Lifespan Considerations in each monograph note factors to be considered for geriatric, pediatric, pregnant, or nursing populations. Appendix H provides additional resources.

Black Box Alerts advise about the increased risks of a particular drug.

morphine

HIGH ALERT

mor-feen
(Astramorph PF, Avinza, DepoDur, Duramorph PF, Infumorph, Kadian, M-Eslon, MS Contin, MSIR, Oramorph SR, Roxanol)

BLACK BOX ALERT Be alert for signs of abuse, misuse, diversion. ***Epidural:*** Monitor for delayed sedation. ***Sustained-release:*** Do not crush or chew. ***MS Contin:*** Use only in opioid-tolerant pts requiring over 400 mg/day. ***Kadian:*** Use only in opioid-tolerant pts. ***Avinza:*** Alcohol disrupts extended-release timing. ***Duramorph PF:*** Risk of severe and/or sustained cardiopulmonary depression.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Narcotic agonist. **CLINICAL:** Opiate analgesic **(Schedule II)** (see p. 142C).

M

ACTION

Binds with opioid receptors within CNS. **Therapeutic Effect:** Alters pain perception, emotional response to pain.

PHARMACOKINETICS

Variably absorbed from GI tract. Readily absorbed after IM, subcutaneous administration. Protein binding: 20%–35%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 2–4 hrs (increased in hepatic disease).

USES

Relief of moderate to severe, acute, or chronic pain; analgesia during labor. Drug of choice for pain due to MI, dyspnea from pulmonary edema not resulting from chemical respiratory irritant. **DepoDur:** Epidural (lumbar) single dose management of surgical pain.

PRECAUTIONS

Contraindications: Acute or severe asthma, GI obstruction, paralytic ileus, severe hepatic/renal impairment, severe respiratory depression. **Cautions:** Biliary tract disease, pancreatitis, Addison's disease, hypothyroidism, urethral stricture, prostatic hyperplasia, debilitated pts, those with CNS depression, toxic psychosis, seizure disorders, alcoholism.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C (D if used for prolonged periods or at high dosages at term). Children:** Paradoxical excitement may occur; those younger than 2 yrs are more susceptible to respiratory depressant effects. **Elderly:** Paradoxical excitement may occur.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS effects, respiratory depression, hypotension. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection, Liposomal Suspension (DepoDur): 10 mg/ml. **Injection, Solution:** 2 mg/ml, 4 mg/ml, 5 mg/ml, 10 mg/ml, 15 mg/ml, 25 mg/ml, 50 mg/ml. **Injection, Solution (Epidural, Intrathecal, IV Infusion) (Astramorph PF, Duramorph PF):** 0.5 mg/ml, 1 mg/ml.

Capsules, Extended-Release (Avinza): 30 mg, 45 mg, 60 mg, 75 mg, 90 mg, 120 mg. **Capsules, Sustained-Release (Kadian):** 20 mg, 30 mg, 50 mg, 60 mg, 80 mg, 100 mg, 200 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • May give undiluted. • For IV injection, may dilute 2.5–15 mg morphine in 4–5 ml Sterile Water for Injection. • For continuous IV infusion, dilute to concentration of 0.1–1 mg/ml in D_5W and give through controlled infusion device. **Rate of administration** • Always administer very slowly. Rapid IV increases risk of severe adverse reactions (apnea, chest wall

underlined – top prescribed drug

Interactions identify potential herbal, drug, and food interactions with a particular drug.

Uses section in each monograph notes the standard and off-label uses for a particular drug.

Top prescribed drugs are underlined.

IV Incompatibilities/ Compatibilities present important information for IV drugs.

rigidity, peripheral circulatory collapse, cardiac arrest, anaphylactoid effects).
Storage • Store at room temperature.

Epidural, Liposomal
• May give either diluted or undiluted. • Do not use an in-line filter. • Store solution in refrigerator; do not freeze. May store at room temperature for 7 days. • Following withdrawal from vial, use within 4 hrs. • Gently invert vial to resuspend drug; avoid aggressive agitation.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), doxorubicin (Doxil), lipids, phenytoin (Dilantin), thiopental.

IV COMPATIBILITIES

Amiodarone (Cordarone), atropine, bumetanide (Bumex), bupivacaine (Marcaine, Sensorcaine), diltiazem (Cardizem), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), glycopyrrolate (Robinul), heparin, hydroxyzine (Vistaril), lidocaine, lorazepam (Ativan), magnesium, midazolam (Versed), milrinone (Primacor), nitroglycerin, potassium, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage should be titrated to desired effect.

Analgesia

PO (IMMEDIATE-RELEASE): ADULTS, ELDERLY: 10–30 mg q3–4h as needed. **CHILDREN:** 0.15–0.3 mg/kg q3–4h as needed.

PO (EXTENDED-RELEASE [AVINZA]): ADULTS, ELDERLY: Dosage requirement should be established using prompt-release formulations and is based on total daily dose. Avinza is given once a day only.

PO (EXTENDED-RELEASE [KADIAN]): ADULTS, ELDERLY: Dosage requirement should be established using prompt-release formulations and is based on total daily dose. Dose is given once a day or divided and given q12h.

Patient-Controlled Analgesia (PCA)

IV: ADULTS, ELDERLY: Loading dose: 5–10 mg. **Intermittent bolus:** 0.5–3 mg. **Lockout interval:** 5–12 min. **Continuous infusion:** 1–10 mg/hr. **4-hr limit:** 20–30 mg.

SIDE EFFECTS

Frequent: Sedation, decreased B/P (including orthostatic hypotension), diaphoresis, facial flushing, constipation, dizziness, drowsiness, nausea, vomiting. **Occasional:** Allergic reaction (rash, pruritus), dyspnea, confusion, palpitations, tremors, urinary retention, abdominal cramps, vision changes, dry mouth, headache, decreased appetite, pain/burning at injection site. **Rare:** Paralytic ileus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Tolerance to analgesic effect, physical dependence may occur with repeated use.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pt should be in recumbent position before drug is given by parenteral route. Assess onset, type, location, duration of pain.

INTERVENTION/EVALUATION

Monitor vital signs 5–10 min after IV administration, 15–30 min after subcutaneous, IM. Be alert for decreased respirations, B/P. Check for adequate voiding. Monitor daily pattern of bowel activity and stool consistency. Avoid constipation.

PATIENT/FAMILY TEACHING

• Discomfort may occur with injection. • Change positions slowly to avoid orthostatic hypotension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, CNS depressants.

M

Side Effects section in each drug monograph specifies the frequency of particular side effects.

Adverse Reactions highlight the particularly dangerous side effects.

♣ Canadian trade name Non-Crushable Drug HIGH ALERT High Alert drug

High Alert drugs are shaded in purple for easy identification.

NOTICES

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods, they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

With respect to any drug or pharmaceutical products identified, readers are advised to check the most current information provided (i) on procedures featured or (ii) by the manufacturer of each product to be administered, to verify the recommended dose or formula, the method and duration of administration, and contraindications. It is the responsibility of practitioners, relying on their own experience and knowledge of their patients, to make diagnoses, to determine dosages and the best treatment for each individual patient, and to take all appropriate safety precautions.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

GENERAL INDEX 1331

I dedicate this work to my daughter Lauren, a true friend, for her unconditional love; my daughter Kathryn, always supportive, always encouraging; and my son Keith, a source of great pride to us all. This is also dedicated to my sons-in-law, Jim and Andy, who have added so very much to my family, and to my grandchildren, Paige Olivia, Logan James, Ryan James, and Dylan Boyd. I couldn't love you more.

Barbara B. Hodgson, RN, OCN

To all health care professionals, who in the expectation of little glory or material reward, dedicate themselves to the art and science of healing.

Robert J. Kizior, BS, RPh

AUTHOR BIOGRAPHIES

Barbara B. Hodgson, RN, OCN

Born and raised in Michigan, Barbara was married and raising a young family in Chicago when she decided to fulfill a lifelong dream and become a nurse. After graduation, she started her own business as author and publisher of **Medcards, The Total Medication Reference Guide,** the first of its kind. These drug cards were designed to assist nursing students in understanding drug information to give knowledgeable care to their patients.

In 1981, she met co-author Robert (Bob) Kizior, who was teaching a pharmacology class. After class, Barbara approached him and asked if he would be interested in working on **Medcards** with her. He agreed, and together they became so successful that a few years later Barbara was able to fulfill another dream and move to Florida.

By 1987, Barbara was approached by W.B. Saunders and asked to author the **Saunders Nursing Drug Handbook.** Since then, Barbara and Bob have worked together on this handbook and on two more drug resources, the **Saunders Electronic Nursing Drug Cards** and the **Saunders Drug Handbook for Health Professions.**

Barbara specialized in oncology at the Cancer Institute, St. Joseph's Hospital, in Tampa, Florida, and at Morton Plant Mease Northbay Hospital in New Port Richey, Florida. Barbara's daughter Lauren is a nurse manager, and her daughter Kathryn, her son Keith, and her son-in-law Jim are all nurses, working in their respective fields of patient care.

Barbara's favorite interests are spending time with her very busy, tight-knit family and, when she has a rare moment, getting her hands full of dirt working in her garden.

Robert (Bob) J. Kizior, BS, RPh

Bob graduated from the University of Illinois School of Pharmacy and is licensed to practice in the state of Illinois. He has worked as a hospital pharmacist for more than 40 years at Alexian Brothers Medical Center in Elk Grove Village, Illinois—a suburb of Chicago. Bob is the Pharmacy Surgery Coordinator for the Department of Pharmacy, where he participates in educational programs for pharmacists, nurses, physicians, and patients. He plays a major role in coordinating pharmacy services in the OR satellite. Bob is a former adjunct faculty member at William Rainey Harper Community College in Palatine, Illinois. It was there that Bob first met Barbara and commenced their long-standing professional association.

An avid fan of Big Ten college athletics, Bob also has eclectic tastes in music that range from classical, big band, rock 'n' roll, and jazz to country and western. Bob spends much of his free time reviewing the professional literature to stay current on new drug information.

PREFACE

Nurses are faced with the ever-challenging responsibility of ensuring safe and effective drug therapy for their patients. Not surprisingly, the greatest challenge for nurses is keeping up with the overwhelming amount of new drug information, including the latest FDA-approved drugs and changes to already approved drugs, such as new uses, dosage forms, warnings, and much more. Nurses must integrate this information into their patient care quickly and in an informed manner.

Saunders Nursing Drug Handbook 2014 is designed as an easy-to-use source of current drug information to help the busy nurse meet these challenges. What separates this book from others is that it guides the nurse through patient care to better practice and better care.

This handbook contains the following:

1. **An IV compatibility chart.** This handy chart is bound into the handbook to prevent accidental loss.
2. **The Classifications section.** The action and uses for some of the most common clinical and pharmacotherapeutic classes are presented. Unique to this handbook, each class provides an at-a-glance table that compares all the generic drugs within the classification according to product availability, dosages, side effects, and other characteristics. Its blue half-page color tab ensures you can't miss it!
3. **An alphabetical listing of drug entries by generic name.** Blue letter thumb tabs help you page through this section quickly. Information on medications that contain a Black Box Alert is an added feature of the drug entries. This alert identifies those medications for which the FDA has issued a warning that the drugs may cause serious adverse effects. Tall Man lettering, with emphasis on certain syllables to avoid confusing similar sounding/looking medications, is shown in slim blue capitalized letters (e.g., *aceta**ZOLAMIDE**). High Alert drugs with a blue icon HIGH ALERT are considered dangerous by The Joint Commission and the Institute for Safe Medication Practices (ISMP) because if they are administered incorrectly, they may cause life-threatening or permanent harm to the patient. The entire High Alert generic drug entry sits on a blue-shaded background so that it's easy to spot! To make scanning pages easier, each new entry begins with a shaded box containing the generic name, pronunciation, trade name(s), fixed-combination(s), and classification(s).
4. **Herbal entries.** In this edition, each herb is cross-referenced to Herbals: Common Natural Medicines (Appendix G) so that you have the most comprehensive view of herbal therapies related to patient care.
5. **A comprehensive reference section.** Appendixes include vital information on calculation of doses; controlled drugs; chronic wound care; drugs of abuse; equianalgesic dosing; FDA pregnancy categories; herbals: common natural medicines; lifespan, cultural aspects, and pharmacogenomics of drug therapy; normal laboratory values; cytochrome P450 enzymes; poison antidotes; preventing medication errors; recommended childhood and adult immunizations; parenteral fluid administration; and Spanish phrases often used in clinical settings.

6. **Drugs by Disorder.** You'll find Drugs by Disorder in the front of the book for easy reference. It lists common disorders and the drugs most often used for treatment.
7. **The index.** The comprehensive index is located at the back of the book on light blue pages. Undoubtedly the best tool to help you navigate the handbook, the comprehensive index is organized by showing generic drug names in **bold,** trade names in regular type, classifications in *italics,* and the page number of the main drug entry listed first and in **bold.**

A DETAILED GUIDE TO THE SAUNDERS NURSING DRUG HANDBOOK

An intensive review by consultants and reviewers helped us to revise the **Saunders Nursing Drug Handbook** so that it is most useful in both educational and clinical practice. The main objective of the handbook is to provide essential drug information in a user-friendly format. The bulk of the handbook contains an alphabetical listing of drug entries by generic name.

To maintain the portability of this handbook and meet the challenge of keeping content current, we have also included additional information for some medications on the Evolve® Internet site. Users can also choose from 200 monographs for the most commonly used medications and customize and print drug cards. Evolve® also includes drug alerts (e.g., medications removed from the market) and drug updates (e.g., new drugs, updates on existing entries). Information is periodically added, allowing the nurse to keep abreast of current drug information.

You'll also notice that some entries for infrequently used medications are condensed to reflect only the absolutely essential points the nurse should know when called on to administer them.

We have incorporated the IV Incompatibilities/Compatibilities heading. The drugs listed in this section are compatible or incompatible with the generic drug when administered directly by IV push, via a Y-site, or via IV piggyback. We have highlighted the intravenous drug administration and handling information with a special heading icon and have broken it down by Reconstitution, Rate of Administration, and Storage.

We present entries in an order that follows the logical thought process the nurse undergoes whenever a drug is ordered for a patient:

- What is the drug?
- How is the drug classified?
- What does the drug do?
- What is the drug used for?
- Under what conditions should you **not** use the drug?
- How do you administer the drug?
- How do you store the drug?
- What is the dose of the drug?
- What should you monitor the patient for once he or she has received the drug?
- What do you assess the patient for?
- What interventions should you perform?
- What should you teach the patient?

The following are included within the drug entries:

Generic Name, Pronunciation, Trade Names. Each entry begins with the generic name and pronunciation, followed by the U.S. and Canadian trade names. Exclusively Canadian trade names are followed by a blue maple leaf. Trade names that were most prescribed in the year 2012 are underlined in this section.
Black Box Alert. This feature highlights drugs that carry a significant risk of serious or life-threatening adverse effects. Black Box Alerts are ordered by the FDA.
Do Not Confuse With. Drug names that sound similar to the generic and/or trade names are listed under this heading to help you avoid potential medication errors.
Fixed-Combination Drugs. Where appropriate, fixed-combinations, or drugs made up of two or more generic medications, are listed with the generic drug.
Pharmacotherapeutic and Clinical Classification Names. Each full entry includes both the pharmacotherapeutic and clinical classifications for the generic drug. The page number of the classification description in the front of the book is provided in this section as well.
Action/Therapeutic Effect. This section describes how the drug is predicted to behave, with the expected therapeutic effect(s) under a separate heading.
Pharmacokinetics. This section includes the absorption, distribution, metabolism, excretion, and half-life of the medication. The half-life is bolded in blue for easy access.
Uses/Off-Label. The listing of uses for each drug includes both the FDA uses and the off-label uses. The off-label heading is shown in bold blue for emphasis.
Precautions. This heading incorporates a discussion about when the generic drug is contraindicated or should be used with caution. The cautions warn the nurse of specific situations in which a drug should be closely monitored.
Lifespan Considerations. This section includes the pregnancy category and lactation data and age-specific information concerning children and elderly people.
Interactions. This heading enumerates drug, food, and herbal interactions with the generic drug. As the number of medications a patient receives increases, awareness of drug interactions becomes more important. Also included is information about therapeutic and toxic blood levels in addition to the altered lab values that show what effects the drug may have on lab results.
Product Availability. Each drug monograph gives the form and availability of the drug. The icon identifies non-crushable drug forms.
Administration/Handling. Instructions for administration are given for each route of administration (e.g., IV, IM, PO, rectal). Special handling, such as refrigeration, is also included where applicable. The routes in this section are always presented in the order IV, IM, Subcutaneous, and PO, with subsequent routes in alphabetical order (e.g., Ophthalmic, Otic, Topical). **IV administration** is broken down by reconstitution, rate of administration (how fast the IV should be given), and storage (including how long the medication is stable once reconstituted).
IV Incompatibilities/IV Compatibilities. These sections give the nurse the most comprehensive compatibility information possible when administering medications by direct IV push, via a Y-site, or via IV piggyback. This edition includes information about lipids.
Indications/Routes/Dosage. Each full entry provides specific dosing guidelines for adults, elderly people, children, and patients with renal and/or hepatic impairment. Dosages are clearly indicated for each approved indication and route.

Side Effects. Side effects are defined as those responses that are usually predictable with the drug, are **not** life-threatening, and may or may not require discontinuation of the drug. Unique to this handbook, side effects are grouped by frequency listed from highest occurrence percentage to lowest so that the nurse can focus on patient care without wading through myriad signs and symptoms of side effects.
Adverse Effects/Toxic Reactions. Adverse effects and toxic reactions are very serious and often life-threatening undesirable responses that require prompt intervention from a health care provider.
Nursing Considerations. Nursing considerations are organized as care is organized. That is:

- What needs to be assessed or done before the first dose is administered? (Baseline Assessment)
- What interventions and evaluations are needed during drug therapy? (Intervention/Evaluation)
- What explicit teaching is needed for the patient and family? (Patient/Family Teaching)

Saunders Nursing Drug Handbook is an easy-to-use source of current drug information for nurses, students, and other health care providers. It is our hope that this handbook will help you provide quality care to your patients.

We welcome any comments you may have that would help us to improve future editions of the handbook. Please contact us via the publisher at *http://evolve.elsevier.com/SaundersNDH.*

Barbara B. Hodgson, RN, OCN
Robert J. Kizior, BS, RPh

ACKNOWLEDGMENTS

I offer a special heartfelt thank you to my co-author, Bob Kizior, for his continuing, superb work. Without Bob's effort in this major endeavor, this book would not have reached the par excellence it has achieved. Bob and I particularly and especially thank Sandra Clark, our clinical manager, for her total dedication to making this edition one of Saunders's finest works. We gratefully acknowledge Lauren Lake, our content editor, in helping ease our workload. Our thanks also go to Amy Simpson and the staff at Graphic World for their tenacious detail work. It takes many eyes to transform a book into a work of art. Without their efforts, this would not have happened. I especially thank Jim Witmer, BSN, CEN, and Keith Hodgson, RN, BSN, for their unending encouragement, support, meticulous eye for detail, and nursing knowledge.

Barbara B. Hodgson, RN, OCN

NEWLY APPROVED MEDICATIONS

Name	Indication
Aclidinium (Tudorza)	Anticholinergic oral inhaler for COPD
Apixaban (Eliquis)*	Factor Xa inhibitor anticoagulant indicated to reduce the risk of stroke and dangerous blood clots (systemic embolism) in patients with atrial fibrillation that is not caused by a heart valve problem
Avanafil (Stendra)	PDE5 inhibitor for erectile dysfunction
Axitinib (Inlyta)	Kinase inhibitor for advanced renal cell carcinoma
Bedaquiline (Sirturo)*	Oral diarylquinoline antimycobacterial drug indicated for the treatment of pulmonary multidrug-resistant tuberculosis
Bosutinib (Bosulif)	Kinase inhibitor for treatment of adults with chronic, accelerated, or blast phase Ph^+ chronic myelogenous leukemia
Cabozantinib (Cometriq)	Kinase inhibitor for treatment of progressive, metastatic medullary thyroid cancer
Carfilzomib (Kyprolis)	Proteasome inhibitor for advanced multiple myeloma
Crofelemer (Fulyzaq)*	Proanthocyanidin oligomer indicated to relieve symptoms of diarrhea in HIV/AIDS patients taking antiretroviral therapy
Enzalutamide (Xtandi)	Androgen receptor inhibitor for treatment of metastatic castration-resistant prostate cancer in patients who previously received docetaxel
Glucarpidase (Voraxaze)	Injectable carboxypeptidase enzyme for treatment of toxic methotrexate blood levels due to kidney failure
Icosapent (Vascepa)	Omega-3 fatty acid for severe hypertriglyceridemia
Ivacaftor (Kalydeco)	Cystic fibrosis transmembrane conductance regulator potentiator for cystic fibrosis patients who have a gene mutation
Linaclotide (Linzess)	A guanylate cyclase-C agonist for treatment of irritable bowel syndrome with constipation and chronic idiopathic constipation
Lomitapide (Juxtapid)	Microsomal triglyceride transfer protein inhibitor indicated for treatment of patients with homozygous familial hypercholesterolemia

*Selected new drugs approved by the FDA in late 2012. Monographs for these drugs are on Evolve and on pages e2–e5 of the e-book.

Name	Indication
Lorcaserin (Belviq)	Serotonin 2C agonist for chronic weight management
Loxapine (Adasuve)	Antipsychotic for acute treatment of agitation associated with schizophrenia or bipolar 1 disorder in adults
Lucinactant (Surfaxin)	Synthetic surfactant for prevention of respiratory distress syndrome in premature infants
Mirabegron (Myrbetriq)	Beta$_3$-adrenergic agonist for overactive bladder
Omacetaxine (Synribo)	Treatment of adults with chronic or accelerated phase chronic myeloid leukemia
Pasireotide (Signifor)	Somatostatin analog for treatment of Cushing's disease
Perampanel (Fycompa)	AMPA antagonist in adjunctive therapy for treatment of partial-onset seizures with or without secondary generalized seizures
Pertuzumab (Perjeta)	HER2/neu receptor antagonist for HER2-positive metastatic breast cancer
Ponatinib (Iclusig)	Kinase inhibitor for treatment of chronic myeloid leukemia and Philadelphia chromosome–positive acute lymphoblastic leukemia
Regorafenib (Stivarga)	Kinase inhibitor for treatment of metastatic colorectal cancer previously treated
Stribild (cobicistat, elvitegravir, emtricitabine, and tenofovir)	Complete once-daily single-tablet regimen for HIV-1 infection in treatment-naïve adults
Tbo-filgrastim	Leukocyte growth factor for reduction in duration of severe neutropenia in patients with nonmyeloid malignancies receiving myelosuppressive anticancer drugs
Teduglutide (Gattex)	Recombinant analog of human glucagon-like peptide 2 for treatment of short bowel syndrome in adults
Teriflunomide (Aubagio)	Oral immunomodulatory, disease-modifying drug with anti-inflammatory properties for treatment of relapsing forms of multiple sclerosis
Tofacitinib (Xeljanz)	Treatment of moderate to severe rheumatoid arthritis
Vismodegib (Erivedge)	Hedgehog pathway inhibitor for advanced basal cell carcinoma

apixaban

a-**pix**-a-ban
(Eliquis)
Do not confuse apixaban with rivaroxaban, argatroban, or dabigatran.

BLACK BOX ALERT Discontinuation in absence of alternative anticoagulation increases risk for thrombotic events. An increased rate of stroke noted following discontinuation in pts with non-valvular atrial fibrillation. If apixaban must be discontinued based on other than pathologic bleeding, coverage with another anticoagulant should be strongly considered.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Factor Xa inhibitor. **CLINICAL:** Anticoagulant.

ACTION

Selectively blocks active site of factor Xa, a key factor in the intrinsic and extrinsic pathway of blood coagulation cascade. Prevents new clot formation, secondary thromboembolic complications. Catalyzes conversion of prothrombin to thrombin. **Therapeutic Effect:** Inhibits platelet activation, fibrin clot formation.

PHARMACOKINETICS

Readily absorbed after PO administration. Peak plasma concentration: 3–4 hrs. Protein binding: 87%. Metabolized in liver. Excreted primarily in urine, feces. **Half-life:** 12 hrs.

USES

Reduces risk for stroke, systemic embolism in pts with nonvalvular atrial fibrillation. **OFF-LABEL:** Reduces risk of recurrent DVT and/or PE.

PRECAUTIONS

Contraindications: Active pathologic bleeding. **Cautions:** Mild to moderate hepatic impairment, severe renal impairment. Avoid use in those with severe hepatic impairment, prosthetic heart valve.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, rifampin) may decrease levels/effects. **Aspirin, NSAIDs, warfarin, heparin, antiplatelet agents, CYP3A4 inhibitors, (e.g., ketoconazole, clarithromycin)** may increase concentration, bleeding risk. **HERBAL: St. John's wort** may decrease levels/effects. **FOOD: Grapefruit juice** may increase levels/adverse effects. **LAB VALUES:** May decrease platelet count, Hgb, LFTs.

AVAILABILITY (Rx)

Tablets: 2.5 mg, 5 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Discontinuation in absence of alternative anticoagulation increases risk for thrombotic events.

PO

• Give without regard to meals. • If elective surgery or invasive procedures with moderate or high risk for bleeding, discontinue apixaban 24 hrs prior to procedure.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 5 mg twice daily, in those with at least 2 of the following characteristics: age 80 yrs or older, body weight 60 kg or less, serum creatinine 1.5 mg/dl or greater, concurrent use with CYP3A4, P-gp inhibitors (e.g., ketoconazole, ritonavir).

Usual Dosage

PO: ELDERLY: 2.5 mg daily twice daily.

B

SIDE EFFECTS

Rare (3%–1%): Nausea, ecchymosis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk for bleeding/hemorrhagic events. May cause serious, potentially fatal, bleeding, accompanied by one or more of the following: a decrease in Hgb of 2 g/dl or more; a need for 2 or more units of packed RBCs; bleeding occurring at one of the following sites: intracranial, intraspinal, intraocular, pericardial, intra-articular, intramuscular with compartment syndrome, retroperitoneal. Serious reactions include jaundice, cholestasis, cytolytic hepatitis, Stevens-Johnson syndrome, hypersensitivity reaction, anaphylaxis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline coagulation studies, CBC, PT/INR. Question history of bleeding disorders, recent surgery, spinal punctures, intracranial hemorrhage, bleeding ulcers, open wounds, anemia, hepatic impairment. Obtain full medication history including herbal products.

INTERVENTION/EVALUATION

Periodically monitor CBC, platelet count, stool for occult blood. Be alert for complaints of abdominal/back pain, headache, confusion, weakness, vision change (may indicate hemorrhage). Question for increased menstrual bleeding/discharge. Assess for any sign of bleeding: bleeding at surgical site, hematuria, blood in stool, bleeding from gums, petechiae, ecchymosis.

PATIENT/FAMILY TEACHING

• Do not take/discontinue any medication except on advice from physician. • Avoid alcohol, aspirin, NSAIDs. • Consult physician before surgery, dental work. • Use electric razor, soft toothbrush to prevent bleeding. Report blood tinged mucus from coughing, heavy menstrual bleeding, headache, vision problems, weakness, abdominal pain, frequent bruising, bloody urine or stool, joint pain or swelling.

bedaquiline

bed-**ak**-wi-leen
(Sirturo)

Do not confuse bedaquiline with quinidine or quetiapine.

BLACK BOX ALERT QT prolongation may occur. Concurrent use with other drugs that may prolong QT interval may produce additive QT prolongation. To be used only when current treatment regimen is ineffective. Placebo-controlled trial: increased risk of death (11.4% bedaquiline vs. 2.5% placebo).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Diarylquinoline antimycobacterial. **CLINICAL:** Antitubercular.

ACTION

Inhibits mycobacterial adenosine triphosphate (ATP) synthase, an enzyme essential for generation of energy in mycobacterium tuberculosum. **Therapeutic Effect:** Treatment of multi-drug resistant mycobacterium tuberculosis (TB).

PHARMACOKINETICS

Absorbed from GI tract. Peak plasma concentration: 5 hrs. Metabolized in liver. Mainly excreted in feces. Protein binding: 99.9%. **Half-life:** 5.5 mos.

