 and platelet count greater than 100,000/mm^3. Potential for nausea, vomiting readily controlled with antiemetic therapy.

INTERVENTION/EVALUATION

Obtain CBC on day 22 (21 days after first dose) or within 48 hrs of that day and weekly until ANC is greater than 1,500 and platelet count is greater than 100,000. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• To reduce nausea/vomiting, take on an empty stomach. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site. • Avoid crowds, those with infection. • Do not have immunizations without physician's approval. • Avoid pregnancy.

temsirolimus HIGH ALERT

tem-sir-oh-**li**-mus
(Torisel)

Do not confuse temsirolimus with everolimus, sirolimus, or tacrolimus.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Kinase inhibitor. **CLINICAL:** Antineoplastic (see p. 88C).

ACTION

Prevents activation of mTOR (mammalian target of rapamycin), preventing tu-

T

mor cell division. **Therapeutic Effect:** Inhibits tumor cell growth, produces tumor regression.

PHARMACOKINETICS

Undergoes extensive hepatic metabolism. Eliminated primarily in feces. **Half-life:** 17 hrs.

USES

Treatment of advanced renal cell carcinoma.

PRECAUTIONS

Contraindications: Moderate-severe hepatic impairment; bilirubin greater than 1.5 times the upper limit of normal (ULN). **Cautions:** Hypersensitivity to sirolimus, mild hepatic impairment, diabetes mellitus, hyperlipidemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, voriconazole)** may increase concentration. **CYP3A4 inducers (e.g., carbamazepine, dexamethasone, phenobarbital, phenytoin, rifabutin, rifampin, rifapentin)** may decrease concentration. **FOOD:** **Grapefruit, grapefruit juice** may increase plasma concentration. **HERBAL:** **St. John's wort** may decrease plasma concentration. Herbs with hypoglycemic properties **(e.g., garlic, ginger, ginseng)** may increase risk for hypoglycemia. **LAB VALUES:** May increase serum bilirubin, alkaline phosphatase, AST, creatinine, glucose, cholesterol, triglycerides. May decrease WBCs, neutrophils, Hgb, platelets, serum phosphorus, potassium.

AVAILABILITY (Rx)

Injection Solution Kit: 25 mg/ml supplied with 1.8-ml diluent vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Inject 1.8 ml of diluent into vial. • The vial contains an overfill of 0.2 ml (30 mg/1.2 ml). • Due to the overfill, the drug concentration of resulting solution will be 10 mg/ml. • A total volume of 3 ml will be obtained, including the overfill. • Mix well by inverting the vial. Allow sufficient time for air bubbles to subside. • Mixture must be injected rapidly into 250 ml 0.9% NaCl. • Invert bag to mix; avoid excessive shaking (may cause foaming).

Rate of Administration • Administer through an in-line filter not greater than 5 microns; infuse over 30–60 min. • Final diluted infusion solution should be completed within 6 hrs from the time drug solution and diluent mixture is added to the 250 ml 0.9% NaCl.

Storage • Refrigerate kit. • Reconstituted solution appears clear to slightly turbid, colorless to yellow, and free from visible particulates. • The 10 mg/ml drug solution/diluent mixture is stable for up to 24 hrs at room temperature. • Solutions diluted for infusion (in 250 ml 0.9% NaCl) must be infused within 6 hrs of preparation.

IV INCOMPATIBILITIES

Both acids and bases degrade solution; combinations of temsirolimus with agents capable of modifying solution pH should be avoided.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Pretreat with diphenhydramine, IV, 25–50 mg 30 min before infusion.

Renal Cancer

IV: ADULTS/ELDERLY: 25 mg infused over 30–60 minutes once weekly. Treatment should continue until disease progresses or unacceptable toxicity occurs.

SIDE EFFECTS

Common (51%–32%): Asthenia (loss of strength, energy), rash, mucositis, nausea, edema (includes facial edema and peripheral edema), anorexia. **Frequent (28%–20%):** Generalized pain, dyspnea, diarrhea, cough, fever, abdominal pain, constipation, back pain, impaired taste. **Occasional (19%–8%):** Weight loss, vomiting, pruritus, chest pain, headache, nail disorder, insomnia, nosebleed, dry skin, acne, chills, myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

UTI occurs in 15% of pts, hypersensitivity reaction in 9%, pneumonia in 8%, upper respiratory tract infection, hypertension, conjunctivitis in 7%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question possibility of pregnancy. Obtain baseline CBC, serum chemistries including hepatic function tests (bilirubin, AST, alkaline phosphatase), renal function tests before treatment begins and routinely thereafter.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel frequency, stool consistency. Assess skin for evidence of rash, edema. Monitor CBC, particularly Hgb, platelets, neutrophil count, hepatic function tests (AST, ALT, total bilirubin), renal function tests. Monitor for shortness of breath, fatigue, hypertension. Assess mouth for stomatitis, mucositis.

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine. • Do not have immunizations without physician's approval (drug lowers body resistance). • Promptly report fever, unusual bruising/bleeding from any site.

tenecteplase HIGH ALERT

ten-**eck**-te-plase
(TNKase)
Do not confuse TNKase with tPA.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tissue plasminogen activator. **CLINICAL:** Thrombolytic (see p. 33C).

ACTION

Produced by recombinant DNA that binds to fibrin and converts plasminogen to plasmin. Initiates fibrinolysis by degrading fibrin clots, fibrinogen, other plasma proteins. **Therapeutic Effect:** Exerts thrombolytic action.

PHARMACOKINETICS

Extensively distributed to tissues. Completely eliminated by hepatic metabolism. **Half-life:** 90–130 min.

USES

Treatment, reduction of mortality associated with acute myocardial infarction (AMI).

PRECAUTIONS

Contraindications: Active internal bleeding, aneurysm, AV malformation, bleeding diathesis, history of CVA, intracranial or intraspinal surgery or trauma within past 2 mos, intracranial neoplasm, severe uncontrolled hypertension. **Cautions:** Recent major surgery, GI or GU bleeding, trauma, acute pericarditis, subacute bacterial endocarditis, pregnancy, severe hepatic impairment, hemorrhagic ophthalmic conditions, anticoagulants.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May have increased risk of intracranial hemorrhage, stroke, major bleeding; caution advised.

T

INTERACTIONS

DRUG: Anticoagulants (e.g., heparin, warfarin), aspirin, dipyridamole, glycoprotein IIb/IIIa inhibitors increase risk of bleeding. **HERBAL:** Herbs with anticoagulant or antiplatelet properties **(e.g., cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo biloba, ginseng, green tea, horse chestnut, red clover)** may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** Decreases plasminogen, fibrinogen levels during infusion, decreasing clotting time (confirms presence of lysis). Decreases Hgb, Hct.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 10 ml Sterile Water for Injection without preservative to vial to provide concentration of 5 mg/ml. • Gently swirl until dissolved. Do not shake. • If foaming occurs, leave vial undisturbed for several min.

Rate of Administration • Administer as IV push over 5 sec.

Storage • Store at room temperature. • If possible, use immediately, but may refrigerate up to 8 hrs after reconstitution. • Appears as colorless to pale yellow solution. • Do not use if discolored or contains particulates. • Discard after 8 hrs.

IV INCOMPATIBILITIES

Do not mix with dextrose-containing solutions or any other medications.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Give as single IV bolus over 5 sec. Precipitate may occur when given in IV line containing dextrose. Flush line with saline before and after administration.

Acute MI

IV: ADULTS: Dosage is based on pt's weight. Treatment should be initiated as soon as possible after onset of symptoms.

Weight (kg)	(mg)	(ml)
90 or more	50	10
80–less than 90	45	9
70–less than 80	40	8
60–less than 70	35	7
Less than 60	30	6

SIDE EFFECTS

Frequent: Bleeding (minor, 21.8%; major, 4.7%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Bleeding at internal sites, including intracranial, retroperitoneal, GI, GU, respiratory sites, may occur. Lysis of coronary thrombi may produce atrial or ventricular arrhythmias, stroke.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline B/P, apical pulse. Record weight. Evaluate 12-lead EKG, cardiac enzymes, serum electrolytes. Assess Hgb, Hct, platelet count, thrombin time, aPTT, PT, fibrinogen level before therapy is instituted. Type and hold blood.

INTERVENTION/EVALUATION

Monitor continuous EKG for arrhythmias, B/P, pulse, respirations q15min until stable, then hourly. Check peripheral pulses, heart and lung sounds. Monitor for chest pain relief; notify physician of continuation/recurrence (note location, type, intensity). Assess for overt or occult blood in any body substance. Monitor aPTT per protocol. Maintain B/P. Avoid any trauma that might increase risk of bleeding (e.g., injections, shaving). Assess neurologic status with vital signs.

tenofovir

TOP 200

ten-**oh**-foh-veer
(Viread)

BLACK BOX ALERT Lactic acidosis, severe hepatomegaly with steatosis (fatty liver), including fatalities, have occurred.

FIXED-COMBINATION(S)

Atripla: tenofovir/efavirenz/emtricitabine (antiretroviral agents): 300 mg/600 mg/200 mg. **Complera:** tenofovir/emtricitabine/rilpivirine (antiretroviral agents): 300 mg/200 mg/25 mg. **Stribild:** tenofovir/elvitegravir (an integrase inhibitor)/cobicistat (a pharmacokinetic enhancer)/emtricitabine (a nucleoside reverse transcriptase inhibitor): 300 mg/150 mg/150 mg/200 mg. **Truvada:** tenofovir/emtricitabine (an antiretroviral agent): 300 mg/200 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nucleotide analogue (reverse transcriptase inhibitor). **CLINICAL:** Antiviral (see pp. 69C, 116C).

ACTION

Inhibits HIV reverse transcriptase by being incorporated into viral DNA, resulting in DNA chain termination. **Therapeutic Effect:** Slows HIV replication, reduces HIV RNA levels (viral load).

PHARMACOKINETICS

Bioavailability in fasted pts is approximately 25%. High-fat meals increase bioavailability. Protein binding: 0.7%–7.2%. Excreted in urine. Removed by hemodialysis. **Half-life:** 17 hrs.

USES

Treatment of HIV-1 infection in combination with other antiretroviral agents. Treatment of chronic hepatitis B in adults.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, concomitant CYP3A4 inhibitors/inducers, HIV and hepatitis B co-infection.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase **didanosine** concentration. May decrease concentrations of **atazanavir, indinavir, lamivudine, lopinavir, ritonavir.** **HERBAL:** None significant. **FOOD:** **High-fat food** increases bioavailability. **LAB VALUES:** May increase serum ALT, AST, creatinine, glucose (urine), phosphate (urine), protein (urine). May decrease neutrophils.

AVAILABILITY (Rx)

Tablets: 150 mg, 200 mg, 250 mg, 300 mg. **Oral Powder:** 40 mg per 1 g of oral powder.

ADMINISTRATION/HANDLING

PO

- May be given without regard to meals.
- Give oral powder with food.

INDICATIONS/ROUTES/DOSAGE

Hepatitis B

PO: ADULTS, ELDERLY, CHILDREN 18 YRS AND OLDER: 300 mg once daily.

HIV

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER AND 35 KG OR GREATER: 300 mg once daily. **CHILDREN 9–11 YRS:** 210 mg/m^2/dose once daily. **Maximum:** 300 mg. **CHILDREN 2–8 YRS:** 8 mg/kg/dose once daily. **Maximum:** 300 mg.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
30–49 ml/min	300 mg q48h
10–29 ml/min	300 mg q72–96h
Hemodialysis	300 mg q7days or after approximately 12 hrs of dialysis

SIDE EFFECTS

Occasional: GI disturbances (diarrhea, flatulence, nausea, vomiting).

T

ADVERSE EFFECTS/ TOXIC REACTIONS

Lactic acidosis, hepatomegaly with steatosis (excess fat in liver) occur rarely, may be severe.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory testing, esp. serum hepatic/renal function tests, triglycerides before beginning tenofovir therapy and at periodic intervals during therapy. Offer emotional support to pt and family.

INTERVENTION/EVALUATION

Closely monitor for evidence of GI discomfort. Monitor daily pattern of bowel activity, stool consistency. Monitor CBC, Hgb, reticulocyte count, serum hepatic/renal function, CD4 cell count, HIV, RNA plasma levels.

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Tenofovir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Take with a high-fat meal (increases absorption). • Inform physician if persistent abdominal pain, nausea, vomiting occurs.

terazosin

ter-**ay**-zoe-sin
(Apo-Terazosin, Hytrin)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha-adrenergic blocker. **CLINICAL:** Antihypertensive, benign prostatic hyperplasia agent (see p. 60C).

ACTION

Blocks alpha-adrenergic receptors. Produces vasodilation, decreases peripheral resistance, targets receptors around bladder neck, prostate. **Therapeutic Effect:** In hypertension, decreases B/P. In benign prostatic hyperplasia (BPH), relaxes smooth muscle, improves urine flow.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15 min	2–3 hrs	12–24 hrs

Rapidly, completely absorbed from GI tract. Protein binding: 90%–94%. Metabolized in liver to active metabolite. Primarily eliminated in feces via biliary system; excreted in urine. Not removed by hemodialysis. **Half-life:** 9.2–12 hrs.

USES

Treatment of mild to moderate hypertension. Used alone or in combination with other antihypertensives. Treatment of benign prostatic hyperplasia (BPH). **OFF-LABEL:** Pediatric hypertension.

PRECAUTIONS

Contraindications: None known. **Cautions:** Confirmed or suspected coronary artery disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted but may be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: NSAIDs, sympathomimetics may decrease hypotensive effects. **Hypotensive medications (e.g., antihypertensives, diuretics)** may increase effects. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, serum albumin, total protein, WBC count.

AVAILABILITY (Rx)

Capsules: 1 mg, 2 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Administer first dose at bedtime (minimizes risk of fainting due to "first-dose syncope").

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ If medication has been discontinued for several days, retitrate initially using 1-mg dose at bedtime.

Mild to Moderate Hypertension

PO: ADULTS, ELDERLY: Initially, 1 mg at bedtime. Slowly increase dosage to desired levels. Range: 1–5 mg/day as single or 2 divided doses. **Maximum:** 20 mg.

Benign Prostatic Hyperplasia (BPH)

PO: ADULTS, ELDERLY: Initially, 1 mg at bedtime. May increase up to 10 mg/day. If no response with 10 mg after 4–6 wks, may increase to 20 mg/day.

SIDE EFFECTS

Frequent (9%–5%): Dizziness, headache, fatigue. **Rare (Less Than 2%):** Peripheral edema, orthostatic hypotension, myalgia, arthralgia, blurred vision, nausea, vomiting, nasal congestion, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

First-dose syncope (hypotension with sudden loss of consciousness) generally occurs 30–90 min after initial dose of 2 mg or more, too-rapid increase in dosage, or addition of another antihypertensive agent to therapy. First-dose syncope may be preceded by tachycardia (pulse rate of 120–160 beats/min).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess history of prostatic hyperplasia (difficulty initiating urine stream, dribbling, sense of urgency, leaking). Give first dose at bedtime. If initial dose is given during daytime, pt must remain recumbent for 3–4 hrs. Assess B/P, pulse immediately before each dose and q15–30min until stabilized (be alert to B/P fluctuations).

INTERVENTION/EVALUATION

Monitor pulse diligently (first-dose syncope may be preceded by tachycardia). Assist with ambulation if dizziness occurs. Assess for peripheral edema. Monitor B/P, GU function.

PATIENT/FAMILY TEACHING

• Noncola carbonated beverage, unsalted crackers, dry toast may relieve nausea. • Nasal congestion may occur. • Full therapeutic effect may not occur for 3–4 wks. • Avoid tasks requiring alertness, motor skills until response to drug is established. • Use caution rising from sitting position. • Report dizziness, palpitations. • Avoid alcohol.

terbinafine

ter-**bin**-a-feen
(Apo-Terbinafine, Lamisil, Lamisil AT, Lamisil Oral Granule, Novo-Terbinafine)
Do not confuse Lamisil with Lamictal or Lomotil, or terbinafine with terbutaline.

◆CLASSIFICATION

CLINICAL: Antifungal (see p. 490).

ACTION

Inhibits the enzyme squalene epoxidase, thereby interfering with fungal biosynthesis. **Therapeutic Effect:** Results in death of fungal cells.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 99%. Metabolized in liver. Primarily excreted in urine; minimal elimination in feces. **Half-life:** PO, 36 hrs; topical, 22–26 hrs.

T

USES

Systemic: Treatment of onychomycosis (fungal disease of nails due to dermatophytes). Treatment of tinea capitis. **Topical:** Treatment of tinea cruris (jock itch), tinea pedis (athlete's foot), tinea corporis (ringworm), tinea versicolor.

PRECAUTIONS

Contraindications: None known. **Cautions:** Preexisting hepatic or renal impairment (creatinine clearance 50 ml/min or less), sensitive to allylamine antifungals (e.g., butenafine).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Alcohol, other hepatotoxic medications** may increase risk of hepatotoxicity. **Hepatic enzyme inducers (e.g., rifampin)** may increase clearance. **Hepatic enzyme inhibitors (e.g., cimetidine, fluconazole)** may decrease clearance. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum hepatic enzymes (AST, ALT).

AVAILABILITY (Rx)

Cream (Lamisil AT): 1%. **Oral Granules (Lamisil Oral Granule):** 125 mg/packet. **Tablets (Lamisil):** 250 mg. **Topical Solution (Lamisil, Lamisil AT):** 1%.

ADMINISTRATION/HANDLING

• Tablets may be given without regard to food. • Granules should be sprinkled on a spoonful of nonacidic food (e.g., mashed potatoes); swallow without chewing.

INDICATIONS/ROUTES/DOSAGE

Tinea Pedis

Topical: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Apply twice daily until signs/symptoms significantly improve, not to exceed 4 wks.

Tinea Cruris, Tinea Corporis

Topical: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Apply 1–2 times daily until signs/symptoms significantly improve, not to exceed 4 wks.

Onychomycosis

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 250 mg/day for 6 wks (fingernails) or 12 wks (toenails).

Tinea Versicolor

Topical Solution: ADULTS, ELDERLY: Apply to the affected area twice daily for 7 days.

Systemic Mycosis

PO: ADULTS, ELDERLY: 250–500 mg/day for up to 16 mos.

Tinea Capitis

PO: CHILDREN 4 YRS AND OLDER: (Use granules). **WEIGHING GREATER THAN 35 KG:** 250 mg once daily. **WEIGHING 25–35 KG:** 187.5 mg once daily. **WEIGHING LESS THAN 25 KG:** 125 mg once daily.

SIDE EFFECTS

Frequent (13%): PO: Headache. **Occasional (6%–3%): PO:** Abdominal pain, flatulence, urticaria, visual disturbance. **Rare: PO:** Diarrhea, rash, dyspepsia (heartburn, indigestion, epigastric pain), pruritus, altered taste, nausea. **Topical:** Irritation, burning, pruritus, dryness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatobiliary dysfunction (including cholestatic hepatitis), serious skin reactions, severe neutropenia occur rarely. Ocular lens, retinal changes have been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Serum hepatic function tests should be obtained in pts receiving treatment for longer than 6 wks.

INTERVENTION/EVALUATION

Check for therapeutic response. Discontinue medication, notify physician if local reaction occurs (irritation, redness, swelling, pruritus, oozing, blistering, burning). Monitor serum hepatic function in pts receiving treatment for longer than 6 wks.

PATIENT/FAMILY TEACHING

• Keep areas clean, dry; wear light clothing to promote ventilation. • Avoid topical cream contact with eyes, nose, mouth, other mucous membranes. • Rub well into affected, surrounding area. • Do not cover with occlusive dressing. • Report rash, dark urine, abdominal pain, anorexia, yellowing of skin.

terbutaline

ter-**bue**-ta-leen
(Brethine, Bricanyl)
Do not confuse Brethine with methergine, or terbutaline with terbinafine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic (adrenergic agonist). **CLINICAL:** Bronchodilator, premature labor inhibitor.

ACTION

Stimulates beta$_2$-adrenergic receptors, resulting in relaxation of uterine, bronchial smooth muscle. **Therapeutic Effect:** Inhibits uterine contractions. Relieves bronchospasm, reduces airway resistance.

PHARMACOKINETICS

Partially absorbed in GI tract following PO administration. Protein binding: 14%–25%. Metabolized in liver. Excreted in feces, urine. **Half-life:** 11–16 hrs.

USES

Symptomatic relief of reversible bronchospasm due to bronchial asthma, bronchitis, emphysema. **OFF-LABEL:** Delays premature labor in pregnancies between 20 and 34 wks.

PRECAUTIONS

Contraindications: Cardiac arrhythmias associated with tachycardia. **Injection:** Prolonged prevention or management of preterm labor. **Oral:** Prevention or treatment of preterm labor. **Cautions:** Cardiac impairment, diabetes mellitus, hypertension, hyperthyroidism, history of seizures.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 6 yrs. **Elderly:** Increased risk of tremors, tachycardia due to sympathomimetic sensitivity.

INTERACTIONS

DRUG: May decrease effects of **beta-blockers. Digoxin, sympathomimetics** may increase risk of arrhythmias. **MAOIs** may increase risk of hypertensive crisis. **Tricyclic antidepressants** may increase cardiovascular effects. **HERBAL: Ephedra, yohimbe** may cause CNS stimulation. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium. May increase serum glucose.

AVAILABILITY (Rx)

Injection Solution: 1 mg/ml. **Tablets:** 2.5 mg, 5 mg.

ADMINISTRATION/HANDLING

IV

• May administer undiluted, direct IV over 5–10 min or continuous infusion diluted in D_5W or 0.9% NaCl.

Subcutaneous

• Do not use if solution appears discolored. • Inject subcutaneously into lateral deltoid region.

T

PO

• Give without regard to food (give with food if GI upset occurs). • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Bronchospasm

PO: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: Initially, 2.5 mg 3–4 times a day. Maintenance: 2.5–5 mg 3 times a day q6h while awake. **Maximum:** 15 mg/day. **CHILDREN 12–14 YRS:** 2.5 mg 3 times a day. **Maximum:** 7.5 mg/day. **CHILDREN YOUNGER THAN 12 YRS:** Initially, 0.05 mg/kg/dose q8h. May increase up to 0.15 mg/kg/dose. **Maximum:** 5 mg/24 hr.

Subcutaneous: ADULTS, CHILDREN 12 YRS AND OLDER: Initially, 0.25 mg. Repeat in 15–30 min for 3 doses. Total dose of 0.75 mg should not be exceeded. **CHILDREN YOUNGER THAN 12 YRS:** 0.005–0.01 mg/kg/dose to a maximum of 0.4 mg/dose q15–20min for 3 doses. May repeat q2–6h as needed.

Preterm Labor

◀ALERT▶ IV form should be used with caution in pregnancy; do not administer for longer than 48–72 hrs.

IV: ADULTS: Acute: 2.5–10 mcg/min. May increase gradually q15–20min up to 17.5–30 mcg/min.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
10–50 ml/min	50% of normal
Less than 10 ml/min	Avoid use

T

SIDE EFFECTS

Frequent (38%–23%): Tremor, anxiety. **Occasional (11%–10%):** Drowsiness, headache, nausea, heartburn, dizziness. **Rare (3%–1%):** Flushing, asthenia (loss of strength, energy), oropharyngeal dryness, irritation (with inhalation therapy).

ADVERSE EFFECTS/ TOXIC REACTIONS

Too-frequent or excessive use may lead to decreased drug effectiveness and/or severe, paradoxical bronchoconstriction. Excessive sympathomimetic stimulation may cause palpitations, extrasystoles, tachycardia, chest pain, slight increase in B/P followed by a substantial decrease, chills, diaphoresis, skin blanching.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Bronchospasm: Offer emotional support (high incidence of anxiety due to difficulty in breathing, sympathomimetic response to drug). **Preterm labor:** Assess baseline maternal pulse, B/P, frequency and duration of contractions, fetal heart rate.

INTERVENTION/EVALUATION

Bronchospasm: Monitor rate, depth, rhythm, type of respiration; quality, rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Monitor ABGs. Observe lips, fingernails for cyanosis (blue or dusky color in light-skinned pts; gray in dark-skinned pts). Observe for clavicular retractions, hand tremor. Evaluate for clinical improvement (quieter, slower respirations, relaxed facial expression, cessation of clavicular retractions). **Preterm labor:** Monitor for frequency, duration, strength of contractions. Diligently monitor maternal and fetal heart rate.

PATIENT/FAMILY TEACHING

• Inform physician if palpitations, chest pain, muscle tremor, dizziness, headache, flushing, breathing difficulties continue. • May cause nervousness, anxiety, shakiness. • Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola, cocoa).

teriflunomide

ter-i-**floo**-noe-myde
(Aubagio)
Do not confuse teriflunomide with leflunomide

BLACK BOX ALERT May result in major birth defects (Pregnancy Category X). Pregnancy must be excluded before initiating therapy, and must be avoided during treatment or prior to completion of an accelerated elimination procedure. Severe hepatic injury may occur. Do not initiate with acute/chronic liver disease or ALT greater than 2 times upper limit of normal.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Pyrimidine synthesis inhibitor, immunomodulatory agent. **CLINICAL:** Multiple sclerosis agent.

ACTION

Inhibits pyrimidine synthesis, exhibiting anti-inflammatory and antiproliferative properties. **Therapeutic Effect:** May slow progression of multiple sclerosis.

PHARMACOKINETICS

Well absorbed following PO administration. Peak concentration: 1–4 h. Protein binding: greater than 99%. Metabolized by hydrolysis. Excreted through renal, biliary system. **Half-life:** 18–19 days.

USES

Treatment of relapsing forms of multiple sclerosis.

PRECAUTIONS

Contraindications: Pregnant women or women of childbearing potential who are not using reliable contraception, severe hepatic impairment, concurrent use of leflunomide. **Cautions:** Concomitant neurotoxic medications, diabetes, severe immunodeficiency or bone marrow dysplasia, significant hematologic abnormalities, uncontrolled infection, history of new/recurrent infections.

LIFESPAN CONSIDERATIONS

May produce embryo-fetal toxicity. Pregnancy contraindicated. Avoid breastfeeding. Detected in human semen. **Pregnancy Category X. Children:** Safety and efficacy not established in those younger than 18 yrs of age. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/effects of **CYP2C8 substrates (e.g., repaglinide, paclitaxel, pioglitazone, or rosiglitazone), oral contraceptives.** May decrease concentration/effects of **warfarin**, **CYP1A2 substrates (e.g., duloxetine, tizanidine).** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum transaminases, potassium, AST, ALT, alkaline phosphatase, bilirubin. May decrease WBCs, neutrophil count.

AVAILABILITY (Rx)

Tablets: 7 mg, 14 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Multiple Sclerosis

PO: ADULTS, ELDERLY: 7 mg or 14 mg once daily.

SIDE EFFECTS

Frequent (19%–6%): Headache, diarrhea, nausea, alopecia, paresthesia, upper abdominal pain. **Occasional (4%–3%):** Hypertension, oral herpes, anxiety, hypertension, toothache, musculoskeletal pain. **Rare (2%–1%):** Seasonal allergy, sciatica, burning sensation, carpal tunnel syndrome, blurred vision, acne, pruritus, myalgia, abdominal distention, conjunctivitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Influenza occurs in 12% of pts, upper respiratory infection with sinusitis, bronchitis, in 9%. Cystitis, sinusitis, viral gastroenteritis may occur. Neutropenia, leukopenia occur rarely.

T

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Because of high potential for birth defects/fetal death, female pts must avoid pregnancy (Pregnancy Category X). Obtain baseline PPD for latent TB. Obtain CBC, AST, ALT, alkaline phosphatase, bilirubin results prior to treatment, and for 6 mos thereafter. Obtain baseline PPD, pregnancy test. Assess limitations for activities of daily living due to multiple sclerosis.

INTERVENTION/EVALUATION

Monitor for signs/symptoms of infection. Treatment should not be initiated if pt has active infection; discontinuation of treatment must be considered. If drug-induced hepatic impairment, peripheral neuropathy, severe skin reaction occur, discontinue medication, begin accelerated elimination procedure (cholestyramine or charcoal for 11 days).

PATIENT/FAMILY TEACHING

• Women of childbearing potential must be counseled regarding fetal risk, use of reliable contraceptives confirmed, possibility of pregnancy excluded (Pregnancy Category X). • May take without regard to food.

teriparatide

ter-i-**par**-a-tide
(Forteo)

BLACK BOX ALERT Increased risk of osteosarcoma; risk dependent on dose and duration.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic hormone. **CLINICAL:** Osteoporosis agent (see p. 144C).

ACTION

Acts on bone to mobilize calcium; acts on kidney to reduce calcium clearance, increase phosphate excretion. **Therapeutic Effect:** Increases rate of release of calcium from bone into blood; stimulates new bone formation.

PHARMACOKINETICS

Extensively absorbed following subcutaneous injection. Metabolized in liver. Excreted in urine. **Half-life:** 1 hr.

USES

Treatment of postmenopausal women with osteoporosis who are at increased risk for fractures, increase bone mass in men with primary or hypogonadal osteoporosis who are at high risk for fractures. High-risk pts include those with a history of osteoporotic fractures, who have failed previous osteoporosis therapy, or were intolerant of previous osteoporosis therapy. Treatment of glucocorticoid-induced osteoporosis in men and women.

PRECAUTIONS

Contraindications: None known. **Cautions:** Conditions that increase risk of osteosarcoma (e.g., Paget's disease, unexplained elevations of alkaline phosphatase level, open epiphyses, prior skeletal radiation therapy, implant therapy), hypercalcemia, hypercalcemic disorders (e.g., hyperparathyroidism), bone metastases, history of skeletal malignancies, metabolic bone diseases other than osteoporosis, concurrent therapy with digoxin, cardiac disease, renal/hepatic impairment, pts at risk for orthostasis, active or recent urolithiasis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VAL-**

UES: May increase serum calcium (transient).

AVAILABILITY (Rx)

Injection Solution: 250 mcg/ml delivers 20 mcg/dose.

ADMINISTRATION/HANDLING

Subcutaneous

• Refrigerate, but minimize time out of refrigerator. Do not freeze; discard if frozen. • Administer into thigh, abdominal wall.

INDICATIONS/ROUTES/DOSAGE

Osteoporosis

Subcutaneous: ADULTS, ELDERLY: 20 mcg once daily into thigh, abdominal wall.

SIDE EFFECTS

Occasional: Leg cramps, nausea, dizziness, headache, orthostatic hypotension, tachycardia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Angina pectoris has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check urinary, serum calcium levels, serum parathyroid hormone levels.

INTERVENTION/EVALUATION

Monitor bone mineral density, urinary/serum calcium levels, serum parathyroid hormone levels. Observe for symptoms of hypercalcemia. Monitor B/P for hypotension, pulse for tachycardia.

PATIENT/FAMILY TEACHING

• Immediately sit or lie down if symptoms of orthostatic hypotension occur. • Inform physician if persistent symptoms of hypercalcemia (nausea, vomiting, constipation, lethargy, asthenia [loss of strength, energy]) occur.

testosterone

TOP 200

tes-**tos**-te-rone

(Andriol, Androderm, AndroGel, Andropository, Axiron, Delatestryl, Depotest, Depo-Testosterone, Everone, FIRST-Testosterone, FIRST-Testosterone MC, Fortesta, Striant, Testim, Testopel)

BLACK BOX ALERT Virilization in children and women can occur following secondary exposure to testosterone gel.

Do not confuse testosterone with testolactone, Testoderm with Estraderm.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Androgen. **CLINICAL:** Sex hormone.

ACTION

Promotes growth, development of male sex organs, maintains secondary sex characteristics in androgen-deficient males. **Therapeutic Effect:** Relieves androgen deficiency.

PHARMACOKINETICS

Well absorbed after IM administration. Protein binding: 98%. Undergoes first-pass metabolism in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 10–100 min.

USES

Injection: Androgen replacement therapy in treatment of delayed male puberty, male hypogonadism, inoperable female breast cancer. **Pellet:** Androgen replacement therapy in treatment of delayed male puberty, male hypogonadism. **Buccal, transdermal:** Male hypogonadism. **OFF-LABEL:** Androgen deficiency in men with AIDS wasting.

PRECAUTIONS

Contraindications: Breast-feeding, severe cardiac impairment, hypercalcemia, pregnancy, prostate or breast cancer in

T

males, severe hepatic/renal disease. **Cautions:** Renal/hepatic/cardiac dysfunction, diabetes.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated during lactation. **Pregnancy Category X. Children:** Safety and efficacy not established; use with caution. **Elderly:** May increase risk of hyperplasia, stimulate growth of occult prostate carcinoma.

INTERACTIONS

DRUG: May decrease serum glucose, requiring **insulin** adjustments. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase Hgb, Hct, LDL, serum alkaline phosphatase, bilirubin, calcium, potassium, sodium, AST. May decrease HDL.

AVAILABILITY (Rx)

Gel, Topical (AndroGel, Testim): 1%, 1.62%. **Injection (Cypionate [Depo-Testosterone]):** 100 mg/ml, 200 mg/ml. **(Enanthate [Delatestryl]):** 200 mg/ml. **Mucoadhesive, for Buccal Application (Striant):** 30 mg. **Pellet, for Subcutaneous Implantation (Testopel):** 75 mg. **Solution (Metered Dose Pump [Axiron]):** 30 mg/activation. **Transdermal System (Androderm):** 2 mg/day or 4 mg/day.

ADMINISTRATION/HANDLING

IM

• Give deep in gluteal muscle. • Do not give IV. • Warming or shaking redissolves crystals that may form in long-acting preparations. • Wet needle of syringe may cause solution to become cloudy; this does not affect potency.

Buccal

(Striant) • Apply to gum area (above incisor tooth). • Hold firmly in place for 30 sec to ensure adhesion; do not chew or swallow. • Not affected by food, toothbrushing, gum, chewing, alcoholic beverages. • Remove before placing new system.

Transdermal

(Androderm) • Apply to clean, dry area on skin on back, abdomen, upper arms, thighs. • Do not apply to bony prominences (e.g., shoulder) or oily, damaged, irritated skin. Do not apply to scrotum. • Rotate application site with 7-day interval to same site.

Transdermal Gel

(AndroGel, Testim) • Apply (morning preferred) to clean, dry, intact skin of shoulder, upper arms (AndroGel 1% may also be applied to abdomen). • Upon opening packet(s), squeeze entire contents into palm of hand, immediately apply to application site. • Allow to dry. • Do not apply to genitals. **(Fortesta):** Apply to skin of front and inner thighs.

Topical Solution

(Axiron) • Apply using applicator to axilla at same time each morning. • Avoid washing site for 2 hrs after application.

INDICATIONS/ROUTES/DOSAGE

Male Hypogonadism

IM: ADULTS: 50–400 mg q2–4wks. **ADOLESCENTS:** Initiation of pubertal growth: 40–50 mg/m^2/dose monthly until growth rate falls to prepubertal levels. Terminal growth phase: 100 mg/m^2/dose until growth ceases.

Maintenance Virilizing Dose: 100 mg/m^2/dose twice a mo.

Subcutaneous *(Pellets)*: ADULTS: 150–450 mg q3–6mos.

Topical Gel *(Fortesta)*: 40 mg once daily in morning. Range: 10–70 mg.

Topical Solution *(Axiron)*: ADULTS, ELDERLY: 60 mg (1 pump activation of 30 mg to each axilla). Range: 30–120 mg.

Transdermal Patch *(Androderm)*: ADULTS, ELDERLY: Start therapy with 4 mg/day patch applied at night. Apply patch to abdomen, back, thighs, upper arms. Dose adjustment based on testosterone levels.

Transdermal Gel *(AndroGel)*: ADULTS, ELDERLY: (AndroGel 1%): Initial dose of 5 g delivers 50 mg testosterone and is

applied once daily to abdomen, shoulders, upper arms. May increase to 7.5 g, then to 10 g, if necessary. **(AndroGel 1.62%):** Initial dose of 40.5 mg applied once daily in the morning to shoulder and upper arms. May increase to 81 mg. Further adjustments based on testosterone levels.

Transdermal Gel *(Testim)*: ADULTS, ELDERLY: Initial dose of 5 g delivers 50 mg testosterone and is applied once daily to the shoulders, upper arms. May increase to 10 g.

Buccal *(Striant)*: ADULTS, ELDERLY: 30 mg q12h.

Delayed Male Puberty

IM *(Cypionate or enanthate):* ADOLESCENTS: 50–200 mg q2–4wks for limited duration.

Subcutaneous *(Pellets)*: ADULTS: 150–450 mg q3–6mos.

Breast Carcinoma

IM *(Testosterone Cypionate, Testosterone Ethanate):* ADULTS: 200–400 mg q2–4wks.

SIDE EFFECTS

Frequent: Gynecomastia, acne. **Females:** Hirsutism, amenorrhea, other menstrual irregularities; deepening of voice; clitoral enlargement (may not be reversible when drug is discontinued). **Occasional:** Edema, nausea, insomnia, oligospermia, priapism, male-pattern baldness, bladder irritability, hypercalcemia (in immobilized pts, those with breast cancer), hypercholesterolemia, inflammation/pain at IM injection site. **Transdermal:** Pruritus, erythema, skin irritation. **Rare:** Polycythemia (with high dosage), hypersensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Peliosis hepatitis (presence of blood-filled cysts in parenchyma of liver), hepatic neoplasms, hepatocellular carcinoma have been associated with prolonged high-dose therapy. Anaphylactic reactions occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline weight, B/P, Hgb, Hct. Check serum hepatic function, electrolytes, cholesterol. Wrist X-rays may be ordered to determine bone maturation in children.

INTERVENTION/EVALUATION

Weigh daily, report weekly gain of more than 5 lb; evaluate for edema. Monitor I&O. Check B/P at least twice daily. Assess serum electrolytes, cholesterol, Hgb, Hct (periodically for high dosage), hepatic function test results, radiologic exam of wrist, hand (when using in prepubertal children). With breast cancer or immobility, check for hypercalcemia (lethargy, muscle weakness, confusion, irritability). Ensure adequate intake of protein, calories. Assess for virilization. Monitor sleep patterns. Check injection site for redness, swelling, pain.

PATIENT/FAMILY TEACHING

• Regular visits to physician and monitoring tests are necessary. • Do not take any other medication without consulting physician. • Maintain diet high in protein, calories. • Food may be better tolerated in small, frequent feedings. • Weigh daily, report 5 lb/wk gain. • Notify physician if nausea, vomiting, acne, pedal edema occurs. • **Females:** Promptly report menstrual irregularities, hoarseness, deepening of voice. • **Males:** Report frequent erections, difficulty urinating, gynecomastia.

tetracycline

tet-ra-**sye**-kleen
(Apo-Tetra, Nu-Tetra)

FIXED-COMBINATION(S)

Pylera: tetracycline/bismuth/metronidazole (an anti-infective): 125 mg/140 mg/125 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tetracycline. **CLINICAL:** Antibiotic.

ACTION

Inhibits bacterial protein synthesis by binding to ribosomes. **Therapeutic Effect:** Bacteriostatic.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 30%–60%. Widely distributed. Excreted in urine; eliminated in feces through biliary system. Not removed by hemodialysis. **Half-life:** 6–11 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to *Rickettsiae, M. pneumoniae, C. trachomatis, C. psittaci, H. ducreyi, Yersinia pestis, Francisella tularensis, Vibrio cholerae, Brucella* spp.; treatment of susceptible infections due to gram-negative organisms including inflammatory acne vulgaris, Lyme disease, mycoplasma disease, *Legionella,* Rocky Mountain spotted fever, chlamydial infection in pts with gonorrhea. Part of multidrug regimen of *H. pylori* eradication to reduce risk of duodenal ulcer recurrence.

PRECAUTIONS

Contraindications: Pregnancy, children 8 yrs or younger. **Cautions:** Sun, ultraviolet light exposure (severe photosensitivity reaction). Renal, hepatic impairment.

T

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Avoid use in women during last half of pregnancy. **Pregnancy Category D. Children:** Not recommended in those 8 yrs or younger; may cause permanent staining of teeth, enamel hypoplasia, decreased linear skeletal growth rate. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effectiveness of **oral contraceptives. Antacids, calcium or iron supplements, laxatives containing magnesium** may form nonabsorbable, undigestable complexes. **HERBAL: Dong quai, St. John's wort** may increase risk of photosensitivity. **FOOD: Dairy products** inhibit absorption. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, amylase, bilirubin, AST, ALT.

AVAILABILITY (Rx)

Capsules: 250 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

• Give with full glass of water 1 hr before or 2 hrs after meals. • Avoid antacids, dairy products within 3 hrs of tetracycline.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Space doses evenly around the clock.

Usual Dosage

PO: ADULTS, ELDERLY: 250–500 mg q6–12h. **CHILDREN 8 YRS AND OLDER:** 25–50 mg/kg/day in 4 divided doses. **Maximum:** 3 g/day.

H. Pylori Infection

PO: ADULTS, ELDERLY: 500 mg 2–4 times a day (in combination with at least one other antibiotic and an acid-suppressing agent [proton pump inhibitor or H_2 antagonist]).

Dosage in Renal Impairment

Dosage interval is modified based on creatinine clearance.

Creatinine Clearance	Dosage
50–80 ml/min	Usual dose q8–12h
10–49 ml/min	Usual dose q12–24h
Less than 10 ml/min	Usual dose q24h

SIDE EFFECTS

Frequent: Dizziness, light-headedness, diarrhea, nausea, vomiting, abdominal cramps, photosensitivity (may be severe). **Occasional:** Pigmentation of skin, mucous membranes; anal/genital pruritus; stomatitis; discoloration of teeth.

ADVERSE EFFECTS/ TOXIC REACTIONS

Superinfection (esp. fungal), anaphylaxis, increased ICP may occur. Bulging fontanelles occur rarely in infants.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. tetracyclines, sulfite.

INTERVENTION/EVALUATION

Assess skin for rash. Monitor daily pattern of bowel activity, stool consistency. Monitor food intake, tolerance. Be alert for superinfection (diarrhea, stomatitis, anal/genital pruritus). Monitor B/P, level of consciousness (potential for ICP).

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • Take oral doses on empty stomach (1 hr before or 2 hrs after food, beverages). • Avoid antacids, dairy products within 3 hrs of tetracycline. • Drink full glass of water with capsules; avoid bedtime doses. • Notify physician if diarrhea, rash, other new symptom occurs. • Protect skin from sun, ultraviolet light exposure. • Consult physician before taking any other medication. • Avoid tasks that require alertness, motor skills until response to drug is established (may cause dizziness, light-headedness).

thalidomide

thal-**id**-o-myde
(Thalomid)

BLACK BOX ALERT Significant risk of severe birth defects, fetal death, even with one dose. Increased risk of deep vein thrombosis, pulmonary embolism in multiple myeloma pts. Two methods of contraception must be used 4 wks before, during, and after therapy.

Do not confuse thalidomide with flutamide or lenalidomide.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunomodulator. **CLINICAL:** Immunosuppressive agent.

ACTION

Has sedative, anti-inflammatory, immunosuppressive activity. Action may be due to selective inhibition of production of tumor necrosis factor-alpha. **Therapeutic Effect:** Reduces muscle wasting in HIV pts; reduces local and systemic effects of leprosy.

PHARMACOKINETICS

Protein binding: 55%–66%. Metabolized by nonenzymatic hydrolysis in plasma. Excreted in urine. **Half-life:** 5–7 hrs.

USES

Treatment of leprosy, multiple myeloma. **OFF-LABEL:** Prevention/treatment of discoid lupus erythematosus, erythema multiforme graft-vs-host reactions following bone marrow transplantation, rheumatoid arthritis (RA). Treatment of Behcet's syndrome, Crohn's disease, GI bleeding, pruritus, recurrent aphthous stomatitis in HIV pts, wasting syndrome associated with HIV infection, cancer.

PRECAUTIONS

Contraindications: Women of childbearing potential, pts unable to comply with S.T.E.P.S. program (including males), pregnancy. **Cautions:** History of seizures, renal/hepatic impairment, neurologic disorders, constipation, HIV infection, cardiovascular disease.

T

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in women who are or may become pregnant and who are not using two required types of birth control or who are not continuously abstaining from heterosexual sexual contact. Can cause severe birth defects, fetal death. Unknown if distributed in breast milk. **Pregnancy Category X. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase sedative effects. **Medications associated with peripheral neuropathy (e.g., isoniazid, lithium, metronidazole, phenytoin)** may increase peripheral neuropathy. May decrease effect of **oral contraceptives. Carbamazepine, phenytoin** may decrease concentration. **HERBAL: Cat's claw, echinacea** possess immunostimulant properties. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 50 mg, 100 mg, 150 mg, 200 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Thalidomide may be prescribed only by licensed prescribers who are registered in the S.T.E.P.S. program and understand the risk of teratogenicity if thalidomide is used during pregnancy.

- Administer thalidomide with water at least 1 hr after evening meal and, if possible, at bedtime due to risk of drowsiness.

INDICATIONS/ROUTES/DOSAGE

AIDS-Related Muscle Wasting, Aphthous Stomatitis

PO: ADULTS: 200 mg twice daily for 5 days, then 200 mg once daily for up to 8 wks.

Leprosy

PO: ADULTS, ELDERLY: Initially, 100–300 mg/day as single bedtime dose, at least 1 hr after evening meal. Continue until active reaction subsides, then reduce dose q2–4wks in 50-mg increments.

Multiple Myeloma

PO: ADULTS, ELDERLY: 200 mg once daily, preferably at bedtime, with dexamethasone 40 mg on days 1–4, 9–12, 17–20 of each 28-day cycle.

SIDE EFFECTS

Frequent: Drowsiness, dizziness, mood changes, constipation, dry mouth, peripheral neuropathy. **Occasional:** Increased appetite, weight gain, headache, loss of libido, edema of face/limbs, nausea, alopecia, dry skin, rash, hypothyroidism.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia, peripheral neuropathy, thromboembolism occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for hypersensitivity to thalidomide. Assess for pregnancy 24 hrs before beginning thalidomide therapy (contraindicated). Determine use of other medications (many interactions).

INTERVENTION/EVALUATION

Monitor WBC, nerve conduction studies, HIV viral load. Observe for signs/symptoms of peripheral neuropathy. Perform pregnancy tests on women of childbearing potential weekly during the first 4 wks of use, then at 4-wk intervals in women with regular menstrual cycles or q2wks in women with irregular menstrual cycles.

PATIENT/FAMILY TEACHING

- Avoid tasks requiring alertness, motor skills until response to drug is established. • Avoid use of alcoholic beverages, other drugs causing drowsiness. • Pregnancy test within 24 hrs before starting thalidomide, then q2–4wks in

women of childbearing age. • Discontinue and call physician if symptoms of peripheral neuropathy occur. • Male pts receiving thalidomide should always use a latex condom during any sexual contact with women of childbearing potential.

theophylline

thee-**off**-i-lin
(Elixophyllin, Theo-24, Uniphyl)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Xanthine derivative. **CLINICAL:** Bronchodilator.

ACTION

Directly relaxes smooth muscle of bronchial airways and pulmonary blood vessels. **Therapeutic Effect:** Relieves bronchospasm, increases vital capacity.

USES

Symptomatic relief, prevention of bronchial asthma, reversible bronchospasm due to chronic bronchitis, emphysema, or chronic obstructive pulmonary disease (COPD).

PRECAUTIONS

Contraindications: None known. **Cautions:** Cardiac, renal, hepatic impairment; hypertension; hyperthyroidism; diabetes mellitus; history of hypersensitivity to caffeine or xanthine; peptic ulcer; tachyarrhythmias; underlying seizure disorder. **Pregnancy Category C.**

INTERACTIONS

DRUG: **Phenytoin, rifampin** may increase metabolism. **Cimetidine, ciprofloxacin, clarithromycin, erythromycin, norfloxacin** may increase concentration, toxicity. **Smoking** may decrease concentration. **HERBAL:** None significant. **FOOD:** **Charcoal-broiled foods, high-protein/low-carbohydrate diet** may decrease serum level. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules (Extended-Release [Theo-24]): 100 mg, 200 mg, 300 mg, 400 mg. **Elixir (Elixophyllin):** 80 mg/15 ml. **Infusion (Theophylline):** 0.8 mg/ml, 1.6 mg/ml, 2 mg/ml, 3.2 mg/ml, 4 mg/ml.

Tablets (Controlled-Release): 400 mg, 600 mg. **Tablets, Extended-Release:** 100 mg, 200 mg, 300 mg, 450 mg, 600 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Do not exceed flow rate of 1 ml/min (25 mg/min) for either piggyback or infusion. • Administer loading dose over 20–30 min. • Use infusion pump or microdrip to regulate IV administration.

Storage • Store at room temperature. • Discard if solution contains precipitate.

PO

• Give with food to prevent GI distress. • Do not crush/break controlled-release, extended-release forms. • Extended-release capsules may be opened and sprinkled on soft food. Do not chew beads.

IV INCOMPATIBILITIES

Amiodarone (Cordarone), ciprofloxacin (Cipro), dobutamine (Dobutrex), ondansetron (Zofran).

IV COMPATIBILITIES

Aztreonam (Azactam), ceftazidime (Fortaz), diphenhydramine (Benadryl), fluconazole (Diflucan), heparin, lipids, morphine, potassium chloride, total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Doses are based on ideal body weight.

Acute Symptoms (Loading Dose)

IV, PO: ADULTS, CHILDREN: 5 mg/kg orally (4.6 mg/kg IV). If theophylline is given within 24 hrs, loading dose not recom-

T

mended without obtaining serum theophylline concentration.

Acute Symptoms (Maintenance Dose)

IV: ADULTS OLDER THAN 60 YRS: 0.3 mg/kg/hr. **Maximum:** 400 mg/day. **ADULTS 16–60 YRS:** 0.4 mg/kg/hr. **Maximum:** 900 mg/day. **CHILDREN 12–16 YRS (NONSMOKERS):** 0.5 mg/kg/hr. **Maximum:** 900 mg/day. **CHILDREN 12–16 YRS (SMOKERS):** 0.7 mg/kg/hr. **CHILDREN 9–11 YRS:** 0.7 mg/kg/hr. **CHILDREN 1–8 YRS:** 0.8 mg/kg/hr. **CHILDREN YOUNGER THAN 1 YR:** 1–1.5 mg/kg/q12h.

Chronic Conditions

PO *(Extended-Release)*: ADULTS, CHILDREN 45 KG OR GREATER: Initially, 300–400 mg/day once daily. **Maintenance:** 400–600 mg/day. **CHILDREN 1 YR AND OLDER, LESS THAN 45 KG:** Initially, 10–14 mg/kg/day (**maximum:** 300 mg/day). **Maintenance:** Up to 20 mg/kg/day. (**maximum:** 600 mg/day).

Oral Solution: ADULTS, CHILDREN 45 KG OR GREATER: Initially, 300 mg/day in divided doses q6–8h. **Maintenance:** 400–600 mg/day. **CHILDREN 1 YR AND OLDER, LESS THAN 45 KG:** Initially, 10–14 mg/kg/day (**maximum:** 300 mg) in divided doses q4–6h. **Maintenance:** Up to 20 mg/kg/day (**maximum:** 600 mg). **CHILDREN 6 MOS–YOUNGER THAN 1 YR:** 12–18 mg/kg/day in divided doses. **CHILDREN 6 WKS–YOUNGER THAN 6 MOS:** 10 mg/kg/day in divided doses. **CHILDREN YOUNGER THAN 6 WKS:** 4 mg/kg/day in divided doses.

SIDE EFFECTS

Frequent: Altered smell (during IV administration), restlessness, tachycardia, tremor. **Occasional:** Heartburn, vomiting, headache, mild diuresis, insomnia, nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Too-rapid IV administration may produce marked hypotension with accompanying syncope, light-headedness, palpitations, tachycardia, hyperventilation, nausea, vomiting, angina-like pain, seizures, ventricular fibrillation, cardiac standstill.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support (high incidence of anxiety due to difficulty in breathing and sympathomimetic response to drug). Peak serum concentration should be drawn 1 hr following IV dose, 1–2 hrs after immediate-release dose, 3–8 hrs after extended-release dose. Draw trough level just before next dose.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality/rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Monitor ABGs. Observe lips, fingernails for cyanosis (blue or dusky color in light-skinned pts; gray in dark-skinned pts). Observe for clavicular retractions, hand tremor. Evaluate for clinical improvement (quieter, slower respirations, relaxed facial expression, cessation of clavicular retractions). Monitor serum theophylline levels (**therapeutic serum level range:** 10–20 mcg/ml).

PATIENT/FAMILY TEACHING

• Increase fluid intake (decreases lung secretion viscosity). • Avoid excessive caffeine derivatives (chocolate, coffee, tea, cola, cocoa). • Smoking, charcoal-broiled food, high-protein/low-carbohydrate diet may decrease serum theophylline level. • Notify physician if nausea, vomiting, persistent headache, palpitations occur.

thiamine (vitamin B_1)

thy-a-min
(Betaxin, Vitamin B_1)
Do not confuse thiamine with Tenormin or Thorazine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Water-soluble vitamin. **CLINICAL:** Vitamin B complex (see p. 161C).

ACTION

Combines with adenosine triphosphate in liver, kidneys, leukocytes to form thiamine diphosphate, a coenzyme necessary for carbohydrate metabolism. **Therapeutic Effect:** Prevents, reverses thiamine deficiency.

PHARMACOKINETICS

Rapidly and completely absorbed from GI tract, primarily in duodenum, after IM administration. Widely distributed. Primarily excreted in urine.

USES

Prevention/treatment of thiamine deficiency (e.g., beriberi, Wernicke's encephalopathy syndrome, peripheral neuritis associated with pellegra, alcoholic pts with altered sensorium), metabolic disorders.

PRECAUTIONS

Contraindications: None known. **Cautions:** Wernicke's encephalopathy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if drug is distributed in breast milk. **Pregnancy Category A (C if used in doses above recommended daily allowance). Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY

Injection Solution (Vitamin B_1): 100 mg/ml. **Tablets (OTC):** 50 mg, 100 mg, 250 mg, 500 mg.

ADMINISTRATION/HANDLING

◄ALERT► IV, IM administration used only in acutely ill or those unresponsive to PO route (GI malabsorption syndrome). IM route preferred to IV use. Give by IV push, or add to most IV solutions and give as infusion.

PO

- May take without regard to food.

IV INCOMPATIBILITY

Sodium bicarbonate.

IV COMPATIBILITIES

Famotidine (Pepcid), multivitamins.

INDICATIONS/ROUTES/DOSAGE

Dietary Supplement

PO: ADULTS, ELDERLY: 1–2 mg/day. **CHILDREN:** 0.5–1 mg/day. **INFANTS:** 0.3–0.5 mg/day.

Thiamine Deficiency (Beriberi)

PO: ADULTS, ELDERLY: 5–30 mg/dose IM or IV 3 times/day (if critically ill), then 5–30 mg/day orally, as a single dose or in 3 divided doses, for 1 mo. **CHILDREN:** 10–25 mg IM or IV (if critically ill) or 10–50 mg/dose orally every day for 2 wks, then 5–10 mg/day for 1 mo.

Alcohol Withdrawal Syndrome

IV, IM: ADULTS, ELDERLY: 100 mg/day for several days, then **PO:** 50–100 mg/day.

Wernicke's Encephalopathy

IV: ADULTS, ELDERLY: Initially, 100 mg then **IV/IM:** 50–100 mg/day until consuming a regular, balanced diet.

SIDE EFFECTS

Frequent: Pain, induration, tenderness at IM injection site.

ADVERSE EFFECTS/ TOXIC REACTIONS

IV administration may result in rare, severe hypersensitivity reaction marked by feeling of warmth, pruritus, urticaria, weakness, diaphoresis, nausea, restlessness, tightness in throat, angioedema, cyanosis, pulmonary edema, GI tract bleeding, cardiovascular collapse.

T

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor EKG readings, lab values for erythrocyte activity. Assess for clinical improvement (improved sense of well-being, weight gain). Observe for reversal of deficiency symptoms (**neurologic:** peripheral neuropathy, hyporeflexia, nystagmus, ophthalmoplegia, ataxia, muscle weakness; **cardiac:** venous hypertension, bounding arterial pulse, tachycardia, edema; **mental:** confused state).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Foods rich in thiamine include pork, organ meats, whole grain and enriched cereals, legumes, nuts, seeds, yeast, wheat germ, rice bran. • Urine may appear bright yellow.

thioridazine

thy-o-**rid**-a-zeen

BLACK BOX ALERT Dose-related prolongation of QT interval may cause arrhythmias, sudden death.

Do not confuse thioridazine with thiothixene or Thorazine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenothiazine. **CLINICAL:** Antipsychotic, sedative, antidyskinetic (see p. 66C).

T

ACTION

Blocks dopamine at postsynaptic receptor sites. Possesses strong anticholinergic, sedative effects. **Therapeutic Effect:** Suppresses behavioral response in psychosis; reduces locomotor activity, aggressiveness.

PHARMACOKINETICS

Absorption may be erratic. Protein binding: Very high. Metabolized in liver. Excreted in urine. **Half-life:** 21–24 hrs.

USES

Treatment of refractory schizophrenic pts. **OFF-LABEL:** Treatment of behavioral problems in children, schizophrenia/psychoses in children, dementia, depressive neurosis, psychosis/agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: Angle-closure glaucoma, blood dyscrasias, severe cardiac/hepatic impairment, concurrent use of drugs that prolong QT interval, severe CNS depression; pts known to have genetic defect leading to reduced levels of activity of CYP2D6. **Cautions:** Seizures, decreased GI motility, urinary retention, benign prostatic hypertrophy, visual problems, Parkinson's disease, renal impairment, pts at risk for pneumonia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta; is distributed in breast milk. **Pregnancy Category C. Children:** Increased risk for development of extrapyramidal symptoms (EPS), neuromuscular symptoms, esp. dystonias. **Elderly:** Prone to anticholinergic effects (dry mouth, EPS, orthostatic hypotension, sedation).

INTERACTIONS

DRUG: **Fluoxetine, paroxetine, fluvoxamine, propranol,** may increase concentration/side effects. **Medications causing QT interval prolongation (e.g., erythromycin, procainamide, quinidine)** may lengthen QT interval. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **Dong quai, St. John's wort** may increase photosensitization. **FOOD:** None known. **LAB VALUES:** May cause EKG changes. **Therapeutic serum level:** 0.2–2.6 mcg/ml; **toxic serum level:** not established.

AVAILABILITY (Rx)

Tablets: 10 mg, 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Do not take antacid within 2 hrs of administration.

INDICATIONS/ROUTES/DOSAGE

Psychosis

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 25–100 mg 3 times daily; dosage increased gradually. **Maximum:** 800 mg/day in 2–4 divided doses. **Maintenance:** 10–200 mg 2–4 times/day. **CHILDREN 2–11 YRS:** Initially, 0.5–3 mg/kg/day in 2–3 divided doses. **Maximum:** 3 mg/kg/day.

SIDE EFFECTS

Generally well tolerated with only mild, transient side effects. **Occasional:** Drowsiness during early therapy, dry mouth, blurred vision, lethargy, constipation, diarrhea, nasal congestion, peripheral edema, urinary retention. **Rare:** Ocular changes, altered skin pigmentation (in those taking high doses for prolonged periods), photosensitivity, darkening of urine.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged QT interval may produce torsade de pointes, a form of ventricular tachycardia, sudden death.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Assess for EPS. Monitor EKG, CBC, B/P, serum potassium, hepatic function, eye exams. Monitor for fine tongue movement (may be early sign of tardive dyskinesia). Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression). **Therapeutic serum level:** 0.2–2.6 mcg/ml; **toxic serum level:** not established.

PATIENT/FAMILY TEACHING

• Full therapeutic effect may take up to 6 wks. • Urine may darken. • Do not abruptly withdraw from long-term drug therapy. • Report visual disturbances. • Sugarless gum, sips of tepid water may relieve dry mouth. • Drowsiness generally subsides during continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Avoid exposure to sunlight, artificial light.

thiotepa

HIGH ALERT

thy-oh-**teh**-pah
(Thioplex)
Do not confuse thiotepa with thioguanine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic (see p. 88C).

ACTION

Inhibits DNA, RNA protein synthesis by cross-linking with DNA, RNA strands, preventing cell growth. Cell cycle–phase nonspecific. **Therapeutic Effect:** Produces cell death.

PHARMACOKINETICS

Incompletely absorbed from GI tract. Metabolized in liver. Excreted in urine. **Half-life:** 2.3–2.4 hrs.

USES

Treatment of superficial tumors of bladder; palliative treatment of adenocarcinoma of breast or ovary; control of pleural, pericardial, or peritoneal effusions caused by metastatic tumors.

T

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, bone marrow dysfunction.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if drug is distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **St. John's wort** may increase photosensitization. **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 15 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme caution during preparation/administration.

IV

◀ALERT▶ Give by IV, intrapleural, intraperitoneal, intrapericardial, or intratumor injection; intravesical instillation.

Reconstitution • Reconstitute 15-mg vial with 1.5 ml Sterile Water for Injection to provide concentration of 10 mg/ml. Shake solution gently; let stand to clear. • May further dilute with 0.9% NaCl at concentration 1 mg/ml or greater. • For intravesical lavage, dilute in 30–60 ml Sterile Water for Injection or 0.9% NaCl.

Rate of Administration • Withdraw reconstituted drug through 0.22-micron filter before administration. • For IV push, give over 1–2 min at concentration of 10 mg/ml. • Give IV infusion over 10–60 min. • For intravesical lavage, instill directly into bladder and retain for at least 2 hrs.

Storage • Refrigerate unopened vials. • Reconstituted solution appears clear to slightly opaque; is stable for 28 days if refrigerated (7 days at room temperature). Discard if solution appears grossly opaque or precipitate forms.

IV INCOMPATIBILITIES

Cisplatin (Platinol-AQ), filgrastim (Neupogen).

IV COMPATIBILITIES

Allopurinol (Aloprim), bumetanide (Bumex), calcium gluconate, carboplatin (Paraplatin), cyclophosphamide (Cytoxan), dexamethasone (Decadron), diphenhydramine (Benadryl), doxorubicin (Adriamycin), etoposide (VePesid), fluorouracil, gemcitabine (Gemzar), granisetron (Kytril), heparin, hydromorphone (Dilaudid), leucovorin, lorazepam (Ativan), magnesium sulfate, morphine, ondansetron (Zofran), paclitaxel (Taxol), potassium chloride, vincristine (Oncovin), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage individualized based on clinical response, tolerance to adverse effects. When used in combination therapy, consult specific protocols for optimum dosage, sequence of drug administration.

Ovarian, Breast Cancer

IV: ADULTS, ELDERLY: Initially, 0.3–0.4 mg/kg every 1–4 wks. Maintenance dose adjusted weekly based on blood counts.

Control of Effusions

Intracavitary Injection: ADULTS, ELDERLY: 0.6–0.8 mg/kg (or 30–60 mg) every 1–4 wks.

Bladder Cancer

Intravesical: 60 mg in 30–60 ml 0.9% NaCl retained for 2 hrs once weekly for 4 wks.

SIDE EFFECTS

Occasional: Pain at injection site, headache, dizziness, urticaria, rash, nausea, vomiting, anorexia, stomatitis. **Rare:** Alopecia, cystitis, hematuria (following intravesical administration).

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity (leukopenia, anemia, thrombocytopenia, pancytopenia) may occur due to bone marrow depression. Although WBC count falls to its lowest point 10–14 days after initial therapy, bone marrow effect may not be evident for 30 days. Stomatitis, ulceration of intestinal mucosa may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain hematologic tests at least weekly during therapy and for 3 wks after therapy is discontinued.

INTERVENTION/EVALUATION

Interrupt therapy if WBC falls below 3,000/mm^3, platelet count below 150,000/mm^3, WBC or platelet count declines rapidly. Monitor serum uric acid levels, hematology tests. Assess for stomatitis. Monitor for hematologic toxicity: infection (fever, sore throat, signs of local infection), unusual bruising/bleeding from any site, symptoms of anemia (excessive fatigue, weakness). Assess skin for rash, urticaria.

PATIENT/FAMILY TEACHING

• Maintain fastidious oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid crowds, those with infection. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site.

thiothixene

thy-oh-**thix**-een
(Navane)

BLACK BOX ALERT Elderly pts with dementia related psychosis are at increased risk for death.

Do not confuse Navane with Norvasc or Nubain, or thiothixene with fluoxetine or thioridazine.

◆CLASSIFICATION

CLINICAL: Antipsychotic (see p. 66C).

ACTION

Blocks postsynaptic dopamine receptor sites in brain. Has alpha-adrenergic blocking effects, depresses release of hypothalamic, hypophyseal hormones. **Therapeutic Effect:** Suppresses psychotic behavior.

PHARMACOKINETICS

Well absorbed from GI tract after IM administration. Widely distributed. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 34 hrs.

USES

Symptomatic management of schizophrenia. **OFF-LABEL:** Psychosis (children), psychosis/agitation related to Alzheimer's dementia. Rapid tranquilization.

PRECAUTIONS

Contraindications: Blood dyscrasias, circulatory collapse, CNS depression, coma. **Cautions:** Seizures, cardiovascular disease, pts at risk for pneumonia, cerebrovascular disease, narrow-angle glaucoma, renal/hepatic impairment, myasthenia gravis, Parkinson's disease, seizure disorder, pts with underlying QT prolongation, decreased GI motility, paralytic ileus, urinary retention, BPH, visual problems.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta; is distributed in breast milk. **Pregnancy Category C. Children:** May develop neuromuscular or extrapyramidal symptoms (EPS), esp. dystonias. **Elderly:** More prone to orthostatic hypo-

T

tension, anticholinergic effects (e.g., dry mouth), sedation, EPS.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS, respiratory depression, hypotensive effects. **Extrapyramidal symptoms (EPS)–producing medications** may increase risk of EPS. **CYP3A4 inducers (e.g., carbamazepine)** may decrease concentration/effects. **HERBAL:** **Kava kava, gotu kola, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May decrease serum uric acid.

AVAILABILITY (Rx)

Capsules: 1 mg, 2 mg, 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Give with food or water.

INDICATIONS/ROUTES/DOSAGE

Mild to Moderate Psychosis

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2 mg 3 times daily up to 20–30 mg/day.

Severe Psychosis

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 5 mg twice daily. May increase gradually up to 60 mg/day.

Rapid Tranquilization of Agitated Pt

PO: ADULTS, ELDERLY: 5–10 mg q30–60min. Average total dose: 15–30 mg.

SIDE EFFECTS

Frequent: Transient drowsiness, dry mouth, constipation, blurred vision, nasal congestion. **Occasional:** Diarrhea, peripheral edema, urinary retention, nausea. **Rare:** Ocular changes, altered skin pigmentation (in those taking high doses for prolonged periods), photosensitivity, hypotension, dizziness, syncope.

ADVERSE EFFECTS/ TOXIC REACTIONS

Most common extrapyramidal reaction is akathisia, characterized by motor restlessness, anxiety. Akinesia, marked by rigidity, tremor, increased salivation, mask-like facial expression, reduced voluntary movements, occurs less frequently. Dystonias, including torticollis (neck muscle spasm), opisthotonos (rigidity of back muscles), oculogyric crisis (rolling back of eyes), occur rarely. Tardive dyskinesia, characterized by tongue protrusion, puffing of cheeks, chewing/puckering of mouth, occurs rarely but may be irreversible. Elderly female pts have greater risk of developing this reaction. Grand mal seizures may occur in epileptic pts. Neuroleptic malignant syndrome occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor B/P for hypotension. Assess for peripheral edema. Monitor daily pattern of bowel activity, stool consistency. Prevent constipation. Observe for extrapyramidal symptoms (EPS), tardive dyskinesia; monitor for potentially fatal, rare neuroleptic malignant syndrome. Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

• Full therapeutic effect may take up to 6 wks. • Report visual disturbances. • Sugarless gum, sips of tepid water may relieve dry mouth. • Drowsiness generally subsides during continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alco-

hol, other CNS depressants. • Avoid exposure to direct sunlight, artificial light.

tiagabine

tye-**a**-ga-bean
(Gabitril)
Do not confuse tiagabine with tizanidine.

◆CLASSIFICATION

CLINICAL: Anticonvulsant (see p. 36C).