USES

Treatment of pulmonary multidrug-resistant TB in adults 18 yrs and older when other alterations are not available. Not recommended for use in those with extrapulmonary TB (e.g., central nervous system), latent or drug-sensitive TB.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe hepatic/renal impairment, history of or risk of QT prolongation (e.g., torsades de pointes, bradyarrhythmias, hypothyroidism).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, rifampin) may reduce concentration, therapeutic effect. **CYP3A4 inhibitors (e.g., ketoconazole)** may increase concentration, risk of adverse reactions. **Macrolide antibacterial (e.g., clarithromycin), fluoroquinolones (e.g., levofloxacin), clofazimine** may increase risk of prolonged QT interval. **HERBAL: St. John's wort** decreases concentration/effects. **FOOD:** Food enhances bioavailability. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, aminotransferase, amylase.

AVAILABILITY (Rx)

Tablets: 100 mg.

ADMINISTRATION/HANDLING

PO

• Give with food (increases bioavailability). • Swallow tablet whole with water.

INDICATIONS/ROUTES/DOSAGE

Tuberculosis

PO: ADULTS 18 YRS AND OLDER, ELDERLY: **Note:** Initiate medication with at least 3 other antitubercular drugs.

Weeks 1–2: 400 mg (4 tablets of 100 mg) once daily with food. **Weeks 3–24:** 200 mg (2 tablets of 100 mg) 3 times per week with food (at least 48 hrs between doses) for a total dose of 600 mg per wk. Total duration of treatment: 24 wks.

SIDE EFFECTS

Frequent (33%–28%): Arthralgia, nausea, headache. **Occasional (9%–8%):** Anorexia, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hemoptysis, chest pain occur in 18% and 11%, respectively. May prolong QT interval.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory results prior to initiation of treatment, particularly serum potassium, calcium, magnesium (may alter QT interval), aminotransferase, ALT, AST, alkaline phosphatase, bilirubin and correct if abnormal. Obtain EKG and assess for prolonged QT. Test for viral hepatitis.

INTERVENTION/EVALUATION

Follow-up monitoring of electrolytes should be performed if QT prolongation is detected. If baseline EKG presents with prolonged QT interval, monitor EKG frequently to confirm QT interval has returned to baseline (monitor for syncope). Monitor serum chemistries monthly while on treatment. Aminotransferase 3 × the ULN or higher should be followed by repeat testing within 48 hrs. Diligently monitor for any signs or symptoms of bleeding, fatigue, anorexia, nausea, jaundice, melanuria, hepatic tenderness, hepatomegaly.

PATIENT/FAMILY TEACHING

• Avoid alcohol. • Report fatigue, loss of appetite, nausea, yellowing of skin or eyes, change in urine color, abdominal tenderness. • Strict compliance with drug regimen is essential.

C

crofelemer

crow-**fel**-e-mur
(Fulyzaq)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Chloride ion inhibitor. **CLINICAL:** Antidiarrheal agent.

ACTION

Inhibits calcium-activated chloride channel at the luminal membrane of enterocytes, blocking secretion and high-volume water loss in diarrhea, normalizing the flow of chloride and water in the gastrointestinal tract. **Therapeutic Effect:** Antidiarrheal.

PHARMACOKINETICS

Minimal absorption. **Half-life:** N/A.

USES

Symptomatic relief of noninfectious diarrhea in adult pts with HIV, AIDS who are receiving antiretroviral therapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Do not use in those with infectious diarrhea. Electrolyte imbalance, fluid depletion.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs of age. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, AST. May decrease WBC count.

AVAILABILITY (Rx)

Tablets, Delayed-Release: 125 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Swallow whole. • Do not break, crush, dissolve, or divide tablet.

INDICATIONS/ROUTES/DOSAGE

Diarrhea

PO: ADULTS, ELDERLY: One tablet two times daily.

SIDE EFFECTS

Occasional (4%–3%): Cough, flatulence, nausea, back pain, arthralgia. **Rare (2%–1%):** Nasopharyngitis, musculoskeletal pain, anxiety, abdominal distention, dry mouth, constipation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory tract infection occurs in 6% of pts, bronchitis in 4%, urinary tract infection in 2%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Do not administer in presence of bloody diarrhea or temperature higher than 101°F.

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool frequency and consistency (watery, loose, soft, semisolid, solid). Withhold drug and notify physician promptly in event of abdominal pain, distention, fever. Question for presence of nausea, back pain, arthralgia.

PATIENT/FAMILY TEACHING

• Do not exceed prescribed dose. • Do not break, chew, dissolve, or divide tablet. • Avoid tasks that require alertness, motor skills until response to drug is established. • Notify physician if diarrhea does not stop within 3 days, if abdominal distention or pain occurs, or if fever develops.

DRUGS BY DISORDER

Note: Not all medications appropriate for a given condition are listed, nor are those not listed inappropriate.
Generic names appear first, followed by brand names in parentheses.

Alcohol dependence
Acamprosate (Campral)
Disulfiram (Antabuse)
Naltrexone (Depade, ReVia, Vivitrol)

Allergic rhinitis
Azelastine (Astepro)
Azelastine/fluticasone (Dymista)
Beclomethasone (Beconase AQ)
Budesonide (Rhinocort Aqua)
Ciclesonide (Omnaris)
Flunisolide (Nasarel)
Fluticasone (Flonase)
Mometasone (Nasonex)
Olopatadine (Patanase)
Triamcinolone (Nasacort)

Allergy
Beclomethasone (Beclovent, Vanceril)
Betamethasone (Celestone)
Brompheniramine (Dimetane)
Budesonide (Pulmicort, Rhinocort)
Cetirizine (Zyrtec)
Chlorpheniramine (Chlor-Trimeton)
Clemastine (Tavist)
Cyproheptadine (Periactin)
Desloratadine (Clarinex)
Dexamethasone (Decadron)
Dimenhydrinate (Dramamine)
Diphenhydramine (Benadryl)
Epinephrine (Adrenalin)
Fexofenadine (Allegra)
Flunisolide (AeroBid, Nasalide)
Fluticasone (Flovent)
Hydrocortisone (Solu-Cortef)
Levocetirizine (Xyzal)
Loratadine (Claritin)
Prednisolone (Prelone)
Prednisone (Deltasone)
Promethazine (Phenergan)
Triamcinolone (Kenalog)

Alzheimer's disease
Donepezil (Aricept, Aricept ODT)
Galantamine (Razadyne, Razadyne ER)
Memantine (Namenda)
Rivastigmine (Exelon, Exelon Patch)

Angina
Amlodipine (Norvasc)
Atenolol (Tenormin)
Diltiazem (Cardizem, Dilacor)
Isosorbide (Imdur, Isordil)
Metoprolol (Lopressor)
Nadolol (Corgard)
Nicardipine (Cardene)
Nifedipine (Adalat, Procardia)
Nitroglycerin
Propranolol (Inderal)
Verapamil (Calan, Isoptin)

Anxiety
Alprazolam (Xanax)
Buspirone (BuSpar)
Diazepam (Valium)
Hydroxyzine (Atarax, Vistaril)
Lorazepam (Ativan)
Oxazepam (Serax)
Paroxetine (Paxil)
Trazodone (Desyrel)
Venlafaxine (Effexor)

Arrhythmias
Acebutolol (Sectral)
Adenosine (Adenocard)
Amiodarone (Cordarone, Pacerone)
Digoxin (Lanoxin)
Diltiazem (Cardizem, Dilacor)
Disopyramide (Norpace)
Dofetilide (Tikosyn)
Dronedarone (Multaq)
Esmolol (Brevibloc)
Flecainide (Tambocor)

Ibutilide (Corvert)
Lidocaine
Magnesium sulfate
Metoprolol (Lopressor)
Mexiletine (Mexitil)
Procainamide (Procan, Pronestyl)
Propafenone (Rythmol)
Propranolol (Inderal)
Quinidine
Sotalol (Betapace)
Tocainide (Tonocard)
Verapamil (Calan, Isoptin)

Arthritis, rheumatoid (RA)

Abatacept (Orencia)
Adalimumab (Humira)
Anakinra (Kineret)
Aspirin
Auranofin (Ridaura)
Aurothioglucose (Solganal)
Azathioprine (Imuran)
Capsaicin (Zostrix)
Celecoxib (Celebrex)
Certolizumab (Cimzia)
Cyclosporine (Sandimmune)
Diclofenac (Cataflam, Voltaren)
Diflunisal (Dolobid)
Etanercept (Enbrel)
Golimumab (Simponi)
Hydroxychloroquine (Plaquenil)
Infliximab (Remicade)
Leflunomide (Arava)
Methotrexate
Penicillamine (Cuprimine)
Prednisone (Deltasone)
Rituximab (Rituxan)
Sulfasalazine (Azulfidine-EN)
Tocilizumab (Actemra)
Tofacitinib (Xeljanz)

Asthma

Albuterol (Proventil, Ventolin)
Aminophylline (Theophylline)
Arformoterol (Brovana)
Beclomethasone (Beclovent, Vanceril)
Budesonide (Pulmicort)
Ciclesonide (Alvesco)
Cromolyn (Crolom, Intal)
Epinephrine (Adrenalin)
Flunisolide (AeroBid)
Fluticasone (Flovent)
Formoterol (Foradil)
Hydrocortisone (Solu-Cortef)
Ipratropium (Atrovent)
Levalbuterol (Xopenex)
Metaproterenol (Alupent)
Methylprednisolone (Solu-Medrol)
Mometasone (Asmanex)
Montelukast (Singulair)
Nedocromil (Tilade)
Prednisolone (Prelone)
Prednisone (Deltasone)
Salmeterol (Serevent)
Terbutaline (Brethine)
Theophylline (SloBid)
Zafirlukast (Accolate)
Zileuton (Zyflo, Zyflo CR)

Attention-deficit hyperactivity disorder (ADHD)

Atomoxetine (Strattera)
Bupropion (Wellbutrin)
Clonidine (Catapres, Kapvay)
Desipramine (Norpramin)
Dexmethylphenidate (Focalin, Focalin XR)
Dextroamphetamine (Dexedrine, Dextrostat)
Guanfacine (Intuniv)
Imipramine (Tofranil)
Lisdexamfetamine (Vyvanse)
Methylphenidate (Concerta, Daytrana, Focalin, Methylin, Ritalin)
Mixed amphetamine (dextroamphetamine and amphetamine salts) (Adderall, Adderall XR)
Modafinil (Provigil)
Nortriptyline (Aventyl, Pamelor)
Venlafaxine (Effexor)

Benign prostatic hypertrophy (BPH)

Alfuzosin (Uroxatral)
Doxazosin (Cardura)
Dutasteride (Avodart)
Finasteride (Proscar)
Mirabegron (Myrbetriq)
Silodosin (Rapaflo)
Tadalafil (Cialis)
Tamsulosin (Flomax)
Terazosin (Hytrin)

Bipolar disorder (mania)

Carbamazepine (Tegretol)
Lamotrigine (Lamictal)
Lithium (Lithobid)
Oxcarbazepine (Trileptal)
Quetiapine (Seroquel)
Valproic acid (Depakene, Depakote)

Bladder hyperactivity
Darifenacin (Enablex)
Oxybutynin (Ditropan, Gelnique)
Solifenacin (VESIcare)
Tolterodine (Detrol)
Trospium (Sanctura)

Bronchospasm
Albuterol (Proventil, Ventolin)
Bitolterol (Tornalate)
Levalbuterol (Xopenex)
Metaproterenol (Alupent)
Salmeterol (Serevent)
Terbutaline (Brethine)

Cancer
Abarelix (Plenaxis)
Abiraterone (Zytiga)
Aldesleukin (Proleukin)
Alemtuzumab (Campath)
Alitretinoin (Panretin)
Altretamine (Hexalen)
Anastrozole (Arimidex)
Arsenic trioxide (Trisenox)
Asparaginase (Elspar)
Axitinib (Inlyta)
Azacitidine (Vidaza)
BCG (TheraCys, Tice BCG)
Bendamustine (Treanda)
Bevacizumab (Avastin)
Bexarotene (Targretin)
Bicalutamide (Casodex)
Bleomycin (Blenoxane)
Bortezomib (Velcade)
Bosutinib (Bosulif)
Brentuximab (Adcetris)
Busulfan (Myleran)
Cabazitaxel (Jevtana)
Cabozantinib (Cometriq)
Capecitabine (Xeloda)
Carboplatin (Paraplatin)
Carfilzomib (Kyprolis)
Carmustine (BiCNU)
Cetuximab (Erbitux)
Chlorambucil (Leukeran)
Cisplatin (Platinol)
Cladribine (Leustatin)
Clofarabine (Clolar)
Crizotinib (Xalkori)
Cyclophosphamide (Cytoxan)
Cytarabine (Ara-C, Cytosar)
Dacarbazine (DTIC)
Dactinomycin (Cosmegen)
Dasatinib (Sprycel)
Daunorubicin (Cerubidine, DaunoXome)
Degarelix (Firmagon)
Denileukin (Ontak)
Docetaxel (Taxotere)
Doxorubicin (Adriamycin, Doxil)
Enzalutamide (Xtandi)
Epirubicin (Ellence)
Eribulin (Halaven)
Erlotinib (Tarceva)
Estramustine (Emcyt)
Etoposide (VePesid)
Everolimus (Afinitor)
Fludarabine (Fludara)
Fluorouracil
Flutamide (Eulexin)
Fulvestrant (Faslodex)
Gefitinib (Iressa)
Gemcitabine (Gemzar)
Goserelin (Zoladex)
Hydroxyurea (Hydrea)
Ibritumomab (Zevalin)
Idarubicin (Idamycin)
Ifosfamide (Ifex)
Imatinib (Gleevec)
Interferon alfa-2b (Intron A)
Ipilimumab (Yervoy)
Irinotecan (Camptosar)
Ixabepilone (Ixempra)
Lapatinib (Tykerb)
Letrozole (Femara)
Leuprolide (Lupron)
Lomustine (CeeNU)
Mechlorethamine (Mustargen)
Megestrol (Megace)
Melphalan (Alkeran)
Mercaptopurine (Purinethol)
Methotrexate
Mitomycin (Mutamycin)
Mitotane (Lysodren)
Mitoxantrone (Novantrone)
Nelarabine (Arranon)
Nilotinib (Tasigna)
Nilutamide (Nilandron)
Ofatumumab (Arzerra)
Omacetaxine (Synribo)
Oxaliplatin (Eloxatin)
Paclitaxel (Taxol)
Panitumumab (Vectibix)
Pazopanib (Votrient)
Pemetrexed (Alimta)
Pentostatin (Nipent)
Pertuzumab (Perjeta)
Plicamycin (Mithracin)
Ponatinib (Iclusig)

Pralatrexate (Folotyn)
Procarbazine (Matulane)
Rasburicase (Elitek)
Regorafenib (Stivarga)
Rituximab (Rituxan)
Romidepsin (Istodax)
Sipuleucel-T (Provenge)
Sorafenib (Nexavar)
Streptozocin (Zanosar)
Sunitinib (Sutent)
Tamoxifen (Nolvadex)
Temozolomide (Temodar)
Temsirolimus (Torisel)
Teniposide (Vumon)
Thioguanine
Thiotepa (Thioplex)
Tipifarnib (Zarnestra)
Topotecan (Hycamtin)
Toremifene (Fareston)
Tositumomab (Bexxar)
Trastuzumab (Herceptin)
Tretinoin (ATRA, Vesanoid)
Valrubicin (Valstar)
Vandetanib (Caprelsa)
Vemurafenib (Zelboraf)
Vinblastine (Velban)
Vincristine (Oncovin)
Vinorelbine (Navelbine)
Vismodegib (Erivedge)
Vorinostat (Zolinza)

Cerebrovascular accident (CVA)

Aspirin
Clopidogrel (Plavix)
Heparin
Nimodipine (Nimotop)
Prasugrel (Effient)
Ticlopidine (Ticlid)
Warfarin (Coumadin)

Chronic obstructive pulmonary disease (COPD)

Aclidinium (Tudorza)
Albuterol (Proventil HFA, Ventolin HFA)
Aminophylline (Theophylline)
Arformoterol (Brovana)
Budesonide (Pulmicort)
Budesonide/formoterol (Symbicort)
Formoterol (Foradil)
Indacaterol (Arcapta)
Ipratropium (Atrovent HFA)
Levalbuterol (Xopenex)
Pirbuterol (Maxair)
Roflumilast (Daliresp)
Salmeterol (Serevent)
Salmeterol/fluticasone (Advair)
Theophylline (Theochron, Theo ZY)
Tiotropium (Spiriva)

Congestive heart failure (CHF)

Bisoprolol (Zebeta)
Bumetanide (Bumex)
Candesartan (Atacand)
Captopril (Capoten)
Carvedilol (Coreg)
Digoxin (Lanoxin)
Dobutamine (Dobutrex)
Dopamine (Intropin)
Enalapril (Vasotec)
Eplerenone (Inspra)
Fosinopril (Monopril)
Furosemide (Lasix)
Hydralazine (Apresoline)
Isosorbide (Isordil)
Lisinopril (Prinivil, Zestril)
Losartan (Cozaar)
Metoprolol (Lopressor)
Milrinone (Primacor)
Nitroglycerin
Quinapril (Accupril)
Ramipril (Altace)
Spironolactone (Aldactone)
Torsemide (Demadex)
Valsartan (Diovan)

Constipation

Bisacodyl (Dulcolax)
Docusate (Colace)
Lactulose (Kristalose)
Lubiprostone (Amitiza)
Methylcellulose (Citrucel)
Milk of magnesia (MOM)
Polyethylene glycol (MiraLax)
Psyllium (Metamucil)
Senna (Senokot)
Tegaserod (Zelnorm)

Crohn's disease

Adalimumab (Humira)
Azathioprine (Azasan)
Budesonide (Entocort EC)
Certolizumab (Cimzia)
Hydrocortisone (Cortenema)
Infliximab (Remicade)
Mesalamine (Asacol, Pentasa)
Natalizumab (Tysabri)
Sulfasalazine (Azulfidine)

Deep vein thrombosis (DVT)
Dalteparin (Fragmin)
Enoxaparin (Lovenox)
Heparin
Tinzaparin (Innohep)
Warfarin (Coumadin)

Depression
Amitriptyline (Elavil, Endep)
Bupropion (Wellbutrin)
Citalopram (Celexa)
Clomipramine (Anafranil)
Desipramine (Norpramin)
Desvenlafaxine (Pristiq)
Doxepin (Sinequan)
Duloxetine (Cymbalta)
Escitalopram (Lexapro)
Fluoxetine (Prozac)
Fluvoxamine (Luvox)
Imipramine (Tofranil)
Maprotiline (Ludiomil)
Mirtazapine (Remeron)
Nortriptyline (Aventyl, Pamelor)
Paroxetine (Paxil)
Phenelzine (Nardil)
Selegiline (Emsam)
Sertraline (Zoloft)
Tranylcypromine (Parnate)
Trazodone (Desyrel)
Venlafaxine (Effexor)
Vilazodone (Viibryd)

Diabetes mellitus
Acarbose (Precose)
Bromocriptine (Cycloset)
Colesevelam (Welchol)
Exenatide (Byetta)
Glimepiride (Amaryl)
Glipizide (Glucotrol)
Glyburide (Micronase)
Insulin preparations
Linagliptin (Tradjenta)
Liraglutide (Victoza)
Metformin (Glucophage)
Miglitol (Glyset)
Nateglinide (Starlix)
Pioglitazone (Actos)
Pramlintide (Symlin)
Repaglinide (Prandin)
Rosiglitazone (Avandia)
Saxagliptin (Onglyza)
Sitagliptin (Januvia)

Diabetic peripheral neuropathy
Amitriptyline (Elavil)
Bupropion (Wellbutrin)
Capsaicin (Trixaicin)
Carbamazepine (Tegretol)
Citalopram (Celexa)
Desipramine (Norpramin)
Duloxetine (Cymbalta)
Gabapentin (Neurontin)
Lamotrigine (Lamictal)
Lidocaine patch (Lidoderm)
Nortriptyline (Pamelor)
Oxcarbazepine (Trileptal)
Oxycodone (OxyContin)
Paroxetine (Paxil)
Pregabalin (Lyrica)
Tramadol (Ultram)
Valproic acid (Depakote)
Venlafaxine, extended-release (Effexor XR)

Diarrhea
Bismuth subsalicylate (Pepto-Bismol)
Diphenoxylate and atropine (Lomotil)
Fidaxomicin (Dificid)
Kaolin-pectin (Kaopectate)
Loperamide (Imodium)
Octreotide (Sandostatin)
Rifaximin (Xifaxan)

Duodenal, gastric ulcer
Cimetidine (Tagamet)
Esomeprazole (Nexium)
Famotidine (Pepcid)
Lansoprazole (Prevacid)
Misoprostol (Cytotec)
Nizatidine (Axid)
Omeprazole (Prilosec)
Pantoprazole (Protonix)
Rabeprazole (Aciphex)
Ranitidine (Zantac)
Sucralfate (Carafate)

Edema
Amiloride (Midamor)
Bumetanide (Bumex)
Chlorthalidone (Hygroton)
Ethacrynic acid (Edecrin)
Furosemide (Lasix)
Hydrochlorothiazide (HydroDIURIL)
Indapamide (Lozol)
Metolazone (Zaroxolyn)
Spironolactone (Aldactone)
Torsemide (Demadex)
Triamterene (Dyrenium)

Epilepsy
Acetazolamide (Diamox)
Carbamazepine (Tegretol)
Clobazam (Onfi)
Clonazepam (Klonopin)
Clorazepate (Tranxene)
Diazepam (Valium)
Ezogabine (Potiga)
Fosphenytoin (Cerebyx)
Gabapentin (Neurontin)
Lamotrigine (Lamictal, Lamictal ODT, Lamictal XR)
Levetiracetam (Keppra)
Lorazepam (Ativan)
Oxcarbazepine (Trileptal)
Perampanel (Fycompa)
Phenobarbital
Phenytoin (Dilantin)
Primidone (Mysoline)
Tiagabine (Gabitril)
Topiramate (Topamax)
Valproic acid (Depakene, Depakote)
Vigabatrin (Sabril)
Zonisamide (Zonegran)

Esophageal reflux, esophagitis
Cimetidine (Tagamet)
Dexlansoprazole (Kapidex)
Esomeprazole (Nexium)
Famotidine (Pepcid)
Lansoprazole (Prevacid)
Nizatidine (Axid)
Omeprazole (Prilosec)
Pantoprazole (Protonix)
Rabeprazole (Aciphex)
Ranitidine (Zantac)

Fever
Acetaminophen (Tylenol)
Aspirin
Ibuprofen (Advil, Caldolor, Motrin)
Naproxen (Aleve, Anaprox, Naprosyn)

Fibromyalgia
Acetaminophen (Tylenol)
Amitriptyline (Elavil)
Carisoprodol (Soma)
Citalopram (Celexa)
Cyclobenzaprine (Flexeril)
Duloxetine (Cymbalta)
Fluoxetine (Prozac)
Gabapentin (Neurontin)
Milnacipran (Savella)
Paroxetine (Paxil)
Pregabalin (Lyrica)
Tramadol (Ultram)
Venlafaxine (Effexor)

Gastritis
Cimetidine (Tagamet)
Famotidine (Pepcid)
Nizatidine (Axid)
Ranitidine (Zantac)

Gastroesophageal reflux disease (GERD)
Cimetidine (Tagamet)
Dexlansoprazole (Kapidex)
Esomeprazole (Nexium)
Famotidine (Pepcid)
Lansoprazole (Prevacid)
Metoclopramide (Metozolv ODT, Reglan)
Nizatidine (Axid)
Omeprazole (Prilosec)
Pantoprazole (Protonix)
Rabeprazole (Aciphex)
Ranitidine (Zantac)

Glaucoma
Acetazolamide (Diamox)
Apraclonidine (Iopidine)
Betaxolol (Betoptic)
Bimatoprost (Lumigan)
Brimonidine (Alphagan)
Brinzolamide (Azopt)
Carbachol
Carteolol (Ocupress)
Dipivefrin (Propine)
Dorzolamide (Trusopt)
Echothiophate iodide (Phospholine)
Latanoprost (Xalatan)
Levobunolol (Betagan)
Metipranolol (OptiPranolol)
Pilocarpine (Isopto Carpine)
Timolol (Timoptic)
Travoprost (Travatan)
Unoprostone (Rescula)

Gout
Allopurinol (Zyloprim)
Colchicine (Colcrys)
Febuxostat (Uloric)
Ibuprofen (Motrin)
Indomethacin (Indocin)
Naproxen (Naprosyn)
Pegloticase (Krystexxa)
Piroxicam (Feldene)

Probenecid (Benemid)
Sulindac (Clinoril)

Hepatitis B
Adefovir (Hepsera)
Entecavir (Baraclude)
Lamivudine (Epivir)
Peginterferon alpha-2a (Pegasys)
Telbivudine (Tyzeka)
Tenofovir (Viread)

Hepatitis C
Boceprevir (Victrelis)
Interferon alfa-2b (Intron-A)
Interferon alfacon-1 (Infergen)
Peginterferon alfa-2a (Pegasys)
Peginterferon alfa-2b (Pegintron)
Ribavirin (Copegus)
Telaprevir (Incivek)

Human immunodeficiency virus (HIV)
Abacavir (Ziagen)
Atazanavir (Reyataz)
Darunavir (Prezista)
Delavirdine (Rescriptor)
Didanosine (Videx)
Efavirenz (Sustiva)
Emtricitabine (Emtriva)
Enfuvirtide (Fuzeon)
Etravirine (Intelence)
Fosamprenavir (Lexiva)
Indinavir (Crixivan)
Lamivudine (Epivir)
Lopinavir/ritonavir (Kaletra)
Maraviroc (Selzentry)
Nelfinavir (Viracept)
Nevirapine (Viramune)
Raltegravir (Isentress)
Rilpivirine (Edurant)
Ritonavir (Norvir)
Saquinavir (Invirase)
Stavudine (Zerit)
Stribild (cobicistat, elvitagravir, emtricitabine, tenafovir)
Tenofovir (Viread)
Tesamorelin (Egrifta)
Tipranavir (Aptivus)
Zidovudine (AZT, Retrovir)

Hypercholesterolemia
Atorvastatin (Lipitor)
Cholestyramine (Questran)
Colesevelam (Welchol)
Colestipol (Colestid)
Ezetimibe (Zetia)
Fenofibrate (Antara, Lofibra, Tricor)
Fish oil (Lovaza)
Fluvastatin (Lescol)
Gemfibrozil (Lopid)
Lomitapide (Juxapid)
Lovastatin (Altoprev, Mevacor)
Niacin (Niaspan, Slo-Niacin)
Pitavastatin (Livalo)
Pravastatin (Pravachol)
Rosuvastatin (Crestor)
Simvastatin (Zocor)

Hyperphosphatemia
Aluminum salts
Calcium salts
Lanthanum (Fosrenol)
Sevelamer (Renagel)

Hypertension
Aliskiren (Tekturna)
Amlodipine (Norvasc)
Atenolol (Tenormin)
Azilsartan (Edarbi)
Benazepril (Lotensin)
Bisoprolol (Zebeta)
Candesartan (Atacand)
Captopril (Capoten)
Clevidipine (Cleviprex)
Clonidine (Catapres)
Diltiazem (Cardizem, Dilacor)
Doxazosin (Cardura)
Enalapril (Vasotec)
Eplerenone (Inspra)
Eprosartan (Teveten)
Felodipine (Plendil)
Fosinopril (Monopril)
Hydralazine (Apresoline)
Hydrochlorothiazide (HydroDIURIL)
Indapamide (Lozol)
Irbesartan (Avapro)
Isradipine (DynaCirc)
Labetalol (Normodyne, Trandate)
Lisinopril (Prinivil, Zestril)
Losartan (Cozaar)
Methyldopa (Aldomet)
Metolazone (Diulo, Zaroxolyn)
Metoprolol (Lopressor)
Minoxidil (Loniten)
Moexipril (Univasc)
Nadolol (Corgard)
Nebivolol (Bystolic)
Nicardipine (Cardene)
Nifedipine (Adalat, Procardia)

Nitroglycerin
Nitroprusside (Nipride)
Olmesartan (Benicar)
Perindopril (Aceon)
Pindolol (Visken)
Prazosin (Minipress)
Propranolol (Inderal)
Quinapril (Accupril)
Ramipril (Altace)
Spironolactone (Aldactone)
Telmisartan (Micardis)
Terazosin (Hytrin)
Timolol (Blocadren)
Trandolapril (Mavik)
Valsartan (Diovan)
Verapamil (Calan, Isoptin)

Hypertriglyceridemia

Atorvastatin (Lipitor)
Colesevelam (Welchol)
Fenofibrate (Tricor)
Fluvastatin (Lescol)
Gemfibrozil (Lopid)
Icosapent (Vascepa)
Lovastatin (Mevacor)
Niacin (Niaspan)
Omega-3 acid ethyl esters (Lovaza)
Pravastatin (Pravachol)
Rosuvastatin (Crestor)
Simvastatin (Zocor)

Hyperuricemia

Allopurinol (Zyloprim)
Febuxostat (Uloric)
Pegloticase (Krystexxa)
Probenecid (Benemid)

Hypotension

Dobutamine (Dobutrex)
Dopamine (Intropin)
Ephedrine
Epinephrine
Norepinephrine (Levophed)
Phenylephrine (Neo-Synephrine)

Hypothyroidism

Levothyroxine (Levoxyl, Synthroid)
Liothyronine (Cytomel)
Thyroid

Idiopathic thrombocytopenic purpura (ITP)

Cyclophosphamide (Cytoxan)
Dexamethasone (Decadron)
Hydrocortisone (Solu-Cortef)
Immune globulin intravenous
Methylprednisolone (Solu-Medrol)
Prednisone
Rh_0(D) immune globulin (RhoGam)
Rituximab (Rituxan)

Insomnia

Diphenhydramine (Benadryl)
Estazolam (ProSom)
Eszopiclone (Lunesta)
Flurazepam (Dalmane)
Ramelteon (Rozerem)
Temazepam (Restoril)
Zaleplon (Sonata)
Zolpidem (Ambien, Edluar)

Migraine headaches

Almotriptan (Axert)
Amitriptyline (Elavil, Endep)
Diclofenac (Cambia)
Dihydroergotamine
Eletriptan (Relpax)
Ergotamine (Ergomar)
Frovatriptan (Frova)
Naratriptan (Amerge)
Propranolol (Inderal)
Rizatriptan (Maxalt)
Sumatriptan (Imitrex)
Zolmitriptan (Zomig)

Multiple sclerosis (MS)

Dalfampridine (Ampyra)
Fingolimod (Gilenya)
Glatiramer (Copaxone)
Interferon beta-1a (Avonex, Rebif)
Interferon beta-1b (Betaseron, Extavia)
Mitoxantrone (Novantrone)
Natalizumab (Tysabri)
Teriflunomide (Aubagio)

Myelodysplastic syndrome

Azacitidine (Vidaza)
Clofarabine (Clolar)
Decitabine (Dacogen)
Lenalidomide (Revlimid)

Myocardial infarction (MI)

Alteplase (Activase)
Aspirin
Atenolol (Tenormin)
Captopril (Capoten)
Clopidogrel (Plavix)
Dalteparin (Fragmin)

Diltiazem (Cardizem, Dilacor)
Enalapril (Vasotec)
Enoxaparin (Lovenox)
Heparin
Lidocaine
Lisinopril (Prinivil, Zestril)
Metoprolol (Lopressor)
Morphine
Nitroglycerin
Propranolol (Inderal)
Quinapril (Accupril)
Ramipril (Altace)
Reteplase (Retavase)
Streptokinase
Timolol (Blocadren)
Warfarin (Coumadin)

Nausea

Aprepitant (Emend)
Chlorpromazine (Thorazine)
Dexamethasone (Decadron)
Dimenhydrinate (Dramamine)
Dolasetron (Anzemet)
Dronabinol (Marinol)
Droperidol (Inapsine)
Fosaprepitant (Emend)
Granisetron (Kytril)
Hydroxyzine (Vistaril)
Lorazepam (Ativan)
Meclizine (Antivert)
Metoclopramide (Reglan)
Nabilone (Cesamet)
Ondansetron (Zofran)
Palonosetron (Aloxi)
Prochlorperazine (Compazine)
Promethazine (Phenergan)
Trimethobenzamide (Tigan)

Obesity

Benzphetamine (Didrex)
Bupropion (Wellbutrin)
Diethylpropion (Tenuate)
Exenatide (Bydureon, Byetta)
Lorcaserin (Belviq)
Methamphetamine (Desoxyn)
Orlistat (Alli, Xenical)
Phendimetrazine (Bontril)
Phentermine (Ionamin)
Phentermine and topiramate (Qsymia)

Obsessive-compulsive disorder (OCD)

Citalopram (Celexa)
Clomipramine (Anafranil)
Escitalopram (Lexapro)
Fluoxetine (Prozac)
Fluvoxamine (Luvox)
Paroxetine (Paxil)
Sertraline (Zoloft)

Organ transplant, rejection prophylaxis

Azathioprine (Imuran)
Basiliximab (Simulect)
Belatacept (Nulojix)
Cyclophosphamide (Cytoxan, Neosar)
Cyclosporine (Sandimmune)
Daclizumab (Zenapax)
Everolimus (Zortress)
Mycophenolate (CellCept)
Sirolimus (Rapamune)
Tacrolimus (Prograf)

Osteoarthritis

Acetaminophen (Tylenol)
Celecoxib (Celebrex)
Diclofenac (Cataflam, Pennsaid, Voltaren)
Etodolac (Lodine)
Flavocoxid (Limbrel)
Flurbiprofen (Ansaid)
Ibuprofen (Motrin)
Ketoprofen (Orudis)
Meloxicam (Mobic)
Nabumetone (Relafen)
Naproxen (Naprosyn)
Oxaprozin (Daypro)
Piroxicam (Feldene)
Salicylates (Aspirin)
Sulindac (Clinoril)
Tramadol (Ultram)

Osteoporosis

Alendronate (Fosamax)
Calcitonin (Miacalcin)
Calcium salts
Denosumab (Prolia)
Ibandronate (Boniva)
Raloxifene (Evista)
Risedronate (Actonel)
Teriparatide (Forteo)
Vitamin D
Zoledronic acid (Reclast)

Paget's disease

Alendronate (Fosamax)
Calcitonin (Miacalcin)
Etidronate (Didronel)
Pamidronate (Aredia)
Risedronate (Actonel)

Tiludronate (Skelid)
Zoledronic acid (Reclast)

Pain, mild to moderate
Acetaminophen (Tylenol)
Aspirin
Celecoxib (Celebrex)
Codeine
Diclofenac (Cataflam, Voltaren, Zipsor)
Diflunisal (Dolobid)
Etodolac (Lodine)
Flurbiprofen (Ansaid)
Ibuprofen (Advil, Caldolor, Motrin)
Ketorolac (Toradol)
Naproxen (Anaprox, Naprosyn)
Salsalate (Disalcid)
Tramadol (Ultram)

Pain, moderate to severe
Butorphanol (Stadol)
Fentanyl (Onsolis, Sublimaze)
Hydromorphone (Dilaudid)
Meperidine (Demerol)
Methadone (Dolophine)
Morphine (MS Contin)
Morphine/naltrexone (Embeda)
Nalbuphine (Nubain)
Oxycodone (OxyFast, Roxicodone)
Oxymorphone (Opana)
Ziconotide (Prialt)

Panic attack disorder
Alprazolam (Xanax)
Clonazepam (Klonopin)
Paroxetine (Paxil)
Sertraline (Zoloft)
Venlafaxine (Effexor)

Parkinsonism
Amantadine (Symmetrel)
Apomorphine (Apokyn)
Bromocriptine (Parlodel)
Carbidopa/levodopa (Sinemet, Sinemet CR)
Diphenhydramine (Benadryl)
Entacapone (Comtan)
Pramipexole (Mirapex)
Rasagiline (Azilect)
Ropinirole (Requip)
Rotigotine (Neupro)
Selegiline (Eldepryl, Zelapar)
Tolcapone (Tasmar)

Peptic ulcer disease
Cimetidine (Tagamet)
Esomeprazole (Nexium)
Famotidine (Pepcid)
Lansoprazole (Prevacid)
Misoprostol (Cytotec)
Nizatidine (Axid)
Omeprazole (Prilosec)
Pantoprazole (Protonix)
Rabeprazole (Aciphex)
Ranitidine (Zantac)
Sucralfate (Carafate)

Pneumonia
Amoxicillin (Amoxil)
Amoxicillin/clavulanate (Augmentin)
Ampicillin (Polycillin)
Azithromycin (Zithromax)
Cefaclor (Ceclor)
Cefpodoxime (Vantin)
Ceftriaxone (Rocephin)
Cefuroxime (Kefurox, Zinacef)
Clarithromycin (Biaxin)
Co-trimoxazole (Bactrim, Septra)
Erythromycin
Gentamicin (Garamycin)
Levofloxacin (Levaquin)
Linezolid (Zyvox)
Moxifloxacin (Avelox)
Piperacillin/tazobactam (Zosyn)
Tobramycin (Nebcin)
Vancomycin (Vancocin)

Pneumonia, *Pneumocystis jiroveci*
Atovaquone (Mepron)
Clindamycin (Cleocin)
Co-trimoxazole (Bactrim, Septra)
Pentamidine (Pentam)
Trimethoprim (Proloprim)

Post-traumatic stress disorder
Amitriptyline (Elavil)
Aripiprazole (Abilify)
Citalopram (Celexa)
Escitalopram (Lexapro)
Fluoxetine (Prozac)
Imipramine (Tofranil)
Lamotrigine (Lamictal)
Olanzapine (Zyprexa)
Paroxetine (Paxil)
Phenelzine (Nardil)
Prazosin (Minipress)

Propranolol (Inderal)
Quetiapine (Seroquel)
Risperidone (Risperdal)
Sertraline (Zoloft)
Topiramate (Topamax)
Valproic acid (Depakote)
Venlafaxine (Effexor)
Ziprasidone (Geodon)

Pruritus
Amcinonide (Cyclocort)
Brompheniramine (Dimetane)
Cetirizine (Zyrtec)
Chlorpheniramine (Dimetane)
Clemastine (Tavist)
Clobetasol (Temovate)
Cyproheptadine (Periactin)
Desloratadine (Clarinex)
Desonide (Tridesilon)
Desoximetasone (Topicort)
Diphenhydramine (Benadryl)
Fluocinolone (Synalar)
Fluocinonide (Lidex)
Halobetasol (Ultravate)
Hydrocortisone (Cort-Dome, Hytone)
Hydroxyzine (Atarax, Vistaril)
Prednisolone (Prelone)
Prednisone (Deltasone)
Promethazine (Phenergan)

Psychosis
Aripiprazole (Abilify)
Asenapine (Saphris)
Chlorpromazine (Thorazine)
Clozapine (Clozaril)
Fluphenazine (Prolixin)
Haloperidol (Haldol)
Iloperidone (Fanapt)
Loxapine (Adasuve)
Lurasidone (Latuda)
Olanzapine (Zyprexa)
Perphenazine (Trilafon)
Quetiapine (Seroquel, Seroquel XR)
Risperidone (Risperdal)
Thioridazine (Mellaril)
Thiothixene (Navane)
Ziprasidone (Geodon)

Pulmonary arterial hypertension
Ambrisentan (Letairis)
Bosentan (Tracleer)
Epoprostenol (Flolan)
Iloprost (Ventavis)
Sildenafil (Revatio)
Tadalafil (Adcirca)
Treprostinil (Remodulin, Tyvaso)

Respiratory distress syndrome (RDS)
Beractant (Survanta)
Calfactant (Infasurf)
Poractant alfa (Curosurf)

Restless legs syndrome
Cabergoline (Dostinex)
Carbidopa/levodopa (Sinemet)
Clonazepam (Klonopin)
Gabapentin (Horizant, Neurontin)
Levodopa
Oxycodone (Roxicodone)
Pramipexole (Mirapex)
Ropinirole (Requip)
Rotigotine (Neupro)
Tramadol (Ultram)
Zaleplon (Sonata)
Zolpidem (Ambien)

Schizophrenia
Aripiprazole (Abilify)
Asenapine (Saphris)
Chlorpromazine (Thorazine)
Clozapine (Clozaril)
Fluphenazine (Prolixin)
Haloperidol (Haldol)
Iloperidone (Fanapt)
Lurasidone (Latuda)
Olanzapine (Zyprexa)
Paliperidone (Invega, Invega Sustenna)
Perphenazine (Trilafon)
Quetiapine (Seroquel, Seroquel XR)
Risperidone (Risperdal)
Thioridazine (Mellaril)
Thiothixene (Navane)
Ziprasidone (Geodon)

Smoking cessation
Bupropion (Zyban)
Clonidine (Catapres)
Nicotine (Nicoderm, Nicotrol)
Nortriptyline (Pamelor)
Varenicline (Chantix)

Thrombosis
Apixaban (Eliquis)
Dalteparin (Fragmin)
Enoxaparin (Lovenox)
Fondaparinux (Arixtra)

Heparin
Tinzaparin (Innohep)
Warfarin (Coumadin)

Thyroid disorders
Levothyroxine (Levoxyl, Synthroid)
Liothyronine (Cytomel)
Thyroid

Transient ischemic attack (TIA)
Aspirin
Clopidogrel (Plavix)
Prasugrel (Effient)
Ticlopidine (Ticlid)
Warfarin (Coumadin)

Tremor
Atenolol (Tenormin)
Chlordiazepoxide (Librium)
Diazepam (Valium)
Lorazepam (Ativan)
Metoprolol (Lopressor)
Nadolol (Corgard)
Propranolol (Inderal)

Tuberculosis (TB)
Bedaquiline (Sirturo)
Cycloserine (Seromycin)
Ethambutol (Myambutol)
Isoniazid (INH)
Pyrazinamide
Rifabutin (Mycobutin)
Rifampin (Rifadin)
Rifapentine (Priftin)
Streptomycin

Urticaria
Cetirizine (Zyrtec)
Cimetidine (Tagamet)
Clemastine (Tavist)
Cyproheptadine (Periactin)
Diphenhydramine (Benadryl)
Hydroxyzine (Atarax, Vistaril)
Loratadine (Claritin)
Promethazine (Phenergan)
Ranitidine (Zantac)

Vertigo
Dimenhydrinate (Dramamine)
Diphenhydramine (Benadryl)
Meclizine (Antivert)
Scopolamine (Trans-Derm Scop)

Vomiting
Aprepitant (Emend)
Chlorpromazine (Thorazine)
Dexamethasone (Decadron)
Dimenhydrinate (Dramamine)
Dolasetron (Anzemet)
Dronabinol (Marinol)
Droperidol (Inapsine)
Fosaprepitant (Emend)
Granisetron (Kytril)
Hydroxyzine (Vistaril)

Scopolamine (Trans-Derm Scop)
Trimethobenzamide (Tigan)

Zollinger-Ellison syndrome
Aluminum salts
Cimetidine (Tagamet)
Esomeprazole (Nexium)
Famotidine (Pepcid)
Lansoprazole (Prevacid)
Omeprazole (Prilosec)
Pantoprazole (Protonix)
Rabeprazole (Aciphex)
Ranitidine (Zantac)

Drug Classification Contents

allergic rhinitis nasal preparations
anesthetics: general
anesthetics: local
anesthetics: local topical
angiotensin-converting enzyme (ACE) inhibitors
angiotensin II receptor antagonists
antacids
antianxiety agents
antiarrhythmics
antibiotics
antibiotic: aminoglycosides
antibiotic: cephalosporins
antibiotic: fluoroquinolones
antibiotic: macrolides
antibiotic: penicillins
anticoagulants/antiplatelets/thrombolytics
anticonvulsants
antidepressants
antidiabetics
antidiarrheals
antifungals: systemic mycoses
antifungals: topical
antiglaucoma agents
antihistamines
antihyperlipidemics
antihypertensives
antimigraine (triptans)
antipsychotics
antivirals
beta-adrenergic blockers
bronchodilators
calcium channel blockers
chemotherapeutic agents
cholinergic agonists/anticholinesterase
contraception
corticosteroids
corticosteroids: topical
diuretics
fertility agents
H_2 antagonists
hematinic preparations
hormones
human immunodeficiency virus (HIV) infection
immunosuppressive agents
laxatives
neuromuscular blockers
nitrates
nonsteroidal anti-inflammatory drugs (NSAIDs)
nutrition: enteral
nutrition: parenteral
obesity management
ophthalmic medications for allergic conjunctivitis
opioid analgesics
osteoporosis
Parkinson's disease treatment
proton pump inhibitors
sedative-hypnotics
skeletal muscle relaxants
smoking cessation agents
sympathomimetics
thyroid
vitamins

Allergic Rhinitis Nasal Preparations

USES

Relieves symptoms associated with allergic rhinitis. These symptoms include rhinorrhea, nasal congestion, pruritus, sneezing, postnasal drip, nasal pain.

Allergic rhinitis or hay fever is an inflammation of the nasal airways occurring when an allergen (e.g., pollen) is inhaled. This triggers antibody production. The antibodies bind to mast cells, which contain histamine. Histamine is released, causing symptoms of allergic rhinitis.

ACTION

Intranasal corticosteroids: Depresses migration of polymorphonuclear leucocytes and fibroblasts, reverses capillary permeability, and stabilizes nasal membranes to prevent/control inflammation.

Intranasal antihistamines: Reduces histamine mediated symptoms of allergic rhinitis, including pruritus, sneezing, rhinorrhea, watery eyes.

Intranasal mast cell stabilizers: Inhibits the mast cell release of histamine and other inflammatory mediators.

Intranasal anticholinergics: Blocks acetylcholine in the nasal mucosa. Effective in treating rhinorrhea associated with allergic rhinitis.

Intranasal decongestants: Vasoconstricts the respiratory mucosa, provides short-term relief of nasal congestion.

CORTICOSTEROIDS

Generic (Brand)	Adult Dose	Pediatric Dose	Side Effects
Beclomethasone (p. 113) (Beconase AQ) (Qnasi)	Beconase AQ: 1–2 sprays in each nostril 2 times/day Qnasi: 2 sprays in each nostril once daily	Beconase AQ: 5–11 yrs: 1–2 sprays in each nostril 2 times/day	Altered taste and smell, epistaxis, burning, stinging, headache, nasal septum perforation
Budesonide (p. 152) (Rhinocort Aqua)	2 sprays in each nostril daily	6–11 yrs: 1–2 sprays in each nostril daily	Same as beclomethasone
Ciclesonide (p. 237) (Omnaris, Zetonna)	Omnaris: 2 sprays in each nostril daily Zetonna: 1 spray in each nostril daily	Omnaris: 6–11 yrs: (only seasonal allergic rhinitis) 2 sprays in each nostril daily	Same as beclomethasone
Flunisolide (p. 492) (Nasarel)	2 sprays in each nostril 2 or 3 times/day (maximum: 8 sprays in each nostril daily)	6–14 yrs: 2 sprays in each nostril 2 times/day or 1 spray in each nostril 3 times/day (maximum: 4 sprays in each nostril daily)	Same as beclomethasone

Fluticasone (p. 503) (Flonase)	1–2 sprays in each nostril daily	4–17 yrs: 1–2 sprays in each nostril daily	Same as beclomethasone
Fluticasone/Azelastine (Dymista)	1 spray in each nostril 2 times/day	Not indicated in children younger than 12 yrs	Same as beclomethasone and azelastine
Fluticasone (p. 503) (Veramyst)	1–2 sprays in each nostril daily	2–11 yrs: 1–2 sprays in each nostril once daily	Same as beclomethasone
Mometasone (p. 794) (Nasonex)	2 sprays in each nostril daily	2–11 yrs: 1 spray in each nostril daily	Same as beclomethasone
Triamcinolone (p. 1208) (Nasacort AQ)	1–2 sprays in each nostril daily	2–5 yrs: 1 spray in each nostril once daily 6–11 yrs: 1–2 sprays in each nostril daily	Same as beclomethasone

ANTIHISTAMINES

Generic (Brand)	Adult Dose	Pediatric Dose	Side Effects
Azelastine (p. 102) (Astelin) Astepro 0.15%	Astelin: 1–2 sprays in each nostril 2 times/day Astepro 0.15%: 1–2 sprays in each nostril two times/day or 2 sprays each nostril once daily	Astelin: 5–11 yrs: 1 spray in each nostril 2 times/day	Sedation, epistaxis, nasal irritation
Azelastine/Fluticasone (p. 102, 503) (Dymista)	1 spray in each nostril 2 times/day	Not approved for children younger than 12 yrs	Same as azelastine and fluticasone
Olopatadine (Patanase)	2 sprays in each nostril 2 times/day	6–11 yrs: 1 spray in each nostril 2 times/day	Same as azelastine

(continued)

Allergic Rhinitis Nasal Preparations *(continued)*

MAST CELL STABILIZERS

Generic (Brand)	Adult Dose	Pediatric Dose	Side Effects
Cromolyn (Nasalcrom)	1 spray in each nostril 3–6 times/day	2–11 yrs: 1 spray in each nostril 3–6 times/day	Nasal irritation, unpleasant taste

ANTICHOLINERGICS

Generic (Brand)	Adult Dose	Pediatric Dose	Side Effects
Ipratropium (p. 627) (Atrovent) 0.03%	2 sprays in each nostril 2–3 times/day	6–11 yrs: 2 sprays in each nostril 2–3 times/day	Nasal irritation, epistaxis, dizziness, headache, blurry vision
Ipratropium (p. 627) (Atrovent) 0.06%	2 sprays in each nostril 4 times/day	5–11 yrs: 2 sprays in each nostril 4 times/day	Same as ipratropium 0.03%

DECONGESTANTS

Generic (Brand)	Adult Dose	Pediatric Dose	Side Effects
Oxymetazoline (Afrin)	2–3 drops or sprays 2 times/day	2–3 drops or sprays 2 times/day	Insomnia, tachycardia, nervousness, nausea, vomiting, transient burning, headache, rebound congestion if used longer than 72 hrs
Phenylephrine (p. 942) (Neo-Synephrine)	2–3 drops or 1–2 sprays q4h as needed (0.25% or 0.5%)	6–11 yrs: 2–3 drops (0.25%) q4h as needed 1–5 yrs: 2–3 drops (0.125%) q4h as needed	Restlessness, nervousness, headache, rebound nasal congestion, burning, stinging, dryness

Anesthetics: General

USES

IV anesthetic agents are used to induce general anesthesia. The general anesthetic state consists of unconsciousness, amnesia, analgesia, immobility, and attenuation of autonomic responses to noxious stimuli.

Volatile inhalation agents produce all the components of the anesthetic state but are administered through the lungs via an anesthesia machine. Agents for use include desflurane, sevoflurane, isoflurane, enflurane, and halothane.

General anesthetics are medications producing unconsciousness and a lack of response to all painful stimuli.

ACTION

IV anesthetic agents: Most agents produce CNS depression by action on the gamma-aminobutyric acid (GABA) receptor complex. GABA is the primary inhibitory neurotransmitter in the CNS. Ketamine produces dissociation between the thalamus and the limbic system.

Volatile inhalation agents: The action of these agents is not fully understood, but they may disrupt neuronal transmission throughout the CNS. These agents may either block excitatory or enhance inhibitory transmission through axons or synapses.

ANESTHETICS: GENERAL

Name	Availability	Uses	Dosage Range	Side Effects
Etomidate (Amidate)	**I:** 2 mg/ml	IV induction	0.2–0.6 mg/kg	Myoclonus, pain on injection, nausea, vomiting, respiratory depression
Ketamine (Ketalar)	**I:** 10 mg/ml, 50 mg/ml, 100 mg/ml	Analgesia, sedation, IV induction	1–4.5 mg/kg	Delirium, euphoria, nausea, vomiting
Methohexital (Brevital)	**Powder for injection:** 500 mg	IV induction, sedation	50–120 mg	Cardiovascular depression, myoclonus, nausea, vomiting, respiratory depression

(continued)

ANESTHETICS: GENERAL *(continued)*

Name	Availability	Uses	Dosage Range	Side Effects
Midazolam (p. 774) (Versed)	**I:** 1 mg/ml, 5 mg/ml	Anxiolytic, amnesic, sedation	1–5 mg titrated slowly	Respiratory depression
Propofol (p. 994) (Diprivan)	**I:** 10 mg/ml	Sedation IV induction Maintenance	0.5 mg/kg 2–2.5 mg/kg 100–200 mcg/kg/min	Cardiovascular depression, delirium, euphoria, pain on injection, respiratory depression

I, Injection.

Anesthetics: Local

USES

Local anesthetics suppress pain by blocking impulses along axons. Suppression of pain does not cause generalized depression of the entire nervous system. Local anesthetics may be given topically and by injection (local infiltration, peripheral nerve block [axillary], IV regional [Bier block], epidural, and spinal).

ACTION

Most local anesthetics fall into one of two groups: esters or amides. Both provide anesthesia and analgesia by reversibly binding to and blocking sodium (Na) channels. This slows the rate of depolarization of the nerve action potential; thus, propagation of the electrical impulses needed for nerve conduction is prevented.

ANESTHETICS: LOCAL

Name	Uses	Onset (min)	Duration (hrs)	Side Effects
Esters				
Chloroprocaine (Nesacaine)	Local infiltrate, nerve block, spinal	6–12	0.5–1	Seizures, bradycardia, cardiac arrest, hypotension, arrhythmias, anxiety, dizziness, restlessness, erythema, pruritus, urticaria, blurred vision, allergic reaction
Procaine (Novocaine)	Local infiltrate, nerve block, spinal	2–5	0.5–1.5	Burning sensation/pain at site of injection, tissue irritation, CNS stimulation followed by CNS depression, chills
Amides				
Bupivacaine (Marcaine, Sensorcaine)	Local infiltrate, nerve block, epidural, spinal	5	2–9	Cardiac arrest, hypotension, bradycardia, palpitations, seizures, restlessness, anxiety, dizziness, nausea, vomiting, blurred vision, weakness, tinnitus, apnea
Lidocaine (p. 687)	Local infiltrate, nerve block, spinal, epidural, topical, IV regional	Less than 2	0.5–1	Bradycardia, hypotension, arrhythmias, agitation, anxiety, dizziness, seizures, pruritus, rash, nausea, vomiting, altered taste, visual changes, tinnitus, respiratory depression, allergic reaction
Mepivacaine (Carbocaine, Polocaine)	Local infiltrate, nerve block, epidural	3–20	2–2.5	Bradycardia, syncope, arrhythmias, anxiety, seizures, dizziness, restlessness, chills, pruritus, urticaria, nausea, vomiting, incontinence, blurred vision, tinnitus, allergic reaction
Ropivacaine (Naropin)	Local infiltrate, nerve block, epidural, spinal	1–15	3–15	Hypotension, bradycardia, headache, pruritus, nausea, vomiting, dizziness, anxiety, tinnitus, dyspnea, cardiac arrest, arrhythmias, seizures, syncope, chills

Note: Most side effects are manifestations of excessive plasma concentrations.

Anesthetics: Local Topical

ANESTHETICS: LOCAL TOPICAL

Name	Indications	Peak Effect (min)	Duration (min)
Amides			
Dibucaine (Nupercainal)	Skin	Less than 5	15–45
Lidocaine (p. 687)	Skin, mucous membranes	2–5	15–45
Esters			
Benzocaine	Skin, mucous membranes	Less than 5	15–45
Cocaine	Mucous membranes	2–5	30–60
Tetracaine (Pontocaine)	Skin, mucous membranes	3–8	30–60

Angiotensin-Converting Enzyme (ACE) Inhibitors

USES	ACTION
Treatment of hypertension (HTN), adjunctive therapy for CHF.	*Antihypertensive:* Exact mechanism unknown. May be related to competitive inhibition of angiotensin I converting enzyme (ACE) activity causing decreased conversion of angiotensin I to angiotensin II, a potent vasoconstrictor. Reduces peripheral arterial resistance. *Congestive heart failure:* Decreases peripheral vascular resistance (afterload), pulmonary capillary wedge pressure (preload); improves cardiac output, exercise tolerance.