ACTION

Blocks reuptake in presynaptic neurons of gamma-aminobutyric acid (GABA), the major inhibitory neurotransmitter in the CNS, in the presynaptic neurons, increasing GABA levels at postsynaptic neurons. **Therapeutic Effect:** Inhibits seizures.

USES

Adjunctive therapy for treatment of partial seizures in adults and children 12 yrs or older.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 96%. Metabolized in liver. Primarily eliminated in feces. **Half-life:** 2–5 hrs.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment. Concurrent use of alcohol, other CNS depressants may cause seizures.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce teratogenic effects. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Carbamazepine, phenobarbital, phenytoin** may increase clearance. May alter effects of **valproic acid.** **HERBAL:** **Evening primrose** may decrease seizure threshold. **St. John's wort** may decrease concentration. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 2 mg, 4 mg, 12 mg, 16 mg.

ADMINISTRATION/HANDLING

• Give with food.

INDICATIONS/ROUTES/DOSAGE

Partial Seizures

PO: ADULTS, ELDERLY: Initially, 4 mg once daily. May increase by 4–8 mg/day at weekly intervals. **Maximum:** 56 mg/day in 2–4 divided doses. **CHILDREN 12–18 YRS:** Initially, 4 mg once daily. May increase by 4 mg at wk 2 and by 4–8 mg at weekly intervals thereafter. **Maximum:** 32 mg/day in 2–4 divided doses.

SIDE EFFECTS

Frequent (34%–20%): Dizziness, asthenia (loss of strength, energy), drowsiness, nervousness, confusion, headache, infection, tremor. **Occasional:** Nausea, diarrhea, abdominal pain, impaired concentration.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose characterized by agitation, confusion, hostility, weakness. Full recovery occurs within 24 hrs.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Observe frequently for recurrence of seizure activity. Initiate seizure precautions.

INTERVENTION/EVALUATION

For those on long-term therapy, serum hepatic/renal function tests, CBC should be performed periodically. Assist with ambulation if dizziness occurs. Assess for

T

clinical improvement (decrease in intensity, frequency of seizures). Monitor for depression, unusual behavior, suicidal ideation or thoughts.

PATIENT/FAMILY TEACHING

• If dizziness occurs, change positions slowly from recumbent to sitting position before standing. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Notify physician of worsening seizure activity, thoughts of suicide, increased depression.

ticagrelor

tye-**ka**-grel-or
(Brilinta)

BLACK BOX ALERT May cause significant, sometimes fatal bleeding. Do not use with active bleeding or history of intracranial bleeding. Do not initiate in pts planning urgent coronary artery bypass graft (CABG) surgery. Discontinue at least 5 days prior to any surgery. Suspect bleeding in any pt who is hypotensive and has had recent percutaneous coronary intervention (PCI), CABG, or other surgical procedures. If possible, manage bleeding without discontinuing therapy to decrease risk of cardiovascular events. Aspirin maintenance doses greater than 100 mg/day may reduce effectiveness and should be strictly avoided.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $P2Y_{12}$ platelet inhibitor. **CLINICAL:** Antiplatelet (see p. 33C).

ACTION

Reversibly inhibits platelet $P2Y_{12}$ ADP receptor to prevent signal transduction and platelet activation. **Therapeutic Effect:** Prevents platelet aggregation.

PHARMACOKINETICS

Readily absorbed after PO administration. Protein binding: 99%. Metabolized in liver. Primarily excreted in feces (58%), urine (26%). **Half-life:** 7–9 hrs.

USES

Reduction of thrombolytic cardiovascular events in conjunction with aspirin in pts with acute coronary syndrome (ACS) including unstable angina, non-STEMI, or STEMI.

PRECAUTIONS

Contraindications: History of intracranial hemorrhage, active pathologic bleeding, severe hepatic impairment. **Cautions:** Moderate hepatic impairment, renal impairment, history of hyperuricemia or gouty arthritis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Must either discontinue breast-feeding or discontinue drug therapy. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Aspirin** greater than 100 mg/day may decrease effectiveness. **CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, voriconazole)** may increase concentration/effects. **CYP3A4 inducers (e.g., carbamazepine, dexamethasone, phenobarbital, phenytoin, rifampin)** may decrease concentration/effects. **Anticoagulants, antiplatelets, NSAIDs** may increase risk of bleeding. May increase **digoxin** level. May increase concentration of **simvastatin, lovastatin. HERBAL: St. John's wort** may decrease effectiveness. **Fenugreek, feverfew, flaxseed, garlic, ginger, ginkgo biloba, ginseng, omega-3, red clover, willow bark, other herbs** with anticoagulant/antiplatelet activity may increase risk of bleeding. **FOOD: Grapefruit, grapefruit juice** may increase potential for bleeding. **LAB VALUES:** May increase uric acid, creatinine.

AVAILABILITY (Rx)

Tablets: 90 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Acute Coronary Syndrome

PO: ADULTS: 180 mg once, then 90 mg twice daily. Give with aspirin 325 mg once (loading dose), then maintain with aspirin 75–100 mg daily.

SIDE EFFECTS

Occasional (13%–7%): Dyspnea, headache. **Rare (5%–3%):** Cough, dizziness, nausea, diarrhea, back pain, fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Life-threatening events including intracranial bleeding, epistaxis, intrapericardial bleeding with cardiac tamponade, hypovolemic shock requiring vasopressive support or blood transfusion reported. Pts with history of sick sinus syndrome, second- or third-degree AV block, bradycardic syncope have increased risk of bradycardia. May induce episodes of atrial fibrillation, hypotension, hypertension. Gynecomastia reported in less than 1% of men.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, BMP, digoxin level if applicable. Question for history of bleeding, stomach ulcers, colon polyps, head trauma, cardiac arrhythmias, unstable angina, recent MI, hepatic impairment, HIV, hypertension, stroke. Receive full medication history including herbal products. Question for history of COPD, chronic bronchitis, emphysema, asthma, exertional dyspnea.

INTERVENTION/EVALUATION

Routinely screen for bleeding. Assess skin for bruising, hematoma. Monitor creatinine, uric acid, digoxin levels if applicable. Report hematuria, epistaxis, coffee-ground emesis, black/tarry stools. Monitor EKG for chest pain, shortness of breath, syncope.

PATIENT/FAMILY TEACHING

• It may take longer to stop bleeding during therapy. • Do not vigorously blow nose. • Use soft toothbrush, electric razor to decrease risk of bleeding. • Immediately call physician if bloody stool, urine or nosebleeds occur. • Report all newly prescribed medications. • Inform physician of any plans for dental procedures or surgeries.

ticlopidine

HIGH ALERT

tye-**klo**-pye-deen
(Apo-Ticlopidine, Novo-Ticlopidine)

BLACK BOX ALERT Risk of neutropenia, agranulocytosis, thrombotic thrombocytopenia purpura, aplastic anemia.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aggregation inhibitor. **CLINICAL:** Antiplatelet (see p. 33C).

ACTION

Inhibits release of adenosine diphosphate from activated platelets, preventing fibrinogen from binding to glycoprotein IIb/IIIa receptors on surface of activated platelets. **Therapeutic Effect:** Inhibits platelet aggregation, thrombus formation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (platelet inhibition)	2 days	8–11 days	1–2 wks

Rapidly absorbed following PO administration. Protein binding: 98%. Extensively metabolized in liver. Primarily excreted in urine; partially eliminated in feces. **Half-life:** 7.9–12.6 hrs.

USES

To reduce risk of stroke in those who have experienced stroke-like symptoms

T

(transient ischemic attacks) or with history of thrombotic stroke. **OFF-LABEL:** Prevention of postop deep vein thrombosis (DVT), protection of aortocoronary bypass grafts, reduction of graft loss after renal transplant, diabetic microangiopathy, ischemic heart disease.

PRECAUTIONS

Contraindications: Active pathologic bleeding (e.g., bleeding peptic ulcer, intracranial bleeding), hematopoietic disorders (neutropenia, thrombocytopenia), presence of hemostatic disorder, severe hepatic impairment. **Cautions:** Those at increased risk for bleeding, mild to moderate hepatic/renal disease, concurrent treatment with anticoagulants.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Aspirin, heparin, NSAIDs, oral anticoagulants, thrombolytics may increase risk of bleeding. May increase concentration, risk of toxicity of **phenytoin, theophylline. HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo biloba, ginseng, horse chestnut, red clover** possess antiplatelet activity, may increase risk of bleeding. **FOOD: All foods** increase bioavailability. **LAB VALUES:** May increase serum cholesterol, alkaline phosphatase, bilirubin, triglycerides, AST, ALT. May prolong bleeding time. May decrease neutrophil, platelet counts.

AVAILABILITY (Rx)

Tablets: 250 mg.

ADMINISTRATION/HANDLING

PO

• Give with food or just after meals (bioavailability increased, GI discomfort decreased).

INDICATIONS/ROUTES/DOSAGE

Prevention of Stroke

PO: ADULTS, ELDERLY: 250 mg twice a day.

SIDE EFFECTS

Frequent (13%–5%): Diarrhea, nausea, dyspepsia (heartburn, indigestion, epigastric pain, bloating). **Rare (2%–1%):** Vomiting, flatulence, pruritus, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia occurs in approximately 2% of pts. Thrombotic thrombocytopenia purpura, agranulocytosis, hepatitis, cholestatic jaundice, tinnitus occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Drug should be discontinued 10–14 days before surgery if antiplatelet effect is not desired.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assist with ambulation if dizziness occurs. Observe, monitor neurologic status for changes. Assess skin for flushing, rash. Observe for signs of bleeding. Monitor CBC, serum hepatic/renal function tests.

PATIENT/FAMILY TEACHING

• Take with food to decrease GI symptoms. • Periodic blood tests are essential. • Inform physician if fever, sore throat, chills, unusual bleeding occurs.

tigecycline

tye-gee-**sye**-kleen
(Tygacil)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycylcycline. **CLINICAL:** Antibiotic.

ACTION

Blocks protein synthesis by binding to ribosomal receptor sites of bacterial cell wall. **Therapeutic Effect:** Bacteriostatic effect.

PHARMACOKINETICS

Extensive tissue distribution, minimally metabolized. Eliminated mainly by biliary/fecal route, with lesser amount excreted in urine. Protein binding: 71%–89%. **Half-life:** Single dose: 27 hrs; following multiple doses: 42 hrs.

USES

Treatment of susceptible infections due to *E. coli, E. faecalis, S. aureus, S. agalactiae, S. anginosus* group (includes *S. anginosus, S. intermedius, S. constellatus), S. pyogenes, B. fragilis, Citrobacter freundii, E. cloacae, K. oxytoca, K. pneumoniae, B. thetaiotaomicron, B. uniformis, B. vulgatus, C. perfringens, Peptostreptococcus micros* including complicated skin/skin structure infections, complicated intra-abdominal infections, community-acquired bacterial pneumonia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hypersensitivity to tetracyclines, last half of pregnancy, hepatic impairment, intestinal perforation.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. May be distributed in breast milk. Permanent discoloration of the teeth (brown-gray) may occur if used during tooth development. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Effects of **oral contraceptives** may be decreased. **Warfarin** may increase risk of hypoprothrombinemia. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, amylase, bilirubin, glucose, LDH, ALT, AST. May decrease Hgb, WBCs, thrombocytes, serum potassium, protein.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Tygacil): 50-mg vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 5.3 ml 0.9% NaCl or D_5W to each 50-mg vial. Swirl gently to dissolve. Resulting solution is 10 mg/ml. • Immediately withdraw 5 ml reconstituted solution and add to 100 ml 0.9% NaCl or D_5W bag for infusion (final concentration should not exceed 1 mg/ml). • Reconstituted solution appears yellow to red-orange.

Rate of Administration • Administer over 30–60 min every 12 hrs. • May be given through a dedicated line or by Y-site piggyback. If same line is used for sequential infusion of several different drugs, line should be flushed before and after infusion of tigecycline with either 0.9% NaCl or D_5W.

Storage • Reconstituted solution is stable for up to 6 hrs at room temperature or up to 24 hrs if refrigerated. • Discard if solution is discolored (green, black) or precipitate forms.

IV INCOMPATIBILITIES

Amphotericin B, chlorpromazine, methylprednisolone, voriconazole.

IV COMPATIBILITIES

Dobutamine, dopamine, lactated Ringer's, lidocaine, potassium chloride, ranitidine, theophylline.

INDICATIONS/ROUTES/DOSAGE

Systemic Infections

IV: ADULTS OVER 18 YRS, ELDERLY: Initially, 100 mg, followed by 50 mg every 12 hrs for 5–14 days.

Dosage in Severe Hepatic Impairment
IV: ADULTS OVER 18 YRS, ELDERLY: Initially, 100 mg, followed by 25 mg every 12 hrs.

SIDE EFFECTS

Frequent (29%–13%): Nausea, vomiting, diarrhea. **Occasional (7%–4%):** Headache, hypertension, dizziness, increased cough, delayed healing. **Rare (3%–2%):** Peripheral edema, pruritus, constipation, dyspepsia (heartburn, indigestion, epigastric pain), asthenia (loss of strength, energy), hypotension, phlebitis, insomnia, rash, diaphoresis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Dyspnea, abscess, pseudomembranous colitis (abdominal cramps, severe watery diarrhea, fever) ranging from mild to life-threatening may result from altered bacterial balance.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. tetracyclines, before therapy.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Be alert for superinfection: fever, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Nausea, vomiting may be controlled by antiemetics.

PATIENT/FAMILY TEACHING

- Notify physician if diarrhea, rash, mouth soreness, other new symptoms occur.

tiludronate

tye-**loo**-dro-nate
(Skelid)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Bone resorption inhibitor. **CLINICAL:** Calcium regulator.

ACTION

Inhibits functioning osteoclasts through disruption of cytoskeletal ring structure, inhibition of osteoclastic proton pump. **Therapeutic Effect:** Inhibits bone resorption.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (platelet inhibition)	2 days	8–11 days	1–2 wks

Well absorbed following PO administration. Protein binding: 90%. Minimally metabolized in liver. Excreted in urine. **Half-life:** 150 hrs.

USES

Treatment of Paget's disease of bone (osteitis deformans).

PRECAUTIONS

Contraindications: Inability to stand or sit upright for at least 30 min. **Cautions:** GI disease (e.g., dysphagia, symptomatic esophageal disease), renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antacids containing aluminum or magnesium, calcium, salicylates may interfere with absorption. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 200 mg.

ADMINISTRATION/HANDLING

PO

• Must take with 6–8 oz plain water. • Do not give within 2 hrs of food intake. • Do not lie down for at least 30 min following administration. • Avoid giving aspirin, calcium supplements, mineral supplements, antacids within 2 hrs of tiludronate administration.

INDICATIONS/ROUTES/DOSAGE

Paget's Disease

PO: ADULTS, ELDERLY: 400 mg once a day for 3 mos. Not recommended in pts with creatinine clearance less than 30 ml/min.

SIDE EFFECTS

Frequent (9%–6%): Nausea, diarrhea, generalized body pain, back pain, headache. **Occasional (Less Than 6%):** Rash, dyspepsia (heartburn, indigestion, epigastric pain), vomiting, rhinitis, sinusitis, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Dysphagia, esophagitis, esophageal ulcer, gastric ulcer occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is using other medications (esp. aluminum, magnesium, calcium, salicylates). Determine baseline renal function. Assess for GI disease.

INTERVENTION/EVALUATION

Monitor serum osteocalcin, alkaline phosphatase, adjusted calcium, urinary hydroxyproline to assess effectiveness of medication.

PATIENT/FAMILY TEACHING

• Take with 6–8 oz water. • Avoid other medication for 2 hrs before or after taking tiludronate. • Check with physician if calcium, vitamin D supplements are necessary.

timolol

HIGH ALERT

tim-oh-lole
(Apo-Timol, Apo-Timop, Betimol, Gen-Timolol, Istalol, Nu-Timolol, PMS-Timolol, Timoptic, Timoptic Ocudose, Timoptic-XE)

BLACK BOX ALERT Abrupt withdrawal of oral timolol can produce acute tachycardia, hypertension, ischemia; must be gradually tapered over 1–2 wks.

Do not confuse timolol with atenolol or Tylenol, or Timoptic with Betoptic or Viroptic.

FIXED-COMBINATION(S)

Combigan: timolol/brimonidine (an alpha$_2$ agonist): 0.5%/0.2%. **Cosopt:** timolol/dorzolamide (a carbonic anhydrase inhibitor): 0.5%/2%. **Timolide:** timolol/hydrochlorothiazide (a diuretic): 10 mg/25 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta-adrenergic blocker. **CLINICAL:** Antihypertensive, antimigraine, antiglaucoma (see pp. 52C, 72C).

ACTION

Blocks beta$_1$-, beta$_2$-adrenergic receptors. **Therapeutic Effect:** Reduces intraocular pressure (IOP) by reducing aqueous humor production, lowers B/P, slows heart rate, decreases myocardial contractility.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–45 min	0.5–2.5 hrs	4 hrs
Ophthalmic	30 min	1–2 hrs	12–24 hrs

Well absorbed from GI tract. Protein binding: 60%. Minimal absorption after ophthalmic administration. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–2.7 hrs. Systemic absorption may occur with ophthalmic administration.

T

USES

Oral: Management of mild to moderate hypertension. Used alone or in combination with diuretics, esp. thiazide type. Reduces cardiovascular mortality in those with definite or suspected acute MI. Prophylaxis of migraine headache. **Ophthalmic:** Reduces IOP in management of open-angle glaucoma, aphakic glaucoma, ocular hypertension, secondary glaucoma.

PRECAUTIONS

Contraindications: Bronchial asthma, cardiogenic shock, CHF (unless secondary to tachyarrhythmias), COPD, second- or third-degree heart block, sinus bradycardia, uncontrolled cardiac failure. **Cautions:** Diabetes mellitus, myasthenia gravis, renal/hepatic impairment. Precautions also apply to ophthalmic administration (due to systemic absorption of ophthalmic solution).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk; not for use in breast-feeding women because of potential for serious adverse effect on breast-feeding infant. Avoid use during first trimester. May produce bradycardia, apnea, hypoglycemia, hypothermia in infant during delivery; low birth-weight infants. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** Age-related peripheral vascular disease increases susceptibility to decreased peripheral circulation.

INTERACTIONS

DRUG: Diuretics, other antihypertensives may increase hypotensive effect. May mask symptoms of hypoglycemia, prolong hypoglycemic effects of **insulin, oral hypoglycemics. NSAIDs** may decrease antihypertensive effect. **HERBAL: Yohimbe, herbs with hypertensive properties** may decrease effect. **FOOD:** None known. **LAB VALUES:** May increase antinuclear antibody titer (ANA), BUN, serum LDH, alkaline phosphatase, bilirubin, creatinine, potassium, uric acid, AST, ALT, triglycerides, lipoproteins.

AVAILABILITY (Rx)

Ophthalmic Gel (Timoptic-XE): 0.25%, 0.5%. **Ophthalmic Solution (Betimol, Istalol, Timoptic, Timoptic Ocudose):** 0.25%, 0.5%. **Tablets:** 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Tablets may be crushed.

Ophthalmic

◀ ALERT ▶ When using gel, invert container, shake once prior to each use. • Place gloved finger on lower eyelid and pull out until pocket is formed between eye and lower lid. • Place prescribed number of drops or amount of prescribed gel into pocket. • Instruct pt to close eye gently so that medication will not be squeezed out of sac. • Apply gentle finger pressure to the lacrimal sac at inner canthus for 1 min following instillation (lessens risk of systemic absorption).

INDICATIONS/ROUTES/DOSAGE

Mild to Moderate Hypertension

PO: ADULTS, ELDERLY: Initially, 10 mg twice daily, alone or in combination with other therapy. Gradually increase at intervals of not less than 1 wk. Maintenance: 20–60 mg/day in 2 divided doses.

Reduction of Cardiovascular Mortality in Acute MI

PO: ADULTS, ELDERLY: 10 mg twice daily, within 1–4 wks after infarction.

Migraine Prevention

PO: ADULTS, ELDERLY: Initially, 10 mg twice daily. Range: 10–30 mg/day.

Reduction of Intraocular Pressure (IOP)

Ophthalmic: ADULTS, ELDERLY, CHILDREN: 1 drop of 0.25% solution in af-

fected eye(s) twice daily. May be increased to 1 drop of 0.5% solution in affected eye(s) twice daily. When IOP is controlled, dosage may be reduced to 1 drop once daily. If pt is switched to timolol from another antiglaucoma agent, administer concurrently for 1 day. Discontinue other agent on following day. **Ophthalmic *(Timoptic XE)*: ADULTS, ELDERLY:** 1 drop/day (0.25% or 0.5%). **Ophthalmic *(Istalol)*: ADULTS, ELDERLY:** Apply 1 drop (0.5%) once daily in the morning.

SIDE EFFECTS

Frequent: Diminished sexual function, drowsiness, difficulty sleeping, asthenia (loss of strength, energy), fatigue. Ophthalmic: Eye irritation, visual disturbances. **Occasional:** Depression, cold hands/feet, diarrhea, constipation, anxiety, nasal congestion, nausea, vomiting. **Rare:** Altered taste, dry eyes, pruritus, numbness of fingers, toes, scalp.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension, bronchospasm. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremors. May precipitate CHF, MI in those with cardiac disease; thyroid storm in those with thyrotoxicosis; peripheral ischemia in those with existing peripheral vascular disease. Hypoglycemia may occur in pts with previously controlled diabetes. Ophthalmic overdose may produce bradycardia, hypotension, bronchospasm, acute cardiac failure.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, apical pulse immediately before drug is administered (if pulse is 60 min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Assess pulse for quality, rate, rhythm. Monitor pulse for irregular rate, bradycardia. Monitor EKG for cardiac arrhythmias, particularly PVCs. Monitor daily pattern of bowel activity, stool consistency. Monitor heart rate, B/P, serum hepatic/renal function, IOP (ophthalmic preparation).

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control glaucoma, hypertension, angina, arrhythmias. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report shortness of breath, unusual fatigue, prolonged dizziness, headache. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician approval. • Restrict salt, alcohol intake. • **Ophthalmic:** Instill drops correctly following guidelines. • Transient stinging, discomfort may occur upon instillation.

tinzaparin HIGH ALERT

tin-**zap**-a-rin
(Innohep ✱)

BLACK BOX ALERT Pts with recent epidural or spinal anesthesia are at risk for spinal or epidural hematoma, subsequent paralysis.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Low molecular weight heparin. **CLINICAL:** Anticoagulant (see p. 31C).

ACTION

Inhibits factor Xa. Causes less inactivation of thrombin, inhibition of platelets, bleeding than with standard heparin. Does not significantly influence bleeding time, PT, aPTT. **Therapeutic Effect:** Produces anticoagulation.

PHARMACOKINETICS

Well absorbed after subcutaneous administration. Partially metabolized. Pri-

T

marily eliminated in urine. **Half-life:** 3–4 hrs.

USES

Treatment of acute symptomatic deep vein thrombosis (DVT) with or without pulmonary embolism, when given in conjunction with warfarin. **OFF-LABEL:** Prophylaxis of DVT following hip/knee replacement surgery, general surgery.

PRECAUTIONS

Contraindications: Active major bleeding, heparin-induced thrombocytopenia (current or past history). **Cautions:** Conditions with increased risk of hemorrhage (e.g., bacterial endocarditis, bleeding disorders, severe uncontrolled hypertension, recent GI bleeding), renal impairment, elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use with caution, particularly during last trimester, immediate postpartum period (increased risk of maternal hemorrhage). Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** May be more susceptible to bleeding.

INTERACTIONS

DRUG: **Anticoagulants, NSAIDs, platelet aggregation inhibitors** may increase risk of bleeding. **HERBAL:** Herbs with anticoagulant/antiplatelet properties **(e.g., cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo biloba, ginseng, green tea, horse chestnut, red clover)** may increase risk for bleeding. **FOOD:** None known. **LAB VALUES:** May increase serum hepatic enzymes (e.g., AST, ALT).

AVAILABILITY (Rx)

Injection Solution: 20,000 anti-Xa international units/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not mix with other injections or infusions. Do not give IM.

Subcutaneous

• Parenteral form appears clear and colorless to pale yellow. • Store at room temperature. • Instruct pt to lie down before administering by deep subcutaneous injection.

INDICATIONS/ROUTES/DOSAGE

Deep Vein Thrombosis (DVT)

Subcutaneous: ADULTS, ELDERLY: 175 anti-Xa international units/kg once a day. Continue for at least 6 days and until pt is sufficiently anticoagulated with warfarin (international normalized ratio [INR] of 2 or more for 2 consecutive days). Use with caution in pts with creatinine clearance 50 ml/min or less.

SIDE EFFECTS

Frequent (16%): Injection site reaction (e.g., inflammation, oozing, nodules, skin necrosis). **Rare (Less Than 2%):** Nausea, asthenia (loss of strength, energy), constipation, epistaxis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may lead to bleeding complications ranging from local ecchymoses to major hemorrhage. **Antidote:** Dose of protamine sulfate (1% solution) should be equal to dose of tinzaparin injected. One mg protamine sulfate neutralizes 100 units of tinzaparin. Second dose of 0.5 mg protamine sulfate per 100 units tinzaparin may be given if aPTT tested 2–4 hrs after initial infusion remains prolonged.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBC, including platelet count. Determine baseline B/P.

INTERVENTION/EVALUATION

Periodically monitor CBC, platelet count. Assess for any sign of bleeding: bleeding at surgical site, hematuria, blood in stool, bleeding from gums, petechiae, bruising,

bleeding from injection sites. Administer only subcutaneously.

PATIENT/FAMILY TEACHING

• May have tendency to bleed easily, use precautions (e.g., use electric razor, soft toothbrush). • Inform physician if chest pain, unusual bleeding/bruising, pain, numbness, tingling, swelling in joints, injection site reaction (oozing, nodules, inflammation) occur.

tiotropium

tye-oh-**trope**-ee-yum
(Spiriva)
Do not confuse Spiriva with Inspra or Serevent, or tiotropium with ipratropium.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Bronchodilator (see p. 73C).

ACTION

Binds to recombinant human muscarinic receptors at smooth muscle, resulting in long-acting bronchial smooth muscle relaxation. **Therapeutic Effect:** Relieves bronchospasm.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Inhalation	N/A	N/A	24–36 hrs

Binds extensively to tissue. Protein binding: 72%. Metabolized by oxidation. Excreted in urine. **Half-life:** 5–6 days.

USES

Long-term maintenance treatment of bronchospasm associated with COPD, including chronic bronchitis, emphysema, and for reducing COPD exacerbations.

PRECAUTIONS

Contraindications: History of hypersensitivity to ipratropium. **Cautions:** Narrow-angle glaucoma, prostatic hypertrophy, bladder neck obstruction, moderate to severe renal impairment, history of hypersensitivity to atropine, myasthenia gravis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Higher frequency of dry mouth, constipation, UTI noted with increasing age.

INTERACTIONS

DRUG: Concurrent administration with **anticholinergics (e.g., ipratropium)** may increase adverse effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Powder for Inhalation: 18 mcg/capsule (in blister packs).

ADMINISTRATION/HANDLING

Inhalation

• Open dustcap of HandiHaler by pulling it upward, then open mouthpiece. • Place capsule in center chamber and firmly close mouthpiece until a click is heard, leaving the dustcap open. • Hold HandiHaler device with mouthpiece upward, press piercing button completely in once, and release. • Instruct pt to breathe out completely before breathing in slowly and deeply but at rate sufficient to hear the capsule vibrate. • Have pt hold breath as long as it is comfortable until exhaling slowly. • Instruct pt to repeat once again to ensure full dose is received.

Storage • Store at room temperature. Do not expose capsules to extreme temperature, moisture. • Do not store capsules in HandiHaler device. • Use immediately once foil is peeled back or removed.

T

INDICATIONS/ROUTES/DOSAGE

COPD (Maintenance Treatment, Reduction of COPD Exacerbations)

Inhalation: ADULTS, ELDERLY: 18 mcg (1 capsule)/day via HandiHaler inhalation device.

SIDE EFFECTS

Frequent (16%–6%): Dry mouth, sinusitis, pharyngitis, dyspepsia, UTI, rhinitis. **Occasional (5%–4%):** Abdominal pain, peripheral edema, constipation, epistaxis, vomiting, myalgia, rash, oral candidiasis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Angina pectoris, depression, flu-like symptoms, glaucoma, increased intraocular pressure occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support (high incidence of anxiety due to difficulty in breathing, sympathomimetic response to drug).

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality, rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Monitor ABGs. Observe lips, fingernails for cyanosis (blue or dusky color in light-skinned pts; gray in dark-skinned pts). Observe for clavicular retractions, hand tremor. Evaluate for clinical improvement (quieter, slower respirations, relaxed facial expression, cessation of clavicular retractions).

PATIENT/FAMILY TEACHING

• Increase fluid intake (decreases lung secretion viscosity). • Do not use more than 1 capsule for inhalation at any one time. • Rinsing mouth with water immediately after inhalation may prevent mouth/throat dryness, moniliasis. • Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola, cocoa). • Report eye pain/discomfort, blurred vision, visual halos.

tipranavir

tye-**pran**-a-veer
(Aptivus)

BLACK BOX ALERT May cause hepatitis (including fatalities), hepatic dysfunction. Intracranial hemorrhage has occurred.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiretroviral. **CLINICAL:** Protease inhibitor (see p. 117C).

ACTION

Prevents virus-specific processing of polyproteins, HIV-1 infected cells. **Therapeutic Effect:** Prevents formation of mature viral cells.

PHARMACOKINETICS

Incompletely absorbed following PO administration. Protein binding: 98%–99%. Metabolized in liver. Eliminated mainly in feces, with lesser amount eliminated in urine. **Half-life:** 6 hrs.

USES

Treatment of HIV infection in combination with ritonavir and other antiretroviral agents (limited to highly treatment experienced or multi–protease inhibitor resistance).

PRECAUTIONS

Contraindications: Moderate to severe hepatic insufficiency, concurrent use of tipranavir/ritonavir with alfuzosin, amiodarone, bepridil, dihydroergotamine, ergonovine, ergotamine, flecainide, lovastatin, methylergonovine, midazolam (oral), propafenone, quinidine, rifampin, sildenafil (pulmonary arterial hypertension), simvastatin, St. John's wort, triazolam, voriconazole. **Cautions:** Diabetes mellitus, hemophilia, known sulfonamide allergy, mild hepatic impairment, pts at increased risk for bleeding from trauma, surgery, concurrent antiplatelet/anticoagulant therapy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: May interfere with metabolism of **amiodarone, bepridil, ergotamine, midazolam, oral contraceptives. Carbamazepine, phenobarbital, phenytoin, rifampin** may decrease concentration. May increase concentration of **colchicine, HMG-CoA reductase inhibitors, fluoxetine, paroxetine, sertraline. HMG-CoA reductase inhibitors** may increase risk of myopathy including rhabdomyolysis. **HERBAL: St. John's wort** may lead to loss of virologic response, potential resistance to tipranavir. **FOOD: High-fat meals** may increase bioavailability. **LAB VALUES:** May increase serum cholesterol, triglycerides, amylase, ALT, AST. May decrease WBC count.

AVAILABILITY (Rx)

Capsules: 250 mg. **Oral Solution:** 100 mg/ml.

ADMINISTRATION/HANDLING

PO

• May take without regard to food. When taken with ritonavir tablets, must be taken with meals. • Store unopened bottles of capsules in refrigerator. • Do not freeze/refrigerate oral solution. • Once bottle is opened, capsules may be stored at room temperature for 60 days. Use oral solution within 60 days after opening.

INDICATIONS/ROUTES/DOSAGE

Note: Must be taken with ritonavir.

HIV Infection

PO: ADULTS, ELDERLY: 500 mg (2 capsules) administered with 200 mg of ritonavir twice a day. **CHILDREN 2–18 YRS:** 14 mg/kg with 6 mg/kg ritonavir twice daily. **Maximum:** 500 mg with 200 mg ritonavir twice daily.

SIDE EFFECTS

Frequent (11%): Diarrhea. **Occasional (7%–2%):** Nausea, fever, fatigue, headache, depression, vomiting, abdominal pain, weakness, rash. **Rare (Less Than 2%):** Abdominal distention, anorexia, flatulence, dizziness, insomnia, myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bronchitis occurs in 3% of pts. Anemia, neutropenia, thrombocytopenia, diabetes mellitus, hepatic failure, hepatitis, peripheral neuropathy, pancreatitis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory testing, esp. hepatic function tests, before beginning therapy and at periodic intervals during therapy. Offer emotional support. Obtain medication history.

INTERVENTION/EVALUATION

Closely monitor for evidence of GI discomfort. Monitor daily pattern of bowel activity, stool consistency. Assess skin for evidence of rash. Monitor serum chemistry tests for marked laboratory abnormalities, particularly hepatic profile, CD4 cell count, HIV, RNA plasma levels. Assess for opportunistic infections (onset of fever, oral mucosa changes, cough, other respiratory symptoms).

PATIENT/FAMILY TEACHING

• Eat small, frequent meals to offset nausea, vomiting. • Continue therapy for full length of treatment. • Doses should be evenly spaced. • Tipranavir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pt may continue to experience illnesses, including opportunistic infections. • Diarrhea can be controlled with OTC medication.

T

tizanidine

tye-**zan**-i-deen
(Apo-Tizanidine, Zanaflex, Zanaflex Capsules)

Do not confuse tizanidine with tiagabine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Skeletal muscle relaxant. **CLINICAL:** Antispastic (see p. 153C).

ACTION

Increases presynaptic inhibition of spinal motor neurons mediated by alpha$_2$-adrenergic agonists, reducing facilitation to postsynaptic motor neurons. **Therapeutic Effect:** Reduces muscle spasticity.

PHARMACOKINETICS

Metabolized in liver. Primarily excreted in urine. **Half-life:** 2 hrs.

USES

Acute and intermittent management of muscle spasticity (spasms, stiffness, rigidity), spasticity associated with multiple sclerosis or spinal cord injury. **OFF-LABEL:** Low back pain, tension headaches, trigeminal neuralgia.

PRECAUTIONS

Contraindications: Concurrent use with ciprofloxacin or fluvoxamine. **Cautions:** Renal/hepatic disease, hypotension, cardiac disease, psychiatric disorders. **Pregnancy Category C.**

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depressant effects. **Oral contraceptives** may reduce clearance. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **Black cohosh, hawthorn, periwinkle** may increase hypotensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT.

AVAILABILITY (Rx)

Capsules: 2 mg, 4 mg, 6 mg. **Tablets:** 2 mg, 4 mg.

ADMINISTRATION/HANDLING

PO

• Capsules may be opened and sprinkled on food. • May give without regard to food. • Administration should be consistent and not switched between giving with or without food.

INDICATIONS/ROUTES/DOSAGE

Muscle Spasticity

PO: ADULTS, ELDERLY: Initially, 2–4 mg, gradually increased in 2- to 4-mg increments q6–8h. **Maximum:** 3 doses/day or 36 mg/24 hrs.

Dosage in Renal Impairment

May require dose reduction/less frequent dosing.

Dosage in Hepatic Impairment

Avoid use if possible. If used, monitor for adverse effects (e.g., hypotension).

SIDE EFFECTS

Frequent (49%–41%): Dry mouth, drowsiness, asthenia (loss of strength, energy). **Occasional (16%–4%):** Dizziness, UTI, constipation. **Rare (3%):** Nervousness, amblyopia, pharyngitis, rhinitis, vomiting, urinary frequency.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypotension may be associated with bradycardia, orthostatic hypotension, and, rarely, syncope. Risk of hypotension increases as dosage increases; hypotension is noted within 1 hr after administration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type, location, duration of muscular spasm. Check for immobility, stiffness, swelling. Obtain baseline serum hepatic function tests, alkaline phosphatase, total bilirubin.

INTERVENTION/EVALUATION

Assist with ambulation at all times. For those on long-term therapy, serum hepatic/renal function tests should be performed periodically. Evaluate for therapeutic response (decreased intensity of skeletal muscle pain/tenderness, improved mobility, decrease in spasticity). To reduce risk of orthostatic hypotension, instruct pt to move slowly from lying to sitting and from sitting to supine position.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid sudden changes in posture. • May cause hypotension, sedation, impaired coordination. • Avoid alcohol.

tobramycin

tow-bra-**mye**-sin
(AK-Tob, PMS-Tobramycin, TOBI, Tobrex)

BLACK BOX ALERT May cause neurotoxicity, nephrotoxicity, ototoxicity. Ototoxicity usually is irreversible. Increased risk of neuromuscular blockade, including respiratory paralysis, particularly when given after anesthesia or muscle relaxants.

Do not confuse tobramycin with vancomycin, or Tobrex with TobraDex.

FIXED-COMBINATION(S)

TobraDex: tobramycin/dexamethasone (a steroid): 0.3%/0.1% per ml or per g. **Zylet:** tobramycin/loteprednol: 0.3%/0.5%.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aminoglycoside. **CLINICAL:** Antibiotic (see p. 21C).

ACTION

Irreversibly binds to protein on bacterial ribosomes. **Therapeutic Effect:** Interferes with protein synthesis of susceptible microorganisms.

PHARMACOKINETICS

Rapid, complete absorption after IM administration. Protein binding: less than 30%. Widely distributed (does not cross blood-brain barrier; low concentrations in CSF). Excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 2–4 hrs (increased in renal impairment, neonates; decreased in cystic fibrosis, febrile or burn pts).

USES

Treatment of susceptible infections due to *P. aeruginosa,* other gram-negative organisms including skin/skin structure, bone, joint, respiratory tract infections; postop, burn, intra-abdominal infections; complicated UTI; septicemia; meningitis. **Ophthalmic:** Superficial eye infections: blepharitis, conjunctivitis, keratitis, corneal ulcers. **Inhalation:** Bronchopulmonary infections in pts with cystic fibrosis.

PRECAUTIONS

Contraindications: Hypersensitivity to other aminoglycosides (cross-sensitivity) and their components, pregnancy. **Cautions:** Renal impairment, preexisting auditory or vestibular impairment, concomitant use of neuromuscular blocking agents, myasthenia gravis, hypocalcemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug readily crosses placenta; is distributed in breast milk. May cause fetal nephrotoxicity. Ophthalmic form should not be used in breast-feeding mothers and only when specifically indicated in pregnancy. **Pregnancy Category D (B for ophthalmic form). Children:** Immature renal function in neonates, premature infants may increase risk of toxicity. **Elderly:** Age-related renal impairment may increase risk of toxicity; dosage adjustment recommended.

INTERACTIONS

DRUG: Nephrotoxic medications, ototoxic medications may increase risk of

T

nephrotoxicity, ototoxicity. **Neuromuscular blockers** may increase neuromuscular blockade. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum bilirubin, creatinine, alkaline phosphatase, LDH, AST, ALT. May decrease serum calcium, magnesium, potassium, sodium. Therapeutic peak serum level: 5–20 mcg/ml; therapeutic trough serum level: 0.5–2 mcg/ml. Toxic peak serum level: greater than 20 mcg/ml; toxic trough serum level: greater than 2 mcg/ml.

AVAILABILITY (Rx)

Infusion, Premix: 60 mg/50 ml, 80 mg/100 ml. **Injection, Powder for Reconstitution:** 1.2 g. **Injection, Solution:** 10 mg/ml, 40 mg/ml. **Ointment, Ophthalmic (Tobrex):** 0.3%. **Solution, Nebulization (TOBI):** 60 mg/ml. **Solution, Ophthalmic (AK-Tob, Tobrex):** 0.3%.

ADMINISTRATION/HANDLING

◀ALERT▶ Coordinate peak and trough lab draws with administration times.

IV

Reconstitution • Dilute with 50–100 ml D_5W or 0.9% NaCl. Amount of diluent for infants, children depends on individual need.

Rate of Administration • Infuse over 30–60 min.

Storage • Store vials at room temperature. • Solutions may be discolored by light or air (does not affect potency). • Reconstituted solution stable for 24 hrs at room temperature or 96 hrs if refrigerated.

IM

• To minimize discomfort, give deep IM slowly. • Less painful if injected into gluteus maximus rather than lateral aspect of thigh.

Inhalation

• Refrigerate. • May store at room temperature up to 28 days after removing from refrigerator. • Do not use if cloudy or contains particulates.

Ophthalmic

• Place gloved finger on lower eyelid, pull out until pocket is formed between eye and lower lid. • Place correct number of drops (¼–½ inch ointment) into pocket. • **Solution:** Apply digital pressure to lacrimal sac for 1–2 min (minimizes drainage into nose/throat, reducing risk of systemic effects). • **Ointment:** Instruct pt to close eye for 1–2 min, rolling eyeball (increases contact area of drug to eye). • Remove excess solution/ointment around eye with tissue.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cephalosporins, heparin, hetastarch (Hespan), indomethacin (Indocin), penicillins, propofol (Diprivan), sargramostim (Leukine, Prokine).

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium gluconate, diltiazem (Cardizem), furosemide (Lasix), hydromorphone (Dilaudid), insulin, lipids, magnesium sulfate, midazolam (Versed), morphine, theophylline, total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Space parenteral doses evenly around the clock. Dosage based on ideal body weight. Peak, trough levels determined periodically to maintain desired serum concentrations (minimizes risk of toxicity). Recommended peak level: 4–10 mcg/ml; trough level: 0.5–2 mcg/ml.

Usual Parenteral Dosage

IV: ADULTS, ELDERLY: 3–7.5 mg/kg/day in 3 divided doses. Once-daily dosing: 4–7 mg/kg every 24 hrs. **CHILDREN 5 YRS AND OLDER:** 2–2.5 mg/kg/dose q8h. **CHILDREN YOUNGER THAN 5 YRS:** 2.5 mg/kg/dose q8h. **NEONATES OLDER THAN 7 DAYS:** 2.5 mg/kg/dose q8–12h; **NEONATES 7 DAYS OR YOUNGER:** 2.5 mg/kg/dose q12h; **PRETERM NEONATES:** 3.5 mg/kg/dose q24h.

Usual Ophthalmic Dosage

Ophthalmic Ointment: ADULTS, ELDERLY, CHILDREN 2 MOS AND OLDER: Apply ½ inch to conjunctiva q8–12h (q3–4h for severe infections).

Ophthalmic Solution: ADULTS, ELDERLY, CHILDREN 2 MOS AND OLDER: 1–2 drops in affected eye q4h (2 drops/hr for severe infections).

Usual Inhalation Dosage (Cystic Fibrosis)

Inhalation High Dose: ADULTS, CHILDREN 6 YRS AND OLDER: 300 mg q12h 28 days on, 28 days off.

Dosage in Renal Impairment

Dosage and frequency modified based on degree of renal impairment, serum drug concentration. After loading dose of 1–2 mg/kg, maintenance dose and frequency are based on serum creatinine levels, creatinine clearance.

Creatinine Clearance	Dosing Interval
41–60 ml/min	q12h
21–40 ml/min	q24h
10–20 ml/min	q48h
Less than 10 ml/min	q72h
Hemodialysis	Loading dose 2–3 mg/kg then 1–2 mg/kg q48–72h
Continuous renal replacement therapy	Loading dose 2–3 mg/kg then 1–2.5 mg/kg q24–48h

SIDE EFFECTS

Occasional: IM: Pain, induration. **IV:** Phlebitis, thrombophlebitis. **Topical:** Hypersensitivity reaction (fever, pruritus, rash, urticaria). **Ophthalmic:** Tearing, itching, redness, eyelid swelling. **Rare:** Hypotension, nausea, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Nephrotoxicity (evidenced by increased BUN, serum creatinine, decreased creatinine clearance) may be reversible if drug is stopped at first sign of symptoms. Irreversible ototoxicity (dizziness, ringing/roaring in ears, hearing loss), neurotoxicity (headache, dizziness, lethargy, tremor, visual disturbances) occur occasionally. Risk increases with higher dosages or prolonged therapy or if solution is applied directly to mucosa. Superinfections, particularly fungal infections, may result from bacterial imbalance with any administration route. Anaphylaxis may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Dehydration must be treated before beginning parenteral therapy. Question for history of allergies, esp. aminoglycosides, sulfite (and parabens for topical, ophthalmic routes). Establish baseline for hearing acuity. Obtain baseline lab tests, esp. renal function.

INTERVENTION/EVALUATION

Monitor I&O (maintain hydration), urinalysis (casts, RBCs, WBCs, decrease in specific gravity), renal function. Monitor results of peak/trough blood tests. **Therapeutic serum level:** peak: 5–20 mcg/ml; trough: 0.5–2 mcg/ml. **Toxic serum level:** peak: greater than 20 mcg/ml; trough: greater than 2 mcg/ml. Be alert to ototoxic, neurotoxic symptoms. Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Assess for rash. Be alert for superinfection, particularly anal/genital pruritus, changes of oral mucosa, diarrhea. When treating pts with neuromuscular disorders, assess respiratory response carefully. **Ophthalmic:** Assess for redness, swelling, itching, tearing.

PATIENT/FAMILY TEACHING

• Notify physician in event of any hearing, visual, balance, urinary problems, even after therapy is completed. • **Ophthalmic:** Blurred vision, tearing may occur briefly after application. • Contact physician if tearing, redness, irritation continue.

T

tocilizumab

toe-si-**liz**-oo-mab
(Actemra)

BLACK BOX ALERT Tuberculosis, serious, invasive fungal infections, other opportunistic infections have occurred. Test for tuberculosis prior to and during treatment, regardless of initial result.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Interleukin (IL)-6 receptor inhibitor. **CLINICAL:** Rheumatoid arthritis agent.

ACTION

Binds to IL-6 receptors, inhibiting signals of proinflammatory cytokines. **Therapeutic Effect:** Inhibits/slows structural joint damage, improves physical function.

PHARMACOKINETICS

Distributed in steady state of plasma and tissue compartments. Undergoes biphasic elimination from circulation. **Half-life:** 11–13 days.

USES

Treatment of moderate to severe rheumatoid arthritis (inhibits and slows structural joint damage, improves physical function). Used for inadequate response to prior tumor necrosis factor (TNF) antagonist therapy. May be used as monotherapy, in combination with methotrexate or other disease-modifying antirheumatic drugs (DMARDs). Treatment of active systemic juvenile idiopathic arthritis (SJIA) in pts 2 yrs of age and older.

PRECAUTIONS

Contraindications: None known. **Cautions:** Concurrent live vaccinations, low platelet count equal to or less than 100,000/mm^3, ANC less than 2,000/mm^3, AST/ALT greater than 1.5 times upper limit of normal (ULN) prior to treatment. History of opportunistic infections (bacterial, mycobacterial, invasive fungal, viral, protozoal), esp. tuberculosis, histoplasmosis, aspergillosis, candidiasis, coccidioidomycosis, listeriosis, pneumocystosis; preexisting or recent-onset CNS demyelinating disorders, including multiple sclerosis; those with chronic or recurrent infection or who have been exposed to tuberculosis; hematologic cytopenia, hepatic impairment, HIV, gastric ulcers, perforation.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Cautious use due to increased risk of serious infections, malignancy.

INTERACTIONS

DRUG: May increase levels/effects of **leflunomide, natalizumab.** May decrease levels/effects of **sipuleucel-T. Live vaccines** not recommended. **Abciximab, denosumab, pimecrolimus, tacrolimus, trastuzumab** may increase levels/effects. **HERBAL: Echinacea** may alter levels/effects. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST (up to 48% of pts), lipids. May decrease platelets, neutrophils.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml (80 mg/4 ml, 200 mg/10 ml, 400 mg/20 ml).

ADMINISTRATION/HANDLING

◀ALERT▶ Do not infuse IV push or bolus.

IV

Reconstitution • Dilute to 100 ml 0.9% NaCl (50 ml 0.9% NaCl for SJIA pts weighing less than 30 kg). • Prior to mixing, withdraw and discard volume of NaCl equal to volume of patient-dosed solution. • Invert bag to avoid foaming. • Inject solution and dilute for mixture that equals 50 ml or 100 ml in NaCl bag. **Rate of Administration** • Infuse over 1 hr.

Storage • Refrigerate vials; do not freeze. • Solution must be at room tem-

perature before administration, but not for longer than 24 hrs. • Protect from light until time of use. • Solution appears colorless. Discard solution if appears cloudy, discolored, or contains particulate.

INDICATIONS/ROUTES/DOSAGE

Note: Do not infuse concomitantly in same IV line with other drugs.

Moderate to Severely Active Rheumatoid Arthritis

IV Infusion: ADULTS, ELDERLY: 4 mg/kg every 4 wks initially. May increase to 8 mg/kg every 4 wks. **Maximum:** 800 mg per dose.

Dosage Modification

Hepatic enzyme levels greater than ULN.

Lab Value	Recommendation
1–3 times ULN	Dose modify concomitant DMARDs or reduce dose to 4 mg/kg until ALT/AST normalized
Greater than 3–5 times ULN	Interrupt treatment until ALT/AST less than 3 times ULN, then follow guidelines for 1–3 times ULN
Greater than 5 times ULN	Discontinue treatment

SJIA

IV: CHILDREN MORE THAN 30 KG: 8 mg/kg q2wks. **CHILDREN 30 KG OR LESS:** 12 mg/kg q2wks.

SIDE EFFECTS

Occasional (8%–6%): Upper respiratory tract infection, nasopharyngitis, headache, hypertension. **Rare (5%–3%):** Infusion reaction, dizziness, bronchitis, rash, oral ulceration.

ADVERSE EFFECTS/ TOXIC REACTIONS

Up to 48% of pts experience elevated ALT, AST. Neutropenia, thrombocytopenia occur in 4% of pts. Serious infections noted, including sepsis, pneumonia, tuberculosis, invasive fungal infections, hepatitis B. Anaphylactic reaction, rash, pruritus, urticaria, bronchospasm, swelling, dyspnea occur in less than 0.2% of pts; hypersensitivity reactions (hypertension, headaches, flushing) occur more frequently. Increased risk of lymphoma, melanoma. New onset or exacerbation of CNS demyelinating disorders, including multiple sclerosis. Risk of gastric perforation with concomitant use of NSAIDs, corticosteroids.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate pt for active tuberculosis and test for latent infection prior to initiating treatment and periodically during therapy. Induration of 5 mm or greater with tuberculin skin testing should be considered a positive test result when assessing whether treatment for latent tuberculosis is necessary. Antifungal therapy should be considered for those who reside or travel to regions where mycoses are endemic. Do not initiate therapy during an active infection. Viral reactivation can occur in cases of herpes zoster, HIV. Assess baseline lab results (hepatic enzymes, cholesterol, triglycerides, platelets, neutrophils) q4–8wks during treatment. Pts should report history of diverticulitis, weakened immune system, HIV, hepatic disease, GI bleeding, coughing up blood, diarrhea, weight loss, cancer, prior cancer treatment, use of NSAIDs, glucocorticosteroids.

INTERVENTION/EVALUATION

Monitor hepatitis B carriers during and several months following therapy. If reactivation occurs, reconsider interrupting treatment. Monitor pts for signs/symptoms of tuberculosis regardless of baseline PPD. Discontinue treatment if pt develops acute infection, opportunistic infection, or sepsis and initiate appropriate antimicrobial therapy. Monitor warfarin, theophylline, cyclosporine levels for

therapeutic ranges. Modify, interrupt, or discontinue treatment if AST/ALT is 1–5 times ULN.

PATIENT/FAMILY TEACHING

• Inform pt that therapy may lower immune system response. • Detail any concomitant immunosuppressive therapy, methotrexate. • Report any history of HIV, fungal infections, hepatitis B, multiple sclerosis, hemoptysis, tuberculosis, or close relatives with active tuberculosis. • Report any travel plans to possible endemic areas. • Report signs/symptoms of stomach pain to evaluate risk of gastric perforation or history of taking NSAIDs, corticosteroids, methotrexate. • Pt will need blood levels drawn q4–8wks during treatment along with routine tuberculosis screening. • Seek immediate medical attention if adverse reaction occurs. • Do not receive live vaccines during therapy. • Notify physician if pregnant or planning on becoming pregnant. • During treatment, report any signs of liver problems, such as stomach pains, yellowing of skin/eyes, dark-amber urine, clay-colored or bloody stools, fatigue, reduced appetite, coffee ground emesis. • Pt must adhere to strict dosing schedule. • Decreased platelet count may lead to risk of bleeding.

tofacitinib

toe-fa-**sye**-ti-nib
(Xeljanz)

Do not confuse tofacitinib with tipifarnib or Xeljanz with Xeloda.

BLACK BOX ALERT Increased risk for developing bacterial, viral, invasive fungal, other opportunistic infections including tuberculosis, cryptococcosis, pneumocystosis that may lead to hospitalization or death; infections often occurred in combination with other immunosuppressants (methotrexate, corticosteroids). Test for latent tuberculosis prior to treatment and during treatment, regardless of initial result. Malignancies including lymphoma, nonmelanoma skin cancer reported. Increased rate of Epstein-Barr virus–associated post-transplant lymphoproliferative disorder observed in renal transplant pts who are treated with tofacitinib and other immunosuppressive therapy drugs.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Janus kinase (JAK) inhibitor. **CLINICAL:** Antirheumatic agent.

ACTION

Inhibits JAK enzymes which are involved in stimulating hematopoiesis and immune cell functioning. **Therapeutic Effect:** Reduces inflammation, tenderness, swelling of joints; slows or prevents progressive joint destruction in rheumatoid arthritis (RA).

PHARMACOKINETICS

Rapidly absorbed following PO administration. Protein binding: 40%. Peak concentration: 30–60 min. Metabolized in liver. Eliminated primarily in urine. **Half-life:** 3 hrs.

USES

Treatment of adult pts with moderate to severe active rheumatoid arthritis with previous inadequate response or intolerance to methotrexate. May be used as monotherapy, in combination with methotrexate or other nonbiologic disease-modifying antirheumatic drugs (DMARDs). Do not use in combination with other biologic DMARDs or with potent immunosuppressants (e.g., azathioprine, cyclosporine).

PRECAUTIONS

◀ALERT▶ Do not initiate treatment in pts with baseline active infection (systemic/localized), severe hepatic impairment, lymphocytes less than 500/mm^3, ANC less than 1,000/mm^3, Hgb less than 9 g/dL.

Contraindications: None known. **Cautions:** Those exposed to TB, history of serious opportunistic infections, conditions that predispose to infections (e.g.,

diabetes), those at risk for GI perforation (e.g., diverticulitis), pts who resided or traveled in areas where TB is endemic, moderate to severe renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not recommended in nursing mothers. Must either discontinue drug or discontinue breastfeeding. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Increased risk for serious infections, malignancy.

INTERACTIONS

DRUG: May alter effects of **live virus vaccines. Immunosuppressants (e.g., azathioprine, cyclosporine)** may increase risk for added immunosuppression, infection. **CYP3A4 inhibitors (e.g., ketoconazole), CYP2C19 inhibitors (e.g., fluconazole)** may increase concentration/effects. **CYP3A4 inducers (e.g., rifampin)** may decrease concentration/effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase AST/ALT, bilirubin, lipids, creatinine. May decrease Hgb, neutrophils, lymphocytes.

AVAILABILITY (Rx)

Tablets, Film-Coated: 5 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Moderate to Severe Rheumatoid Arthritis

PO: ADULTS/ELDERLY: 5 mg twice daily.

Dose Modification

Reduce to 5 mg once daily for any of the following: moderate to severe renal impairment, moderate hepatic impairment, concurrent use of potent CYP3A4 inhibitors, concurrent use of one or more moderate CYP3A4 or potent CYP2C19 inhibitors.

Lymphopenia

Interrupt treatment until lymphocytes greater than or equal to 500/mm^3. Discontinue if lymphocytes less than 500/mm^3 after repeat testing.

Neutropenia

Interrupt treatment until neutrophils greater than 1,000/mm^3. Discontinue if neutrophils less than 500/mm^3 after repeat testing.

Anemia

Interrupt treatment until Hgb greater than or equal to 9 g/dL or baseline Hgb decreases less than or equal to 2 g/dL after repeat testing.

Hepatotoxicity

Interrupt treatment until diagnosis of drug-induced hepatic injury has been excluded.

SIDE EFFECTS

Rare (4%–2%): Upper respiratory tract infection, diarrhea, nasopharyngitis, headache, hypertension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia, lymphopenia may increase risk for infection. Serious infections may include aspergillosis, BK virus, cellulitis, coccidioidomycosis, cryptococcus, cytomegalovirus, esophageal candidiasis, histoplasmosis, invasive fungal infections, listeriosis, pneumocystosis, pneumonia, tuberculosis, UTI, sepsis. Increased risk for various malignancies. May induce viral reactivation of hepatitis B or C, herpes zoster, HIV. Epstein-Barr virus–associated post-transplant lymphoproliferative disorder reported in 2% of pts with renal transplant. Increased risk for GI perforation.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain vital signs, CBC, CMP, lipid panel, urine pregnancy test results. Evaluate for

active tuberculosis (TB) and test for latent infection prior to and during treatment. Induration of 5 mm or greater with purified protein derivative (PPD) is considered positive result when assessing for latent TB. Question possibility of pregnancy or breast-feeding. Screen for history/comorbidities. Obtain full medication history including vitamins, herbal products.

INTERVENTION/EVALUATION

Obtain CBC every 4–8 wks, then every 3 mos, lipid panel 4–8 wks after initiation; hepatic function panel if hepatic impairment suspected. Monitor for TB regardless of baseline PPD. Consider discontinuation if pt develops acute infection, opportunistic infection, sepsis; initiate appropriate antimicrobial therapy. Immediately report any hemorrhaging, melena, abdominal pain, hemoptysis (may indicate GI perforation).

PATIENT/FAMILY TEACHING

• Blood levels will be monitored routinely. • Therapy will lower immune system response. • Do not receive live virus vaccines. • Other immunosuppressant drugs may increase risk for infection. • Expect routine TB screening. • Fever, cough, burning with urination, body aches, chills, skin changes may indicate infection. • Report history of HIV, recent infections, hepatitis B or C, TB or close relatives who have active TB. • Report any travel plans to possible endemic areas. • Notify physician if pregnant or planning pregnancy. • Do not breast-feed. • Immediately report bleeding of any kind. • Yellowing of skin or eyes, right upper quadrant abdominal pain, bruising, clay-colored stool, dark urine may indicate liver problem. • Avoid grapefruit, grapefruit juice.

tolterodine

TOP 200

tol-**ter**-oh-deen
(Detrol, Detrol LA, Unidet)
Do not confuse Detrol with Ditropan, or tolterodine with fesoterodine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Muscarinic receptor antagonist. **CLINICAL:** Antispasmodic.

ACTION

Exhibits potent antimuscarinic activity by interceding via cholinergic muscarinic receptors, thereby inhibiting urinary bladder contraction. **Therapeutic Effect:** Decreases urinary frequency, urgency.

PHARMACOKINETICS

Immediate-release form rapidly, well absorbed after PO administration. Protein binding: 96%. Extensively metabolized in liver to active metabolite. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** Immediate-release: 2–10 hrs. Extended-release: 7–18 hrs.

USES

Treatment of overactive bladder in pts with symptoms of urinary frequency, urgency, incontinence.

PRECAUTIONS

Contraindications: Gastric retention, uncontrolled angle-closure glaucoma, urinary retention. **Cautions:** Renal impairment, clinically significant bladder outflow obstruction (risk of urinary retention), GI obstructive disorders (e.g., pyloric stenosis [risk of gastric retention]), treated narrow-angle glaucoma, myasthenia gravis, prolonged QT interval (congenital/medications), hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. Breast-

feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., **clarithromycin, erythromycin, itraconazole, ketoconazole, miconazole**) may increase concentration. **Fluoxetine** may inhibit metabolism. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets (Detrol): 1 mg, 2 mg.

Capsules (Extended-Release [Detrol LA]): 2 mg, 4 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Do not crush, dissolve, open extended-release capsules; swallow whole.

INDICATIONS/ROUTES/DOSAGE

Overactive Bladder

PO: ADULTS, ELDERLY (IMMEDIATE-RELEASE): 1–2 mg twice a day **(WITH CYP3A4 INHIBITORS):** 1 mg twice a day. **(EXTENDED-RELEASE):** 2–4 mg once a day **(WITH CYP3A4 INHIBITORS):** 2 mg once daily.

Dosage in Severe Renal/Hepatic Impairment

PO: ADULTS, ELDERLY (IMMEDIATE-RELEASE): 1 mg twice a day. **(EXTENDED-RELEASE):** 2 mg once a day.

SIDE EFFECTS

Frequent (40%): Dry mouth. **Occasional (11%–4%):** Headache, dizziness, fatigue, constipation, dyspepsia (heartburn, indigestion, epigastric pain), upper respiratory tract infection, UTI, dry eyes, abnormal vision (accommodation problems), nausea, diarrhea. **Rare (3%):** Drowsiness, chest/back pain, arthralgia, rash, weight gain, dry skin.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose can result in severe anticholinergic effects, including abdominal cramps, facial warmth, excessive salivation/lacrimation, diaphoresis, pallor, urinary urgency, blurred vision, prolonged QT interval.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess degree of overactive bladder (urinary urgency, frequency, incontinence).

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Question for visual changes. Monitor incontinence, postvoid residuals.

PATIENT/FAMILY TEACHING

• May cause blurred vision, dry eyes/mouth, constipation. • Inform physician of any confusion, altered mental status. • Avoid tasks that require alertness, motor skills until response to drug is established.

tolvaptan

tol-**vap**-tan
(Samsca)

BLACK BOX ALERT Osmotic demyelination (dysphagia, lethargy, slurred speech or inability to speak, seizures, coma, death) may occur with too-rapid correction of hyponatremia; slow rate of correction is essential. Should be initiated and reinitiated only in a hospital where serum sodium is monitored closely.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Vasopressin antagonist. **CLINICAL:** Hyponatremia adjunct.

ACTION

Promotes excretion of free water (without loss of serum electrolytes), resulting

T

in net fluid loss, increased urine output, decreased urine osmolarity and increase in serum sodium concentration. **Therapeutic Effect:** Restores normal serum sodium levels.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	2–4 hrs	N/A

Readily absorbed following oral administration. Metabolized in liver. Protein binding: 99%. Eliminated entirely by nonrenal routes. **Half-life:** 5 hrs.

USES

Treatment of symptomatic hypervolemic or euvolemic hyponatremia resistant to correction with fluid restriction, including those with heart failure, cirrhosis, and syndrome of inappropriate antidiuretic hormone (SIADH).

PRECAUTIONS

Contraindications: Hypovolemic hyponatremia, concurrent use with strong CYP3A4 inhibitors (clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir), those with urgent need to raise sodium level, pt with inability to sense or respond to thirst, pts who are anuric. **Cautions:** Hyperkalemia, concurrent use of medications that increase serum potassium, GI bleeding in pts with cirrhosis, dehydration, hypovolemia, concurrent use with hypertonic saline.

T

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Systemic exposure to fetus likely. Potential for decreased neonatal viability, delayed growth/development. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., aprepitant, clarithromycin, diltiazem, erythromycin, fluconazole, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, verapamil) may increase levels, effects. **CYP3A4 inducers (e.g., barbiturates, carbamazepine, phenytoin, rifabutin, rifampin, rifapentine)** may reduce concentration. **Cyclosporine** may increase concentration. **HERBAL: St. John's wort** may reduce concentration. **FOOD: Grapefruit, grapefruit juice** may increase absorption, concentration. **LAB VALUES:** May increase serum potassium, magnesium. May alter serum glucose.

AVAILABILITY (Rx)

Tablets: 15 mg, 30 mg.

ADMINISTRATION/HANDLING

- Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 15 mg once daily. Increase dose to 30 mg once daily, after at least 24 hrs (**maximum:** 60 mg once daily), to achieve desired level of serum sodium.

SIDE EFFECTS

Frequent (16%–13%): Thirst, dry mouth. **Occasional (11%–4%):** Increase in urine output/urgency, asthenia (loss of strength, energy), nausea, constipation, hyperglycemia, anorexia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Dysphagia, lethargy, slurred speech or inability to speak, affective changes, spastic quadriparesis, seizures, coma, death may occur with too-rapid correction of hyponatremia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Initiate only in hospital setting with serum sodium monitoring. Obtain baseline serum sodium, hepatic enzyme levels, BUN, creatinine, CBC. Assess for increased

pulse rate, poor skin turgor, nausea, diarrhea (signs of hyponatremia).

INTERVENTION/EVALUATION

During initiation and titration, frequently monitor for changes in serum electrolytes and volume. Avoid fluid restriction during first 24 hrs of therapy. Monitor for improvement in signs/symptoms of hyponatremia, hypernatremia (flushing, edema, restlessness, dry mucous membranes, fever).

PATIENT/FAMILY TEACHING

• Continue ingesting fluids in response to thirst. • Notify physician if urinary changes, loss of strength, unusual fatigue occur. • Report immediately symptoms of osmotic demyelination (e.g., trouble speaking/swallowing, confusion, mood changes, trouble controlling body movements, seizures).

topiramate

TOP 200

toe-**peer**-a-mate
(Apo-Topiramate, Novo-Topiramate, Topamax)
Do not confuse Topamax or topiramate with Sporonox, Tegretol, Tegretol XR, or Toprol XL.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbonic anhydrase inhibitor. **CLINICAL:** Anticonvulsant (see p. 36C).

ACTION

Blocks repetitive, sustained firing of neurons by enhancing ability of gamma-aminobutyric acid (GABA) to induce influx of chloride ions into neurons; may block sodium channels. **Therapeutic Effect:** Decreases seizure activity.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 15%–41%. Partially metabolized in liver. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 21 hrs.

USES

Adjunctive therapy for treatment of partial-onset seizures and primary generalized tonic-clonic seizures; initial monotherapy in pts 10 yrs and older with partial or primary generalized tonic-clonic seizures; seizures associated with Lennox-Gastaut syndrome. Prevention of migraine headache. **OFF-LABEL:** Neuropathic pain, diabetic neuropathy, cluster headaches, infantile spasms.

PRECAUTIONS

Contraindications: None known. **Cautions:** Sensitivity to topiramate or sulfa, hepatic/renal impairment, pts who are high risk for suicide, respiratory impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted in those older than 2 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depression. **Carbamazepine, phenytoin, valproic acid** may decrease concentration/effects. **Carbonic anhydrase inhibitors** may increase risk of kidney stone formation and severity of metabolic acidosis. May decrease effectiveness of **oral contraceptives. HERBAL: Evening primrose** may decrease seizure threshold. **FOOD:** None known. **LAB VALUES:** May reduce serum bicarbonate, increase AST, ALT.

AVAILABILITY (Rx)

Capsules (Sprinkle): 15 mg, 25 mg.
Tablets: 25 mg, 50 mg, 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• Do not break or chew tablets (bitter taste). • Give without regard to meals.

• Capsules may be swallowed whole or contents sprinkled on teaspoonful of soft food and swallowed immediately; do not chew.

INDICATIONS/ROUTES/DOSAGE

Adjunctive Treatment of Partial-Onset Seizures, Lennox-Gastaut Syndrome, Tonic-Clonic Seizures

PO: ADULTS, ELDERLY, CHILDREN 17 YRS AND OLDER: Initially, 25–50 mg for 1 wk. May increase by 25–50 mg/day at weekly intervals. Usual maintenance dose: 100–200 mg twice daily. **Maximum:** 1,600 mg/day. **CHILDREN 2–16 YRS:** Initially, 1–3 mg/kg/day to maximum of 25 mg at night for 1 wk. May increase by 1–3 mg/kg/day at weekly intervals given in 2 divided doses. Maintenance: 5–9 mg/kg/day in 2 divided doses.

Monotherapy with Partial-Onset, Tonic-Clonic Seizures

PO: ADULTS, ELDERLY, CHILDREN 10 YRS AND OLDER: Initially, 25 mg twice a day. Increase at weekly intervals up to 400 mg/day according to the following schedule: Wk 1, 25 mg twice a day. Wk 2, 50 mg twice a day. Wk 3, 75 mg twice a day. Wk 4, 100 mg twice a day. Wk 5, 150 mg twice a day. Wk 6, 200 mg twice a day. **CHILDREN 2–9 YRS:** Initially, 25 mg/day. Then 25 mg 2 times/day week 2; then increase by 25–50 mg/day at weekly intervals up to minimum dose.