ACE INHIBITORS

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Benazepril (p. 119) (Lotensin)	**T:** 5 mg, 10 mg, 20 mg, 40 mg	HTN	**HTN:** 5–80 mg	Headaches, dizziness, fatigue, cough
Captopril (p. 177) (Capoten)	**T:** 12.5 mg, 25 mg, 50 mg, 100 mg	HTN CHF	**HTN:** 50–450 mg **CHF:** 12.5–450 mg	Insomnia, headaches, dizziness, fatigue, GI complaints, cough, rash
Enalapril (p. 406) (Vasotec)	**T:** 2.5 mg, 5 mg, 10 mg, 20 mg **IV:** 1.25 mg/ml	HTN CHF	**HTN:** 10–40 mg; (**IV:** 1.25 mg q6h) **CHF:** 5–20 mg	Chest pain, hypotension, headaches, fatigue, dizziness
Fosinopril (p. 517) (Monopril)	**T:** 10 mg, 20 mg, 40 mg	HTN CHF	**HTN:** 10–80 mg **CHF:** 20–40 mg	Hypotension, nausea, vomiting, cough
Lisinopril (p. 697) (Prinivil, Zestril)	**T:** 2.5 mg, 5 mg, 10 mg, 20 mg, 40 mg	HTN CHF	**HTN:** 10–40 mg **CHF:** 5–20 mg	Chest pain, hypotension, headaches, dizziness, fatigue, diarrhea
Moexipril (Univasc)	**T:** 7.5 mg, 15 mg	HTN	**HTN:** 7.5–30 mg	Dizziness, fatigue, diarrhea, cough
Perindopril (Aceon)	**T:** 2 mg, 4 mg, 6 mg	HTN	**HTN:** 4–16 mg	Hypotension, dizziness, fatigue, syncope, cough
Quinapril (p. 1009) (Accupril)	**T:** 5 mg, 10 mg, 20 mg, 40 mg	HTN CHF	**HTN:** 10–80 mg **CHF:** 10–40 mg	Chest pain, hypotension, headaches, dizziness, fatigue, diarrhea, nausea, vomiting, cough
Ramipril (p. 1018) (Altace)	**C:** 1.25 mg, 2.5 mg, 5 mg, 10 mg	HTN CHF	**HTN:** 2.5–20 mg **CHF:** 1.25–10 mg	Hypotension, headaches, dizziness, cough
Trandolapril (Mavik)	**T:** 1 mg, 2 mg, 4 mg	HTN CHF	**HTN:** 1–4 mg **CHF:** 1–4 mg	Dizziness, dyspepsia, cough, asthenia (loss of strength, energy), syncope, myalgia

C, Capsules; ***CHF,*** congestive heart failure; ***HTN,*** hypertension; ***IV,*** intravenous; ***T,*** tablets.

Angiotensin II Receptor Antagonists

USES

Treatment of hypertension (HTN) alone or in combination with other antihypertensives. Treatment of heart failure (HF).

ACTION

Angiotensin II receptor antagonists (AIIRA) block vasoconstrictor and aldosterone-secreting effects on angiotensin II by selectively blocking the binding of angiotensin II to AT_1 receptors in vascular smooth muscle and adrenal gland, causing vasodilation and a decrease in aldosterone effects.

ANGIOTENSIN II RECEPTOR ANTAGONISTS

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Azilsartan (p. 103)	**T:** 40 mg, 80 mg	HTN	40–80 mg	Diarrhea, hypotension
Candesartan (p. 174) (Atacand)	**T:** 4 mg, 8 mg, 16 mg, 32 mg	HTN HF	8–32 mg 4–32 mg	Headaches, upper respiratory tract infection, pain, dizziness
Eprosartan (p. 424) (Teveten)	**T:** 400 mg, 600 mg	HTN	400–800 mg	Headaches, upper respiratory tract infection, myalgia
Irbesartan (p. 629) (Avapro)	**T:** 75 mg, 150 mg, 300 mg	HTN Nephropathy	75–300 mg 300 mg	Headaches, upper respiratory tract infection
Losartan (p. 713) (Cozaar)	**T:** 25 mg, 50 mg, 100 mg	HTN Nephropathy	25–100 mg 100 mg	Dizziness, headaches, upper respiratory tract infection, diarrhea, fatigue, cough
Olmesartan (p. 866) (Benicar)	**T:** 5 mg, 20 mg, 40 mg	HTN	20–40 mg	Headaches, upper respiratory tract infection, flu-like symptoms, dizziness, bronchitis, rhinitis, back pain, pharyngitis, sinusitis, diarrhea, peripheral edema
Telmisartan (p. 1133) (Micardis)	**T:** 40 mg, 80 mg	HTN CV risk reduction	20–80 mg 80 mg	Upper respiratory tract infection, dizziness, back pain, sinusitis, diarrhea
Valsartan (p. 1225) (Diovan)	**T:** 80 mg, 160 mg	HTN HF Post MI	80–320 mg 80–320 mg 40–320 mg	Dizziness, headaches, upper respiratory tract infection, diarrhea, fatigue

CV, Cardiovascular; ***HF,*** heart failure; ***HTN,*** hypertension; ***MI,*** myocardial infarction; ***T,*** tablets.

Antacids

USES

Relief of symptoms associated with hyperacidity (e.g., heartburn, acid indigestion, sour stomach), hyperacidity associated with gastric/duodenal ulcers, treatment of pathologic gastric hypersecretion associated with Zollinger-Ellison syndrome, symptomatic treatment of gastroesophageal reflux disease (GERD), prevention and treatment of upper GI stress-induced ulceration and bleeding (esp. in ICU).

Aluminum hydroxide in conjunction with a low-phosphate diet to reduce elevated phosphate in pts with renal insufficiency. Calcium for calcium deficiency, magnesium for magnesium deficiency.

ACTION

Antacids act primarily in the stomach to neutralize gastric acid (increase pH). Antacids do not have a direct effect on acid output. The ability to increase pH depends on the dose, dosage form used, presence or absence of food in the stomach, and acid-neutralizing capacity (ANC). ANC is the number of mEq of hydrochloric acid that can be neutralized by a particular weight or volume of antacid.

Antacids reduce elevated phosphate by binding with phosphate in the intestine to form an insoluble complex, which is then eliminated.

ANTACIDS

Antacid	Brand Names	Availability	Dosage Range	Side Effects
Aluminum				
Hydroxide	Amphojel, Alu-Tab, Dialume	**T:** 300 mg, 500 mg, 600 mg **C:** 500 mg	500–1,500 mg 3–6 times/day	Chalky taste, mild constipation, abdominal cramps *Long-term use:* Neurotoxicity in dialysis pts, hypercalcemia, osteoporosis *Large doses:* Fecal impaction, peripheral edema

(continued)

ANTACIDS *(continued)*

Antacid	Brand Names	Availability	Dosage Range	Side Effects
Calcium				
Carbonate (p. 170)	Tums, Caltrate 600, Oyst-Cal 500	**T (chewable):** 500 mg, 750 mg, 1,000 mg **T:** 1,250 mg	500–1,500 mg as needed (**Maximum:** 7,000 mg in 24 hrs)	Chalky taste *Large doses:* Fecal impaction, peripheral edema, metabolic alkalosis *Long-term use:* Difficult/painful urination
Citrate	Calcitrate	**C:** 225 mg **T:** 200 mg	500–2,000 mg	Constipation, nausea, vomiting
Magnesium				
Hydroxide (p. 723)	Milk of Magnesia	**T (chewable):** 311 mg **L:** 400 mg/5 ml, 800 mg/5 ml	**T:** 622–1,244 mg up to 4 times/day **L:** 2.5–7.5 ml up to 4 times/day	Chalky taste, diarrhea, laxative effect, electrolyte imbalance (dizziness, irregular heartbeat, fatigue)
Oxide (p. 724)	Mag-Ox 400	**T:** 400 mg, 420 mg, 500 mg	400–800 mg/day	Same as above

C, Capsules; ***L,*** liquid; ***T,*** tablets.

Antianxiety Agents

USES

Treatment of anxiety including generalized anxiety disorder (GAD), panic disorder, obsessive-compulsive disorder (OCD), social anxiety disorder (SAD), posttraumatic stress disorder (PTSD), and acute stress disorder. In addition, some benzodiazepines are used as hypnotics, anticonvulsants to prevent delirium tremors during alcohol withdrawal, and as adjunctive therapy for relaxation of skeletal muscle spasms. Midazolam, a short-acting benzodiazepine, is used for preop sedation and relief of anxiety for short diagnostic/endoscopic procedures (see individual monograph for midazolam).

ACTION

Benzodiazepines are the largest and most frequently prescribed group of antianxiety agents. The exact mechanism is unknown, but they may increase the inhibiting effect of gamma-aminobutyric acid (GABA), which inhibits nerve impulse transmission by binding to specific benzodiazepine receptors in various areas of the central nervous system (CNS).

◀ALERT▶ Refer to individual entries of nonbenzodiazepine drugs for more information on uses and actions.

ANTIANXIETY AGENTS

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Benzodiazepine				
Alprazolam (p. 38) (Xanax)	**T:** 0.25 mg, 0.5 mg, 1 mg, 2 mg **S:** 0.5 mg/5 ml, 1 mg/ml **ER:** 0.5 mg, 1 mg, 2 mg, 3 mg **ODT:** 0.25 mg, 0.5 mg, 1 mg, 2 mg	Anxiety, panic disorder	0.75–10 mg	Drowsiness, weakness, fatigue, ataxia, slurred speech, confusion, lack of coordination, impaired memory, paradoxical agitation, dizziness, nausea
Chlordiazepoxide (p. 231) (Librium)	**C:** 5 mg, 10 mg, 25 mg **T:** 10 mg, 25 mg **I:** 100 mg	Anxiety, alcohol withdrawal	5–300 mg	Same as alprazolam
Clorazepate (p. 269) (Tranxene)	**C:** 3.75 mg, 7.5 mg, 15 mg **SD:** 11.25 mg, 22.5 mg	Anxiety, alcohol withdrawal, anticonvulsant	7.5–90 mg	Same as alprazolam
Diazepam (p. 342) (Valium)	**T:** 2.5 mg, 5 mg, 10 mg **S:** 5 mg/5 ml, 5 mg/ml **I:** 5 mg/ml	Anxiety, alcohol withdrawal, anticonvulsant, muscle relaxant	2–40 mg	Same as alprazolam

(continued)

Antiarrhythmics

USES	ACTION
Prevention and treatment of cardiac arrhythmias, such as premature ventricular contractions, ventricular tachycardia, premature atrial contractions, paroxysmal atrial tachycardia, atrial fibrillation and flutter.	The antiarrhythmics are divided into four classes based on their effects on certain ion channels and/or receptors located on the myocardial cell membrane. Class I is further divided into three subclasses (IA, IB, IC) based on electrophysiologic effects. *Class I:* Block cardiac sodium channels and slow conduction velocity, prolonging refractoriness and decreasing automaticity of sodium-dependent tissue. *Class IA:* Block sodium and potassium channels. *Class IB:* Shorten the repolarization phase. *Class IC:* No effect on repolarization phase, but slow conduction velocity. *Class II:* Slow sinus and atrioventricular (AV) nodal conduction. *Class III:* Block cardiac potassium channels, prolonging the repolarization phase of electrical cells. *Class IV:* Inhibit the influx of calcium through its channels, causing slower conduction through the sinus and AV nodes.

ANTIARRHYTHMICS

Name	Availability	Uses	Dosage Range	Side Effects
Class IA				
Disopyramide (p. 367) (Norpace, Norpace CR)	**C:** 100 mg, 150 mg **C (ER):** 100 mg, 150 mg	AF, WPW, PSVT, PVCs, VT	400–800 mg/day	Dry mouth, blurred vision, urinary retention, CHF, proarrhythmia, heart block, nausea, vomiting, diarrhea, hypoglycemia, nervousness
Procainamide (p. 983) (Procan-SR, Pronestyl)	**T:** 250 mg, 375 mg, 500 mg **C:** 250 mg, 375 mg, 500 mg **T (SR):** 250 mg, 500 mg, 750 mg, 1,000 mg **I:** 100 mg/ml, 500 mg/ml	AF, WPW, PVCs, VT	**A (PO):** 250–500 mg q3h; **(ER):** 250–750 mg q6h	Hypotension, fever, agranulocytosis, SLE, headaches, proarrhythmia, confusion, disorientation, GI symptoms, hypotension
Quinidine (Quinaglute, Quinidex)	**T:** 200 mg, 300 mg **T (ER):** 300 mg, 324 mg **I:** 80 mg/ml	AF, WPW, PVCs, VT	**A (PO):** 200–600 mg q2–4h; **(ER):** 300–600 mg q8h	Diarrhea, hypotension, nausea, vomiting, cinchonism, fever, bitter taste, heart block, thrombocytopenia, proarrhythmia
Class IB				
Lidocaine (p. 687) (Xylocaine)	**I:** 300 mg for IM **IV Infusion:** 2 mg/ml, 4 mg/ml	PVCs, VT, VF	**IV:** 50–100 mg bolus, then 1–4 mg/min infusion	Drowsiness, agitation, muscle twitching, seizures, paresthesia, proarrhythmia, slurred speech, tinnitus, cardiac depression, bradycardia, asystole
Mexiletine (Mexitil)	**C:** 150 mg, 200 mg, 250 mg	PVCs, VT, VF	**A:** 600–1,200 mg/day	Drowsiness, agitation, muscle twitching, seizures, paresthesia, proarrhythmia, nausea, vomiting, blood dyscrasias, hepatitis, fever
Tocainide (Tonocard)	**T:** 400 mg, 600 mg	PVCs, VT, VF	**A:** 1,200–1,800 mg/day	Drowsiness, agitation, muscle twitching, seizures, paresthesia, proarrhythmia, nausea, vomiting, diarrhea, agranulocytosis

Class IC				
Flecainide (Tambocor)	**T:** 50 mg, 100 mg, 150 mg	AF, PSVT, life-threatening ventricular arrhythmias	**A:** 200–400 mg/day	Dizziness, tremors, light-headedness, bradycardia, heart block, heart failure, GI upset, neutropenia, flushing, blurred vision, metallic taste, proarrhythmia
Propafenone (p. 992) (Rythmol)	**T:** 150 mg, 225 mg, 300 mg	PAF, WPW, life-threatening ventricular arrhythmias	**A:** 450–900 mg/day	Dizziness, blurred vision, altered taste, nausea, exacerbation of asthma, proarrhythmia, bradycardia, heart block, heart failure, GI upset, bronchospasm, hepatotoxicity
Class II (Beta-Blockers)				
Acebutolol (Sectral)	**C:** 200 mg, 400 mg	AF, A flutter, PSVT, PVCs	**A:** 600–1,200 mg/day	Bradycardia, hypotension, depression, nightmares, fatigue, sexual dysfunction, SLE, arthritis, myalgia
Esmolol (p. 436) (Brevibloc)	**I:** 10 mg/ml, 20 mg/ml	AF, A flutter, PSVT, PVCs	**A:** 50–200 mcg/kg/min	Hypotension, heart block, heart failure, bronchospasm
Propranolol (p. 996) (Inderal)	**T:** 10 mg, 20 mg	AF, A flutter, PSVT, PVCs	**A:** 10–30 mg 3–4 times/day	Bradycardia, hypotension, depression, nightmares, fatigue, sexual dysfunction, heart block, bronchospasm
Class III				
Amiodarone (p. 50) (Cordarone, Pacerone)	**T:** 200 mg, 400 mg **I:** 50 mg/ml	AF, PAF, PSVT, life-threatening ventricular arrhythmias	**A (PO):** 800–1,600 mg/day for 1–3 wks, then 600–800 mg/day **(IV):** 150 mg bolus, then IV infusion	Blurred vision, photophobia, constipation, ataxia, proarrhythmia, pulmonary fibrosis, bradycardia, heart block, hyperthyroidism or hypothyroidism, peripheral neuropathy, GI upset, blue-gray skin, optic neuritis, hypotension

(continued)

ANTIARRHYTHMICS *(continued)*

Name	Availability	Uses	Dosage Range	Side Effects
Dofetilide (p. 373) (Tikosyn)	**C:** 125 mcg, 250 mcg, 500 mcg	AF, A flutter	**A:** Individualized	Torsade de pointes, hypotension
Dronedarone (p. 391) (Multaq)	**T:** 400 mg	AF, A flutter	**A (PO):** 400 mg 2 times/day	Diarrhea, nausea, abdominal pain, vomiting, asthenia (loss of strength, energy)
Ibutilide (Corvert)	**I:** 0.1 mg/ml	AF, A flutter	**A (greater than 60 kg):** 1 mg over 10 min; **(less than 60 kg):** 0.01 mg/kg over 10 min	Torsade de pointes
Sotalol (p. 1100) (Betapace)	**T:** 80 mg, 120 mg, 160 mg, 240 mg	AF, PAF, PSVT, life-threatening ventricular arrhythmias	**A:** 160–640 mg/day	Fatigue, dizziness, dyspnea, bradycardia, proarrhythmia, heart block, hypotension, bronchospasm
Class IV (Calcium Channel Blockers)				
Diltiazem (p. 356) (Cardizem)	**I:** 25 mg/ml vials **Infusion:** 1 mg/ml	AF, A flutter, PSVT	**A (IV):** 20–25 mg bolus, then infusion of 5–15 mg/hr	Hypotension, bradycardia, dizziness, headaches, heart block, asystole, heart failure
Verapamil (p. 1239) (Calan, Isoptin)	**I:** 5 mg/2 ml	AF, A flutter, PSVT	**A (IV):** 5–10 mg	Hypotension, bradycardia, dizziness, headaches, constipation, heart block, heart failure, asystole, fatigue, edema, nausea

Antibiotics

USES

Treatment of wide range of gram-positive or gram-negative bacterial infections, suppression of intestinal flora before surgery, control of acne, prophylactically to prevent rheumatic fever, prophylactically in high-risk situations (e.g., some surgical procedures or medical conditions) to prevent bacterial infection.

ACTION

Antibiotics (antimicrobial agents) are natural or synthetic compounds that have the ability to kill or suppress the growth of microorganisms.

One means of classifying antibiotics is by their antimicrobial spectrum. Narrow-spectrum agents are effective against few microorganisms (e.g., aminoglycosides are effective against gram-negative aerobes), whereas broad-spectrum agents are effective against a wide variety of microorganisms (e.g., fluoroquinolones are effective against gram-positive cocci and gram-negative bacilli).

Antimicrobial agents may also be classified based on their mechanism of action.

- Agents that inhibit cell wall synthesis or activate enzymes that disrupt the cell wall, causing a weakening in the cell, cell lysis, and death. Include penicillins, cephalosporins, vancomycin, imidazole antifungal agents.
- Agents that act directly on the cell wall, affecting permeability of cell membranes, causing leakage of intracellular substances. Include antifungal agents amphotericin and nystatin, polymyxin, colistin.
- Agents that bind to ribosomal subunits, altering protein synthesis and eventually causing cell death. Include aminoglycosides.
- Agents that affect bacterial ribosome function, altering protein synthesis and causing slow microbial growth. Do not cause cell death. Include chloramphenicol, clindamycin, erythromycin, tetracyclines.
- Agents that inhibit nucleic acid metabolism by binding to nucleic acid or interacting with enzymes necessary for nucleic acid synthesis. Inhibit DNA or RNA synthesis. Include rifampin, metronidazole, fluoroquinolones (e.g., ciprofloxacin).
- Agents that inhibit specific metabolic steps necessary for microbial growth, causing a decrease in essential cell components or synthesis of nonfunctional analogues of normal metabolites. Include trimethoprim, sulfonamides.
- Agents that inhibit viral DNA synthesis by binding to viral enzymes necessary for DNA synthesis, preventing viral replication. Include acyclovir, vidarabine.

Antibiotics *(continued)*

SELECTION OF ANTIMICROBIAL AGENTS

The goal of therapy is to achieve antimicrobial action at the site of infection sufficient to inhibit the growth of the microorganism. The agent selected should be the most active against the most likely infecting organism, least likely to cause toxicity or allergic reaction. Factors to consider in selection of an antimicrobial agent include the following:

- Sensitivity pattern of the infecting microorganism
- Location and severity of infection (may determine route of administration)
- Pt's ability to eliminate the drug (status of renal and hepatic function)
- Pt's defense mechanisms (includes both cellular and humoral immunity)
- Pt's age, pregnancy status, genetic factors, allergies, CNS disorder, preexisting medical problems

CATEGORIZATION OF ORGANISMS BY GRAM STAINING

Gram-Positive Cocci	Gram-Negative Cocci	Gram-Positive Bacilli	Gram-Negative Bacilli
Aerobic	**Aerobic**	**Aerobic**	**Aerobic**
Staphylococcus aureus	*Neisseria gonorrhoeae*	*Listeria monocytogenes*	*Escherichia coli*
Staphylococcus epidermidis	*Neisseria meningitidis*	*Bacillus anthracis*	*Klebsiella pneumoniae*
Streptococcus pneumoniae	*Moraxella catarrhalis*	*Corynebacterium diphtheriae*	*Proteus mirabilis*
Streptococcus pyogenes		**Anaerobic**	*Serratia marcescens*
Viridans streptococci		*Clostridium difficile*	*Acinetobacter* spp.
Enterococcus faecalis		*Clostridium perfringens*	*Pseudomonas aeruginosa*
Enterococcus faecium		*Clostridium tetani*	*Enterobacter* spp.
Anaerobic		*Actinomyces* spp.	*Haemophilus influenzae*
Peptostreptococcus spp.			*Legionella pneumophila*
Peptococcus spp.			**Anaerobic**
			Bacteroides fragilis
			Fusobacterium spp.

Antibiotic: Aminoglycosides

USES

Treatment of serious infections when other less toxic agents are not effective, are contraindicated, or require adjunctive therapy (e.g., with penicillins or cephalosporins). Used primarily in the treatment of infections caused by gram-negative microorganisms, such as those caused by *Proteus, Klebsiella, Pseudomonas, Escherichia coli, Serratia,* and *Enterobacter*. Inactive against most gram-positive microorganisms. Not well absorbed systemically from GI tract (must be administered parenterally for systemic infections). Oral agents are given to suppress intestinal bacteria.

ACTION

Bactericidal. Transported across bacterial cell membrane; irreversibly bind to specific receptor proteins of bacterial ribosomes. Interfere with protein synthesis, preventing cell reproduction and eventually causing cell death.

ANTIBIOTIC: AMINOGLYCOSIDES

Name	Availability	Dosage Range	Side Effects
Amikacin (p. 48) (Amikin)	**I:** 50 mg/ml, 250 mg/ml	**A:** 15 mg/kg/day **C:** 15 mg/kg/day	Nephrotoxicity, neurotoxicity, ototoxicity (both auditory and vestibular), hypersensitivity (skin itching, redness, rash, swelling)
Gentamicin (p. 537) (Garamycin)	**I:** 10 mg/ml, 40 mg/ml	**A:** 3–5 mg/kg/day **C:** 6–7.5 mg/kg/day	Same as amikacin
Neomycin	**T:** 500 mg	**A:** 1 g for 3 doses as preop	Nausea, vomiting, diarrhea
Tobramycin (p. 1177) (Nebcin)	**I:** 10 mg/ml, 40 mg/ml	**A:** 3–5 mg/kg/day **C:** 6–7.5 mg/kg/day	Same as amikacin

A, Adults; ***C*** *(dosage),* children; ***I,*** injection; ***T,*** tablets.

Antibiotic: Cephalosporins

USES

Broad-spectrum antibiotics, which, like penicillins, may be used in a number of diseases, including respiratory diseases, skin and soft tissue infection, bone/joint infections, GU infections, prophylactically in some surgical procedures.

First-generation cephalosporins have activity against gram-positive organisms (e.g., streptococci and most staphylococci) and activity against most gram-negative organisms, including *Escherichia coli, Klebsiella pneumoniae, Proteus mirabilis, Salmonella,* and *Shigella.*

ACTION

Second-generation cephalosporins have same effectiveness as first-generation and increased activity against gram-negative organisms, including *H. influenzae, Neisseria, Enterobacter,* and several anaerobic organisms.

Third-generation cephalosporins are less active against gram-positive organisms but more active against the Enterobacteriaceae with some activity against *Pseudomonas aeruginosa, Serratia* spp., and *Acinetobacter* spp.

Fourth-generation cephalosporins have good activity against gram-positive organisms (e.g., *Staphylococcus aureus*) and gram-negative organisms (e.g., *Pseudomonas aeruginosa, E. coli, Klebsiella,* and *Proteus*).

Fifth-generation cephalosporins have good activity against gram-positive organisms (e.g., *Staphylococcus aureus, Streptococcus* spp.) and gram-negative organisms (e.g., *E. coli, Klebsiella* spp.).

Cephalosporins inhibit cell wall synthesis or activate enzymes that disrupt the cell wall, causing cell lysis and cell death. May be bacteriostatic or bactericidal. Most effective against rapidly dividing cells.

ANTIBIOTIC: CEPHALOSPORINS

Name	Availability	Dosage Range	Side Effects
First-Generation			
Cefadroxil (p. 196) (Duricef)	**C:** 500 mg **T:** 1 g **S:** 125 mg/5 ml, 250 mg/5 ml, 500 mg/5 ml	**A:** 1–2 g/day **C:** 30 mg/kg/day	Abdominal cramps/pain, fever, nausea, vomiting, diarrhea, headaches, oral/vaginal candidiasis
Cefazolin (p. 198) (Ancef)	**I:** 500 mg, 1 g, 2 g	**A:** 0.75–6 g/day **C:** 25–100 mg/kg/day	Same as cefadroxil

Cephalexin (p. 223) **(Keflex, Keftab)**	**C:** 250 mg, 500 mg **T:** 250 mg, 500 mg, 1 g	**A:** 1–4 g/day **C:** 25–100 mg/kg/day	Same as cefadroxil
Second-Generation			
Cefaclor (p. 195) **(Ceclor)**	**C:** 250 mg, 500 mg **T (ER):** 500 mg **S:** 125 mg/5 ml, 187 mg/5 ml, 250 mg/5 ml, 375 mg/5 ml	**A:** 250–500 mg q8h **C:** 20–40 mg/kg/day	Same as cefadroxil May have serum sickness–like reaction
Cefotetan	**I:** 1 g, 2 g	**A:** 1–6 g/day	Same as cefadroxil May cause unusual bleeding/ecchymoses
Cefoxitin (p. 207) **(Mefoxin)**	**I:** 1 g, 2 g	**A:** 3–12 g/day	Same as cefadroxil
Cefprozil (p. 211) **(Cefzil)**	**T:** 250 mg, 500 mg **S:** 125 mg/5 ml, 250 mg/5 ml	**A:** 0.5–1 g/day **C:** 30 mg/kg/day	Same as cefadroxil
Cefuroxime (p. 219) **(Ceftin, Kefurox, Zinacef)**	**T:** 125 mg, 250 mg, 500 mg **S:** 125 mg/5 ml, 250 mg/5 ml **I:** 750 mg, 1.5 g	**A (PO):** 0.25–1 g/day; **(IM/IV):** 2.25–9 g/day **C (PO):** 250–500 mg/day; **(IM/IV):** 50–100 mg/kg/day	Same as cefadroxil

(continued)

ANTIBIOTIC: CEPHALOSPORINS *(continued)*

Name	Availability	Dosage Range	Side Effects
Third-Generation			
Cefdinir (p. 200) (Omnicef)	**C:** 300 mg **S:** 125 mg/5 ml	**A:** 600 mg/day **C:** 14 mg/kg/day	Same as cefadroxil
Cefditoren (Spectracef)	**T:** 200 mg	**A:** 400–800 mg/day	Same as cefadroxil
Cefotaxime (p. 205) (Claforan)	**I:** 500 mg, 1 g, 2 g	**A:** 2–12 g/day **C:** 100–200 mg/kg/day	Same as cefadroxil
Cefpodoxime (p. 209) (Vantin)	**T:** 100 mg, 200 mg **S:** 50 mg/5 ml, 100 mg/5 ml	**A:** 200–800 mg/day **C:** 10 mg/kg/day	Same as cefadroxil
Ceftazidime (p. 214) (Fortaz, Tazicef, Tazidime)	**I:** 500 mg, 1 g, 2 g	**A:** 0.5–6 g/day **C:** 90–150 mg/kg/day	Same as cefadroxil
Ceftibuten (p. 216) (Cedax)	**C:** 400 mg **S:** 90 mg/5 ml, 180 mg/5 ml	**A:** 400 mg/day **C:** 9 mg/kg/day	Same as cefadroxil
Ceftizoxime (Cefizox)	**I:** 500 mg, 1 g, 2 g	**A:** 1–12 g/day **C:** 150–200 mg/kg/day	Same as cefadroxil
Ceftriaxone (p. 217) (Rocephin)	**I:** 250 mg, 500 mg, 1 g, 2 g	**A:** 1–4 g/day **C:** 50–100 mg/kg/day	Same as cefadroxil
Fourth-Generation			
Cefepime (p. 201) (Maxipime)	**I:** 500 mg, 1 g, 2 g	**A:** 1–6 g/day	Same as cefadroxil
Fifth-Generation			
Ceftaroline (p. 212) (Teflaro)	**I:** 500 mg	**A:** 600 mg q12h	Same as cefadroxil

A, Adults; ***C,*** capsules; ***C** (dosage),* children; ***ER,*** extended-release; ***I,*** injection; ***S,*** suspension; ***T,*** tablets.

Antibiotic: Fluoroquinolones

USES

Fluoroquinolones act against a wide range of gram-negative and gram-positive organisms. They are used primarily in the treatment of lower respiratory infections, skin/skin structure infections, UTIs, and sexually transmitted diseases.

ACTION

Bactericidal. Inhibit DNA gyrase in susceptible microorganisms, interfering with bacterial DNA replication and repair.