Wgt.	Minimum	Maximum
11 kg or less	150 mg/day in 2 divided doses	250 mg/day in 2 divided doses
12–22 kg	200 mg/day in 2 divided doses	300 mg/day in 2 divided doses
23–31 kg	200 mg/day in 2 divided doses	350 mg/day in 2 divided doses
32–38 kg	250 mg/day in 2 divided doses	350 mg/day in 2 divided doses
39 or more kg	250 mg/day in 2 divided doses	400 mg/day in 2 divided doses

Migraine Prevention

PO: ADULTS, ELDERLY: Initially, 25 mg/day. May increase by 25 mg/day at 7-day intervals up to a total daily dose of 100 mg/day in 2 divided doses.

Dosage in Renal Impairment

Reduce drug dosage by 50% and titrate more slowly in pts who have creatinine clearance less than 70 ml/min.

SIDE EFFECTS

Frequent (30%–10%): Drowsiness, dizziness, ataxia, nervousness, nystagmus, diplopia, paresthesia, nausea, tremor. **Occasional (9%–3%):** Confusion, breast pain, dysmenorrhea, dyspepsia (heartburn, indigestion, epigastric pain), depression, asthenia (loss of strength, energy), pharyngitis, weight loss, anorexia, rash, musculoskeletal pain, abdominal pain, difficulty with coordination, sinusitis, agitation, flu-like symptoms. **Rare (3%–2%):** Mood disturbances (e.g., irritability, depression), dry mouth, aggressive behavior, impaired heat regulation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Psychomotor slowing, impaired concentration, language problems (esp. word-finding difficulties), memory disturbances occur occasionally. Metabolic acidosis, suicidal ideation occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Seizures: Review history of seizure disorder (intensity, frequency, duration, level of consciousness). Initiate seizure precautions. Provide quiet, dark environment. Question for sensitivity to topiramate, pregnancy, use of other anticonvulsant medication (esp. carbamazepine, valproic acid, phenytoin). **Migraine:** Assess pain location, duration, intensity. Assess renal function.

INTERVENTION/EVALUATION

Observe frequently for recurrence of seizure activity. Assess for clinical improve-

ment (decrease in intensity/frequency of seizures). Monitor renal function tests (BUN, creatinine), hepatic function tests (AST, ALT). Assist with ambulation if dizziness occurs.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established (may cause dizziness, drowsiness, impaired concentration). • Drowsiness usually diminishes with continued therapy. • Avoid use of alcohol, other CNS depressants. • Do not abruptly discontinue drug (may precipitate seizures). • Strict maintenance of drug therapy is essential for seizure control. • Do not break tablets (bitter taste). • Maintain adequate fluid intake (decreases risk of renal stone formation). • Inform physician if blurred vision, eye pain occurs. • Report suicidal ideation, depression, unusual behavior. • Use caution with activities that may increase core temperature (exposure to extreme heat, dehydration). • Instruct pt to use alternative/additional means of contraception (topiramate decreases effectiveness of oral contraceptives).

topotecan HIGH ALERT

toe-poe-**tee**-kan
(Hycamtin)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Potent immunosuppressant; severe neutropenia (absolute neutrophil count [ANC] less than 500 cells/mm^3) occurs in 60% of pts.

Do not confuse Hycamtin with Hycomine, Mycamine, or topotecan with irinotecan.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: DNA topoisomerase inhibitor. **CLINICAL:** Antineoplastic (see p. 88C).

ACTION

Interacts with topoisomerase I, an enzyme that relieves torsional strain in DNA by inducing reversible single-strand breaks. Prevents religation of DNA strand, resulting in damage to double-strand DNA, cell death. **Therapeutic Effect:** Produces cytotoxic effect.

PHARMACOKINETICS

Hydrolyzed to active form after IV administration. Protein binding: 35%. Excreted in urine. **Half-life:** 2–3 hrs (increased in renal impairment).

USES

Treatment of metastatic carcinoma of ovary after failure of initial or recurrent chemotherapy. Treatment of sensitive, relapsed small cell lung cancer. Treatment of late-stage cervical cancer. **OFF-LABEL:** Treatment of central nervous system lesions/lymphoma, Ewing's sarcoma, rhabdomyosarcoma, neuroblastoma.

PRECAUTIONS

Contraindications: Baseline neutrophil count less than 1,500 cells/mm^3 and platelet count less than 100,000/mm^3, breast-feeding, pregnancy, severe myelosuppression. **Cautions:** Mild myelosuppression, hepatic/renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Avoid pregnancy; breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Live virus vaccines may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **Other bone marrow depressants** may increase risk of myelosuppression. **HERBAL: Echinacea** may decrease effectiveness. **FOOD:** None known. **LAB VALUES:** May increase se-

T

rum bilirubin, AST, ALT, alkaline phosphatase. May decrease RBC, leukocyte, neutrophil, platelet counts, Hgb, Hct.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 4 mg (single-dose vial). **Injection, Solution:** 1 mg/ml (4 ml).

Capsule: 0.25 mg, 1 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Because topotecan may be carcinogenic, mutagenic, teratogenic, handle drug with extreme care during preparation/administration.

PO

• May take with or without food. • Swallow whole; do not crush, chew, divide capsule. • Do not take replacement dose if vomiting occurs.

IV

Reconstitution • Reconstitute each 4-mg vial with 4 ml Sterile Water for Injection. • Further dilute with 50–100 ml 0.9% NaCl or D_5W.

Rate of Administration • Administer as IV infusion over 30 min or by continuous infusion over 24 hrs. • Extravasation associated with only mild local reactions (erythema, ecchymosis).

Storage • Store vials at room temperature in original cartons. • Reconstituted vials diluted for infusion stable at room temperature, ambient lighting for 24 hrs, or 7 days if refrigerated.

IV INCOMPATIBILITIES

Dexamethasone (Decadron), 5-fluorouracil, mitomycin (Mutamycin).

IV COMPATIBILITIES

Carboplatin (Paraplatin), cisplatin (Platinol AQ), cyclophosphamide (Cytoxan), doxorubicin (Adriamycin), etoposide (VePesid), gemcitabine (Gemzar), granisetron (Kytril), ondansetron (Zofran), paclitaxel (Taxol), vincristine (Oncovin).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Do not give topotecan if baseline neutrophil count is less than 1,500 cells/mm^3 and platelet count is less than 100,000/mm^3.

Ovarian Carcinoma, Small Cell Lung Cancer

IV: ADULTS, ELDERLY: 1.5 mg/m^2/day over 30 min for 5 consecutive days, beginning on day 1 of 21-day course. Minimum of 4 courses recommended. If severe neutropenia (neutrophil count less than 1,500/mm^3) occurs during treatment, reduce dose for subsequent courses by 0.25 mg/m^2 or administer filgrastim (G-CSF) no sooner than 24 hrs after last dose of topotecan.

PO *(Small Cell Lung Cancer)*: ADULTS, ELDERLY: 2.3 mg/m^2/day for 5 days; repeat q21days (dose rounded to nearest 0.25 mg).

Cervical Cancer

IV: ADULTS, ELDERLY: 0.75 mg/m^2/day for 3 days (followed by cisplatin 50 mg/m^2 on day 1 only). Repeat q21days (baseline neutrophil count greater than 1,500/mm^3 and platelet count greater than 100,000 mm^3).

Dosage in Renal Impairment

No dosage adjustment is necessary in pts with mild renal impairment (creatinine clearance 40–60 ml/min). For moderate renal impairment (creatinine clearance 20–39 ml/min), give 0.75 mg/m^2.

SIDE EFFECTS

Frequent: Nausea (77%), vomiting (58%), diarrhea, total alopecia (42%), headache (21%), dyspnea (21%). **Occasional:** Paresthesia (9%), constipation, abdominal pain (3%). **Rare:** Anorexia, malaise, arthralgia, asthenia (loss of strength, energy), myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe neutropenia (absolute neutrophil count [ANC] less than 500 cells/mm^3) occurs in 60% of pts (develops at median

of 11 days after day 1 of initial therapy). Thrombocytopenia (platelet count less than 25,000/mm^3) occurs in 26% of pts. Severe anemia (RBC count less than 8 g/dl) occurs in 40% of pts (develops at median of 15 days after day 1 of initial therapy).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support to pt and family. Assess CBC with differential, Hgb, platelet count before each dose. Myelosuppression may precipitate life-threatening hemorrhage, infection, anemia. If platelet count drops, minimize trauma to pt (e.g., IM injections, pt positioning). Premedicate with antiemetics on day of treatment, starting at least 30 min before administration.

INTERVENTION/EVALUATION

Assess for bleeding, signs of infection, anemia. Monitor hydration status, I&O, serum electrolytes (diarrhea, vomiting are common side effects). Monitor CBC with differential, Hgb, platelets for evidence of myelosuppression. Monitor renal/hepatic function tests. Assess response to medication; provide interventions (e.g., small, frequent meals; antiemetics for nausea/vomiting). Question for complaints of headache. Assess breathing pattern for evidence of dyspnea.

PATIENT/FAMILY TEACHING

• Alopecia is reversible but new hair may have different color, texture. • Diarrhea may cause dehydration, electrolyte depletion. • Antiemetic and antidiarrheal medications may reduce side effects. • Notify physician if diarrhea, vomiting, persistent fever, bruising/bleeding, yellowing of eyes/skin occur. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine.

toremifene HIGH ALERT

tor-**em**-ih-feen
(Fareston)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonsteroidal antiestrogen. **CLINICAL:** Antineoplastic (see p. 88C).

ACTION

Binds to estrogen receptors on tumors, producing complex that decreases DNA synthesis, inhibits estrogen effects. **Therapeutic Effect:** Blocks growth-stimulating effects of estrogen in breast cancer.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: greater than 99%. Metabolized in liver. Eliminated in feces. **Half-life:** Approximately 5 days.

USES

Treatment of metastatic breast cancer in postmenopausal women with estrogen receptor–positive or estrogen receptor unknown. **OFF-LABEL:** Treatment of desmoid tumors.

PRECAUTIONS

Contraindications: Long QT syndrome, uncorrected hypokalemia or hypomagnesemia. **Cautions:** Preexisting endometrial hyperplasia, leukopenia, thrombocytopenia, hepatic failure, history of thromboembolic disease, heart failure, electrolyte abnormalities.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. Not prescribed in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Medications that prolong QT interval (e.g., amiodarone, levofloxa-

T

cin) may increase risk of QT prolongation. **CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin)** may decrease concentration. May increase risk of bleeding with **warfarin. CYP3A4 inhibitors (e.g., ketoconazole, clarithromycin)** may increase concentration/toxicity. **HERBAL: St. John's wort** may decrease concentration. **FOOD: Grapefruit juice** may increase concentration/effects. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, calcium, AST.

AVAILABILITY (Rx)

Tablets: 60 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Breast Cancer

PO: ADULTS: 60 mg/day as a single dose until disease progression is observed.

SIDE EFFECTS

Frequent: Hot flashes (35%), diaphoresis (20%), nausea (14%), vaginal discharge (13%), dizziness, dry eyes (9%). **Occasional (5%–2%):** Edema, vomiting, vaginal bleeding. **Rare:** Fatigue, depression, lethargy, anorexia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Ocular toxicity (cataracts, glaucoma, decreased visual acuity), hypercalcemia may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Estrogen receptor assay should be done before beginning therapy. CBC, platelet count, serum calcium levels should be checked before and periodically during therapy.

INTERVENTION/EVALUATION

Assess for hypercalcemia (increased urinary volume, excessive thirst, nausea, vomiting, constipation, hypotonicity of muscles, deep bone/flank pain, renal stones). Monitor CBC, leukocyte, platelet counts, serum calcium, hepatic function tests.

PATIENT/FAMILY TEACHING

• May have initial flare of symptoms (bone pain, hot flashes) that will subside. • Report vaginal bleeding/discharge/itching, leg cramps, weight gain, shortness of breath, weakness. • Contact physician if nausea/vomiting continue. • Nonhormone contraceptives are recommended during treatment.

torsemide

tor-se-myde
(Demadex)
Do not confuse torsemide with furosemide.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Loop diuretic. **CLINICAL:** Antihypertensive, antiedema (see p. 102C).

ACTION

Enhances excretion of sodium, chloride, potassium, water at ascending limb of loop of Henle. Reduces plasma, extracellular fluid volume. **Therapeutic Effect:** Produces diuresis; lowers B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO, IV (diuresis)	30–60 min	1–4 hrs	6 hrs

Rapidly, well absorbed from GI tract. Protein binding: 97%–99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–4 hrs.

USES

Treatment of hypertension either alone or in combination with other antihypertensives. Edema associated with CHF, renal disease, hepatic disease.

PRECAUTIONS

Contraindications: Anuria, other sulfonylureas. **Cautions:** Pts with cirrhosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **NSAIDs, aspirin** may increase risk of renal impairment. May increase risk of **digoxin** toxicity associated with torsemide-induced hypokalemia. May increase risk of **lithium** toxicity. **Other hypokalemia-causing medications** may increase risk of hypokalemia. **HERBAL:** **Ephedra, ginseng, yohimbe, licorice** may worsen hypertension. **Black cohosh** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum creatinine, uric acid. May decrease serum calcium, chloride, magnesium, potassium, sodium.

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml. **Tablets:** 5 mg, 10 mg, 20 mg, 100 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration

◄ALERT► Flush IV line with 0.9% NaCl before and following administration. • May give undiluted as IV push over minimum of 2 min. • For continuous IV infusion, dilute with 0.9% or 0.45% NaCl or D_5W and infuse over 24 hrs. • Too-rapid IV rate, high dosages may cause ototoxicity; administer IV rate **slowly.**

Storage • Store at room temperature. IV infusion stable for 24 hrs at room temperature.

PO

• Give without regard to food. Give with food to avoid GI upset, preferably with breakfast (prevents nocturia).

IV COMPATIBILITY

Milrinone (Primacor).

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 2.5–5 mg/day. May increase to 10 mg/day if no response in 4–6 wks. If no response, add additional antihypertensive.

Edema Associated with CHF

PO, IV: ADULTS, ELDERLY: Initially, 10–20 mg/day. May increase by approximately doubling dose until desired therapeutic effect is attained. **Maximum dose:** PO: 200 mg; IV: 100–200 mg.

Chronic Renal Failure

PO, IV: ADULTS, ELDERLY: Initially, 20 mg/day. May increase by approximately doubling dose until desired therapeutic effect is attained. **Maximum dose:** PO: 200 mg; IV: 100–200 mg.

Hepatic Cirrhosis

PO: ADULTS, ELDERLY: Initially, 5 mg/day given with aldosterone antagonist or potassium-sparing diuretic. May increase by approximately doubling dose until desired therapeutic effect is attained. **Maximum single dose:** 40 mg.

SIDE EFFECTS

Frequent (10%–4%): Headache, dizziness, rhinitis. **Occasional (3%–1%):** Asthenia (loss of strength, energy), insomnia, nervousness, diarrhea, constipation, nausea, dyspepsia (heartburn, indigestion, epigastric pain), edema, EKG changes, pharyngitis, cough, arthralgia, myalgia. **Rare (Less Than 1%):** Syncope, hypotension, arrhythmias.

T

ADVERSE EFFECTS/ TOXIC REACTIONS

Ototoxicity may occur with too-rapid IV administration or with high doses; must be given slowly. Overdose produces acute, profound water loss; volume/electrolyte depletion; dehydration; decreased blood volume; circulatory collapse.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum electrolyte levels, esp. potassium. Obtain baseline weight; check for edema. Assess for rales in lungs, signs of CHF.

INTERVENTION/EVALUATION

Monitor B/P, serum electrolytes (esp. potassium), I&O, weight. Notify physician of any hearing abnormality. Note extent of diuresis. Assess lungs for rales. Check for signs of edema, particularly of dependent areas. Although less potassium is lost with torsemide than with furosemide, assess for signs of hypokalemia (change of muscle strength, tremor, muscle cramps, altered mental status, cardiac arrhythmias).

PATIENT/FAMILY TEACHING

• Take medication in morning to prevent nocturia. • Expect increased urinary volume, frequency. • Report palpitations, muscle weakness, cramps, nausea, dizziness. • Do not take other medications (including OTC drugs) without consulting physician. • Eat foods high in potassium such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins.

T

tositumomab and iodine ^{131}I-tositumomab

HIGH ALERT

toe-si-**too**-moe-mab
(Bexxar)

BLACK BOX ALERT Hypersensitivity, including anaphylaxis, can occur. Severe thrombocytopenia and neutropenia occur in majority of pts. Should be administered only by physicians/health professionals qualified in safe handling of radionuclides.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic (see p. 88C).

ACTION

Composed of an antibody conjoined with a radiolabeled antitumor antibody. The antibody portion binds specifically to the CD20 antigen, found on pre-B, B lymphocytes and on more than 90% of B-cell non-Hodgkin's lymphomas, resulting in formation of a complex. **Therapeutic Effect:** Induces cytotoxicity associated with ionizing radiation from radioisotope. Depletes circulating $CD20^+$ cells.

PHARMACOKINETICS

Elimination of iodine 131 (^{131}I) occurs by decay, excretion in urine. **Half-life:** 36–48 hrs. Pts with high tumor burden, splenomegaly, bone marrow involvement have faster clearance, shorter half-life, larger volume of distribution.

USES

Treatment of pts with CD20 antigen-expressing non-Hodgkin's lymphoma (NHL), whose disease has relapsed following chemotherapy. **OFF-LABEL:** First-line treatment of follicular NHL.

PRECAUTIONS

Contraindications: Hypersensitivity to murine proteins, pregnancy. **Cautions:** Renal impairment, active systemic infection, immunosuppression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: ^{131}I-tositumomab component is contraindicated during pregnancy (severe, possibly irreversible hypothyroidism in neonates). Radioiodine

is excreted in breast milk; do not breastfeed. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** Response rate, duration of severe hematologic toxicity are lower in those older than 65 yrs.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, platelet count, WBC count, thyroid-stimulating hormone (TSH), neutrophils.

AVAILABILITY (Rx)

Kit (Dosimetric): tositumomab 225 mg/16.1 ml (2 vials), tositumomab 35 mg/2.5 ml (1 vial), and iodine ^{131}I-tositumomab 0.1 mg/ml (1 vial). **Kit (Therapeutic):** tositumomab 225 mg/16.1 ml (2 vials), tositumomab 35 mg/2.5 ml (1 vial), and iodine ^{131}I-tositumomab 1.1 mg/ml (1 or 2 vials).

ADMINISTRATION/HANDLING

◀ALERT▶ Regimen consists of 4 components given in 2 separate steps: the dosimetric step, followed 7–14 days later by a therapeutic step. When infusing, use IV tubing with in-line 0.22-micron filter (use same tubing throughout entire dosimetric or therapeutic step; changing filter results in drug loss). Reduce infusion rate by 50% for mild to moderate infusion toxicity; interrupt infusion for severe infusion toxicity (may resume when resolution of toxicity occurs). Resume at 50% reduction rate of infusion.

IV

Reconstitution

◀ALERT▶ Reconstitution amounts and rates of administration are the same for both dosimetric and therapeutic steps.

TOSITUMOMAB • Reconstitute 450 mg tositumomab in 50 ml 0.9% NaCl.

IODINE ^{131}I-TOSITUMOMAB • Reconstitute iodine ^{131}I-tositumomab in 30 ml 0.9% NaCl.

Rate of Administration

TOSITUMOMAB • Infuse over 60 min.

IODINE ^{131}I-TOSITUMOMAB • Infuse over 20 min.

Storage

TOSITUMOMAB • Refrigerate vials before dilution. Protect from strong light. • Following dilution, solution is stable for 24 hrs if refrigerated, up to 8 hrs at room temperature. • Discard any unused portion left in the vial. • Do not shake.

IODINE ^{131}I-TOSITUMOMAB • Store frozen until vial is removed for thawing before administration. Thawed doses are stable for 8 hrs if refrigerated. • Discard any unused portion.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Initiate thyroid protective agents (potassium iodide) 24 hrs prior to administration of iodine ^{131}I-tositumomab dosimetric step and continue until 2 wks following administration of iodine ^{131}I-tositumomab therapeutic step. Pretreat against infusion reactions with acetaminophen and diphenhydramine 1 hr prior to beginning therapy.

Non-Hodgkin's Lymphoma

◀ALERT▶ **Pretreatment:** Diphenhydramine 50 mg and acetaminophen 650–1,000 mg given 1 hr prior to administering, followed by acetaminophen 650–1,000 mg q4h for 2 doses, then q4h prn. Full recovery from hematologic toxicities is not a requirement for giving second dose.

IV: ADULTS, ELDERLY: Dosage contains 4 components in 2 steps. **Day 0:** Tositumomab 450 mg/50 NaCl over 60 min, then iodine ^{131}I-tositumomab 35 mg in 30 ml NaCl over 20 min. **Day 7:** Tositumomab 450 mg/50 NaCl over 60 min, then iodine ^{131}I-tositumomab to deliver 65–75 cGy total body irradiation and tositumomab 35 mg over 20 min.

SIDE EFFECTS

Frequent (46%–18%): Asthenia (loss of strength, energy), fever, nausea, cough, chills. **Occasional (17%–10%):** Rash, headache, abdominal pain, vomiting,

T

anorexia, myalgia, diarrhea, pharyngitis, arthralgia, rhinitis, pruritus. **Rare (9%–5%):** Peripheral edema, diaphoresis, constipation, dyspepsia (heartburn, indigestion, epigastric pain), back pain, hypotension, vasodilation, dizziness, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Infusion toxicity, characterized by fever, rigors, diaphoresis, hypotension, dyspnea, nausea, may occur during or within 48 hrs of infusion. Severe, prolonged myelosuppression, characterized by neutropenia, anemia, thrombocytopenia, occurs in 71% of pts. Sepsis occurs in 45% of pts, hemorrhage in 12%, myelodysplastic syndrome in 8%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pretreatment with acetaminophen and diphenhydramine before administering infusion may prevent infusion-related effects. Obtain baseline CBC before therapy and at least weekly following administration for minimum of 10 wks. Use strict aseptic technique to protect pt from infection. Follow radiation safety protocols. Time to nadir is 4–7 wks, duration of cytopenias is approximately 30 days.

INTERVENTION/EVALUATION

Diligently monitor lab values for possibly severe, prolonged thrombocytopenia, neutropenia, anemia. Monitor for hematologic toxicity (fever, chills, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Assess for signs of hypothyroidism.

PATIENT/FAMILY TEACHING

• Avoid pregnancy (Pregnancy Category X). • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site.

tramadol

TOP 200

tram-a-dol
(ConZip, Ralivia ER, Rybix ODT, Ryzolt, Tridural, Ultram, Ultram ER)
Do not confuse tramadol with tapentadol, Toradol, Trandate, trazodone, or Voltaren, or Ultram with Ultracet.

FIXED-COMBINATION(S)

Ultracet: tramadol/acetaminophen (a non-narcotic analgesic): 37.5 mg/325 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Centrally acting synthetic opioid analgesic.
CLINICAL: Analgesic.

ACTION

Binds to μ-opioid receptors, inhibits reuptake of norepinephrine, serotonin. Reduces intensity of pain stimuli incoming from sensory nerve endings. **Therapeutic Effect:** Reduces pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	Less than 1 hr	2–3 hrs	9 hrs

Rapidly, almost completely absorbed after PO administration. Protein binding: 20%. Extensively metabolized in liver to active metabolite (reduced in pts with advanced cirrhosis). Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 6–7 hrs.

USES

Management of moderate to moderately severe pain.

PRECAUTIONS

Contraindications: Acute alcohol intoxication, concurrent use of centrally acting analgesics, hypnotics, opioids, psychotropic drugs, hypersensitivity to opioids. **ConZip, Ryzolt:** (Additional) Severe/acute bronchial asthma, hypercapnia, significant respiratory depression. **Caution:** CNS depression, anoxia, advanced hepatic cirrhosis, respiratory depression, increased ICP, history of seizures or risk for seizures, hepatic/renal impairment, acute abdominal conditions, opioid-dependent pts, head injury, myxedema, hypothyroidism, hypoadrenalism, pregnancy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS, depression. **Carbamazepine** decreases concentration/effects. **CYP2D6 inhibitors (e.g., paroxetine), CYP3A4 inhibitors (e.g., erythromycin), triptans, selective serotonin reuptake inhibitors (SSRIs), tricyclic antidepressants** may increase risk of seizures, risk of serotonin syndrome. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, AST, ALT. May decrease Hgb. May cause proteinuria.

AVAILABILITY (Rx)

Tablets (Immediate-Release) (Ultram): 50 mg. **Capsule (Variable-Release):** ConZip: 100 mg (25 mg immediate/75 mg extended), 200 mg (50 mg immediate/150 mg extended), 300 mg (50 mg immediate/250 mg extended).

Tablets (Extended-Release) (Ryzolt, Ultram ER): 100 mg, 200 mg, 300 mg. **Tablets, Orally-Disintegrating (Rybix):** 50 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals but consistently with or without meals. • Do not chew, crush, split; swallow extended-release tablets whole.

ODT

• Remove from foil blister, place on tongue. • May take with or without water. • Do not chew, break, or split.

INDICATIONS/ROUTES/DOSAGE

Moderate to Moderately Severe Pain

PO *(Immediate-Release)*: ADULTS, ELDERLY: 50–100 mg q4–6h. **Maximum:** 400 mg/day for pts 75 yrs and younger; 300 mg/day for pts older than 75 yrs.

PO *(Extended-Release)*: ADULTS, ELDERLY: 100–300 mg once a day (titrate to desired effect).

Dosage in Renal Impairment

Immediate-Release: For pts with creatinine clearance less than 30 ml/min, increase dosing interval to q12h. **Maximum:** 200 mg/day. Do not use extended-release.

Dosage in Hepatic Impairment

Immediate-Release: Dosage is decreased to 50 mg q12h. Do not use extended-release with severe hepatic impairment.

SIDE EFFECTS

Frequent (25%–15%): Dizziness, vertigo, nausea, constipation, headache, drowsiness. **Occasional (10%–5%):** Vomiting, pruritus, CNS stimulation (e.g., nervousness, anxiety, agitation, tremor, euphoria, mood swings, hallucinations), asthenia (loss of strength, energy), diaphoresis, dyspepsia (heartburn, indigestion, epigastric pain), dry mouth, diarrhea. **Rare (less than 5%):** Malaise, vasodilation, anorexia, flatulence, rash, blurred vision,

T

urinary retention/frequency, menopausal symptoms.

ADVERSE EFFECTS/ TOXIC REACTIONS

Seizures reported in those receiving tramadol within recommended dosage range. May have prolonged duration of action, cumulative effect in pts with hepatic/renal impairment, serotonin syndrome (agitation, hallucinations, tachycardia, hyperreflexia).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain. Assess drug history, esp. carbamazepine, analgesics, CNS depressants, MAOIs. Review past medical history, esp. epilepsy, seizures. Assess renal/hepatic function lab values.

INTERVENTION/EVALUATION

Monitor pulse, B/P, renal/hepatic function. Assist with ambulation if dizziness, vertigo occurs. Dry crackers, cola may relieve nausea. Palpate bladder for urinary retention. Monitor daily pattern of bowel activity, stool consistency. Sips of tepid water may relieve dry mouth. Assess for clinical improvement, record onset of relief of pain.

PATIENT/FAMILY TEACHING

• May cause dependence. • Avoid alcohol, OTC medications (analgesics, sedatives). • May cause drowsiness, dizziness, blurred vision. • Avoid tasks requiring alertness, motor skills until response to drug is established. • Inform physician if severe constipation, difficulty breathing, excessive sedation, seizures, muscle weakness, tremors, chest pain, palpitations occur.

T

tranexamic acid

tran-ex-**am**-ick **as**-id
(Lysteda)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Systemic hemostatic. **CLINICAL:** Antifibrinolytic agent.

ACTION

Diminishes dissolution of hemostatic fibrin by plasmin, preserving and stabilizing fibrin's matrix structure. **Therapeutic Effect:** Prevents formation of fibrin clots (antifibrinolytic).

PHARMACOKINETICS

Only small amount metabolized. No effect on platelet count, coagulation time. Protein binding: 3%. Excreted in urine. **Half-life:** 18 hrs.

USES

Treatment of cyclic excessive menstrual bleeding.

PRECAUTIONS

Contraindications: Evidence of active thromboembolic disease (DVT, pulmonary embolism, cerebral thrombosis); history of thrombosis, thromboembolism, including retinal vein or artery occlusion; thrombogenic valvular disease, cardiac rhythm disease, hypercoagulopathy. **Extreme Caution:** Concurrent use of hormonal contraceptives, women with acute promyelocytic leukemia taking retinoic acid for remission induction, history of allergies, women with subarachnoid hemorrhage, upper urinary tract bleeding; renal, cardiac, cerebrovascular disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. Not indicated for use in pregnant women. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Not for use in postmenopausal women.

INTERACTIONS

DRUG: Anti-inhibitor coagulants, factor IX complex medications, hor-

monal contraceptives may increase risk of thrombosis. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May prolong thrombin time.

AVAILABILITY (Rx)

Tablets: 650 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Swallow whole; do not chew, break tablets.

INDICATIONS/ROUTES/DOSAGE

Acute Bleeding

PO: ADULTS: 2 tablets 3 times daily for maximum of 5 days during monthly menstruation.

Dosage in Renal Impairment

Serum Creatinine	Dosage
1.4–2.8 mg/dl	2 tablets twice daily
2.7–5.7 mg/dl	2 tablets once daily
Greater than 5.7 mg/dl	1 tablet once daily

SIDE EFFECTS

Frequent (50%–21%): Headache, nasal congestion, back pain. **Occasional (20%–10%):** Abdominal pain, myalgia, arthralgia. **Rare (7%–5%):** Muscle cramps and spasms, migraine headache, fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Venous and arterial thrombosis or thromboembolism, cases of retinal artery and retinal vein occlusions have been reported. Hypersensitivity reaction occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain gynecologic, obstetric history. Assess current methods of birth control.

INTERVENTION/EVALUATION

Assess for decrease in B/P, increase in pulse rate, abdominal or back pain, severe headache (may be evidence of hemorrhage). Question for change in amount of discharge during menses. Question and treat headache as appropriate.

PATIENT/FAMILY TEACHING

• Take medication only during monthly period (not meant to treat menstrual symptoms). • Stop medication and report immediately any eye symptoms or change in vision. • Report if heavy menstrual bleeding symptoms persist or worsen.

tranylcypromine

tran-ill-**sip**-roe-meen
(Parnate)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: MAOI.
CLINICAL: Antidepressant (see p. 38C).

ACTION

Inhibits activity of the enzyme monoamine oxidase at CNS storage sites, leading to increasing levels of neurotransmitters epinephrine, norepinephrine, serotonin, dopamine at neuronal receptor sites. **Therapeutic Effect:** Relieves depression.

USES

Treatment of depression in pts refractory to, intolerant of other therapy. **OFF-LABEL:** Post-traumatic stress disorder.

PRECAUTIONS

Contraindications: Concurrent use of antihistamines, antihypertensives, antiparkinson drugs, bupropion, buspirone, CNS depressants, SSRIs or SNRIs, sympathomimetics, excessive use of caffeine. Pheochromocytoma, uncontrolled hypertension, cerebrovascular defects, his-

T

tory of headache, history of hepatic disease or abnormal hepatic function tests. **Cautions:** Pts at high risk for suicide, glaucoma, hyperthyroidism, diabetes, hypotension, history of substance abuse, acute alcoholism, renal impairment, pts at risk for seizures.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Minimally distributed in breast milk. **Pregnancy Category C. Children:** Not recommended for this pt population (increased risk of suicidal ideation). **Elderly:** Increased risk of drug toxicity may require dosage adjustment.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depressant effects. **Buspirone** may increase risk of hypertension. **Caffeine-containing medications** may increase risk of cardiac arrhythmias, hypertension. **Carbamazepine, cyclobenzaprine, MAOIs, maprotiline** may precipitate hypertensive crisis. **Dopamine, tryptophan** may cause sudden, severe hypertension. **Fluoxetine, trazodone, tricyclic antidepressants** may cause serotonin syndrome, neuroleptic malignant syndrome. May increase effects of **insulin, oral antidiabetics. Meperidine, other opioid analgesics** may produce serotonin syndrome. **HERBAL:** **Valerian, St. John's wort, SAMe, kava kava** may increase risk of serotonin syndrome or excessive sedation. **FOOD:** **Foods containing pressor amines (aged cheese, caffeine, red wine), tyramine** may cause sudden, severe hypertension. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 10 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ At least 14 days must elapse between tranylcypromine and selective serotonin reuptake inhibitors (SSRIs). Avoid foods containing tryptophan and caffeine; tyramine-containing foods/beverages (e.g., aged cheese, air-dried or cured meats, fava, soy sauce, soybean condiments, tap/draft beer).

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS, ELDERLY: Initially, 10 mg twice daily. May increase by 10 mg/day at 1- to 3-wk intervals up to 60 mg/day in divided doses. Usual effective dose: 30 mg/day.

SIDE EFFECTS

Frequent: Orthostatic hypotension, restlessness, GI upset, insomnia, dizziness, lethargy, weakness, dry mouth, peripheral edema. **Occasional:** Flushing, diaphoresis, rash, urinary frequency, increased appetite, transient impotence. **Rare:** Visual disturbances.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypertensive crisis occurs rarely, marked by severe hypertension, occipital headache radiating frontally, neck stiffness/soreness, nausea, vomiting, diaphoresis, fever/chills, clammy skin, dilated pupils, palpitations, tachycardia, bradycardia, constricting chest pain. Intracranial bleeding may be associated with severe hypertension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Perform baseline serum hepatic/renal function tests. Assess sensitivity to tranylcypromine. Assess for other medical conditions, esp. alcoholism, CHF, pheochromocytoma, arrhythmias, cardiovascular disease, hypertension, suicidal tendencies. Question for other medications, including CNS depressants, meperidine, other antidepressants.

INTERVENTION/EVALUATION

Assess appearance, behavior, speech pattern, level of interest, mood. Supervise

suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor for occipital headache radiating frontally, neck stiffness/soreness (may be first signal of impending hypertensive crisis). Monitor B/P diligently for hypertension. Assess skin, temperature for fever. Discontinue medication immediately if palpitations, frequent headaches occur. Monitor weight.

PATIENT/FAMILY TEACHING

• Take second daily dose no later than 4 PM to avoid insomnia. • Antidepressant relief may be noted during first wk of therapy; maximum benefit noted within 3 wks. • Notify physician of worsening depression, unusual behavior, suicidal thoughts or ideation. • Report headache, neck stiffness/soreness immediately. • To avoid orthostatic hypotension, change from lying to sitting position slowly and dangle legs momentarily before standing. • Avoid foods that require bacteria/molds for their preparation/preservation, those that contain tyramine (e.g., cheese, sour cream, beer, wine, pickled herring, liver, figs, raisins, bananas, avocados, soy sauce, yeast extracts, yogurt, papaya, broad beans, meat tenderizers), excessive amounts of caffeine (coffee, tea, chocolate), OTC cold/allergy preparations, weight reduction medications.

trastuzumab HIGH ALERT

tras-**too**-zoo-mab
(Herceptin)

BLACK BOX ALERT Anaphylactic reaction, infusion reaction, acute respiratory distress syndrome have been associated with fatalities. Reduction in left ventricular ejection fraction, severe heart failure may result in thrombus formation, stroke, cardiac death.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic (see p. 89C).

ACTION

Binds to HER-2 protein, overexpressed in 25%–30% of primary breast cancers, inhibiting proliferation of tumor cells. **Therapeutic Effect:** Inhibits growth of tumor cells, mediates antibody-dependent cellular cytotoxicity.

PHARMACOKINETICS

Half-life: 5.8 days (range: 1–32 days).

USES

Treatment of HER-2 overexpressing breast cancer (adjuvant), metastatic breast cancer, metastatic gastric or gastroesophageal junction adenocarcinoma (in pts without prior treatment).

PRECAUTIONS

Contraindications: None known. **Cautions:** Preexisting cardiac disease or dysfunction, pulmonary disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related cardiac dysfunction may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 440 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute with 20 ml Bacteriostatic Water for Injection to

T

yield concentration of 21 mg/ml. • Add calculated dose to 250 ml 0.9% NaCl (do not use D_5W). • Gently mix contents in bag.

Rate of Administration • Do not give IV push or bolus. • Give loading dose (4 mg/kg) over 90 min. Give maintenance infusion (2 mg/kg) over 30 min.

Storage • Refrigerate. • Reconstituted solution appears colorless to pale yellow. • Reconstituted solution in vial is stable for 28 days if refrigerated after reconstitution with Bacteriostatic Water for Injection (if using Sterile Water for Injection without preservative, use immediately; discard unused portions). • Solution diluted in 250 ml 0.9% NaCl stable for 24 hrs if refrigerated.

IV INCOMPATIBILITIES

Do not mix with D_5W or any other medications.

INDICATIONS/ROUTES/DOSAGE

Breast Cancer (Adjuvant)

IV: ADULTS, ELDERLY: (with concurrent paclitaxel or docetaxel): Initially, 4 mg/kg as 90-min infusion, then 2 mg/kg weekly as 30-min infusion for 12 wks followed 1 wk later (when concurrent chemotherapy completed) by 6 mg/kg infusion over 30–90 min q3wks for total therapy duration of 52 wks. **(with docetaxel/carboplatin):** Initially, 4 mg/kg as 90-min infusion, then 2 mg/kg weekly as 30-min infusion for a total of 18 wks, followed 1 wk later (when concurrent chemotherapy completed) by 6 mg/kg infused over 30–90 min q3wks for total therapy duration of 52 wks.

Breast Cancer (Metastatic)

IV: ADULTS, ELDERLY: Initially, 4 mg/kg as 90-min infusion, then 2 mg/kg as 30-min infusion weekly until disease progression.

Stomach Cancer

IV: ADULTS, ELDERLY: Initially, 8 mg/kg over 90 min, then 6 mg/kg over 30–90 min q3wks until disease progression.

Dosage Adjustment in Cardiotoxicity

Left ventricular ejection fraction (LVEF) 16% or greater decrease from baseline WNL (within normal limits) or LVEF below normal limits and 10% or greater decrease from baseline: Hold treatment for 4 wks. Repeat LVEF q4wks. Resume therapy if LVEF returns to normal limits in 4–8 wks and remains at 15% or less decrease from baseline.

SIDE EFFECTS

Frequent (Greater Than 20%): Pain, asthenia (loss of strength, energy), fever, chills, headache, abdominal pain, back pain, infection, nausea, diarrhea, vomiting, cough, dyspnea. **Occasional (15%–5%):** Tachycardia, CHF, flu-like symptoms, anorexia, edema, bone pain, arthralgia, insomnia, dizziness, paresthesia, depression, rhinitis, pharyngitis, sinusitis. **Rare (Less Than 5%):** Allergic reaction, anemia, leukopenia, neuropathy, herpes simplex.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiomyopathy, ventricular dysfunction, CHF occur rarely. Pancytopenia may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate left ventricular function. Obtain baseline echocardiogram, EKG, multigated acquisition (MUGA) scan. Obtain CBC, platelet count at baseline and at regular intervals during therapy.

INTERVENTION/EVALUATION

Frequently monitor for deteriorating cardiac function. Assess for asthenia (loss of strength, energy). Assist with ambulation if asthenia (loss of strength, energy) occurs. Monitor for fever, chills, abdominal pain, back pain. Offer antiemetics if nausea, vomiting occur. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (lowers resistance).

• Avoid contact with those who have recently taken oral polio vaccine. • Avoid crowds, those with infection.

trazodone

TOP 200

traz-o-done
(Apo-Trazodone ✤, Novo-Trazodone ✤, Oleptro, PMS-Trazodone ✤)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse trazodone with tramadol or ziprasidone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin reuptake inhibitor. **CLINICAL:** Antidepressant (see pp. 14C, 40C).

ACTION

Blocks reuptake of serotonin at neuronal presynaptic membranes, increasing its availability at postsynaptic receptor sites. **Therapeutic Effect:** Relieves depression.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 85%–95%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 5–9 hrs.

USES

Treatment of depression exhibited as persistent, prominent dysphoria (occurring nearly daily for at least 2 wks) manifested by 4 of 8 symptoms: appetite change, sleep pattern change, increased fatigue, impaired concentration, feelings of guilt or worthlessness, loss of interest in usual activities, psychomotor agitation or retardation, suicidal tendencies. **OFF-LABEL:** Hypnotic, potential augmenting agent for antidepressants.

PRECAUTIONS

Contraindications: None known. **Cautions:** Cardiac disease, arrhythmias, cerebrovascular disease, hepatic/renal impairment, high risk of suicide, concurrent or recent MAOI use.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta; minimally distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 6 yrs. **Elderly:** More likely to experience sedative, hypotensive effects; lower dosage recommended.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., **ritonavir, ketoconazole**) increase concentration, potential for adverse effects. May increase concentration of **digoxin, phenytoin. HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression and serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May decrease WBC, neutrophil counts.

AVAILABILITY (Rx)

Tablets: 50 mg, 100 mg, 150 mg, 300 mg.

Tablets: (Extended-Release [Oleptro]): 150 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• Give shortly after snack, meal (reduces risk of dizziness, light-headedness). • Tablets may be crushed. • Do not crush or chew extended-release tablets. Swallow whole or break in half along score line. • Best taken at bedtime.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Therapeutic effect may take up to 6 wks to occur.

Depression

PO: ADULTS: Initially, 150 mg/day in 3 equally divided doses. Increase by 50 mg/day at 3- to 7-day intervals until

T

therapeutic response is achieved. **Maximum:** 600 mg/day. **ELDERLY:** Initially, 25–50 mg at bedtime. May increase by 25–50 mg every 3–7 days. Range: 75–150 mg/day. **TABLETS (EXTENDED-RELEASE):** Initially, 150 mg once daily. May increase by 75 mg q3days. **Maximum:** 375 mg/day. **ADOLESCENTS 13–18 YRS:** Initially, 25–50 mg/day. May increase to 100–150 mg/day in divided doses. **CHILDREN 6–12 YRS:** Initially, 1.5–2 mg/kg/day in divided doses. May increase gradually to 6 mg/kg/day in 3 divided doses.

SIDE EFFECTS

Frequent (9%–3%): Drowsiness, dry mouth, light-headedness, dizziness, headache, blurred vision, nausea, vomiting. **Occasional (3%–1%):** Nervousness, fatigue, constipation, myalgia/arthralgia, mild hypotension. **Rare:** Photosensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Priapism, altered libido, retrograde ejaculation, impotence occur rarely. Appears to be less cardiotoxic than other antidepressants, although arrhythmias may occur in pts with preexisting cardiac disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess mental status, mood, behavior. For those on long-term therapy, serum hepatic/renal function tests, blood counts should be performed periodically. Elderly are more likely to experience sedative, hypotensive effects.

INTERVENTION/EVALUATION

Monitor for suicidal ideation (esp. at beginning of therapy or dosage change). Assess appearance, behavior, speech pattern, level of interest, mood. Monitor WBC, neutrophil count, hepatic enzymes. Assist with ambulation if dizziness, light-headedness occurs.

PATIENT/FAMILY TEACHING

- Immediately discontinue medication, consult physician if priapism occurs. • May take after meal, snack. • May take at bedtime if drowsiness occurs. • Change positions slowly to avoid hypotensive effect. • Tolerance to sedative, anticholinergic effects usually develops during early therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Photosensitivity to sun may occur. • Dry mouth may be relieved by sugarless gum, sips of tepid water. • Report visual disturbances, worsening depression, suicidal ideation, unusual changes in behavior. • Do not abruptly discontinue medication. • Avoid alcohol.

treprostinil

tre-**pros**-tin-il
(Remodulin, Tyvaso)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aggregation inhibitor, vasodilator. **CLINICAL:** Antiplatelet.

ACTION

Directly dilates pulmonary, systemic arterial vascular beds, also inhibits platelet aggregation. **Therapeutic Effect:** Reduces symptoms of pulmonary arterial hypertension associated with exercise.

PHARMACOKINETICS

Rapidly, completely absorbed after subcutaneous infusion; protein binding: 91%. Metabolized by liver. Excreted mainly in urine, with lesser amount eliminated in feces. **Half-life:** 2–4 hrs.

USES

Injection: Treatment of pulmonary arterial hypertension (PAH) in pts with NYHA class II–IV symptoms to decrease exercise associated symptoms; diminish clinical deterioration when transitioning from epoprostenol (Flolan). **Inhalation:** Treatment of PAH in pts with NYHA class III symptoms to increase walk distance.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, those older than 65 yrs, pts with significant underlying lung disease (e.g., COPD); low systemic arterial pressure; concomitant use of anticoagulants, inducers of CYP2C8 (e.g., rifampin), inhibitors of CYP2C8 (e.g., gemfibrozil).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Consider dose selection carefully because of increased incidence of diminished organ function, concurrent disease, other drug therapy.

INTERACTIONS

DRUG: Anticoagulants, aspirin, heparin, thrombolytics may increase risk of bleeding. **CYP2C8 inhibitors (e.g., gemfibrozil)** may increase concentration/effects. **CYP2C8 inducers (e.g., rifampin)** may decrease concentration/effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Remodulin): 1 mg/ml, 2.5 mg/ml, 5 mg/ml, 10 mg/ml. **Solution for Oral Inhalation (Tyvaso):** 0.6 mg/ml (2.9-ml ampoule) delivers 6 mcg per inhalation.

ADMINISTRATION/HANDLING

Inhalation

• Use only with supplied inhalation system. Refer to product information. Give undiluted. • Wait 1 min before inhaling next dose (allows for deeper bronchial penetration). • Administer 4 times daily 4 hrs apart, during waking hrs.

IV

Reconstitution • Dilute with either Sterile Water for Injection or 0.9% NaCl to final volume of 50 ml or 100 ml.

Rate of Administration • Give as continuous IV infusion via indwelling central venous catheter.

Storage • Store unopened vials at room temperature. • Diluted solutions stable for 48 hrs at room temperature.

Subcutaneous

Reconstitution • Intended to be administered without further dilution using an appropriately designed infusion pump. • To avoid potential interruptions in drug delivery, pt must have immediate access to backup infusion pump, subcutaneous infusion sets.

Rate of Administration • Give as continuous subcutaneous infusion via subcutaneous catheter, using infusion pump designed for subcutaneous drug delivery.

Storage • Store unopened vials at room temperature.

INDICATIONS/ROUTES/DOSAGE

Pulmonary Arterial Hypertension (PAH)

Continuous Subcutaneous Infusion, IV Infusion: ADULTS, ELDERLY: Initially, 1.25 ng/kg/min. Reduce infusion rate to 0.625 ng/kg/min if initial dose cannot be tolerated. Increase infusion rate in increments of no more than 1.25 ng/kg/min per wk for first 4 wks, then no more than 2.5 ng/kg/min per wk for duration of infusion.

Inhalation: ADULTS, ELDERLY: 3 breaths (18 mcg) per treatment session. Reduce to 1 or 2 breaths if 3 breaths are not tolerated. Increase by 3 breaths at 1- to 2-wk intervals. Titrate to target dose of 9 breaths (54 mcg) per treatment session.

Hepatic Impairment (Mild to Moderate)

IV/Subcutaneous: ADULTS, ELDERLY: Decrease initial dose to 0.625 ng/kg/min based on ideal body weight; increase cautiously.

SIDE EFFECTS

IV: Frequent: Infusion site pain, erythema, induration, rash. **Occasional:** Headache, diarrhea, jaw pain, vasodilation, nausea. **Rare:** Dizziness, hypotension, pruritus, edema. **Inhalation: Common (54%–25%):** Cough, headache, throat irritation. **Occasional (19%–6%):** Nausea, flushing, syncope.

T

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal, sudden large reductions in dosage may result in worsening of pulmonary arterial hypertension symptoms. Inhalation may produce symptomatic hypotension.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor for dyspnea, fatigue, decreased activity, symptoms of excessive dose (e.g., headache, nausea, vomiting). Monitor for changes in B/P.

PATIENT/FAMILY TEACHING

• Delivery occurs via self-inserted subcutaneous catheter using ambulatory subcutaneous pump; carefully follow instructions for drug administration. • Follow guidelines for care of subcutaneous catheter, troubleshooting infusion pump problems. • Avoid skin or eye contact with Tyvaso (rinse immediately with water).

tretinoin HIGH ALERT

tret-ih-noyn
(Atralin, Avita, Refissa, Rejuva-A, Renova, Retin-A, Retin-A Micro, Tretin X, Vesanoid)

BLACK BOX ALERT High risk for teratogenicity; major fetal abnormalities, spontaneous abortions. Pts with acute promyelocytic leukemia (APL) are at severe risk for reactions (fever, dyspnea, acute respiratory distress syndrome [pulmonary infiltrates, pleural effusions, pericardial effusions]), edema, hepatic, renal, and/or multiorgan failure; 40% develop leukocytosis.

Do not confuse tretinoin with isotretinoin, phenytoin, Tenormin, or triamcinolone.

FIXED-COMBINATION(S)

With octyl methoxycinnamate and oxybenzone, moisturizers, and SPF-12, a sunscreen **(Retin-A Regimen Kit).**

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Retinoid.
CLINICAL: Antiacne, transdermal, antineoplastic (see p. 89C).

ACTION

Antiacne: Decreases cohesiveness of follicular epithelial cells. Increases turnover of follicular epithelial cells. **Therapeutic Effect:** Causes expulsion of blackheads. Bacterial skin counts are not altered. **Transdermal:** Exerts effects on growth/differentiation of epithelial cells. **Therapeutic Effect:** Alleviates fine wrinkles, hyperpigmentation. **Antineoplastic:** Induces maturation, decreases proliferation of acute promyelocytic leukemia (APL) cells. **Therapeutic Effect:** Repopulation of bone marrow, blood by normal hematopoietic cells.

PHARMACOKINETICS

Topical: Minimally absorbed. **PO:** Well absorbed following PO administration. Protein binding: greater than 95%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 0.5–2 hrs.

USES

Topical: Treatment of acne vulgaris, photodamaged skin, some skin cancers. **PO:** Induction of remission in pts with acute promyelocytic leukemia (APL). **OFF-LABEL (PO):** Maintenance therapy in APL.

PRECAUTIONS

Contraindications: Sensitivity to parabens (used as preservative in gelatin capsule). **Extreme Caution: Topical:** Eczema, sun exposure. **Cautions: Topical:** Those with considerable sun exposure in their occupation, hypersensitivity to sun. **PO:** Elevated serum cholesterol/triglycerides.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Topical: Use during pregnancy only if clearly necessary. Unknown if distributed in breast milk; ex-

ercise caution in breast-feeding mother. **Topical: Pregnancy Category C. PO:** Teratogenic, embryotoxic effect. **Pregnancy Category D. Children/Elderly:** Safety and efficacy not established.

INTERACTIONS

DRUG: TOPICAL: Retinoids (e.g., acitretin, oral tretinoin) may increase drying, irritative effects. **PO: Tetracyclines** may increase risk of pseudotumor cerebri, intracranial hypertension. **Aminocaproic acid** may increase risk of thrombotic complications. **CYP3A4 inducers (e.g., phenobarbital, rifampin)** may decrease concentration/effects. **CYP3A4 inhibitors (e.g., ketoconazole)** may increase concentration, risk of toxicity. **HERBAL: St. John's wort** may decrease concentration/effects. **Dong quai, St. John's wort** may increase photosensitization. **Vitamin A** supplementation may increase vitamin A toxicity. **FOOD:** None known. **LAB VALUES: PO:** Leukocytosis occurs commonly (40%). May elevate serum hepatic function tests, cholesterol, triglycerides.

AVAILABILITY (Rx)

Cream: 0.02% (Renova), 0.025% (Avita, Retin-A, Tretin X), 0.05% (Refissa, Retin-A, Tretin X), 0.1% (Retin-A). **Gel:** 0.01% (Retin-A, Tretin X), 0.025% (Avita, Retin-A, Tretin X), 0.04% (Retin-A Micro), 0.1% (Retin-A Micro).

Capsules: (Vesanoid): 10 mg.

ADMINISTRATION/HANDLING

PO

• Do not crush/break capsule. • Administer with a meal.

Topical

• Thoroughly cleanse area before applying tretinoin. • Lightly cover only affected area. Liquid may be applied with fingertip, gauze, cotton; do not rub onto unaffected skin. • Keep medication away from eyes, mouth, angles of nose, mucous membranes. • Wash hands immediately after application.

INDICATIONS/ROUTES/DOSAGE

Acne

Topical: ADULTS, CHILDREN 12 YRS AND OLDER: Apply once daily at bedtime or on alternate days.

Remission Induction in Acute Promyelocytic Leukemia (APL)

PO: ADULTS: 45 mg/m^2/day given as 2–3 evenly divided doses until complete remission is documented. Discontinue therapy 30 days after complete remission or after 90 days of treatment, whichever comes first.

Remission Maintenance in APL

PO: ADULTS, ELDERLY: 45 mg/m^2/day in 2 divided doses for 15 days q3mos for 2 yrs. **CHILDREN:** 25 mg/m^2/day in 2 divided doses for 15 days q3mos for 2 yrs.

SIDE EFFECTS

Topical: Temporary change in pigmentation, photosensitivity. Local inflammatory reactions (peeling, dry skin, stinging, erythema, pruritus) are to be expected and are reversible with discontinuation of tretinoin. **Frequent: PO (87%–54%):** Headache, fever, dry skin/oral mucosa, bone pain, nausea, vomiting, rash. **Occasional: PO (26%–6%):** Mucositis, earache or feeling of fullness in ears, flushing, pruritus, diaphoresis, visual disturbances, hypotension/hypertension, dizziness, anxiety, insomnia, alopecia, skin changes. **Rare (Less Than 6%):** Altered visual acuity, temporary hearing loss.

ADVERSE EFFECTS/ TOXIC REACTIONS

PO: Retinoic acid syndrome (fever, dyspnea, weight gain, abnormal chest auscultatory findings [pulmonary infiltrates, pleural/pericardial effusions], episodic hypotension) occurs commonly (25%), as does leukocytosis (40%). Syndrome generally occurs during first month of therapy (sometimes after first dose). High-dose steroids (dexamethasone 10 mg IV) at first suspicion of syndrome reduce morbidity, mortality. Pseudotu-

T

mor cerebri may be noted, esp. in children (headache, nausea, vomiting, visual disturbances). **Topical:** Possible tumorigenic potential when combined with ultraviolet radiation.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

PO: Inform women of childbearing potential of risk to fetus if pregnancy occurs. Instruct on need for use of 2 reliable forms of contraceptives concurrently during therapy and for 1 mo after discontinuation of therapy, even in infertile women. Pregnancy test should be obtained within 1 wk before institution of therapy. Obtain initial serum hepatic function tests, cholesterol, triglyceride levels.

INTERVENTION/EVALUATION

PO: Monitor serum hepatic function tests, hematologic, coagulation profiles, cholesterol, triglycerides. Monitor for signs/symptoms of pseudotumor cerebri in children.

PATIENT/FAMILY TEACHING

• **Topical:** Avoid exposure to sunlight, tanning beds; use sunscreens, protective clothing. • Protect affected areas from wind, cold. • If skin is already sunburned, do not use drug until fully healed. • Keep tretinoin away from eyes, mouth, angles of nose, mucous membranes. • Do not use medicated, drying, abrasive soaps; wash face no more than 2–3 times a day with gentle soap. • Avoid use of preparations containing alcohol, menthol, spice, lime (e.g., shaving lotions, astringents, perfume). • Mild redness, peeling are expected; decrease frequency or discontinue medication if excessive reaction occurs. • Nonmedicated cosmetics may be used; however, cosmetics must be removed before tretinoin application. • Improvement noted during first 24 wks of therapy. • **Antiacne:** Therapeutic results noted in 2–3 wks; optimal results in 6 wks. **Oral:** • Avoid tasks requiring motor skills, alertness until response to drug is established. • Avoid alcohol. • Avoid exposure to sunlight, tanning beds. • Notify physician of persistent vomiting, diarrhea, unusual bleeding/bruising, acute abdominal pain, vision changes, or if pregnancy is suspected.

triamcinolone TOP 200

try-am-**sin**-oh-lone

triamcinolone acetonide

(Kenalog, Kenalog-10, Kenalog-40, Nasacort AQ, Triderm)

triamcinolone hexacetonide

(Aristospan)

Do not confuse Nasacort with Nasalcrom.

FIXED-COMBINATION(S)

Myco-II, Mycolog II, Myco-Triacet: triamcinolone/nystatin (an antifungal): 0.1%/100,000 units/g.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocortical steroid. **CLINICAL:** Antiinflammatory (see pp. 3C, 98C, 100C).

ACTION

Inhibits accumulation of inflammatory cells at inflammation sites, phagocytosis, lysosomal enzyme release, synthesis/release of mediators of inflammation. **Therapeutic Effect:** Prevents/suppresses cell-mediated immune reactions. Decreases/prevents tissue response to inflammatory process.

USES

Nasal inhalation: Seasonal, perennial rhinitis. **Intra-articular:** Acute gouty arthritis, bursitis, tenosynovitis, epicondyli-

tis, rheumatoid arthritis, synovitis of osteoarthritis. **Intralesional:** Alopecia areata, discoid lupus erythematosus, keloids, lichen plaques, psoriatic plaques. **Topical:** Relief of inflammation, pruritus associated with corticoid-responsive dermatoses.

PRECAUTIONS

Contraindications: Administration of live virus vaccines, systemic fungal infections, cerebral malaria, serious infections. **IM:** Idiopathic thrombocytopenic purpura. **Topical:** Local fungal, viral, bacterial infections. **Cautions:** Following acute MI, elderly, hepatic impairment, myasthenia gravis, pts at risk for osteoporosis/seizures/GI disease, history of tuberculosis (may reactivate disease), hypothyroidism, cirrhosis, CHF, hypertension, renal insufficiency, diabetes. Prolonged therapy should be discontinued slowly. **Pregnancy Category C (D if used in first trimester).**

INTERACTIONS

DRUG: **Amphotericin, diuretics** may worsen hypokalemia. May increase risk of **digoxin** toxicity (due to hypokalemia). May decrease effects of **insulin, oral hypoglycemics. Hepatic enzyme inducers** (e.g., **phenytoin, rifampin**) may decrease effects. May reduce response to **vaccines** due to inhibition of antibody response. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, lipid, amylase, sodium. May decrease serum calcium, potassium, thyroxine.

AVAILABILITY (Rx)

Cream: 0.025%, 0.1%. **Injection, Suspension (Kenalog-10):** 10 mg/ml. **(Kenalog-40):** 40 mg/ml. **Ointment:** 0.025%, 0.1%, 0.5%. **Paste, Oral, Topical:** 0.1%. **Suspension, Spray Nasal Inhalation (Nasacort AQ):** 55 mcg/inhalation.

ADMINISTRATION/HANDLING

Topical

- Gently cleanse area before application.
- Use occlusive dressings only as ordered.
- Apply sparingly, rub into area thoroughly.

INDICATIONS/ROUTES/DOSAGE

Triamcinolone Hexacetonide

Intralesional: Up to 0.5 mg/square inch. Range: 2–48 mg.

Intra-Articular: Average dose: 2–20 mg q3–4 wks.

Triamcinolone Acetonide

Intra-Articular: ADULTS, ELDERLY: Initially: 2–20 mg/day. Doses can be adjusted between 20–80 mg as needed.

Rhinitis

Intranasal: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2 sprays in each nostril once daily. **Maximum:** 4 sprays in each nostril once daily or 2 sprays in each nostril twice daily. **CHILDREN 6–11 YRS:** Initially, 1 spray in each nostril once daily. **Maximum:** 2 sprays in each nostril once daily. **CHILDREN 2–5 YRS:** 1 spray in each nostril once daily.

Usual Topical Dosage

Topical: ADULTS, ELDERLY, CHILDREN: 2–3 times a day. May give 1–2 times a day or as intermittent therapy.

SIDE EFFECTS

Frequent: Insomnia, dry mouth, heartburn, nervousness, abdominal distention, diaphoresis, acne, mood swings, increased appetite, facial flushing, delayed wound healing, increased susceptibility to infection, diarrhea, constipation. **Occasional:** Headache, edema, change in skin color, frequent urination. **Rare:** Tachycardia, allergic reaction (rash, urticaria), altered mental status, hallucinations, depression. **Topical:** Allergic contact dermatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term therapy: Muscle wasting (arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer, CHF. **Abrupt withdrawal following long-term therapy:** Anorexia, nausea, fever, headache, arthralgia, rebound inflammation, fatigue,

T

weakness, lethargy, dizziness, orthostatic hypotension. Anaphylaxis occurs rarely with parenteral administration. Sudden discontinuation may be fatal. Blindness has occurred rarely after intralesional injection around face, head.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroids. Obtain baselines for height, weight, B/P, serum glucose, electrolytes.

INTERVENTION/EVALUATION

Oral inhalation, intranasal: Check mucous membranes for signs of fungal infection. Monitor growth in children. Monitor B/P.

PATIENT/FAMILY TEACHING

• Notify physician if condition being treated persists or worsens. • Avoid exposure to chickenpox or measles. • Avoid alcohol. • **Inhalation:** Do not take for acute asthma attack. • Rinse mouth to decrease risk of mouth soreness. • Inform physician if mouth lesions, sore mouth occurs (stomatitis). • **Nasal:** Report unusual cough/spasm, persistent nasal bleeding, burning, infection.

triamterene

TOP 200

try-**am**-ter-een
(Dyrenium)

BLACK BOX ALERT Hyperkalemia risk, potentially fatal if uncorrected; increased incidence in renal impairment, diabetes (even without evidence of diabetic nephropathy), elderly, severely ill pts.

Do not confuse Dyrenium with Pyridium, or triamterene with trimipramine.

FIXED-COMBINATION(S)

Dyazide, Maxzide: triamterene/hydrochlorothiazide (a diuretic): 37.5 mg/25 mg, 50 mg/25 mg, 75 mg/50 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Potassium-sparing diuretic. **CLINICAL:** Antiedema agent, antihypertensive (see p. 102C).

ACTION

Inhibits sodium, potassium, ATPase. Interferes with sodium/potassium exchange in distal tubule, cortical collecting tubule, collecting duct. Increases sodium, decreases potassium excretion. Increases magnesium, decreases calcium loss. **Therapeutic Effect:** Produces diuresis, lowers B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	2–4 hrs	N/A	7–9 hrs

Incompletely absorbed from GI tract. Widely distributed. Metabolized in liver. Primarily eliminated in feces via biliary route. **Half-life:** 1.5–2.5 hrs (increased in renal impairment).

USES

Treatment of edema, hypertension.

PRECAUTIONS

Contraindications: Drug-induced or preexisting hyperkalemia, progressive or severe renal disease, severe hepatic disease. **Cautions:** Hepatic/renal impairment, history of renal calculi, diabetes mellitus, gouty arthritis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta; distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category B (D if used in pregnancy-induced hypertension). Children:** Safety and efficacy not established. **Elderly:** May be at increased risk for developing hyperkalemia.

INTERACTIONS

DRUG: ACE inhibitors (e.g., captopril), cyclosporine, potassium-containing medications, potassium

supplements may increase risk of hyperkalemia. May decrease clearance, increase risk of toxicity of **lithium. NSAIDs** may decrease antihypertensive effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase urinary calcium excretion, BUN, serum glucose, calcium, magnesium, creatinine, potassium, uric acid. May decrease serum sodium.

AVAILABILITY (Rx)

Capsules: 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Give with food if GI disturbance occurs.

INDICATIONS/ROUTES/DOSAGE

Edema, Hypertension

PO: ADULTS, ELDERLY: 25–100 mg/day as single dose or in 2 divided doses. **Maximum:** 300 mg/day. **CHILDREN:** 1–2 mg/kg/day as single dose or in 2 divided doses. **Maximum:** 3–4 mg/kg/day or 300 mg/day.

SIDE EFFECTS

Occasional: Fatigue, nausea, diarrhea, abdominal pain, leg cramps, headache. **Rare:** Anorexia, asthenia (loss of strength, energy), rash, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

May result in hyponatremia (drowsiness, dry mouth, increased thirst, lack of energy), severe hyperkalemia (irritability, anxiety, heaviness of legs, paresthesia, hypotension, bradycardia, EKG changes [tented T waves, widening QRS complex, ST segment depression]), particularly in those with renal impairment, diabetes, elderly, severely ill. Agranulocytosis, nephrolithiasis, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline serum electrolytes, particularly check for hypokalemia. Assess serum renal/hepatic function tests. Assess for edema (note location, extent), skin turgor, mucous membranes for hydration status. Assess muscle strength, mental status. Note skin temperature, moisture. Obtain baseline weight. Initiate strict I&O. Note pulse rate, regularity.

INTERVENTION/EVALUATION

Monitor B/P, vital signs, serum electrolytes (particularly potassium), I&O, weight. Watch for changes from initial assessment (hyperkalemia may result in muscle strength changes, tremor, muscle cramps), altered mental status (orientation, alertness, confusion), cardiac arrhythmias. Weigh daily. Note extent of diuresis. Assess lung sounds for rhonchi, wheezing.

PATIENT/FAMILY TEACHING

• Take medication in morning. • Expect increased urinary volume, frequency. • Therapeutic effect takes several days to begin and can last for several days when drug is discontinued. • Avoid prolonged exposure to sunlight. • Report severe, persistent weakness, headache, dry mouth, nausea, vomiting, fever, sore throat, unusual bleeding/bruising. • Avoid excessive intake of food high in potassium, salt substitutes.

trifluoperazine

tri-floo-oh-**per**-a-zeen (Apo-Trifluoperazine, Novo-Trifluzine, PMS-Trifluoperazine)

BLACK BOX ALERT Elderly pts with dementia-related psychosis are at increased risk for death.

Do not confuse trifluoperazine with triflupromazine or trihexyphenidyl.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenothiazine derivative. **CLINICAL:** Antipsychotic, antianxiety (see p. 66C).

T

ACTION

Blocks dopamine at postsynaptic receptor sites. Possesses strong extrapyramidal, antiemetic effects, weak anticholinergic, sedative effects. **Therapeutic Effect:** Suppresses behavioral response in psychosis; reduces locomotor activity, aggressiveness.

PHARMACOKINETICS

Readily absorbed following PO administration. Protein binding: 90%–99%. Metabolized in liver. Excreted in urine. **Half-life:** 24 hrs.

USES

Treatment of schizophrenia, nonpsychotic anxiety. **OFF-LABEL:** Psychotic disorders, behavioral symptoms associated with dementia behavior, psychosis/agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: Severe CNS depression, bone marrow suppression, blood dyscrasias, severe hepatic disease, coma. **Cautions:** Seizure disorder; severe cardiac/renal disease; pts at risk for pneumonia, hypotensive episodes; decreased GI motility; urinary retention; BPH; visual problems; narrow-angle glaucoma; myasthenia gravis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta; is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 2 yrs. **Elderly:** Higher risk of sedative, anticholinergic, extrapyramidal, hypotensive effects.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS, respiratory depression, hypotensive effects. **Extrapyramidal symptom (EPS)–producing medications** may increase extrapyramidal symptoms. **Hypotensive agents** may increase hypotension. **MAOIs, tricyclic antidepressants** may increase anticholinergic, sedative effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **Dong quai, St. John's wort** may increase photosensitization. **FOOD:** None known. **LAB VALUES:** May cause EKG changes.

AVAILABILITY (Rx)

Tablets: 1 mg, 2 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• May give with food to decrease GI effects. • Do not take within 2 hrs of any antacids.

INDICATIONS/ROUTES/DOSAGE

Schizophrenia

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 2–5 mg 1–2 times a day. Range: 15–20 mg/day. **Maximum:** 40 mg/day. **CHILDREN 6–11 YRS:** Initially, 1 mg 1–2 times a day. Maintenance: Up to 15 mg/day.

Nonpsychotic Anxiety

PO: ADULTS, ELDERLY: 1–2 mg 2 times/day. **Maximum:** 6 mg/day. Therapy should not exceed 12 wks.