ANTIBIOTIC: FLUOROQUINOLONES

Name	Availability	Dosage Range	Side Effects
Ciprofloxacin (p. 244) (Cipro)	**T:** 100 mg, 250 mg, 500 mg, 750 mg **S:** 250 mg/5 ml, 500 mg/5 ml **I:** 200 mg, 400 mg	**A (PO):** 250–750 mg q12h; **(IV):** 200–400 mg q12h	Dizziness, headaches, anxiety, drowsiness, insomnia, abdominal pain, nausea, diarrhea, vomiting, phlebitis (parenteral)
Gemifloxacin (p. 536) (Factive)	**T:** 320 mg	**A:** 320 mg/day	Same as ciprofloxacin
Levofloxacin (p. 682) (Levaquin)	**T:** 250 mg, 500 mg, 750 mg **I:** 250 mg, 500 mg, 750 mg **OS:** 250 mg/10 ml	**A (PO/IV):** 250–750 mg/day as single dose	Same as ciprofloxacin
Moxifloxacin (p. 801) (Avelox)	**T:** 400 mg **I:** 400 mg	**A:** 400 mg/day	Same as ciprofloxacin; may prolong QT interval
Norfloxacin (p. 852) (Noroxin)	**T:** 400 mg	**A:** 400 mg q12h	Same as ciprofloxacin
Ofloxacin (p. 861)	**T:** 200 mg, 300 mg, 400 mg	**A:** 200–400 mg q12h	Same as ciprofloxacin

A, Adults; ***I,*** injection; ***OS,*** oral solution; ***S,*** suspension; ***T,*** tablets.

Antibiotic: Macrolides

USES	ACTION
Macrolides act primarily against most gram-positive microorganisms and some gram-negative cocci. Azithromycin and clarithromycin appear to be more potent than erythromycin. Macrolides are used in the treatment of pharyngitis/tonsillitis, sinusitis, chronic bronchitis, pneumonia, uncomplicated skin/skin structure infections.	Bacteriostatic or bactericidal. Reversibly bind to the P site of the 50S ribosomal subunit of susceptible organisms, inhibiting RNA-dependent protein synthesis.

ANTIBIOTIC: MACROLIDES

Name	Availability	Dosage Range	Side Effects
Azithromycin (p. 104) (Zithromax)	**T:** 250 mg, 600 mg **S:** 100 mg/5 ml, 200 mg/5 ml, 1-g packet **I:** 500 mg	**A (PO):** 500 mg once, then 250 mg on days 2–5; **(IV):** 500 mg/day **C (PO):** 10 mg/kg once, then 5 mg/kg/day on days 2–5	**PO:** Nausea, diarrhea, vomiting, abdominal pain **IV:** Pain, redness, swelling at injection site
Clarithromycin (p. 253) (Biaxin)	**T:** 250 mg, 500 mg **T (XL):** 500 mg **S:** 125 mg/5 ml	**A:** 250–500 mg q12h **C:** 7.5 mg/kg q12h	Headaches, loss of taste, nausea, vomiting, diarrhea, abdominal pain/discomfort
Erythromycin (p. 432) (EES, Eryc, EryPed, Ery-Tab, Erythrocin, PCE)	**T:** 200 mg, 250 mg, 333 mg, 400 mg, 500 mg **C:** 250 mg **S:** 100 mg/2.5 ml, 125 mg/5 ml, 200 mg/5 ml, 250 mg/5 ml, 400 mg/5 ml	**A (PO):** 250–500 mg q6h **C (PO):** 30–50 mg/kg/day **A, C (IV):** 15–20 mg/kg/day **Maximum:** 4 g/day	**PO:** Nausea, vomiting, diarrhea, abdominal pain **IV:** Inflammation, phlebitis at injection site

A, Adults; ***C,*** capsules; ***C (dosage),*** children; ***I,*** injection; ***S,*** suspension; ***T,*** tablets; ***XL,*** long-acting.

Antibiotic: Penicillins

USES

Penicillins (also referred to as beta-lactam antibiotics) may be used to treat a large number of infections, including pneumonia and other respiratory diseases, UTIs, septicemia, meningitis, intra-abdominal infections, gonorrhea and syphilis, bone/joint infection.

Penicillins are classified based on an antimicrobial spectrum:

Natural penicillins are very active against gram-positive cocci but ineffective against most strains of *Staphylococcus aureus* (inactivated by enzyme penicillinase).

Penicillinase-resistant penicillins are effective against penicillinase-producing *Staphylococcus aureus* but are less effective against gram-positive cocci than the natural penicillins.

Broad-spectrum penicillins are effective against gram-positive cocci and some gram-negative bacteria (e.g., *Haemophilus influenzae, Escherichia coli, Proteus mirabilis, Salmonella,* and *Shigella*).

Extended-spectrum penicillins are effective against gram-negative organisms, including *Pseudomonas aeruginosa, Enterobacter, Proteus* spp., *Klebsiella, Serratia* spp., and *Acinetobacter* spp.

ACTION

Penicillins inhibit cell wall synthesis or activate enzymes, which disrupt the bacterial cell wall, causing cell lysis and cell death. May be bacteriostatic or bactericidal. Most effective against bacteria undergoing active growth and division.

ANTIBIOTIC: PENICILLINS

Name	Availability	Dosage Range	Side Effects
Natural			
Penicillin G benzathine (p. 926) (Bicillin, Bicillin LA)	**I:** 600,000 units, 1.2 million units, 2.4 million units	**A:** 1.2 million units/day **C:** 0.3–1.2 million units/day	Mild diarrhea, nausea, vomiting, headaches, sore mouth/tongue, vaginal itching/discharge, allergic reaction (including anaphylaxis, skin rash, urticaria, pruritus)
Penicillin G potassium (p. 927) (Pfizerpen)	**I:** 1, 2, 3, 5 million-unit vials	**A:** 2–24 million units/day **C:** 100,000–250,000 units/kg/day	Same as penicillin G benzathine
Penicillin V potassium (p. 928) (Apo-Pen-VK)	**T:** 250 mg, 500 mg **S:** 125 mg/5 ml, 250 mg/5 ml	**A:** 0.5–2 g/day **C:** 25–50 mg/kg/day	Same as penicillin G benzathine
Penicillinase-Resistant			
Dicloxacillin (Dynapen, Pathocil)	**C:** 125 mg, 250 mg, 500 mg **S:** 62.5 mg/5 ml	**A:** 1–2 g/day **C:** 12.5–25 mg/kg/day	Same as penicillin G benzathine Increased risk of hepatotoxicity
Nafcillin (p. 809) (Unipen)	**C:** 250 mg **I:** 500 mg, 1 g, 2 g	**A (PO):** 1–6 g/day; **(IV):** 2–6 g/day **C (PO):** 25–50 mg/kg/day; **(IV):** 50 mg/kg/day	Same as penicillin G benzathine Increased risk of interstitial nephritis
Oxacillin (Bactocill)	**C:** 250 mg, 500 mg **S:** 250 mg/5 ml **I:** 250 mg, 500 mg, 1 g, 2 g	**A (PO/IV):** 2–6 g/day **C (PO/IV):** 50–100 mg/kg/day	Same as penicillin G benzathine Increased risk of hepatotoxicity, interstitial nephritis

Broad-Spectrum			
Amoxicillin (p. 56) **(Amoxil, Trimox)**	**T:** 125 mg, 250 mg, 500 mg, 875 mg **C:** 250 mg, 500 mg **S:** 50 mg/ml, 125 mg/5 ml, 250 mg/5 ml	**A:** 0.75–1.5 g/day **C:** 20–40 mg/kg/day	Same as penicillin G benzathine
Amoxicillin/clavulanate (p. 58) **(Augmentin)**	**T:** 250 mg, 500 mg, 875 mg **T (chewable):** 125 mg, 200 mg, 250 mg, 400 mg **S:** 125 mg/5 ml, 200 mg/5 ml, 250 mg/5 ml, 400 mg/5 ml	**A:** 0.75–1.5 g/day **C:** 20–40 mg/kg/day	Same as penicillin G benzathine
Ampicillin (p. 62) **(Principen)**	**C:** 250 mg, 500 mg **S:** 125 mg/5 ml, 250 mg/5 ml **I:** 125 mg, 250 mg, 500 mg, 1 g, 2 g	**A:** 1–12 g/day **C:** 50–200 mg/kg/day	Same as penicillin G benzathine
Ampicillin/sulbactam (p. 64) **(Unasyn)**	**I:** 1.5 g, 3 g	**A:** 6–12 g/day **C:** 100–200 mg/kg/day	Same as penicillin G benzathine
Extended-Spectrum			
Piperacillin/tazobactam (p. 951) **(Zosyn)**	**I:** 2.25 g, 3.375 g, 4.5 g	**A:** 2.25–4.5 g q6–8h **C:** 200–400 mg/kg/day	Same as penicillin G benzathine
Ticarcillin/clavulanate **(Timentin)**	**I:** 3.1 g	**A:** 3.1 g q4–6h **C:** 200–300 mg/kg/day	Same as penicillin G benzathine

A, Adults; ***C,*** capsules; ***C** (dosage),* children; ***I,*** injection; ***S,*** suspension; ***T,*** tablets.

Anticoagulants/Antiplatelets/Thrombolytics

USES

Treatment and prevention of venous thromboembolism, acute MI, acute cerebral embolism; reduce risk of acute MI; reduce total mortality in pts with unstable angina; prevent occlusion of saphenous grafts following open heart surgery; prevent embolism in select pts with atrial fibrillation, prosthetic heart valves, valvular heart disease, cardiomyopathy. Heparin also used for acute/chronic consumption coagulopathies (disseminated intravascular coagulation).

ACTION

Anticoagulants: Inhibit blood coagulation by preventing the formation of new clots and extension of existing ones *but do not dissolve formed clots.* Anticoagulants are subdivided into three classes. *Heparin* (including low molecular weight heparin): Indirectly interferes with blood coagulation by blocking the conversion of prothrombin to thrombin and fibrinogen to fibrin. *Coumarin:* Acts indirectly to prevent synthesis in the liver of vitamin K–dependent clotting factors. *Direct Thrombin Inhibitors:* Inhibit thrombin from converting fibrinogen to fibrin.

Antiplatelets: Interfere with platelet aggregation. Effects are irreversible for life of platelet. Medications in this group act by different mechanisms. Aspirin irreversibly inhibits cyclo-oxygenase, irreversibly inhibits formation of thromboxane A_2. Clopidogrel, dipyridamole, prasugrel, and ticlopidine have similar effects as aspirin and are known as adenosine diphosphate (ADP) inhibitors. Abciximab, eptifibatide, and tirofiban block binding of fibrinogen to the glycoprotein IIb/IIIa receptor on platelet surface (known as platelet glycoprotein IIb/IIIa receptor antagonists).

Thrombolytics: Act directly or indirectly on fibrinolytic system to dissolve clots (converting plasminogen to plasmin, an enzyme that digests fibrin clot).

ANTICOAGULANTS/ANTIPLATELETS/THROMBOLYTICS

Name	Availability	Uses	Side Effects
Anticoagulants			
Direct Thrombin Inhibitors			
Argatroban (p. 73)	**I:** 100 mg/ml	Prevent/treat VTE in pts with HIT or at risk for HIT undergoing PCI	Bleeding, hypotension

Bivalirudin (p. 137) (Angiomax)	**I:** 250-mg vials	Pts with unstable angina undergoing PTCA	Bleeding, hypotension, pain, headache, nausea
Dabigatran (Pradaxa)	**C:** 75 mg, 150 mg	Reduce risk for stroke/embolism with nonvalvular atrial fibrillation	Bleeding, gastritis
Desirudin (Iprivask)	**I:** 15 mg	Hip surgery	Bleeding
Lepirudin (p. 671) (Refludan)	**I:** 50-mg vials	Prevent VTE in pts with HIT	Anemia
Heparin, Low Molecular Weight Heparins			
Dalteparin (p. 299) (Fragmin)	**I:** 2,500 units, 5,000 units, 7,500 units, 10,000 units	Hip surgery, abdominal surgery, unstable angina or non–Q-wave MI	Bleeding, hematoma, increased ALT, AST, pain at injection site, bruising
Enoxaparin (p. 409) (Lovenox)	**I:** 30 mg, 40 mg, 60 mg, 80 mg, 100 mg, 120 mg, 150 mg	Hip surgery, knee surgery, abdominal surgery, unstable angina or non–Q-wave MI, acute illness	Bleeding, thrombocytopenia, hematoma, increased ALT, AST, nausea, bruising
Fondaparinux (p. 510) (Arixtra)	**I:** 2.5 mg	Hip surgery, knee surgery	Bleeding, thrombocytopenia, hematoma, fever, nausea, anemia
Heparin (p. 560)	**I:** 1,000 units/ml, 2,500 units/ml, 5,000 units/ml, 7,500 units/ml, 10,000 units/ml, 20,000 units/ml	Prevent/treat VTE	Bleeding, thrombocytopenia, skin rash, itching, burning
Rivaroxaban (p. 1049) (Xarelto)	**T:** 10 mg	Prevent DVT post knee, hip replacement Prevent thromboembolism in atrial fibrillation	Bleeding
Tinzaparin (p. 1171) (Innohep)	**I:** 20,000 units/ml vials	Treatment of VTE (with warfarin)	Bleeding, thrombocytopenia, increased ALT, injection site hematoma

HIT, Heparin-induced thrombocytopenia; ***I,*** injection; ***MI,*** myocardial infarction; ***PCI,*** percutaneous coronary intervention; ***PO,*** oral; ***PTCA,*** percutaneous transluminal coronary angioplasty; ***T,*** tablet; ***VTE,*** venous thromboembolism.

(continued)

ANTICOAGULANTS/ANTIPLATELETS/THROMBOLYTICS *(continued)*

Name	Availability	Uses	Side Effects
Coumarin			
Warfarin (p. 1262) (Coumadin)	**PO:** 1 mg, 2 mg, 2.5 mg, 3 mg, 4 mg, 5 mg, 6 mg, 7.5 mg, 10 mg **I:** 5 mg	Prevent/treat VTE in pts; prevent systemic embolism in pts with heart valve replacement, valve heart disease, MI, atrial fibrillation	Bleeding, skin necrosis, anorexia, nausea, vomiting, diarrhea, rash, abdominal cramps, purple toe syndrome
Antiplatelets			
Abciximab (p. 4) (ReoPro)	**I:** 2 mg/ml	Adjunct to PCI to prevent acute cardiac ischemic complications (with heparin and aspirin)	Bleeding, hypotension, nausea, vomiting, back pain, allergic reactions, thrombocytopenia
Aspirin (p. 83)	**PO:** 81 mg, 165 mg, 325 mg, 500 mg, 650 mg	TIA Prevention of reinfarction and thromboembolism post MI	Tinnitus, dizziness, hypersensitivity, dyspepsia, minor bleeding, GI ulceration
Clopidogrel (p. 268) (Plavix)	**PO:** 75 mg	Reduce risk of stroke, MI, or vascular death in pts with recent MI, noncardioembolic stroke, peripheral artery disease. Reduce CV death, MI, stroke, reinfarction in pts with non-STEMI/STEMI	Bleeding
Dipyridamole (p. 365) (Persantine)	**PO:** 25 mg, 50 mg, 75 mg	Prevent postop thromboembolic complications following cardiac valve replacement	Dizziness, GI distress

Eptifibatide (p. 426) (Integrilin)	**I:** 0.75 mg/ml, 2 mg/ml	Treatment of acute coronary syndrome	Bleeding, hypotension
Prasugrel (Effient)	**PO:** 5 mg, 10 mg	Reduce thrombotic cardiovascular events in pts with ACS to be managed with PCI (including stenting)	Bleeding, hypotension
Ticagrelor (p. 1164) (Brilinta)	**PO:** 90 mg	Reduce thrombotic cardiovascular events in pts with ACS	Bleeding, dyspnea
Ticlopidine (p. 1165) (Ticlid)	**PO:** 250 mg	Reduce risk stroke in pts with CVA precursors, TIA Prevention of stent thrombosis	Neutropenia, agranulocytosis, thrombocytopenia, aplastic anemia, increased serum cholesterol/triglycerides, rash, diarrhea, nausea, vomiting, GI pain
Tirofiban (Aggrastat)	**I:** 50 mcg/ml, 250 mcg/ml	Treatment of acute coronary syndrome	Bleeding, thrombocytopenia
Thrombolytics			
Alteplase (p. 41) (Activase)	**I:** 50 mg, 100 mg	Acute MI, acute ischemic stroke, pulmonary embolism	Bleeding, cholesterol embolism, arrhythmias
Reteplase (p. 1030) (Retavase)	**I:** 10.4 units	Acute MI	Bleeding, cholesterol embolism, arrhythmias
Tenecteplase (p. 1139) (TNKase)	**I:** 50 mg	Acute MI	Bleeding, cholesterol embolism, arrhythmias

ACS, Acute coronary syndrome; ***CVA,*** cerebrovascular attack; ***I,*** injection; ***MI,*** myocardial infarction; ***PCI,*** percutaneous coronary intervention; ***PO,*** oral; ***TIA,*** transient ischemic attack.

Anticonvulsants

USES

Anticonvulsants are used to treat seizures. Seizures can be divided into two broad categories: partial seizures and generalized seizures. *Partial seizures* begin focally in the cerebral cortex, undergoing limited spread. Simple partial seizures do not involve loss of consciousness but may evolve secondarily into generalized seizures. Complex partial seizures involve impairment of consciousness.

Generalized seizures may be convulsive or nonconvulsive and usually produce immediate loss of consciousness.

ACTION

Anticonvulsants can prevent or reduce excessive discharge of neurons with seizure foci or decrease the spread of excitation from seizure foci to normal neurons. The exact mechanism is unknown but may be due to (1) suppressing sodium influx, (2) suppressing calcium influx, or (3) increasing the action of gamma-aminobutyric acid (GABA), which inhibits neurotransmitters throughout the brain.

ANTICONVULSANTS

Name	Availability	Uses	Dosage Range	Side Effects
Carbamazepine (p. 180) (Carbatrol, Tegretol, Tegretol XR)	**S:** 100 mg/5 ml **T (chewable):** 100 mg **T:** 200 mg **T (ER):** 100 mg, 200 mg, 400 mg **C (ER):** 200 mg, 300 mg	Complex partial, tonic-clonic, mixed seizures; trigeminal neuralgia	**A:** 800–1,200 mg/day **C:** 400–800 mg/day	Dizziness, diplopia, leukopenia, drowsiness, blurred vision, headache, ataxia, nausea, vomiting, hyponatremia
Clonazepam (p. 264) (Klonopin)	**T:** 0.5 mg, 1 mg, 2 mg	Petit mal, akinetic, myoclonic, absence seizures	**A:** 1.5–20 mg/day	CNS depression, sedation, ataxia, confusion, depression, behavior disorders, respiratory depression
Ezogabine (p. 460) (Potiga)	**T:** 50 mg, 200 mg, 300 mg, 400 mg	Partial onset seizures	**A:** 600–1,200 mg/day	Dizziness, somnolence, fatigue, confusion, vertigo, tremor, diplopia, blurred vision, balance disorder

Fosphenytoin (p. 519) (Cerebyx)	**I:** 50 mg PE/ml	Status epilepticus, seizures occurring during neurosurgery	**A:** 15–20 mg PE/kg bolus, then 4–6 mg PE/kg/day maintenance	Burning, itching, paresthesia, nystagmus, ataxia
Gabapentin (p. 525) (Neurontin)	**C:** 100 mg, 300 mg, 400 mg	Partial seizures with and without secondary generalization	**A:** 900–1,800 mg/day	CNS depression, fatigue, drowsiness, dizziness, ataxia, nystagmus, blurred vision, confusion
Lacosamide (p. 655) (Vimpat)	**T:** 50 mg, 100 mg, 150 mg, 200 mg **S:** 10 mg/ml **I:** 10 mg/ml	Adjunctive therapy, partial seizures	**A:** 200–400 mg/day	Diplopia, headache, dizziness, nausea
Lamotrigine (p. 660) (Lamictal)	**T:** 25 mg, 100 mg, 150 mg, 200 mg **T (ER):** 25 mg, 50 mg, 100 mg, 200 mg **T (ODT):** 25 mg, 50 mg, 100 mg, 200 mg	Partial seizures, primary generalized tonic-clonic seizures, generalized seizures of Lennox-Gastaut syndrome	**A:** 100–600 mg/day	Dizziness, ataxia, drowsiness, diplopia, nausea, rash, headache, vomiting, insomnia, incoordination
Levetiracetam (p. 679) (Keppra)	**T:** 250 mg, 500 mg, 750 mg, 2,000 mg **S:** 100 mg/ml	Adjunctive therapy, partial seizures, primary tonic-clonic seizures, myoclonic seizures	**A:** 1,000–3,000 mg/day	Dizziness, drowsiness, weakness, irritability, hallucinations, psychosis
Oxcarbazepine (p. 884) (Trileptal)	**T:** 150 mg, 300 mg, 600 mg	Partial seizures	**A:** 900–1,800 mg/day	Drowsiness, dizziness, headaches, diplopia, ataxia, nausea, vomiting
Phenobarbital (p. 939)	**T:** 30 mg, 60 mg, 100 mg **I:** 65 mg, 130 mg	Tonic-clonic, partial seizures; status epilepticus	**A (PO):** 100–300 mg/day; **(IM/IV):** 200–600 mg **C (PO):** 3–5 mg/kg/day; **(IM/IV):** 100–400 mg	CNS depression, sedation, paradoxical excitement and hyperactivity, rash
Phenytoin (p. 945) (Dilantin)	**C:** 100 mg **T (chewable):** 50 mg **S:** 125 mg/5 ml **I:** 50 mg/ml	Tonic-clonic, psychomotor seizures	**A (PO):** 300–600 mg/day; **IV:** 150–250 mg **C (PO):** 4–8 mg/kg/day; **(IV):** 10–15 mg/kg	Nystagmus, ataxia, hypertrichosis, gingival hyperplasia, rash, osteomalacia, lymphadenopathy

ANTICONVULSANTS *(continued)*

Name	Availability	Uses	Dosage Range	Side Effects
Pregabalin (p. 978) (Lyrica)	**C:** 25 mg, 50 mg, 75 mg, 100 mg, 150 mg, 200 mg, 225 mg, 300 mg	Adjunctive therapy, partial seizures	**A:** 150–600 mg/day	Confusion, drowsiness, dizziness, ataxia, weight gain, dry mouth, blurred vision, peripheral edema
Primidone (p. 980) (Mysoline)	**T:** 50 mg, 250 mg **S:** 250 mg/5 ml	Complex partial, akinetic, tonic-clonic seizures	**A:** 750–2,000 mg/day **C:** 10–25 mg/kg/day	CNS depression, sedation, paradoxical excitement and hyperactivity, rash, dizziness, ataxia
Tiagabine (p. 1163) (Gabitril)	**T:** 4 mg, 12 mg, 16 mg, 20 mg	Partial seizures	**A:** Initially, 4 mg up to 56 mg **C:** Initially, 4 mg up to 32 mg	Dizziness, asthenia (loss of strength, energy), nervousness, anxiety, tremors, abdominal pain
Topiramate (p. 1187) (Topamax)	**T:** 25 mg, 100 mg, 200 mg	Partial seizures	**A:** 25–400 mg/day **C:** 1–9 mg/kg/day	Drowsiness, dizziness, headache, ataxia, confusion, weight loss, diplopia
Valproic acid (p. 1223) (Depakene, Depakote)	**C:** 250 mg **S:** 250 mg/5 ml **Sprinkles:** 125 mg **T:** 125 mg, 250 mg, 500 mg **T (ER):** 500 mg **I:** 100 mg/ml	Complex partial, absence seizures	**A, C:** 15–60 mg/kg/day	Nausea, vomiting, tremors, thrombocytopenia, hair loss, hepatic dysfunction, weight gain, decreased platelet function
Vigabatrin (Sabril)	**T:** 500 mg **PS:** 500 mg	Infantile spasms, refractory complex partial seizures	**A:** 1,000–4,000 mg/day **C:** 40–100 mg/kg/day	Vision changes, eye pain, abdominal pain, agitation, confusion, mood/mental changes, abnormal coordination
Zonisamide (p. 1276) (Zonegran)	**C:** 100 mg	Partial seizures	**A:** 500 mg/day	Drowsiness, dizziness, anorexia, diarrhea, weight loss, agitation, irritability, rash, nausea

A, Adults; ***C,*** capsules; ***C** (dosage),* children; ***ER,*** extended-release; ***I,*** injection; ***ODT,*** orally-disintegrating tablets; ***PE,*** phenytoin equivalent; ***PS,*** powder sachet; ***S,*** suspension; ***T,*** tablets.

Antidepressants

USES

Used primarily for the treatment of depression. Depression can be a chronic or recurrent mental disorder presenting with symptoms such as depressed mood, loss of interest or pleasure, guilt feelings, disturbed sleep/appetite, low energy, and difficulty in thinking. Depression can also lead to suicide.

ACTION

Antidepressants include tricyclics, monoamine oxidase inhibitors (MAOIs), selective serotonin reuptake inhibitors (SSRIs), serotonin-norepinephrine reuptake inhibitors (SNRIs), and other antidepressants. Depression may be due to reduced functioning of monoamine neurotransmitters (e.g., norepinephrine, serotonin [5-HT], dopamine) in the CNS (decreased amount and/or decreased effects at the receptor sites). Antidepressants block metabolism, increase amount/effects of monoamine neurotransmitters, and act at receptor sites (change responsiveness/sensitivities of both presynaptic and postsynaptic receptor sites).

ANTIDEPRESSANTS

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Tricyclics				
Amitriptyline (p. 52) (Elavil)	**T:** 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 150 mg	Depression, neuropathic pain	40–300 mg	Drowsiness, blurred vision, constipation, confusion, postural hypotension, cardiac conduction defects, weight gain, seizures, dry mouth
Clomipramine (p. 262) (Anafranil)	**C:** 25 mg, 50 mg, 75 mg	OCD	25–250 mg	Same as amitriptyline
Desipramine (p. 326) (Norpramin)	**T:** 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 150 mg	Depression, neuropathic pain	25–100 mg	Same as amitriptyline

(continued)

ANTIDEPRESSANTS *(continued)*

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Doxepin (p. 383) (Sinequan)	**C:** 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 150 mg **OC:** 10 mg/ml	Depression, anxiety, neuropathic pain	25–300 mg	Same as amitriptyline
Imipramine (p. 599) (Tofranil)	**T:** 10 mg, 25 mg, 50 mg **C:** 75 mg, 100 mg, 125 mg, 150 mg	Depression, enuresis, neuropathic pain, panic disorder, ADHD	30–300 mg	Same as amitriptyline
Nortriptyline (p. 854) (Aventyl, Pamelor)	**C:** 10 mg, 25 mg, 50 mg, 75 mg **S:** 10 mg/5 ml	Depression, neuropathic pain, smoking cessation	25–100 mg	Same as amitriptyline
Monoamine Oxidase Inhibitors				
Phenelzine (p. 937) (Nardil)	**T:** 15 mg	Depression	15–90 mg	Sedation, hypertensive crisis, weight gain, orthostatic hypotension
Tranylcypromine (p. 1199) (Parnate)	**T:** 10 mg	Depression	30–60 mg	Same as phenelzine

Selective Serotonin Reuptake Inhibitors

Citalopram (p. 250) (Celexa)	**T:** 20 mg, 40 mg **S:** 10 mg/5 ml	Depression, OCD, panic disorder	25–60 mg	Insomnia or sedation, nausea, agitation, headaches
Escitalopram (p. 434) (Lexapro)	**T:** 5 mg, 10 mg, 20 mg	Depression, GAD	10–20 mg	Insomnia or sedation, nausea, agitation, headaches
Fluoxetine (p. 495) (Prozac)	**C:** 10 mg, 20 mg, 40 mg **T:** 10 mg **S:** 20 mg/5 ml	Depression, OCD, bulimia, panic disorder, anorexia, bipolar disorder, premenstrual syndrome	10–80 mg	Akathisia, sexual dysfunction, skin rash, urticaria, pruritus, decreased appetite, asthenia (loss of strength, energy), diarrhea, drowsiness, headaches, diaphoresis, insomnia, nausea, tremors
Fluvoxamine (p. 507) (Luvox, Luvox CR)	**T:** 25 mg, 50 mg, 100 mg **C (SR):** 100 mg, 150 mg	OCD, SAD	100–300 mg	Sexual dysfunction, fatigue, constipation, dizziness, drowsiness, headaches, insomnia, nausea, vomiting
Paroxetine (p. 907) (Paxil)	**T:** 10 mg, 20 mg, 30 mg, 40 mg **S:** 10 mg/5 ml	Depression, OCD, panic attack, SAD	20–50 mg	Asthenia (loss of strength, energy), constipation, diarrhea, diaphoresis, insomnia, nausea, sexual dysfunction, tremors, vomiting, urinary frequency or retention
Sertraline (p. 1077) (Zoloft)	**T:** 25 mg, 50 mg, 100 mg **S:** 20 mg/ml	Depression, OCD, panic attack	50–200 mg	Sexual dysfunction, dizziness, drowsiness, anorexia, diarrhea, nausea, dry mouth, abdominal cramps, decreased weight, headaches, increased diaphoresis, tremors, insomnia

(continued)

ANTIDEPRESSANTS *(continued)*

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Serotonin-Norepinephrine Reuptake Inhibitors				
Desvenlafaxine (p. 331) (Pristiq)	**T:** 50 mg, 100 mg	Depression	50–100 mg	Nausea, dizziness, insomnia, hyperhidrosis, constipation, drowsiness, decreased appetite, anxiety, male sexual function disorders
Duloxetine (p. 394) (Cymbalta)	**C:** 20 mg, 30 mg, 60 mg	Depression, fibromyalgia, neuropathic pain	40–60 mg	Nausea, dry mouth, constipation, decreased appetite, fatigue, diaphoresis
Venlafaxine (p. 1237) (Effexor)	**T:** 25 mg, 37.5 mg, 50 mg, 75 mg, 100 mg **T (ER):** 37.5 mg, 75 mg, 150 mg	Depression, anxiety	75–375 mg	Increased blood pressure, agitation, sedation, insomnia, nausea
Other				
Bupropion (p. 158) (Wellbutrin)	**T:** 75 mg, 100 mg **SR:** 100 mg, 150 mg	Depression, smoking cessation, ADHD, bipolar disorder	150–450 mg	Insomnia, irritability, seizures
Mirtazapine (p. 786) (Remeron)	**T:** 15 mg, 30 mg, 45 mg	Depression	15–45 mg	Sedation, dry mouth, weight gain, agranulocytosis, hepatic toxicity
Trazodone (p. 1203) (Desyrel)	**T:** 50 mg, 100 mg, 150 mg, 300 mg	Depression	50–600 mg	Sedation, orthostatic hypotension, priapism
Vilazodone (p. 1242) (Viibyrd)	**T:** 10 mg, 20 mg, 40 mg	Depression	40 mg	Diarrhea, nausea, dizziness, dry mouth, insomnia, vomiting, decreased libido

ADHD, Attention deficit hyperactivity disorder; ***C,*** capsules; ***ER,*** extended-release; ***GAD,*** generalized anxiety disorder; ***OC,*** oral concentrate; ***OCD,*** obsessive-compulsive disorder; ***S,*** suspension; ***SAD,*** social anxiety disorder; ***SR,*** sustained-release; ***T,*** tablets.