SIDE EFFECTS

Frequent: Hypotension, dizziness, syncope (occur frequently after first injection, occasionally after subsequent injections, rarely with oral form). **Occasional:** Drowsiness during early therapy, dry mouth, blurred vision, lethargy, constipation, diarrhea, nasal congestion, peripheral edema, urinary retention. **Rare:** Ocular changes, altered skin pigmentation (in those taking high doses for prolonged periods), photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extrapyramidal symptoms appear to be dose-related (particularly high doses) and are divided into 3 categories: akathisia (inability to sit still, tapping of feet); parkinsonian symptoms (mask-like face, tremors, shuffling gait, hypersalivation); acute dys-

tonias: torticollis (neck muscle spasm), opisthotonos (rigidity of back muscles), oculogyric crisis (rolling back of eyes). Dystonic reaction may produce diaphoresis, pallor. Tardive dyskinesia (tongue protrusion, puffing of cheeks, chewing/puckering of the mouth) occurs rarely (may be irreversible). Abrupt withdrawal after long-term therapy may precipitate nausea, vomiting, gastritis, dizziness, tremors. Blood dyscrasias, particularly agranulocytosis, mild leukopenia may occur. May lower seizure threshold.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P for hypotension. Assess for EPS. Monitor WBC for blood dyscrasias. Monitor for fine tongue movement (may be early sign of tardive dyskinesia); tremor, gait changes; abnormal movement in trunk, neck, extremities. Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor target behaviors. Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

• Do not take antacids within 2 hrs of trifluoperazine. • Avoid alcohol. • Avoid excessive exposure to sunlight, artificial light. • Avoid tasks that require alertness, motor skills until response to drug is established (may cause drowsiness). • Rise slowly from lying or sitting position (prevents hypotension).

trihexyphenidyl

tri-hex-ee-**fen**-ih-dill
(PMS-Trihexyphenidyl)

Do not confuse trihexiphenidyl with trifluoperazine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Antiparkinson agent.

ACTION

Blocks central cholinergic receptors (aids in balancing cholinergic and dopaminergic activity). **Therapeutic Effect:** Decreases salivation, relaxes smooth muscle.

USES

Adjunctive treatment for all forms of Parkinson's disease, including postencephalitic, arteriosclerotic, idiopathic types. Controls symptoms of drug-induced extrapyramidal symptoms (EPS).

PRECAUTIONS

Contraindications: None known. **Cautions:** Hyperthyroidism, renal/hepatic impairment, cardiovascular disease, prostatic hyperplasia, obstructive diseases of GI tract, excessive activity during hot weather, exercise. **Pregnancy Category C.**

INTERACTIONS

DRUG: Alcohol, CNS depressants may increase sedative effect. **Amantadine, anticholinergics, MAOIs** may increase anticholinergic effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Elixir: 2 mg/5 ml. **Tablets:** 2 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

• Administer with food, water to decrease GI irritation.

INDICATIONS/ROUTES/DOSAGE

Parkinsonism

PO: ADULTS, ELDERLY: Initially, 1 mg on first day. May increase by 2 mg/day at 3- to 5-day intervals up to 6–10 mg/day

T

(12–15 mg/day in pts with postencephalitic parkinsonism).

Drug-Induced Extrapyramidal Symptoms
PO: ADULTS, ELDERLY: Initially, 1 mg/day. Range: 5–15 mg/day in 3–4 divided doses.

SIDE EFFECTS

◀ALERT▶ Those older than 60 yrs tend to develop mental confusion, disorientation, agitation, psychotic-like symptoms. **Frequent:** Drowsiness, dry mouth. **Occasional:** Blurred vision, urinary retention, constipation, dizziness, headache, muscle cramps. **Rare:** Skin rash, seizures, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction (eczema, pruritus, rash, cardiac arrhythmias, photosensitivity) may occur. Overdosage may vary from CNS depression (sedation, apnea, cardiovascular collapse, death) to severe paradoxical reaction (hallucinations, tremor, seizures).

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Be alert to neurologic effects (headache, lethargy, mental confusion, agitation). Monitor elderly closely for paradoxical reaction. Assess for clinical reversal of symptoms (improvement of tremor of head/hands at rest, mask-like facial expression, shuffling gait, muscular rigidity).

PATIENT/FAMILY TEACHING

• Take after meals or with food. • Do not stop medication abruptly. • Inform physician if GI effects, palpitations, eye pain, rash, fever, heat intolerance occur. • Avoid alcohol, other CNS depressants. • May cause dry mouth, drowsiness. • Avoid tasks that require alertness, motor skills until response to drug is established. • Difficulty urinating, constipation may occur (inform physician if they persist).

trimethoprim

tri-**meth**-oh-prim
(Apo-Trimethoprim, Primsol)

FIXED-COMBINATION(S)

Bactrim, Septra: trimethoprim/sulfamethoxazole (a sulfonamide): 16 mg/80 mg/ml (injection), 40 mg/200 mg/5 ml (suspension), 80 mg/400 mg, 160 mg/800 mg (tablets).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Folate antagonist. **CLINICAL:** Antibacterial.

ACTION

Blocks bacterial biosynthesis of nucleic acids, proteins by interfering with metabolism of folinic acid. **Therapeutic Effect:** Bacteriostatic.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: 42%–46%. Widely distributed, including to CSF. Metabolized in liver. Primarily excreted in urine. Moderately removed by hemodialysis. **Half-life:** 8–10 hrs (increased in renal impairment, newborns; decreased in children).

USES

Treatment of uncomplicated UTI caused by susceptible strains of *E. coli, P. mirabilis, K. pneumoniae.* Treatment of otitis media due to *H. influenzae, S. pneumoniae*. Acute exacerbation of bronchitis in adults, treatment of toxoplasmosis. Treatment of pneumonia caused by *Pneumocystis jiroveci*.

PRECAUTIONS

Contraindications: Megaloblastic anemia due to folic acid deficiency. **Cautions:** Renal/hepatic impairment, pts with folic acid deficiency.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug readily crosses placenta; is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted. May increase incidence of thrombocytopenia.

INTERACTIONS

DRUG: Folate antagonists (e.g., methotrexate) may increase risk of megaloblastic anemia. May increase levels/side effects of **phenytoin. HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum bilirubin, creatinine, AST, ALT.

AVAILABILITY (Rx)

Oral Solution (Primsol): 50 mg/5 ml. **Tablets:** 100 mg.

ADMINISTRATION/HANDLING

PO

• Space doses evenly to maintain constant therapeutic level. • Give without regard to meals (if GI upset occurs, give with food).

INDICATIONS/ROUTES/DOSAGE

Uncomplicated UTI

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 100 mg q12h or 200 mg once daily for 10–14 days. **CHILDREN YOUNGER THAN 12 YRS:** 4–6 mg/kg/day in 2 divided doses for 10 days.

Otitis Media

PO: CHILDREN, 6 MOS AND OLDER: 10 mg/kg/day in divided doses q12h for 10 days.

Pneumocystis jiroveci Pneumonia (PCP)

ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 15–20 mg/kg/day in 4 divided doses for 21 days.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine Clearance	Dosage
Greater than 30 ml/min	No change
15–30 ml/min	50% of normal dose
Less than 15 ml/min	Avoid use

SIDE EFFECTS

Occasional: Nausea, vomiting, diarrhea, decreased appetite, abdominal cramps, headache. **Rare:** Hypersensitivity reaction (pruritus, rash), methemoglobinemia (bluish fingernails, lips, skin; fever; pale skin; sore throat; asthenia [loss of strength, energy]), photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Stevens-Johnson syndrome, erythema multiforme, exfoliative dermatitis, anaphylaxis occur rarely. Hematologic toxicity (thrombocytopenia, neutropenia, leukopenia, megaloblastic anemia) more likely to occur in elderly, debilitated, alcoholics, those with renal impairment or receiving prolonged high dosage.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess hematology baseline reports, serum renal function tests.

INTERVENTION/EVALUATION

Assess skin for rash. Evaluate food tolerance. Monitor serum hematology reports, renal/hepatic function test results. Check for developing signs of hematologic toxicity (pallor, fever, sore throat, malaise, bleeding/bruising).

PATIENT/FAMILY TEACHING

• Space doses evenly. • Complete full length of therapy (10–14 days). • May take on empty stomach or with food if stomach upset occurs. • Avoid sun, ultraviolet light; use sunscreen, wear pro-

T

tective clothing. • Immediately report pallor, fatigue, sore throat, bruising/bleeding, discoloration of skin, fever, rash to physician.

triptorelin

trip-toe-**rel**-in
(Trelstar, Trelstar Depot, Trelstar LA)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Gonadotropin-releasing hormone analogue.
CLINICAL: Antineoplastic.

ACTION

Through a negative feedback mechanism, inhibits gonadotropin hormone secretion. Circulating levels of luteinizing hormone (LH), follicle-stimulating hormone (FSH), testosterone, estradiol rise initially, then subside with continued therapy. **Therapeutic Effect:** Suppresses growth of abnormal prostate tissue.

USES

Treatment of advanced prostate cancer (alternate to orchiectomy or estrogen administration). **OFF-LABEL:** Treatment of endometriosis, precocious puberty, uterine sarcoma.

PRECAUTIONS

Contraindications: Hypersensitivity to luteinizing hormone-releasing hormone (LHRH), LHRH agonists, pregnancy. **Cautions:** None known.

T

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May alter serum pituitary-gonadal function test results. May cause transient increase in serum testosterone, usually during first wk of treatment.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Trelstar Depot): 3.75 mg. **Injection, Powder for Reconstitution (Trelstar LA):** 11.25 mg, 22.5 mg.

ADMINISTRATION/HANDLING

IM

• Reconstitute with 2 ml Sterile Water for Injection. • Administer into large muscle mass, esp. gluteus muscle, alternating injection sites.

INDICATIONS/ROUTES/DOSAGE

Prostate Cancer

IM *(Trelstar Depot)*: ADULTS, ELDERLY: 3.75 mg once q28days.
IM *(Trelstar LA)*: ADULTS, ELDERLY: 11.25 mg q84days, 22.5 mg q24wks.

SIDE EFFECTS

Frequent (Greater Than 5%): Hot flashes, skeletal pain, headache, impotence. **Occasional (5%–2%):** Insomnia, vomiting, leg pain, fatigue. **Rare (Less Than 2%):** Dizziness, emotional lability, diarrhea, urinary retention, UTI, anemia, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bladder outlet obstruction, skeletal pain, hematuria, spinal cord compression with weakness, paralysis of lower extremities may occur.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Obtain serum testosterone, prostate-specific antigen (PSA), prostatic acid phosphatase (PAP) levels periodically during therapy. Serum testosterone, PAP levels should increase during first wk of therapy. Testosterone level then should decrease to baseline level or less within 2 wks, PAP level within 4 wks. Monitor pt closely for

worsening signs and symptoms of prostatic cancer, esp. during first wk of therapy (due to transient increase in testosterone).

PATIENT/FAMILY TEACHING

• Do not miss monthly injections. • May experience increased skeletal pain, blood in urine, urinary retention initially (subsides within 1 wk). • Hot flashes may occur. • Inform physician if tachycardia, persistent nausea/vomiting, numbness of arms/legs, pain/swelling of breasts, difficulty breathing, infection at injection site occurs.

trospium

tro-spee-um
(Sanctura, Sanctura XR, Trosec)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Antispasmotic.

ACTION

Antagonizes effect of acetylcholine on muscarinic receptors, producing parasympatholytic action. **Therapeutic Effect:** Reduces smooth muscle tone in bladder.

PHARMACOKINETICS

Minimally absorbed after PO administration. Protein binding: 50%–85%. Distributed in plasma. Excreted mainly in feces and, to lesser extent, in urine. **Half-life:** 20 hrs.

USES

Treatment of overactive bladder with symptoms of urge urinary incontinence, urgency, urinary frequency.

PRECAUTIONS

Contraindications: Gastric retention, uncontrolled angle-closure glaucoma, urinary retention. **Cautions:** Decreased GI motility, renal/hepatic impairment, obstructive GI disorders, ulcerative colitis, intestinal atony, myasthenia gravis, narrow-angle glaucoma, significant bladder obstruction, Alzheimer's disease, hot weather/exercise, elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Higher incidence of dry mouth, constipation, dyspepsia, UTI, urinary retention in those 75 yrs and older.

INTERACTIONS

DRUG: **Other anticholinergic agents** increase severity, frequency of side effects, may alter absorption of other drugs due to anticholinergic effects on GI motility. **Morphine, procainamide, tenofovir, vancomycin** may increase concentration. **HERBAL:** None significant. **FOOD:** **High-fat meals** may reduce absorption. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Sanctura): 20 mg. **Capsules, Extended-Release (Sanctura XR):** 60 mg.

ADMINISTRATION/HANDLING

PO

• Store at room temperature. • Give at least 1 hr before meals or on an empty stomach. • Do not crush, chew tablet, extended-release capsule; swallow whole. • Administer tablets at bedtime, capsules in morning with full glass of water, 1 hr before eating.

INDICATIONS/ROUTES/DOSAGE

Overactive Bladder

PO: ADULTS: 20 mg twice daily. **ELDERLY 75 YRS AND OLDER:** 20 mg once daily at bedtime. **Extended-release:** 60 mg once daily.

Dosage in Renal Impairment

For pts with creatinine clearance less than 30 ml/min, dosage reduced to 20

mg once daily at bedtime. Extended-release not recommended.

SIDE EFFECTS

Frequent (20%): Dry mouth. **Occasional (10%–4%):** Constipation, headache. **Rare (Less Than 2%):** Fatigue, upper abdominal pain, dyspepsia (heartburn, indigestion, epigastric pain), flatulence, dry eyes, urinary retention.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in severe anticholinergic effects, characterized by nervousness, restlessness, nausea, vomiting, confusion, diaphoresis, facial flushing, hypertension, hypotension, respiratory depression, irritability, lacrimation. Supraventricular tachycardia and hallucinations occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for presence of dysuria, urinary urgency, frequency, incontinence.

INTERVENTION/EVALUATION

Monitor for symptomatic relief. Monitor I&O; palpate bladder for retention. Monitor daily pattern of bowel activity, stool consistency. Dry mouth may be relieved by sips of tepid water.

PATIENT/FAMILY TEACHING

- Report nausea, vomiting, diaphoresis, increased salivary secretions, palpitations, severe abdominal pain.

U

ustekinumab

yoo-ste-**kin**-ue-mab
(Stelara)
Do not confuse Stelara with Aldara, or ustekinumab with infliximab or rituximab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antipsoriasis agent.

ACTION

Strongly binds with cellular components involved in responses to inflammation and immune system, thereby decreasing likelihood of aggravating psoriatic eruptions. **Therapeutic Effect:** Significantly slows growth, migration of circulating total lymphocytes (predominant in psoriatic lesions).

PHARMACOKINETICS

Following subcutaneous injections, clearance is affected by body weight, is not affected by gender or race. Degraded into small peptides and amino acids via catabolic pathways. Serum concentration reaches steady state at 28 wks. **Half-life:** 10–126 days.

USES

Treatment of adults 18 yrs or older with moderate to severe plaque psoriasis who are candidates for systemic therapy or phototherapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of chronic infection, recurrent infection, active tuberculosis, prior malignancy, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Not indicated for use in this pt population. **Elderly:** Age-related increased incidence of infection requires cautious use.

INTERACTIONS:

DRUG: Immunosuppressive agents increase risk of infection. **Live virus vaccine** decreases immune response. **Abciximab, trastuzumab** may increase concentration/effects. **HERBAL: Echina-**

cea may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase lymphocyte count.

AVAILABILITY (Rx)

Injection Solution: 45 mg/0.5 ml.

ADMINISTRATION/HANDLING

Subcutaneous

• Do not inject into areas where skin is tender, bruised, erythematous, indurated. • Administer into thigh, abdomen, buttocks, upper arm. • Refrigerate unopened vial. • Solution appears colorless to light yellow. Discard if solution contains more than a few small translucent or white particles or is cloudy.

INDICATIONS/ROUTES/DOSAGE

Psoriasis

Subcutaneous: ADULTS, ELDERLY WEIGHING 100 KG OR LESS: Initially, 45 mg, then 45 mg 4 wks later, followed by 45 mg every 12 wks. **WEIGHING MORE THAN 100 KG:** Initially, 90 mg, then 90 mg 4 wks later, followed by 90 mg every 12 wks.

SIDE EFFECTS

Occasional (8%–4%): Nasopharyngitis, upper respiratory tract infection, headache. **Rare (3%–1%):** Fatigue, diarrhea, back pain, dizziness, pruritus, injection site erythema, myalgia, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Worsening of psoriasis, thrombocytopenia, malignancies, serious infections (cellulitis, diverticulitis, gastroenteritis, pneumonia, osteomyelitis, urinary tract infections, postoperative wound infection) have been noted. Reversible posterior leukoencephalopathy syndrome (headache, seizures, confusion, visual disturbances) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pts should not receive live vaccines during treatment, 1 yr prior to initiating treatment, or 1 yr following discontinuation of treatment. Inform pt of duration of treatment and required monitoring procedures. Assess skin prior to therapy; document extent and location of psoriasis lesions. Test pt for tuberculosis infection prior to initiating treatment.

INTERVENTION/EVALUATION

Closely monitor for signs/symptoms of active tuberculosis during and after treatment. Assess skin throughout therapy for evidence of improvement of psoriasis lesions. Monitor for worsening of lesions.

PATIENT/FAMILY TEACHING

• If appropriate, pt may self-inject after proper training in preparation and injection technique. • Inform physician if signs of infection occurs. • If new diagnosis of malignancy occurs, inform physician of current treatment with ustekinumab.

valacyclovir

TOP 200

val-a-**sye**-kloe-veer
(Apo-Valacyclovir ✤, Valtrex)
Do not confuse valacyclovir with acyclovir or valganciclovir, or Valtrex with Valcyte or Zovirax.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiviral.
CLINICAL: Antiherpetic agent (see p. 70C).

ACTION

Converted to acyclovir triphosphate, becoming part of viral DNA chain. **Therapeutic Effect:** Interferes with DNA synthesis, replication of herpes simplex virus (HSV), varicella-zoster virus (VZV).

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 13%–18%. Rapidly converted by hydrolysis to active compound

V

acyclovir. Widely distributed to tissues, body fluids (including CSF). Primarily eliminated in urine. Removed by hemodialysis. **Half-life:** (acyclovir) 2.5–3.3 hrs (increased in renal impairment).

USES

Treatment of herpes zoster (shingles) in immunocompetent adults. Treatment of initial and recurrent genital herpes in immunocompetent adults. Prevention of recurrent genital herpes and reduction of heterosexual transmission of genital herpes. Suppression of genital herpes in HIV-infected pts. Treatment of cold sores, chickenpox in immunocompetent children. **OFF-LABEL:** Prophylaxis and treatment of cancer-related HSV, VZV.

PRECAUTIONS

Contraindications: Hypersensitivity to or intolerance of acyclovir, valacyclovir, or their components. **Cautions:** Renal impairment, concurrent use of nephrotoxic agents.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cross placenta. May be distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Caplets: 500 mg, 1,000 mg. **Tablets:** 500 mg, 1,000 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • If GI upset occurs, give with meals.

INDICATIONS/ROUTES/DOSAGE

Herpes Zoster (Shingles)

PO: ADULTS, ELDERLY: 1 g 3 times a day for 7 days.

Herpes Simplex (Cold Sores)

PO: ADULTS, ELDERLY: 2 g twice a day for 1 day (separate by 12 hrs).

Initial Episode of Genital Herpes

PO: ADULTS, ELDERLY: 1 g twice a day for 10 days.

Recurrent Episodes of Genital Herpes

PO: ADULTS, ELDERLY: 500 mg twice a day for 3 days.

Suppressive Therapy of Genital Herpes in HIV-Infected Pts

PO: ADULTS, ELDERLY: 500 mg twice a day.

Prevention of Genital Herpes

PO: ADULTS, ELDERLY: 500–1,000 mg/day.

Chickenpox

PO: CHILDREN 2–17 YRS: 20 mg/kg/dose 3 times/day for 5 days. **Maximum:** 1 g/dose.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance. **HD:** Give dose postdialysis.

Cold Sores/Herpes Zoster

Creatinine Clearance	Herpes Zoster	Cold Sores
30–49 ml/min	1 g q12h	1 g q12h × 2 doses
10–29 ml/min	1 g q24h	500 mg q12h × 2 doses
Less than 10 ml/min	500 mg q24h	500 mg as single dose

Genital Herpes

Creatinine Clearance	Initial Episode	Recurrent Episode	Suppressive Therapy
10–29 ml/min	1 g q24h	500 mg q24h	500 mg q24–48h
Less than 10 ml/min	500 mg q24h	500 mg q24h	500 mg q24–48h

SIDE EFFECTS

Frequent: Herpes zoster (17%–10%): Nausea, headache. **Genital herpes (17%):** Headache. **Occasional: Herpes zoster (7%–3%):** Vomiting, diarrhea, constipation (50 yrs and older), asthenia (loss of strength, energy), dizziness (50 yrs and older). **Genital herpes (8%–3%):** Nausea, diarrhea, dizziness. **Rare: Herpes zoster (3%–1%):** Abdominal pain, anorexia. **Genital herpes (3%–1%):** Asthenia (loss of strength, energy), abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia, thrombocytopenia, renal failure occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly to valacyclovir, acyclovir. Tissue cultures for herpes zoster, herpes simplex should be done before giving first dose (therapy may proceed before results are known). Assess medical history, esp. advanced HIV infection, bone marrow or renal transplantation, renal/hepatic impairment.

INTERVENTION/EVALUATION

Evaluate cutaneous lesions. Monitor serum renal/hepatic function tests, CBC, urinalysis. Provide analgesics, comfort measures for herpes zoster (esp. exhausting to elderly). Encourage fluids. Keep pt's fingernails short, hands clean.

PATIENT/FAMILY TEACHING

• Drink adequate fluids. • Do not touch lesions with fingers to avoid spreading infection to new site. • **Genital herpes:** Continue therapy for full length of treatment. • Space doses evenly. • Avoid sexual intercourse during duration of lesions to prevent infecting partner. • Valacyclovir does not cure herpes. • Notify physician if lesions recur or do not improve. • Pap smears should be done at least annually due to increased risk of cervical cancer in women with genital herpes. • Initiate treatment at first sign of recurrent episode of genital herpes or herpes zoster (early treatment within first 24–48 hrs is imperative for therapeutic results).

valganciclovir

val-gan-**sye**-kloh-veer
(Valcyte)

BLACK BOX ALERT May adversely affect spermatogenesis, fertility. Risk for granulocytopenia, anemia, thrombocytopenia.

Do not confuse Valcyte with Valium or Valtrex, or valganciclovir with valacyclovir.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic nucleoside. **CLINICAL:** Antiviral (see p. 70C).

ACTION

Competes with viral DNA esterases, is incorporated directly into growing viral DNA chains. **Therapeutic Effect:** Interferes with DNA synthesis, viral replication.

PHARMACOKINETICS

Well absorbed, rapidly converted to ganciclovir by intestinal mucosal cells and hepatocytes. Widely distributed including CSF, ocular tissue. Slowly metabolized intracellularly. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** Ganciclovir: 4 hrs (increased in renal impairment).

USES

Adults: Treatment of cytomegalovirus (CMV) retinitis in AIDS. Prevention of CMV disease in high-risk renal, cardiac, renal-pancreas transplant pts. **Children:** Prevention of CMV disease in high-risk renal and cardiac transplant pts.

V

PRECAUTIONS

Contraindications: Hypersensitivity to acyclovir, ganciclovir. **Cautions:** Extreme caution in children because of long-term carcinogenicity, reproductive toxicity. Renal impairment, concurrent nephrotoxic medications, preexisting bone marrow suppression or cytopenias, history of cytopenic reactions to other drugs; elderly (at greater risk for renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Effective contraception should be used during therapy; valganciclovir should not be used during pregnancy. Avoid breast-feeding during therapy; may be resumed no sooner than 72 hrs after last dose of valganciclovir. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. May increase risk of toxicity of **didanosine, mycophenolate. Probenecid** may decrease renal clearance, increase concentration. **Zidovudine (AZT)** may increase risk of hematologic toxicity. **HERBAL:** None significant. **FOOD:** **All foods** maximize drug bioavailability. **LAB VALUES:** May decrease Hgb, creatinine clearance, serum creatinine, platelet count, absolute neutrophil count.

AVAILABILITIES (Rx)

Powder for Oral Solution: 50 mg/ml (100 ml).

Tablets: 450 mg.

ADMINISTRATION/HANDLING

PO

• Do not break, crush tablets; swallow whole (potential carcinogen). • Avoid contact with skin. • Wash skin with soap, water if contact occurs. • Give with food. • Store oral suspension in refrigerator. Discard after 49 days.

INDICATIONS/ROUTES/DOSAGE

Cytomegalovirus (CMV) Retinitis

PO: ADULTS: Initially, 900 mg (two 450-mg tablets) twice daily for 21 days. Maintenance: 900 mg once daily.

Prevention of CMV After Transplant

PO: ADULTS, ELDERLY: 900 mg once daily beginning within 10 days of transplant and continuing until 100 days (heart, kidney, or pancreas transplant) or 200 days (kidney transplant) post-transplant. **CHILDREN 4 MOS–16 YRS:** Once daily based on body surface area (BSA) and creatinine clearance (CrCl) using formula: (Dose = 7 × BSA × CrCl). **Maximum:** 900 mg/day.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine Clearance	Induction Dosage	Maintenance Dosage
60 ml/min or higher	900 mg twice daily	900 mg once daily
40–59 ml/min	450 mg twice daily	450 mg once daily
25–39 ml/min	450 mg once daily	450 mg every 2 days
10–24 ml/min	450 mg every 2 days	450 mg twice a wk

SIDE EFFECTS

Frequent (16%–9%): Diarrhea, neutropenia, headache. **Occasional (8%–3%):** Nausea. **Rare (Less Than 3%):** Insomnia, paresthesia, vomiting, abdominal pain, fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity, including severe neutropenia (most common), anemia, thrombocytopenia, may occur. Retinal detachment occurs rarely. Overdose may result in renal toxicity. May decrease sperm production, fertility.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate hematologic, serum chemistry baselines, serum creatinine.

INTERVENTION/EVALUATION

Monitor I&O, ensure adequate hydration (minimum 1,500 ml/24 hrs). Diligently evaluate CBC for decreased WBCs, Hgb, Hct, decreased platelets. Question pt regarding vision, therapeutic improvement, complications.

PATIENT/FAMILY TEACHING

• Valganciclovir provides suppression, not cure, of CMV retinitis. • Frequent blood tests are necessary during therapy because of toxic nature of drug. • Ophthalmologic exam q4–6wks during treatment is advised. • Report any new symptom promptly. • May temporarily or permanently inhibit sperm production in men, suppress fertility in women. • Barrier contraception should be used during and for 90 days after therapy because of mutagenic potential. • Avoid handling broken/crushed tablets, oral solution. • Notify physician of fever, chills, unusual bleeding/bruising.

valproic acid

TOP 200

val-**pro**-ick **as**-id

(Apo-Divalproex ✱, Depacon, Depakene, Depakote, Depakote ER, Depakote Sprinkle, Novo-Divalproex ✱, Stavzor)

BLACK BOX ALERT Embryo, fetal neural tube defects (spina bifida) have occurred. Life-threatening pancreatitis, complete hepatic failure have occurred.

Do not confuse Depakene with Depakote.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Carboxylic acid derivative. **CLINICAL:** Anticonvulsant, antimanic, antimigraine (see p. 36C).

ACTION

Directly increases concentration of inhibitory neurotransmitter gamma-aminobutyric acid (GABA). **Therapeutic Effect:** Produces anticonvulsant effect, stabilizes mood, prevents migraine headache.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 80%–90%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 9–16 hrs (may be increased in hepatic impairment, elderly, children younger than 18 mos).

USES

Treatment of simple and complex absence (petit mal) seizures (monotherapy preferred due to unpredictable interactions, increased risk of hepatotoxicity). Adjunctive therapy of multiple seizures (**Stavzor**). Treatment of manic episodes with bipolar disorders, complex partial seizures. Prophylaxis of migraine headaches. **OFF-LABEL:** Status epilepticus.

PRECAUTIONS

Contraindications: Active hepatic disease, urea cycle disorders. **Cautions:** History of hepatic disease, bleeding abnormalities, pts at high risk for suicide.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta; is distributed in breast milk. **Pregnancy Category D. Children:** Increased risk of hepatotoxicity in those younger than 2 yrs. **Elderly:** No age-related precautions, but lower dosages recommended.

INTERACTIONS

DRUG: Carbapenems (e.g., meropenem), CYP3A4 inducers (e.g., carbamazepine, phenytoin) may decrease concentration/effects. May alter effects of **warfarin**. May increase concentration of **lamotrigine. Topiramate** may increase risk of hyperammonemia. **HERBAL: Evening primrose** may decrease seizure

V

threshold. **FOOD**: None known. **LAB VALUES**: May increase serum LDH, bilirubin, AST, ALT. **Therapeutic serum level:** 50–100 mcg/ml; **toxic serum level:** greater than 100 mcg/ml.

AVAILABILITY (Rx)

Capsules (Depakene): 250 mg. **Capsules, Sprinkle (Depakote Sprinkle):** 125 mg. **Injection, Solution (Depacon):** 100 mg/ml. **Syrup (Depakene):** 250 mg/5 ml.

Capsules, Delayed-Release (Stavzor): 125 mg, 250 mg, 500 mg. **Tablets, Delayed-Release (Depakote):** 125 mg, 250 mg, 500 mg. **Tablets, Extended-Release (Depakote ER):** 250 mg, 500 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute each single dose with at least 50 ml D_5W, 0.9% NaCl, or lactated Ringer's.

Rate of Administration • Infuse over 60 min at rate of 20 mg/min or less. • Alternatively, single doses of up to 45 mg/kg given over 5–10 min (1.5–6 mg/kg/min).

Storage • Store vials at room temperature. • Diluted solutions stable for 24 hrs. • Discard unused portion.

PO

• May give without regard to food. Do not mix oral solution with carbonated beverages (may cause mouth/throat irritation). • May sprinkle capsule (Depakote Sprinkle) contents on applesauce and give immediately (do not chew sprinkle beads). • Give delayed-release/extended-release tablets whole. Do not crush, chew, open delayed-release capsule (Stavzor). • Regular-release and delayed-release formulations usually given in 2–4 divided doses/day. Extended-release formulation (Depakote ER) usually given once daily.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

Seizures

PO: ADULTS, ELDERLY, CHILDREN 10 YRS AND OLDER: Initially, 10–15 mg/kg/day in 1–3 divided doses. May increase by 5–10 mg/kg/day at weekly intervals up to 30–60 mg/kg/day. Usual adult dosage: 1,000–2,500 mg/day. ***(Stavzor)*:** Initially, 10–15 mg/kg/day, may increase by 5–10 mg/kg/day at 1-wk intervals to achieve desired response. **Maximum:** 60 mg/kg/day.

IV: ADULTS, ELDERLY, CHILDREN: Same as oral dose but given q6h.

Manic Episodes

PO *(Depakote)*: ADULTS, ELDERLY: Initially, 750–1,500 mg/day in divided doses. **Maximum:** 60 mg/kg/day.

PO *(Extended-Release [Depakote ER])*: Initially, 25 mg/kg/day once daily. **Maximum:** 60 mg/kg/day. ***(Delayed-Release [Stavzor])*:** Initially, 750 mg/day in divided dose. Titrate to lowest therapeutic dose. **Maximum:** 60 mg/kg/day.

Prevention of Migraine Headaches

PO *(Extended-Release [Depakote ER])*: ADULTS, ELDERLY: Initially, 500 mg/day for 7 days. May increase up to 1,000 mg/day.

PO *(Delayed-Release [Depakote])*: ADULTS, ELDERLY: Initially, 250 mg twice a day. May increase up to 1,000 mg/day. ***(Stavzor)*:** 250 mg twice a day. May increase to 1,000 mg/day.

SIDE EFFECTS

Frequent: Epilepsy: Abdominal pain, irregular menses, diarrhea, transient alopecia, indigestion, nausea, vomiting, tremors, fluctuations in body weight. **Mania (22%–19%):** Nausea, drowsiness. **Occasional: Epilepsy:** Constipation, dizziness, drowsiness, headache, skin rash, unusual excitement, restlessness. **Mania (12%–6%):** Asthenia (loss of strength, energy), abdominal pain, dyspepsia (heartburn, indigestion, epigastric distress), rash. **Rare: Epilepsy:** Mood changes, diplopia, nystagmus,

V

spots before eyes, unusual bleeding/bruising.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity may occur, particularly in first 6 mos of therapy. May be preceded by loss of seizure control, malaise, weakness, lethargy, anorexia, vomiting rather than abnormal serum hepatic function test results. Blood dyscrasias may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Anticonvulsant: Review history of seizure disorder (intensity, frequency, duration, level of consciousness). Initiate safety measures, quiet dark environment. CBC, platelet count should be performed before and 2 wks after therapy begins, then 2 wks following maintenance dose. Obtain baseline hepatic function tests. **Antimanic:** Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content. **Antimigraine:** Question pt regarding onset, location, duration of migraine, possible precipitating symptoms.

INTERVENTION/EVALUATION

Monitor serum hepatic function tests, bilirubin, ammonia, CBC, platelets. **Anticonvulsant:** Observe frequently for recurrence of seizure activity. Monitor serum hepatic function tests, CBC, platelet count. Assess skin for ecchymoses, petechiae. Monitor for clinical improvement (decrease in intensity/frequency of seizures). **Antimanic:** Question for suicidal ideation. Assess for therapeutic response (interest in surroundings, increased ability to concentrate, relaxed facial expression). **Antimigraine:** Evaluate for relief of migraine headache and resulting photophobia, phonophobia, nausea, vomiting. **Therapeutic serum level:** 50–100 mcg/ml; **toxic serum level:** greater than 100 mcg/ml.

PATIENT/ FAMILY TEACHING

• Do not abruptly discontinue medication after long-term use (may precipitate seizures). • Strict maintenance of drug therapy is essential for seizure control. • Drowsiness usually disappears during continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Carry identification card, bracelet that notes anticonvulsant therapy. • Inform physician if nausea, vomiting, lethargy, altered mental status, weakness, loss of appetite, abdominal pain, yellowing of skin, unusual bruising/bleeding occurs. • Report if seizure control worsens, suicidal ideation (depression, unusual changes in behavior, suicidal thoughts) occurs.

valsartan

TOP 200

val-**sar**-tan
(Diovan)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse Diovan with Zyban, or valsartan with losartan or Valstar.

FIXED-COMBINATION(S)

Diovan HCT: valsartan/hydrochlorothiazide (a diuretic): 80 mg/12.5 mg, 160 mg/12.5 mg, 160 mg/25 mg, 320 mg/12.5 mg, 320 mg/25 mg. **Exforge:** valsartan/amlodipine (a calcium channel blocker): 160 mg/5 mg, 160 mg/10 mg, 320 mg/5 mg, 320 mg/10 mg. **Exforge HCT:** valsartan/amlodipine (a calcium channel blocker)/hydrochlorothiazide (a diuretic): 160 mg/5 mg/12.5 mg, 160 mg/5 mg/25 mg, 160 mg/10 mg/12.5 mg, 160 mg/10 mg/25 mg, 320 mg/10 mg/25 mg. **Valturna:** valsartan/aliskiren (a direct renin inhibitor): 160 mg/150 mg, 320 mg/300 mg.

V

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive (see p. 10C).

ACTION

Potent vasodilator. Blocks vasoconstrictor, aldosterone-secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT_1 receptors. **Therapeutic Effect:** Produces vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Poorly absorbed after PO administration. Food decreases peak plasma concentration. Protein binding: 95%. Metabolized in liver. Recovered primarily in feces and, to lesser extent, in urine. Unknown if removed by hemodialysis. **Half-life:** 6 hrs.

USES

Treatment of hypertension alone or in combination with other antihypertensives. Treatment of heart failure. Reduce mortality in high-risk pts (left ventricular failure/dysfunction) following MI.

PRECAUTIONS

Contraindications: None known. **Cautions:** Concurrent use of potassium-sparing diuretics or potassium supplements, mild to severe hepatic impairment, unstented bilateral/unilateral renal artery stenosis, renal impairment, significant aortic/mitral stenosis, heart failure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **NSAIDs** may decrease antihypertensive effect. **Potassium-sparing drugs, potassium supplements** may increase serum potassium. **Diuretics** may produce additive hypotensive effects. **HERBAL:** **Ginger, ginseng, licorice** may worsen hypertension. **Black cohosh, periwinkle** may increase antihypertensive effects. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, BUN, AST, ALT, creatinine, potassium. May decrease Hgb, Hct, WBC.

AVAILABILITY (Rx)

Tablets: 40 mg, 80 mg, 160 mg, 320 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 80–160 mg/day in pts who are not volume depleted. **Maximum:** 320 mg/day. **CHILDREN 6–16 YRS:** Initially, 1.3 mg/kg once a day (**Maximum:** 40 mg). May increase up to 2.7 mg/kg once a day (**Maximum:** 160 mg/day).

CHF

PO: ADULTS, ELDERLY: Initially, 40 mg twice a day. May increase up to 160 mg twice a day. **Maximum:** 320 mg/day.

Post-MI

PO: ADULTS, ELDERLY: May initiate 12 hrs or longer following MI. Initially, 20 mg twice a day. May increase within 7 days to 40 mg twice a day. May further increase up to target dose of 160 mg twice a day.

SIDE EFFECTS

Rare (2%–1%): Insomnia, fatigue, heartburn, abdominal pain, dizziness, headache, diarrhea, nausea, vomiting, arthralgia, edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdosage may manifest as hypotension, tachycardia. Bradycardia occurs

less often. Viral infection, upper respiratory tract infection (cough, pharyngitis, sinusitis, rhinitis) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated. Question for possibility of pregnancy. Assess medication history (esp. diuretic). Question for history of hepatic/renal impairment, renal artery stenosis, history of severe CHF. Obtain baseline chemistries, blood counts.

INTERVENTION/EVALUATION

Maintain hydration (offer fluids frequently). Assess for evidence of upper respiratory infection. Monitor serum electrolytes, renal/hepatic function tests, Hgb, Hct, urinalysis, B/P, pulse. Observe for symptoms of hypotension.

PATIENT/ FAMILY TEACHING

• Pts should take measures to avoid pregnancy • Inform physician as soon as possible if pregnancy occurs. • Report any sign of infection (sore throat, fever). • Do not stop taking medication. • Report swelling of extremities, chest pain, palpitations.

vancomycin

van-koe-**mye**-sin
(Vancocin)

Do not confuse IV vancomycin with Invanz, or vancomycin with clindamycin, gentamicin, tobramycin, or Vibramycin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic glycopeptide antibiotic. **CLINICAL:** Antibiotic.

ACTION

Binds to bacterial cell walls, altering cell membrane permeability, inhibiting RNA synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

PO: Poorly absorbed from GI tract. Primarily eliminated in feces. **Parenteral:** Widely distributed (except CSF). Protein binding: 10%–50%. Primarily excreted unchanged in urine. Not removed by hemodialysis. **Half-life:** 4–11 hrs (increased in renal impairment).

USES

Systemic: Treatment of infections caused by staphylococcal, streptococcal spp. bacteria. **PO:** Treatment of antibiotic colitis, pseudomembranous colitis, antibiotic-associated diarrhea produced by *C. difficile* staphylococcal enterocolitis. **OFF-LABEL:** Treatment of infections caused by gram-positive organisms in pts with serious allergies to beta-lactam antibiotics; treatment of beta-lactam-resistant gram-positive infections.

PRECAUTIONS

Contraindications: Preexisting hearing impairment. **Cautions:** Renal dysfunction; concurrent therapy with other ototoxic, nephrotoxic medications.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta. Unknown if distributed in breast milk. **Pregnancy Category C (injection), B (PO). Children:** Close monitoring of serum levels recommended in premature neonates, young infants. **Elderly:** Age-related renal impairment may increase risk of ototoxicity, nephrotoxicity; dosage adjustment recommended.

INTERACTIONS

DRUG: Aminoglycosides, amphotericin B, cisplatin may increase risk of ototoxicity, nephrotoxicity of parenteral vancomycin. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May in-

V

crease BUN. **Therapeutic peak serum level:** (Not routinely obtained) 20–40 mcg/ml; **therapeutic trough serum level:** 10–20 mcg/ml. **Toxic peak serum level:** greater than 40 mcg/ml; **toxic trough serum level:** greater than 20 mcg/ml.

AVAILABILITY (Rx)

Capsules (Vancocin): 125 mg, 250 mg. **Infusion (Premix [Vancocin HCl]):** 500 mg/100 ml, 1 g/200 ml. **Injection, Powder for Reconstitution (Vancocin HCl):** 500 mg, 750 mg, 1 g.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Give by intermittent IV infusion (piggyback) or continuous IV infusion. Do not give IV push (may result in exaggerated hypotension).

Reconstitution • For intermittent IV infusion (piggyback), reconstitute each 500-mg vial with 10 ml Sterile Water for Injection (20 ml for 1-g vial) to provide concentration of 50 mg/ml. • Further dilute with D_5W or 0.9% NaCl to final concentration not to exceed 5 mg/ml.

Rate of Administration • Administer over 60 min or longer (30 min for each 500 mg recommended). • Monitor B/P closely during IV infusion.

Storage • Reconstituted vials are stable for 14 days at room temperature or if refrigerated. • Diluted solutions are stable for 14 days if refrigerated or 7 days at room temperature. • Discard if precipitate forms.

PO

• May give with food. • Powder for injection may be reconstituted and diluted for oral administration.

IV INCOMPATIBILITIES

Albumin, amphotericin B complex (Abelcet, AmBisome, Amphotec), aztreonam (Azactam), cefazolin (Ancef), cefepime (Maxipime), cefotaxime (Claforan), cefotetan (Cefotan), cefoxitin (Mefoxin), ceftazidime (Fortaz), ceftriaxone (Rocephin), cefuroxime (Zinacef), foscarnet (Foscavir), heparin, idarubicin (Idamycin), nafcillin (Nafcil), piperacillin and tazobactam (Zosyn), ticarcillin and clavulanate (Timentin).

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium gluconate, diltiazem (Cardizem), hydromorphone (Dilaudid), insulin, lipids, lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, potassium chloride, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Usual Parenteral Dosage

IV: ADULTS, ELDERLY: 10–20 mg/kg/dose q8–12h. Dosage requires adjustment in renal impairment. **CHILDREN OLDER THAN 1 MO:** 10 mg/kg/dose q6h. **NEONATES:** 15 mg/kg q24h up to 10–15 mg/kg/dose q6–8h.

Staphylococcal Enterocolitis, Antibiotic-Associated Pseudomembranous Colitis Caused by *Clostridium difficile*

PO: ADULTS, ELDERLY: 125–250 mg 4 times a day for 7–10 days. **CHILDREN:** 40 mg/kg/day in 3–4 divided doses for 7–10 days. **Maximum:** 2 g/day.

Dosage in Renal Impairment

After loading dose, subsequent dosages and frequency are modified based on creatinine clearance, severity of infection, and serum concentration of drug.

SIDE EFFECTS

Frequent: PO: Bitter/unpleasant taste, nausea, vomiting, mouth irritation (with oral solution). **Rare: Parenteral:** Phlebitis, thrombophlebitis, pain at peripheral IV site, dizziness, vertigo, tinnitus, chills, fever, rash, necrosis with extravasation. **PO:** Rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Nephrotoxicity (change in amount/frequency of urination, nausea, vomiting, increased thirst, anorexia), ototoxicity

(temporary or permanent hearing loss) may occur. "Red man syndrome" or "red neck syndrome" is common adverse reaction characterized by pruritus, urticaria, erythema, angioedema, tachycardia, hypotension, myalgia, maculopapular rash (usually appears on face, neck, upper torso). Cardiovascular toxicity (cardiac depression, arrest) occurs rarely. Onset usually occurs within 30 min of start of infusion, resolves within hrs following infusion. May result from too-rapid rate of infusion.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Avoid other ototoxic, nephrotoxic medications if possible. Obtain culture, sensitivity test before giving first dose (therapy may begin before results are known).

INTERVENTION/EVALUATION

Monitor serum renal function tests, I&O. Assess skin for rash. Check hearing acuity, balance. Monitor B/P carefully during infusion. Evaluate IV site for phlebitis (heat, pain, red streaking over vein). **Therapeutic serum level: peak:** 20–40 mcg/ml; **trough:** 10–20 mcg/ml. **Toxic serum level: peak:** greater than 40 mcg/ml; **trough:** greater than 20 mcg/ml.

PATIENT/ FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • Notify physician in event of tinnitus, rash, signs/symptoms of nephrotoxicity. • Lab tests are important part of total therapy.

vandetanib

van-**det**-ah-nib
(Caprelsa)

BLACK BOX ALERT Can prolong QT interval (torsade de pointes and sudden cardiac death reported). Do not use in pts with hypokalemia, hypocalcemia, hypomagnesemia, congenital long QT syndrome. If medication that prolongs QT interval is needed, more frequent EKG monitoring is recommended. EKGs should be obtained during wks 2–4 and wks 8–12 after starting therapy and 3 mos thereafter. Any dose reduction or interruption related to QT prolongation greater than 2 wks must have frequent EKG monitoring as noted above. Only prescribers and pharmacies certified with restricted distribution program are able to prescribe and dispense.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic (see p. 89C).

ACTION

Inhibits epidermal growth factor (EGF)-stimulated receptor tyrosine kinase phosphorylation in tumor cells and endothelial cells. Inhibits cell migration, proliferation, survival, and angiogenesis (new blood vessel formation). **Therapeutic Effect:** Inhibits thyroid tumor cell growth and metastasis.

PHARMACOKINETICS

Slowly absorbed following PO administration. Peak concentration: 4–10 hrs. Metabolized in liver. Protein binding: 90%. Excreted in feces (44%), urine (25%). **Half-life:** 19 days.

USES

Treatment of symptomatic or progressive medullary thyroid cancer in pts with unresectable locally advanced or metastatic disease.

PRECAUTIONS

Contraindications: Congenital long QT syndrome. **Cautions:** Pregnancy, concurrent medications that prolong QT interval, thyroid, cerebrovascular disease, history of arrhythmias, moderate to severe renal/hepatic impairment, hypertension, uncompensated heart failure.

V

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Avoid pregnancy. Must use effective contraception during treatment and for at least 4 mos after treatment. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Medications prolonging QT interval (e.g., azithromycin, amiodarone, clarithromycin, erythromycin) may increase risk of QT prolongation. **CYP3A4 inducers (e.g., carbamazepine, oxcarbazepine, phenytoin, rifampin)** may decrease concentration/effects. **HERBAL: St. John's wort** may decrease effectiveness. **FOOD: Grapefruit, grapefruit juice** may increase risk of torsades, myelotoxicity. **LAB VALUES:** May decrease WBC, Hgb, neutrophils. May increase serum bilirubin, AST, ALT, creatinine, urine protein. May alter serum calcium, glucose, magnesium, potassium.

AVAILABILITY (Rx)

Tablets: 100 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not crush. • May disperse in 2 oz of non-carbonated water and stir for 10 min until tablet is evenly dispersed (will not completely dissolve). May administer dispersion immediately. Can be given via feeding tube. • Direct contact of crushed tablets with skin or mucous membranes should be strictly avoided. If contact occurs, wash thoroughly. **Storage** • Contact pharmacy to properly discard out-of-date tablets.

INDICATIONS/ROUTES/DOSAGE

Thyroid Cancer

PO: ADULTS, ELDERLY: 300 mg once daily.

Dosage in Renal Impairment

(Creatinine clearance less than 50 ml/min): 200 mg once daily.

Dosage Adjustment for QT Prolongation or Toxicity

Interrupt therapy until resolved or improved, then restart at 100–200 mg once daily.

SIDE EFFECTS

Frequent (57%–21%): Diarrhea/colitis, rash, dermatitis acneiform/acne, nausea, headache, fatigue, anorexia, abdominal pain. **Occasional (15%–10%):** Dry skin, vomiting, asthenia (loss of strength, energy), photosensitivity, insomnia, nasopharyngitis, dyspepsia, cough, pruritus, weight decrease, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged QT interval resulting in torsade de pointes, ventricular arrhythmias, sudden cardiac death have been reported. Frequent diarrhea may result in electrolyte imbalances. Severe skin reactions, including Stevens-Johnson syndrome, have been reported. Interstitial lung disease (ILD) or pneumonitis reported (may result in respiratory-related death). Consider ILD in pts with hypoxia, pleural effusion, cough, dyspnea. Ischemic cerebrovascular events have been reported. Life-threatening events including hypertensive crisis, reversible posterior leukoencephalopathy syndrome (RPLS) have been noted. Adverse reactions resulting in death included respiratory failure/arrest, aspiration pneumonia, cardiac failure, sepsis, GI bleeding.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC with differential, complete chemistry studies, magnesium, ionized calcium, TSH, UA, EKG, vital signs. Obtain negative urine pregnancy before therapy. Question for history of congenital long QT syndrome, CHF, arrhythmias, hepatic/renal impairment, seizures, CVA, hemorrhagic events, HTN. Obtain full medication history including contraception. Perform full head-to-toe exam including visual acuity, thorough skin assessment.

INTERVENTION/EVALUATION

Monitor blood levels including electrolytes esp. during episodes of diarrhea. EKG during wks 2–4, wks 8–12, then every 3 mos thereafter. EKG for palpitations, chest pain, hypokalemia, hyperkalemia, hypocalcemia, bradycardia, ventricular arrhythmias, syncope. Report any respiratory changes including dyspnea, cough (may indicate ILD). Reversible posterior leukoencephalopathy syndrome should be considered in pts with seizures, headache, visual disturbances, confusion, altered mental status. Ophthalmologic exams including slit lamp recommended in pts with visual disturbances.

PATIENT/FAMILY TEACHING

• Blood levels, EKGs are routinely monitored. • Strictly avoid pregnancy. Contraception should be taken during treatment and 4 mos after discontinuation. • Changes in mental status, seizures, headache, blurry vision, trouble speaking, one-sided weakness may indicate stroke, high blood pressure crisis, or life-threatening brain swelling. Immediately report any newly prescribed medications. • Do not take herbal products. • Limit exposure to sunlight. • Report any yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine, decreased urine output, skin changes. • Report palpitations, chest pain, shortness of breath, dizziness, fainting (may indicate arrhythmia).

vardenafil

var-**den**-a-fill
(Levitra, Staxyn)
Do not confuse Levitra with Kaletra or Lexiva, or vardenafil with sildenafil or tadalafil.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphodiesterase inhibitor. **CLINICAL:** Erectile dysfunction adjunct.

ACTION

Inhibits phosphodiesterase type 5 (PDE5), the enzyme responsible for degrading cyclic guanosine monophosphate in corpus cavernosum of penis, resulting in smooth muscle relaxation, increased blood flow. **Therapeutic Effect:** Facilitates penile erection.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Extensive tissue distribution. Protein binding: 95%. Metabolized in liver. Excreted primarily in feces, with lesser amount eliminated in urine. Drug has no effect on penile blood flow without sexual stimulation. **Half-life:** 4–5 hrs.

USES

Treatment of erectile dysfunction.

PRECAUTIONS

Contraindications: Concurrent use of nitrates in any form. **Cautions:** Renal/hepatic impairment, left ventricular outflow obstruction, elderly, prolonged QT interval, anatomical deformation of penis, pts who may be predisposed to priapism (sickle cell anemia, multiple myeloma, leukemia), concurrent use with alpha-adrenergic blockers.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated for use in women, newborns. **Pregnancy Category B. Children:** Not indicated for use in children. **Elderly:** No age-related precautions noted, but initial dose should be 5 mg.

INTERACTIONS

DRUG: **Alpha-adrenergic blockers (e.g., alfuzosin, doxazosin, prazosin, tamsulosin, terazosin), nitrates** may significantly lower B/P. **CYP3A4 inhibitors (e.g., erythromycin, indinavir, itraconazole, ketoconazole, ritonavir)** may increase concentration. **HERBAL:** None significant. **FOOD:** **High-fat meals** delay maximum effectiveness. **Grapefruit juice** may increase concentration, risk of toxicity. **LAB VALUES:** May

V

increase creatinine kinase, GGTP. May alter AST, ALT.

AVAILABILITY (Rx)

Tablets (Levitra): 2.5 mg, 5 mg, 10 mg, 20 mg.

Tablets, Orally-Disintegrating (Staxyn): 10 mg.

ADMINISTRATION/HANDLING

PO

• May take approximately 1 hr before sexual activity. • May give without regard to food.

Orally-Disintegrating

• Take 1 hr before sexual activity. • Take without regard to meals. • Place on tongue, do not crush, split. • Do not take with liquid.

INDICATIONS/ROUTES/DOSAGE

Erectile Dysfunction

PO: ADULTS: 10 mg approximately 1 hr before sexual activity. Dose may be increased to 20 mg or decreased to 5 mg, based on pt tolerance. **Maximum dosing frequency:** Once daily. **ELDERLY OLDER THAN 65 YRS:** 5 mg. **Orally-disintegrating tablet:** 10 mg 1 hr prior to sexual activity.

Dosage in Moderate Hepatic Impairment

PO: For pts with Child-Pugh class B hepatic impairment, dosage is 5 mg 1 hr before sexual activity. ODT not recommended.

Dosage With Concurrent Ritonavir, Fosamprenavir/Ritonavir, Lopinavir/Ritonavir, Tipranavir

PO: ADULTS: 2.5 mg in 72-hr period.

Dosage With Concurrent Atanzavir, Clarithromycin, Ketoconazole, Itraconazole (at 400 mg/day), Indinavir, Saquinavir, Fosamprenavir/Nelfinavir

PO: ADULTS: 2.5 mg in 24-hr period.

Dosage With Concurrent Ketoconazole, Itraconazole (at 200 mg/day), Erythromycin

PO: ADULTS: 5 mg in 24-hr period.

SIDE EFFECTS

Occasional: Headache, flushing, rhinitis, indigestion, sudden hearing loss. **Rare (Less Than 2%):** Dizziness, changes in color vision, blurred vision, postural hypotension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged erections (lasting over 4 hrs), priapism (painful erections lasting over 6 hrs) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess cardiovascular status, medication history (esp. alpha-adrenergic blockers, nitrates) before initiating treatment for erectile dysfunction.

INTERVENTION/EVALUATION

Monitor B/P.

PATIENT/FAMILY TEACHING

• Has no effect in absence of sexual stimulation. • Seek treatment immediately if erection persists for over 4 hrs. • Avoid grapefruit juice. • Report sudden decrease or loss of hearing or vision.

varenicline

TOP 200

var-**en**-i-kleen
(Champix, Chantix)

BLACK BOX ALERT Risk of psychiatric symptoms and suicidal behavior. Agitation, hostility, depressed mood have been reported.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective partial nicotine agonist. **CLINICAL:** Smoking deterrent (see p. 157C).

ACTION

Binds to acetylcholine receptors, producing agonist activity, preventing nicotine from binding to specific receptors. Blocks

ability of nicotine to stimulate central dopamine system, believed to be mechanism underlying reinforcement/reward experienced with smoking. **Therapeutic Effect:** Decreases desire to smoke.

PHARMACOKINETICS

Completely absorbed following PO administration. Absorption unaffected by food, time of day dosing. Maximum plasma concentration: 3–4 hrs; steady-state condition: within 4 days. Protein binding: 20%. Minimal metabolism. Removed by hemodialysis. Primarily excreted unchanged in urine. **Half-life:** 24 hrs.

USES

Aid to smoking cessation treatment.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Not recommended. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None known. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY

Tablets (Film-Coated): 0.5 mg, 1 mg.

ADMINISTRATION/HANDLING

• Give with food and with full glass of water. • Do not crush, chew, break film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Therapy should start 1 wk before stopping smoking.

Smoking Deterrent

PO: ADULTS, ELDERLY: Days 1–3: 0.5 mg once daily. Days 4–7: 0.5 mg twice daily. Day 8–end of treatment: 1 mg twice daily. Therapy should last for 12 wks. Those who have successfully stopped smoking at the end of 12 wks should continue with an additional 12 wks of treatment to increase likelihood of long-term abstinence.

Severe Renal Impairment *(creatinine clearance less than 30 ml/min)*: 0.5 mg once daily. **Maximum:** 0.5 mg twice daily.

End-Stage Renal Disease, Undergoing Hemodialysis: Maximum: 0.5 mg once daily.

SIDE EFFECTS

Frequent: Nausea (30%), insomnia (18%), headache (15%), abnormal dreams (13%). **Occasional (8%–5%):** Constipation, abdominal discomfort, fatigue, dry mouth, flatulence, altered taste, dyspepsia (heartburn, indigestion, epigastric pain), vomiting, anxiety, depression, irritability. **Rare (3%–1%):** Drowsiness, rash, increased appetite, lethargy, nightmares, gastroesophageal reflux disease, rhinorrhea, agitation, mood swings.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal may cause irritability, sleep disturbances in 3% of pts. Hypertension, angina pectoris, arrhythmia, bradycardia, coronary artery disease, gingivitis, anemia, lymphadenopathy occur rarely. May cause bizarre behavior, suicidal ideation.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Screen, evaluate those with coronary heart disease (history of MI, angina pectoris), cardiac arrhythmias.

INTERVENTION/EVALUATION

Discontinue use if cardiovascular symptoms occur or worsen. Monitor for psychiatric symptoms (changes in behavior, mood, level of interest, appearance).

V

PATIENT/FAMILY TEACHING

• Initiate treatment 1 wk before quit smoking date. • Take with food and with full glass of water. • With twice-daily dosing, take 1 tablet in morning, 1 in evening. • Contact physician if nausea, insomnia persist. • Report change in behavior, mood, level of interest, appearance.

vasopressin

vay-soe-**press**-in
(Pitressin, Pressyn, Pressyn AR)
Do not confuse Pitressin with Pitocin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Posterior pituitary hormone. **CLINICAL:** Vasopressor, antidiuretic.

ACTION

Increases reabsorption of water by renal tubules. Directly stimulates smooth muscle in GI tract. **Therapeutic Effect:** Causes peristalsis, vasoconstriction.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	N/A	N/A	0.5–1 hr
IM, subcutaneous	1–2 hrs	N/A	2–8 hrs

Distributed throughout extracellular fluid. Metabolized in liver, kidney. Primarily excreted in urine. **Half-life:** 10–20 min.

USES

Adjunct in treatment of acute massive GI hemorrhage or esophageal varices. Prevention/control of polydipsia, polyuria, dehydration in pts with neurogenic diabetes insipidus or differential diagnosis of diabetes insipidus. Stimulates peristalsis in prevention/treatment of postop abdominal distention, intestinal paresis. Treatment of pulseless arrest ventricular fibrillation or tachycardia and vasodilatory shock with hypotension unresponsive to fluids or exogenous catecholamines.

PRECAUTIONS

Contraindications: None known. **Cautions:** Seizures, migraine, asthma, vascular disease, renal/cardiac disease, goiter (with cardiac complications), arteriosclerosis, nephritis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Caution in giving to breast-feeding women. **Pregnancy Category C. Children/Elderly:** Caution due to risk of water intoxication/hyponatremia.

INTERACTIONS

DRUG: Alcohol, demeclocycline, lithium, norepinephrine may decrease antidiuretic effect. **Carbamazepine, chlorpropamide, clofibrate** may increase antidiuretic effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 20 units/ml (0.5 ml, 1 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute with D_5W or 0.9% NaCl to concentration of 0.1–1 unit/ml (usual concentration: 100 units/500 ml D_5W).
Rate of Administration • Give as IV infusion.
Storage • Store at room temperature.

IM, Subcutaneous

• Give with 1–2 glasses of water to reduce side effects.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), diazepam (Valium), etomidate (Amidate), furosemide (Lasix), thiopentothal.

IV COMPATIBILITIES

Dobutamine (Dobutrex), dopamine (Intropin), heparin, lorazepam (Ativan), midazolam (Versed), milrinone (Primacor), verapamil (Calan, Isoptin).

INDICATIONS/ROUTES/DOSAGE

Pulseless Arrest

IV: ADULTS, ELDERLY: 40 units as one-time bolus.

Diabetes Insipidus

◀ALERT▶ May be administered intranasally by nasal spray or on cotton pledgets; dosage is individualized.

IV Infusion: ADULTS, CHILDREN: 0.5 milliunits/kg/hr. May double dose q30min. **Maximum:** 10 milliunits/kg/hr.

IM, Subcutaneous: ADULTS, ELDERLY: 5–10 units 2–4 times a day. Range: 5–60 units/day. **CHILDREN:** 2.5–10 units, 2–4 times a day.

Abdominal Distention, Intestinal Paresis

IM: ADULTS, ELDERLY: Initially, 5 units. Subsequent doses, 10 units q3–4h.

GI Hemorrhage

IV Infusion: ADULTS, ELDERLY: Initially, 0.2–0.4 unit/min progressively increased to 0.8 unit/min. **CHILDREN:** 0.002–0.005 unit/kg/min. Titrate as needed. **Maximum:** 0.01 unit/kg/min.

Vasodilatory Shock

IV Infusion: ADULTS, ELDERLY: Initially, 0.01–0.04 units/min. Titrate to desired effect.

SIDE EFFECTS

Frequent: Pain at injection site (with vasopressin tannate). **Occasional:** Abdominal cramps, nausea, vomiting, diarrhea, dizziness, diaphoresis, pale skin, circumoral pallor, tremors, headache, eructation, flatulence. **Rare:** Chest pain, confusion, allergic reaction (rash, urticaria, pruritus, wheezing, difficulty breathing, facial/peripheral edema), sterile abscess (with vasopressin tannate).

ADVERSE EFFECTS/ TOXIC REACTIONS

Anaphylaxis, MI, water intoxication have occurred. Elderly, very young are at higher risk for water intoxication.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baselines for weight, B/P, pulse, serum electrolytes, Hgb, Hct, urine specific gravity.

INTERVENTION/EVALUATION

Monitor I&O closely, restrict intake as necessary to prevent water intoxication. Weigh daily if indicated. Check B/P, pulse twice daily. Monitor serum electrolytes, Hgb, Hct, urine specific gravity. Evaluate injection site for erythema, pain, abscess. Report side effects to physician for dose reduction. Be alert for early signs of water intoxication (drowsiness, listlessness, headache). Observe for evidence of GI bleeding. Withhold medication, report immediately any chest pain, allergic symptoms.

PATIENT/FAMILY TEACHING

• Promptly report headache, chest pain, shortness of breath, other symptoms. • Stress importance of I&O. • Avoid alcohol.

vemurafenib

vem-ue-**raf**-e-nib
(Zelboraf)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Threonine kinase inhibitor. **CLINICAL:** Antineoplastic.

ACTION

Inhibits BRAF serine-threonine kinase gene mutation, a main cause of tumor cell proliferation in the absence of growth factors normally required for

V

proliferation. **Therapeutic Effect:** Exhibits antitumor effects.

PHARMACOKINETICS

Readily absorbed after PO administration. Protein binding: 99%. Minimally metabolized in liver. Primarily excreted in feces (94%). **Half-life:** 57 hrs. Range: 30–120 hrs.

USES

Treatment of unresectable or metastatic melanoma with BRAF mutation as detected by FDA-approved test.

PRECAUTIONS

Contraindications: None known. **Cautions:** Prolonged QT syndrome, concurrent use of medications that prolong QT interval, severe renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy. May cause fetal harm. Must use effective contraception during treatment and for at least 2 mos after discontinuation. Unknown if distributed in breast milk. Must either discontinue breast-feeding or discontinue therapy. **Children:** Safety and efficacy not established. **Elderly:** May have increased risk of adverse reactions, side effects.

INTERACTIONS

DRUG: **Antiarrhythmics (amiodarone, disopyramide, dofetilide, procainamide, quinidine, sotalol), azithromycin, barbiturates, chloroquine, ciprofloxacin, citalopram, dexamethasone, dolasetron, fluconazole, haloperidol, methadone, phenothiazines, phenytoins, pimozide, trazodone, tricyclic antidepressants, vardenafil, voriconazole, ziprasidone** may prolong QT interval. **CYP3A4 inhibitors (e.g., atazanavir, carbamazepine, clarithromycin, itraconazole, ketoconazole, phenobarbital, rifabutin, rifampin, saquinavir)** may alter concentration. May increase bleeding effect with **warfarin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT, gamma-glutamyl transferase (GGT), bilirubin.

AVAILABILITY (Rx)

Film-Coated Tablets: 240 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not crush, chew, or divide tablets. • Give with full glass of water.

INDICATIONS/ROUTES/DOSAGE

Note: Management of adverse drug reactions may require dose reduction, treatment interruption, or discontinuation.

Melanoma

PO: ADULTS, ELDERLY 960 mg twice daily (in morning and evening about 12 hrs apart).

Dosage Modification

Based on adverse reaction criteria (grades 1–4). Interrupt therapy and reduce to 720 mg twice daily. Further reduction to 480 mg twice daily if more severe adverse reaction occurs. Discontinue treatment if repeated higher grades occur.

SIDE EFFECTS

Frequent (53%–33%): Arthralgia, alopecia, fatigue, rash, nausea. **Occasional (28%–11%):** Diarrhea, hyperkeratosis, headache, pruritus, pyrexia, dry skin, extremity pain, anorexia, vomiting, peripheral edema, erythema, dysgeusia, myalgia, constipation, asthenia (loss of strength, energy). **Rare (8%–5%):** Maculopapular rash, actinic keratosis, musculoskeletal pain, back pain, cough, papular rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cutaneous squamous cell carcinoma (cuSCC) and keratocanthomas reported in 24% of pts. Pts at increased risk of cuSCC include elderly, pts with prior skin cancer, chronic sun exposure. Hypersensitivity reactions including erythema, hy-

potension, anaphylaxis reported. Mild to severe photosensitivity reactions. Serious dermatologic reactions include Stevens-Johnson syndrome, epidermal necrolysis. Ophthalmologic reactions including uveitis reported. Increased LFTs may lead to discontinuation.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain BMP, magnesium, ionized calcium, EKG, PT/INR if taking warfarin. Assess skin for moles, lesions, papilloma and perform full dermatologic exam. Baseline ophthalmologic exam, visual acuity. Assess medication history for QT-prolonging drugs. Obtain negative urine pregnancy before initiating treatment.

INTERVENTION/EVALUATION

Monitor EKG 15 days after initiation, then monthly for first 3 mos, then every 3 mos thereafter. Routinely assess skin and for 6 mos after discontinuation. Immediately report any new skin lesions. EKG for palpitations, chest pain, hypokalemia, hyperkalemia, hypocalcemia, bradycardia, ventricular arrhythmias, syncope. Monitor PT/INR while pt is on warfarin. Pruritus, difficulty breathing, erythema, hypotension may indicate anaphylaxis.

PATIENT/FAMILY TEACHING

• Blood levels, EKG, eye examinations are routinely ordered. • Strictly avoid pregnancy. Contraception should be used during treatment and 2 mos after discontinuation. • Avoid sunlight exposure. • Report any skin changes including new warts, sores, reddish bumps that bleed or do not heal, change in mole size or color. • Report any yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine, decreased urine output, skin changes. • Report palpitations, chest pain, shortness of breath, dizziness, fainting (may indicate arrhythmia).

venlafaxine

TOP 200

ven-la-**fax**-een
(Effexor, Effexor XR)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenethylamine derivative. **CLINICAL:** Antidepressant (see pp. 14C, 40C).

ACTION

Potentiates CNS neurotransmitter activity by inhibiting reuptake of serotonin, norepinephrine, and, to lesser degree, dopamine. **Therapeutic Effect:** Relieves depression.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 25%–30%. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–7 hrs; metabolite, 9–13 hrs (increased in hepatic/renal impairment).

USES

Treatment of depression exhibited as persistent, prominent dysphoria (occurring nearly every day for at least 2 wks) manifested by 4 of 8 symptoms: change in appetite, change in sleep pattern, increased fatigue, impaired concentration, feelings of guilt or worthlessness, loss of interest in usual activities, psychomotor agitation or retardation, suicidal ideation. Psychotherapy augments therapeutic result. Treatment of generalized anxiety disorder (GAD), social anxiety disorder (SAD). Treatment of panic disorder, with or without agoraphobia. **OFF-LABEL:** Treatment of ADHD, obsessive-compulsive disorder (OCD), hot flashes, neuropathic pain, post-traumatic stress disorder (PTSD).

V

PRECAUTIONS

Contraindications: Use of MAOIs within 14 days. **Cautions:** Seizure disorder, renal/hepatic impairment, suicidal pts, recent MI, mania, volume-depleted pts, narrow-angle glaucoma, CHF, hyperthyroidism, abnormal platelet function.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Children, adolescents are at increased risk for suicidal ideation and behavior, worsening depression, esp. during first few mos of therapy. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., **ketoconazole**) may increase concentration/effects. **MAOIs** may cause neuroleptic malignant syndrome, autonomic instability (including rapid fluctuations of vital signs), extreme agitation, hyperthermia, altered mental status, myoclonus, rigidity, coma. **Triptans, selegiline, SSRIs, trazodone, tricyclic antidepressants** may increase risk of serotonin syndrome. May increase risk of bleeding with **NSAIDs, aspirin, warfarin. HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May increase serum cholesterol CPK, LDH, prolactin, GGT.

AVAILABILITY (Rx)

Tablets (Effexor): 25 mg, 37.5 mg, 50 mg, 75 mg, 100 mg.

Capsules (Extended-Release [Effexor XR]): 37.5 mg, 75 mg, 150 mg. **Tablets (Extended-Release):** 37.5 mg, 75 mg, 150 mg, 225 mg.

ADMINISTRATION/HANDLING

PO

• Give with food. • Scored tablet may be crushed. • Do not crush/chew extended-release capsules or tablets. • May open capsule, sprinkle on applesauce. Give immediately without chewing and follow with full glass of water.

INDICATIONS/ROUTES/DOSAGE

Depression

PO *(Immediate-Release)*: ADULTS, ELDERLY: Initially, 75 mg/day in 2–3 divided doses with food. May increase by 75 mg/day at intervals of 4 days or longer. **Maximum:** 375 mg/day in 3 divided doses.

PO *(Extended-Release)*: ADULTS, ELDERLY: 37.5–75 mg/day as single dose with food. May increase by 75 mg/day at intervals of 4 days or longer. **Maximum:** 225 mg/day.

Generalized Anxiety Disorder (GAD)

PO *(Extended-Release)*: ADULTS, ELDERLY: Initially, 37.5–75 mg/day. May increase by 75 mg/day at 4-day intervals up to 225 mg/day.

Panic Disorder

PO *(Extended-Release)*: Initially, 37.5 mg/day. May increase to 75 mg after 7 days followed by increases of 75 mg/day at 7-day intervals up to 225 mg/day.

Social Anxiety Disorder (SAD)

PO: ADULTS, ELDERLY: 75 mg once daily.

Dosage in Renal/Hepatic Impairment

Expect to decrease venlafaxine dosage by 50% in pts with moderate hepatic impairment, 25% in pts with mild to moderate renal impairment, 50% in pts on dialysis (withhold dose until completion of dialysis). When discontinuing therapy, taper dosage slowly over 2 wks.

SIDE EFFECTS

Frequent (greater than 20%): Nausea, drowsiness, headache, dry mouth. **Occasional (20%–10%):** Dizziness, insomnia, constipation, diaphoresis, nervousness, asthenia (loss of strength, energy), ejaculatory disturbance, anorexia. **Rare (less than 10%):** Anxiety, blurred vision, diarrhea, vomiting, tremor, abnormal dreams, impotence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Sustained increase in diastolic B/P of 10–15 mm Hg occurs occasionally. Serotonin syndrome (agitation, confusion, hallucinations, hyper-reflexia), neuroleptic malignant syndrome (muscular rigidity, fever, cognitive changes), suicidal ideation have occurred.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain initial weight, B/P. Assess appearance, behavior, speech pattern, level of interest, mood.

INTERVENTION/EVALUATION

Monitor signs/symptoms of depression, B/P, weight. Assess sleep pattern for evidence of insomnia. Check during waking hours for drowsiness, dizziness, anxiety; provide assistance as necessary. Assess appearance, behavior, speech pattern, level of interest, mood for therapeutic response. Monitor for suicidal ideation (esp. at initiation of therapy or changes in dosage).

PATIENT/ FAMILY TEACHING

• Take with food to minimize GI distress. • Do not increase, decrease, suddenly stop medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Inform physician if breast-feeding, pregnant, or planning to become pregnant. • Avoid alcohol. • Report worsening depression, suicidal ideation, unusual changes in behavior.

verapamil

TOP 200

ver-**ap**-a-mill
(Apo-Verap ✱, Calan, Calan SR, Chronovera ✱, Covera-HS, Isoptin SR, Novo-Veramil SR ✱, Verelan, Verelan PM)

Do not confuse Calan with Diltiazem, Covera-HS with Provera, or Verelan with Voltaren.

FIXED-COMBINATION(S)

Tarka: verapamil/trandolapril (an ACE inhibitor): 240 mg/1 mg, 180 mg/2 mg, 240 mg/2 mg, 240 mg/4 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. **CLINICAL:** Antihypertensive, antianginal, antiarrhythmic, hypertrophic cardiomyopathy therapy adjunct (see pp. 18C, 61C, 78C).

ACTION

Inhibits calcium ion entry across cardiac, vascular smooth-muscle cell membranes, dilating coronary arteries, peripheral arteries, arterioles. **Therapeutic Effect:** Decreases heart rate, myocardial contractility; slows SA, AV conduction. Decreases total peripheral vascular resistance by vasodilation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	1–2 hrs	6–8 hrs
IV	1–2 min	1–5 min	10–20 min

Well absorbed from GI tract. Protein binding: 90% (60% in neonates). Undergoes first-pass metabolism in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life: (single dose):** 2–8 hrs, **(multiple doses):** 4.5–12 hrs.

USES

Parenteral: Management of supraventricular tachyarrhythmias (SVT), temporary control of rapid ventricular rate in atrial flutter/fibrillation. **PO:** Treatment of hypertension, angina pectoris, supraventricular tachyarrhythmias (SVT), atrial fibrillation/flutter (rate control). **OFF-LABEL:** Treatment of bipolar disorder, hypertrophic cardiomyopathy, vascular headaches, migraines.

V

PRECAUTIONS

Contraindications: Atrial fibrillation/flutter in presence of accessory bypass tract (e.g., Wolff-Parkinson-White, Lown-Ganong-Levine syndromes), severe left ventricular dysfunction, cardiogenic shock, second- or third-degree heart block (except with pacemaker), hypotension, sick sinus syndrome (except with pacemaker), ventricular tachycardia. **Cautions:** Renal/hepatic impairment, concomitant use of beta-blockers and/or digoxin, myasthenia gravis, hypertrophic cardiomyopathy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta; distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Beta-adrenergic blockers** may have additive negative effects on heart rate, AV conduction, or contractility. **Statins** may increase risk of myopathy, rhabdomyolysis. May increase concentration of **cyclosporine, carbamazepine.** May increase **digoxin** concentration. **CYP3A4 inducers** (e.g., **rifampin**) may decrease concentration/effects. **HERBAL: St. John's wort** may decrease concentration/effects. **Ephedra, ginseng, ginger, licorice, yohimbe** may worsen hypertension. **Black cohosh, periwinkle** may increase antihypertensive effect. **FOOD: Grapefruit, grapefruit juice** may increase concentration. **LAB VALUES:** EKG may show prolonged PR interval. **Therapeutic serum level:** 0.08–0.3 mcg/ml; **toxic serum level:** N/A.

AVAILABILITY (Rx)

Caplets (Sustained-Release [Calan SR]): 120 mg, 180 mg, 240 mg. **Injection Solution:** 2.5 mg/ml. **Tablets (Calan):** 40 mg, 80 mg, 120 mg. **Capsules (Extended-Release [Verelan PM]):** 100 mg, 200 mg, 300 mg. **Capsules (Extended-Release):** 120 mg, 180 mg, 240 mg. **Capsules (Sustained-Release [Verelan]):** 120 mg, 180 mg, 240 mg, 360 mg. **Tablets (Extended-Release [Covera-HS]):** 180 mg, 240 mg. **Tablets (Sustained-Release [Isoptin SR]):** 120 mg, 180 mg, 240 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • May give undiluted.
Rate of Administration • Administer IV push over 2 min for adults, children; give over 3 min for elderly. • Continuous EKG monitoring during IV injection is required for children, recommended for adults. • Monitor EKG for rapid ventricular rate, extreme bradycardia, heart block, asystole, prolongation of PR interval. Notify physician of any significant changes. • Monitor B/P q5–10min. • Pt should remain recumbent for at least 1 hr after IV administration.
Storage • Store vials at room temperature.

PO

• Do not give with grapefruit, grapefruit juice. • Non–sustained-release tablets may be given without regard to food. • Swallow extended-release, sustained-release tablets whole; do not break, crush, dissolve, or divide. • Sustained-release capsules (Verelan, Verelan PM) may be opened and sprinkled on applesauce, then swallowed immediately (do not chew).

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), nafcillin (Nafcil), propofol (Diprivan), sodium bicarbonate.

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium chloride, calcium gluconate, dexamethasone (Decadron), digoxin (Lanoxin), dobutamine (Dobutrex), dopamine (Intropin),

furosemide (Lasix), heparin, hydromorphone (Dilaudid), lidocaine, magnesium sulfate, metoclopramide (Reglan), milrinone (Primacor), morphine, multivitamins, nitroglycerin, norepinephrine (Levophed), potassium chloride, potassium phosphate, procainamide (Pronestyl), propranolol (Inderal).

INDICATIONS/ROUTES/DOSAGE

Supraventricular Tachyarrhythmias (SVT)

IV: ADULTS, ELDERLY: Initially, 2.5–5 mg over 2 min. May give 5–10 mg 30 min after initial dose. **Maximum total dose:** 20–30 mg. **CHILDREN 1–15 YRS:** 0.1–0.3 mg/kg over 2 min. **Maximum initial dose:** 5 mg. May repeat in 30 min. **Maximum second dose:** 10 mg.

Angina, Unstable Angina, Chronic Stable Angina

PO: ADULTS (IMMEDIATE-RELEASE): Initially, 80–120 mg 3 times a day. For elderly pts, those with hepatic dysfunction, 40 mg 3 times a day. Titrate to optimal dose. Maintenance: 240–480 mg/day in 3–4 divided doses. Usual range: 80–160 mg 3 times/day. **(EXTENDED-RELEASE) (Covera-HS):** Initially, 180 mg at bedtime. May increase at weekly intervals to 240 mg/day, 360 mg/day, up to 480 mg/day.

Hypertension

PO *(Immediate-Release)*: ADULTS, ELDERLY: 80 mg 3 times a day. Range: 80–320 mg/day in 2 divided doses.

PO *(Sustained-Release [Calan SR, Isoptin SR])*: ADULTS, ELDERLY: Initially, 120–180 mg once daily. May increase at weekly intervals to 240 mg once daily, then 180 mg twice daily. **Maximum:** 240 mg twice daily.

***[Verelan]*:** Initially, 120–180 mg once daily. May increase dose at weekly intervals to 240 mg/day, then 360 mg/day, then 480 mg/day maximum.

PO *(Extended-Release [Covera-HS])*: ADULTS, ELDERLY: Initially, 180 mg once daily at bedtime. May increase at weekly intervals to 240 mg/day, then 360 mg/day, then 480 mg/day maximum.

PO *(Extended-Release [Verelan PM])*: ADULTS, ELDERLY: Initially, 100–200 mg once daily at bedtime. May increase dose at weekly intervals to 300 mg once daily, then 400 mg once daily maximum.

Chronic Atrial Fibrillation (Rate Control), SVT

PO *(Immediate-Release)*: ADULTS, ELDERLY: 240–480 mg/day in 3–4 divided doses. Usual range: 120–360 mg/day.

Dosage for Renal Impairment

Creatinine clearance less than 10 ml/min: Give 50%–75% normal dose.

SIDE EFFECTS

Frequent (7%): Constipation. **Occasional (4%–2%):** Dizziness, light-headedness, headache, asthenia (loss of strength, energy), nausea, peripheral edema, hypotension. **Rare (less than 1%):** Bradycardia, dermatitis, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Rapid ventricular rate in atrial flutter/fibrillation, marked hypotension, extreme bradycardia, CHF, asystole, second- or third-degree AV block occur rarely. **Antidote:** Glucagon 5–10 mg over 1 min, then infuse 1–10 mg over 1 hour.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress). Check B/P for hypotension, pulse for bradycardia immediately before giving medication.

INTERVENTION/EVALUATION

Assess pulse for quality, rate, rhythm. Monitor B/P. Monitor EKG for cardiac changes, particularly prolongation of PR interval. Notify physician of any significant EKG interval changes. Assist with ambulation if dizziness occurs. Assess for peripheral edema behind medial malleo-

V

lus (sacral area in bedridden pts). For those taking oral form, monitor daily pattern of bowel activity, stool consistency. **Therapeutic serum level:** 0.08–0.3 mcg/ml; **toxic serum level:** N/A.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control anginal pain. • To avoid hypotensive effect, rise slowly from lying to sitting position, wait momentarily before standing. • Avoid tasks that require alertness, motor skills until response to drug is established. • Limit caffeine. • Avoid or limit alcohol. • Inform physician if angina pain not reduced, irregular heartbeats, shortness of breath, swelling, dizziness, constipation, nausea, hypotension occur. • Avoid concomitant grapefruit, grapefruit juice.

vilazodone

vil-**ah**-zoe-doan
(Viibyrd)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, and young adults 18–24 yrs of age with major depressive disorder, other psychiatric disorders.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin reuptake receptor inhibitor. **CLINICAL:** Antidepressant (see p. 40C).

ACTION

Enhances serotonergic activity in CNS by selectively inhibiting reuptake of serotonin. **Therapeutic Effect:** Relieves depression.

PHARMACOKINETICS

Readily absorbed from GI tract. Peak concentration: 4–5 hrs. Widely distributed. Protein binding: 96%–99%. Extensively metabolized primarily via CYP3A4. **Half-life:** 25 hrs.

USES

Treatment of depression exhibited as persistent, prominent dysphoria (occurring nearly every day for at least 2 wks) manifested by 4 of 8 symptoms: change in appetite, change in sleep pattern, increased fatigue, impaired concentration, feelings of guilt or worthlessness, loss of interest in usual activities, psychomotor agitation or retardation, suicidal tendencies.

PRECAUTIONS

Contraindications: Those either currently receiving MAOIs or within 14 days of stopping or starting a MAOI. **Cautions:** Concurrent use of NSAIDs, aspirin, or other drugs that affect coagulation; history of seizures; pts at risk for suicide; history of bipolar disorder, mania, hypomania; hepatic impairment; concomitant CNS depressants; elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is excreted in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Aspirin, NSAIDs, warfarin** may increase risk of bleeding. Strong **CYP3A4 inhibitors (e.g., ketoconazole, nefazodone, ritonavir)** increase concentration. Potential for serotonin syndrome (agitation, altered consciousness, ataxia, myoclonus, overactive reflexes, muscular trembling) with **almotriptan, buspirone, eletriptan, naratriptan, SNRIs (e.g., venlafaxine), SSRIs (e.g., sertraline), sumatriptan, tramadol, tryptophan.** **HERBAL:** **St. John's wort** may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Give with food (administration without food can result in inadequate drug concentration, may diminish effectiveness).

INDICATIONS/ROUTES/DOSAGE

PO: ADULTS, ELDERLY: Initially, 10 mg once daily for 7 days, followed by 20 mg once daily for an additional 7 days, and then increased to 40 mg once daily. Note: When discontinuing treatment, reduce dose gradually.

SIDE EFFECTS

Frequent (28%–23%): Diarrhea, nausea. **Occasional (9%–3%):** Dizziness, dry mouth, insomnia, vomiting, decreased libido, abnormal dreams, fatigue, sweating. **Rare (2%):** Dyspepsia (heartburn, GI upset), flatulence, paresthesia, restlessness, arthralgia, abnormal orgasm, delayed ejaculation, increased appetite, palpitations, tremor.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serotonin syndrome (agitation, confusion, hallucinations, hyper-reflexia), neuroleptic malignant syndrome (fever, muscular rigidity, cognitive changes).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content, risk of suicide.

INTERVENTION/EVALUATION

Monitor B/P, heart rate, weight. Monitor for suicidal ideation (esp. at initiation of therapy or changes in dosage). Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

• Avoid tasks that may require alertness, motor skills until response to drug is established (may cause dizziness). • Take with food. • Do not suddenly stop taking medication but withdraw gradually. • Use caution when changing position from lying or sitting to standing. Look for emergence of suicidability, signs of mania/hypomania. Avoid alcohol.

*vinBLAStine

HIGH ALERT

vin-**blass**-teen
(Velban)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Fatal if given intrathecally (ascending paralysis, death). Vesicant; avoid extravasation.

Do not confuse vinblastine with vincristine or vinorelbine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Vinca alkaloid. **CLINICAL:** Antineoplastic (see p. 89C).

ACTION

Binds to microtubular protein of mitotic spindle, causing metaphase arrest. **Therapeutic Effect:** Inhibits cell division.

PHARMACOKINETICS

Does not cross blood-brain barrier. Protein binding: 99%. Metabolized in liver to active metabolite. Primarily eliminated in feces by biliary system. **Half-life:** 24.8 hrs.

USES

Treatment of disseminated Hodgkin's disease, non-Hodgkin's lymphoma, advanced stage of mycosis fungoides, advanced testicular carcinoma, Kaposi's sarcoma, Letterer-Siwe disease, breast carcinoma, choriocarcinoma. **OFF-LABEL:** Treatment of bladder, ovarian cancer; non–small-cell lung cancer; soft tissue sarcoma.

PRECAUTIONS

Contraindications: Bacterial infection, significant granulocytopenia (unless a result

of disease being treated). **Cautions:** Hepatic impairment, severe leukopenia, neurotoxicity, recent exposure to radiation therapy, chemotherapy, ischemic heart disease, preexisting pulmonary disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. during first trimester. Breast-feeding not recommended. **Pregnancy Category D. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/anticonvulsant effects of **phenytoin. CYP3A4 inhibitors (e.g., erthromycin)** may increase levels/toxicity. **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: St. John's wort** may decrease concentration. Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 10 mg. **Injection Solution:** 1 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation and administration. Give by IV injection. Leakage from IV site into surrounding tissue may produce extreme irritation. Avoid eye contact with solution (severe eye irritation, possible corneal ulceration may result). If eye contact occurs, immediately irrigate eye with water.

IV

Reconstitution • Reconstitute 10-mg vial with 10 ml 0.9% NaCl preserved with phenol or benzyl alcohol to provide concentration of 1 mg/ml. May further dilute in 50 ml D_5W or 0.9% NaCl.

Rate of Administration • Inject into tubing of running IV infusion or directly into vein over 1 min (IV infusion over 5–15 min). • Do not inject into extremity with impaired, potentially impaired circulation caused by compression or invading neoplasm, phlebitis, varicosity. • Rinse syringe, needle with venous blood before withdrawing needle (minimizes possibility of extravasation). • Extravasation may result in cellulitis, phlebitis. Large amount of extravasation may result in tissue sloughing. If extravasation occurs, give local injection of hyaluronidase, apply warm compresses.

Storage • Refrigerate unopened vials. • Solution appears clear, colorless. • Following reconstitution, solution is stable for 30 days if refrigerated. • Discard if solution is discolored or precipitate forms.

IV INCOMPATIBILITIES

Cefepime (Maxipime), furosemide (Lasix).

IV COMPATIBILITIES

Allopurinol (Aloprim), cisplatin (Platinol AQ), cyclophosphamide (Cytoxan), doxorubicin (Adriamycin), etoposide (VePesid), 5-fluorouracil, gemcitabine (Gemzar), granisetron (Kytril), heparin, leucovorin, methotrexate, ondansetron (Zofran), paclitaxel (Taxol), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage individualized based on clinical response, tolerance to adverse effects. When used in combination therapy, consult specific protocols for optimum dosage, sequence of drug administration.

Usual Dosage

IV: ADULTS, ELDERLY: 3.7–7.4 mg/m² q7days. **Maximum:** 18.5 mg/m². **CHILDREN:** 2.5–6 mg/m² q7–14days. **Maximum:** 12.5 mg/m²/wk.

Dosage in Hepatic Impairment

Direct serum bilirubin concentration greater than 3 mg/dl: Reduce dose by 50%.

V

SIDE EFFECTS

Frequent: Nausea, vomiting, alopecia. **Occasional:** Constipation, diarrhea, rectal bleeding, headache, paresthesia (occur 4–6 hrs after administration, persist for 2–10 hrs), malaise, asthenia (loss of strength, energy), dizziness, pain at tumor site, jaw/face pain, depression, dry mouth. **Rare:** Dermatitis, stomatitis, phototoxicity, hyperuricemia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity manifested most commonly as leukopenia, less frequently as anemia. WBC reaches its nadir 4–10 days after initial therapy, recovers within 7–14 days (high dosage may require 21-day recovery period). Thrombocytopenia is usually mild and transient, with recovery occurring in few days. Hepatic insufficiency may increase risk of toxicity. Acute shortness of breath, bronchospasm may occur, particularly when administered concurrently with mitomycin.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Nausea, vomiting easily controlled by antiemetics. Discontinue therapy if WBC, thrombocyte counts fall abruptly (unless drug is clearly destroying tumor cells in bone marrow). Obtain CBC weekly or before each dosing.

INTERVENTION/EVALUATION

If WBC falls below 2,000/mm^3, assess diligently for signs of infection. Assess for stomatitis; maintain fastidious oral hygiene. Monitor for hematologic toxicity: infection (fever, sore throat, signs of local infection), unusual bruising/bleeding from any site, symptoms of anemia (excessive fatigue, weakness). Monitor daily pattern of bowel activity, stool consistency. Avoid constipation.

PATIENT/FAMILY TEACHING

- Immediately report any pain/burning at injection site during administration. • Pain at tumor site may occur during or shortly after injection. • Do not have immunizations without physician approval (drug lowers resistance). • Avoid crowds, those with infection. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site. • Alopecia is reversible, but new hair growth may have different color, texture. • Contact physician if nausea/vomiting continues. • Avoid constipation by increasing fluids, bulk in diet, exercise as tolerated.

*vinCRIStine

HIGH ALERT

vin-**cris**-teen
(Marqibo, Vincasar PFS)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Fatal if given intrathecally (ascending paralysis, death). Vesicant; avoid extravasation. Marqibo and Vincasar are not interchangeable.

Do not confuse vincristine with vinblastine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Vinca alkaloid. **CLINICAL:** Antineoplastic (see p. 89C).

ACTION

Binds to microtubular protein of mitotic spindle, causing metaphase arrest. **Therapeutic Effect:** Inhibits cell division.

PHARMACOKINETICS

Does not cross blood-brain barrier. Protein binding: 75%. Metabolized in liver. Primarily eliminated in feces by biliary system. **Half-life:** 24 hrs. Marqibo: 45 hrs.

USES

Treatment of acute lymphocytic leukemia (ALL), Hodgkin's lymphoma, advanced non-Hodgkin's lymphomas, neuroblastoma, rhabdomyosarcoma, Wilms tumor. Marqibo: Relapsed Philadelphia chromo-

V

some negative (Ph^-) ALL. **OFF-LABEL:** Treatment of multiple myeloma, chronic lymphocytic leukemia (CLL), brain tumors, small cell lung cancer, ovarian germ cell tumors.

PRECAUTIONS

Contraindications: Demyelinating form of Charcot-Marie-Tooth syndrome. Intrathecal administration. **Caution:** Hepatic impairment, pts receiving radiation therapy through ports (including liver), neurotoxicity, preexisting neuromuscular disease, hepatobiliary dysfunction, elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Breast-feeding not recommended. **Pregnancy Category D. Children:** No age-related precautions noted. **Elderly:** More susceptible to neurotoxic effects.

INTERACTIONS

DRUG: May decrease concentration/anticonvulsant effects of **phenytoin. Itraconazole** may increase severity of neuromuscular side effects. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: St. John's wort, echinacea** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Injection Solution: 1 mg/ml. Marqibo: Kit for IV administration containing 5 mg/31 ml vincristine.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation and administration. Give by IV injection. Use extreme caution in calculating, administering vincristine. Overdose may result in serious or fatal outcome.

Reconstitution • May give undiluted or diluted in 25–50 ml D_5W or 0.9% NaCl.

Rate of Administration • Inject dose into tubing of running IV infusion or directly into vein over 1 min. May be administered as 5–10 min infusion (preferred). • Do not inject into extremity with impaired, potentially impaired circulation caused by compression or invading neoplasm, phlebitis, varicosity. • Extravasation produces stinging, burning, edema at injection site. Terminate injection immediately, locally inject hyaluronidase, apply heat (disperses drug, minimizes discomfort, cellulitis).

Storage • Refrigerate unopened vials. • Solution appears clear, colorless. • Discard if solution is discolored or precipitate forms.

IV INCOMPATIBILITIES

Cefepime (Maxipime), furosemide (Lasix), idarubicin (Idamycin).

IV COMPATIBILITIES

Allopurinol (Aloprim), cisplatin (Platinol AQ), cyclophosphamide (Cytoxan), cytarabine (Ara-C, Cytosar), doxorubicin (Adriamycin), etoposide (VePesid), 5-fluorouracil, gemcitabine (Gemzar), granisetron (Kytril), leucovorin, methotrexate, ondansetron (Zofran), paclitaxel (Taxol), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV: ADULTS, ELDERLY: 1.4 mg/m^2, frequency may vary based on protocol. **CHILDREN WEIGHING MORE THAN 10 KG:** 1.5–2 mg/m^2, frequency may vary based on protocol. **CHILDREN WEIGHING LESS THAN 10 KG:** 0.05 mg/kg once weekly. **Maximum:** 2 mg.

Hepatic Impairment

Bilirubin/AST	Dosage
Bilirubin 1.5–3 mg/dl or AST 60–180 units	50% of normal
Bilirubin 3–5 mg/dl	25% of normal
Bilirubin greater than 5 mg/dl or AST greater than 180 units	Avoid use

ALL (Marqibo)
IV: ADULTS, ELDERLY: 2.25 mg/m^2 q7days. Infuse over 1 hr.

SIDE EFFECTS

Expected: Peripheral neuropathy (occurs in nearly every pt; first clinical sign is depression of Achilles tendon reflex). **Frequent:** Peripheral paresthesia, alopecia, constipation/obstipation (upper colon impaction with empty rectum), abdominal cramps, headache, jaw pain, hoarseness, diplopia, ptosis/drooping of eyelid, urinary tract disturbances. **Occasional:** Nausea, vomiting, diarrhea, abdominal distention, stomatitis, fever. **Rare:** Mild leukopenia, mild anemia, thrombocytopenia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Acute shortness of breath, bronchospasm may occur, esp. when administered concurrently with mitomycin. Prolonged or high-dose therapy may produce foot/wrist drop, difficulty walking, slapping gait, ataxia, muscle wasting. Acute uric acid nephropathy may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab tests: CBC, WBC, Hgb, Hct, hepatic function studies. Offer pt/family emotional support.

INTERVENTION/EVALUATION

Monitor serum uric acid levels, renal/hepatic function studies, hematologic status. Assess Achilles tendon reflex. Monitor daily pattern of bowel activity, stool consistency. Monitor for ptosis, diplopia, blurred vision. Question pt regarding urinary changes.

PATIENT/FAMILY TEACHING

• Immediately report any pain/burning at injection site during administration. • Alopecia is reversible, but new hair growth may have different color/texture. • Contact physician if nausea/vomiting continues. • Report signs of peripheral neuropathy (burning/numbness of bottom of feet, palms of hands). • Report fever, sore throat, unusual bleeding/bruising, shortness of breath.

vinorelbine HIGH ALERT

vin-oh-**rell**-bean
(Navelbine)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Fatal if given intrathecally (ascending paralysis, death). Extravasation produces thrombophlebitis, local tissue necrosis. May produce severe granulocytopenia.

Do not confuse vinorelbine with vinblastine or vincristine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Vinca alkaloid. **CLINICAL:** Antineoplastic (see p. 89C).

ACTION

Interferes with mitotic microtubule assembly. **Therapeutic Effect:** Prevents cellular division.

PHARMACOKINETICS

Widely distributed after IV administration. Protein binding: 80%–90%. Metabolized in liver. Primarily eliminated in feces by biliary system. **Half-life:** 28–43 hrs.

USES

Single agent or in combination with cisplatin for treatment of unresectable, advanced, non–small-cell lung cancer (NSCLC). **OFF-LABEL:** Treatment of metastatic breast cancer, cervical carcinoma, cisplatin-resistant ovarian carcinoma, malignant pleural mesothelioma, soft tissue sarcoma.

PRECAUTIONS

Contraindications: Granulocyte count before treatment of less than 1,000 cells/

V

mm^3. **Cautions:** Compromised marrow reserve due to prior chemotherapy/radiation therapy; hepatic impairment; neurotoxicity; neuropathy; pulmonary impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. during first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Bone marrow depressants may increase risk of myelosuppression. **Cisplatin** significantly increases risk of granulocytopenia. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **Mitomycin** may produce an acute pulmonary reaction. **Paclitaxel** may increase neuropathy. **CYP3A4 inhibitors (e.g., ketoconazole)** may increase concentration/effects. **HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, alkaline phosphatase, AST, ALT.

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml (1-ml, 5-ml vials).

ADMINISTRATION/HANDLING

IV

◀ALERT▶ IV needle, catheter must be correctly positioned before administration. Leakage into surrounding tissue produces extreme irritation, local tissue necrosis, thrombophlebitis. Handle drug with extreme care during administration; wear protective clothing per protocol. If solution comes in contact with skin/mucosa, immediately wash thoroughly with soap, water.

Reconstitution • Must be diluted and administered via syringe or IV bag.

SYRINGE DILUTION • Dilute calculated vinorelbine dose with D_5W or 0.9% NaCl to concentration of 1.5–3 mg/ml.

IV BAG DILUTION • Dilute calculated vinorelbine dose with D_5W, 0.45% or 0.9% NaCl, 5% dextrose and 0.45% NaCl, Ringer's or lactated Ringer's to concentration of 0.5–2 mg/ml.

Rate of Administration • Administer diluted vinorelbine over 6–10 min into side port of free-flowing IV closest to IV bag followed by flushing with 75–125 ml of one of the solutions. • If extravasation occurs, stop injection immediately; give remaining portion of dose into another vein.

Storage • Refrigerate unopened vials. • Protect from light. • Unopened vials are stable at room temperature for 72 hrs. • Do not administer if particulate has formed. • Diluted vinorelbine may be used for up to 24 hrs under normal room light when stored in polypropylene syringes or polyvinyl chloride bags at room temperature.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), allopurinol (Aloprim), amphotericin B (Fungizone), amphotericin B complex (Abelcet, AmBisome, Amphotec), ampicillin (Omnipen), cefazolin (Ancef), cefoperazone (Cefobid), cefotetan (Cefotan), ceftriaxone (Rocephin), cefuroxime (Zinacef), 5-fluorouracil (5-FU), furosemide (Lasix), ganciclovir (Cytovene), methylprednisolone (Solu-Medrol), sodium bicarbonate.

IV COMPATIBILITIES

Calcium gluconate, carboplatin (Paraplatin), cisplatin (Platinol AQ), cyclophosphamide (Cytoxan), cytarabine (ARA-C, Cytosar), dacarbazine (DTIC), daunorubicin (Cerubidine), dexamethasone (Decadron), diphenhydramine (Benadryl), doxorubicin (Adriamycin), etoposide (VePesid), gemcitabine (Gemzar), granisetron (Kytril), hydromorphone (Dilaudid), idarubicin (Idamycin), methotrexate, morphine, ondansetron (Zofran), teniposide (Vumon), vinblastine (Velban), vincristine (Oncovin).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage adjustments should be based on granulocyte count obtained on the day of treatment, as follows:

Granulocyte Count (cells/mm³) on Day of Treatment	Dosage
1,500 or higher	100% of starting dose
1,000–1,499	50% of starting dose
Less than 1,000	Do not administer

NSCLC Monotherapy

IV Injection: ADULTS, ELDERLY: 30 mg/m² administered weekly over 6–10 min.

NSCLC Combination Therapy with Cisplatin

IV Injection: ADULTS, ELDERLY: 25–30 mg/m² every wk.

Dosage in Hepatic Impairment

Bilirubin	Dosage
2 mg/dl or less	100% of dose
2.1–3 mg/dl	50% of dose
Greater than 3 mg/dl	25% of dose

SIDE EFFECTS

Frequent: Asthenia (loss of strength, energy) (35%), nausea (34%), constipation (29%), erythema, pain, vein discoloration at injection site (28%), fatigue (27%), peripheral neuropathy manifested as paresthesia, hyperesthesia (25%), diarrhea (17%), alopecia (12%). **Occasional:** Phlebitis (10%), dyspnea (7%), loss of deep tendon reflexes (5%). **Rare:** Chest pain, jaw pain, myalgia, arthralgia, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bone marrow depression is manifested mainly as granulocytopenia (may be severe). Other hematologic toxicities (neutropenia, thrombocytopenia, leukopenia, anemia) increase risk of infection, bleeding. Acute shortness of breath, severe bronchospasm occur infrequently, particularly in pts with preexisting pulmonary dysfunction.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review medication history. Assess hematology (CBC, platelet count, Hgb, differential) values before giving each dose. Granulocyte count should be at least 1,000 cells/mm³ before vinorelbine administration. Granulocyte nadirs occur 7–10 days following dosing. Do not give hematologic growth factors within 24 hrs before administration of chemotherapy or earlier than 24 hrs following cytotoxic chemotherapy. Advise women of childbearing potential to avoid pregnancy during drug therapy.

INTERVENTION/EVALUATION

Diligently monitor injection site for swelling, redness, pain. Frequently monitor for myelosuppression during and following therapy (infection [fever, sore throat, signs of local infection], unusual bleeding/bruising, anemia [excessive fatigue, weakness]). Monitor pts developing severe granulocytopenia for evidence of infection, fever. Crackers, dry toast, sips of cola may help relieve nausea. Monitor daily pattern of bowel activity, stool consistency. Question for tingling, burning, numbness of hands/feet (peripheral neuropathy). Pt complaint of "walking on glass" is sign of hyperesthesia.

PATIENT/FAMILY TEACHING

• Notify physician immediately if redness, swelling, pain occur at injection site. • Avoid crowds, those with infection. • Do not have immunizations without physician's approval. • Promptly report fever, signs of infection, unusual bruising/bleeding from any site, difficulty breathing. • Avoid pregnancy. • Alopecia is reversible, but new hair growth may have different color, texture.

V

vismodegib

vis-moe-**deg**-ib
(Erivedge)

BLACK BOX ALERT May result in embryo-fetal death or severe birth defects including missing digits, midline defects, irreversible malformations due to embryotoxic and teratogenic properties. Verify pregnancy status prior to initiation. Advise use of effective contraception in female pts. Advise male pts of potential exposure risk through seminal fluid.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Hedgehog pathway inhibitor. **CLINICAL:** Antineoplastic (see p. 89C).

ACTION

An inhibitor of Hedgehog pathway, binding to and inhibiting smoothened, a transmembrane protein involved in hedgehog signal transduction. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis of basal cell carcinoma.

PHARMACOKINETICS

Metabolized in liver. Protein binding: 99%. Mainly excreted in feces, with a lesser amount eliminated in urine. **Half-life:** 4 days (daily dosing), 12 days (single dose).

USES

Treatment of adult pts with metastatic basal cell carcinoma, locally advanced basal cell carcinoma with recurrence after surgery, or pts who are not candidates for surgery or radiation.

PRECAUTIONS

◄ALERT► Do not donate blood products for at least 7 mos after discontinuation. **Contraindications:** None known. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Not recommended in nursing mothers. Must either discontinue drug or discontinue breast-feeding. Unknown if distributed in breast milk. Contraception recommended during treatment and up to 7 mos after discontinuation. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Safety and efficacy not established.

INTERACTIONS

DRUG: **P-glycoprotein inhibitors (e.g., clarithromycin, erythromycin)** may increase concentration/adverse effects. **Antacids, H_2 blockers, proton pump inhibitors** may decrease concentration/effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease potassium, sodium, GFR. May increase serum BUN, creatinine.

AVAILABILITY (Rx)

Capsules: 150 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Swallow whole. Do not crush, dissolve, open capsule.

INDICATIONS/ROUTES/DOSAGE

Advanced Basal Cell Carcinoma

PO: ADULTS/ELDERLY: 150 mg once daily.

SIDE EFFECTS

Frequent (71%–40%): Muscle spasm, alopecia, dysgeusia, weight loss, fatigue. **Occasional (30%–11%):** Nausea, amenorrhea, diarrhea, anorexia, constipation, vomiting, arthralgia, loss of taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

May cause spontaneous abortion, fetal demise, birth defects. Azotemia (renal impairment) reported in 2% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain negative pregnancy test (urine/serum) before initiation, BMP. Question current breast-feeding status. Assess

skin, moles for other possible malignancies.

INTERVENTION/EVALUATION

Obtain STAT human chorionic gonadotropin (HCG) level if pregnancy suspected, BMP if electrolyte imbalance or renal impairment suspected. Offer emotional support. Encourage PO intake if diarrhea occurs. Offer antiemetics for nausea/vomiting. Report oliguria, dark or concentrated urine.

PATIENT/FAMILY TEACHING

• Avoid pregnancy. • May cause birth defects or miscarriage. • Do not breastfeed. • Male pts must use condoms with spermicide during sexual activity, despite history of vasectomy. • Female pts must use contraception for at least 7 mos after stopping treatment. • Immediately report suspected pregnancy. • Do not donate blood for at least 7 mos after stopping treatment. • Swallow capsules whole; do not crush, open, or chew. • Hair loss is an expected side effect. • Strictly monitor menstrual cycle. • Report dark-colored urine or decreased urine output despite hydration.

vitamin A

vite-ah-myn A
(Aquasol A, Palmitate A)
Do not confuse Aquasol A with Anusol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fat-soluble vitamin. **CLINICAL:** Nutritional supplement (see p. 161C).

ACTION

May act as cofactor in biochemical reactions. **Therapeutic Effect:** Essential for normal function of retina, visual adaptation to darkness, bone growth, testicular and ovarian function, embryonic development; preserves integrity of epithelial cells.

PHARMACOKINETICS

Rapidly absorbed from GI tract if bile salts, pancreatic lipase, protein, dietary fat are present. Transported in blood to liver, where it is metabolized; stored in parenchymal hepatic cells, then transported in plasma as retinol, as needed. Excreted primarily in bile and, to lesser extent, in urine.

USES

Treatment and prevention of vitamin A deficiency (biliary tract, pancreatic disease, sprue, colitis, hepatic cirrhosis, celiac disease, regional enteritis, extreme dietary inadequacy, partial gastrectomy, cystic fibrosis).

PRECAUTIONS

Contraindications: Hypervitaminosis A, oral use in malabsorption syndrome. **Cautions:** None significant.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category A (X if used in doses above recommended daily allowance). Children/Elderly:** Caution with higher dosages.

INTERACTIONS

DRUG: **Oral contraceptives** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Aquasol A): 50,000 units/ml. **Tablets (Palmitate A):** 10,000 units, 15,000 units.

Capsules: 10,000 units, 25,000 units.

ADMINISTRATION/HANDLING

◄ALERT► IM administration used only in acutely ill or pts unresponsive to oral route (GI malabsorption syndrome).

V

IM

• For IM injection in adults, if dosage is 1 ml (50,000 international units), may give in deltoid muscle; if dosage is over 1 ml, give in large muscle mass. Anterolateral thigh is site of choice for infants, children younger than 7 mos.

PO

• Do not crush, break capsules. • Give with food or milk.

INDICATIONS/ROUTES/DOSAGE

Severe Vitamin A Deficiency (With Xerophthalmia)

PO: ADULTS, ELDERLY, CHILDREN 8 YRS AND OLDER: 500,000 units/day for 3 days, then 50,000 units/day for 14 days, then 10,000–20,000 units/day for 2 mos. **CHILDREN 1–7 YRS:** 5,000 units/kg/day for 5 days, then 5,000–10,000 units/day for 2 mos.
IM: ADULTS, ELDERLY, CHILDREN 8 YRS AND OLDER: 100,000 units/day for 3 days, then 50,000 units/day for 14 days. **CHILDREN 1–7 YRS:** 17,500–35,000 units/day for 10 days. **INFANTS YOUNGER THAN 1 YR:** 7,500–15,000 units/day, then 5,000–10,000 units/day orally for 10 days.

Vitamin A Deficiency

PO: ADULTS, ELDERLY, CHILDREN 8 YRS AND OLDER: 100,000 units/day for 3 days, then 50,000 units/day for 14 days. **CHILDREN 1–7 YRS:** 17,500–35,000 units/day for 10 days. **INFANTS YOUNGER THAN 1 YR:** 7,500–15,000 units/day for 10 days.

Malabsorption Syndrome

PO: ADULTS, ELDERLY, CHILDREN 8 YRS AND OLDER: 10,000–50,000 units/day.

Dietary Supplement

PO: ADULTS, ELDERLY: 4,000–5,000 units/day. **CHILDREN 7–10 YRS:** 3,300–3,500 units/day. **CHILDREN 4–6 YRS:** 2,500 units/day. **CHILDREN 6 MOS–3 YRS:** 1,500–2,000 units/day. **CHILDREN 1–5 MOS:** 1,500 units/day.

SIDE EFFECTS

None known.

ADVERSE EFFECTS/ TOXIC REACTIONS

Chronic overdose produces malaise, nausea, vomiting, drying/cracking of skin/lips, inflammation of tongue/gums, irritability, alopecia, night sweats. Bulging fontanelles have occurred in infants.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Closely supervise for overdosage symptoms during prolonged daily administration over 25,000 international units. Monitor for therapeutic serum vitamin A levels (80–300 international units/ml).

PATIENT/FAMILY TEACHING

• Foods rich in vitamin A include cod, halibut, tuna, shark (naturally occurring vitamin A found only in animal sources). • Avoid taking mineral oil, cholestyramine (Questran) while taking vitamin A.

(Drisdol)

paricalcitol

par-i-kal-si-tol
(Zemplar)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fat-soluble vitamin. **CLINICAL:** Vitamin D analogue (see p. 162C).

ACTION

Calcitriol: Stimulates calcium transport in intestines, resorption in bones, and tubular reabsorption in kidney; suppresses parathyroid hormone (PTH) secretion/synthesis. **Doxercalciferol:** Regulates blood calcium levels, stimulates bone growth, suppresses PTH secretion/synthesis. **Ergocalciferol:** Promotes active absorption of calcium and phosphorus, increasing serum levels to allow bone mineralization; mobilizes calcium and phosphate from bone, increases reabsorption of calcium and phosphate by renal tubules. **Paricalcitol:** Suppresses PTH secretion/synthesis. **Therapeutic Effect:** Essential for absorption, utilization of calcium, phosphate, control of PTH levels.

PHARMACOKINETICS

Calcitriol: Rapidly absorbed. Protein binding: 99.9%. Metabolized to active metabolite (ergocalciferol). Primarily excreted in feces/urine. **Half-life:** 5–8 hrs. **Doxercalciferol:** Metabolized in liver. **Half-life:** 32–37 hrs. **Ergocalciferol:** Metabolized in liver. **Paricalcitol:** Readily absorbed. Protein binding: 99.8%. Metabolized in liver. Primarily excreted in feces. **Half-life:** 5–7 hrs.

USES

Calcitriol: Manage hypocalcemia in pts on chronic renal dialysis, secondary hypoparathyroidism in chronic kidney disease (CKD), manage hypocalcemia in hypoparathyroidism. **(Topical):** Treatment of mild to moderate plaque psoriasis. **Doxercalciferol:** Treatment of secondary hyperparathyroidism in CKD on dialysis and predialysis. **Ergocalciferol:** Treatment of refractory rickets, hypophosphatemia, hypoparathyroidism, dietary supplement. **Paricalcitol: (Intravenous):** Treatment/prevention of secondary hyperparathyroidism associated with stage 5 CKD. **(PO):** Treatment/prevention of secondary hyperparathyroidism associated with stage 3 and 4 CKD. **OFF-LABEL: Calcitriol:** Vitamin D-dependent rickets. **Ergocalciferol:** Prevention/treatment of vitamin D deficiency in pts with CKD.

PRECAUTIONS

Contraindications: Vitamin D toxicity, hypercalcemia, malabsorption syndrome. **Cautions:** Immobilization (increases risk of hypercalcemia), dehydration (increases serum creatinine, risk of hypercalcemia, dialysis pts (increases risk of hypermagnesemia/hyperphosphatemia), preexisting renal failure (ectopic calcification may occur), impaired hepatic function, renal osteodystrophy with hyperphosphatemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta. Infant risk cannot be excluded. **Pregnancy Category: (Calcitriol): A (C if used in doses above recommended daily allowance). (Doxercalciferol): B. (Ergocalciferol): A (C if used in doses above recommended daily allowance). (Paricalcitol): C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Magnesium-containing antacids may increase risk of hypermagnesemia. **Calcium-containing products, concurrent vitamin D (or derivatives)** may increase risk of hypercalcemia. May increase **digoxin** toxicity due to hypercalcemia (may cause arrhythmias). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum cholesterol, calcium, magnesium, phosphate, ALT, AST, BUN, creatinine.

AVAILABILITY (Rx)

Calcitriol

Capsules, Softgel (Rocaltrol): 0.25 mcg, 0.5 mcg. **Injection Solution (Calcijex):** 1 mcg/ml. **Oral Solution (Rocaltrol):** 1 mcg/ml.

V

Doxercalciferol
Capsules, Softgel (Hectorol): 0.5 mcg, 2.5 mcg. **Injection Solution (Hectorol):** 2 mcg/ml.

Ergocalciferol
Capsules (Drisdol): 50,000 units (1.25 mg). **Liquid, Oral (Drisdol):** 8,000 units/ml (200 mcg/ml). **Tablets:** 400 units.

Paricalcitol
Capsules, Gelatin (Zemplar): 1 mcg, 2 mcg, 4 mcg. **Injection Solution (Zemplar):** 2 mcg/ml.

ADMINISTRATION/HANDLING

Calcitriol
PO
• May take without regard to food.

IV
• May give as IV bolus at end of dialysis.

Doxercalciferol
PO
• May take without regard to food.

IV
• May give as IV bolus via catheter at end of dialysis.

Ergocalciferol
PO
• May take without regard to food.

Paricalcitol
PO
• May take without regard to food. • For 3 times/wk dosing, give no more frequently than every other day.

IV
• Give bolus anytime during dialysis. • Do not give more frequently than every other day.

INDICATIONS/ROUTES/DOSAGE

Calcitriol
Hypocalcemia on Chronic Renal Dialysis
PO: ADULTS, ELDERLY: (ROCALTROL): Initially, 0.25 mcg/day or every other day. May increase by 0.25 mcg/day at 4- to 8-wk intervals. Range: 0.5–1 mcg/day.
IV: ADULTS, ELDERLY: (CALCIJEX): 1–2 mcg 3 times/wk. Adjust dose at 2- to 4-wk intervals. Range: 0.5–4 mcg 3 times/wk.

Hypocalcemia in Hypoparathyroidism
PO: ADULTS, CHILDREN 6 YRS AND OLDER: (ROCALTROL): Initially, 0.25 mcg/day. May increase at 2- to 4-wk intervals. Range: 0.5–2 mcg/day. **CHILDREN 1–5 YRS:** 0.25–0.75 mcg once daily. **CHILDREN YOUNGER THAN 1 YR:** 0.04–0.08 mcg/kg once daily.

Secondary Hyperparathyroidism Associated with Moderate to Severe CKD Not on Dialysis
PO: ADULTS, ELDERLY, CHILDREN 3 YRS AND OLDER: (ROCALTROL): Initially, 0.25 mcg/day. May increase to 0.5 mcg/day. **CHILDREN YOUNGER THAN 3 YRS:** Initially, 0.01–0.015 mcg/kg/day.

Doxercalciferol
Secondary Hyperparathyroidism (Dialysis)
PO: ADULTS, ELDERLY: Initial dose (intact parathyroid hormone [iPTH] greater than 400 pg/ml): 10 mcg 3 times/wk at dialysis. Dose titrated to lower iPTH to 150–300 pg/ml, with dosage adjustments made at 8-wk intervals. **Maximum:** 20 mcg 3 times/wk.
IV: ADULTS, ELDERLY: Initial dose (iPTH greater than 400 pg/ml): 4 mcg 3 times/wk after dialysis, given as bolus dose. Dose titrated to lower iPTH to 150–300 pg/ml, with dosage adjustments made at 8-wk intervals. **Maximum:** 18 mcg/wk.

Secondary Hyperparathyroidism (Predialysis)
PO: ADULTS, ELDERLY: Initially, 1 mcg/day. Titrate dose to lower iPTH to 35–70 pg/ml for stage 3 CKD and 70–110 pg/ml for stage 4 CKD. **Maximum:** 3.5 mcg/day.

Ergocalciferol
Dietary Supplement
PO: ADULTS, ELDERLY, CHILDREN: 10 mcg (400 units)/day. **NEONATES:** 10–20 mcg (400–800 units)/day.

Hypoparathyroidism

PO: ADULTS, ELDERLY: 625 mcg–5 mg (25,000–200,000 units)/day (with calcium supplements). **CHILDREN:** 1.25–5 mg (50,000–200,000 units)/day (with calcium supplements).

Nutritional Rickets, Osteomalacia

PO: ADULTS, ELDERLY, CHILDREN: 25–125 mcg (1,000–5,000 units)/day for 8–12 wks. **ADULTS, ELDERLY (WITH MALABSORPTION SYNDROME):** 250–7,500 mcg (10,000–300,000 units)/day. **CHILDREN (WITH MALABSORPTION SYNDROME):** 250–625 mcg (10,000–25,000 units)/day.

Vitamin D–Dependent Rickets

PO: ADULTS, ELDERLY: 250 mcg–1.5 mg (10,000–60,000 units)/day. **CHILDREN:** 75–125 mcg (3,000–5,000 units)/day. **Maximum:** 1,500 mcg (60,000 units)/day.

Vitamin D–Resistant Rickets

PO: ADULTS, ELDERLY, CHILDREN: 300 mcg–12.5 mg (12,000–500,000 units)/day.

Hypophosphatemia

PO: ADULTS, ELDERLY: 250–1,500 mcg (10,000–60,000 units)/day with phosphate supplements. **CHILDREN:** 1,000–2,000 mcg (40,000–80,000 units)/day with phosphate supplements.

Plaque Psoriasis

Topical: ADULTS, ELDERLY: Apply to affected area twice daily.

Paricalcitol

Secondary Hyperparathyroidism in Stage 5 CKD

IV: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: Initially, 0.04–0.1 mcg/kg given as bolus dose no more frequently than every other day at any time during dialysis. May increase by 2–4 mcg every 2–4 wks. Dose is based on serum iPTH levels.

Secondary Hyperparathyroidism in Stages 3 and 4 CKD

Note: Initial dose based on baseline serum iPTH levels. Dose adjusted q2wks based on iPTH levels relative to baseline.

PO: ADULTS, ELDERLY: (iPTH 500 PG/ML OR LESS): 1 mcg/day or 2 mcg 3 times/wk. **(iPTH GREATER THAN 500 PG/ML):** 2 mcg/day or 4 mcg 3 times/wk.

SIDE EFFECTS

Frequencies not defined. **Calcitriol:** Cardiac arrhythmias, headache, pruritus, hypercalcemia, polydipsia, abdominal pain, metallic taste, nausea, vomiting, myalgia, soft tissue calcification. **Doxercalciferol:** Edema, pruritus, nausea, vomiting, headache, dizziness, dyspnea, malaise, hypercalcemia. **Ergocalciferol:** Hypercalcemia, hypervitaminosis D, decreased renal function, soft tissue calcification, bone demineralization, nausea, constipation, weight loss. **Paricalcitol:** Edema, nausea, vomiting, hypercalcemia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Early signs of overdose manifested as weakness, headache, drowsiness, nausea, vomiting, dry mouth, constipation, muscle/bone pain, metallic taste. Later signs of overdose evidenced by polyuria, polydipsia, anorexia, weight loss, nocturia, photophobia, rhinorrhea, pruritus, disorientation, hallucinations, hyperthermia, hypertension, cardiac dysrhythmias.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum calcium, phosphorus, alkaline phosphatase, creatinine, iPTH.

INTERVENTION/EVALUATION

Monitor serum, urinary calcium levels, serum phosphate, magnesium, creatine, alkaline phosphatase, BUN determinations (therapeutic calcium level: 9–10 mg/dl), iPTH measurements. Estimate daily dietary calcium intake. Encourage adequate fluid intake. Monitor for signs/symptoms of vitamin D intoxication.

V

PATIENT/FAMILY TEACHING

• Adequate calcium intake should be maintained. • Dietary phosphorus may need to be restricted (foods high in phosphorus include beans, dairy products, nuts, peas, whole-grain products). • Oral formulations may cause hypersensitivity reactions. Avoid excessive doses. • Report signs/symptoms of hypercalcemia (headache, weakness, drowsiness, nausea, vomiting, dry mouth, constipation, metallic taste, muscle or bone pain). • Maintain adequate hydration. • Avoid changes in diet or supplemental calcium intake (unless directed by health care professional). • Avoid magnesium-containing antacids in pts with renal failure.

vitamin E

vite-ah-myn E
(Aquasol E, E-Gems, Key-E, Key-E Kaps)
Do not confuse Aquasol E with Anusol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fat-soluble vitamin. **CLINICAL:** Nutritional supplement (see p. 162C).

ACTION

Prevents oxidation of vitamins A and C, protects fatty acids from attack by free radicals, protects RBCs from hemolysis by oxidizing agents. **Therapeutic Effect:** Prevents/treats vitamin E deficiency.

PHARMACOKINETICS

Variably absorbed from GI tract (requires bile salts, dietary fat, normal pancreatic function). Primarily concentrated in adipose tissue. Metabolized in liver. Primarily eliminated by biliary system.

USES

Prevention/treatment of vitamin E deficiency. **OFF-LABEL:** Prevention/treatment of tardive dyskinesia; reduces risk of bronchopulmonary dysplasia, retrolental fibroplasia in infants exposed to high concentrations of oxygen. Treatment of hemolytic anemia secondary to vitamin E deficiency.

PRECAUTIONS

Contraindications: None known. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category A (C if used in doses above recommended daily allowance). Children/Elderly:** No age-related precautions noted in normal dosages.

INTERACTIONS

DRUG: May increase effects of **warfarin.** May increase concentration of **cyclosporine.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Capsules: 100 units, 200 units, 400 units, 600 units, 1,000 units. **Tablets:** 100 units, 200 units, 400 units, 500 units.

ADMINISTRATION/HANDLING

PO

• Do not crush, break tablets/capsules.
• Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Vitamin E Deficiency

PO: ADULTS, ELDERLY: 60–75 units/day. **CHILDREN:** 1 unit/kg/day. Patients with cystic fibrosis, beta-thalassemia, sickle cell anemia may require higher maintenance doses.

Prevention of Vitamin E Deficiency

PO: ADULTS, ELDERLY: 30 units/day.

SIDE EFFECTS

Rare: Contact dermatitis, sterile abscess.

ADVERSE EFFECTS/ TOXIC REACTIONS

Chronic overdose may produce fatigue, weakness, nausea, headache, blurred vision, flatulence, diarrhea.

NURSING CONSIDERATIONS

PATIENT/FAMILY TEACHING

• Swallow tablets/capsules whole; do not crush, chew. • Toxicity consists of blurred vision, diarrhea, dizziness, nausea, headache, flu-like symptoms. • Consume foods rich in vitamin E, including vegetable oils, vegetable shortening, margarine, leafy vegetables, milk, eggs, meat.

vitamin K

vite-ah-myn K

phytonadione (vitamin K_1)

(AquaMEPHYTON, Konakion, Mephyton, Vitamin K_1)
Do not confuse Mephyton with melphalan or methadone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fat-soluble vitamin. **CLINICAL:** Nutritional supplement, antidote (drug-induced hypoprothrombinemia), antihemorrhagic.

ACTION

Promotes hepatic formation of coagulation factors II, VII, IX, X. **Therapeutic Effect:** Essential for normal clotting of blood.

PHARMACOKINETICS

Readily absorbed from GI tract (duodenum) after IM, subcutaneous administration. Metabolized in liver. Excreted in urine; eliminated by biliary system. Onset of action (increased coagulation factors): **PO:** 6–10 hrs; **IV:** 1–2 hrs. Peak effect (INR values return to normal): **PO:** 24–48 hrs; **IV:** 12–14 hrs.

USES

Prevention, treatment of hemorrhagic states in neonates. Antidote for hemorrhage induced by oral anticoagulants, hypoprothrombinemic states due to vitamin K deficiency. Hypoprothrombinemia caused by malabsorption or inability to synthesize vitamin K.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment, newborns (esp. premature): Risk of hemolysis, jaundice, hyperbilirubinemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effects of **oral anticoagulants.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (AquaMEPHYTON, Vitamin K_1): 1 mg/0.5 ml, 10 mg/ml. **Tablets (Mephyton):** 5 mg.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Restrict to emergency use only.

Reconstitution • May dilute with preservative-free NaCl or D_5W immediately before use. Do not use other diluents. • Discard unused portions.

Rate of Administration • Administer slow IV at rate of 1 mg/min. • Monitor continuously for hypersensitivity, anaphylactic reaction during and immediately following IV administration.

Storage • Store at room temperature.

V

IM, Subcutaneous

• Inject into anterolateral aspect of thigh, deltoid region.

PO

• Scored tablets may be crushed. • May give without regard to food.

IV INCOMPATIBILITY

None known.

IV COMPATIBILITIES

Heparin, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ PO/subcutaneous route preferred; IV/IM use restricted to emergent situations.

Oral Anticoagulant Overdose

PO, IV, Subcutaneous: ADULTS, ELDERLY: 2.5–10 mg/dose. May repeat in 12–48 hrs if given orally, in 6–8 hrs if given by IV or subcutaneous route. **CHILDREN:** 0.5–5 mg depending on need for further anticoagulation, severity of bleeding.

Vitamin K Deficiency

PO: ADULTS, ELDERLY: 2.5–25 mg/24 hrs. **CHILDREN:** 2.5–5 mg/24 hrs.

IV, IM, Subcutaneous: ADULTS, ELDERLY: 10 mg/dose. **CHILDREN:** 1–2 mg/dose.

Hemorrhagic Disease of Newborn

IM, Subcutaneous: NEONATE: Treatment: 1 mg/dose/day. May increase to 2 mg. **Prophylaxis:** 0.5–1 mg within 1 hr of birth.

SIDE EFFECTS

◀ALERT▶ PO/subcutaneous administration less likely to produce side effects than IV/IM routes.

Occasional: Pain, soreness, swelling at IM injection site, pruritic erythema (with repeated injections), facial flushing, altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Newborns (esp. premature infants) may develop hyperbilirubinemia. Severe reaction (cramp-like pain, chest pain, dyspnea, facial flushing, dizziness, rapid/weak pulse, rash, diaphoresis, hypotension progressing to shock, cardiac arrest) occurs rarely, immediately after IV administration.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor PT, international normalized ratio (INR) routinely in those taking anticoagulants. Assess skin for ecchymoses, petechiae. Assess gums for gingival bleeding, erythema. Assess urine for hematuria. Assess Hct, platelet count, urine/stool culture for occult blood. Assess for decrease in B/P, increase in pulse rate, complaint of abdominal/back pain, severe headache (may be evidence of hemorrhage). Question for increase in amount of discharge during menses. Assess peripheral pulses. Check for excessive bleeding from minor cuts, scratches.

PATIENT/FAMILY TEACHING

• Discomfort may occur with parenteral administration. • **Adults:** Use electric razor, soft toothbrush to prevent bleeding. • Report any sign of red or dark urine, black or red stool, coffee-ground vomitus, red-speckled mucus from cough. • Do not use any OTC medication without physician approval (may interfere with platelet aggregation). • Consume foods rich in vitamin K_1, including leafy green vegetables, meat, cow's milk, vegetable oil, egg yolks, tomatoes.

voriconazole

vor-i-**kon**-a-zole
(Vfend)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Triazole derivative. **CLINICAL:** Antifungal (see p. 47C).

ACTION

Inhibits synthesis of ergosterol (vital component of fungal cell wall formation). **Therapeutic Effect:** Damages fungal cell wall membrane.

PHARMACOKINETICS

Rapidly, completely absorbed after PO administration. Widely distributed. Protein binding: 58%. Metabolized in liver. Primarily excreted as metabolite in urine. **Half-life:** Variable, dose dependent.

USES

Treatment of invasive aspergillosis, esophageal candidiasis. Treatment of serious fungal infections caused by *Scedosporium apiospermum, Fusarium* spp. Treatment of candidemia in non-neutropenic pts. **OFF-LABEL:** Fungal infection prophylaxis, empiric therapy for persistent neutropenic fever.

PRECAUTIONS

Contraindications: Concurrent administration of carbamazepine, ergot alkaloids, pimozide, quinidine (may cause prolonged QT interval, torsade de pointes), rifabutin, rifampin, ritonavir, sirolimus, St. John's wort. **Cautions:** Severe renal/hepatic impairment, hypersensitivity to other antifungal agents.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration, risk of toxicity of **alprazolam, calcium channel blockers, cyclosporine, efavirenz, ergot alkaloids, HMG-CoA reductase inhibitors (e.g., lovastatin), methadone, midazolam, protease inhibitors (e.g., amprenavir, saquinavir), rifabutin, sirolimus, tacrolimus, triazolam, warfarin. Carbamazepine, rifabutin, rifampin, ritonavir** may decrease concentration/effects. **HERBAL: St. John's wort** may significantly decrease concentration. **FOOD: Grapefruit juice** may increase concentration. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, bilirubin, creatinine. May decrease potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 200 mg. **Powder for Oral Suspension:** 200 mg/5 ml. **Tablets:** 50 mg, 200 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 200-mg vial with 19 ml Sterile Water for Injection to provide concentration of 10 mg/ml. Further dilute with 0.9% NaCl or D_5W to provide concentration of 0.5–5 mg/ml.
Rate of Administration • Infuse over 1–2 hrs at a rate not to exceed 3 mg/kg/hr.
Storage • Store powder for injection at room temperature. • Use reconstituted solution immediately. • Do not use after 24 hrs when refrigerated.

PO

• Give 1 hr before or 1 hr after a meal. • Do not mix oral suspension with any other medication or flavoring agent. • Shake suspension for about 10 sec before use.

IV INCOMPATIBILITY

Total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Invasive Aspergillosis, Other Serious Fungal Infection

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 6 mg/kg q12h for 2 doses, then 4 mg/kg q12h. **CHILDREN 3–11 YRS OF AGE:** Initially, 6–8 mg/kg (**maxi-**

V

mum: 400 mg) q12h for 2 doses, then 7 mg/kg (**maximum:** 200 mg) q12h.
PO: ADULTS, ELDERLY: 4 mg/kg q12h (IV administration preferred). **CHILDREN 3–11 YRS:** Initially, 8 mg/kg (**maximum:** 400 mg) q12h for 2 doses, then 7 mg/kg (**maximum:** 200 mg) q12h.

Candidemia, Other Deep Tissue Candida Infections

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 6 mg/kg q12h for 2 doses, then 3–4 mg/kg q12h.
PO: 400 mg q12h for 2 doses, then 200 mg q12h.

Esophageal Candidiasis

PO: ADULTS, ELDERLY WEIGHING 40 KG OR MORE: 200 mg q12h for minimum of 14 days, then at least 7 days following resolution of symptoms. **Maximum:** 600 mg/day. **ADULTS, ELDERLY WEIGHING LESS THAN 40 KG:** 100 mg q12h for minimum of 14 days, then at least 7 days following resolution of symptoms. **Maximum:** 300 mg/day.

Dosage in Pts Receiving Phenytoin

IV: Increase maintenance dose to 5 mg/kg q12h.
PO: Increase 200 mg q12h to 400 mg q12h (pts weighing 40 kg or more) or 100 mg q12h to 200 mg q12h (pts weighing less than 40 kg).

Dosage in Pts Receiving Cyclosporine, Omeprazole

Reduce cyclosporine dose by 50%. Reduce omeprazole by 50% in pts maintained on 40 mg or more per day.

Dosage in Pts Receiving Efavirenz

Increase dose to 400 mg q12h and reduce efavirenz to 300 mg/day.

Dosage in Hepatic Impairment

Mild to Moderate: Reduce maintenance dose by 50%.
Severe: Use only if benefits outweigh risks. Monitor closely for toxicity.

SIDE EFFECTS

Frequent (20%–6%): Abnormal vision, fever, nausea, rash, vomiting. **Occasional (5%–2%):** Headache, chills, hallucinations, photophobia, tachycardia, hypertension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity (jaundice, hepatitis, hepatic failure), acute renal failure have occurred in severely ill pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum hepatic/renal function tests.

INTERVENTION/EVALUATION

Monitor serum hepatic/renal function tests. Monitor visual function (visual acuity, visual field, color perception) for drug therapy lasting longer than 28 days.

PATIENT/FAMILY TEACHING

• Take at least 1 hr before or 1 hr after a meal. • Avoid grapefruit juice. • Avoid driving at night. • Notify physician of visual changes (blurred vision, photophobia, yellowing of skin/eyes). • Avoid performing hazardous tasks if changes in vision occur. • Avoid direct sunlight. • Women of childbearing potential should use effective contraception.

vorinostat

vor-**in**-o-stat
(Zolinza)
Do not confuse vorinostat with Votrient.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Histone deacetylase inhibitor. **CLINICAL:** Antineoplastic (see p. 89C).

ACTION

Inhibits activity of specific enzymes that catalyze removal of acetyl groups of proteins, causing accumulation of acetylated histones. **Therapeutic Effect:** Induces cell arrest.

PHARMACOKINETICS

Protein binding: 71%. Metabolized to inactive metabolites. Excreted in urine. **Half-life:** 2 hrs.

USES

Treatment of cutaneous manifestations in pts with cutaneous T-cell lymphoma (CTCL) with progressive, persistent, or recurrent disease, on or following two systemic therapies.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of deep vein thrombosis (DVT), diabetes mellitus, hepatic impairment, preexisting renal impairment, hypokalemia, hypomagnesemia, those with history of QT prolongation or medications that prolong QT interval.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effect of **warfarin. Valproic acid** increases risk of GI bleeding, thrombocytopenia. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum calcium, potassium, sodium, phosphate, platelet count. May increase serum glucose, creatinine, urine protein.

AVAILABILITY (Rx)

Capsules: 100 mg.

ADMINISTRATION/HANDLING

PO

• Do not open, crush, or chew capsules. • Give with food. • Maintain adequate hydration during treatment.

INDICATIONS/ROUTES/DOSAGE

Cutaneous T-Cell Lymphoma (CTCL)

PO: ADULTS, ELDERLY: 400 mg once daily with food. Dose may be reduced to 300 mg once daily with food. May be further reduced to 300 mg once daily with food for 5 consecutive days each wk.

SIDE EFFECTS

Frequent: Fatigue, diarrhea (52%), nausea (40%), altered taste (28%), anorexia (24%). **Occasional (21%–11%):** Weight decrease, muscle spasms, alopecia, dry mouth, chills, vomiting, constipation, dizziness, peripheral edema, headache, pruritus, cough, fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombocytopenia occurs in 25% of pts, anemia in 15%. Pulmonary embolism occurs in 4% of pts. Deep vein thrombosis (DVT) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Baseline PT, international normalized ratio (INR), CBC, chemistry tests, esp. serum potassium, calcium, magnesium, glucose, creatinine should be obtained prior to therapy and every 2 wks during first 2 mos of therapy and monthly thereafter. Inform women of childbearing potential of risk to fetus if pregnancy occurs.

INTERVENTION/EVALUATION

Monitor platelet count, PT, INR, monitor serum electrolytes CBC q2wks for 2 mos, then monthly. Monitor signs/symptoms of DVT. Encourage fluid intake, approximately 2 L/day input. Assess for evidence of dehydration. Provide antiemetics to control nausea/vomiting. Monitor daily pattern of bowel activity, stool consistency.