Antidiabetics

USES

Insulin: Treatment of insulin-dependent diabetes (type 1) and non–insulin-dependent diabetes (type 2). Also used in acute situations such as ketoacidosis, severe infections, major surgery in otherwise non–insulin-dependent diabetics. Administered to pts receiving parenteral nutrition. Drug of choice during pregnancy. All insulins, including long-acting insulins, can cause hypoglycemia and weight gain.

Alpha-glucosidase inhibitors: Adjunct to diet and exercise for management of type 2 diabetes mellitus.

Biguanides: Adjunct to diet and exercise for management of type 2 diabetes mellitus.

Dipeptidyl peptidase 4 inhibitors (DPP-4): Adjunct to diet and exercise for management of type 2 diabetes mellitus.

Meglitinide: Adjunct to diet and exercise for management of type 2 diabetes mellitus.

Sulfonylureas: Adjunct to diet and exercise for management of type 2 diabetes mellitus.

Thiazolidinediones: Adjunct to diet and exercise for management of type 2 diabetes mellitus.

ACTION

Insulin: A hormone synthesized and secreted by beta cells of Langerhans' islet in the pancreas. Controls storage and utilization of glucose, amino acids, and fatty acids by activated transport systems/enzymes. Inhibits breakdown of glycogen, fat, protein. Insulin lowers blood glucose by inhibiting glycogenolysis and gluconeogenesis in liver; stimulates glucose uptake by muscle, adipose tissue. Activity of insulin is initiated by binding to cell surface receptors.

Alpha-glucosidase inhibitors: Work locally in small intestine, slowing carbohydrate breakdown and glucose absorption.

Biguanides: Inhibit hepatic gluconeogenesis, glycogenolysis; enhance insulin sensitivity in muscle and fat.

DPP-4: Inhibits degradation of endogenous incretins, which increases insulin secretion, decreases glucagon secretion.

Meglitinide: Stimulates pancreatic insulin secretion.

Sulfonylureas: Stimulate release of insulin from beta cells of the pancreas.

Thiazolidinediones: Enhance insulin sensitivity in muscle and fat.

Antidiabetics *(continued)*

ANTIDIABETICS

INSULIN (p. 613)

Type	Onset	Peak	Duration	Comments
Rapid-Acting				
Apidra, glulisine	10–15 min	1–1.5 hrs	3–5 hrs	Stable at room temp for 28 days Can mix with NPH
Humalog, lispro	15–30 min	0.5–2.5 hrs	6–8 hrs	Stable at room temp for 28 days Can mix with NPH
Novolog, aspart	10–20 min	1–3 hrs	3–5 hrs	Stable at room temp for 28 days Can mix with NPH
Short-Acting				
Humulin R, Novolin R, regular	30–60 min	1–5 hrs	6–10 hrs	Stable at room temp for 28 days Can mix with NPH
Intermediate-Acting				
Humulin N, Novolin N, NPH	1–2 hrs	6–14 hrs	16–24 hrs	Stable at room temp for 28 days Can mix with aspart, lispro, glulisine
Long-Acting				
Lantus, glargine	1.1 hrs	No significant peak	24 hrs	Do NOT mix with other insulins Stable at room temp for 28 days
Levemir, detemir	0.8–2 hrs	Relatively flat	12–24 hrs (dose dependent)	Do NOT mix with other insulins Stable at room temp for 42 days

Oral Agents

Name	Availability	Dosage Range	Side Effects
Sulfonylureas			
Glimepiride (p. 541) (Amaryl)	**T:** 1 mg, 2 mg, 4 mg	1–8 mg/day	Hypoglycemia, weight gain
Glipizide (p. 542) (Glucotrol)	**T:** 5 mg, 10 mg **T (XL):** 5 mg	**T:** 2.5–40 mg/day **XL:** 5–20 mg/day	Same as glimepiride
Glyburide (p. 547) (DiaBeta, Micronase)	**T:** 1.25 mg, 2.5 mg, 5 mg **PT:** 1.5 mg, 3 mg	**T:** 1.25–20 mg/day **PT:** 1–12 mg/day	Same as glimepiride
Alpha-Glucosidase Inhibitors			
Acarbose (p. 8) (Precose)	**T:** 25 mg, 50 mg, 100 mg	75–300 mg/day	Flatulence, diarrhea, abdominal pain, increased risk of hypoglycemia when used with insulin or sulfonylureas
Miglitol (Glyset)	**T:** 25 mg, 50 mg, 100 mg	75–300 mg/day	Same as acarbose
Dipeptidyl Peptidase Inhibitors			
Linagliptin (p. 691)	**T:** 5 mg	5 mg/day	Arthralgia, back pain, headache
Saxagliptin (p. 1071)	**T:** 2.5 mg, 5 mg	2.5–5 mg/day	Upper respiratory tract infection, urinary tract infection, headache
Sitagliptin (p. 1088) (Januvia)	**T:** 25 mg, 50 mg, 100 mg	25–100 mg/day	Nasopharyngitis, upper respiratory infection, headaches, modest weight gain, increased incidence of hypoglycemia when added to a sulfonylurea
Biguanides			
Metformin (p. 747) (Glucophage)	**T:** 500 mg, 850 mg **XR:** 500 mg	**T:** 0.5–2.5 g/day **XR:** 1,500–2,000 mg/day	Nausea, vomiting, diarrhea, loss of appetite, metallic taste, lactic acidosis (rare but potentially fatal complication)

(continued)

ANTIDIABETICS *(continued)*

Name	Availability	Dosage Range	Side Effects
Glucagon-Like Peptide-1 (GLP-1)			
Exenatide (p. 457) (Byetta)	**I:** 5 mcg, 10 mcg	5–10 mcg 2 times/day	Diarrhea, dizziness, dyspnea, headaches, nausea, vomiting
Exenatide extended-release (p. 457) (Bydureon)	**I:** 2 mg	2 mg once weekly	Diarrhea, nausea, headache
Liraglutide (p. 694) (Victoza)	**I:** 0.6 mg, 1.2 mg, 1.8 mg (6 mg/ml)	0.6–1.8 mg/day	Headache, nausea, diarrhea
Meglitinides			
Nateglinide (p. 821) (Starlix)	**T:** 60 mg, 120 mg	60–120 mg 3 times/day	Hypoglycemia, weight gain
Repaglinide (p. 1028) (Prandin)	**T:** 0.5 mg, 1 mg, 2 mg	0.5–1 mg with each meal (**Maximum:** 16 mg/day)	Same as nateglinide
Thiazolidinediones			
Pioglitazone (p. 949) (Actos)	**T:** 15 mg, 30 mg, 45 mg	15–45 mg/day	Mild to moderate peripheral edema, weight gain, increased risk of CHF, associated with reduced bone mineral density and increased incidence of fractures
Rosiglitazone (p. 1059) (Avandia)	**T:** 2 mg, 4 mg, 8 mg	4–8 mg/day	Same as pioglitazone
Miscellaneous			
Bromocriptine (p. 150)	**T:** 0.8 mg	1.6–4.8 mg/day	Nausea, fatigue, dizziness, vomiting
Colesevelam (p. 276) (Welchol)	**T:** 625 mg **S:** 1.875 g, 3.75 g packet	3.75 g/day	Constipation, dyspepsia, nausea
Pramlintide (p. 968) (Symlin)	**I:** 0.6 mg/ml	15–60 mcg immediately prior to meals	Abdominal pain, anorexia, headaches, nausea, vomiting, severe hypoglycemia may occur when used in combination with insulin (reduction in dosages of short-acting, including premixed, insulins recommended)

CHF, Congestive heart failure; ***I,*** injection; ***PT,*** prestab; ***S:*** suspension; ***T,*** tablets; ***XL,*** extended-release; ***XR,*** extended-release.

Antidiarrheals

USES	ACTION	
Acute diarrhea, chronic diarrhea of inflammatory bowel disease, reduction of fluid from ileostomies.	*Systemic agents:* Act as smooth muscle receptors (enteric) disrupting peristaltic movements, decreasing GI motility, increasing transit time of intestinal contents.	*Local agents:* Adsorb toxic substances and fluids to large surface areas of particles in the preparation. Some of these agents coat and protect irritated intestinal walls. May have local anti-inflammatory action.

ANTIDIARRHEALS

Name	Availability	Type	Dosage Range
Bismuth (p. 135) (Pepto-Bismol)	**T:** 262 mg **C:** 262 mg **L:** 130 mg/15 ml, 262 mg/15 ml, 524 mg/15 ml	Local	**A:** 2 **T** or 30 ml **C (9–12 yrs):** 1 **T** or 15 ml **C (6–8 yrs):** 2/3 **T** or 10 ml **C (3–5 yrs):** 1/3 **T** or 5 ml
Diphenoxylate with atropine (p. 364) (Lomotil)	**T:** 2.5 mg **L:** 2.5 mg/5 ml	Systemic	**A:** 5 mg 4 times/day **C:** 0.3–0.4 mg/kg/day in 4 divided doses **(L)**
Kaolin (with pectin) (Kaopectate)	**S:** 262 mg/15 ml, 525 mg/15 ml	Local	**A:** 60–120 ml after each bowel movement **C (6–12 yrs):** 30–60 ml **C (3–5 yrs):** 15–30 ml
Loperamide (p. 705) (Imodium)	**C:** 2 mg **T:** 2 mg **L:** 1 mg/5 ml, 1 mg/ml	Systemic	**A:** Initially, 4 mg (**Maximum:** 16 mg/day) **C (9–12 yrs):** 2 mg 3 times/day **C (6–8 yrs):** 2 mg 2 times/day **C (2–5 yrs):** 1 mg 3 times/day **(L)**

A, Adults; ***C,*** capsules; ***C** (dosage),* children; ***L,*** liquid; ***S,*** suspension; ***T,*** tablets.

Antifungals: Systemic Mycoses

Systemic mycoses are subdivided into opportunistic infections (candidiasis, aspergillosis, cryptococcosis, and mucormycosis) that are seen primarily in debilitated or immunocompromised hosts and nonopportunistic infections (blastomycosis, histoplasmosis, and coccidioidomycosis) that occur in any host. Treatment can be difficult because these infections often resist treatment and may require prolonged therapy.

ANTIFUNGALS: SYSTEMIC MYCOSES

Name	Indications	Side Effects
Amphotericin B (p. 59)	Potentially life-threatening fungal infections, including aspergillosis, blastomycosis, coccidioidomycosis, cryptococcosis, histoplasmosis, systemic candidiasis	Fever, chills, headache, nausea, vomiting, nephrotoxicity, hypokalemia, hypomagnesemia, hypotension, dyspnea, arrhythmias, abdominal pain, diarrhea, increased hepatic function tests
Amphotericin B lipid complex (Abelcet) (p. 59)	Invasive fungal infections	Same as amphotericin B
Amphotericin B liposomal (AmBisome) (p. 59)	Empiric therapy for presumed fungal infections in febrile neutropenic pts, treatment of cryptococcal meningitis in HIV-infected pts, treatment of *Aspergillus, Candida, Cryptococcus* infections, treatment of visceral leishmaniasis	Same as amphotericin B
Amphotericin colloidal dispersion (Amphotec) (p. 59)	Invasive *Aspergillus*	Same as amphotericin B

Anidulafungin (Eraxis) (p. 68)	Candidemia, esophageal candidiasis	Diarrhea, hypokalemia, increased hepatic function tests, headache
Caspofungin (Cancidas) (p. 193)	Candidemia, invasive aspergillosis, empiric therapy for presumed fungal infections in febrile neutropenic pts	Headache, nausea, vomiting, diarrhea, increased hepatic function tests
Fluconazole (Diflucan) (p. 486)	Treatment of vaginal candidiasis; oropharyngeal, esophageal candidiasis; and cryptococcal meningitis. Prophylaxis to decrease incidence of candidiasis in pts undergoing bone marrow transplant receiving cytotoxic chemotherapy and/or radiation	Nausea, vomiting, abdominal pain, diarrhea, dysgeusia, increased hepatic function tests, liver necrosis, hepatitis, cholestasis, headache, rash, pruritus, eosinophilia, alopecia
Itraconazole (Sporanox) (p. 642)	Blastomycosis, histoplasmosis, aspergillosis, onychomycosis, empiric therapy of febrile neutropenic pts with suspected fungal infections, treatment of oropharyngeal and esophageal candidiasis	Congestive heart failure, peripheral edema, nausea, vomiting, abdominal pain, diarrhea, increased hepatic function tests, liver necrosis, hepatitis, cholestasis, headache, rash, pruritus, eosinophilia
Ketoconazole (Nizoral) (p. 647)	Candidiasis, chronic mucocutaneous candidiasis, oral thrush, candiduria, blastomycosis, coccidioidomycosis	Nausea, vomiting, abdominal pain, diarrhea, gynecomastia, increased hepatic function tests, liver necrosis, hepatitis, cholestasis, headache, rash, pruritus, eosinophilia
Micafungin (Mycamine) (p. 772)	Esophageal candidiasis, *Candida* infections, prophylaxis in pts undergoing hematopoietin stem cell transplantation	Fever, chills, hypokalemia, hypomagnesemia, hypocalcemia, myelosuppression, thrombocytopenia, nausea, vomiting, abdominal pain, diarrhea, increased hepatic function tests, dizziness, headache, rash, pruritus, pain or inflammation at injection site, fever
Posaconazole (Noxafil) (p. 961)	Prevent invasive aspergillosis and *Candida* infections in pts 13 yrs and older who are immunocompromised, treatment of oropharyngeal candidiasis	Fever, headaches, nausea, vomiting, diarrhea, abdominal pain, hypokalemia, cough, dyspnea
Voriconazole (Vfend) (p. 1258)	Invasive aspergillosis, candidemia, esophageal candidiasis, serious fungal infections	Visual disturbances, nausea, vomiting, abdominal pain, diarrhea, increased hepatic function tests, liver necrosis, hepatitis, cholestasis, headache, rash, pruritus, eosinophilia

Antifungals: Topical

USES	ACTION
Treatment of tinea infections, cutaneous candidiasis (moniliasis) due to *Candida albicans.*	Exact mechanism unknown. May deplete essential intracellular components by inhibiting transport of potassium, other ions into cells; alter membrane permeability, resulting in loss of potassium, other cellular components.

ANTIFUNGALS: TOPICAL

Name	Availability	Dosage Range	Side Effects
Butenafine (Mentax)	**C:** 1%	2 times/day	Burning, stinging, pruritus, contact dermatitis, erythema
Ciclopirox (Loprox)	**C:** 1% **L:** 1%	2 times/day	Irritation, pruritus, redness
Clioquinol (Vioform)	**C:** 3% **O:** 3%	2–3 times/day	Irritation, stinging, swelling
Clotrimazole (Lotrimin, Mycelex)	**C:** 1% **L:** 1% **S:** 1%	2 times/day	Erythema, stinging, blistering, edema, pruritus
Econazole (Spectazole)	**C:** 1%	1–2 times/day	Burning, stinging, irritation, erythema
Ketoconazole (p. 647) (Nizoral)	**C:** 2%	1–2 times/day	Irritation, pruritus, stinging
Miconazole (p. 773) (Micatin, Monistat)	**C:** 2% **P:** 2%	2 times/day	Irritation, burning, allergic contact dermatitis

Nystatin (p. 855) (Mycostatin, Nilstat)	**C:** 100,000 g **O:** 100,000 g **P:** 100,000 g	2–3 times/day	Irritation
Oxiconazole (Oxistat)	**C:** 1% **L:** 1%	1–2 times/day	Pruritus, burning, stinging, irritation, pain, tingling
Sertaconazole (Ertaczo)	**C:** 2%	2 times/day	Dry skin, burning, pruritus, erythema
Terbinafine (p. 1143) (Lamisil)	**C:** 1% **G:** 10 mg	1–2 times/day	Irritation, burning, pruritus, dryness
Tolnaftate (Tinactin)	**C:** 1% **G:** 1% **S:** 1%	2 times/day	Mild irritation
Triacetin (Fungoid)	**C:** 1% **S:** 1%	3 times/day	Irritation
Undecylenic acid (Caldesene, Cruex, Desenex)	**C:** 8%, 20% **P:** 10%, 12%, 15%, 19%, 25% **O:** 25%	As needed	None significant

C, Cream; ***G,*** gel; ***L,*** lotion; ***O,*** ointment; ***P,*** powder; ***S,*** solution.

Antiglaucoma Agents

USES	ACTION
Reduction of elevated intraocular pressure (IOP) in pts with open-angle glaucoma and ocular hypertension.	Medications decrease IOP by two primary mechanisms: decreasing aqueous humor (AH) production or increasing AH outflow. • *Miotics (direct acting and indirect acting):* Constrict pupils, opening channels in the trabecular meshwork, reducing resistance to outflow of AH. • *Alpha$_2$-agonists:* Activate receptors in ciliary body, inhibiting aqueous secretion and increasing uveoscleral aqueous outflow. • *Beta-blockers:* Reduce production of aqueous humor. • *Carbonic anhydrase inhibitors:* Decrease production of AH by inhibiting enzyme carbonic anhydrase. • *Prostaglandins:* Increase outflow of aqueous fluid through uveoscleral route.

ANTIGLAUCOMA AGENTS

Name	Availability	Dosage Range	Side Effects
Miotics			
Carbachol (Miostat)	**S:** 0.01%	1 ml to anterior chamber of eye	Ciliary or accommodative spasm, blurred vision, reduced night vision, diaphoresis, increased salivation, urinary frequency, nausea, diarrhea
Echothiophate (Phospholine Iodide)	**S:** 0.125%	1 drop 2 times/day	Headaches, accommodative spasm, diaphoresis, vomiting, nausea, diarrhea, tachycardia
Pilocarpine (Pilipine HS)	**G:** 4%	½-inch ribbon on lower conjunctiva at bedtime	Same as carbachol

Alpha$_2$-Agonists

Apraclonidine (Iopidine)	**S:** 0.5%	1–2 drops 3 times/day	Hypersensitivity reaction, change in visual acuity, lethargy
Brimonidine (Alphagan)	**S:** 0.1%, 0.15%, 0.2%	1 drop 2–3 times/day	Hypersensitivity reaction, headaches, drowsiness, fatigue

Prostaglandins

Bimatoprost (Lumigan)	**S:** 0.03%	1 drop daily in evening	Ocular hyperemia, eyelash growth, pruritus
Latanoprost (Xalatan)	**S:** 0.005%	1 drop daily in evening	Burning, stinging, iris pigmentation
Tafluprost (Zioptan)	**S:** 0.0015%	1 drop daily in evening	Ocular hyperemia, eye stinging, ocular pruritus, headache
Travoprost (Travatan)	**S:** 0.004%	1 drop daily in evening	Ocular hyperemia, eye discomfort, foreign body sensation, pain, pruritus

(continued)

ANTIGLAUCOMA AGENTS *(continued)*

Name	Availability	Dosage Range	Side Effects
Beta-Blockers			
Betaxolol (Betoptic, Betoptic-S)	**Suspension (Betoptic-S):** 0.25% **S (Betoptic):** 0.5%	Betoptic-S: 1 drop 2 times/day Betoptic: 1–2 drops 2 times/day	Transient irritation, burning, tearing, blurred vision
Carteolol (Ocupress)	**S:** 1%	1 drop 2 times/day	Mild, transient ocular stinging, burning, discomfort
Levobunolol (Betagan)	**S:** 0.25%, 0.5%	1–2 drops 1–2 times/day	Local discomfort, conjunctivitis, brow ache, tearing, blurred vision, headaches, anxiety
Metipranolol (OptiPranolol)	**S:** 0.3%	1 drop 2 times/day	Transient irritation, burning, stinging, blurred vision
Timolol (p. 1145) (Betimol, Istalol, Timoptic, Timoptic XE)	**S:** 0.25%, 0.5% **G, Timoptic XE:** 0.25%, 0.5%	**S:** 1 drop 2 times/day (Istalol): 1 drop daily **G:** 1 drop daily	Drowsiness, difficulty sleeping, fatigue, weakness
Carbonic Anhydrase Inhibitors			
Acetazolamide (p. 12) (Diamox)	**T:** 250 mg **C:** 500 mg	0.25–1 g/day	Diarrhea, loss of appetite, metallic taste, nausea, paresthesia
Brinzolamide (Azopt)	**Suspension:** 1%	1 drop 3 times/day	Blurred vision, bitter taste
Dorzolamide (Trusopt)	**S:** 2%	1 drop 3 times/day	Burning, stinging, blurred vision, bitter taste

C, Capsules; ***G,*** gel; ***O,*** ointment; ***S,*** solution; ***T,*** tablets.

Antihistamines

USES

Symptomatic relief of upper respiratory allergic disorders. Allergic reactions associated with other drugs respond to antihistamines, as do blood transfusion reactions. Used as a second-choice drug in treatment of angioneurotic edema. Effective in treatment of acute urticaria and other dermatologic conditions. May also be used for preop sedation, Parkinson's disease, and motion sickness.

ACTION

Antihistamines (H_1 antagonists) inhibit vasoconstrictor effects and vasodilator effects on endothelial cells of histamine. They block increased capillary permeability, formation of edema/wheal caused by histamine. Many antihistamines can bind to receptors in CNS, causing primarily depression (decreased alertness, slowed reaction times, drowsiness) but also stimulation (restlessness, nervousness, inability to sleep). Some may counter motion sickness.

ANTIHISTAMINES

Name	Availability	Dosage Range	Side Effects
Brompheniramine (Brovex)	**T:** 4 mg **T (SR):** 4 mg, 6 mg **S:** 2 mg/5 ml	**A:** 4–8 mg q4–6h or **T (SR):** 8–12 mg q12–24h **C:** 0.5 mg/kg/day	Dry mouth, urinary retention, blurred vision
Cetirizine (p. 226) (Zyrtec)	**T:** 5 mg, 10 mg **S:** 5 mg/5 ml	**A:** 5–10 mg/day **C (6–12 yrs):** 5–10 mg/day **C (2–5 yrs):** 2.5–5 mg/day	Minimal CNS and anticholinergic side effects

(continued)

ANTIHISTAMINES *(continued)*

Name	Availability	Dosage Range	Side Effects
Chlorpheniramine (Chlor-Trimeton)	**T:** 4 mg **T (chewable):** 2 mg **T (SR):** 8 mg, 12 mg **S:** 2 mg/5 ml	**A:** 2–4 mg q4–6h or **SR:** 8–12 mg q12–24h **C:** 0.35 mg/kg/day	Same as brompheniramine
Clemastine (Tavist Allergy)	**T:** 1.34 mg, 2.68 mg **S:** 0.67 mg/5 ml	**A:** 1.34–2.68 mg q8–12h **C (6–12 yrs):** 0.67–1.34 mg q8–12h	Same as azatadine
Cyproheptadine (Periactin)	**T:** 4 mg **S:** 2 mg/5 ml	**A:** 4 mg q8h **C:** 0.25 mg/kg/day	Same as azatadine
Desloratadine (p. 327) (Clarinex)	**T:** 5 mg **ODT:** 2.5 mg, 5 mg **S:** 0.5 mg/ml	**A, C (12 yrs and older):** 5 mg/day **C (6–11 yrs):** 2.5 mg/day **C (1–5 yrs):** 1.25 mg/day **C (6–11 mos):** 1 mg/day	Same as cetirizine
Dexchlorpheniramine (Polaramine)	**T:** 2 mg **S:** 2 mg/5 ml	**A:** 2 mg q4–6h **C:** 0.5–1 mg q4–6h	Same as brompheniramine
Dimenhydrinate (p. 354) (Dramamine)	**T:** 50 mg **L:** 12.5 mg/5 ml	**A:** 50–100 mg q4–6h **C:** 12.5–50 mg q6–8h	Same as azatadine
Diphenhydramine (p. 359) (Benadryl)	**T:** 25 mg, 50 mg **C:** 25 mg, 50 mg **L:** 6.25 mg/5 ml, 12.5 mg/5 ml	**A:** 25–50 mg q6–8h **C (6–11 yrs):** 12.5–25 mg q4–6h **C (2–5 yrs):** 6.25 mg q4–6h	Same as azatadine
Fexofenadine (p. 479) (Allegra)	**T:** 30 mg, 60 mg, 180 mg	**A:** 60 mg q12h or 180 mg/day **C (6–11 yrs):** 30 mg q12h	Same as cetirizine
Hydroxyzine (p. 577) (Atarax)	**T:** 10 mg, 25 mg, 50 mg, 100 mg **C:** 25 mg, 50 mg, 100 mg **S:** 10 mg/5 ml, 25 mg/5 ml	**A:** 25 mg q6–8h **C:** 2 mg/kg/day	Same as azatadine
Levocetirizine (p. 681) (Xyzal)	**T:** 5 mg	**A, C (12 yrs and older):** 5 mg once daily in evening **C (6–11 yrs):** 2.5 mg once daily in evening	Same as cetirizine

Loratadine (p. 708) (Claritin)	**T:** 10 mg **S:** 1 mg/ml	**A:** 10 mg/day **C (6–12 yrs):** 10 mg/day	Same as cetirizine
Promethazine (p. 990) (Phenergan)	**T:** 12.5 mg, 25 mg, 50 mg **S:** 6.25 mg/5 ml, 25 mg/5 ml	**A:** 25 mg at bedtime or 12.5 mg q8h **C:** 0.5 mg/kg at bedtime or 0.1 mg/kg q6–8h	Same as azatadine

Antihyperlipidemics

USES	ACTION
Cholesterol management.	*Bile acid sequestrants:* Bind bile acids in the intestine; prevent active transport and reabsorption and enhance bile acid excretion. Depletion of hepatic bile acid results in the increased conversion of cholesterol to bile acids. *HMG-CoA reductase inhibitors (statins):* Inhibit HMG-CoA reductase, the last regulated step in the synthesis of cholesterol. Cholesterol synthesis in the liver is reduced. *Niacin (nicotinic acid):* Reduces hepatic synthesis of triglycerides and secretion of VLDL by inhibiting the mobilization of free fatty acids from peripheral tissues. *Fibric acid:* Increases the oxidation of fatty acids in the liver, resulting in reduced secretion of triglyceride-rich lipoproteins, and increases lipoprotein lipase activity and fatty acid uptake. *Cholesterol absorption inhibitor:* Acts in the gut wall to prevent cholesterol absorption through the intestinal villi. *Omega fatty acids:* Exact mechanism unknown. Mechanisms may include inhibition of acyl-CoA, decreased lipogenesis in liver, increased lipoprotein lipase activity.

Antihyperlipidemics *(continued)*

ANTIHYPERLIPIDEMICS

Name	Primary Effect	Dosage	Comments/Side Effects
Bile Acid Sequestrants			
Cholestyramine (Prevalite, Questran) (p. 234)	Decreases LDL	4 g once or twice daily	May bind drugs given concurrently. Take at least 1 hr before or 4–6 hrs after cholestyramine. **Side Effects:** Constipation, heartburn, nausea, vomiting, stomach pain
Colesevelam (p. 276) (Welchol)	Decreases LDL	6–7 625-mg tablets once daily or 2 divided doses with meals	Take with food. **Side Effects:** Constipation, dyspepsia, weakness, myalgia, pharyngitis
Colestipol (Colestid)	Decreases LDL	**T:** 2–16 g daily **G:** 5–30 g daily	Do not crush tablets. May bind drugs given concurrently. Take at least 1 hr before or 4–6 hrs after colestipol. **Side Effects:** Constipation, headache, dizziness, anxiety, vertigo, drowsiness, nausea, vomiting, diarrhea, flatulence
Cholesterol Absorption Inhibitor			
Ezetimibe (Zetia) (p. 458)	Decreases LDL	10 mg once daily	Administer at least 2 hrs before or 4 hrs after bile acid sequestrants. **Side Effects:** Dizziness, headache, fatigue, diarrhea, abdominal pain, arthralgia, sinusitis, pharyngitis
Fibric Acid			
Fenofibrate (Antara, Lofibra, Tricor, Triglide) (p. 468)	Decreases TG	**Antara:** 43–130 mg/day **Lofibra:** 67–200 mg/day **Tricor:** 48–145 mg/day **Triglide:** 50–160 mg/day	May increase levels of ezetimibe. Concomitant use of statins may increase rhabdomyolysis, elevate CPK levels, and cause myoglobinuria. **Side Effects:** Abdominal pain, constipation, diarrhea, respiratory complaints, headache, fever, flu-like syndrome, asthenia (loss of strength, energy)

Fenofibric acid (p. 469) (Fibricor, Trilipix)	Decreases TG, LDL Increases HDL	45–135 mg/day	May give without regard to meals. Concomitant use of statins may increase rhabdomyolysis. **Side Effects:** Headache, upper respiratory tract infection, pain, nausea, dizziness, nasopharyngitis
Gemfibrozil (Lopid) (p. 534)	Decreases TG	600 mg 2 times/day	Give 30 min before breakfast and dinner. Concomitant use of statins may increase rhabdomyolysis, elevate CPK levels, and cause myoglobinuria. **Side Effects:** Fatigue, vertigo, headache, rash, eczema, diarrhea, abdominal pain, nausea, vomiting, constipation
Niacin			
Niacin, nicotinic acid (Niacor, Niaspan) (p. 831)	Decreases LDL, TG Increases HDL	**Regular-release (Niacor):** 1.5–6 g/day in 3 divided doses **Extended-release (Niaspan):** 375 mg to 2 g once daily at bedtime	Diabetics may experience a dose-related elevation in glucose. **Side Effects:** Increased hepatic function tests, hyperglycemia, dyspepsia, itching, flushing, dizziness, insomnia
Statins			
Atorvastatin (Lipitor) (p. 90)	Decreases LDL, TG Increases HDL	10–80 mg/day	May interact with CYP3A4 inhibitors (e.g., amiodarone, diltiazem, cyclosporine, grapefruit juice) increasing risk of myopathy. **Side Effects:** Myalgia, myopathy, rhabdomyolysis, headache, chest pain, peripheral edema, dizziness, rash, abdominal pain, constipation, diarrhea, dyspepsia, nausea, flatulence, increased hepatic function tests, back pain, sinusitis
Fluvastatin (Lescol) (p. 506)	Decreases LDL, TG Increases HDL	20–80 mg/day	Primarily metabolized by CYP2C9 enzyme system. May increase levels of phenytoin, rifampin. May lower fluvastatin levels. **Side Effects:** Headache, fatigue, dyspepsia, diarrhea, nausea, abdominal pain, myalgia, myopathy, rhabdomyolysis

(continued)

ANTIHYPERLIPIDEMICS *(continued)*

Name	Primary Effect	Dosage	Comments/Side Effects
Lovastatin (Mevacor) (p. 715)	Decreases LDL, TG Increases HDL	10–80 mg/day	May interact with CYP3A4 inhibitors (e.g., amiodarone, diltiazem, cyclosporine, grapefruit juice) increasing risk of myopathy. **Side Effects:** Increased CPK levels, headache, dizziness, rash, constipation, diarrhea, abdominal pain, dyspepsia, nausea, flatulence, myalgia, myopathy, rhabdomyolysis
Pitavastatin (p. 954) (Livalo)	Decreases LDL, TG Increases HDL	1–4 mg/day	Erythromycin, rifampin may increase concentration. **Side Effects:** Myalgia, back pain, diarrhea, constipation, pain in extremities
Pravastatin (Pravachol) (p. 972)	Decreases LDL, TG Increases HDL	10–80 mg/day	May be less likely to be involved in drug interactions. Cyclosporine may increase pravastatin levels. **Side Effects:** Chest pain, headache, dizziness, rash, nausea, vomiting, diarrhea, increased hepatic function tests, cough, flu-like symptoms, myalgia, myopathy, rhabdomyolysis
Rosuvastatin (Crestor) (p. 1061)	Decreases LDL, TG Increases HDL	5–40 mg/day	May be less likely to be involved in drug interactions. Cyclosporine may increase rosuvastatin levels. **Side Effects:** Chest pain, peripheral edema, headache, rash, dizziness, vertigo, pharyngitis, diarrhea, nausea, constipation, abdominal pain, dyspepsia, sinusitis, flu-like symptoms, myalgia, myopathy, rhabdomyolysis
Simvastatin (Zocor) (p. 1084)	Decreases LDL, TG Increases HDL	5–80 mg/day	May interact with CYP3A4 inhibitors (e.g., amiodarone, diltiazem, cyclosporine, grapefruit juice) increasing risk of myopathy. **Side Effects:** Constipation, flatulence, dyspepsia, increased hepatic function tests, increased CPK, upper respiratory tract infection
Omega Fatty Acids			
Lovaza (p. 872)	Decreases TG	2 g twice daily or 4 g once daily	**Side Effects:** Eructation, dyspepsia, taste perversion
Vascepa	Decreases TG	2 g twice daily	**Side Effects:** Arthralgia

CPK, Creatine phosphokinase; ***G,*** granules; ***HDL,*** high-density lipoprotein; ***LDL,*** low-density lipoprotein; ***T,*** tablets; ***TG,*** triglycerides.

Antihypertensives

USES

Treatment of mild to severe hypertension.

ACTION

Many groups of medications are used in the treatment of hypertension.

ACE inhibitors: Decrease conversion of angiotensin I to angiotensin II, a potent vasoconstrictor, reducing peripheral vascular resistance and B/P.

Alpha-agonists (central action): Stimulate alpha$_2$-adrenergic receptors in the cardiovascular centers of the CNS, reducing sympathetic outflow and producing an antihypertensive effect.

Alpha-antagonists (peripheral action): Block alpha$_1$-adrenergic receptors in arterioles and veins, inhibiting vasoconstriction and decreasing peripheral vascular resistance, causing a fall in B/P.

Angiotensin receptor blockers: Block vasoconstrictor effects of angiotensin II by blocking the binding of angiotensin II to AT1 receptors in vascular smooth muscle, helping blood vessels to relax and reduce B/P.

Beta-blockers: Decrease B/P by inhibiting beta$_1$-adrenergic receptors, which lowers heart rate, heart workload, and the heart's output of blood.

Calcium channel blockers: Reduce B/P by inhibiting flow of extracellular calcium across cell membranes of vascular tissue, relaxing arterial smooth muscle.

Diuretics: Inhibit sodium (Na) reabsorption, increasing excretion of Na and water. Reduce plasma, extracellular fluid volume, and peripheral vascular resistance.

Renin inhibitors: Directly inhibit renin, decreasing plasma renin activity (PRA), inhibiting conversion of angiotensinogen to angiotensin, producing antihypertensive effect.

Vasodilators: Directly relax arteriolar smooth muscle, decreasing vascular resistance. Exact mechanism unknown.

ANTIHYPERTENSIVES

Name	Availability	Dosage Range	Side Effects
(ACE) Inhibitors			
Benazepril (p. 119) (Lotensin)	**T:** 5 mg, 10 mg, 20 mg, 40 mg	10–40 mg/day	Same as enalapril

ANTIHYPERTENSIVES *(continued)*

Name	Availability	Dosage Range	Side Effects
Enalapril (p. 406) (Vasotec)	**T:** 2.5 mg, 5 mg, 10 mg, 20 mg	2.5–10 mg/day	Cough, rash, hyperkalemia, hypotension (volume-depleted pts), acute renal failure, angioedema
Lisinopril (p. 697) (Prinivil, Zestril)	**T:** 2.5 mg, 5 mg, 10 mg, 20 mg, 30 mg, 40 mg	10–40 mg/day	Same as enalapril
Quinapril (p. 1009)	**T:** 5 mg, 10 mg, 20 mg, 40 mg	10–40 mg/day	Same as enalapril
Ramipril (p. 1018) (Altace)	**T or C:** 1.25 mg, 2.5 mg, 5 mg, 10 mg	2.5–20 mg/day	Same as enalapril
Alpha-Agonists: Central Action			
Clonidine (p. 265) (Catapres)	**T:** 0.1 mg, 0.2 mg, 0.3 mg **P:** 0.1 mg/hr, 0.2 mg/hr, 0.3 mg/hr	**PO:** 0.2–0.8 mg/day **Topical:** 0.1–0.6 mg/wk	Sedation, dry mouth, constipation, sexual dysfunction, bradycardia
Methyldopa (Aldomet)	**T:** 125 mg, 250 mg, 500 mg	**PO:** 0.5–3 g/day	Same as clonidine Impaired memory, depression, nasal congestion
Alpha-Agonists: Peripheral Action			
Doxazosin (p. 381) (Cardura)	**T:** 1 mg, 2 mg, 4 mg, 8 mg	**PO:** 2–16 mg/day	Dizziness, vertigo, headaches
Prazosin (p. 973) (Minipress)	**C:** 1 mg, 2 mg, 5 mg	**PO:** 6–20 mg/day	Dizziness, light-headedness, headaches, drowsiness
Terazosin (p. 1142) (Hytrin)	**C:** 1 mg, 2 mg, 5 mg, 10 mg	**PO:** 1–20 mg/day	Dizziness, headaches, asthenia (loss of strength, energy)
Angiotensin Receptor Blockers			
Azilsartan (p. 103)	**T:** 40 mg, 80 mg	40–80 mg/day	Diarrhea, hypotension
Candesartan (Atacand)	**T:** 4 mg, 8 mg, 16 mg, 32 mg	8–32 mg/day	Same as losartan
Losartan (p. 713) (Cozaar)	**T:** 25 mg, 50 mg, 100 mg	25–100 mg/day	Headache, dizziness, hyperkalemia, hypotension (volume-depleted pts), angioedema (very rare)

Olmesartan (p. 866)	**T:** 5 mg, 20 mg, 40 mg	20–40 mg/day	Same as losartan
Valsartan (Diovan)	**T:** 80 mg, 160 mg, 320 mg	80–320 mg/day	Same as losartan
Beta-Blockers			
Atenolol (p. 86) (Tenormin)	**T:** 25 mg, 50 mg, 100 mg	25–100 mg/day	Fatigue, bradycardia, reduced exercise tolerance, increased triglycerides, bronchospasm, sexual dysfunction, masked hypoglycemia
Metoprolol (p. 766)	**T:** 25 mg, 50 mg, 100 mg	50–200 mg/day	Same as atenolol
Metoprolol XL (p. 766) (Toprol XL)	**T:** 25 mg, 50 mg, 100 mg, 200 mg	50–300 mg/day	Same as atenolol
Calcium Channel Blockers			
Amlodipine (p. 54) (Norvasc)	**T:** 2.5 mg, 5 mg, 10 mg	2.5–10 mg/day	Headache, fatigue, peripheral edema, flushing, worsening heart failure
Diltiazem CD (p. 356) (Cardizem CD)	**C:** 120 mg, 180 mg, 240 mg, 300 mg	180–420 mg/day	Dizziness, headache, bradycardia, heart block, worsening heart failure, edema, constipation
Felodipine (p. 466)	**T:** 2.5 mg, 5 mg, 10 mg	2.5–20 mg/day	Same as amlodipine
Nifedipine XL (p. 837) (Adalat CC)	**T:** 30 mg, 60 mg, 90 mg	30–120 mg/day	Same as amlodipine
Verapamil SR (p. 1239) (Calan SR)	**T:** 120 mg, 180 mg, 240 mg	120–480 mg/day	Same as diltiazem CD
Diuretics			
Chlorthalidone (Hygroton)	**T:** 25 mg, 50 mg, 100 mg	6.25–25 mg/day	Same as hydrochlorothiazide
Hydrochlorothiazide (p. 564) (Hydrodiuril)	**T:** 25 mg, 50 mg	12.5–50 mg/day	Hypokalemia, hyperuricemia, hypomagnesemia, hyperglycemia

ANTIHYPERTENSIVES *(continued)*

Name	Availability	Dosage Range	Side Effects
Renin Inhibitor			
Aliskiren (p. 33) (Tekturna)	**T:** 150 mg, 300 mg	**PO:** 150–300 mg/day	Diarrhea, dyspepsia, headache, dizziness, fatigue, upper respiratory tract infection
Vasodilators			
Hydralazine (p. 562) (Apresoline)	**T:** 10 mg, 25 mg, 50 mg, 100 mg	**PO:** 40–300 mg/day	Anorexia, nausea, diarrhea, vomiting, headaches, palpitations
Minoxidil (p. 783) (Loniten)	**T:** 2.5 mg, 10 mg	**PO:** 10–40 mg/day	Rapid/irregular heartbeat, hypertrichosis, peripheral edema

C, Capsules; ***P,*** patch; ***T,*** tablets.

Antimigraine (Triptans)

USES	ACTION
Treatment of migraine headaches with or without aura in adults 18 yrs and older.	Triptans are selective agonists of the serotonin (5-HT) receptor in cranial arteries, which cause vasoconstriction and reduce inflammation associated with antidromic neuronal transmission correlating with relief of migraine headache.

TRIPTANS

Name	Availability	Dosage Range	Contraindications	Side Effects
Almotriptan (p. 37) (Axert)	**T:** 6.25 mg, 12.5 mg	6.25–12.5 mg; may repeat after 2 hrs	Ischemic heart disease, angina pectoris, arrhythmias, previous MI, uncontrolled hypertension	Drowsiness, dizziness, fatigue, hot flashes, chest pain/discomfort, paresthesia, nausea, vomiting
Eletriptan (p. 402) (Relpax)	**T:** 20 mg, 40 mg	**A:** 20–40 mg; may repeat after 2 hrs	Same as almotriptan	Asthenia (loss of strength, energy), nausea, dizziness, drowsiness
Frovatriptan (p. 520) (Frova)	**T:** 2.5 mg	2.5 mg; may repeat after 2 hrs; no more than 3 **T**/day	Same as almotriptan	Hot/cold sensations, dizziness, fatigue, headaches, chest pain, skeletal pain, dry mouth, dyspepsia, flushing
Naratriptan (p. 818) (Amerge)	**T:** 1 mg, 2.5 mg	2.5 mg; may repeat once after 4 hrs	Same as almotriptan	Atypical sensations, pain, nausea
Rizatriptan (p. 1052) (Maxalt, Maxalt-MLT)	**T:** 5 mg, 10 mg **DT:** 5 mg, 10 mg	5 or 10 mg; may repeat after 2 hrs	Same as almotriptan	Atypical sensations, pain, nausea, dizziness, drowsiness, asthenia (loss of strength, energy), fatigue
Sumatriptan (p. 1115) (Imitrex, Sumavel DosePro)	**T:** 25 mg, 50 mg, 100 mg **NS:** 5 mg, 20 mg **I:** 4 mg, 6 mg	**PO:** 25–100 mg; may repeat after 2 hrs **NS:** 5–20 mg; may repeat after 2 hrs **Subcutaneous:** 4–6 mg; may repeat after 1 hr	Same as almotriptan	*Oral:* Atypical sensations, pain, malaise, fatigue *Injection:* Atypical sensations, flushing, chest pain/discomfort, injection site reaction, dizziness, vertigo *Nasal:* Discomfort, nausea, vomiting, altered taste
Zolmitriptan (p. 1272) (Zomig, Zomig-ZMT)	**T:** 2.5 mg, 5 mg **DT:** 2.5 mg, 5 mg	2.5–5 mg; may repeat after 2 hrs	Same as almotriptan	Atypical sensations, pain, nausea, dizziness, asthenia (loss of strength, energy), drowsiness

A, Adults; ***DT,*** disintegrating tablets; ***I,*** injection; ***NS,*** nasal spray; ***T,*** tablets.

Antipsychotics

USES

Primarily used in managing psychotic illness (esp. in pts with increased psychomotor activity). Also used to treat the manic phase of bipolar disorder, behavioral problems in children, nausea and vomiting, intractable hiccups, anxiety and agitation, as adjunct in treatment of tetanus, and to potentiate effects of narcotics.

ACTION

Effects of these agents occur at all levels of the CNS. Antipsychotic mechanism unknown but may antagonize dopamine action as a neurotransmitter in basal ganglia and limbic system. Antipsychotics may block postsynaptic dopamine receptors, inhibit dopamine release, increase dopamine turnover. These medications can be divided into the phenothiazines and nonphenothiazines (miscellaneous). In addition to their use in the symptomatic treatment of psychiatric illness, some have antiemetic, antinausea, antihistamine, anticholinergic, and/or sedative effects.

ANTIPSYCHOTICS

			Relative Side Effect Profile			
Name	Availability	Dosage	EPS	Anticholinergic	Sedation	Hypotension
Aripiprazole (p. 75) (Abilify)	**T:** 2 mg, 5 mg, 10 mg, 15 mg, 20 mg, 30 mg **DT:** 10 mg, 15 mg **I:** 9.75 mg	**PO:** 15–30 mg/day **I:** Up to 30 mg/day	Low	Very low	Very low	Low
Asenapine (Saphris)	**TSL:** 5 mg, 10 mg	10 mg/day	Low	Very low	Moderate	Low/moderate
Chlorpromazine (p. 232) (Thorazine)	**T:** 10 mg, 25 mg, 50 mg, 100 mg, 200 mg **SR:** 30 mg, 75 mg, 100 mg **OC:** 30 mg/ml, 100 mg/ml	50–2,000 mg/day	Moderate	Moderate	High	High
Clozapine (p. 271) (Clozaril, FazaClo)	**T:** 25 mg, 100 mg **DT:** 25 mg, 100 mg	75–900 mg/day	Very low	High	High	High

Antivirals

USES

Treatment of HIV infection. Treatment of cytomegalovirus (CMV) retinitis in pts with AIDS, acute herpes zoster (shingles), genital herpes (recurrent), mucosal and cutaneous herpes simplex virus (HSV), chickenpox, and influenza A viral illness.

ACTION

Effective antivirals must inhibit virus-specific nucleic acid/protein synthesis. Possible mechanisms of action of antivirals used for non-HIV infection may include interference with viral DNA synthesis and viral replication, inactivation of viral DNA polymerases, incorporation and termination of the growing viral DNA chain, prevention of release of viral nucleic acid into the host cell, or interference with viral penetration into cells.

ANTIVIRALS

Name	Availability	Uses	Side Effects
Abacavir (p. 1) (Ziagen)	**T:** 300 mg **OS:** 20 mg/ml	HIV infection	Nausea, vomiting, loss of appetite, diarrhea, headaches, fatigue
Acyclovir (p. 17) (Zovirax)	**T:** 400 mg, 800 mg **C:** 200 mg **I:** 50 mg/ml	Mucosal/cutaneous HSV-1 and HSV-2, varicella-zoster (shingles), genital herpes, herpes simplex, encephalitis, chickenpox	Malaise, anorexia, nausea, vomiting, light-headedness
Adefovir (p. 22) (Hepsera)	**T:** 10 mg	Chronic hepatitis B	Asthenia (loss of strength, energy), headaches, abdominal pain, nausea, diarrhea, flatulence, dyspepsia
Amantadine (p. 45) (Symmetrel)	**C:** 100 mg **S:** 50 mg/5 ml	Influenza A	Anxiety, dizziness, light-headedness, headaches, nausea, loss of appetite
Cidofovir (p. 239) (Vistide)	**I:** 75 mg/ml	CMV retinitis	Decreased urination, fever, chills, diarrhea, nausea, vomiting, headaches, loss of appetite

Beta-Adrenergic Blockers

USES

Management of hypertension, angina pectoris, arrhythmias, hypertrophic subaortic stenosis, migraine headaches, MI (prevention), glaucoma.

ACTION

Beta-adrenergic blockers competitively block $beta_1$-adrenergic receptors, located primarily in myocardium, and $beta_2$-adrenergic receptors, located primarily in bronchial and vascular smooth muscle. By occupying beta-receptor sites, these agents prevent naturally occurring or administered epinephrine/norepinephrine from exerting their effects. The results are basically opposite to those of sympathetic stimulation.

Effects of $beta_1$-blockade include slowing heart rate, decreasing cardiac output and contractility; effects of $beta_2$-blockade include bronchoconstriction, increased airway resistance in pts with asthma or COPD. Beta-blockers can affect cardiac rhythm/automaticity (decrease sinus rate, SA/AV conduction; increase refractory period in AV node). Decrease systolic and diastolic B/P; exact mechanism unknown but may block peripheral receptors, decrease sympathetic outflow from CNS, or decrease renin release from kidney. All beta-blockers mask tachycardia that occurs with hypoglycemia. When applied to the eye, reduce intraocular pressure and aqueous production.

BETA-ADRENERGIC BLOCKERS

Name	Availability	Indication	Dosage Range	Selectivity
Acebutolol (Sectral)	**C:** 200 mg, 400 mg	HTN, arrhythmias	200–1,200 mg/day	$Beta_1$
Atenolol (p. 86) (Tenormin)	**T:** 25 mg, 50 mg, 100 mg	HTN, angina, MI	50–100 mg/day	$Beta_1$
Bisoprolol (p. 136) (Zebeta)	**T:** 5 mg, 10 mg	HTN	2.5–20 mg/day	$Beta_1$
Carvedilol (p. 191) (Coreg)	**T:** 3.125 mg, 6.25 mg, 12.5 mg, 25 mg **C (SR):** 10 mg, 20 mg, 40 mg, 80 mg	HF, LVD after MI, HTN	12.5–100 mg/day	$Alpha_1$, $Beta_1$, $Beta_2$

Bronchodilators

USES	ACTION
Relief of bronchospasm occurring during anesthesia and in bronchial asthma, bronchitis, emphysema.	*Inhaled corticosteroids:* Exact mechanism unknown. May act as anti-inflammatories, decrease mucus secretion. *Beta$_2$-adrenergic agonists:* Stimulate beta-receptors in lung, relax bronchial smooth muscle, increase vital capacity, decrease airway resistance. *Anticholinergics:* Inhibit cholinergic receptors on bronchial smooth muscle (block acetylcholine action). *Leukotriene modifiers:* Decrease effect of leukotrienes, which increase migration of eosinophils, producing mucus/edema of airway wall, causing bronchoconstriction. *Methylxanthines:* Directly relax smooth muscle of bronchial airway, pulmonary blood vessels (relieve bronchospasm, increase vital capacity). Increase cyclic 3,5-adenosine monophosphate.

Calcium Channel Blockers

USES

Treatment of essential hypertension, treatment of and prophylaxis of angina pectoris (including vasospastic, chronic stable, unstable), prevention/control of supraventricular tachyarrhythmias, prevention of neurologic damage due to subarachnoid hemorrhage.

ACTION

Calcium channel blockers inhibit the flow of extracellular Ca^{2+} ions across cell membranes of cardiac cells, vascular tissue. They relax arterial smooth muscle, depress the rate of sinus node pacemaker, slow AV conduction, decrease heart rate, produce negative inotropic effect (rarely seen clinically due to reflex response). Calcium channel blockers decrease coronary vascular resistance, increase coronary blood flow, reduce myocardial oxygen demand. Degree of action varies with individual agent.

CALCIUM CHANNEL BLOCKERS

Name	Availability	Dosage Range	Side Effects	Indications
Amlodipine (p. 54) (Norvasc)	**T:** 2.5 mg, 5 mg, 10 mg	2.5–10 mg/day	Abdominal pain, flushing, headaches, peripheral edema	HTN, angina
Diltiazem (p. 356) (Cardizem)	**T:** 30 mg, 60 mg, 90 mg **T (SR):** 120 mg, 180 mg, 240 mg **C (SR):** 60 mg, 90 mg, 120 mg, 180 mg, 240 mg, 300 mg, 360 mg **I:** 5 mg/ml	**PO:** 120–360 mg/day **I:** 20–25 mg IV bolus, then 5–15 mg/hr infusion	Dizziness, drowsiness, edema, headache	**PO:** HTN **IV:** Arrhythmias
Felodipine (p. 466) (Plendil)	**T:** 2.5 mg, 5 mg, 10 mg	5–10 mg/day	Peripheral edema, headaches	HTN
Isradipine (p. 640) (DynaCirc)	**T (CR):** 5 mg, 10 mg **C:** 2.5 mg, 5 mg	5–20 mg/day	Headaches	HTN
Nicardipine (p. 832) (Cardene)	**C:** 20 mg, 30 mg **C (ER):** 30 mg, 45 mg, 60 mg **I:** 2.5 mg/ml	**PO:** 60–120 mg/day	Flushing, peripheral edema, headache, dizziness	HTN, angina

(continued)

CALCIUM CHANNEL BLOCKERS *(continued)*

Name	Availability	Dosage Range	Side Effects	Indications
Nifedipine (p. 837) (Adalat, Procardia)	**C:** 10 mg, 20 mg **T (ER):** 30 mg, 60 mg, 90 mg	30–120 mg/day	Peripheral edema, dizziness, flushed face, headaches, nausea	HTN, angina
Nimodipine (p. 841) (Nimotop)	**C:** 30 mg	60 mg q4h for 21 days	Nausea, reduced B/P, headache, rash, diarrhea	Prevent neurologic damage following subarachnoid hemorrhage
Verapamil (p. 1239) (Calan, Isoptin)	**T:** 40 mg, 80 mg, 120 mg **T (SR):** 120 mg, 180 mg, 240 mg	120–480 mg/day	Nausea, gingival hyperplasia, headache, fatigue, dizziness	HTN, angina, arrhythmias

C, Capsules; ***CR,*** controlled-release; ***ER,*** extended-release; ***HTN,*** hypertension; ***I,*** injection; ***SR,*** sustained-release; ***T,*** tablets.

Chemotherapeutic Agents

USES

Treatment of a variety of cancers; may be palliative or curative. Treatment of choice in hematologic cancers. Often used as adjunctive therapy (e.g., with surgery or irradiation); most effective when tumor mass has been removed or reduced by radiation. Often used in combinations to increase therapeutic results, decrease toxic effects. Certain agents may be used in nonmalignant conditions: polycythemia vera, psoriasis, rheumatoid arthritis, or immunosuppression in organ transplantation (used only in select cases that are severe and unresponsive to other forms of therapy). Refer to individual monographs.

ACTION

Most antineoplastics can be divided into alkylating agents, antimetabolites, anthracyclines, plant alkaloids, and topoisomerase inhibitors. These agents affect cell division or DNA synthesis. Newer agents (monoclonal antibodies and tyrosine kinase inhibitors) directly target a molecular abnormality in certain types of cancer. Hormones modulate tumor cell behavior without directly attacking those cells. Some agents are classified as miscellaneous.