V

PATIENT/FAMILY TEACHING

• Drink at least 2 L/day of fluids to prevent dehydration. • Report excessive vomiting, diarrhea. • Contact physician if shortness of breath, pain in any extremity occur.

warfarin

TOP 200 HIGH ALERT

war-far-in
(Apo-Warfarin, Coumadin, Jantoven, Novo-Warfarin)

BLACK BOX ALERT May cause major or fatal bleeding. Risk factors include history of GI bleeding, hypertension, cerebrovascular disease, heart disease, malignancy, trauma, anemia, renal insufficiency, age 65 yrs and older, high anticoagulation factor (INR greater than 4). Consider cardiac/hepatic function, age, nutritional status, concurrent medications, risk of bleeding when dosing warfarin. Genetic variations have been identified as factors associated with dosage and bleeding risk. Genotyping tests are available.

Do not confuse Coumadin with Cardura, or Kemadrin, or Jantoven with Janumet or Januvia.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Coumarin derivative. **CLINICAL:** Anticoagulant (see p. 32C).

ACTION

Interferes with hepatic synthesis of vitamin K–dependent clotting factors, resulting in depletion of coagulation factors II, VII, IX, X. **Therapeutic Effect:** Prevents further extension of formed existing clot; prevents new clot formation, secondary thromboembolic complications.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1.5–3 days	5–7 days	2–5 days

Well absorbed from GI tract. Protein binding: 99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 20–60 hrs.

USES

Prophylaxis, treatment of venous thrombosis, pulmonary embolism, and thromboembolic disorders. Prophylaxis, treatment of thromboembolic complications associated with cardiac valve replacement or atrial fibrillation. Reduces risk of death, recurrent MI, stroke, embolization after MI. **OFF-LABEL:** Treatment adjunct in transient ischemic attacks.

PRECAUTIONS

Contraindications: Neurosurgical procedures, open wounds, pregnancy, severe hypertension, spinal puncture procedures, uncontrolled bleeding, ulcers, unreliable or noncompliant pt, history of falls, unsupervised senile or psychotic pt, blood dyscrasias, alcoholism, pericarditis or pericardial effusion, pregnancy, bacterial endocarditis, threatened abortion. **Cautions:** Active tuberculosis; acute infection; diabetes; heparin-induced thrombocytopenia; those at risk for hemorrhage, necrosis, gangrene; moderate to severe hepatic, renal impairment; moderate to severe hypertension; polycythemia vera; thyroid disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (fetal, neonatal hemorrhage, intrauterine death). Crosses placenta; distributed in breast milk. **Pregnancy Category X. Children:** More susceptible to effect. **Elderly:** Increased risk of hemorrhage; lower dosage recommended.

INTERACTIONS

DRUG: Amiodarone, azole antifungals, cimetidine, disulfiram, fluvoxamine, sulfamethoxazole-trimethoprim, levothyroxine, metronidazole, NSAIDs, omeprazole, platelet aggregation inhibitors, salicylates, thrombolytic agents, thyroid hormones may increase effect. **Griseofulvin, hepatic enzyme inducers** (e.g., **rifampin**), **vitamin K** may decrease effects. **Alcohol** may en-

hance anticoagulant effect. **HERBAL:** **Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo biloba, ginseng, horse chestnut, red clover** possess antiplatelet activity, may increase risk of bleeding. **Ginseng, St. John's wort** may decrease effect. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets (Coumadin, Jantoven): 1 mg, 2 mg, 2.5 mg, 3 mg, 4 mg, 5 mg, 6 mg, 7.5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Scored tablets may be crushed. • Give without regard to food. Give with food if GI upset occurs. • Give at same time each day.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Initial dosing must be individualized.

Anticoagulant

PO: ADULTS, ELDERLY: Initially, 2–5 mg/daily for 2 days **OR** 5–10 mg daily for 1–2 days, adjusting the dose based on INR results. Usual maintenance dose: 2–10 mg/day, but may vary outside these guidelines. **CHILDREN:** Initially, 0.05–0.2 mg/kg/day. **Maximum:** 10 mg. Maintenance: 0.05–0.34 mg/kg/day, then adjust based on INR.

SIDE EFFECTS

Occasional: GI distress (nausea, anorexia, abdominal cramps, diarrhea). **Rare:** Hypersensitivity reaction (dermatitis, urticaria), esp. in those sensitive to aspirin.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bleeding complications ranging from local ecchymoses to major hemorrhage may occur. **Antidote:** Vitamin K. Amount based on INR, significance of bleeding. Range: 2.5–10 mg given orally or slow IV infusion (see Appendix K for dosage). Hepatotoxicity, blood dyscrasias, necrosis, vasculitis, local thrombosis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Cross-check dose with coworker. Determine INR before administration and daily following therapy initiation. When stabilized, follow with INR determination q4–6wks. Obtain genotyping prior to initiating therapy if available.

INTERVENTION/EVALUATION

Monitor INR reports diligently. Assess Hct, platelet count, AST, ALT, urine/stool for occult blood. Be alert to complaints of abdominal/back pain, severe headache (may be sign of hemorrhage). Decrease in B/P, increase in pulse rate may be sign of hemorrhage. Question for increase in amount of menstrual discharge. Assess peripheral pulses; skin for ecchymoses, petechiae. Check for excessive bleeding from minor cuts, scratches. Assess gums for erythema, gingival bleeding.

PATIENT/ FAMILY TEACHING

• Take medication at same time each day. • Do not take, discontinue any other medication except on advice of physician. • Avoid alcohol, salicylates, drastic dietary changes. • Do not change from one brand to another. • Consult with physician before surgery, dental work. • Urine may become red-orange. • Avoid, minimize significant bodily trauma. • Notify physician if bleeding, bruising, red or brown urine, black stools occur. • Use electric razor, soft toothbrush to prevent bleeding. • Report coffee-ground vomitus, blood-tinged mucus from cough. • Do not use any OTC medication without physician approval (may interfere with platelet aggregation).

zafirlukast

za-**feer**-loo-kast
(Accolate)
Do not confuse Accolate with Accupril, Accutane, or Aclovate.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Leukotriene receptor antagonist. **CLINICAL:** Antiasthma (see p. 76C).

ACTION

Binds to leukotriene receptors, inhibiting bronchoconstriction due to sulfur dioxide, cold air, specific antigens (grass, cat dander, ragweed). **Therapeutic Effect:** Reduces airway edema, smooth muscle constriction; alters cellular activity associated with inflammatory process.

PHARMACOKINETICS

Rapidly absorbed after PO administration (food reduces absorption). Protein binding: 99%. Extensively metabolized in liver. Primarily excreted in feces. Unknown if removed by hemodialysis. **Half-life:** 10 hrs.

USES

Prophylaxis, chronic treatment of bronchial asthma in adults and children 5 yrs and older.

PRECAUTIONS

Contraindications: Hepatic impairment. **Cautions:** Alcoholic cirrhosis, pts receiving warfarin.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug is distributed in breast milk. Do not administer to breast-feeding women. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 5 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Erythromycin, theophylline** may decrease concentration/effects. **Aspirin** may increase concentration/effects. **HERBAL:** None significant. **FOOD:** **Food** decreases bioavailability by 40%. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

- Give 1 hr before or 2 hrs after meals.

INDICATIONS/ROUTES/DOSAGE

Bronchial Asthma

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 20 mg twice daily. **CHILDREN 5–11 YRS:** 10 mg twice daily.

SIDE EFFECTS

Frequent (13%): Headache. **Occasional (3%):** Nausea, diarrhea. **Rare (Less Than 3%):** Generalized pain, asthenia (loss of strength, energy), myalgia, fever, dyspepsia (heartburn, indigestion, epigastric pain), vomiting, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Concurrent administration of inhaled corticosteroids increases risk of upper respiratory tract infection.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain medication history. Assess serum hepatic function lab values.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality, rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Observe for cyanosis (lips, fingernails appear blue or dusky color in light-skinned pts; gray in dark-skinned pts). Monitor serum hepatic function tests.

PATIENT/FAMILY TEACHING

- Increase fluid intake (decreases lung secretion viscosity).
- Take as prescribed, even during symptom-free periods.
- Do not use for acute asthma episodes.
- Do not alter, stop other asthma medications.
- Do not breast-feed.
- Report nausea, jaundice, abdominal pain, flu-like symptoms, worsening of asthma.

zaleplon

zal-e-plon
(Sonata)
Do not confuse zaleplon with zolpidem.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonbenzodiazepine. **(Schedule IV). CLINICAL:** Hypnotic (see p. 150C).

ACTION

Enhances action of inhibitory neurotransmitter gamma-aminobutyric acid (GABA). **Therapeutic Effect:** Induces sleep.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	Rapid	1 hr	6–8 hrs

Rapidly, almost completely absorbed following PO administration. Protein binding: 45%–75%. Metabolized in liver. Primarily excreted in urine. Partially eliminated in feces. **Half-life:** 1 hr.

USES

Short-term treatment of insomnia (7–10 days). Decreases sleep onset time (no effect on number of nocturnal awakenings, total sleep time).

PRECAUTIONS

Contraindications: None known. **Cautions:** Mild to moderate hepatic impairment (avoid use in severe impairment), depression, history of drug dependence, elderly, compromised respiratory function, depression, risk for suicide.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta; distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to zaleplon effects.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depression. **Cimetidine** may increase concentration/effects. **CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifampin)** may decrease concentration. **HERBAL: St. John's wort** may decrease levels/effects. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD: High-fat, heavy meals** may delay onset of sleep by approximately 2 hrs. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Give immediately before bedtime. • Giving drug with or immediately after high-fat meal results in slower absorption. • Capsules may be emptied and mixed with food.

INDICATIONS/ROUTES/DOSAGE

Insomnia

PO: ADULTS: 10 mg at bedtime. Range: 5–20 mg. **ELDERLY:** 5 mg at bedtime. **Maximum:** 10 mg.

Dosage in Hepatic Impairment

Mild to moderate: 5 mg. Severe: Not recommended.

SIDE EFFECTS

Expected: Drowsiness, sedation, mild rebound insomnia (on first night after drug is discontinued). **Frequent (28%–7%):** Nausea, headache, myalgia, dizziness. **Occasional (5%–3%):** Abdominal pain, asthenia (loss of strength, energy), dyspepsia (heartburn, indigestion, epigastric pain), eye pain, paresthesia. **Rare (2%):** Tremor, amnesia, hyperacusis (acute sense of hearing), fever, dysmenorrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

May produce altered concentration/ behavior changes, impaired memory. Taking medication while ambulating may result in hallucinations, impaired coordination, dizziness, light-headedness. Overdose results in drowsiness, confusion, diminished reflexes, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Provide for safety; raise bed rails. Provide environment conducive to sleep (back rub, quiet environment, low lighting).

INTERVENTION/EVALUATION

Assess sleep pattern.

PATIENT/FAMILY TEACHING

• Take right before bedtime or when in bed and not falling asleep. • Avoid tasks requiring alertness, motor skills until response to drug is established. • Do not exceed prescribed dosage. • Do not take with or immediately after a high-fat or heavy meal. • Rebound insomnia may occur when drug is discontinued after short-term therapy. • Avoid alcohol, other CNS depressants.

zanamivir

zan-**am**-i-veer
(Relenza)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiviral.
CLINICAL: Anti-influenza (see p. 70C).

ACTION

Appears to inhibit influenza virus enzyme neuraminidase, essential for viral replication. **Therapeutic Effect:** Prevents viral release from infected cells.

PHARMACOKINETICS

Systemically absorbed, approximately 4%–17%. Protein binding: less than 10%. Not metabolized. Partially excreted unchanged in urine. **Half-life:** 2.5–5.1 hrs.

USES

Treatment of uncomplicated acute illness due to influenza virus A and B in adults, children 7 yrs and older who have been symptomatic for less than 2 days. Prevention of influenza A and B in adults and children 5 yrs and older.

PRECAUTIONS

Contraindications: None known. **Cautions:** COPD, asthma, severe renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 7 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Powder for Inhalation: 5 mg/blister.

ADMINISTRATION/HANDLING

Inhalation

• Instruct pt to use Diskhaler device provided, exhale completely; then, holding mouthpiece 1 inch away from lips, inhale and hold breath as long as possible before exhaling. • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness). • Store at room temperature.

INDICATIONS/ROUTES/DOSAGE

Treatment of Influenza Virus

Inhalation: ADULTS, ELDERLY, CHILDREN 7 YRS AND OLDER: 2 inhalations (one 5-mg blister per inhalation for total dose of 10 mg) twice daily (approximately 12 hrs apart) for 5 days.

Prevention of Influenza Virus

Inhalation: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 2 inhalations (10 mg) once daily for duration of exposure period.

SIDE EFFECTS

Occasional (3%–2%): Diarrhea, sinusitis, nausea, bronchitis, cough, dizziness, headache. **Rare (Less Than 1.5%):** Malaise, fatigue, fever, abdominal pain, myalgia, arthralgia, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

May produce neutropenia. Bronchospasm may occur in those with history of COPD, bronchial asthma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pts requiring an inhaled bronchodilator at same time as zanamivir should use the bronchodilator before zanamivir administration.

INTERVENTION/EVALUATION

Provide assistance if dizziness occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Follow manufacturer guidelines for use of delivery device. • Avoid contact with those who are at high risk for influenza. • Continue treatment for full 5-day course. • Doses should be evenly spaced. • In pts with respiratory disease, an inhaled bronchodilator should be readily available.

zidovudine

zye-**doe**-vue-deen
(Apo-Zidovudine, Novo-AZT, Retrovir)

BLACK BOX ALERT Neutropenia, severe anemia may occur. Lactic acidosis, severe hepatomegaly with steatosis (fatty liver), including fatalities, have occurred. Symptomatic myopathy, myositis associated with prolonged use.

Do not confuse Retrovir with acyclovir or ritonavir.

FIXED-COMBINATION(S)

Combivir: zidovudine/lamivudine (an antiviral): 300 mg/150 mg. **Trizivir:** zidovudine/lamivudine/abacavir (an antiviral): 300 mg/150 mg/300 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nucleoside reverse transcriptase inhibitors. **CLINICAL:** Antivirals (see pp. 70C, 115C).

ACTION

Interferes with viral RNA-dependent DNA polymerase, an enzyme necessary for viral HIV replication. **Therapeutic Effect:** Slows HIV replication, reducing progression of HIV infection.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: 25%–38%. Undergoes first-pass metabolism in liver. Crosses blood-brain barrier and is widely distributed, including to CSF. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 0.5–3 hrs (increased in renal impairment).

USES

Treatment of HIV infection in combination with other antiretroviral agents. Prevention of maternal/fetal HIV transmission. **OFF-LABEL:** Prophylaxis in health care workers at risk for acquiring HIV after occupational exposure.

PRECAUTIONS

Contraindications: Life-threatening allergic reactions to zidovudine or its components. **Cautions:** Bone marrow compromise, renal/hepatic dysfunction, decreased hepatic blood flow.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast

milk. Unknown if fetal harm or effects on fertility can occur. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Information not available.

INTERACTIONS

DRUG: Bone marrow depressants, ganciclovir may increase myelosuppression. May be antagonistic with **doxorubicin.** Hematologic toxicities may occur with **interferon alfa. HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase mean corpuscular volume (MCV).

AVAILABILITY (Rx)

Capsules (Retrovir): 100 mg. **Injection Solution (Retrovir):** 10 mg/ml. **Syrup (Retrovir):** 50 mg/5 ml. **Tablets (Retrovir):** 300 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Must dilute before administration. • Remove calculated dose from vial and add to D_5W to provide concentration no greater than 4 mg/ml.
Rate of Administration • Infuse over 1 hr. May infuse over 30 min in neonates.
Storage • After dilution, IV solution is stable for 24 hrs at room temperature; 48 hrs if refrigerated. • Use within 8 hrs if stored at room temperature or 24 hrs if refrigerated to minimize potential for microbial-contaminated solution. • Do not use if solution is discolored or precipitate forms.

PO

• Keep capsules in cool, dry place. Protect from light. • Food, milk do not affect GI absorption. • Space doses evenly around the clock. • Pt should be in upright position when giving medication to prevent esophageal ulceration.

IV INCOMPATIBILITY

None known.

IV COMPATIBILITIES

Dexamethasone (Decadron), dobutamine (Dobutrex), dopamine (Intropin), heparin, lipids, lorazepam (Ativan), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 200 mg q8h or 300 mg q12h. **CHILDREN 12 YRS AND YOUNGER:** 160 mg/m^2/dose (**maximum:** 200 mg) q8h or 240 mg/m^2 q12h (**maximum:** 300 mg). **FULL-TERM NEONATES:** 2 mg/kg/dose q6h. **PREMATURE NEONATES:** 2 mg/kg/dose q12h, increased to q8h at 2 or 4 wks based on gestation at birth.
IV: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 1 mg/kg/dose q4h around the clock. **CHILDREN 12 YRS AND YOUNGER:** 120 mg/m^2/dose q6h. **FULL-TERM NEONATES:** 1.5 mg/kg/dose q6h. **PREMATURE NEONATES:** 1.5 mg/kg/dose q12h, increased to q8h at 2 or 4 wks based on gestation at birth.

Prevention of Maternal/Fetal HIV Transmission

PO: ADULTS: 200 mg 3 times/day, or 300 mg 2 times/day. Begin at 14–34 wks' gestation and continue until start of labor.
IV *(During Labor and Delivery)*: 2 mg/kg loading dose, then IV infusion of 1 mg/kg/hr until umbilical cord clamped. **NEONATAL:** Begin 6–12 hrs after birth and continue for first 6 wks of life. Use IV route only until oral therapy can be administered.
PO: FULL-TERM INFANTS: 4 mg/kg/dose q12h (IV: 1.5 mg/kg/dose q6h). **INFANTS 30–34 WKS' GESTATION:** 2 mg/kg/dose q12h; increase to q8h at 2 wks of age (IV: 1.5 mg/kg/dose q12h; increase to q8h at 2 wks of age). **INFANTS LESS THAN 30 WKS' GESTATION:** 2 mg/kg/dose q12h; increase to q8h at 4 wks of age (IV: 1.5 mg/kg/dose q12h; increase to q8h at 4 wks of age).

Dosage in Renal Impairment

Creatinine clearance less than 15 ml/min, including hemodialysis or peritoneal dialysis: 100 mg PO or 1 mg/kg IV q6–8h.

SIDE EFFECTS

Expected (46%–42%): Nausea, headache. **Frequent (20%–16%):** Abdominal pain, asthenia (loss of strength, energy), rash, fever, acne. **Occasional (12%–8%):** Diarrhea, anorexia, malaise, myalgia, drowsiness. **Rare (6%–5%):** Dizziness, paresthesia, vomiting, insomnia, dyspnea, altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anemia (occurring most commonly after 4–6 wks of therapy), granulocytopenia are particularly significant in pts with pretherapy low baselines. Neurotoxicity (ataxia, fatigue, lethargy, nystagmus, seizures) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Avoid drugs that are nephrotoxic, cytotoxic, myelosuppressive; may increase risk of toxicity. Obtain specimens for viral diagnostic tests before starting therapy (therapy may begin before results are obtained). Check hematology reports for accurate baseline.

INTERVENTION/EVALUATION

Monitor CBC, Hgb, MCV, reticulocyte count, CD4 cell count, HIV RNA plasma levels. Check for bleeding. Assess for headache, dizziness. Monitor daily pattern of bowel activity, stool consistency. Evaluate skin for acne, rash. Be alert to development of opportunistic infections (fever, chills, cough, myalgia). Monitor I&O, serum renal/hepatic function tests. Check for insomnia.

PATIENT/FAMILY TEACHING

• Doses should be evenly spaced around the clock. • Zidovudine is not a cure for HIV infection, nor does it reduce risk of transmission to others. Acts to reduce symptoms and slows or arrests progress of disease. • Do not take any medications without physician's approval. • Bleeding from gums, nose, rectum may occur and should be reported to physician immediately. • Blood counts are essential because of bleeding potential. • Dental work should be done before therapy or after blood counts return to normal (often wks after therapy has stopped). • Inform physician if muscle weakness, difficulty breathing, headache, inability to sleep, unusual bleeding, rash, signs of infection occur.

ziprasidone

TOP 200

zi-**pras**-i-done (Geodon, Zeldox ✱)

BLACK BOX ALERT Increased risk of mortality in elderly pts with dementia-related psychosis, mainly due to pneumonia, heart failure.

Do not confuse Ziprasidone with trazodone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Piperazine derivative. **CLINICAL:** Antipsychotic (see p. 66C).

ACTION

Antagonizes alpha-adrenergic, dopamine, histamine, serotonin receptors; inhibits reuptake of serotonin, norepinephrine. **Therapeutic Effect:** Diminishes symptoms of schizophrenia, depression.

PHARMACOKINETICS

Well absorbed after PO administration. Food increases bioavailability. Protein binding: 99%. Extensively metabolized in liver. Eliminated in feces. Not removed by hemodialysis. **Half-life: PO:** 7 hrs; **IM:** 2–5 hrs.

USES

Treatment of schizophrenia, acute bipolar mania, acute agitation in pts with schizophrenia, mania. Maintenance treatment of bipolar disorder as adjunct to lithium or valproic acid. **OFF-LABEL:** Tourette's syndrome, psychosis/agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: Conditions associated with risk of prolonged QT interval, congenital long QT syndrome, concurrent use of other QT prolongation medications. Uncompensated heart failure. Recent MI. **Cautions:** Pts with bradycardia, hypokalemia, hypomagnesemia may be at greater risk for torsade de pointes (atypical ventricular tachycardia). History of MI or unstable heart disease, seizures, Parkinson's disease; those at risk for aspiration, pneumonia, hepatic impairment. Pts at high risk for suicide, hypotensive episodes, breast cancer, or other prolactin-dependent tumors; pts exposed to temperature extremes.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depression. **Carbamazepine** may decrease concentration. **Ketoconazole** may increase concentration. **Medications causing prolongation of QT interval (e.g., amiodarone, dofetilide, sotalol)** may increase effects on cardiac conduction leading to malignant arrhythmias (e.g., torsade de pointes). **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration. **FOOD:** **All foods** enhance bioavailability. **LAB VALUES:** May prolong QT interval. May increase serum glucose, prolactin levels.

AVAILABILITY (Rx)

Capsules: 20 mg, 40 mg, 60 mg, 80 mg. **Injection, Powder for Reconstitution:** 20 mg.

ADMINISTRATION/HANDLING

IM

• Store vials at room temperature; protect from light. • Reconstitute each vial with 1.2 ml Sterile Water for Injection to provide concentration of 20 mg/ml. • Reconstituted solution stable for 24 hrs at room temperature or 7 days if refrigerated.

PO

• Give with food (increases bioavailability).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage greater than 80 mg twice daily are not recommended in most pts.

Schizophrenia

PO: ADULTS, ELDERLY: Initially, 20 mg twice daily with food. Titrate at intervals of no less than 2 days. Maintenance: 20–100 mg twice daily.

Acute Agitation (Schizophrenia)

IM: ADULTS, ELDERLY: 10 mg q2h or 20 mg q4h. **Maximum:** 40 mg/day.

Mania in Bipolar Disorder

PO: ADULTS, ELDERLY (Acute): Initially, 40 mg twice daily. May increase to 60–80 mg twice daily on second day of treatment. Maintenance: 40–80 mg twice daily.

SIDE EFFECTS

Frequent (30%–16%): Headache, drowsiness, dizziness. **Occasional:** Rash, orthostatic hypotension, weight gain, restlessness, constipation, dyspepsia (heartburn, indigestion, epigastric pain). **Rare:** Hyperglycemia, priapism.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolongation of QT interval (as seen on EKG) may produce torsade de pointes, a form of ventricular tachycardia. Pts with bradycardia, hypokalemia, hypomagnesemia are at increased risk.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess pt's behavior, appearance, emotional status, response to environment,

speech pattern, thought content. EKG should be obtained to assess for QT prolongation before instituting medication. Blood chemistry for serum magnesium, potassium should be obtained before beginning therapy and routinely thereafter.

INTERVENTION/EVALUATION

Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression). Monitor weight.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol.

zoledronic acid

zoe-le-**dron**-ik **as**-id
(Aclasta, Reclast, Zometa)
Do not confuse Zometa with Zofran or Zoladex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Bisphosphonate. **CLINICAL:** Calcium regulator, bone resorption inhibitor (see p. 1440).

ACTION

Inhibits resorption of mineralized bone, cartilage; inhibits increased osteoclastic activity, skeletal calcium release induced by stimulatory factors released by tumors. **Therapeutic Effect:** Increases urinary calcium, phosphorus excretion; decreases serum calcium, phosphorus levels.

USES

Zometa: Treatment of hypercalcemia of malignancy, bone metastases of solid tumors. Treatment of multiple myeloma. **Reclast:** Treatment and prevention of postmenopausal osteoporosis, glucocorticoid-induced osteoporosis, treatment of Paget's disease. Treatment of osteoporosis in men to increase bone mass. **OFF-LABEL:** Prevention of bone loss associated with aromatase inhibitor therapy in postmenopausal women with breast cancer or androgen deprivation therapy in men with prostate cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to other bisphosphonates, including alendronate, etidronate, pamidronate, risedronate, tiludronate. Creatinine clearance less than 35 ml/min, evidence of acute renal impairment, hypocalcemia (Reclast). **Cautions:** History of aspirin-sensitive asthma, renal impairment, hypoparathyroidism, risk of hypocalcemia, malabsorption syndrome.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Loop diuretics (e.g., furosemide) may increase risk for hypocalcemia. **Nephrotoxic drugs** may increase risk for nephrotoxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum magnesium, calcium, phosphate.

AVAILABILITY (Rx)

Injection Solution (Zometa): 4 mg/5 ml vial, 4 mg/100 ml single-use ready-to-use bottle. **(Reclast):** 5 mg diluted in 100 ml ready-to-infuse solution.

ADMINISTRATION/HANDLING

◀ALERT▶ Pt should be adequately rehydrated before administration of zoledronic acid.

IV (Zometa)

Reconstitution • Further dilute Zometa with 100 ml 0.9% NaCl or D_5W.

Rate of Administration • Adequate hydration is essential in conjunction with zoledronic acid. • Administer as IV infu-

sion over not less than 15 min (increases risk of deterioration in renal function).
Storage • Store intact vials at room temperature. • Infusion of solution must be completed within 24 hrs.

IV (Reclast)

• Administer as IV infusion over not less than 15 min. • Follow infusion with a 10-ml 0.9% NaCl flush of IV line.

IV INCOMPATIBILITIES

Do not mix with other medications.

INDICATIONS/ROUTES/DOSAGE

Hypercalcemia (Zometa)
IV Infusion: ADULTS, ELDERLY: 4 mg IV infusion given over no less than 15 min. Retreatment may be considered, but at least 7 days should elapse to allow for full response to initial dose.

Multiple Myeloma, Bone Metastases of Solid Tumors (Zometa)
IV: ADULTS, ELDERLY: 4 mg q3–4wks.

Paget's Disease (Reclast)
IV: ADULTS, ELDERLY: 5 mg as a single dose. Data about retreatment not available.

Osteoporosis Treatment (Reclast)
IV: ADULTS, ELDERLY: 5 mg once yearly.

Prevention of Glucocorticoid-Induced Osteoporosis (Reclast)
IV: ADULTS, ELDERLY: 5 mg once yearly.

Prevention of Postmenopausal Osteoporosis (Reclast)
IV: ADULTS, ELDERLY: 5 mg once q2yrs.

Dosage in Renal Impairment
Reclast: **Creatinine clearance less than 35 ml/min:** Not recommended.
Zometa:

Creatinine Clearance	Dosage
50–60 ml/min	3.5 mg
40–49 ml/min	3.3 mg
30–39 ml/min	3 mg
Less than 30 ml/min	Not recommended

SIDE EFFECTS

Frequent (44%–26%): Fever, nausea, vomiting, constipation. **Occasional (15%–10%):** Hypotension, anxiety, insomnia, flu-like symptoms (fever, chills, bone pain, myalgia, arthralgia). **Rare:** Conjunctivitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Renal toxicity may occur if IV infusion is administered in less than 15 min.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Prior to initiation, obtain dental exam for pts at risk for osteonecrosis. Establish baseline serum electrolytes, creatinine.

INTERVENTION/EVALUATION

Monitor serum renal function, CBC, Hgb, Hct. Assess vertebral bone mass (document stabilization, improvement). Monitor serum calcium, phosphate, magnesium, creatinine levels. Assess for fever. Monitor food intake, daily pattern of bowel activity, stool consistency. Check I&O, BUN, serum creatinine in pts with renal impairment.

zolmitriptan

zole-mi-**trip**-tan
(Zomig, Zomig Rapimelt, Zomig-ZMT)
Do not confuse zolmitriptan with sumatriptan.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor agonist. **CLINICAL:** Antimigraine (see p. 63C).

ACTION

Binds selectively to vascular receptors, producing vasoconstrictive effect on cranial blood vessels. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 25%. Undergoes first-pass metabolism in liver to active metabolite. Eliminated primarily in urine (60%) and, to lesser extent, in feces (30%). **Half-life:** 2.8–3.7 hrs.

USES

Treatment of acute migraine attack with or without aura.

PRECAUTIONS

Contraindications: Arrhythmias associated with conduction disorders (e.g., Wolff-Parkinson-White syndrome), basilar or hemiplegic migraine, coronary artery disease, ischemic heart disease (including angina pectoris, history of MI, silent ischemia, Prinzmetal's angina), uncontrolled hypertension, use within 24 hrs of ergotamine-containing preparations or another serotonin receptor agonist, MAOI used within 14 days. Additional for nasal spray: Cerebrovascular syndromes (e.g., stroke), peripheral vascular disease. **Cautions:** Mild to moderate renal/hepatic impairment, pt profile suggesting cardiovascular risks (e.g., hypertension, hypercholesterolemia, smoker, obesity, diabetes).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Ergotamine-containing medications may produce vasospastic reaction. **Fluoxetine, fluvoxamine, paroxetine, sertraline** may produce hyperreflexia, incoordination, weakness. **MAOIs** may dramatically increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Nasal Spray (Zomig): 5 mg/0.1 ml. **Tablets (Zomig):** 2.5 mg, 5 mg.

Tablets (Orally-Disintegrating [Zomig-ZMT]): 2.5 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. Tablets may be broken.

Orally-Disintegrating Tablet

• Must take whole; do not break, crush, cut, chew. • Place on tongue, allow to dissolve. • Not necessary to administer with liquid.

Nasal

• Instruct pt to clear nasal passages as much as possible before use. • With head upright, pt should close one nostril with index finger, breathe out gently through mouth. • Instruct pt to insert nozzle into open nostril about ½ inch, close mouth, and while taking a breath through nose, release spray dosage by firmly pressing plunger. • Have pt remove nozzle from nose, gently breathe in through nose and out through mouth for 15–20 sec. Tell pt to avoid breathing in deeply.

INDICATIONS/ROUTES/DOSAGE

Acute Migraine Attack

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 18 YRS: Initially, 2.5 mg or less (may break tablet). If headache returns, may repeat dose after 2 hrs. **Maximum:** 10 mg/24 hrs.

Orally-Disintegrating Tablet: ADULTS, ELDERLY: 2.5 mg at onset of migraine headache. If headache returns, may repeat dose after 2 hrs. **Maximum:** 10 mg/24 hrs.

Intranasal: ADULTS, ELDERLY: 5 mg (1 spray). If headache returns, may repeat dose after 2 hrs. **Maximum:** 10 mg/24 hrs.

SIDE EFFECTS

Frequent (8%–6%): PO: Dizziness; paresthesia, neck/throat/jaw pressure; drowsi-

ness. **Nasal:** Altered taste, paresthesia. **Occasional (5%–3%): PO:** Warm/hot sensation, asthenia (loss of strength, energy), chest pressure. **Nasal:** Nausea, drowsiness, nasal discomfort, dizziness, asthenia (loss of strength, energy), dry mouth. **Rare (2%–1%):** Diaphoresis, myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiac events (ischemia, coronary artery vasospasm, MI), noncardiac vasospasm-related reactions (hemorrhage, stroke) occur rarely, particularly in pts with hypertension, diabetes, strong family history of coronary artery disease; those who are obese; smokers; males older than 40 yrs; postmenopausal women.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of peripheral vascular disease, coronary artery disease, renal/hepatic impairment, MAOI use. Question pt regarding onset, location, duration of migraine, possible precipitating factors.

INTERVENTION/EVALUATION

Monitor for evidence of dizziness. Monitor B/P, esp. in pts with hepatic impairment. Assess for relief of migraine headache, migraine potential for photophobia, phonophobia (sound sensitivity, light sensitivity, nausea, vomiting).

PATIENT/FAMILY TEACHING

• Take single dose as soon as symptoms of actual migraine attack appear. • Medication is intended to relieve migraine, not to prevent or reduce number of attacks. • Lie down in quiet dark room for additional benefit after taking medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report chest pain; palpitations; tightness in throat; edema of face, lips, eyes; rash; easy bruising; blood in urine/stool; pain/numbness in arms/legs.

zolpidem

TOP 200

zole-pi-dem
(Ambien, Ambien CR, Edluar, Intermezzo, Zolpimist)
Do not confuse Ambien with Abilify or ativan, or zolpidem with lorazepam or zaleplon.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonbenzodiazepine **(Schedule IV). CLINICAL:** Sedative-hypnotic (see p. 150C).

ACTION

Enhances action of inhibitory neurotransmitter gamma-aminobutyric acid (GABA). **Therapeutic Effect:** Induces sleep with fewer nightly awakenings, improves sleep quality.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	N/A	6–8 hrs

Rapidly absorbed from GI tract. Protein binding: 92%. Metabolized in liver; excreted in urine. Not removed by hemodialysis. **Half-life:** 1.4–4.5 hrs (increased in hepatic impairment).

USES

Ambien, Edluar, Zolpimist: Short-term treatment of insomnia (with difficulty of sleep onset). **Ambien CR:** Treatment of insomnia (with difficulty of sleep onset and/or sleep maintenance). **Intermezzo:** Treatment of insomnia characterized by middle-of-the-night awakening followed by difficulty returning to sleep.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment, pts with depression, history of drug dependence, sleep apnea, COPD, respiratory disease, myasthenia gravis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** More likely to experience falls or confusion; decreased initial doses recommended. Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depression. **HERBAL:** **Gotu kola, kava kava, valerian** may increase CNS depression. **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Oral Solution (Zolpimist): 5 mg/actuation. **Tablets (Ambien):** 5 mg, 10 mg. **Tablets (Sublingual [Edluar]):** 5 mg, 10 mg. **(Intermezzo):** 1.75 mg, 3.5 mg.

Tablets (Extended-Release [Ambien CR]): 6.25 mg, 12.5 mg.

ADMINISTRATION/HANDLING

PO

• For faster sleep onset, do not give with or immediately after a meal. • Do not break, crush, dissolve, or divide Ambien CR tablets. Swallow whole. • Edluar sublingual tablets to be placed under tongue and allowed to disintegrate. Do not swallow or administer with water. • Spray Zolpimist directly into mouth over tongue.

INDICATIONS/ROUTES/DOSAGE

Insomnia

PO, Spray, Sublingual *(Edluar, Zolpimist)*: ADULTS: 10 mg immediately before bedtime. **ELDERLY, DEBILITATED:** 5 mg immediately before bedtime.

***(Intermezzo)*: ADULTS, ELDERLY:** 1.75 mg (women) 3.5 mg (men) taken once in middle of night with 4 or more hrs of expected sleep yet to come.

PO *(Extended-Release)*: ADULTS: 12.5 mg immediately before bedtime. **ELDERLY, DEBILITATED:** 6.25 mg immediately before bedtime.

Dosage in Hepatic Impairment

PO: *(Immediate-Release Tablet, Spray, Sublingual Tablet)*: 5 mg. ***(Extended-Release Tablet)*:** 6.25 mg.

SIDE EFFECTS

Occasional (7%): Headache. **Rare (less than 2%):** Dizziness, nausea, diarrhea, muscle pain, sleepwalking.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce severe ataxia (clumsiness, unsteadiness), bradycardia, diplopia, severe drowsiness, nausea, vomiting, difficulty breathing, unconsciousness. Abrupt withdrawal following long-term use may produce weakness, facial flushing, diaphoresis, vomiting, tremor. Drug tolerance/dependence may occur with prolonged use of high dosages.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations, mental status, sleep patterns. Raise bed rails, provide call light. Provide environment conducive to sleep (back rub, quiet environment, low lighting).

INTERVENTION/EVALUATION

Monitor sleep pattern of pt. Evaluate for therapeutic response to insomnia: decrease in number of nocturnal awakenings, increase in length of sleep. Monitor daytime alertness, respiratory rate, behavior profile.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication after long-term use. • Avoid alcohol and tasks that require alertness, motor skills until response to drug is established. • Tolerance, dependence may occur with prolonged use of high dosages. • Do not

break, chew, crush, dissolve, or divide Ambien CR tablets; swallow whole.

zonisamide

zoh-**nis**-a-mide
(Zonegran)
Do not confuse Zonegran with Sinequan, or zonisamide with lacosamide.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Succinimide. **CLINICAL:** Anticonvulsant (see p. 36C).

ACTION

May stabilize neuronal membranes, suppress neuronal hypersynchronization by blocking sodium, calcium channels. **Therapeutic Effect:** Reduces seizure activity.

PHARMACOKINETICS

Well absorbed after PO administration. Metabolized in liver. Extensively bound to RBCs. Protein binding: 40%. Primarily excreted in urine. **Half-life:** 63 hrs (plasma), 105 hrs (RBCs).

USES

Adjunctive therapy in treatment of partial seizures in adults, children older than 16 yrs with epilepsy. **OFF-LABEL:** Bipolar disorder.

PRECAUTIONS

Contraindications: Allergy to sulfonamides. **Cautions:** Renal/hepatic impairment, pts at high risk for suicide.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** No age-related precautions noted, but lower dosages recommended.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase sedative effect. **CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, valproic acid)** may increase metabolism, decrease effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum creatinine.

AVAILABILITY (Rx)

Capsules: 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• May give with or without food. • Do not crush, break capsules. Swallow capsules whole. • Do not give to pts allergic to sulfonamides.

INDICATIONS/ROUTES/DOSAGE

Note: Do not use if creatinine clearance is less than 50 ml/min.

Partial Seizures

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 16 YRS: Initially, 100 mg/day. May increase to 200 mg/day after 2 wks. Further increases to 300 mg/day and 400 mg/day can be made with minimum of 2 wks between adjustments. Range: 100–600 mg/day.

SIDE EFFECTS

Frequent (17%–9%): Drowsiness, dizziness, anorexia, headache, agitation, irritability, nausea. **Occasional (8%–5%):** Fatigue, ataxia, confusion, depression, impaired memory/concentration, insomnia, abdominal pain, diplopia, diarrhea, speech difficulty. **Rare (4%–3%):** Paresthesia, nystagmus, anxiety, rash, dyspepsia (heartburn, indigestion, epigastric pain), weight loss.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose characterized by bradycardia, hypotension, respiratory depression, coma. Leukopenia, anemia, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Initiate seizure precautions. Serum hepatic function tests, CBC, platelet count should be performed before therapy begins and periodically during therapy.

INTERVENTION/EVALUATION

Observe frequently for recurrence of seizure activity. Assess for clinical improvement (decrease in intensity, frequency of seizures). Assist with ambulation if dizziness occurs.

PATIENT/FAMILY TEACHING

• Strict maintenance of drug therapy is essential for seizure control. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Report if rash, back/abdominal pain, blood in urine, fever, sore throat, ulcers in mouth, easy bruising occur. • Notify physician of worsening depression, unusual behavior, suicidal ideation.

CALCULATION OF DOSES

Frequently, dosages ordered do not correspond exactly to what is available and must be calculated.

RATIO/PROPORTION:
A pt is to receive 65 mg of a medication. It is available as 80 mg/2 ml. What volume (ml) needs to be administered to the patient?

STEP 1: Set up ratio.

$$\frac{80 \text{ mg}}{2 \text{ ml}} = \frac{65 \text{ mg}}{\text{x (ml)}}$$

STEP 2: Cross multiply and divide each side by the number with x to determine volume to be administered.

$$80 \text{ mg} \times (\text{x}) \text{ ml} = 65 \text{ mg} \times 2 \text{ ml}$$
$$80 \text{ x} = 130$$
$$\text{x} = \frac{130}{80} = 1.625 \text{ ml}$$

CALCULATIONS IN MICROGRAMS PER KILOGRAM PER MINUTE (mcg/kg/min):
A 63-year-old pt (weight 165 lb) is to receive medication A at a rate of 8 mcg/kg/min. Given a solution containing medication A in a concentration of 500 mg/250 ml, at what rate (ml/hr) would you infuse this medication?

STEP 1: Convert to same units. In this problem, the dose is expressed in mcg/kg; therefore, convert weight to kg (2.2 lb = 1 kg) and drug concentration to mcg/ml (1 mg = 1,000 mcg).

$$165 \text{ lb divided by } 2.2 = 75 \text{ kg}$$
$$\frac{500 \text{ mg}}{250 \text{ ml}} = \frac{2 \text{ mg}}{\text{ml}} = \frac{2{,}000 \text{ mcg}}{\text{ml}}$$

STEP 2: Number of mcg/hr.

$$(75 \text{ kg}) \times 8 \text{ mcg/kg/min} = 600 \text{ mcg/min or } 36{,}000 \text{ mcg/hr}$$

STEP 3: Number of ml/hr.

$$36{,}000 \text{ mcg/hr divided by } 2{,}000 \text{ mcg/ml} = 18 \text{ ml/hr}$$

Appendix B

CONTROLLED DRUGS (UNITED STATES)

Schedule I: Medications having no legal medical use. These substances may be used for research purposes with proper registration (e.g., heroin, LSD).

Schedule II: Medications having a legitimate medical use but are characterized by a very high abuse potential and/or potential for severe physical and psychic dependency. Emergency telephone orders for limited quantities of these drugs are authorized, but the prescriber must provide a written, signed prescription order (e.g., morphine, amphetamines).

Schedule III: Medications having significant abuse potential (less than Schedule II). Telephone orders are permitted (e.g., opiates in combination with other substances such as acetaminophen).

Schedule IV: Medications having a low abuse potential. Telephone orders are permitted (e.g., benzodiazepines, propoxyphene).

Schedule V: Medications having the lowest abuse potential of the controlled substances. Some Schedule V products may be available without a prescription (e.g., certain cough preparations containing limited amounts of an opiate).

Appendix C

CHRONIC WOUND CARE

Introduction

A chronic wound is one that has not healed completely after 4–6 wks. The most common chronic wounds include pressure ulcers (also called *decubitus ulcers* or *bedsores)*, diabetic ulcers (diabetes causes neuropathy, which inhibits the perception of pain and may cause repeated injury), and venous ulcers, primarily occurring in legs, most likely affecting the elderly.

Causes of chronic wounds include the following:

- **Diseases:** Diabetes, cancer, liver/kidney conditions may slow the healing process
- **Poor blood supply/oxygen:** Decreased blood flow may be due to low blood pressure, blocked or narrow blood vessels; low oxygen may be due to heart or lung disease
- **Repeated trauma:** May be due to swelling, increased pressure in tissues, constant pressure on the wound area
- **Impaired immune system:** May be due to radiation, poor nutrition, medications (e.g., steroids)
- **Infection or presence of foreign objects:** May delay wound healing

Treatment

Treatment is based on the severity of the wound, the location of the wound, and whether other areas are affected. Staging of ulcers and other chronic wounds is common practice and relates to the depth and severity of the wound.

Stage 1: Wound is seen as nonblanching redness of intact skin
Stage 2: Ulcer extends through the epidermis or dermis
Stage 3: Ulcer extends through the full thickness of the skin into the subcutaneous tissue, creating a crater
Stage 4: Tissue necrosis with muscle, bone, or underlying structural damage

Treatment of chronic wounds involves maintaining appropriate moisture levels, preventing/treating infections, debridement (removal of necrotic or fibrous tissue, which may include surgical debridement for pts with sepsis or advancing cellulitis), cleansing the wound, eliminating or minimizing pain, and protecting the surrounding skin.

During the healing process, wounds progress through three, sometimes overlapping, phases:

- **Inflammatory phase:** Redness, heat, pain, swelling
- **Proliferative phase:** Migration of fibroblasts into the wound, cellular proliferation, granulation
- **Maturation phase:** New collagen production, deposition and migration of epithelial cells

Products used for treatment of chronic wounds include antimicrobials, debriding agents, dressings, and wound cleansers. **Note:** Papain-containing products are no longer available. These products have historically been marketed without approval. Also, adverse events with use of these products raise serious safety concerns (reported to produce hypersensitivity reactions, anaphylactic reactions, hypotension, tachycardia). Pts allergic to latex may be allergic to papaya, the source of papain.

Wound Care Products

Description	General Uses	Comments
Alginate dressings: Spun fibers of brown seaweed that act as ion exchange mechanisms to absorb serous fluid or exudate, forming a gel-like covering that conforms to the shape of the wound. Facilitate autolytic debridement and maintain a moist wound environment. **Products:** AlgiDERM, Curasorb, Sorbsan. Available as ropes, pads.	Abrasions/ lacerations/skin tears Arterial/venous ulcers Deep and tunneling wounds Diabetic ulcers Pressure ulcers Second-degree burns Odorous wounds Contaminated and infected wounds	Good for moderately to heavily exudative wounds and hemorrhagic wounds Can be left in place until soaked with exudate Requires a secondary dressing (e.g., transparent film, foam, hydrocolloids) Do not moisten prior to use Nonadhesive, nonocclusive Contraindicated in third-degree burns; not recommended for dry or minimally exudative wounds
Collagenase ointment: Sterile enzymatic debriding ointment that possesses the ability to digest collagen in necrotic tissue. **Products:** Santyl.	Eschar or necrotic tissue in wound bed Diabetic foot ulcer Pressure ulcers, stages 2–4 Varicose ulcers	Can be used for infected wounds Gauze is used as a secondary dressing Discontinue when granulation tissue is present Optimal pH for enzymatic action is 6–8 Avoid acidic agents for cleansing; avoid detergents and agents containing heavy metal (e.g., mercury or silver), which may adversely affect enzymatic activity
Trypsin, castor oil, Peru balsam: Trypsin is a mild debriding agent that helps shed damaged skin cells. **Castor oil** acts as a lubricant to protect tissue. **Peru balsam** increases blood flow to a wound area, reduces wound odor. **Products:** Granulex, Xenaderm. Available as gel, ointment, spray.	Eschar or necrotic tissue in wound bed Pressure ulcers, stages 1–4 Varicose ulcers	Can be used for infected wounds Avoid concurrent use of silver-containing products (may reduce efficacy) Promotes healing and relieves pain caused by bed sores and other skin ulcers
Hydrophilic polyurethane foam: Also called open cell foam dressings. Sheets of foamed solutions of polymers containing variably sized open cells that can hold wound exudate away from wound bed. Maintains moist wound environment. **Products:** Biopatch, Curafoam, Flexzan. Available as sheets in a wide variety of formulations.	Moderate to heavy exudative wounds with or without a clean granular wound bed Diabetic ulcers, pressure ulcers, venous stasis ulcers Draining surgical incisions Superficial burns Tube and drain sites	Contraindicated for use in third-degree burns Not recommended for wounds with little to no exudate or when tunneling is present Good for cavitating wounds Highly absorbent, semi-occlusive dressing Usual dressing change is up to 3 times per wk

Description	General Uses	Comments
Hydrocolloids: Formulations of elastomeric, adhesive, and gelling agents; the most common absorbent ingredient is carboxymethylcellulose. Most hydrocolloids are backed with a semi-occlusive film layer. The wound side of the dressing is adhesive, adhering to a moist surface as well as to dry skin but not to the moist wound bed. As wound fluid is absorbed, the hydrocolloid forms a viscous gel in the wound bed, enhancing a moist wound environment. **Products:** Aquacel, Curaderm, DuoDerm. Available as dressings, granules, patches, paste.	Minimal to moderate exudate in partial and full thickness wounds Cuts and abrasions First- and second-degree burns Pressure ulcers Stasis ulcers	Not for wounds producing heavy exudate, infected wounds, dry eschar-covered wounds May provide pain relief Good for chronic wounds that are epithelializing Can be left in place for up to 7 days Contraindicated for third-degree burns
Hydrogels: Glycerin- or water-based dressings designed to hydrate the wound. May absorb small amounts of exudate. **Products:** Curasol, Tegaderm, Flexderm, Vigilon. Available as gel, sheets, gauze.	Partial and full thickness wounds Dry to minimal exudate Cuts and abrasions First- and second-degree burns Pressure ulcers Stasis ulcers	Not for wounds producing moderate to heavy exudate Not for infected wounds May provide pain relief Good for wounds that are debriding Good for keeping a dry wound moist Can be left in place for 1–3 days
Iodine compounds: **Cadexomer iodine:** Iodine is complexed with a polymeric cadexomer starch vehicle, forming a topical gel or paste. The cadexomer moiety absorbs exudate and debris and releases iodine for antimicrobial activity. **Products:** Iodosorb, Iodoflex. Available as gel, dressing, ointment, powder.	Chronic nonhealing, exuding wounds including pressure or leg ulcers and exuding, infected wounds	Requires use of a secondary dressing Contraindicated in pts with iodine sensitivity, Hashimoto's thyroiditis, nontoxic nodular goiter, children Dressing to be changed when it turns white, indicating that the iodine has been depleted
Silver compounds **Silver sulfadiazine cream:** Silver possesses bactericidal properties. Has been shown to reduce bacterial density, vascular margination, migration of inflammatory cells. Enhances rate of re-epithelialization.	Prevent infection in second- and third-degree burns Prevent or treat infection in chronic wounds	May have cytotoxic effects that could delay wound healing Allergic reactions may occur Use should be limited to a 2- to 4-wk period Bacteria may become resistant with prolonged use Avoid use with collagenase- or trypsin-containing debriding agents

(continued)

Description	General Uses	Comments
Transparent film dressings: Polyurethane sheets coated on one side with an adhesive that is inactivated by moisture and will not adhere to a moist surface such as the wound bed. Have no absorbent capacity and are impermeable to fluids and bacteria but are semipermeable to oxygen and water vapor. **Products:** Bioclusive, CarraFilm, Tegaderm HP. Available in a variety of sizes and features.	Prophylaxis on high-risk intact skin Superficial wounds with minimal or no exudate Eschar-covered wounds when autolysis is indicated Clean, closed surgical incisions Pressure ulcers, stage 1 or 2 Second-degree burns	Prevents wound desiccation and contamination by bacteria Contraindicated in third-degree burns Promotes autolysis of necrotic tissue in the wound; maintains moist environment Avoid in arterial ulcers and infected wounds requiring frequent monitoring Do not use as primary dressing on wounds with depth or tunneling May provide pain relief Leave in place for up to 7 days or until fluid leaks
Becaplermin gel: Recombinant formulation of platelet-derived growth factor that promotes cell mitogenesis and protein synthesis for granulation tissue granulation. **Products:** Regranex.	Diabetic foot ulcers that extend into subcutaneous tissue or beyond	Usually applied daily Adequate blood supply and absence of necrotic tissue are needed for efficacy Repeated use (3 or more tubes) may increase risk of cancer-related death Use cautiously in pts with known malignancy

Appendix D

DRUGS OF ABUSE

Substance	*Brand/* Street Names	Administered	Effects of Intoxication	Potential Health Consequences
Amphetamine	*Dexedrine;* bennies, black beauties, hearts, speed, uppers	Injection, smoked, snorted	Increased heart rate, blood pressure, body temperature, metabolism; increased energy, mental alertness; tremors; reduced appetite; irritability; anxiety; panic; violent behavior; psychosis	Weight loss, insomnia, cardiac or cardiovascular complications, stroke, seizures, addiction
Barbiturates	*Nembutal, Seconal, Phenobarbital;* barbs, reds, phennies, yellow, yellow jackets	Injection, oral	Reduction of pain and anxiety; feeling of well-being; lowered inhibitions; slowed pulse/breathing; lowered blood pressure; poor concentration; sedation, drowsiness	Confusion, fatigue; impaired coordination, memory, judgment; respiratory depression or arrest; addiction; depression; unusual excitement; fever; irritability; slurred speech; dizziness
Benzodiazepines	*Ativan, Librium, Valium, Xanax;* candy, downers, tranks	Oral	Reduction of pain and anxiety; feeling of well-being; lowered inhibitions; slowed pulse/breathing; lowered blood pressure; poor concentration; sedation, drowsiness	Confusion, fatigue; impaired coordination, memory, judgment; respiratory depression or arrest; addiction; dizziness
Cocaine	Blow, bump, candy, coke, crack, rack, snow, toot	Injection, smoked, snorted	Increased heart rate, blood pressure, body temperature, metabolism; increased energy, mental alertness; tremors; reduced appetite; irritability; anxiety; panic; violent behavior; psychosis	Weight loss, insomnia, cardiac or cardiovascular complications, stroke, seizures, addiction, nasal damage from snorting, rapid or irregular heartbeat, headaches, malnutrition

(continued)

Substance	*Brand/* Street Names	Administered	Effects of Intoxication	Potential Health Consequences
Codeine	*Fiorinal with codeine, Tylenol with codeine;* Captain Cody, schoolboy, loads, pancakes and syrup	Injection, oral	Pain relief, euphoria, drowsiness	Respiratory depression and arrest, nausea, confusion, constipation, sedation, unconsciousness, coma, tolerance, addiction
Dextromethorphan	Found in some cough and cold medications; robotripping, Robo, Triple C	Oral	Impaired motor function, feeling of being separated from one's body and environment; euphoria; slurred speech; confusion; dizziness; distorted visual perceptions	
Flunitrazepam	*Rohypnol;* forget-me pill, Mexican Valium, roofies, roofinol, rope, rophies	Oral, snorted	Sedation, muscle relaxation, confusion, memory loss, dizziness, impaired coordination	Addiction; also associated with sexual assaults
GHB	Georgia home boy, grievous bodily harm, liquid ecstasy, soap, scoop, goop, liquid X	Oral	Drowsiness, nausea, headache, disorientation, loss of coordination, memory loss	Unconsciousness, seizures, coma, associated with sexual assaults
Heroin	Smack, horse, brown sugar, dope, junk, white horse, China white	Injection, smoked, snorted	Euphoria, drowsiness, impaired coordination, dizziness, confusion, nausea, sedation, feeling of heaviness in the body, slowed breathing	Constipation, endocarditis, hepatitis, HIV, addiction, fatal overdose
Hydrocodone	*Vicodan, Lortab*	Oral	Pain relief, euphoria, drowsiness	Respiratory depression and arrest, nausea, confusion, constipation, sedation, unconsciousness, coma, tolerance, addiction

Substance	*Brand/* Street Names	Administered	Effects of Intoxication	Potential Health Consequences
Inhalants	Solvents (paint thinner, glues), nitrites (laughing gas, snappers, poppers)	Inhaled through nose or mouth	Stimulation, loss of inhibition, headache, nausea or vomiting, slurred speech, loss of motor coordination, wheezing	Cramps, muscle weakness, depression, memory impairment, damage to cardiovascular and nervous systems, unconsciousness, sudden death
Ketamine	*Ketalar;* cat Valium, Special K, vitamin K	Injection, snorted, smoked	Increased heart rate and blood pressure, impaired motor function, feelings of being separated from one's body and environment; at high doses: delirium, depression, respiratory depression or arrest; death	Memory loss, numbness, nausea/vomiting, anxiety, tremors
LSD	Acid, cubes, microdot, yellow sunshine, blue heaven	Oral, absorbed through mouth tissues	Altered states of perception and feeling; hallucinations; nausea; increased body temperature, heart rate, blood pressure; loss of appetite; sweating; sleeplessness; numbness; dizziness; weakness; tremors; impulsive behavior; rapid shifts in emotion	Flashbacks, hallucinogen persisting perception disorder
Marijuana	Blunt, ganja, grass, joint, Mary Jane, pot, reefer, sinsemilla, skunk, weed	Oral, smoked	Euphoria, relaxation, slowed reaction time, impaired balance and coordination, increased heart rate and appetite, impaired learning and memory, anxiety, panic attacks, psychosis	Cough, frequent respiratory infections, possible mental health decline, addiction

(continued)

Substance	*Brand/* Street Names	Administered	Effects of Intoxication	Potential Health Consequences
MDMA	Ecstasy, Adam, clarity, Eve, lover's speed, peace, uppers	Injection, oral, snorted	Mild hallucinogenic effects, increased tactile sensitivity, empathic feelings, lowered inhibition, anxiety, chills, sweating, teeth clenching, muscle cramping	Sleep disturbances, depression, impaired memory, hyperthermia, addiction
Mescaline	Buttons, cactus, peyote	Oral, smoked	Altered states of perception and feeling; hallucinations; nausea; increased body temperature, heart rate, blood pressure; loss of appetite; sweating; sleeplessness; numbness; dizziness; weakness; tremors; impulsive behavior; rapid shifts in emotion	
Methamphetamine	*Desoxyn;* meth, ice, crank, crystal, go fast, speed	Oral, injection, smoked, snorted	Increased heart rate, blood pressure, body temperature, metabolism; increased energy, mental alertness; tremors; reduced appetite; irritability; anxiety; panic; violent behavior; psychosis	Weight loss, insomnia, cardiac or cardiovascular complications, stroke, seizures, addiction, severe dental problems, behavior/memory loss, impaired memory and learning, tolerance, addiction
Methylphenidate	*Ritalin;* JIF, MPH, Skippy, smart drug, vitamin R	Injection, oral, snorted	Increase or decrease in blood pressure; psychotic episodes	Digestive problems, loss of appetite, weight loss
Morphine	*Roxanol, Duramorph;* M, Miss Emma, monkey, white stuff	Injection, oral, smoked	Pain relief, euphoria, drowsiness	Respiratory depression and arrest, nausea, confusion, constipation, sedation, unconsciousness, coma, tolerance, addiction

Substance	*Brand*/ Street Names	Administered	Effects of Intoxication	Potential Health Consequences
Oxycodone	*OxyContin, Percodan;* oxycotton, oxycet, hillbilly heroin, percs	Injection, oral	Pain relief, euphoria, drowsiness	Respiratory depression and arrest, nausea, confusion, constipation, sedation, unconsciousness, coma, tolerance, addiction
PCP	*Phencyclidine;* angel dust, boat, hog, love boat, peace pill	Injection, oral, smoked	Impaired motor function, feelings of being separated from one's body and environment, analgesia, psychosis, aggression, violence, slurred speech, loss of coordination, hallucinations	
Psilocybin	Magic mushrooms, purple passion, little smoke	Oral	Altered states of perception and feeling, hallucinations, nausea, nervousness, paranoia, panic	

Appendix E

EQUIANALGESIC DOSING

Guidelines for equianalgesic dosing of commonly used analgesics are presented in the following table. The dosages are approximate to 10 mg of morphine intramuscularly. These guidelines are for the management of acute pain in the opioid-naïve pt. Dosages may vary for the opioid-tolerant pt and for the management of chronic pain. Dosing adjustments for renal or hepatic insufficiency may also be necessary. Clinical response is the criterion that must be applied for each pt with titration to desired response.

Name	Equianalgesic Oral Dose	Equianalgesic Parenteral Dose (IV, IM, Subcutaneous)
Codeine	200 mg	100–130 mg
Fentanyl	Not available	0.1 mg (100 micrograms)
Hydrocodone	30–45 mg	Not available
Hydromorphone (Dilaudid)	7.5–8 mg	1.5–2 mg
Hydromorphone (Dilaudid) (Controlled-Release)	7.5 mg	N/A
Meperidine (Demerol)	300 mg	75 mg
Methadone (Dolophine)	10–20 mg	10 mg
Morphine	30 mg	10 mg
Oxycodone (OxyContin)	20–30 mg	Not available
Oxymorphone	10 mg	1 mg
Oxymorphone (Extended-Release)	10 mg	N/A

Appendix F

FDA PREGNANCY CATEGORIES

◀ALERT▶ Medications should be used during pregnancy only if clearly needed.

A: Adequate and well-controlled studies have failed to show a risk to the fetus in the first trimester of pregnancy (also, no evidence of risk has been seen in later trimesters). Possibility of fetal harm appears remote.

B: Animal reproduction studies have failed to show a risk to the fetus, and there are no adequate/well-controlled studies in pregnant women.

C: Animal reproduction studies have shown an adverse effect on the fetus, and there are no adequate/well-controlled studies in humans. However, the benefits may warrant use of the drug in pregnant women despite potential risks.

D: There is positive evidence of human fetal risk based on data from investigational or marketing experience or from studies in humans, but the potential benefits may warrant use of the drug despite potential risks (e.g., use in life-threatening situations in which other medications cannot be used or are ineffective).

X: Animal or human studies have shown fetal abnormalities and/or there is evidence of human fetal risk based on adverse reaction data from investigational or marketing experience where the risks of using the medication clearly outweigh potential benefits.

Appendix G

HERBALS: COMMON NATURAL MEDICINES

The use of herbal therapies is increasing in the United States. Because of the rise in the use of herbal therapy, the following is presented to provide some basic information on some of the more popular herbs. Please note this is not an all-inclusive list, which is beyond the scope of this handbook.

Name	Uses	Comments
Aloe vera	Orally: osteoarthritis, inflammatory bowel diseases (e.g., ulcerative colitis), fever, itching, inflammation. Topically: burns, wound healing, psoriasis, sunburn, frostbite, cold sores.	Well tolerated. Orally can cause abdominal pain, cramps; topically can cause burning, itching, contact dermatitis. May lower blood glucose levels and have additive effects with antidiabetic medications.
Bilberry	Orally: improve visual acuity (e.g., night vision, cataracts), atherosclerosis, chronic fatigue syndrome. Topically: mild inflammation of mouth and throat mucous membranes.	Can inhibit platelet aggregation, increase risk of bleeding when combined with antiplatelet or anticoagulant medications (e.g., aspirin, clopidogrel, enoxaparin, warfarin). May lower blood glucose.
Bitter orange	Orally: appetite stimulant, dyspepsia. Topically: inflammation of the eyelid, conjunctiva, retina.	May cause hypertension, cardiovascular toxicity. May increase concentration/effects of midazolam; concurrent use with MAOIs may increase blood pressure (avoid use); combination with caffeine can increase blood pressure, heart rate.
Black cohosh	Orally: symptoms of menopause, premenstrual syndrome (PMS), dysmenorrhea, dyspepsia. Topically: acne, mole, and wart removal; improve skin appearance.	Can cause GI upset, rash, headache, dizziness, increased weight, cramping, breast tenderness, vaginal spotting/bleeding. May decrease effects of cisplatin; may increase risk of hepatic damage with hepatotoxic medications.
Capsicum (cayenne pepper)	Orally: dyspepsia, flatulence, diarrhea, cramps, toothache, hyperlipidemia. Topically: pain of shingles, osteoarthritis, rheumatoid arthritis, postherpetic neuralgia, diabetic neuralgia, trigeminal neuralgia.	Orally can cause upper abdominal discomfort (e.g., gas, bloating, nausea, diarrhea, belching); topically can cause burning, stinging, erythema. May increase effects/adverse effects of antiplatelet medications.
Chamomile	Prepared as a tea and used as a mild sedative, relaxant, and sleeping aid; used for indigestion, itching, and inflammation.	Large amounts may cause vomiting.

Name	Uses	Comments
Chastberry	Orally: menstrual irregularities (e.g., dysmenorrhea, amenorrhea, metrorrhagia).	Can cause GI upset, headache, diarrhea, nausea, itching, urticaria, rash, insomnia, increased weight, irregular menstrual bleeding. Can interfere with efficacy of oral contraceptives, hormone replacement therapy.
Clove (clove oil)	Orally: dyspepsia, expectorant, diarrhea, halitosis, flatulence, nausea, vomiting. Topically: toothache, mouth and throat inflammation.	Topically can cause tissue irritation, allergic dermatitis.
Co-enzyme Q-10	Congestive heart failure, angina, diabetes, hypertension.	Can cause GI side effects (e.g., nausea, vomiting, diarrhea, appetite suppression, heartburn, epigastric discomfort). Can decrease blood pressure and have an additive effect with antihypertensive medications; may reduce anticoagulant effects of warfarin.
Cranberry	Prevention/treatment of urinary tract infections, neurogenic bladder, urinary deodorizer in incontinence.	Large amounts can cause GI upset, diarrhea. Greater than 1,000 ml daily can increase risk of uric acid, kidney stone formation.
DHEA	Slow or reverse aging, weight loss, metabolic syndrome, increase immune and cognitive function.	At high dose can cause acne, hirsutism, hair loss, voice deepening, insulin resistance, altered menstrual pattern. May interfere with antiestrogen effects of anastrozole, letrozole, or other aromatase inhibitors; may overcome estrogen receptor antagonist activity of tamoxifen in estrogen receptor positive cancer cells.
Dong quai	Dysmenorrhea, premenstrual syndrome, menopausal symptoms.	May cause photosensitivity and photodermatitis. May increase effect/risk of bleeding with antiplatelet and anticoagulant medications (e.g., aspirin, warfarin).
Echinacea	Treat/prevent common cold, other upper respiratory tract infections.	Can cause GI effects (e.g., nausea, abdominal pain, diarrhea, vomiting). Stimulates immune function—may exacerbate autoimmune diseases (e.g., multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosis).

(continued)

Name	Uses	Comments
Eucalyptus	Orally: infections, fever, dyspepsia, expectorant for coughs. Topically: inflammation of respiratory tract mucous membranes, rheumatoid arthritis, nasal stuffiness.	Orally: GI effects (e.g., nausea, vomiting, diarrhea). Topically (prolonged exposure/large amounts): agitation, drowsiness, muscle weakness, ataxia.
Evening primrose oil	Premenstrual syndrome, endometriosis, symptoms of menopause (e.g., hot flashes).	May increase risk of bruising/bleeding with antiplatelet/anticoagulant medications (e.g., aspirin, clopidogrel, enoxaparin, warfarin).
Feverfew	Orally: fever, headaches, prevention of migraines, menstrual irregularities. Topically: toothaches, antiseptic.	Orally: GI effects (e.g., heartburn, nausea, diarrhea, constipation, abdominal pain, bloating, flatulence). Topically: contact dermatitis. May have additive effects, increase risk of bleeding with antiplatelet medications.
Fish oil	Hyperlipidemia, hypertriglyceridemia, hypertension, stroke, depression, rheumatoid arthritis, osteoporosis, psoriasis, Crohn's disease.	Can cause a fishy aftertaste, halitosis, heartburn, dyspepsia, nausea, loose stools, rash. May have additive effect with antihypertensive medication.
Garlic	Hypertension, hyperlipidemia, age-related vascular changes, atherosclerosis, chronic fatigue syndrome, menstrual disorders.	Dose-related effects including breath/body odor, mouth and GI burning/irritation, heartburn, flatulence, nausea, vomiting, diarrhea. May increase effects of antiplatelets (e.g., aspirin, clopidogrel, enoxaparin), anticoagulants (e.g., warfarin); may decrease effects of oral contraceptives, cyclosporine, protease inhibitors, and NNRTIs.
Ginger	Motion sickness, morning sickness, dyspepsia, rheumatoid arthritis, osteoarthritis, loss of appetite, migraine headache.	At high doses of 5 g/day may cause abdominal discomfort, heartburn, diarrhea, irritant effect in mouth and throat. May increase risk of bleeding with antiplatelet medications and anticoagulants (e.g., aspirin, clopidogrel, enoxaparin, warfarin).
Ginkgo	Dementia (including Alzheimer's), vascular dementia, mixed dementia.	Mild GI upset, headache, dizziness, constipation, palpitations, allergic skin reactions. Decreases platelet aggregation; may increase risk of bleeding with antiplatelet and anticoagulants (e.g., aspirin, clopidogrel, enoxaparin, warfarin).

Name	Uses	Comments
Ginseng	Increases resistance to environmental stress, improves well-being, boosts energy, aphrodisiac.	May cause insomnia, vaginal bleeding, headache, hypertension, hypotension. May decrease platelet aggregation (use caution with antiplatelet or anticoagulant medications).
Glucosamine	Osteoarthritis, glaucoma, temporomandibular joint arthritis.	May cause mild GI effects (e.g., nausea, heartburn, diarrhea, constipation). May increase risk of bleeding with anticoagulants (e.g., warfarin).
Gotu kola	Reduce fatigue, anxiety, depression, improve memory and intelligence.	May cause GI upset, nausea, drowsiness. May cause additive sedative effects/side effects with CNS depressants (e.g., clonazepam, lorazepam, zolpidem).
Grapefruit	Hyperlipidemia, atherosclerosis, weight loss and obesity.	May increase concentrations/effects of benzodiazepines, calcium channel blockers, carbamazepine, carvedilol, clomipramine, cyclosporine, estrogens, lovastatin, simvastatin, atorvastatin.
Green tea	Improve cognitive performance and mental alertness.	Can cause nausea, vomiting, abdominal bloating, dyspepsia, flatulence, diarrhea. Higher doses can cause dizziness, insomnia, fatigue, agitation. May increase effects of amphetamines, caffeine.
Kava kava	Anxiety disorders, stress, ADHD, insomnia, restlessness.	GI upset, headache, dizziness, drowsiness, enlarged pupils and disturbances of oculomotor equilibrium and accommodation, dry mouth, allergic skin reactions. May increase drowsiness, motor reflex depression with alcohol, benzodiazepines, other CNS depressants.
l-carnitine	Treatment of primary l-carnitine deficiency, acute myocardial infarction, supplement to total parenteral nutrition, l-carnitine deficiency in those requiring hemodialysis.	Can cause nausea, vomiting, abdominal cramps, heartburn, gastritis, diarrhea, body odor, seizures.

(continued)

Name	Uses	Comments
Licorice	Gastric and duodenal ulcers, sore throat, bronchitis, dyspepsia, cough, osteoarthritis.	Excessive ingestion can cause pseudohyperaldosteronism with sodium and water retention, hypokalemia, alkalosis. May lead to hypertension, edema, arrhythmias. May reduce effect of antihypertensive medication therapy.
Melatonin	Jet lag, insomnia, shift-work disorder.	Can cause daytime drowsiness, headache, dizziness. May increase effect of antiplatelets, anticoagulants (e.g., aspirin, clopidogrel, enoxaparin, warfarin). May cause additive sedation with CNS depressants (e.g., alcohol, benzodiazepines).
Milk thistle	Liver disorders, chronic inflammatory liver disease, hepatic cirrhosis, chronic hepatitis.	Can cause nausea, diarrhea, dyspepsia, flatulence, abdominal bloating, anorexia.
Peppermint	Common cold, cough, inflammation of mouth and pharynx, sinusitis, fever, cramps of upper GI tract, dyspepsia, flatulence.	Can cause heartburn, nausea, vomiting, allergic reactions including flushing and headache. May increase concentration/effects of cyclosporine.
Red yeast	Maintain desirable cholesterol levels in healthy people; reduce cholesterol in hyperlipidemia; indigestion; diarrhea; improve blood circulation.	Can cause abdominal discomfort, heartburn, flatulence, dizziness. May increase risk of myopathy with cyclosporine, gemfibrozil, or niacin; may increase risk of liver damage with alcohol.
SAMe	Depression, anxiety, heart disease, fibromyalgia, osteoarthritis, tendonitis, dementia, Alzheimer's disease, Parkinson's disease.	Higher doses can cause flatulence, nausea, vomiting, diarrhea, constipation, headache, mild insomnia, anorexia, sweating, dizziness, nervousness. May have additive adverse effects with MAOIs including hypertension, hyperthermia, agitation, confusion, coma. May have additive serotonergic effects and serotonin syndrome-like effects (e.g., agitation, tremors, tachycardia, diarrhea, hyperreflexia, shivering, diaphoresis) with antidepressants.
Saw palmetto	Symptoms of benign prostatic hyperplasia (BPH).	Can cause dizziness, headache, GI complaints (e.g., nausea, vomiting, constipation, diarrhea). May increase effect of antiplatelets, anticoagulants (e.g., aspirin, clopidogrel, enoxaparin, warfarin).

Name	Uses	Comments
St. John's wort	Depression, anxiety, heart palpitations; mood disturbances associated with menopause, ADHD, OCD, SAD.	Can cause insomnia, vivid dreams, restlessness, agitation, irritability, GI discomfort, diarrhea, fatigue, dry mouth, dizziness, headache. May decrease effect of alprazolam, amitriptyline, oral contraceptives, cyclosporine, imatinib, irinotecan, NNRTIs, phenytoin, protease inhibitors, tacrolimus, warfarin. May cause additive serotonergic effects with antidepressants, paroxetine, sertraline, tramadol.
Valerian	Insomnia, anxiety-associated restlessness, sleeping disorders.	Can cause headache, excitability, insomnia, gastric discomfort, dry mouth, vivid dreams, morning drowsiness. May have additive sedative effects with alcohol, benzodiazepines, other CNS depressants.
Yohimbe	Aphrodisiac, impotence, exhaustion, angina, hypertension, diabetic neuropathy, postural hypotension.	Can cause excitation, tremors, insomnia, anxiety, hypertension, tachycardia, dizziness, irritability, headache, fluid retention, rash, nausea, vomiting. High doses can cause respiratory depression. May have additive effects with MAOIs. Tyramine-containing foods increase risk of hypertensive crisis.

black cohosh

(Black Cohosh Softgel, Remifemin)
Also known as baneberry, bugbane, bugwort, fairy candles.

ACTION

May target serotonin receptors to help regulate body temperature. **Effect:** Reduces symptoms of menopause (e.g., hot flashes).

USES

Treatment of symptoms of menopause, induction of labor in pregnant women. May reduce serum lipids, decrease B/P (esp. when combined with prescription medications). Mild sedative action.

PRECAUTIONS

Contraindications: Preterm pregnancy (has menstrual and uterine stimulant effects that may increase risk of miscarriage). Not to be taken for longer than 6 mos. **Cautions:** Pts with breast, uterine, ovarian cancer; endometriosis; uterine fibroids.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May have additive antiproliferative effect with **tamoxifen.** May increase action of **antihypertensives.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum luteinizing hormone (LH) concentration.

AVAILABILITY

Capsules (Soft Gelatin): 40 mg. **Tablets:** 20 mg.

INDICATIONS/ROUTES/DOSAGE

Menopause, Labor Induction, Reduce Lipids and/or B/P, Sedative
PO: ADULTS, ELDERLY: 20–80 mg twice a day.

SIDE EFFECTS

Nausea, headache, dizziness, weight gain, visual changes, migraines.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may cause nausea/vomiting, bradycardia, diaphoresis. May produce hepatotoxicity.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is pregnant or breast-feeding (contraindicated).

INTERVENTION/EVALUATION

Monitor B/P, lipid levels.

PATIENT/FAMILY TEACHING

• Inform physician if pregnancy occurs or planning to become pregnant, breast-feeding. • Do not take for longer than 6 mos.

chamomile

kham-oh-meel
Also known as German chamomile, pinheads (Blossom 30 g/jar; 45 g/jar; 120 g/jar).

ACTION

Antiallergic, anti-inflammatory action due to inhibiting release of histamine. Possesses antiallergic, antiflatulent, antispasmodic, mild sedative, anti-inflammatory action. **Effect**: Reduces GI symptoms, produces mild CNS depression.

USES

Treatment of symptoms of flatulence, travel sickness, diarrhea, insomnia, GI spasms.

PRECAUTIONS

Contraindications: Pregnancy. **Cautions:** Pts with asthma (may exacerbate condition), those allergic to ragweed, aster, daisies, chrysanthemums.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated. A teratogen, affects menstrual cycle, has uterine stimulant effects. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase anticoagulation, risk of bleeding with **aspirin, clopidogrel, dalteparin, enoxaparin, heparin, warfarin.** May have additive effects with **benzodiazepines.** **HERBAL:** Sedative effects may increase with **ginseng, kava kava, St. John's wort, valerian.** May increase risk of bleeding with **feverfew, garlic, ginger, ginkgo, licorice.** **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY

Whole Flowers: 30 g/jar, 45 g/jar, 120 g/jar.

INDICATIONS/ROUTES/DOSAGE

Flatulence, Travel Sickness, Diarrhea, Insomnia, GI Spasms

PO: ADULTS, ELDERLY: 2–8 g of dried flower heads 3 times a day or 1 cup of tea 3–4 times a day.

SIDE EFFECTS

Allergic reaction (contact dermatitis, severe hypersensitivity reaction, anaphylactic reaction), eye irritation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anaphylactic reaction (bronchospasm, severe pruritus, angioedema) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is pregnant, breast-feeding, or asthmatic. Assess if pt is taking other medications, esp. those that increase risk of bleeding or have sedative properties. Assess for allergies to ragweed, aster, daisies, chrysanthemums.

INTERVENTION/EVALUATION

Monitor for signs of allergic reaction.

PATIENT/FAMILY TEACHING

• Inform physician if pregnancy occurs or if planning to become pregnant or breast-feed. • May cause mild sedation. • Avoid tasks that require alertness, motor skills until response to herb is established. • Avoid use with other sedatives, alcohol, anticoagulants.

DHEA

Also known as prasterone.

ACTION

Produced in adrenal glands, liver; metabolized to androstenedione, major precursor to androgens and estrogens. Also produced in CNS, concentrated in limbic regions; may function as excitatory neuroregulator. **Effect:** Androgen, estrogen-like hormonal effects may be responsible for DHEA benefits.

USES

Increases strength, energy, muscle mass; stimulates immune system; improves cognitive function and memory; improves depressed mood/fatigue in HIV pts. Treatment of atherosclerosis, hyperglycemia, cancer; prevention of osteoporosis; increases bone mineral density.

PRECAUTIONS

Contraindications: None known. **Cautions:** May increase risk of prostate, breast, hormone-sensitive cancers. Avoid use in those with breast, uterine, ovarian cancer; endometriosis; uterine fibroids; diabetes (can increase insulin resistance/sensitivity); depression (may increase risk of adverse psychiatric effects).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May adversely affect pregnancy by increasing androgen levels; avoid use. **Children:** Safety and efficacy not established. **Elderly:** Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: May interfere with **estrogen/androgen therapy.** May increase **triazolam** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Capsules: 25 mg. **Tablets:** 25 mg.

INDICATIONS/ROUTES/DOSAGE

Depression
PO: ADULTS, ELDERLY: 30–90 mg/day.

Usual Adult Dosage
PO: ADULTS, ELDERLY: 25–50 mg/day.

SIDE EFFECTS

Acne, hair loss, hirsutism, voice deepening, insulin resistance, altered menstrual cycle, hypertension, abdominal pain, fatigue, headache, nasal congestion.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for hormone-sensitive tumors (may stimulate growth). Avoid use of hormone replacement therapy.

INTERVENTION/EVALUATION

Assess changes in mood, sleep pattern. Monitor changes in aggressiveness, irritability, restlessness.

PATIENT/FAMILY TEACHING

- Avoid use in pregnancy/lactation; concurrent hormone replacement therapy.
- Lower dosage if acne develops.

dong quai

Also known as Chinese angelica, dang gui, tang kuei, toki.

ACTION

Competitively inhibits estradiol binding to estrogen receptors. Has vasodilatory, antispasmodic, CNS stimulant effects. **Effect:** Reduces symptoms of menopause.

USES

Gynecologic ailments, including menstrual cramps, menopause symptoms; uterine stimulant. Used as antihypertensive, anti-inflammatory, vasodilator, immunosuppressant, analgesic, antipyretic.

PRECAUTIONS

Contraindications: Pregnancy (due to uterine stimulant effect), bleeding disorders, excessive menstrual flow. **Cautions:** Lactation; breast, ovarian, uterine cancer.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Anticoagulant effect, risk of bleeding increased with **warfarin.** **HERBAL:** **Feverfew, garlic, ginger, ginkgo, ginseng** may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** May increase PT, INR.

AVAILABILITY (Rx)

Dong Quai Softgel: 200 mg, 530 mg, 565 mg.

INDICATIONS/ROUTES/DOSAGE

Gynecologic Ailments, Other Uses

PO: ADULTS, ELDERLY: 3–4 g a day in divided doses with meals.

SIDE EFFECTS

Diarrhea, photosensitivity, nausea, vomiting, anorexia, increased menstrual flow.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is pregnant or breast-feeding, taking other medications, esp. those that increase risk of bleeding.

INTERVENTION/EVALUATION

Assess for hypersensitivity reaction.

PATIENT/FAMILY TEACHING

• Inform physician if pregnant or planning to become pregnant. • Do not breast-feed. • May cause photosensitivity reaction; sunscreen, protective clothing should be worn.

echinacea

Also known as black susan, cone flower, red sunflower, scurvy root.

ACTION

Stimulates immune system. Possesses antiviral/immune stimulatory effects. Increases phagocytosis, lymphocyte activity (possibly by releasing tumor necrosis factor [TNF], interleukin-1, interferon). **Effect:** Prevents/reduces symptoms associated with upper respiratory infection.

USES

Immune system stimulant used for treatment/prevention of the common cold, other upper respiratory infections. Also used for UTI, vaginal candidiasis.

PRECAUTIONS

Contraindications: Pregnancy/lactation, children 2 yrs and younger, those with autoimmune disease (e.g., multiple sclerosis, systemic lupus erythematosus [SLE], HIV/AIDS), tuberculosis, history of allergic conditions. **Cautions:** Diabetes (may alter control of blood sugar). Do not use for more than 8 wks (may decrease effectiveness).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May interfere with **immunosuppressant therapy (corticosteroids, cyclosporine, mycophenolate). Topical econazole** may reduce recurring vaginal candida infections. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Capsules: 200 mg, 380 mg, 400 mg, 500 mg. **Powder:** 25 g, 100 g, 500 g. **Tincture:** 475 mg/ml.

INDICATIONS/ROUTES/DOSAGE

Usual Adult Dosage

PO: ADULTS, ELDERLY: 6–9 ml herbal juice for maximum of 8 wks.

◀ALERT▶ A variety of doses have been used depending on the preparation.

SIDE EFFECTS

Well tolerated. May cause allergic reaction (urticaria, acute asthma/dyspnea, angioedema), fever, nausea, vomiting, diarrhea, unpleasant taste, abdominal pain, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is pregnant or breast-feeding, has history of autoimmune disease, is receiving immunosuppressant therapy.

INTERVENTION/EVALUATION

Assess for hypersensitivity reaction, improvement in infection.

PATIENT/FAMILY TEACHING

• Do not use during pregnancy or lactation, children younger than 2 yrs. • Do not use for more than 8 wks without at least 1-wk break in therapy.

feverfew

Also known as bachelor's button, featherfew, midsummer daisy, santa maria.

ACTION

May inhibit platelet aggregation, serotonin release from platelets, leukocytes. Inhibits/blocks prostaglandin synthesis. **Effect:** Reduces pain intensity, vomiting, noise sensitivity with severe migraine headaches.

USES

Fever, headache, prevention of migraine and menstrual irregularities, arthritis, psoriasis, allergies, asthma, vertigo.

PRECAUTIONS

Contraindications: Pregnancy/lactation (may cause uterine contraction/abortion). Allergies to ragweed, chrysanthemums, marigolds, daisies. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated. **Children:** Safety and efficacy not established; avoid use. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Anticoagulants, antiplatelet agents may increase risk of bleeding. **NSAIDs** may decrease effectiveness. **HERBAL: Garlic, ginger, ginkgo** may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 100 mg. **Feverfew Leaf:** 380 mg.

INDICATIONS/ROUTES/DOSAGE

Migraine Headache

PO: ADULTS, ELDERLY: 50–100 mg extract a day. **Leaf:** 50–125 mg a day.

SIDE EFFECTS

PO: Abdominal pain, muscle stiffness, pain, indigestion, diarrhea, flatulence, nausea, vomiting. **Chewing leaf:** Mouth ulceration, inflammation of oral mucosa and tongue, swelling of lips, loss of taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is pregnant or breast-feeding (contraindicated).

INTERVENTION/EVALUATION

Assess for hypersensitivity reaction, mouth ulcers, muscle/joint pain.

PATIENT/FAMILY TEACHING

• Do not use during pregnancy or lactation. • Avoid use in children.

garlic

Also known as ail, allium, nectar of the gods, poor man's treacle, stinking rose.

ACTION

Possesses antithrombotic properties, can increase fibrinolytic activity, decrease platelet aggregation, increase PT. Acts as HMG-CoA reductase inhibitor (statins). **Effect:** Lowers serum cholesterol. Causes smooth muscle relaxation/vasodilation, reducing B/P. Reduces oxidative stress and LDL oxidation, preventing age-related vascular changes, atherosclerosis. Prevents endothelial cell depletion, producing antioxidant effect.

USES

Treatment of hypertension, prevention of coronary artery disease, age-related vascular changes, atherosclerosis.

PRECAUTIONS

Contraindications: Pts with bleeding disorders. **Cautions:** Diabetes (may decrease blood glucose levels), inflammatory GI conditions (may irritate GI tract). Hypothyroidism (may reduce iodine uptake). May prolong bleeding time (discontinue 1–2 wks before surgery).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Caution: May stimulate labor and cause colic in infants. **Children:** Safety and efficacy not established (may be beneficial in those with hypercholesterolemia). **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May enhance effects of **anticoagulants, antiplatelets (aspirin, clopidogrel, enoxaparin, warfarin).** May decrease effects of **cyclosporine, oral contraceptives. Insulin, oral antidiabetic agents** may increase hypoglycemic effects. **Saquinavir, other antiretrovirals** may decrease concentration/effect of garlic. **HERBAL: Feverfew, ginger, ginkgo, ginseng** may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** May decrease serum glucose, cholesterol. May increase INR.

AVAILABILITY (OTC)

Capsules: 100 mg, 300 mg, 500 mg, 1,000 mg, 1.5 g. **Extract. Oil. Powder. Tablets:** 400 mg, 1,250 mg. **Tea.**

INDICATIONS/ROUTES/DOSAGE

Hyperlipidemia, Hypertension

PO *(Capsules, Powder, Tea)*: ADULTS, ELDERLY: 600–1,200 mg a day in divided doses 3 times a day.

◀ALERT▶ Appropriate doses for other conditions vary depending on the preparation used.

SIDE EFFECTS

Breath/body odor, oropharyngeal/esophageal burning, heartburn, nausea, vomiting, diarrhea, allergic reactions (rhinitis, urticaria, angioedema).

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess serum lipid levels; determine whether pt is taking anticoagulants, antiplatelets. Assess if diabetic, taking insulin or oral hypoglycemic agents.

INTERVENTION/EVALUATION

Monitor CBC, coagulation studies, serum lipid, creatinine, glucose levels. Assess for hypersensitivity reaction, contact dermatitis.

PATIENT/FAMILY TEACHING

• Avoid use in pregnancy or breast-feeding. • Inform all health care providers of garlic use. • Discontinue 1–2 wks before any procedure in which excessive bleeding may occur.

ginger

Also known as black ginger, race ginger, zingiber.

ACTION

Possesses antipyretic, analgesic, antitussive, sedative properties. Increases GI motility; may act on serotonin receptors, primarily 5-HT_3. **Effect:** Reduces nausea/vomiting.

USES

Prevention of nausea/vomiting caused by motion sickness, early pregnancy, dyspepsia; treatment of rheumatoid arthritis (RA).

PRECAUTIONS

Contraindications: None known. **Cautions:** Pregnancy; pts with bleeding conditions, diabetes (may cause hypoglycemia).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use during pregnancy is controversial (large amounts act as an abortifacient). **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Large amounts may increase risk of bleeding with **anticoagulants, antiplatelets.** **HERBAL:** **Feverfew, garlic, ginkgo, ginseng** may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 470 mg, 550 mg. **Extract. Powder. Root:** 470 mg, 550 mg. **Tablets. Tea. Tincture.**

INDICATIONS/ROUTES/DOSAGE

Morning Sickness

PO: ADULTS: 250 mg 4 times a day. **Maximum:** 4 g a day.

Motion Sickness

PO: ADULTS: 1 g (dried powder root) 30 min before travel.

Nausea

PO: ADULTS: 550–1,100 mg 3 times a day.

Arthritis

PO: ADULTS: 170 mg 3 times a day or 255 mg twice a day.

SIDE EFFECTS

Abdominal discomfort, heartburn, diarrhea, hypersensitivity reaction, nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

CNS depression, arrhythmias.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for use of anticoagulants, antiplatelets (may increase risk of bleeding).

INTERVENTION/EVALUATION

Monitor for hypersensitivity reaction.

PATIENT/FAMILY TEACHING

- Use cautiously during pregnancy or breast-feeding.

ginkgo biloba

Also known as fossil tree, maidenhair tree, tanakan.

ACTION

Possesses antioxidant, free radical scavenging properties. **Effect:** Protects tissues from oxidative damage, prevents progression of tissue degeneration in pts with dementia. Inhibits platelet-activating factor bonding at numerous sites, decreasing platelet aggregation, smooth muscle contraction; may increase car-

diac contractility, coronary blood flow. Decreases blood viscosity, improving circulation by relaxing vascular smooth muscle. Increases cerebral, peripheral blood flow, reduces vascular permeability. May influence neurotransmitter system (e.g., cholinergic).

USES

Treatment of dementia syndromes, including Alzheimer's. Improves cerebral, peripheral circulation. Improves conditions associated with cerebral vascular insufficiency (memory loss, difficulty concentrating, vertigo, tinnitus). Improves cognitive behavior, sleep patterns in pts with depression. Acts as antioxidant.

PRECAUTIONS

Contraindications: Pregnancy, lactation. **Cautions:** Pts with bleeding disorders, diabetes, epilepsy, or those prone to seizures. Avoid use in couples having difficulty conceiving.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated. **Children:** Safety and efficacy not established. Avoid use. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Anticoagulants, antiplatelets (aspirin, clopidogrel, heparin, warfarin) may increase risk of bleeding. Effects may be increased with concurrent use of **MAOIs.** **HERBAL: Feverfew, garlic, ginger, ginseng** may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** May alter glucose.

AVAILABILITY (OTC)

Capsules: 40 mg, 60 mg. **Fluid Extract. Tablets:** 40 mg, 60 mg. **Tincture.**

INDICATIONS/ROUTES/DOSAGE

Dementia

PO: ADULTS, ELDERLY: 120–240 mg a day (extract) in 2–3 doses.

Vertigo, Tinnitus

PO: ADULTS, ELDERLY: 120–160 mg a day.

Cognitive Function

PO: ADULTS, ELDERLY: 120–600 mg a day. ◀ALERT▶ Appropriate doses for other conditions vary; should be started at low doses, titrated to higher doses as needed.

SIDE EFFECTS

Headache, dizziness, palpitations, constipation, allergic skin reactions. Large doses may cause nausea, vomiting, diarrhea, fatigue, diminished muscle tone.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for use of anticoagulants, antiplatelets, MAOIs. Assess for history of bleeding disorders, diabetes, seizures.

INTERVENTION/EVALUATION

Monitor for hypersensitivity reaction, serum glucose.

PATIENT/FAMILY TEACHING

• Avoid use with anticoagulants, antiplatelets. • May take up to 6 mos before effectiveness is noted. • Do not use during pregnancy, breast-feeding. • Avoid use in children.

ginseng

Also known as Asian ginseng, Chinese ginseng, red ginseng.

ACTION

Affects hypothalamic-pituitary-adrenal axis. Appears to stimulate lymphocytic action. **Effect:** Reduces stress. Affects immune function.

USES

Increases resistance to stress. Enhances energy level, brain activity. Increases physical endurance. Aids in serum glucose control. Improves cognitive function, concentration, memory, work efficiency. Relieves debilitating fatigue in cancer pts.

PRECAUTIONS

Contraindications: Pts with bleeding tendencies, thrombosis. Avoid use during pregnancy, lactation. **Cautions:** Pts with cardiac disorders, diabetes, hormone-sensitive cancers (breast, uterine, ovarian), endometriosis, uterine fibroids.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Insufficient information. Do not use. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Anticoagulants, antiplatelets (aspirin, clopidogrel, enoxaparin, heparin, warfarin) may increase risk of bleeding. May increase effects of **insulin, oral antidiabetic agents.** Effects may be decreased with concurrent use of **furosemide.** Ginseng may interfere with effects of **immunosuppressants (e.g., cyclosporine, prednisone).** **HERBAL: Chamomile, feverfew, garlic, ginger, ginkgo** may increase risk of bleeding. **FOOD: Coffee, tea** may increase effect. **LAB VALUES:** May prolong aPTT, decrease serum glucose.

AVAILABILITY (OTC)

Capsules: 100 mg, 250 mg, 410 mg, 500 mg. **Dried Root. Extract. Powder. Tablets:** 250 mg, 1,000 mg. **Tea** (usually 1,500 mg/bag). **Tincture.**

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: (Tablets/capsules): 200–600 mg a day. **(Powder, root):** 0.6–3 g 1–3 times a day. **(Tea—1,500 mg):** 1–3 times a day.

SIDE EFFECTS

Frequent: Insomnia. **Occasional:** Vaginal bleeding, amenorrhea, palpitations, hypertension, diarrhea, headache, allergic reactions.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is pregnant, breast-feeding. Assess if pt is diabetic, taking oral hypoglycemic agents, insulin. Assess for anticoagulant, immunosuppressant use. Determine baseline serum glucose.

INTERVENTION/EVALUATION

Monitor coagulation studies, serum glucose. Assess for hypersensitivity reaction, rash.

PATIENT/FAMILY TEACHING

- Avoid use in pregnancy or breast-feeding, children. • Avoid continuous use for longer than 3 mos.

glucosamine/ chondroitin

ACTION

Glucosamine: Necessary for synthesis of mucopolysaccharides, which comprise body's tendons, ligaments, cartilage, synovial fluid. May decrease glucose-induced insulin secretion. **Effect:** Relieves symptoms of osteoarthritis. **Chondroitin:** Endogenously found in cartilage tissue, substrate for forming joint matrix structure. May possess anticoagulant properties. **Effect:** Relieves symptoms of osteoarthritis.

USES

Treatment of osteoarthritis.

PRECAUTIONS

Contraindications: None known. **Cautions:** **Glucosamine:** Diabetes (may increase insulin resistance). **Chondroitin:** None known.

INTERACTIONS

DRUG: **Warfarin** may increase effect. **Anticoagulants** may increase risk of bleeding with chondroitin. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, antifactor Xa.

AVAILABILITY (OTC)

GLUCOSAMINE
Capsules: 500 mg. **Tablets:** 500 mg.
CHONDROITIN
Capsules: 250 mg.
◀ALERT▶ Many combination products are available.

INDICATIONS/ROUTES/DOSAGE

Osteoarthritis
PO: (Glucosamine): ADULTS, ELDERLY: 500 mg 3 times a day or 1–2 g a day. **(Chondroitin):** 200–400 mg 2–3 times a day.

SIDE EFFECTS

GLUCOSAMINE: Mild GI symptoms (gas, bloating, cramps). **CHONDROITIN:** Well tolerated. May cause nausea, diarrhea, constipation, edema, alopecia, allergic reactions.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine whether pt is taking anticoagulants, antiplatelets, antidiabetic drugs. Assess if pt is pregnant or breast-feeding.

INTERVENTION/EVALUATION

Monitor effectiveness of therapy in relieving osteoarthritis symptoms. Monitor serum glucose levels.

PATIENT/FAMILY TEACHING

• Avoid use in pregnancy, breast-feeding, children. • May take several mos of therapy to be effective. • Glucosamine may alter serum glucose levels.

kava kava

Also known as ava, kew, sakau, tonga, yagona.
◀ALERT▶ May be removed from market.

ACTION

Exact mechanism of action unknown but possesses CNS effects. **Effect:** Anxiolytic, sedative, analgesic effects.

USES

Treatment of anxiety disorders, stress, restlessness. Used for sedation, sleep enhancement.

PRECAUTIONS

Contraindications: Pregnancy, lactation (may cause loss of uterine tone). **Cautions:** Depression, history of recurrent hepatitis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Alcohol, benzodiazepines** may increase risk of drowsiness. **HERBAL:** **Chamomile, ginseng, goldenseal, melatonin, St. John's wort, valerian** may increase risk of excessive drowsiness. **FOOD:** None known. **LAB VALUES:** May increase hepatic function tests.

AVAILABILITY (OTC)

Capsules: 140 mg, 150 mg, 250 mg, 300 mg, 425 mg, 500 mg. **Extract. Liquid. Tincture.**

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 100 mg 3 times a day or 1 cup of tea 3 times a day.

SIDE EFFECTS

GI upset, headache, dizziness, vision changes (blurred vision, red eyes), allergic skin reactions, dermopathy (dry, flaky skin), yellowing of skin, hair, nails, sclera of eyes, nausea, vomiting, weight loss, shortness of breath.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is pregnant or breast-feeding (contraindicated). Determine baseline hepatic function tests. Assess for use of other CNS depressants.

INTERVENTION/EVALUATION

Monitor hepatic function tests. Assess for allergic skin reactions.

PATIENT/FAMILY TEACHING

• Avoid use if pregnant, planning to become pregnant, or breast-feeding; not for use in children 12 yrs and younger. • Avoid tasks that require alertness, motor skills until response to herbal is established. • Do not use for more than 3 mos (may be habit forming).

melatonin

Also known as pineal hormone.

ACTION

Hormone synthesized endogenously by pineal gland. Interacts with melatonin receptors in brain. **Effect:** Regulates body's circadian rhythm, sleep patterns. Acts as antioxidant, protecting cells from oxidative damage by free radicals.

USES

Treatment for ADHD, insomnia, jet lag. Used as an antioxidant.

PRECAUTIONS

Contraindications: Pregnancy or lactation. **Cautions:** Depression (may worsen dysphoria), seizures (may increase incidence), cardiovascular/hepatic disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol, benzodiazepines may have additive effects. Melatonin may interfere with effects of **immunosuppressants.** May enhance effects of **isoniazid. HERBAL: Chamomile, ginseng, goldenseal, kava kava, valerian** may increase sedative effects. **FOOD:** None known. **LAB VALUES:** May increase human growth hormone levels. May decrease luteinizing hormone (LH) levels.

AVAILABILITY (OTC)

Lozenges: 3 mg. **Powder. Tablets:** 0.5 mg, 3 mg.

INDICATIONS/ROUTES/DOSAGE

Insomnia

PO: ADULTS, ELDERLY: 0.5–5 mg at bedtime.

Jet Lag

PO: ADULTS, ELDERLY: 5 mg/day beginning 3 days before flight and continuing until 3 days after flight.

SIDE EFFECTS

Headache, transient depression, fatigue, drowsiness, dizziness, abdominal cramps/irritability, decreased alertness, hypersensitivity reaction, tachycardia, nausea, vomiting, anorexia, altered sleep patterns, confusion.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is pregnant or breast-feeding (avoid use). Determine whether pt has history of seizures, depression. Assess sleep patterns if used for insomnia. Determine medication usage (esp. CNS depressants).

INTERVENTION/EVALUATION

Monitor effectiveness in improving insomnia. Assess for hypersensitivity reactions, CNS effects.

PATIENT/FAMILY TEACHING

• Do not use if pregnant, planning to become pregnant, breast-feeding. • Avoid tasks that require alertness, motor skills, until response to drug is established.

saw palmetto

Also known as American dwarf palm tree, cabbage palm, sabal, zuzhong.

ACTION

Appears to inhibit 5-alpha-reductase, prevent conversion of testosterone to dihydrotestosterone (DHT). **Effect:** Reduces prostate growth. Contains antiandrogenic, antiproliferative, anti-inflammatory properties.

USES

Symptoms of benign prostate hyperplasia (BPH). Used as a mild diuretic, sedative, anti-inflammatory agent, antiseptic.

PRECAUTIONS

Contraindications: Pregnancy, lactation due to antiandrogenic and estrogenic activity. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May interfere with effects of **hormone therapy, oral contraceptives.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Berries. Capsules: 80 mg, 160 mg, 500 mg. **Fluid Extract. Tea.**

INDICATIONS/ROUTES/DOSAGE

Benign Prostate Hyperplasia (BPH)

PO: ADULTS, ELDERLY: 160 mg twice daily or 320 mg once daily using liquid extract or 1–2 g of whole berries.

Diuretic, Sedative, Anti-Inflammatory, Antiseptic

PO: ADULTS, ELDERLY: 0.6–1.5 ml liquid extract or 0.5–1 g dried berries 3 times daily.

SIDE EFFECTS

Mild anorexia, dizziness, nausea, vomiting, constipation, diarrhea, headache, impotence, hypersensitivity reactions, back pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for use of oral contraceptives, hormone replacement therapy (herbal may interfere). Assess pt's urinary patterns. Obtain prostate-specific antigen (PSA) level before using.

INTERVENTION/EVALUATION

Assess for hypersensitivity reactions. Monitor symptoms of benign prostate hyperplasia (frequent/painful urination, hesitancy, urgency). Observe for decreased nocturia, improved urinary flow, decreased residual urine volume.

PATIENT/FAMILY TEACHING

• Should be taken with food. • Contraindicated in pregnancy, breast-feeding.

St. John's wort

Also known as amber, demon chaser, goatweed, hardhay, rosin rose, tipton weed.

ACTION

Inhibits COMT (catechol-*O*-methyl transferase), MAO (monoamine oxidase); modulates effects of serotonin by inhibiting serotonin reuptake and 5-HT_3, 5-HT_4 antagonism. **Effect:** Relieves depression.

USES

Treatment of depression, including secondary effects of depression (fatigue, loss of appetite, anxiety, nervousness, insomnia).

PRECAUTIONS

Contraindications: Pregnancy, breast-feeding (may cause increased muscle tone of uterus; infants may experience colic, drowsiness, lethargy). **Cautions:** Bipolar disorder, schizophrenia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated. **Pregnancy Category C. Children:** Safety and efficacy not established. Avoid use. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Angiotensin-converting enzyme (ACE) inhibitors may cause hypertension. May decrease concentration/effects of **indinavir. Antidepressants** may increase therapeutic effect. May decrease effectiveness of **cyclosporine,** resulting in organ rejection. **Digoxin** may cause CHF exacerbation. **HERBAL: Chamomile, ginseng, goldenseal, kava kava, valerian** may increase therapeutic, adverse effects. **FOOD: Tyramine-containing food may** cause hypertensive crisis with high doses of St. John's wort. **LAB VALUES:** May decrease PT/INR in pts treated with warfarin.

AVAILABILITY (Rx)

Capsules: 150 mg, 300 mg. **Extract. Liquid Tincture.**

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS, ELDERLY: 300 mg 3 times a day is most common.

SIDE EFFECTS

Abdominal cramps, insomnia, vivid dreams, restlessness, anxiety, agitation, irritability, fatigue, dry mouth, headache, dizziness, photosensitivity, confusion.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is pregnant or breast-feeding, has history of psychiatric disease. Determine medication usage (many potential interactions). Assess mental status: mood, memory, anxiety level.

INTERVENTION/EVALUATION

Monitor changes in depressive state, behavior, signs of side effects.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue herb (may increase adverse effects). • Check with physician before taking other medications (many interactions). • Avoid foods high in tyramine (aged cheese, pickled products, beer, wine). • Therapeutic effect may take 4–6 wks. • Avoid sunlight; use sunscreen/protective clothing (increased photosensitivity).

valerian

Also known as all-heal, amantilla, garden heliotrope, valeriana.

ACTION

Appears to inhibit enzyme system responsible for catabolism of gamma-aminobutyric acid (GABA), increasing GABA concentration, decreasing CNS activity. **Effect:** Produces sedative effects. Has anxiolytic, antidepressant, anticonvulsant effects.

USES

Used as sedative for insomnia, sleeping disorders associated with anxiety, restlessness. Used for depression, ADHD.

PRECAUTIONS

Contraindications: Insufficient data on pregnancy or lactation (avoid use); hepatic disease. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated; unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** Increased risk of motor/cognitive function impairment.

INTERACTIONS

DRUG: Alcohol, barbiturates, benzodiazepines may cause additive effect, increase adverse effects. **HERBAL: Chamomile, ginseng, kava kava, melatonin, St. John's wort** may enhance therapeutic effect, adverse effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Capsules. Extract. Tablets. Tea. Tincture.

INDICATIONS/ROUTES/DOSAGE

Sedation

PO: ADULTS, ELDERLY: (Extract): 400–900 mg ½–1 hr before bedtime or 1 cup tea taken several times a day.

SIDE EFFECTS

Headache, hangover, cardiac arrhythmias.

ADVERSE EFFECTS/ TOXIC REACTIONS

Ataxia (difficulty walking), hypothermia, increased muscle relaxation, excitability, insomnia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine whether pt is using other CNS depressants, esp. benzodiazepines. Assess baseline serum hepatic function.

INTERVENTION/EVALUATION

Monitor effectiveness in decreasing insomnia. Assess for hypersensitivity reaction; monitor serum hepatic function tests.

PATIENT/FAMILY TEACHING

• Up to 4 wks may be needed for significant relief. • Avoid tasks that require alertness, motor skills until response to herb is established. • Inform physician if pregnant or breast-feeding. • Taper doses slowly; do not discontinue abruptly.

yohimbe

Also known as aphrodien, corynine, johimbi.

ACTION

Produces genital blood vessel dilation, improves nerve impulse transmission to genital area. Increases penile blood flow, central sympathetic excitation impulses to genital tissues. **Effect:** Improves sexual function, affects impotence.

USES

Used as aphrodisiac by some cultures. Used to improve libido, enhance sexual function in male. Used to manage symptoms associated with diabetic neuropathy, postural hypotension.

PRECAUTIONS

Contraindications: Pregnancy, lactation (may have uterine relaxant effect, cause fetal toxicity), angina, heart disease, benign prostatic hyperplasia (BPH), depression, renal/hepatic disease. **Cautions:** Anxiety, diabetes mellitus, hypertension, post-traumatic stress disorder (PSTD), schizophrenia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated; avoid use. **Children:** Safety and efficacy not established; avoid use. **Elderly:** Age-related renal/hepatic impairment may require discontinuation.

INTERACTIONS

DRUG: May interfere with **antidiabetic agents, antihypertensives.** May antagonize effects of **clonidine. MAOIs, sympathomimetics, tricyclic antidepressants** may have additive effects. **HERBAL: Ginkgo biloba, St. John's wort** may have additive therapeutic, adverse effects. **FOOD: Foods containing caffeine, tyramine** may increase risk of hypertensive crises. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Liquid: 5 mg/5 ml. **Tablets:** 5 mg.

INDICATIONS/ROUTES/DOSAGE

Impotence

PO: ADULTS, ELDERLY: 15–30 mg/day in divided doses.

SIDE EFFECTS

Excitement, tremor, insomnia, anxiety, hypertension, tachycardia, dizziness, headache, irritability, salivation, dilated pupils, nausea, vomiting, hypersensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Paralysis, severe hypotension, irregular heartbeat, cardiac failure may occur. Overdose can be fatal.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess if pt is pregnant or breast-feeding (contraindicated). Determine other medical conditions, including angina, heart disease, benign prostatic hyperplasia (BPH). Assess baseline serum renal/hepatic function, medications (see Interactions).

INTERVENTION/EVALUATION

Monitor serum renal/hepatic function, B/P. Assess for hypersensitivity reaction.

PATIENT/FAMILY TEACHING

- Do not use other OTC or prescribed medications before checking with physician. • Inform physician if pregnant or breast-feeding.

Appendix H

LIFESPAN, CULTURAL ASPECTS, AND PHARMACOGENOMICS OF DRUG THERAPY

LIFESPAN

Drug therapy is unique to pts of different ages. Age-specific competencies involve understanding the development and health needs of the various age groups. Pregnant pts, children, and elderly people represent different age groups with important considerations during drug therapy.

CHILDREN

In pediatric drug therapy, drug administration is guided by the age of the child, weight, level of growth and development, and height. The dosage ordered is to be given either by kilogram of body weight or by square meter of body surface area, which is based on the height and weight of the child. Many dosages based on these calculations must be individualized based on pediatric response.

If the oral route of administration is used, often syrup or chewable tablets are given. Additionally, sometimes medication is added to liquid or mixed with foods. Remember to never force a child to take oral medications because choking or emotional trauma may ensue.

If an intramuscular injection is ordered, the vastus lateralis muscle in the midlateral thigh is used because the gluteus maximus is not developed until walking occurs and the deltoid muscle is too small. For intravenous medications, administer very slowly in children. If given too quickly, high serum drug levels will occur with the potential for toxicity.

PREGNANCY

Women of childbearing years should be asked about the possibility of pregnancy before any drug therapy is initiated. Advise a woman who is either planning a pregnancy or believes she may be pregnant to inform her physician immediately. During pregnancy, medications given to the mother pass to the fetus via the placenta. Teratogenic (fetal abnormalities) effects may occur. Breast-feeding while the mother is taking certain medications may not be recommended due to the potential for adverse effects on the newborn.

The choice of drug ordered for pregnant women is based on the stage of pregnancy because the fetal organs develop during the first trimester. Cautious use of drugs in women of reproductive age who are sexually active and who are not using contraceptives is essential to prevent the potential for teratogenic or embryotoxic effects. Refer to the different pregnancy categories (found in Appendix F) to determine the relative safety of a medication during pregnancy.

ELDERLY

Elderly people are more likely to experience an adverse drug reaction owing to physiologic changes (e.g., visual, hearing, mobility changes, chronic diseases) and cognitive changes (short-term memory loss or alteration in the thought process) that may lead to multiple medication dosing. In chronic disease states such as hypertension, glaucoma, asthma, or arthritis, the daily ingestion of multiple medications increases the potential for adverse reactions and toxic effects.

Decreased renal or hepatic function may lower the metabolism of medications in the liver and reduce excretion of medications, thus prolonging the half-life of the drug and the po-

tential for toxicity. Dosages in elderly people should initially be smaller than for the general adult population and then slowly titrated based on pt response and therapeutic effect of the medication.

CULTURE

The term *ethnopharmacology* was first used to describe the study of medicinal plants used by indigenous cultures. More recently, it is being used as a reference to the action and effects of drugs in people from diverse racial, ethnic, and cultural backgrounds. Although there are insufficient data from investigations involving people from diverse backgrounds that would provide reliable information on ethnic-specific responses to all medications, there is growing evidence that modifications in dosages are needed for some members of racial and ethnic groups. There are wide variations in the perception of side effects by pts from diverse cultural backgrounds. These differences may be related to metabolic differences that result in higher or lower levels of the drug, individual differences in the amount of body fat, or cultural differences in the way individuals perceive the meaning of side effects and toxicity. Nurses and other health care providers need to be aware that variations can occur with side effects, adverse reactions, and toxicity so that pts from diverse cultural backgrounds can be monitored.

Some cultural differences in response to medications include the following:

African Americans: Generally, African Americans are less responsive to beta-blockers (e.g., propranolol [Inderal]) and angiotensin-converting enzyme (ACE) inhibitors (e.g., enalapril [Vasotec]).

Asian Americans: On average, Asian Americans have a lower percentage of body fat, so dosage adjustments must be made for fat-soluble vitamins and other drugs (e.g., vitamin K used to reverse the anticoagulant effect of warfarin).

Hispanic Americans: Hispanic Americans may require lower dosages and may experience a higher incidence of side effects with tricyclic antidepressants (e.g., amitriptyline).

Native Americans: Alaskan Eskimos may suffer prolonged muscle paralysis with the use of succinylcholine when administered during surgery.

There has been a desire to exert more responsibility over one's health and, as a result, a resurgence of self-care practices. These practices are often influenced by folk remedies and the use of medicinal plants. In the United States, there are several major ethnic population subgroups (white, black, Hispanic, Asian, and Native Americans). Each of these ethnic groups has a wide range of practices that influence beliefs and interventions related to health and illness. At any given time, in any group, treatment may consist of the use of traditional herbal therapy, a combination of ritual and prayer with medicinal plants, customary dietary and environmental practices, or the use of Western medical practices.

African Americans

Many African Americans carry the traditional health beliefs of their African heritage. Health denotes harmony with nature of the body, mind, and spirit, whereas illness is seen as disharmony that results from natural causes or divine punishment. Common practices to the art of healing include treatments with herbals and rituals known empirically to restore health. Specific forms of healing include using home remedies, obtaining medical advice from a physician, and seeking spiritual healing.

Examples of healing practices include the use of hot baths and warm compresses for rheumatism, the use of herbal teas for respiratory illnesses, and the use of kitchen condiments in folk remedies. Lemon, vinegar, honey, saltpeter, alum, salt, baking soda, and Epsom salt are common kitchen ingredients used. Goldenrod, peppermint, sassafras, parsley, yarrow, and rabbit tobacco are a few of the herbals used.

Hispanic Americans
The use of folk healers, medicinal herbs, magic, and religious rituals and ceremonies are included in the rich and varied customs of Hispanic Americans. This ethnic group believes that God is responsible for allowing health or illness to occur. Wellness may be viewed as good luck, a reward for good behavior, or a blessing from God. Praying, using herbals and spices, wearing religious objects such as medals, and maintaining a balance in diet and physical activity are methods considered appropriate in preventing evil or poor health.

Hispanic ethnopharmacology is more complementary to Western medical practices. After the illness is identified, appropriate treatment may consist of home remedies (e.g., use of vegetables and herbs), use of over-the-counter patent medicines, and use of physician-prescribed medications.

Asian Americans
For Asian Americans, harmony with nature is essential for physical and spiritual well-being. Universal balance depends on harmony among the elemental forces: fire, water, wood, earth, and metal. Regulating these universal elements are two forces that maintain physical and spiritual harmony in the body: the *yin* and the *yang*. Practices shared by most Asian cultures include meditation, special nutritional programs, herbology, and martial arts.

Therapeutic options available to traditional Chinese physicians include prescribing herbs, meditation, exercise, nutritional changes, and acupuncture.

Native Americans
The theme of total harmony with nature is fundamental to traditional Native American beliefs about health. It is dependent on maintaining a state of equilibrium among the physical body, the mind, and the environment. Health practices reflect this holistic approach. The method of healing is determined traditionally by the medicine man, who diagnoses the ailment and recommends the appropriate intervention.

Treatment may include heat, herbs, sweat baths, massage, exercise, diet changes, and other interventions performed in a curing ceremony.

European Americans
Europeans often use home treatments as the front-line interventions. Traditional remedies practiced are based on the magical or empirically validated experience of ancestors. These cures are often practiced in combination with religious rituals or spiritual ceremonies.

Household products, herbal teas, and patent medicines are familiar preparations used in home treatments (e.g., salt water gargle for sore throat).

PHARMACOGENOMICS

Traditionally, medications are prescribed using a "one size fits all" philosophy. In general, the genetic makeup is similar in all humans, regardless of race or sex. However, people inherit variations in their genes, which can affect the way a person responds to a medication.

A genetic variation may make a medication stay in the body longer, causing serious side effects, or a variation may make the medication less potent.

For example, two people taking the same cancer medication may have very different responses. One may have severe, life-threatening side effects, whereas the second may have few, if any, side effects. The drug may shrink a tumor in one person but not in another.

Pharmacogenomics examines how a person's genetic makeup affects response to medications. Although widespread application still lies in the future, pharmacogenomics has the potential to personalize medical therapies. Physicians eventually will be able to prescribe medications based on an individual's genotype, thereby maximizing effectiveness and minimizing side effects. A few tests are available today.

Cytochrome P450 genotyping test. Cytochrome (CYP) 450 enzymes CYP2D6 and CYP2C19 are involved in the metabolism of many cardiovascular, antidepressant, and antipsychotic agents. More than 1% of the human population has a genetic variation that affects CYP2D6 and CYP2C19. These patients may eliminate drugs metabolized by the CYP2D6 and CYP2C19 enzyme systems "normally" (extensive metabolizers), too quickly (ultra-rapid metabolizers), too slowly (intermediate metabolizers), or not at all (poor metabolizers). Clinical effect would be a greater likelihood of adverse reactions in people who are poor metabolizers and a greater likelihood of treatment failure in people who are rapid metabolizers. Poor metabolizers include 5%–10% Caucasians, whereas rapid metabolizers include 10% Spaniards and 39% Ethiopians.

Thiopurine methyltransferase test. An enzyme called thiopurine methyltransferase (TPMT) breaks down a type of chemotherapy medication called thiopurine (e.g., mercaptopurine, thioguanine, azathioprine), which is used in the treatment of some leukemias and autoimmune disorders. Some people have genetic variations that prevent them from producing this enzyme, resulting in the buildup of thiopurine levels in the body and leading to severe toxic reactions, including profound myelosuppression, with normal doses. Data on the frequency of occurrence in specific population groups are not available.

UGT1A1 TA repeat genotype test. This test, commonly known as the UFT1A1 test, detects a variation in a gene that affects the UGT1A1 enzyme. This enzyme determines how the body breaks down irinotecan (Camptosar), a chemotherapy medication used in the treatment of colorectal cancer. A deficiency of this enzyme allows the medication to build up to toxic levels, possibly causing bone marrow suppression, gastrointestinal toxicities, infection, and death. Deficiency of this enzyme occurs in 16% of Chinese and 40% of European and East Indian individuals.

Dihydropyrimidine dehydrogenase test. The medication 5-fluorouracil (5-FU) and its related compounds (e.g., capecitabine) are commonly used chemotherapy medications. Some people have a genetic variation that results in a decrease in the dihydropyrimidine dehydrogenase enzyme, which is responsible for breaking down 5-FU. As a result of the deficiency, some people may develop severe or even fatal reactions to 5-FU. This deficiency occurs in 0.9% of Caucasians.

By utilizing the information provided by pharmacogenomic testing, drug therapy is changing to a more individualized approach. Anticipated benefits of pharmacogenomics include creation of better vaccines, safer medications targeted to specific diseases, and more appropriate dosing of medications at the onset of therapy. Ultimately, we may see a decrease in health care costs due to more efficient clinical trials, reduced adverse drug reactions, and less time needed to find effective therapy for patients.

Appendix I

NORMAL LABORATORY VALUES

HEMATOLOGY/COAGULATION

Test	Normal Range
Activated partial thromboplastin time (aPTT)	25–35 sec
Erythrocyte count (RBC count)	M: 4.5–5.5 million cells/mm^3 F: 4.0–4.9 million cells/mm^3
Hematocrit (HCT, Hct)	M: 41%–50% F: 36%–44%
Hemoglobin (Hb, Hgb)	M: 13.5–16.5 g/dl F: 12.0–15.0 g/dl
Leukocyte count (WBC count)	4.5–10.0 thousand cells/mm^3
Leukocyte differential count	
Basophils	0%–0.75%
Eosinophils	1%–3%
Lymphocytes	25%–33%
Monocytes	3%–7%
Neutrophils—bands	3%–5%
Neutrophils—segmented	54%–62%
Mean corpuscular hemoglobin (MCH)	26–34 pg/cell
Mean corpuscular hemoglobin concentration (MCHC)	31%–37% Hb/cell
Mean corpuscular volume (MCV)	80–100 fL
Partial thromboplastin time (PTT)	60–85 sec
Platelet count (thrombocyte count)	100–450 thousand/mm^3
Prothrombin time (PT)	11–13.5 sec
RBC count (see Erythrocyte count)	

CLINICAL CHEMISTRY (SERUM PLASMA, URINE)

Test	Normal Range
Alanine aminotransferase (ALT)	8–36 units/L 8–78 units/L (children 0–2 mos)
Albumin	3.2–5 g/dl
Alkaline phosphatase	33–131 (adults 25–60 yrs) 51–153 (adults older than 60 yrs)
Amylase	30–110 units/L
Aspartate aminotransferase (AST)	5–35 units/L
Bilirubin (direct)	0–0.3 mg/dl
Bilirubin (total)	0.1–1.2 mg/dl
BUN	7–20 mg/dl
Calcium, ionized	2.24–2.46 mEq/L

Test	Normal Range
Calcium (total)	8.6–10.3 mg/dl
Carbon dioxide (CO_2) total	23–30 mEq/L
Chloride	95–108 mEq/L
Cholesterol (total) HDL cholesterol LDL cholesterol	Less than 200 mg/dl 40–60 mg/dl Less than 160 mg/dl
Creatinine	0.5–1.4 mg/dl
Creatinine clearance	M: 80–125 ml/min/1.73 m^2 F: 75–115 ml/min/1.73 m^2
Creatine kinase (CK) isoenzymes CK-BB CK-MB (cardiac) CK-MM (muscle)	 0% 0%–3.9% 96%–100%
Creatine phosphokinase (CPK)	8–150 units/L
Ferritin	13–300 ng/ml
Glucose (preprandial)	Less than 115 mg/dl
Glucose (fasting)	60–110 mg/dl
Glucose (nonfasting, 2 hrs postprandial)	Less than 120 mg/dl
Hemoglobin A_{1c}	Less than 8
Iron	66–150 mcg/dl
Iron-binding capacity, total (TIBC)	250–420 mcg/dl
Lactate dehydrogenase (LDH)	56–194 units/L
Lipase	23–208 units/L
Magnesium	1.6–2.5 mg/dl
Osmolality	289–308 mOsm/kg
Oxygen saturation	90–95 (arterial) 40–70 (venous)
pH	7.35–7.45 (arterial) 7.32–7.42 (venous)
Phosphorus, inorganic	2.8–4.2 mg/dl
Potassium	3.5–5.2 mEq/L
Protein (total)	6.5–7.9 g/dl
Sodium	134–149 mEq/L
Thyroid-stimulating hormone (TSH)	0.7–6.4 milliunits/L (adults 20 yrs or younger) 0.4–4.2 milliunits/L (adults 21–54 yrs) 0.5–8.9 milliunits/L (adults 55–87 yrs)
Transferrin	Greater than 200 mg/dl
Triglycerides (TG)	45–155 mg/dl
Urea nitrogen	7–20 mg/dl
Uric acid	M: 2–8 mg/dl F: 2–7.5 mg/dl

Appendix J

CYTOCHROME P450 (CYP) ENZYMES

Most drugs are eliminated from the body, at least in part, by being changed chemically to a less lipid-soluble product (i.e., metabolized) and thus more likely to be excreted from the body via the kidney or bile. Drugs may go through two different metabolic processes: Phase 1 and Phase 2 metabolism.

In Phase 1 metabolism, hepatic microsomal enzymes found in the endothelium of liver cells metabolize drugs via hydrolysis and oxidation and reduction reactions. These chemical reactions make the drug more water soluble. In Phase 2 metabolism, large water-soluble substances (e.g., glucuronic acid, sulfate) are attached to the drug, forming inactive, or significantly less active, water-soluble metabolites. Phase 2 processes include glucuronidation, sulfation, conjugation, acetylation, and methylation.

Virtually any of the Phase 1 and Phase 2 enzymes can be inhibited, and some of these enzymes can be induced by drugs. Inhibiting the activity of metabolic enzymes results in increased concentrations of the drug (substrate), whereas inducing metabolic enzymes results in decreased concentrations of the drug (substrate).

The term "cytochrome P450" (CYP enzymes) refers to a family of more than 100 enzymes in the human body that modulate various physiologic functions. First identified in the 1950s, the CYP enzyme system contains two large subgroups: steroidogenic and xenobiotic enzymes. Only the xenobiotic group is involved in the metabolism of drugs. The xenobiotic group includes four major enzyme families: CYP1, CYP2, CYP3, and CYP4. The primary role of these families is the metabolism of drugs. These families are further subdivided into subfamilies designated by a capital letter and given a specific enzyme number (1, 2, 3, etc.) according to the similarity in amino acid sequence it shares with other enzymes (e.g., CYP1A2).

The key CYP450 enzymes include CYP1A2, CYP2C9, CYP2C19, CYP2D6, and CYP3A4 and may be responsible for metabolism of 75% of all drugs, with the CYP3A subfamily responsible for nearly half of this activity.

The CYP enzymes are found in the endoplasmic reticulum of cells in a variety of human tissue but are primarily concentrated in the liver and intestine. CYP enzymes can be both inhibited and induced, leading to increased or decreased serum concentration of the drug (along with its effects).

The following tables of CYP substrates, inhibitors, and inducers provide a perspective on drugs that are affected by, or affect, cytochrome P450 (CYP) enzymes. **CYP substrate** includes drugs reported to be metabolized, at least in part, by one or more CYP enzymes. **CYP inhibitor** includes drugs reported to inhibit one or more CYP enzymes. **CYP inducer** contains drugs reported to induce one or more CYP enzymes.

P450 ENZYMES: SUBSTRATES, INHIBITORS, INDUCERS

CYP1A2 ENZYME

CYP1A2 SUBSTRATES	CYP1A2 INHIBITORS	CPY1A2 INDUCERS
Caffeine	Cimetidine (Tagamet)	Barbiturates
Clozapine (Clozaril)	Ciprofloxacin (Cipro)	Carbamazepine (Tegretol)
Mirtazapine (Remeron)	Fluvoxamine	Rifampin (Rifadin)
Olanzapine (Zyprexa)	Zileuton (Zyflo)	Smoking
Ramelteon (Rozerem)		
Ropinirole (Requip)		
Tizanidine (Zanaflex)		

- CYP1A2 enzyme is increasingly involved in drug interactions.
- More potent inhibitors include cimetidine, ciprofloxacin, and fluvoxamine.
- Smoking is the most important inducer, but rifampin and barbiturates also can increase enzyme activity.
- Example of reaction: Tizanidine plasma concentrations increased more than 30-fold when the inhibitor fluvoxamine was given concurrently.

CYP2C9 ENZYME

CYP2C9 SUBSTRATES	CYP2C9 INHIBITORS	CYP2C9 INDUCERS
Candesartan (Atacand)	Amiodarone (Cordarone)	Barbiturates
Celecoxib (Celebrex)	Clopidogrel (Plavix)	Carbamazepine (Tegretol)
Diclofenac (Voltaren)	Fluconazole (Diflucan)	Rifampin (Rifadin)
Glipizide (Glucotrol)	Metronidazole (Flagyl)	St. John's wort
Glyburide (DiaBeta)	Sulfamethoxazole	
Ibuprofen (Advil, Motrin)	Valproic acid (Depakote)	
Irbesartan (Avapro)		
Meloxicam (Mobic)		
Warfarin (Coumadin)		

- More potent inhibitors include amiodarone, metronidazole, and sulfamethoxazole.
- All of the inducers can substantially increase enzyme activity.
- Both warfarin and oral hypoglycemics are of serious concern with regard to drug interactions. Substrates warranting attention include warfarin and oral hypoglycemics.

CYP2C19 ENZYME

CYP2C19 SUBSTRATES	CYP2C19 INHIBITORS	CYP2C19 INDUCERS
Citalopram (Celexa)	Cimetidine (Tagamet)	Barbiturates
Diazepam (Valium)	Clopidogrel (Plavix)	Carbamazepine (Tegretol)
Escitalopram (Lexapro)	Esomeprazole (Nexium)	Rifampin (Rifadin)
Omeprazole (Prilosec)	Fluconazole (Diflucan)	St. John's wort
Pantoprazole (Protonix)	Fluvoxamine	
Sertraline (Zoloft)	Modafinil (Provigil)	

- Inhibition by itself does not frequently cause adverse effects compared with other CYP enzymes because many of the substrates do not have serious toxicity.
- Inhibition or induction of the enzyme nonetheless may result in an adverse drug interaction.
- Racial background is important in the likelihood of being deficient in this enzyme (e.g., 3%–5% of Caucasians and 12%–23% of Asians are poor metabolizers of this enzyme).

CYP2D6 ENZYME

CYP2D6 SUBSTRATES	CYP2D6 INHIBITORS	CYP2D6 INDUCERS
Amitriptyline (Elavil) Atomoxetine (Strattera) Duloxetine (Cymbalta) Fluoxetine (Prozac) Metoclopramide (Reglan) Metoprolol (Lopressor) Paroxetine (Paxil) Risperidone (Risperdal) Tamoxifen (Nolvadex) Tolterodine (Detrol) Tramadol (Ultram) Venlafaxine (Effexor)	Amiodarone (Cordarone) Bupropion (Wellbutrin) Fluoxetine (Prozac) Paroxetine (Paxil)	See comment below

- Potent inhibitors include fluoxetine and paroxetine.
- Evidence suggests that this enzyme is not very susceptible to enzyme induction.
- Genetics, rather than drug therapy, accounts for most ultra-rapid metabolizers (e.g., Greeks, Portuguese, Saudis, and Ethiopians have high enzyme activity).

CYP3A4 ENZYME

CYP3A4 SUBSTRATES	CYP3A4 INHIBITORS	CYP3A4 INDUCERS
Alfuzosin (Uroxatral) Alprazolam (Xanax) Budesonide (Entocort EC) Carbamazepine (Tegretol) Cyclosporine (Neoral) Fluticasone (Flovent) Lovastatin (Mevacor) Repaglinide (Prandin) Sildenafil (Viagra) Simvastatin (Zocor) Tadalafil (Cialis)	Amiodarone (Cordarone) Clarithromycin (Biaxin) Diltiazem (Cardizem) Erythromycin (Ery-Tab) Fluconazole (Diflucan) Fluoxetine (Prozac) Itraconazole (Spoiranox) Ketoconazole (Nizoral) Verapamil (Calan, Isoptin)	Carbamazepine (Tegretol) Efavirenz (Sustiva) Phenobarbital Rifampin (Rifadin) St. John's wort

- This enzyme metabolizes about half of all medications on the market.
- Drug toxicity of CYP3A4 substrates due to inhibition of CYP3A4 is relatively common.
- This enzyme is very sensitive to induction, tending to lower plasma concentrations of substrates, resulting in reduced efficacy of the substrate.
- Most potent inhibitors include clarithromycin, itraconazole, and ketoconazole.
- Rifampin is a potent inducer and may reduce serum concentrations of substrates by as much as 90%.

Appendix K

POISON ANTIDOTE CHART

Poisoning Agent	Antidote	Dosage
Acetaminophen	Acetylcysteine (Acetadote, Mucomyst)	PO: ADULTS, CHILDREN: Loading dose: 140 mg/kg, then 70 mg/kg q4h for a total of 18 doses. Total dose delivered: 1,330 mg/kg. IV: ADULTS, CHILDREN: Loading dose: 150 mg/kg over 60 min, then 50 mg/kg over 4 hrs, then 100 mg/kg over 16 hrs. Total dose delivered: 300 mg/kg.
Anticholinergic agents (e.g., atropine)	Physostigmine	IM/IV/SUBCUTANEOUS: ADULTS: Initially, 0.5–2 mg, then repeat q20min until response occurs or adverse effects occur. Repeat 1–4 mg q30–60min as life-threatening symptoms recur. IV: CHILDREN (Reserve for life-threatening situation only): 0.01–0.03 mg/kg/dose. May repeat after 15–20 min to maximum total dose of 2 mg, or until response occurs or adverse cholinergic effects occur.
Arsenic	Dimercaprol (BAL in oil)	Mild Poisoning IM: ADULTS, CHILDREN: 2.5 mg/kg/dose q6h for 2 days, then q12h for 1 day, then once daily for 10 days. Severe Poisoning IM: ADULTS, CHILDREN: 3 mg/kg/dose q4h for 2 days, then q6h for 1 day, then q12h for 10 days.
Benzodiazepines (e.g., midazolam)	Flumazenil (Romazicon)	IV: ADULTS: 0.2 mg over 30 sec. May give 0.3-mg dose after 30 sec if desired LOC not obtained. Additional doses of 0.5 mg can be given over 30 sec at 1-min intervals up to cumulative dose of 3 mg. CHILDREN: 0.01 mg/kg (**maximum:** 0.2 mg) with repeat doses of 0.01 mg/kg (**maximum:** 0.2 mg) given every minute to maximum total cumulative dose of 1 mg.
Beta-blockers (e.g., propranolol)	Glucagon	IV: ADULTS: 5–10 mg over 1 min, followed by infusion of 1–10 mg/hr.
Calcium channel blockers (e.g., verapamil)	Glucagon	IV: ADULTS: 5–10 mg over 1 min, followed by infusion of 1–10 mg/hr.

(continued)

Poisoning Agent	Antidote	Dosage
Carbamate pesticides	Atropine	IV: ADULTS: Initially, 1–5 mg doubled q5min until signs of muscarinic excess abate. IV INFUSION: ADULTS: 0.5–1 mg/hr. IM: ADULTS (Mild symptoms): 2 mg. If severe symptoms develop after first dose, 2 additional doses should be repeated in 10 min. (Severe symptoms): Immediately administer three 2-mg doses. IV: CHILDREN: 0.02–0.05 mg/kg q10–20min until atropine effect observed, then q1–4h for at least 24 hrs. IM: 0.5–2 mg/dose based on weight (0.5 mg: 15–40 lb, 1 mg: 41–90 lb, 2 mg: greater than 90 lb). (Mild symptoms): 1 injection. (Severe symptoms): 2 additional injections given in rapid succession 10 min after receiving first injection.
Digoxin (Lanoxin)	Digoxin immune FAB (Digibind)	**ADULTS** Unknown amount of ingestion: 800 mg IV infusion if acute ingestion, 240 mg IV infusion if chronic ingestion. **Dosing for Ingestion of Single Large Dose** Dose (in no. of vials) = (Total digitalis body load in mg)/(0.5 mg of digitalis bound per vial). Total digitalis body load in mg = (No. of tablets/capsules ingested) × (mg strength of tablet/capsule) × (bioavailability of tablet/capsule). Digoxin tablets and elixir are 80% bioavailable. Digoxin capsules and injection are 100% bioavailable. **Dosing Based on Serum Level** Digoxin: Dose (in no. of vials) = (Serum digoxin level in ng/mL) × (weight in kg)/(100). Digitoxin: Dose (in no. of vials) = (Serum digitoxin level in ng/mL) × (weight in kg)/(1,000). **CHILDREN** **Dosing for Ingestion of Single Large Dose** Dose (in no. of vials) = (Total digitalis body load in mg)/(0.5 mg of digitalis bound per vial). Total digitalis body load in mg = (No. of tablets/capsules ingested) × (mg strength of tablet/capsule) × (bioavailability of tablet/capsule). Digoxin tablets and elixir are 80% bioavailable. Digoxin capsules and injection are 100% bioavailable. WEIGHING 20 kg or less: Dilution of reconstituted vial to 1 mg/ml may be desirable for doses of 3 mg or less. Dose (in no. of mg) = Dose (in no. of vials) × 38 mg/vial. Dose (in no. of vials) = (Serum digoxin level in ng/ml) × (weight in kg)/(100).

Poisoning Agent	Antidote	Dosage
Ethylene glycol	Fomepizole (Antizol)	IV: ADULTS, CHILDREN: Loading dose 15 mg/kg, then 10 mg/kg q12h for 4 doses, then 15 mg/kg q12h thereafter until ethylene glycol levels reduced to less than 20 mg/dl and patient is asymptomatic with normal pH.
Extravasation vasoconstrictive agents (e.g., dopamine)	Phentolamine (Regitine)	ADULTS, CHILDREN: Infiltrate area with small amount of solution made by diluting 5–10 mg in 10 ml 0.9% NaCl within 12 hrs of extravasation. In general, do not exceed 0.1–0.2 mg/kg (5 mg total).
Heparin	Protamine	IV: ADULTS, CHILDREN: Dosage is determined by most recent dosage of heparin or low molecular weight heparin (LWH): 1 mg protamine neutralizes 90–115 units of heparin and 1 mg (100 units) of LWH. **Maximum dose:** 50 mg.
Iron	Deferoxamine (Desferal)	Acute IM: ADULTS: Initially, 1,000 mg, then 500 mg q4h for 2 doses. Additional doses of 0.5 g q4–12h. **Maximum:** 6 g/24 hrs. CHILDREN 3 YRS AND OLDER: 90 mg/kg/dose q8h (not to exceed 1 g/dose). **Maximum:** 6 g/24 hrs. IV: ADULTS, CHILDREN: 15 mg/kg/hr. **Maximum:** 6 g/24 hrs. Chronic IM: ADULTS: 500–1,000 mg/day. IV: ADULTS, CHILDREN: 15 mg/kg/hr. **Maximum:** 12 g/24 hrs.
Isoniazid	Pyridoxine (vitamin B_6)	IV: ADULTS, CHILDREN: Total dose of pyridoxine equal to amount of isoniazid ingested as first dose of 1–4 g IV, then 1 g IM q30min until total dose completed. If not known, give 5 g at rate of 1 g/min. May repeat q5–10min.
Lead	Calcium EDTA	Symptomatic Treat for 3–5 days; give in conjunction with dimercaprol. IM: ADULTS, CHILDREN: 167 mg/m^2 every 4 hrs. IV: ADULTS, CHILDREN: 1 g/m^2 as 8- to 24-hr infusion or divided q12h. Lead Encephalopathy Treat for 5 days; give concurrently with dimercaprol. IM: ADULTS, CHILDREN: 250 mg/m^2 every 4 hrs. IV: ADULTS, CHILDREN: 50 mg/kg/day as 24-hr continuous infusion.
Lead	Dimercaprol (BAL in oil)	Mild IM: ADULTS, CHILDREN: Loading dose 4 mg/kg, then 3 mg/kg/dose q4h for 2–7 days. Begin calcium EDTA with second dose. Severe and Lead Encephalopathy IM: ADULTS, CHILDREN: 4 mg/kg/dose q4h for 3–5 days. Begin calcium EDTA with second dose.

(continued)

Poisoning Agent	Antidote	Dosage
Lead	Succimer (Chemet)	PO: ADULTS, CHILDREN: 10 mg/kg/dose q8h for 5 days, then q12h for 14 days. **Maximum:** 500 mg/dose. Note: For children younger than 5 yrs, dose based on mg/m^2.
Methanol	Fomepizole (Antizol)	IV: ADULTS, CHILDREN: Loading dose 15 mg/kg, then 10 mg/kg q12h for 4 doses, then 15 mg/kg q12h thereafter until ethylene glycol levels reduced to less than 20 mg/dl and patient is asymptomatic with normal pH.
Opioids (e.g., morphine)	Naloxone (Narcan)	IV/IM/SUBCUTANEOUS: ADULTS: 0.4–2 mg/dose. May repeat every 2–3 min as needed. Therapy may need to be reassessed if no response is seen after cumulative dose of 10 mg. CHILDREN (5 YRS OR OLDER or WEIGHING 20 KG OR GREATER): 2 mg/dose IV/IM/SUBCUTANEOUS. May repeat every 2–3 min as needed. Therapy may need to be reassessed if no response is seen after cumulative dose of 10 mg. CHILDREN (WEIGHING LESS THAN 20 KG): 0.1 mg/kg/dose. May repeat every 2–3 min as needed.
Organophosphate pesticides	Atropine	IV: ADULTS: Initially, 1–5 mg doubled q5min until signs of muscarinic excess abate. IV INFUSION: ADULTS: 0.5–1 mg/hr. IM: ADULTS (Mild symptoms): 2 mg. If severe symptoms develop after first dose, 2 additional doses should be repeated in 10 min. (Severe symptoms): Immediately administer three 2-mg doses. IV: CHILDREN: 0.02–0.05 mg/kg q10–20min until atropine effect observed, then q1–4h for at least 24 hrs. IM: 0.5–2 mg/dose based on weight (0.5 mg: 15–40 lb, 1 mg: 41–90 lb, 2 mg: greater than 90 lb). (Mild symptoms): 1 injection. (Severe symptoms): 2 additional injections given in rapid succession 10 min after receiving first injection.
Organophosphate pesticides	Pralidoxime (Protopam)	IM/IV: ADULTS: 1–2 g. Repeat in 1–2 hrs if muscle weakness has not been relieved, then at 10- to 12-hr intervals if cholinergic signs recur. CHILDREN: 20–50 mg/kg/dose. Repeat in 1–2 hrs if muscle weakness is not relieved, then at 10- to 12-hr intervals if cholinergic signs recur.
Warfarin (Coumadin)	Phytonadione (vitamin K)	PO/IV/SUBCUTANEOUS: ADULTS: 2.5–10 mg/dose. May repeat in 12–48 hrs if given PO, 6–8 hrs if given by IV or subcutaneous route. CHILDREN: 0.5–5 mg depending on need for further anticoagulation, severity of bleeding.

Appendix L

PREVENTING MEDICATION ERRORS AND IMPROVING MEDICATION SAFETY

Medication safety is a high priority for the health care professional. Prevention of medication errors and improved safety for the pt are important, esp. in today's health care environment when today's pt is older and sometimes sicker and the drug therapy regimen can be more sophisticated and complex.

A medication error is defined by the National Coordinating Council for Medication Error Reporting and Prevention (NCC MERP) as "any preventable event that may cause or lead to inappropriate medication use or pt harm while the medication is in the control of the health care professional, pt, or consumer."

Most medication errors occur as a result of multiple, compounding events as opposed to a single act by a single individual.

Use of the wrong medication, strength, or dose; confusion over sound-alike or look-alike drugs; administration of medications by the wrong route; miscalculations (esp. when used in pediatric pts or when administering medications intravenously); and errors in prescribing and transcription all can contribute to compromising the safety of the pt. The potential for adverse events and medication errors is definitely a reality and is potentially tragic and costly in both human and economic terms.

Health care professionals must take the initiative to create and implement procedures to prevent medication errors from occurring and implement methods to reduce medication errors. The first priority in preventing medication errors is to establish a multidisciplinary team to improve medication use. The goal for this team would be to assess medication safety and implement changes that would make it difficult or impossible for mistakes to reach the pt. Some important criteria in making improved medication safety successful include the following:

- Promote a nonpunitive approach to reducing medication errors.
- Increase the detection and the reporting of medication errors, near misses, and potentially hazardous situations that may result in medication errors.
- Determine root causes of medication errors.
- Educate about the causes of medication errors and ways to prevent these errors.
- Make recommendations to allow organization-wide, system-based changes to prevent medication errors.
- Learn from errors that occur in other organizations and take measures to prevent similar errors.

Some common causes and ways to prevent medication errors and improve safety include the following:

Handwriting: Poor handwriting can make it difficult to distinguish between two medications with similar names. Also, many drug names sound similar, esp. when the names are spoken over the telephone, poorly enunciated, or mispronounced.

- Take time to write legibly.
- Keep phone or verbal orders to a minimum to prevent misinterpretation.
- Repeat back orders taken over the telephone.
- When ordering a new or rarely used medication, print the name.

- Always specify the drug strength, even if only one strength exists.
- Express dosages for oral liquids only in metric weights or volumes (e.g., mg or ml), not by teaspoon or tablespoon.
- Print generic and brand names of look-alike or sound-alike medications.

Zeros and decimal points: Hastily written orders can present problems even if the name of the medication is clear.

- Never leave a decimal point "naked." Place a zero before a decimal point when the number is less than a whole unit (e.g., use 0.25 mg or 250 mcg, **not** .25 mg).
- Never have a trailing zero following a decimal point (e.g., use 2 mg, **not** 2.0 mg).

Abbreviations: Errors can occur because of a failure to standardize abbreviations. Establishing a list of abbreviations that should never be used is recommended.

- Never abbreviate unit as "U"; spell out "unit."
- Do not abbreviate "once daily" as OD or QD or "every other day" as QOD; spell it out.
- Do not use D/C, as this may be misinterpreted as either discharge or discontinue.
- Do not abbreviate drug names; spell out the generic and/or brand names.

Ambiguous or incomplete orders: These types of orders can cause confusion or misinterpretation of the writer's intention. Examples include situations when the route of administration, dose, or dosage form has not been specified.

- Do not use slash marks—they may be read as the number one (1).
- When reviewing an unusual order, verify the order with the person writing the order to prevent any misunderstanding.
- Read over orders after writing.
- Encourage that the drug's indication for use be provided on medication orders.
- Provide complete medication orders—do not use "resume preop" or "continue previous meds."
- Provide the age and, when appropriate, the weight of the pt.

High-alert medications: Medications in this category have an increased risk of causing significant pt harm when used in error. Mistakes with these medications may or may not be more common but may be more devastating to the pt if an error occurs. A list of high-alert medications can be obtained from the Institute for Safe Medication Practices (ISMP) at www.ismp.org.

Technology available today that can be used to address and help solve potential medication problems or errors includes the following:

- Electronic prescribing systems—This refers to computerized prescriber order entry systems. Within these systems is the capability to incorporate medication safety alerts (e.g., maximum dose alerts, allergy screening). Additionally, these systems should be integrated or interfaced with pharmacy and laboratory systems to provide drug–drug and drug–disease interactions alerts and include clinical order screening capability.
- Bar codes—These systems are designed to use bar-code scanning devices to validate identity of pts, verify medications administered, document administration, and provide safety alerts.
- "Smart" infusion pumps—These pumps allow users to enter drug infusion protocols into a drug library along with predefined dosage limits. If a dosage is outside the limits established, an alarm is sounded and drug delivery is halted, informing the clinician that the dose is outside the recommended range.

- Automated dispensing systems; point-of-use dispensing system—These systems should be integrated with information systems, esp. pharmacy systems.
- Pharmacy order entry system—This should be fully integrated with an electronic prescribing system with the capability of producing medication safety alerts. Additionally, the system should generate a computerized medication administration record (MAR), which would be used by the nursing staff while administering medications.

Medication reconciliation: Medication errors generally occur at transition points in the pt's care (admission, transfer from one level of care to another [e.g., critical care to general care area], and discharge). Incomplete documentation can account for up to 60% of potential medication errors. Therefore, it becomes necessary to accurately and completely reconcile medication across the continuum of care. This includes the name, dosage, frequency, and route of medication administration.

Medication reconciliation programs are a process of identifying the most accurate list of all medications a pt is taking and using this list to provide correct medications anywhere within the health care system. The focus is on not only compiling a list but using the list to reduce medication errors and provide quality pt care.

Additional Strategies to Reduce Medication Errors

The Institute for Safe Medication Practices (ISMP), FDA, and other agencies have identified high-risk areas associated with medication errors. They include the following:

At-risk population: At-risk populations primarily include pediatric and geriatric pts. For both, this risk is due to altered pharmacokinetic parameters with little published information regarding medication use in these groups. Additionally, in the pediatric population, the risk is due to the need for calculating doses based on age and weight, lack of available dosage forms, and concentrations for smaller children.

In a USP report, more than one-third of medication errors reaching the pt occurred in pts 65 yrs of age and older. Almost 40% of people 60 yrs and older take at least five medications. More than 50% of fatal hospital medication errors involve seniors. In the senior population, age-related physiologic changes (e.g., decreased renal function, reduced muscle mass) increase the risk for adverse events.

Avoid abbreviations and nomenclature: The confusion caused by abbreviations has prompted the ISMP to develop a list of abbreviations that should be avoided (see back cover of handbook).

Recognize prescription look-alike and sound-alike medications: The ISMP has developed an extensive list of confused drug names (see www.jointcommission.org). See individual monographs for **DO NOT CONFUSE** information.

Focus on high alert medications: High alert medications are medications that bear a heightened risk of causing significant pt harm if incorrectly used. High alert medications in the handbook have a colored background for the entire monograph.

Look for duplicate therapies and interactions: Drug interactions and duplicate therapies can increase risk of adverse reactions. Refer to individual monographs for significant interaction information (drug, herbal, food).

Report errors to improve process: This action plays an important role in preventing further errors. The intent is to identify system failures that can be altered to prevent further errors.

Appendix M

RECOMMENDED CHILDHOOD AND ADULT IMMUNIZATIONS

Recommended Adult Immunization Schedule by Vaccine and Age Group—United States, 2013

VACCINE / AGE GROUP	19-21 yrs	22-26 yrs	27-49 yrs	50-59 yrs	60-64 yrs	≥65 yrs
Influenza [2,*]	1 dose annually					
Tetanus, diphtheria, pertussis (Td/Tdap) [3,*]	Substitute 1-time dose of Tdap for Td booster; then boost with Td every 10 yrs					
Varicella [4,*]	2 doses					
Human papillomavirus (HPV) Female [5,*]	3 doses					
Human papillomavirus (HPV) Male [5,*]	3 doses					
Zoster [6]					1 dose	
Measles, mumps, rubella (MMR) [7,*]	1 or 2 doses					
Pneumococcal polysaccharide (PPSV23) [8,9]	1 or 2 doses					1 dose
Pneumococcal 13-valent conjugate (PCV13) [10]	1 dose					
Meningococcal [11,*]	1 or more doses					
Hepatitis A [12,*]	2 doses					
Hepatitis B [13,*]	3 doses					

*Covered by the Vaccine Injury Compensation Program

For all persons in this category who meet the age requirements and who lack documentation of vaccination or have no evidence of previous infection; zoster vaccine recommended regardless of prior episode of zoster

Recommended if some other risk factor is present (e.g., on the basis of medical, occupational, lifestyle, or other indication)

No recommendation

These schedules indicate the recommended age groups and medical indications for which administration of currently licensed vaccines is commonly indicated for adults ages 19 yrs and older, as of January 1, 2013. For all vaccines being recommended on the Adult Immunization Schedule: a vaccine series does not need to be restarted, regardless of the time that has elapsed between doses. Licensed combination vaccines may be used whenever any components of the combination are indicated and when the vaccine's other components are not contraindicated. For detailed recommendations on all vaccines, including those used primarily for travelers or that are issued during the year, consult the manufacturers' package inserts and the complete statements from the Advisory Committee on Immunization Practices (**www.cdc.gov/vaccines/pubs/acip-list.htm**). Use of trade names and commercial sources is for identification only and does not imply endorsement by the U.S. Department of Health and Human Services.

Report all clinically significant postvaccination reactions to the Vaccine Adverse Event Reporting System (VAERS). Reporting forms and instructions on filing a VAERS report are available at **www.vaers.hhs.gov** or by telephone, **800-822-7967**.

Information on how to file a Vaccine Injury Compensation Program claim is available at www.hrsa.gov/vaccinecompensation or by telephone, 800-338-2382. To file a claim for vaccine injury, contact the U.S. Court of Federal Claims, 717 Madison Place, N.W., Washington, D.C. 20005; telephone, 202-357-6400.

Additional information about the vaccines in this schedule, extent of available data, and contraindications for vaccination is also available at **www.cdc.gov/vaccines** or from the CDC-INFO Contact Center at 800-CDC-INFO (800-232-4636) in English and Spanish, 8:00 a.m. - 8:00 p.m. Eastern Time, Monday - Friday, excluding holidays.

Use of trade names and commercial sources is for identification only and does not imply endorsement by the U.S. Department of Health and Human Services.

1. **Additional information**
   - Additional guidance for the use of the vaccines described in this supplement is available at http://www.cdc.gov/vaccines/pubs/acip-list.htm.
   - Information on vaccination recommendations when vaccination status is unknown and other general immunization information can be found in the General Recommendations on Immunization at http://www.cdc.gov/mmwr/preview/mmwrhtml/rr6002a1.htm.
   - Information on travel vaccine requirements and recommendations (e.g., for hepatitis A and B, meningococcal, and other vaccines) are available at **http://wwwnc.cdc.gov/travel/page/vaccinations.htm**.
2. **Influenza vaccination**
   - Annual vaccination against influenza is recommended for all persons aged 6 mos and older.
   - Persons aged 6 mos and older, including pregnant women, can receive the inactivated influenza vaccine (IIV).
   - Healthy, nonpregnant persons aged 2–49 yrs without high-risk medical conditions can receive either intranasally administered live, attenuated influenza vaccine (LAIV) (FluMist), or IIV. Health-care personnel who care for severely immunocompromised persons (i.e., those who require care in a protected environment) should receive IIV rather than LAIV.
   - The intramuscularly or intradermally administered IIV are options for adults aged 18–64 yrs.
   - Adults aged 65 yrs and older can receive the standard dose IIV or the high-dose IIV (Fluzone High-Dose).
3. **Tetanus, diphtheria, and acellular pertussis (Td/Tdap) vaccination**
   - Administer one dose of Tdap vaccine to pregnant women during each pregnancy (preferred during 27–36 wks' gestation), regardless of number of yrs since prior Td or Tdap vaccination.
   - Administer Tdap to all other adults who have not previously received Tdap or for whom vaccine status is unknown. Tdap can be administered regardless of interval since the most recent tetanus or diphtheria-toxoid containing vaccine.
   - Adults with an unknown or incomplete history of completing a 3-dose primary vaccination series with Td-containing vaccines should begin or complete a primary vaccination series including a Tdap dose.
   - For unvaccinated adults, administer the first 2 doses at least 4 wks apart and the third dose 6–12 mos after the second.
   - For incompletely vaccinated (i.e., less than 3 doses) adults, administer remaining doses.
   - Refer to the Advisory Committee on Immunization Practices (ACIP) statement for recommendations for administering Td/Tdap as prophylaxis in wound management (see footnote #1).
4. **Varicella vaccination**
   - All adults without evidence of immunity to varicella (as defined below) should receive 2 doses of single-antigen varicella vaccine or a second dose if they have received only 1 dose.
   - Special consideration for vaccination should be given to those who have close contact with persons at high risk for severe disease (e.g., health-care personnel and family contacts of persons with immunocompromising conditions) or are at high risk for exposure or transmission (e.g., teachers; child care employees; residents and staff members of institutional settings, including correctional institutions; college students; military personnel; adolescents and adults living in households with children; nonpregnant women of childbearing age; and international travelers).
   - Pregnant women should be assessed for evidence of varicella immunity. Women who do not have evidence of immunity should receive the first dose of varicella vaccine upon completion or termination of pregnancy and before discharge from the health-care facility. The second dose should be administered 4–8 wks after the first dose.
   - Evidence of immunity to varicella in adults includes any of the following:
     — documentation of 2 doses of varicella vaccine at least 4 wks apart;
     — U.S.-born before 1980 except health-care personnel and pregnant women;
     — history of varicella based on diagnosis or verification of varicella disease by a health-care provider;
     — history of herpes zoster based on diagnosis or verification of herpes zoster disease by a health-care provider; or
     — laboratory evidence of immunity or laboratory confirmation of disease.
5. **Human papillomavirus (HPV) vaccination**
   - Two vaccines are licensed for use in females, bivalent HPV vaccine (HPV2) and quadrivalent HPV vaccine (HPV4), and one HPV vaccine for use in males (HPV4).
   - For females, either HPV4 or HPV2 is recommended in a 3-dose series for routine vaccination at age 11 or 12 yrs, and for those aged 13 through 26 yrs, if not previously vaccinated.
   - For males, HPV4 is recommended in a 3-dose series for routine vaccination at age 11 or 12 yrs, and for those aged 13 through 21 yrs, if not previously vaccinated. Males aged 22 through 26 yrs may be vaccinated.
   - HPV4 is recommended for men who have sex with men (MSM) through age 26 yrs for those who did not get any or all doses when they were younger.
   - Vaccination is recommended for immunocompromised persons (including those with HIV infection) through age 26 yrs for those who did not get any or all doses when they were younger.
   - A complete series for either HPV4 or HPV2 consists of 3 doses. The second dose should be administered 1–2 mos after the first dose; the third dose should be administered 6 mos after the first dose (at least 24 wks after the first dose).
   - HPV vaccines are not recommended for use in pregnant women. However, pregnancy testing is not needed before vaccination. If a woman is found to be pregnant after initiating the vaccination series, no intervention is needed; the remainder of the 3-dose series should be delayed until completion of pregnancy.
   - Although HPV vaccination is not specifically recommended for health-care personnel (HCP) based on their occupation, HCP should receive the HPV vaccine as recommended (see above).
6. **Zoster vaccination**
   - A single dose of zoster vaccine is recommended for adults aged 60 yrs and older regardless of whether they report a prior episode of herpes zoster. Although the vaccine is licensed by the Food and Drug Administration (FDA) for use among and can be administered to persons aged 50 yrs and older, ACIP recommends that vaccination begins at age 60 yrs.
   - Persons aged 60 yrs and older with chronic medical conditions may be vaccinated unless their condition constitutes a contraindication, such as pregnancy or severe immunodeficiency.
   - Although zoster vaccination is not specifically recommended for HCP, they should receive the vaccine if they are in the recommended age group.
7. **Measles, mumps, rubella (MMR) vaccination**
   - Adults born before 1957 generally are considered immune to measles and mumps. All adults born in 1957 or later should have documentation of 1 or more doses of MMR vaccine unless they have a medical contraindication to the vaccine, or laboratory evidence of immunity to each of the three diseases. Documentation of provider-diagnosed disease is not considered acceptable evidence of immunity for measles, mumps, or rubella.

   Measles component:
   - A routine second dose of MMR vaccine, administered a minimum of 28 days after the first dose, is recommended for adults who
     — are students in postsecondary educational institutions;
     — work in a health-care facility; or
     — plan to travel internationally.
   - Persons who received inactivated (killed) measles vaccine or measles vaccine of unknown type during 1963–1967 should be revaccinated with 2 doses of MMR vaccine.

   Mumps component:
   - A routine second dose of MMR vaccine, administered a minimum of 28 days after the first dose, is recommended for adults who
     — are students in a postsecondary educational institution;
     — work in a health-care facility; or
     — plan to travel internationally.
   - Persons vaccinated before 1979 with either killed mumps vaccine or mumps vaccine of unknown type who are at high risk for mumps infection (e.g., persons who are working in a health-care facility) should be considered for revaccination with 2 doses of MMR vaccine.

   Rubella component:
   - For women of childbearing age, regardless of birth yr, rubella immunity should be determined. If there is no evidence of immunity, women who are not pregnant should be vaccinated. Pregnant women who do not have evidence of immunity should receive MMR vaccine upon completion or termination of pregnancy and before discharge from the health-care facility.

   HCP born before 1957:
   - For unvaccinated health-care personnel born before 1957 who lack laboratory evidence of measles, mumps, and/or rubella immunity or laboratory confirmation of disease, health-care facilities should consider vaccinating personnel with 2 doses of MMR vaccine at the appropriate interval for measles and mumps or 1 dose of MMR vaccine for rubella.
8. **Pneumococcal polysaccharide (PPSV23) vaccination**
   - Vaccinate all persons with the following indications:
     — all adults aged 65 yrs and older;
     — adults younger than age 65 yrs with chronic lung disease (including chronic obstructive pulmonary disease, emphysema, and asthma); chronic cardiovascular diseases; diabetes mellitus; chronic renal failure; nephrotic syndrome; chronic liver disease (including cirrhosis); alcoholism; cochlear implants; cerebrospinal fluid leaks; immunocompromising conditions; and functional or anatomic asplenia (e.g., sickle cell disease and other hemoglobinopathies, congenital or acquired asplenia, splenic dysfunction, or splenectomy [if elective splenectomy is planned, vaccinate at least 2 wks before surgery]);

— residents of nursing homes or long-term care facilities; and
— adults who smoke cigarettes.

- Persons with immunocompromising conditions and other selected conditions are recommended to receive PCV13 and PPSV23 vaccines. See footnote #10 for information on timing of PCV13 and PPSV23 vaccinations.
- Persons with asymptomatic or symptomatic HIV infection should be vaccinated as soon as possible after their diagnosis.
- When cancer chemotherapy or other immunosuppressive therapy is being considered, the interval between vaccination and initiation of immunosuppressive therapy should be at least 2 wks. Vaccination during chemotherapy or radiation therapy should be avoided.
- Routine use of PPSV23 is not recommended for American Indians/Alaska Natives or other persons younger than age 65 yrs unless they have underlying medical conditions that are PPSV23 indications. However, public health authorities may consider recommending PPSV23 for American Indians/Alaska Natives who are living in areas where the risk for invasive pneumococcal disease is increased.
- When indicated, PPSV23 should be administered to pts who are uncertain of their vaccination status and there is no record of previous vaccination. When PCV13 is also indicated, a dose of PCV13 should be given first (see footnote #10).

9. Revaccination with PPSV23

- One-time revaccination 5 yrs after the first dose is recommended for persons aged 19 through 64 yrs with chronic renal failure or nephrotic syndrome; functional or anatomic asplenia (e.g., sickle cell disease or splenectomy); and for persons with immunocompromising conditions.
- Persons who received 1 or 2 doses of PPSV23 before age 65 yrs for any indication should receive another dose of the vaccine at age 65 yrs or later if at least 5 yrs have passed since their previous dose.
- No further doses are needed for persons vaccinated with PPSV23 at or after age 65 yrs.

10. Pneumococcal conjugate 13-valent vaccination (PCV13)

- Adults aged 19 yrs or older with immunocompromising conditions (including chronic renal failure and nephrotic syndrome), functional or anatomic asplenia, CSF leaks or cochlear implants, and who have not previously received PCV13 or PPSV23 should receive a single dose of PCV13 followed by a dose of PPSV23 at least 8 wks later.
- Adults aged 19 yrs or older with the aforementioned conditions who have previously received one or more doses of PPSV23 should receive a dose of PCV13 one or more yrs after the last PPSV23 dose was received. For those that require additional doses of PPSV23, the first such dose should be given no sooner than 8 wks after PCV13 and at least 5 yrs since the most recent dose of PPSV23.
- When indicated, PCV13 should be administered to pts who are uncertain of their vaccination status history and there is no record of previous vaccination.
- Although PCV13 is licensed by the Food and Drug Administration (FDA) for use among and can be administered to persons aged 50 yrs and older, ACIP recommends PCV13 for adults aged 19 yrs and older with the specific medical conditions noted above.

11. Meningococcal vaccination

- Administer 2 doses of meningococcal conjugate vaccine quadrivalent (MCV4) at least 2 mos apart to adults with functional asplenia or persistent complement component deficiencies.
- HIV-infected persons who are vaccinated also should receive 2 doses.
- Administer a single dose of meningococcal vaccine to microbiologists routinely exposed to isolates of Neisseria meningitidis, military recruits, and persons who travel to or live in countries in which meningococcal disease is hyperendemic or epidemic.
- First-yr college students up through age 21 yrs who are living in residence halls should be vaccinated if they have not received a dose on or after their 16th birthday.
- MCV4 is preferred for adults with any of the preceding indications who are aged 55 yrs and younger; meningococcal polysaccharide vaccine (MPSV4) is preferred for adults aged 56 yrs and older.
- Revaccination with MCV4 every 5 yrs is recommended for adults previously vaccinated with MCV4 or MPSV4 who remain at increased risk for infection (e.g., adults with anatomic or functional asplenia or persistent complement component deficiencies).

12. Hepatitis A vaccination

- Vaccinate any person seeking protection from hepatitis A virus (HAV) infection and persons with any of the following indications:
  — men who have sex with men and persons who use injection or noninjection illicit drugs;
  — persons working with HAV-infected primates or with HAV in a research laboratory setting;
  — persons with chronic liver disease and persons who receive clotting factor concentrates;
  — persons traveling to or working in countries that have high or intermediate endemicity of hepatitis A; and
  — unvaccinated persons who anticipate close personal contact (e.g., household or regular babysitting) with an international adoptee during the first 60 days after arrival in the United States from a country with high or intermediate endemicity. (See footnote #1 for more information on travel recommendations). The first dose of the 2-dose hepatitis A vaccine series should be administered as soon as adoption is planned, ideally 2 or more wks before the arrival of the adoptee.
- Single-antigen vaccine formulations should be administered in a 2-dose schedule at either 0 and 6–12 mos (Havrix), or 0 and 6–18 mos (Vaqta). If the combined hepatitis A and hepatitis B vaccine (Twinrix) is used, administer 3 doses at 0, 1, and 6 mos; alternatively, a 4-dose schedule may be used, administered on days 0, 7, and 21–30, followed by a booster dose at mo 12.

13. Hepatitis B vaccination

- Vaccinate persons with any of the following indications and any person seeking protection from hepatitis B virus (HBV) infection:
  — sexually active persons who are not in a long-term, mutually monogamous relationship (e.g., persons with more than one sex partner during the previous 6 mos); persons seeking evaluation or treatment for a sexually transmitted disease (STD); current or recent injection-drug users; and men who have sex with men;
  — health-care personnel and public-safety workers who are potentially exposed to blood or other infectious body fluids;
  — persons with diabetes younger than age 60 yrs as soon as feasible after diagnosis; persons with diabetes who are age 60 yrs or older at the discretion of the treating clinician based on increased need for assisted blood glucose monitoring in long-term care facilities, likelihood of acquiring hepatitis B infection, its complications or chronic sequelae, and likelihood of immune response to vaccination;
  — persons with end-stage renal disease, including pts receiving hemodialysis; persons with HIV infection; and persons with chronic liver disease;
  — household contacts and sex partners of hepatitis B surface antigen-positive persons; clients and staff members of institutions for persons with developmental disabilities; and international travelers to countries with high or intermediate prevalence of chronic HBV infection; and
  — all adults in the following settings: STD treatment facilities; HIV testing and treatment facilities; facilities providing drug-abuse treatment and prevention services; health-care settings targeting services to injection-drug users or men who have sex with men; correctional facilities; end-stage renal disease programs and facilities for chronic hemodialysis pts; and institutions and nonresidential daycare facilities for persons with developmental disabilities.
- Administer missing doses to complete a 3-dose series of hepatitis B vaccine to those persons not vaccinated or not completely vaccinated. The second dose should be administered 1 mo after the first dose; the third dose should be given at least 2 mos after the second dose (and at least 4 mos after the first dose). If the combined hepatitis A and hepatitis B vaccine (Twinrix) is used, give 3 doses at 0, 1, and 6 mos; alternatively, a 4-dose Twinrix schedule, administered on days 0, 7, and 21–30 followed by a booster dose at mo 12 may be used.
- Adult pts receiving hemodialysis or with other immunocompromising conditions should receive 1 dose of 40 µg/mL (Recombivax HB) administered on a 3-dose schedule at 0, 1, and 6 mos or 2 doses of 20 µg/mL (Engerix-B) administered simultaneously on a 4-dose schedule at 0, 1, 2, and 6 mos.

14. Selected conditions for which Haemophilus influenzae type b (Hib) vaccine may be used

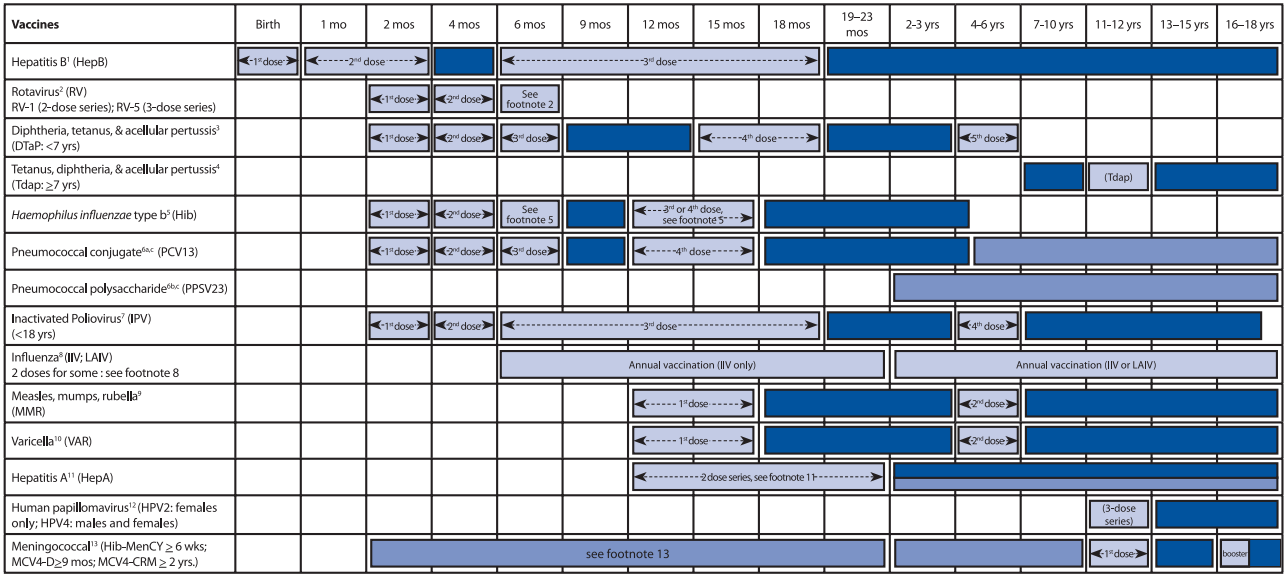
- 1 dose of Hib vaccine should be considered for persons who have sickle cell disease, leukemia, or HIV infection, or who have anatomic or functional asplenia if they have not previously received Hib vaccine.

15. Immunocompromising conditions

- Inactivated vaccines generally are acceptable (e.g., pneumococcal, meningococcal, and influenza [inactivated influenza vaccine]), and live vaccines generally are avoided in persons with immune deficiencies or immunocompromising conditions. Information on specific conditions is available at **http://www.cdc.gov/vaccines/pubs/acip-list.htm**.

Recommended Immunization Schedule for Persons Aged 0 Through 18 Yrs—United States, 2013

For Those Who Fall Behind or Start Late, See the Catch-up Schedule



This schedule includes recommendations in effect as of January 1, 2013. Any dose not administered at the recommended age should be administered at a subsequent visit, when indicated and feasible. The use of a combination vaccine generally is preferred over separate injections of its equivalent component vaccines. Vaccination providers should consult the relevant Advisory Committee on Immunization Practices (ACIP) statement for detailed recommendations, available online at **http://www.cdc.gov/vaccines/pubs/acip-list.htm**. Clinically significant adverse events that follow vaccination should be reported to the Vaccine Adverse Event Reporting System (VAERS) online (http://www.vaers.hhs.gov) or by telephone (800-822-7967). Suspected cases of vaccine-preventable diseases should be reported to the state or local health department. Additional information, including precautions and contraindications for vaccination, is available from CDC online (**http://www.cdc.gov/vaccines**) or by telephone (800-CDC-INFO [800-232-4636]).

1. Hepatitis B (HepB) vaccine. (Minimum age: birth)

Routine vaccination:

At birth

- Administer monovalent HepB vaccine to all newborns before hospital discharge.
- For infants born to hepatitis B surface antigen (HBsAg)–positive mothers, administer HepB vaccine and 0.5 mL of hepatitis B immune globulin (HBIG) within 12 hrs of birth. These infants should be tested for HBsAg and antibody to HBsAg (anti-HBs) 1 to 2 mos after completion of the HepB series, at age 9 through 18 mos (preferably at the next well-child visit).
- If mother's HBsAg status is unknown, within 12 hrs of birth administer HepB vaccine to all infants regardless of birth weight. For infants weighing <2,000 grams, administer HBIG in addition to HepB within 12 hrs of birth. Determine mother's HBsAg status as soon as possible and, if she is HBsAg-positive, also administer HBIG for infants weighing ≥2,000 grams (no later than age 1 wk).

Doses following the birth dose

- The second dose should be administered at age 1 or 2 mos. Monovalent HepB vaccine should be used for doses administered before age 6 wks.
- Infants who did not receive a birth dose should receive 3 doses of a HepB-containing vaccine on a schedule of 0, 1 to 2 mos, and 6 mos starting as soon as feasible. See Figure 2.
- The minimum interval between dose 1 and dose 2 is 4 wks and between dose 2 and 3 is 8 wks. The final (third or fourth) dose in the HepB vaccine series should be administered no earlier than age 24 wks, and at least 16 wks after the first dose.
- Administration of a total of 4 doses of HepB vaccine is recommended when a combination vaccine containing HepB is administered after the birth dose.

Catch-up vaccination:

- Unvaccinated persons should complete a 3-dose series.
- A 2-dose series (doses separated by at least 4 mos) of adult formulation Recombivax HB is licensed for use in children aged 11 through 15 yrs.
- For other catch-up issues, see Figure 2.

2. Rotavirus (RV) vaccines. (Minimum age: 6 wks for both RV-1 [Rotarix] and RV-5 [RotaTeq]).

Routine vaccination:

- Administer a series of RV vaccine to all infants as follows:
  1. If RV-1 is used, administer a 2-dose series at 2 and 4 mos of age.
  2. If RV-5 is used, administer a 3-dose series at ages 2, 4, and 6 mos.
  3. If any dose in series was RV-5 or vaccine product is unknown for any dose in the series, a total of 3 doses of RV vaccine should be administered.

Catch-up vaccination:

- The maximum age for the first dose in the series is 14 wks, 6 days.
- Vaccination should not be initiated for infants aged 15 wks 0 days or older.
- The maximum age for the final dose in the series is 8 mos, 0 days.
- If RV-1(Rotarix) is administered for the first and second doses, a third dose is not indicated.
- For other catch-up issues, see Figure 2.

3. Diphtheria and tetanus toxoids and acellular pertussis (DTaP) vaccine. (Minimum age: 6 wks)

Routine vaccination:

- Administer a 5-dose series of DTaP vaccine at ages 2, 4, 6, 15–18 mos, and 4 through 6 yrs. The fourth dose may be administered as early as age 12 mos, provided at least 6 mos have elapsed since the third dose.

Catch-up vaccination:

- The fifth (booster) dose of DTaP vaccine is not necessary if the fourth dose was administered at age 4 yrs or older.
- For other catch-up issues, see Figure 2.

4. Tetanus and diphtheria toxoids and acellular pertussis (Tdap) vaccine. (Minimum age: 10 yrs for Boostrix, 11 yrs for Adacel).

Routine vaccination:

- Administer 1 dose of Tdap vaccine to all adolescents aged 11 through 12 yrs.
- Tdap can be administered regardless of the interval since the last tetanus and diphtheria toxoid-containing vaccine.
- Administer one dose of Tdap vaccine to pregnant adolescents during each pregnancy (preferred during 27 through 36 wks gestation) regardless of number of yrs from prior Td or Tdap vaccination.

Catch-up vaccination:

- Persons aged 7 through 10 yrs who are not fully immunized with the childhood DTaP vaccine series, should receive Tdap vaccine as the first dose in the catch-up series; if additional doses are needed, use Td vaccine. For these children, an adolescent Tdap vaccine should not be given.
- Persons aged 11 through 18 yrs who have not received Tdap vaccine should receive a dose followed by tetanus and diphtheria toxoids (Td) booster doses every 10 yrs thereafter.
- An inadvertent dose of DTaP vaccine administered to children aged 7 through 10 yrs can count as part of the catch-up series. This dose can count as the adolescent Tdap dose, or the child can later receive a Tdap booster dose at age 11–12 yrs.
- For other catch-up issues, see Figure 2.

5. *Haemophilus influenzae* type b (Hib) conjugate vaccine. (Minimum age: 6 wks)

Routine vaccination:

- Administer a Hib vaccine primary series and a booster dose to all infants. The primary series doses should be administered at 2, 4, and 6 mos of age; however, if PRP-OMP (PedvaxHib or Comvax) is administered at 2 and 4 mos of age, a dose at age 6 mos is not indicated. One booster dose should be administered at age 12 through15 mos.
- Hiberix (PRP-T) should only be used for the booster (final) dose in children aged 12 mos through 4 yrs, who have received at least 1 dose of Hib.

Catch-up vaccination:

- If dose 1 was administered at ages 12-14 mos, administer booster (as final dose) at least 8 wks after dose 1.
- If the first 2 doses were PRP-OMP (PedvaxHIB or Comvax), and were administered at age 11 mos or younger, the third (and final) dose should be administered at age 12 through 15 mos and at least 8 wks after the second dose.
- If the first dose was administered at age 7 through 11 mos, administer the second dose at least 4 wks later and a final dose at age 12 through 15 mos, regardless of Hib vaccine (PRP-T or PRP-OMP) used for first dose.
- For unvaccinated children aged 15 mos or older, administer only 1 dose.
- For other catch-up issues, see Figure 2.

Vaccination of persons with high-risk conditions:

- Hib vaccine is not routinely recommended for pts older than 5 yrs of age. However one dose of Hib vaccine should be administered to unvaccinated or partially vaccinated persons aged 5 yrs or older who have leukemia, malignant neoplasms, anatomic or functional asplenia (including sickle cell disease), human immunodeficiency virus (HIV) infection, or other immunocompromising conditions.

6a. Pneumococcal conjugate vaccine (PCV). (Minimum age: 6 wks)

Routine vaccination:

- Administer a series of PCV13 vaccine at ages 2, 4, 6 mos with a booster at age 12 through 15 mos.
- For children aged 14 through 59 mos who have received an age-appropriate series of 7-valent PCV (PCV7), administer a single supplemental dose of 13-valent PCV (PCV13).

Catch-up vaccination:

- Administer 1 dose of PCV13 to all healthy children aged 24 through 59 mos who are not completely vaccinated for their age.
- For other catch-up issues, see Figure 2.

Vaccination of persons with high-risk conditions:

- For children aged 24 through 71 mos with certain underlying medical conditions (see footnote 6c), administer 1 dose of PCV13 if 3 doses of PCV were received previously, or administer 2 doses of PCV13 at least 8 wks apart if fewer than 3 doses of PCV were received previously.
- A single dose of PCV13 may be administered to previously unvaccinated children aged 6 through 18 yrs who have anatomic or functional asplenia (including sickle cell disease), HIV infection or an immunocompromising condition, cochlear implant or cerebrospinal fluid leak. See MMWR 2010;59 (No. RR-11), available at **http://www.cdc.gov/mmwr/pdf/rr/rr5911.pdf**.
- Administer PPSV23 at least 8 wks after the last dose of PCV to children aged 2 yrs or older with certain underlying medical conditions (see footnotes 6b and 6c).

6b. Pneumococcal polysaccharide vaccine (PPSV23). (Minimum age: 2 yrs)

Vaccination of persons with high-risk conditions:

- Administer PPSV23 at least 8 wks after the last dose of PCV to children aged 2 yrs or older with certain underlying medical conditions (see footnote 6c). A single revaccination with PPSV should be administered after 5 yrs to children with anatomic or functional asplenia (including sickle cell disease) or an immunocompromising condition.

6c. Medical conditions for which PPSV23 is indicated in children aged 2 yrs and older and for which use of PCV13 is indicated in children aged 24 through 71 mos:
- Immunocompetent children with chronic heart disease (particularly cyanotic congenital heart disease and cardiac failure); chronic lung disease (including asthma if treated with high-dose oral corticosteroid therapy), diabetes mellitus; cerebrospinal fluid leaks; or cochlear implant.
- Children with anatomic or functional asplenia (including sickle cell disease and other hemoglobinopathies, congenital or acquired asplenia, or splenic dysfunction);
- Children with immunocompromising conditions: HIV infection, chronic renal failure and nephrotic syndrome, diseases associated with treatment with immunosuppressive drugs or radiation therapy, including malignant neoplasms, leukemias, lymphomas and Hodgkin disease; or solid organ transplantation, congenital immunodeficiency.

7. Inactivated poliovirus vaccine (IPV). (Minimum age: 6 wks)

Routine vaccination:
- Administer a series of IPV at ages 2, 4, 6–18 mos, with a booster at age 4–6 yrs. The final dose in the series should be administered on or after the fourth birthday and at least 6 mos after the previous dose.

Catch-up vaccination:
- In the first 6 mos of life, minimum age and minimum intervals are only recommended if the person is at risk for imminent exposure to circulating poliovirus (i.e., travel to a polio-endemic region or during an outbreak).
- If 4 or more doses are administered before age 4 yrs, an additional dose should be administered at age 4 through 6 yrs.
- A fourth dose is not necessary if the third dose was administered at age 4 yrs or older and at least 6 mos after the previous dose.
- If both OPV and IPV were administered as part of a series, a total of 4 doses should be administered, regardless of the child's current age.
- IPV is not routinely recommended for U.S. residents aged 18 yrs or older.
- For other catch-up issues, see Figure 2.

8. Influenza vaccines. (Minimum age: 6 mos for inactivated influenza vaccine [IIV]; 2 yrs for live, attenuated influenza vaccine [LAIV])

Routine vaccination:
- Administer influenza vaccine annually to all children beginning at age 6 mos. For most healthy, nonpregnant persons aged 2 through 49 yrs, either LAIV or IIV may be used. However, LAIV should NOT be administered to some persons, including 1) those with asthma, 2) children 2 through 4 yrs who had wheezing in the past 12 mos, or 3) those who have any other underlying medical conditions that predispose them to influenza complications. For all other contraindications to use of LAIV see MMWR 2010; 59 (No. RR-8), available at **http://www.cdc.gov/mmwr/pdf/rr/rr5908.pdf**.
- Administer 1 dose to persons aged 9 yrs and older.

For children aged 6 mos through 8 yrs:
- For the 2012–13 season, administer 2 doses (separated by at least 4 wks) to children who are receiving influenza vaccine for the first time. For additional guidance, follow dosing guidelines in the 2012 ACIP influenza vaccine recommendations, MMWR 2012; 61: 613–618, available at **http://www.cdc.gov/mmwr/pdf/wk/mm6132.pdf**.
- For the 2013–14 season, follow dosing guidelines in the 2013 ACIP influenza vaccine recommendations.

9. Measles, mumps, and rubella (MMR) vaccine. (Minimum age: 12 mos for routine vaccination)

Routine vaccination:
- Administer the first dose of MMR vaccine at age 12 through 15 mos, and the second dose at age 4 through 6 yrs. The second dose may be administered before age 4 yrs, provided at least 4 wks have elapsed since the first dose.
- Administer 1 dose of MMR vaccine to infants aged 6 through 11 mos before departure from the United States for international travel. These children should be revaccinated with 2 doses of MMR vaccine, the first at age 12 through 15 mos (12 mos if the child remains in an area where disease risk is high), and the second dose at least 4 wks later.
- Administer 2 doses of MMR vaccine to children aged 12 mos and older, before departure from the United States for international travel. The first dose should be administered on or after age 12 mos and the second dose at least 4 wks later.

Catch-up vaccination:
- Ensure that all school-aged children and adolescents have had 2 doses of MMR vaccine; the minimum interval between the 2 doses is 4 wks.

10. Varicella (VAR) vaccine. (Minimum age: 12 mos)

Routine vaccination:
- Administer the first dose of VAR vaccine at age 12 through 15 mos, and the second dose at age 4 through 6 yrs. The second dose may be administered before age 4 yrs, provided at least 3 mos have elapsed since the first dose. If the second dose was administered at least 4 wks after the first dose, it can be accepted as valid.

Catch-up vaccination:
- Ensure that all persons aged 7 through 18 yrs without evidence of immunity (see MMWR 2007;56 [No. RR-4], available at **http://www.cdc.gov/mmwr/pdf/rr/rr5604.pdf**) have 2 doses of varicella vaccine. For children aged 7 through 12 yrs the recommended minimum interval between doses is 3 mos (if the second dose was administered at least 4 wks after the first dose, it can be accepted as valid); for persons aged 13 yrs and older, the minimum interval between doses is 4 wks.

11. Hepatitis A vaccine (HepA). (Minimum age: 12 mos)

Routine vaccination:
- Initiate the 2-dose HepA vaccine series for children aged 12 through 23 mos; separate the 2 doses by 6 to 18 mos.
- Children who have received 1 dose of HepA vaccine before age 24 mos, should receive a second dose 6 to 18 mos after the first dose.
- For any person aged 2 yrs and older who has not already received the HepA vaccine series, 2 doses of HepA vaccine separated by 6 to 18 mos may be administered if immunity against hepatitis A virus infection is desired.

Catch-up vaccination:
- The minimum interval between the two doses is 6 mos.

Special populations:
- Administer 2 doses of Hep A vaccine at least 6 mos apart to previously unvaccinated persons who live in areas where vaccination programs target older children, or who are at increased risk for infection.

12. Human papillomavirus (HPV) vaccines. (HPV4 [Gardasil] and HPV2 [Cervarix]). (Minimum age: 9 yrs)

Routine vaccination:
- Administer a 3-dose series of HPV vaccine on a schedule of 0, 1-2, and 6 mos to all adolescents aged 11-12 yrs. Either HPV4 or HPV2 may be used for females, and only HPV4 may be used for males.
- The vaccine series can be started beginning at age 9 yrs.
- Administer the second dose 1 to 2 mos after the **first** dose and the third dose 6 mos after the **first** dose (at least 24 wks after the first dose).

Catch-up vaccination:
- Administer the vaccine series to females (either HPV2 or HPV4) and males (HPV4) at age 13 through 18 yrs if not previously vaccinated.
- Use recommended routine dosing intervals (see above) for vaccine series catch-up.

13. Meningococcal conjugate vaccines (MCV). (Minimum age: 6 wks for Hib-MenCY, 9 mos for Menactra [MCV4-D], 2 yrs for Menveo [MCV4-CRM]).

Routine vaccination:
- Administer MCV4 vaccine at age 11–12 yrs, with a booster dose at age 16 yrs.
- Adolescents aged 11 through 18 yrs with human immunodeficiency virus (HIV) infection should receive a 2-dose primary series of MCV4, with at least 8 wks between doses. See MMWR 2011; 60:1018–1019 available at: **http://www.cdc.gov/mmwr/pdf/wk/mm6030.pdf**.
- For children aged 9 mos through 10 yrs with high-risk conditions, see below.

Catch-up vaccination:
- Administer MCV4 vaccine at age 13 through 18 yrs if not previously vaccinated.
- If the first dose is administered at age 13 through 15 yrs, a booster dose should be administered at age 16 through 18 yrs with a minimum interval of at least 8 wks between doses.
- If the first dose is administered at age 16 yrs or older, a booster dose is not needed.
- For other catch-up issues, see Figure 2.

Vaccination of persons with high-risk conditions:
- For children younger than 19 mos of age with anatomic or functional asplenia (including sickle cell disease), administer an infant series of Hib-MenCY at 2, 4, 6, and 12-15 mos.
- For children aged 2 through 18 mos with persistent complement component deficiency, administer either an infant series of Hib-MenCY at 2, 4, 6, and 12 through 15 mos or a 2-dose primary series of MCV4-D starting at 9 mos, with at least 8 wks between doses. For children aged 19 through 23 mos with persistent complement component deficiency who have not received a complete series of Hib-MenCY or MCV4-D, administer 2 primary doses of MCV4-D at least 8 wks apart.
- For children aged 24 mos and older with persistent complement component deficiency or anatomic or functional asplenia (including sickle cell disease), who have not received a complete series of Hib-MenCY or MCV4-D, administer 2 primary doses of either MCV4-D or MCV4-CRM. If MCV4-D (Menactra) is administered to a child with asplenia (including sickle cell disease), do not administer MCV4-D until 2 yrs of age and at least 4 wks after the completion of all PCV13 doses. See MMWR 2011;60:1391–2, available at **http://www.cdc.gov/mmwr/pdf/wk/mm6040.pdf**.
- For children aged 9 mos and older who are residents of or travelers to countries in the African meningitis belt or to the Hajj, administer an age appropriate formulation and series of MCV4 for protection against serogroups A and W-135. Prior receipt of Hib-MenCY is not sufficient for children traveling to the meningitis belt or the Hajj. See MMWR 2011;60:1391–2, available at **http://www.cdc.gov/mmwr/pdf/wk/mm6040.pdf**.
- For children who are present during outbreaks caused by a vaccine serogroup, administer or complete an age and formulation-appropriate series of Hib-MenCY or MCV4.
- For booster doses among persons with high-risk conditions refer to **http://www.cdc.gov/vaccines/pubs/acip-list.htm#mening**.

This schedule is approved by the Advisory Committee on Immunization Practices (**http://www.cdc.gov/vaccines/acip/index.html**), the American Academy of Pediatrics (**http://www.aap.org**), the American Academy of Family Physicians (**http://www.aafp.org**), and the American College of Obstetricians and Gynecologists (**http://www.acog.org**).

Appendix N

PARENTERAL FLUID ADMINISTRATION

Replacing fluids in the body is based on body fluid needs. Water comprises approximately 60% of the adult body. Approximately 40% is intracellular fluid and 20% is extracellular fluid, of which 15% is interstitial (tissues) and 5% is intravascular. The walls separating these compartments are porous, allowing water to move freely between them. Small particles such as sodium and chloride can pass through the walls, but larger molecules such as proteins and starches usually are unable to pass through the walls.

Hydrostatic and osmotic pressures are forces that move water and regulate the body's water. Intravenous fluid manipulates these two pressures. Hydrostatic pressure reflects the weight and volume of water. The greater the volume, the higher the blood pressure.

Effects of Osmotic Pressure: *Osmosis* is the diffusion of water across a semipermeable membrane from an area of high concentration to an area of low concentration (water moves into the compartment of higher concentration of particles, or solute). This is similar to the action of a sponge soaking up water. This pull is referred to as *osmotic pressure.* It is the number of particles in each compartment that keeps water where it is supposed to be. By administering fluids with more (or fewer) particles than blood plasma, fluid is pulled into the compartment where it is needed the most.

How do we know where the water is needed? To assess water balance, measure the *osmolality* of blood plasma (number of particles [osmoles] in a kilogram of fluid). *Osmolarity* is the number of particles in a liter of fluid. Normal serum osmolality is approximately 300 milliosmoles (mOsm) per liter.

Crystalloids are made of substances that form crystals (e.g., sodium chloride) and are small, so easy movement between compartments is possible. Crystalloids are categorized by their tonicity (a synonym for osmolality). An isotonic solution has the same number of particles (osmolality) as plasma and will not promote a shift of fluids into or out of cells. Examples of isotonic crystalloid solutions are 0.9% sodium chloride and lactated Ringer's solution. Dextrose 5% in water is another isotonic crystalloid. However, it is quickly metabolized, and the fluid quickly becomes hypotonic. Hypotonic solutions (e.g., D_5W, 0.45% sodium chloride) are a good source of free water, causing a shift out of the vascular bed and into cells by way of osmosis. Hypotonic solutions are given to correct cellular dehydration and hypernatremia. Hypertonic solutions have more particles than body water and pull water back into the circulation, which can shrink cells.

Sodium Chloride

Uses

- Extracellular fluid replacement when chloride loss is greater than or equal to sodium loss
- Treatment of metabolic alkalosis in the presence of fluid loss; chloride ions cause a compensatory decrease of bicarbonate ions
- Sodium depletion, extracellular fluid volume deficit with sodium deficit
- Initiation and termination of blood transfusion, preventing hemolysis of RBCs (occurs with dextrose in water solutions)

Side Effects/Abnormalities

- Hypernatremia
- **Acidosis:** 0.9% sodium chloride contains one-third more chloride ions than is present in extracellular fluid; excess chloride ions cause loss of bicarbonate, resulting in acidosis

- **Hypokalemia:** Increased potassium excretion at the same time extracellular fluid is increasing, which further decreases potassium concentration in extracellular fluid
- Circulatory overload

Dextrose (Glucose)

Effects

- Provides calories for essential energy
- Improves hepatic function because it is converted into glycogen
- Spares body protein, preventing unnecessary breakdown of protein tissue
- Prevents ketosis
- Stored in the liver as glycogen, causing a shift of potassium from extracellular to intracellular fluid compartment

Uses

- Dehydration
- Hyponatremia
- Hyperkalemia
- Vehicle of drug delivery and nutrition

Note: Once infused, dextrose is rapidly metabolized to water and carbon dioxide, becoming hypotonic rather than isotonic.

Side Effects/Abnormalities

- Dehydration: Osmotic diuresis occurs if dextrose is given faster than the pt's ability to metabolize it
- Hypokalemia (see Effects)
- Hyperinsulinism due to rapid infusion of hypertonic solution
- Water intoxication due to an imbalance based on increase in extracellular fluid volume from water alone

Selected Parenteral Fluids

Solution	Comments
Dextrose 5% in water (D_5W)	Supplies approximately 170 cal/L and free water to aid in renal excretion of solutes Avoid excessive volumes in pts with increased antidiuretic hormone activity or to replace fluids in hypovolemic pts
0.9% Sodium chloride (0.9% NaCl)	Isotonic fluid commonly used to expand extracellular fluid in presence of hypovolemia Can be used to treat mild metabolic alkalosis
0.45% Sodium chloride (0.45% NaCl)	Hypotonic solution that provides sodium, chloride, and free water; sodium and chloride allow kidneys to select and retain needed amounts Free water is desirable as aid to kidneys in elimination of solutes
3% Sodium chloride	Used only to treat severe hyponatremia
Lactated Ringer's solution	Isotonic solution that contains sodium, potassium, calcium, and chloride in approximately the same concentrations as found in plasma Used to treat hypovolemia, burns, and fluid loss as bile or diarrhea

TAKING THE MEDICATION HISTORY

Tomando la Historia Médica
(Toh-mahn-doh lah Ees-toh-ree-ah Meh-dee-kah)

- Are you allergic to any medications? (If yes:)
  ¿Es alérgico a algún medicamento? (sí:)
  (Ehs ah-lehr-hee-koh ah ahl-goon meh-dee-kah-mehn-toh) (see:)

- —Which medications are you allergic to?
  ¿A cuál medicamento es alérgico?
  (ah koo-ahl meh-dee-kah-mehn-toh ehs ah-lehr-hee-koh)

- Do you take any over-the-counter, prescription, or herbal medications?
  ¿Toma medicamentos sin receta, con receta, o naturistas (hierbas medicinales)?
  (Toh-mah meh-dee-kah-mehn-tohs seen reh-seh-tah, kohn reh-seh-tah, oh nah-too-rees-tahs [ee-ehr-bahs meh-dee-see-nah-lehs])

  —How often do you take each medication?
  ¿Con qué frequencia toma cada medicamento?
  (Kohn keh freh-koo-ehn-see-ah toh-mah kah-dah meh-dee-kah-mehn-toh)

  Once a day?
  ¿Una vez por día; diariamente?
  (Oo-nah behs pohr dee-ah; dee-ah-ree-ah-mehn-teh)

  Twice a day? ¿Dos veces por día?
  (dohs beh-sehs pohr dee-ah)

  Three times a day? ¿Tres veces por día?
  (Trehs beh-sehs pohr dee-ah)

  Four times a day? ¿Cuatro veces por día?
  (Koo-ah-troh beh-sehs pohr-dee-ah)

  —Does the medication make you feel better?
  ¿Le hace sentir mejor el medicamento?
  (Leh ah-seh sehn-teer meh-hohr ehl meh-dee-kah-mehn-toh)

  —Does the medication make you feel the same or unchanged?
  ¿Le hace sentir igual o sin cambio el medicamento?
  (Leh ah-seh sehn-teer ee-goo-ahl oh seen kam-bee-oh ehl meh-dee-kah-mehn-toh)

  —Does the medication make you feel worse?
  ¿Se siente peor con el medicamento?
  (Seh see-ehn teh peh-ohr kohn ehl meh-dee-kah-mehn-toh)

PREPARING FOR TREATMENT WITH MEDICATION THERAPY

Preparando para un régimen de medicamento
(Preh-pah-rahn-doh pah-rah oon reh-hee-mehn deh meh-dee-kah-mehn-toh)

MEDICATION PURPOSE
PROPÓSITO DEL MEDICAMENTO

(Proh-poh-see-toh dehl meh-dee-kah-mehn-toh)

This medication will help relieve:
Este medicamento le ayudará a aliviar:
(Ehs-teh meh-dee-kah-mehn-toh leh ah-yoo-dah-rah ah ah-lee-bee-ahr)

abdominal gas
gases intestinales
(gah-sehs een-tehs-tee-nah-lehs)

abdominal pain
dolor intestinal; dolor en el abdomen
(doh-lohr een-tehs-tee-nahl; doh-lohr ehn ehl ahb-doh-mehn)

chest congestion
congestión del pecho
(kohn-hehs-tee-ohn dehl peh-choh)

chest pain
dolor del pecho
(doh-lohr dehl peh-choh)

constipation
constipación; estrenimiento
(kohns-tee-pah-see-ohn; ehs-treh-nyee-mee-ehn-toh)

cough
tos
(tohs)

headache
dolor de cabeza
(doh-lohr deh kah-beh-sah)

muscle aches and pains
achaques musculares y dolores
(ah-chah-kehs moos-koo-lah-rehs ee doh-loh-rehs)

pain
dolor
(doh-lohr)

This medication will prevent:
Este medicamento prevendrá:
(Ehs-teh meh-dee-kah-mehn-toh preh-behn-drah)

blood clots
coágulos de sangre
(koh-ah-goo-lohs deh sahn-greh)

constipation
constipación; estreñimiento
(kohns-tee-pah-see-ohn; ehs-treh-nyee-mee-ehn-toh)

contraception
contracepción; embarazo
(kohn-trah-sehp-see-ohn; ehm-bah-rah-soh)

diarrhea
diarrea
(dee-ah-reh-ah)

infection
infección
(een-fehk-see-ohn)

seizures
convulciónes; ataque epiléptico
(kohn-bool-see-ohn-ehs; ah-tah-keh eh-pee-lehp-tee-koh)

shortness of breath
respiración corta; falta de aliento
(rehs-pee-rah-see-ohn kohr-tah; fahl-tah deh ah-lee-ehn-toh)

wheezing
el resollar; la respiración ruidosa, sibilante
(ehl reh-soh-yahr; lah rehs-pee-rah-see-ohn roo-ee-doh-sah, see-bee-lahn-teh)

This medication will increase your:
Este medicamento aumentará su:
(Ehs-teh meh-dee-kah-mehn-toh ah-oo-mehn-tah-rah soo):

ability to fight infections
habilidad a combatir infecciones
(ah-bee-lee-dahd ah kohm-bah-teer een-fehk-see-oh-nehs)

appetite
apetito
(ah-peh-tee-toh)

blood iron level
nivel de hierro en la sangre
(nee-behl deh ee-eh-roh ehn lah sahn-greh)

blood sugar
azúcar en la sangre
(ah-soo-kahr ehn lah sahn-greh)

heart rate
pulso; latido
(pool-soh; lah-tee-doh)

red blood cell count
cuenta de células rojas
(koo-ehn-tah deh seh-loo-lahs roh-hahs)

thyroid hormone levels
niveles de hormona tiroide
(nee-beh-lehs deh ohr-moh-nah tee-roh-ee-deh)

urine volume
volumen de orina
(boh-loo-mehn deh oh-ree-nah)

This medication will decrease your:
Este medicamento reducirá su:
(Ehs-teh meh-dee-kah-mehn-toh reh-doo-see-rah soo)

anxiety
ansiedad
(ahn-see-eh-dahd)

blood cholesterol level
nivel de colesterol en la sangre
(nee-behl deh koh-lehs-teh-rohl ehn lah sahn-greh)

blood lipid level
nivel de lípido en la sangre
(nee-behl deh lee-pee-doh ehn lah sahn-greh)

blood pressure
presión arterial; de sangre
(preh-see-ohn ahr-teh-ree-ahl; deh sahn-greh)

blood sugar level
nivel de azúcar en la sangre
(nee-behl deh ah-soo-kahr ehn lah sahn-greh)

heart rate
pulso; latido
(pool-soh; lah-tee-doh)

stomach acid
ácido en el estómago

Pageburst Integrated Resources

As part of your Pageburst Digital Book, you can access the following Integrated Resources:

- **Conversion Table**
- **Less Frequently Used Drugs**
- **Non-Crushable Drugs**
- **Orphan Drugs**
- **QT-Interval Prolongation and Medication Safety**
- **Signs and Symptoms of Electrolyte Imbalance**
- **Techniques of Medication Administration**

COMMONLY USED ABBREVIATIONS

ABG(s)—arterial blood gas(es)
ACE—angiotensin-converting enzyme
ADHD—attention-deficit hyperactivity disorder
AIDS—acquired immunodeficiency syndrome
ALT—alanine aminotransferase, serum
ANC—absolute neutrophil count
aPTT—activated partial thromboplastin time
AST—aspartate aminotransferase, serum
AV—atrioventricular
bid—twice per day
B/P—blood pressure
BSA—body surface area
BUN—blood urea nitrogen
CBC—complete blood count
Ccr—creatinine clearance
CHF—congestive heart failure
CNS—central nervous system
CO—cardiac output
COPD—chronic obstructive pulmonary disease
CPK—creatine phosphokinase
CSF—cerebrospinal fluid
CT—computed tomography
CVA—cerebrovascular accident
D_5W—dextrose 5% in water
dl—deciliter
DNA—deoxyribonucleic acid
EEG—electroencephalogram
EKG—electrocardiogram
esp.—especially
g—gram
GGT—gamma glutamyl transpeptidase
GI—gastrointestinal
GU—genitourinary
H_2—histamine
Hct—hematocrit
HDL—high-density lipoprotein
Hgb—hemoglobin
HIV—human immunodeficiency virus
HMG-CoA—3-hydroxy-3-methylglutaryl-coenzyme A (HMG-CoA) reductase inhibitors (statins)
hr/hrs—hour/hours
HTN—hypertension
I&O—intake and output
ICP—intracranial pressure
ID—intradermal
IgA—immunoglobulin A
IM—intramuscular
IOP—intraocular pressure
IV—intravenous
K—potassium
kg—kilogram
LDH—lactate dehydrogenase
LDL—low-density lipoprotein
LOC—level of consciousness
MAC—*Mycobacterium avium* complex
MAOI—monoamine oxidase inhibitor
mcg—microgram
mEq—milliequivalent
mg—milligram
MI—myocardial infarction
min—minute(s)
mo/mos—month/months
N/A—not applicable
Na—sodium
NaCl—sodium chloride
NG—nasogastric
NSAID(s)—nonsteroidal anti-inflammatory drug(s)
OD—right eye
OS—left eye
OTC—over the counter
OU—both eyes
PCP—*Pneumocystis jiroveci* pneumonia
PO—orally, by mouth
prn—as needed
PSA—prostate-specific antigen
pt/pts—patient/patients
PT—prothrombin time
PTCA—percutaneous transluminal coronary angiography
q—every
qid—four times daily
RBC—red blood cell count
REM—rapid eye movement
RNA—ribonucleic acid
SA—sinoatrial node
sec—second(s)
SSRI—selective serotonin reuptake inhibitor
tbsp—tablespoon
tid—three times daily
TNF—tumor necrosis factor
tsp—teaspoon
UTI—urinary tract infection
VLDL—very-low-density lipoprotein
WBC—white blood cell count
wk/wks—week/weeks
yr/yrs—year/years

DANGEROUS ABBREVIATION LIST

The 2004 National Patient Safety Goals of The Joint Commission (TJC) requires the elimination of dangerous abbreviations in an effort to promote patient safety by reducing medication errors. To achieve this goal, TJC developed a list of abbreviations, acronyms, and symbols that health care organizations must include in their "do not use" list. An abbreviation on the "do not use" list should not be used in any of its forms—uppercase or lowercase, with or without periods. For example, if Q.D. is on the organization's list, health care organizations cannot use QD or qd because any of those variations are confusing and can be misinterpreted.

Abbreviation	Potential Problem	Preferred Term
U (for unit)	Mistaken as zero, four, or cc	Write "unit"
IU (for international unit)	Mistaken as IV (intravenous) or 10 (ten)	Write "international unit"
Q.D., QD, q.d., qd (daily)	Mistaken for each other	Write "daily"
Q.O.D., QOD, q.o.d., qod (every other day)	Period after "Q" mistaken for "I" and the "O" mistaken for "I"	Write "every other day"
Trailing zero (e.g., 5.0 mg); lack of leading zero (e.g., .5 mg)	Decimal point is missed	Always write a zero before a decimal point (0.5 mg) and never write a zero by itself after a decimal point (5 mg)
MS, MSO_4, $MgSO_4$	Confused for one another; can mean morphine sulfate or magnesium sulfate	Write "morphine sulfate" or "magnesium sulfate"

In addition, TJC requires an organization to identify and apply at least another three "do not use" abbreviations, acronyms, or symbols of its own choosing. The following list was developed by TJC for organizations to consider including on their list.

μg (for micrograms)	Mistaken for mg (milligrams) resulting in one thousand-fold-dosing overdose	Write "mcg"
H.S. (for half-strength or Latin abbreviation for bedtime)	Mistaken for either half-strength or hour of sleep (at bedtime); q.H.S. mistaken for every hour; all can result in dosing error	Write "half-strength" or "at bedtime"
T.I.W. (for three times per week)	Mistaken for three times per day or twice weekly, resulting in an overdose	Write "3 times weekly" or "three times weekly"
S.C. or S.Q. (for subcutaneous)	Mistaken as SL for sublingual, or "5 every"	Write "Sub-Q," "subQ," or "subcutaneously"
D/C (for discharge)	Interpreted as discontinue whatever medications follow (typically discharge meds)	Write "discharge"
c.c. (for cubic centimeter)	Mistaken for U (units) when poorly written	Write "ml" for milliliters
A.S., A.D., A.U. (Latin abbreviation for left, right, or both ears)	Mistaken for OS, OD, OU, etc.	Write "left ear," "right ear," or "both ears"
> (greater than) < (less than)	Misinterpreted as number 7 or letter "L"	Write "greater than" or "less than"
Abbreviations for drug names	Misinterpreted due to similar abbreviations for multiple drugs	Write drug names in full