Name	Availability	Category	Side Effects
Abiraterone (p. 6) (Zytiga)	**T:** 250 mg	CYP17 inhibitor	Joint swelling, hypokalemia, edema, muscle discomfort, hot flashes, diarrhea, UTI, cough, hypertension, arrhythmia, dyspepsia, upper respiratory tract infection
Aldesleukin (p. 623) (Proleukin)	**I:** 22 million units	Biologic response modifier	Hypotension, sinus tachycardia, nausea, vomiting, diarrhea, renal impairment, anemia, rash, fatigue, agitation, pulmonary congestion, dyspnea, fever, chills, oliguria, weight gain, dizziness
Alemtuzumab (p. 29) (Campath)	**I:** 30 mg/3 ml	Monoclonal antibody	Rigors, fever, fatigue, hypotension, neutropenia, anemia, sepsis, dyspnea, bronchitis, pneumonia, urticaria
Alitretinoin (Panretin)	**Gel:** 0.1%	Retinoic acid derivative	Burning, pain, edema, dermatitis, rash, skin disorders
Altretamine (Hexalen)	**C:** 50 mg	Miscellaneous	Nausea, vomiting, myelosuppression, peripheral neuropathy, altered mood, ataxia, dizziness, anxiety, vertigo
Anastrozole (p. 67) (Arimidex)	**T:** 1 mg	Aromatase inhibitor	Peripheral edema, chest pain, nausea, vomiting, diarrhea, constipation, abdominal pain, anorexia, pharyngitis, vaginal hemorrhage, anemia, leukopenia, rash, weight gain, diaphoresis, increased appetite, pain, headaches, dizziness, depression, paresthesia, hot flashes, increased cough, dry mouth, asthenia (loss of strength, energy), dyspnea, phlebitis
Arsenic trioxide (p. 78) (Trisenox)	**I:** 10 mg/ml	Miscellaneous	AV block, GI hemorrhage, hypertension, hypoglycemia, hypokalemia, hypomagnesemia, neutropenia, oliguria, prolonged QT interval, seizures, sepsis, thrombocytopenia
Asparaginase (p. 81) (Elspar)	**I:** 10,000 units	Miscellaneous	Anorexia, nausea, vomiting, hepatic toxicity, pancreatitis, nephrotoxicity, clotting factor abnormalities, malaise, confusion, lethargy, EEG changes, respiratory distress, fever, hyperglycemia, depression, stomatitis, allergic reactions, drowsiness
Axitinib (p. 96) (Inlyta)	**T:** 1 mg, 5 mg	Kinase inhibitor	Diarrhea, hypertension, fatigue, decreased appetite, nausea, dysphoria, vomiting, asthenia (loss of strength, energy), constipation

(continued)

CHEMOTHERAPEUTIC AGENTS *(continued)*

Name	Availability	Category	Side Effects
Azacitidine (p. 98) (Vidaza)	**I:** 100 mg	DNA methylation inhibitor	Edema, hypokalemia, weight loss, myalgia, cough, dyspnea, upper respiratory tract infection, back pain, pyrexia, weakness
BCG (TheraCys, Tice BCG)	**I:** 50 mg, 81 mg	Biologic response modulator	Nausea, vomiting, anorexia, diarrhea, dysuria, hematuria, cystitis, urinary urgency, anemia, malaise, fever, chills
Bendamustine (p. 121) (Treanda)	**I:** 100 mg	Alkylating agent	Neutropenia, pyrexia, thrombocytopenia, nausea, anemia, leukopenia, vomiting
Bevacizumab (p. 129) (Avastin)	**I:** 25 mg/ml	Monoclonal antibody	Increased B/P, fatigue, blood clots, diarrhea, decreased WBCs, headaches, decreased appetite, stomatitis
Bexarotene (p. 131) (Targretin)	**C:** 75 mg **Gel:** 1%	Miscellaneous	Anemia, dermatitis, fever, hypercholesterolemia, infection, leukopenia, peripheral edema
Bicalutamide (p. 132) (Casodex)	**T:** 50 mg	Antiandrogen	Gynecomastia, hot flashes, breast pain, nausea, diarrhea, constipation, nocturia, impotence, pain, muscle pain, asthenia (loss of strength, energy), abdominal pain
Bleomycin (p. 139) (Blenoxane)	**I:** 15 units, 30 units	Antibiotic	Nausea, vomiting, anorexia, stomatitis, hyperpigmentation, alopecia, pruritus, hyperkeratosis, urticaria, pneumonitis progression to fibrosis, weight loss, rash
Bortezomib (p. 143) (Velcade)	**I:** 3.5 mg	Proteasome inhibitor	Anxiety, dizziness, headaches, insomnia, peripheral neuropathy, pruritus, rash, abdominal pain, decreased appetite, constipation, diarrhea, dyspepsia, nausea, vomiting, arthralgia, dyspnea, asthenia (loss of strength, energy), edema, pain
Bosutinib (p. 146) (Bosulif)	**T:** 100 mg, 500 mg	Kinase inhibitor	Nausea, diarrhea, thrombocytopenia, vomiting, abdominal pain, anemia, fever, fatigue
Brentuximab (Adcetris)	**I:** 50 mg	Miscellaneous	Neutropenia, peripheral sensory neuropathy, fatigue, nausea, anemia, upper respiratory tract infection, diarrhea, pyrexia, thrombocytopenia, cough, vomiting
Busulfan (p. 161) (Myleran)	**T:** 2 mg	Alkylating agent	Nausea, vomiting, hyperuricemia, myelosuppression, skin hyperpigmentation, alopecia, anorexia, weight loss, diarrhea, stomatitis

Cabazitaxel (p. 163) (Jevtana)	**I:** 60 mg/1.5 ml	Microtubule inhibitor	Neutropenia, anemia, leukopenia, thrombocytopenia, diarrhea, fatigue, nausea, vomiting, constipation, asthenia (loss of strength, energy), abdominal pain, hematuria, anorexia, peripheral neuropathy, dyspnea, alopecia
Capecitabine (p. 176) (Xeloda)	**T:** 150 mg, 300 mg	Antimetabolite	Nausea, vomiting, diarrhea, stomatitis, myelosuppression, palmar-plantar erythrodysesthesia syndrome, dermatitis, fatigue, anorexia
Carboplatin (p. 184) (Paraplatin)	**I:** 50 mg, 150 mg, 450 mg	Alkylating agent	Nausea, vomiting, nephrotoxicity, myelosuppression, alopecia, peripheral neuropathy, hypersensitivity, ototoxicity, asthenia (loss of strength, energy), diarrhea, constipation
Carfizomib (Kyprolis)	**I:** 60 mg	Proteasome inhibitor	Anemia, fatigue, nausea, thrombocytopenia, dyspnea, diarrhea, pyrexia
Carmustine (p. 189) (BiCNU)	**I:** 100 mg	Alkylating agent	Anorexia, nausea, vomiting, myelosuppression, pulmonary fibrosis, pain at injection site, diarrhea, skin discoloration
Cetuximab (p. 228) (Erbitux)	**I:** 2 mg/ml	Monoclonal antibody	Dyspnea, hypotension, acne-like rash, dry skin, weakness, fatigue, fever, constipation, abdominal pain
Chlorambucil (p. 229) (Leukeran)	**T:** 2 mg	Alkylating agent	Myelosuppression, dermatitis, nausea, vomiting, hepatic toxicity, anorexia, diarrhea, abdominal discomfort, rash
Cisplatin (p. 248) (Platinol-AQ)	**I:** 50 mg, 100 mg	Alkylating agent	Nausea, vomiting, nephrotoxicity, myelosuppression, neuropathies, ototoxicity, anaphylactic-like reactions, hyperuricemia, hypomagnesemia, hypophosphatemia, hypokalemia, hypocalcemia, pain at injection site
Cladribine (p. 251) (Leustatin)	**I:** 1 mg/ml	Antimetabolite	Nausea, vomiting, diarrhea, myelosuppression, chills, fatigue, rash, fever, headaches, anorexia, diaphoresis
Crizotinib (p. 284) (Xalkori)	**C:** 200 mg, 250 mg	Tyrosine kinase inhibitor	Vision disorders, nausea, vomiting, diarrhea, edema, constipation
Cyclophosphamide (p. 289) (Cytoxan)	**I:** 100 mg, 200 mg, 500 mg, 1 g, 2 g **T:** 25 mg, 50 mg	Alkylating agent	Nausea, vomiting, hemorrhagic cystitis, myelosuppression, alopecia, interstitial pulmonary fibrosis, amenorrhea, azoospermia, diarrhea, darkening skin/fingernails, headaches, diaphoresis
Cytarabine (p. 293) (Ara-C, Cytosar)	**I:** 100 mg, 500 mg, 1 g, 2 g	Antimetabolite	Anorexia, nausea, vomiting, stomatitis, esophagitis, diarrhea, myelosuppression, alopecia, rash, fever, neuropathies, abdominal pain

CHEMOTHERAPEUTIC AGENTS *(continued)*

Name	Availability	Category	Side Effects
Dacarbazine (p. 296) (DTIC)	**I:** 200 mg	Alkylating agent	Nausea, vomiting, anorexia, hepatic necrosis, myelosuppression, alopecia, rash, facial flushing, photosensitivity, flu-like symptoms, confusion, blurred vision
Dasatinib (p. 309) (Sprycel)	**T:** 20 mg, 50 mg, 70 mg	Tyrosine kinase inhibitor	Pyrexia, pleural effusion, febrile neutropenia, GI bleeding, pneumonia, thrombocytopenia, dyspnea, anemia, cardiac failure, diarrhea
Daunorubicin (p. 305) (Cerubidine)	**I:** 20 mg	Anthracycline	CHF, nausea, vomiting, stomatitis, mucositis, diarrhea, hematuria, myelosuppression, alopecia, fever, chills, abdominal pain
Daunorubicin liposomal (p. 311) (DaunoXome)	**I:** 50 mg	Anthracycline	Nausea, diarrhea, abdominal pain, anorexia, vomiting, stomatitis, myelosuppression, rigors, back pain, headaches, neuropathy, depression, dyspnea, fatigue, fever, cough, allergic reactions, diaphoresis
Denileukin (p. 323) (Ontak)	**I:** 300 mcg/2 ml	Miscellaneous	Hypersensitivity reaction, back pain, dyspnea, rash, chest pain, tachycardia, asthenia (loss of strength, energy), flu-like symptoms, chills, nausea, vomiting, infection
Docetaxel (p. 370) (Taxotere)	**I:** 20 mg, 80 mg	Antimicrotubular	Hypotension, nausea, vomiting, diarrhea, mucositis, myelosuppression, rash, paresthesia, hypersensitivity, fluid retention, alopecia, asthenia (loss of strength, energy), stomatitis, fever
Doxorubicin (p. 385) (Adriamycin)	**I:** 10 mg, 20 mg, 50 mg, 75 mg, 150 mg, 200 mg	Anthracycline	Cardiotoxicity, including CHF; arrhythmias, nausea, vomiting, stomatitis, esophagitis, GI ulceration, diarrhea, anorexia, hematuria, myelosuppression, alopecia, hyperpigmentation of nail beds and skin, local inflammation at injection site, rash, fever, chills, urticaria, lacrimation, conjunctivitis
Doxorubicin liposomal (p. 385) (Doxil)	**I:** 20 mg, 50 mg	Anthracycline	Neutropenia, palmar-plantar erythrodysesthesia syndrome, cardiomyopathy, CHF
Enzalutamide (Xtandi)	**C:** 40 mg	Antiandrogen	Fatigue, weakness, back pain, diarrhea, tissue swelling, musculoskeletal pain, headache, upper respiratory tract infections, blood in urine, spinal cord compression
Epirubicin (p. 418) (Ellence)	**I:** 2 mg/ml	Anthracycline	Anemia, leukopenia, neutropenia, infection, mucositis

Erlotinib (p. 428) (Tarceva)	**T:** 25 mg, 100 mg, 150 mg	Tyrosine kinase inhibitor	Diarrhea, rash, nausea, vomiting
Estramustine (p. 443) (Emcyt)	**C:** 140 mg	Alkylating agent	Increased risk of thrombosis, gynecomastia, nausea, vomiting, diarrhea, thrombocytopenia, peripheral edema
Etoposide (p. 450) (VePesid)	**I:** 20 mg/ml **C:** 50 mg	Podophyllotoxin derivative	Nausea, vomiting, anorexia, myelosuppression, alopecia, diarrhea, drowsiness, peripheral neuropathies
Everolimus (p. 454) (Afinitor, Zortress)	**T (Afinitor):** 5 mg, 10 mg **T (Zortress):** 0.25 mg, 0.5 mg, 0.75 mg	mTOR kinase inhibitor	Stomatitis, infections, asthenia (loss of strength, energy), fatigue, cough, diarrhea
Exemestane (p. 456) (Aromasin)	**T:** 25 mg	Aromatase inactivator	Dyspnea, edema, hypertension, mental depression
Fludarabine (p. 488) (Fludara)	**I:** 50 mg	Antimetabolite	Nausea, diarrhea, stomatitis, bleeding, anemia, myelosuppression, skin rash, weakness, confusion, visual disturbances, peripheral neuropathy, coma, pneumonia, peripheral edema, anorexia
Fluorouracil (p. 493) (Adrucil, Efudex)	**I:** 50 mg/ml **Cream:** 1%, 5% **Solution:** 1%, 2%, 5%	Antimetabolite	Nausea, vomiting, stomatitis, GI ulceration, diarrhea, anorexia, myelosuppression, alopecia, skin hyperpigmentation, nail changes, headaches, drowsiness, blurred vision, fever
Flutamide (p. 502) (Eulexin)	**C:** 125 mg	Antiandrogen	Hot flashes, nausea, vomiting, diarrhea, hepatitis, impotence, decreased libido, rash, anorexia
Fulvestrant (p. 521) (Faslodex)	**I:** 125 mg/2.5 ml, 250 mg/5 ml syringes	Estrogen receptor antagonist	Asthenia (loss of strength, energy), pain, headaches, injection site pain, flu-like symptoms, fever, nausea, vomiting, constipation, anorexia, diarrhea, peripheral edema, dizziness, depression, anxiety, rash, increased cough, UTI
Gefitinib (p. 531) (Iressa)	**T:** 250 mg	Tyrosine kinase inhibitor	Diarrhea, rash, acne, nausea, dry skin, vomiting, pruritus, anorexia

(continued)

CHEMOTHERAPEUTIC AGENTS *(continued)*

Name	Availability	Category	Side Effects
Gemcitabine (p. 532) (Gemzar)	**I:** 200 mg, 1 g	Antimetabolite	Increased hepatic function tests, nausea, vomiting, diarrhea, stomatitis, hematuria, myelosuppression, rash, mild paresthesia, dyspnea, fever, edema, flu-like symptoms, constipation
Goserelin (p. 550) (Zoladex)	**I:** 3.6 mg, 10.8 mg	Hormone agonist	Hot flashes, sexual dysfunction, erectile dysfunction, gynecomastia, lethargy, pain, lower urinary tract symptoms, headaches, nausea, depression, diaphoresis
Hydroxyurea (p. 575) (Hydrea)	**C:** 500 mg	Antimetabolite	Anorexia, nausea, vomiting, stomatitis, diarrhea, constipation, myelosuppression, fever, chills, malaise
Ibritumomab (p. 582) (Zevalin)	Injection kit	Monoclonal antibody	Neutropenia, thrombocytopenia, anemia, infection, asthenia (loss of strength, energy), abdominal pain, fever, pain, headaches, nausea, peripheral edema, allergic reaction, GI hemorrhage, apnea
Idarubicin (p. 588) (Idamycin PFS)	**I:** 5 mg, 10 mg, 20 mg	Anthracycline	CHF, arrhythmias, nausea, vomiting, stomatitis, myelosuppression, alopecia, rash, urticaria, hyperuricemia, abdominal pain, diarrhea, esophagitis, anorexia
Ifosfamide (p. 590) (Ifex)	**I:** 1 g, 3 g	Alkylating agent	Nausea, vomiting, hemorrhagic cystitis, myelosuppression, alopecia, lethargy, drowsiness, confusion, hallucinations, hematuria
Imatinib (p. 595) (Gleevec)	**C:** 100 mg	Tyrosine kinase inhibitor	Nausea, fluid retention, hemorrhage, musculoskeletal pain, arthralgia, weight gain, pyrexia, abdominal pain, dyspnea, pneumonia
Interferon alfa-2b (p. 616) (Intron-A)	**I:** 3 million units, 5 million units, 10 million units, 18 million units, 25 million units, 50 million units	Miscellaneous	Mild hypotension, hypertension, tachycardia with high fever, nausea, diarrhea, altered taste, weight loss, thrombocytopenia, myelosuppression, rash, pruritus, myalgia, arthralgia associated with flu-like symptoms
Ipilimumab (p. 625) (Yervoy)	**I:** 5 mg/ml	Miscellaneous	Fatigue, diarrhea, pruritus, rash, colitis

Irinotecan (p. 630) (Camptosar)	**I:** 40 mg, 100 mg	Camptothecin	Diarrhea, nausea, vomiting, abdominal cramps, anorexia, stomatitis, increased AST, severe myelosuppression, alopecia, diaphoresis, rash, weight loss, dehydration, increased serum alkaline phosphatase, headaches, insomnia, dizziness, dyspnea, cough, asthenia (loss of strength, energy), rhinitis, fever, back pain, chills
Ixabepilone (p. 645) (Ixempra)	**I:** 15 mg, 45 mg	Antimicrotubular	Peripheral sensory neuropathy, fatigue, myalgia, alopecia, nausea, vomiting, stomatitis, diarrhea, anorexia, abdominal pain
Lapatinib (p. 665) (Tykerb)	**T:** 250 mg	Tyrosine kinase inhibitor	Diarrhea, palmar-plantar erythrodysesthesia, nausea, rash, vomiting, fatigue
Letrozole (p. 672) (Femara)	**T:** 2.5 mg	Aromatase inhibitor	Hypertension, nausea, vomiting, constipation, diarrhea, abdominal pain, anorexia, rash, pruritus, musculoskeletal pain, arthralgia, fatigue, headaches, dyspnea, coughing, hot flashes
Leuprolide (p. 676) (Lupron)	**I:** 3.75 mg, 5 mg, 7.5 mg, 11.25 mg, 15 mg, 22.5 mg, 30 mg	Hormone agonist	Hot flashes, gynecomastia, nausea, vomiting, constipation, anorexia, dizziness, headaches, insomnia, paresthesia, bone pain
Lomustine (p. 703) (CeeNU)	**C:** 10 mg, 40 mg, 100 mg	Alkylating agent	Anorexia, nausea, vomiting, stomatitis, hepatotoxicity, nephrotoxicity, myelosuppression, alopecia, confusion, slurred speech
Mechlorethamine (Mustargen)	**I:** 10 mg/ml	Alkylating agent	Severe nausea and vomiting, metallic taste, diarrhea, myelosuppression, alopecia, phlebitis, vertigo, tinnitus, hyperuricemia, infertility, azoospermia, anorexia, headaches, drowsiness, fever
Megestrol (p. 733) (Megace)	**T:** 20 mg, 40 mg **Suspension:** 40 mg/ml	Hormone	Deep vein thrombosis, Cushing-like syndrome, alopecia, carpal tunnel syndrome, weight gain, nausea
Melphalan (p. 736) (Alkeran)	**T:** 2 mg	Alkylating agent	Anorexia, nausea, vomiting, myelosuppression, diarrhea, stomatitis
Mercaptopurine (Purinethol)	**T:** 50 mg	Antimetabolite	Anorexia, nausea, vomiting, stomatitis, hepatic toxicity, myelosuppression, hyperuricemia, diarrhea, rash

(continued)

CHEMOTHERAPEUTIC AGENTS *(continued)*

Name	Availability	Category	Side Effects
Methotrexate (p. 753) (Rheumatrex)	**T:** 2.5 mg, 5 mg, 7.5 mg, 10 mg, 15 mg **I:** 5 mg, 50 mg, 100 mg, 200 mg, 250 mg	Antimetabolite	Nausea, vomiting, stomatitis, GI ulceration, diarrhea, hepatic toxicity, renal failure, cystitis, myelosuppression, alopecia, urticaria, acne, photosensitivity, interstitial pneumonitis, fever, malaise, chills, anorexia
Mitomycin (p. 789) (Mutamycin)	**I:** 20 mg, 40 mg	Antibiotic	Anorexia, nausea, vomiting, stomatitis, diarrhea, renal toxicity, myelosuppression, alopecia, pruritus, fever, hemolytic uremic syndrome, weakness
Mitotane (Lysodren)	**T:** 500 mg	Miscellaneous	Anorexia, nausea, vomiting, diarrhea, skin rashes, depression, lethargy, drowsiness, dizziness, adrenal insufficiency, blurred vision, impaired hearing
Mitoxantrone (p. 791) (Novantrone)	**I:** 20 mg, 25 mg, 30 mg	Anthracenedione	CHF, tachycardia, ECG changes, chest pain, nausea, vomiting, stomatitis, mucositis, myelosuppression, rash, alopecia, urine discoloration (bluish green), phlebitis, diarrhea, cough, headaches, fever
Nelarabine (p. 824) (Arranon)	**I:** 5 mg/ml	Antimetabolite	Anemia, neutropenia, thrombocytopenia, nausea, vomiting, diarrhea, fatigue, fever, dyspnea, severe neurologic events (convulsions, peripheral neuropathy)
Nilotinib (p. 838) (Tasigna)	**C:** 200 mg	Tyrosine kinase inhibitor	Rash, pruritus, nausea, fatigue, headache, constipation, diarrhea, vomiting, thrombocytopenia, neutropenia
Nilutamide (p. 840) (Nilandron)	**T:** 50 mg	Antiandrogen	Hypertension, angina, hot flashes, nausea, anorexia, increased hepatic enzymes, dizziness, dyspnea, visual disturbances, impaired adaptation to dark, constipation, decreased libido
Oxaliplatin (p. 881) (Eloxatin)	**I:** 50 mg, 100 mg	Alkylating agent	Fatigue, neuropathy, abdominal pain, dyspnea, diarrhea, nausea, vomiting, anorexia, fever, edema, chest pain, anemia, thrombocytopenia, thromboembolism, altered hepatic function tests
Paclitaxel (p. 893) (Taxol)	**I:** 30 mg, 100 mg	Antimicrotubular	Hypertension, bradycardia, ECG changes, nausea, vomiting, diarrhea, mucositis, myelosuppression, alopecia, peripheral neuropathies, hypersensitivity reaction, arthralgia, myalgia

Panitumumab (p. 904) (Vectibix)	**I:** 20 mg/ml	Monoclonal antibody	Pulmonary fibrosis, severe dermatologic toxicity, infusion reactions, abdominal pain, nausea, vomiting, constipation, skin rash, fatigue
Pegaspargase (Oncaspar)	**I:** 750 international units/ml	Miscellaneous	Hypotension, anorexia, nausea, vomiting, hepatotoxicity, pancreatitis, depression of clotting factors, malaise, confusion, lethargy, EEG changes, respiratory distress, hypersensitivity reaction, fever, hyperglycemia, stomatitis
Pemetrexed (p. 922) (Alimta)	**I:** 500 mg	Antimetabolite	Anorexia, constipation, diarrhea, neuropathy, anemia, chest pain, dyspnea, rash, fatigue
Pentostatin (Nipent)	**I:** 10 mg	Antibiotic	Nausea, vomiting, hepatic disorders, elevated hepatic function tests, leukopenia, anemia, thrombocytopenia, rash, fever, upper respiratory infection, fatigue, hematuria, headaches, myalgia, arthralgia, diarrhea, anorexia
Pertuzumab (p. 935) (Perjeta)	**I:** 420 mg/14 ml	HERZ/neu receptor antagonist	Alopecia, diarrhea, nausea, neutropenia, rash, fatigue, peripheral neuropathy
Procarbazine (p. 984) (Matulane)	**C:** 50 mg	Alkylating agent	Nausea, vomiting, stomatitis, diarrhea, constipation, myelosuppression, pruritus, hyperpigmentation, alopecia, myalgia, paresthesia, confusion, lethargy, mental depression, fever, hepatic toxicity, arthralgia, respiratory disorders
Rituximab (p. 1047) (Rituxan)	**I:** 100 mg, 500 mg	Monoclonal antibody	Hypotension, arrhythmias, peripheral edema, nausea, vomiting, abdominal pain, leukopenia, thrombocytopenia, neutropenia, rash, pruritus, urticaria, angioedema, myalgia, headaches, dizziness, throat irritation, rhinitis, bronchospasm, hypersensitivity reaction
Sipuleucel-T (Provenge)	**I:** Minimum of 50 million autologous $CD54^{+}$ cells in lactated Ringer's	Miscellaneous	Chills, fatigue, fever, back pain, nausea, headache, joint ache
Sorafenib (p. 1099) (Nexavar)	**T:** 200 mg	Tyrosine kinase inhibitor	Fatigue, alopecia, nausea, vomiting, anorexia, constipation, diarrhea, neuropathy, dyspnea, cough, asthenia (loss of strength, energy), pain
Streptozocin (Zanosar)	**I:** 1 g	Alkylating agent	May lead to insulin-dependent diabetes, nausea, vomiting, nephrotoxicity, renal tubular acidosis, myelosuppression, lethargy, diarrhea, confusion, depression

(continued)

CHEMOTHERAPEUTIC AGENTS *(continued)*

Name	Availability	Category	Side Effects
Sunitinib (p. 1117) (Sutent)	**C:** 12.5 mg, 25 mg, 50 mg	Tyrosine kinase inhibitor	Hypotension, edema, fatigue, headache, fever, dizziness, rash, hyperpigmentation, diarrhea, nausea, dyspepsia, altered taste, vomiting, neutropenia, thrombocytopenia, increased ALT/AST
Tamoxifen (p. 1122) (Nolvadex-D)	**T:** 10 mg, 20 mg	Estrogen receptor antagonist	Skin rash, nausea, vomiting, anorexia, menstrual irregularities, hot flashes, pruritus, vaginal discharge or bleeding, myelosuppression, headaches, tumor or bone pain, ophthalmic changes, weight gain, confusion
Temozolomide (p. 1136) (Temodar)	**C:** 5 mg, 20 mg, 100 mg, 250 mg	Alkylating agent	Amnesia, fever, infection, leukopenia, neutropenia, peripheral edema, seizures, thrombocytopenia
Temsirolimus (p. 1137) (Torisel)	**I:** 25 mg/ml	mTOR kinase inhibitor	Rash, asthenia (loss of strength, energy), mucositis, nausea, edema, anorexia, thrombocytopenia, leukopenia
Teniposide (Vumon)	**I:** 50 mg/5 ml	Miscellaneous	Hypotension with rapid infusion, diarrhea, nausea, vomiting, mucositis, myelosuppression, alopecia, anemia, rash, hypersensitivity reaction
Thioguanine (Tabloid)	**T:** 40 mg	Antimetabolite	Anorexia, stomatitis, myelosuppression, hyperuricemia, nausea, vomiting, diarrhea
Thiotepa (p. 1159) (Thioplex)	**I:** 15 mg	Alkylating agent	Anorexia, nausea, vomiting, mucositis, myelosuppression, amenorrhea, reduced spermatogenesis, fever, hypersensitivity reactions, pain at injection site, headaches, dizziness, alopecia
Topotecan (p. 1189) (Hycamtin)	**I:** 4 mg	Camptothecin	Nausea, vomiting, diarrhea, constipation, abdominal pain, stomatitis, anorexia, neutropenia, leukopenia, thrombocytopenia, anemia, alopecia, headaches, dyspnea, paresthesia
Toremifene (p. 1191) (Fareston)	**T:** 60 mg	Estrogen receptor antagonist	Elevated hepatic function tests, nausea, vomiting, constipation, skin discoloration, dermatitis, dizziness, hot flashes, diaphoresis, vaginal discharge or bleeding, ocular changes, cataracts, anxiety
Tositumomab (p. 1194) (Bexxar)	**I:** 14 mg/ml	Monoclonal antibody	Headaches, rash, pruritus, abdominal pain, anorexia, diarrhea, nausea, vomiting, arthralgia, myalgia, cough, dyspnea, asthenia (loss of strength, energy), chills, fever, infection

Trastuzumab (p. 1201) (Herceptin)	**I:** 440 mg	Monoclonal antibody	CHF, heart murmur (S_3 gallop), nausea, vomiting, diarrhea, abdominal pain, anorexia, rash, peripheral edema, back or bone pain, asthenia (loss of strength, energy), headaches, insomnia, dizziness, cough, dyspnea, rhinitis, pharyngitis
Tretinoin (p. 1206) (Vesanoid)	**C:** 10 mg	Miscellaneous	Flushing, nausea, vomiting, diarrhea, constipation, dyspepsia, mucositis, leukocytosis, dry skin/mucous membranes, rash, pruritus, alopecia, dizziness, anxiety, insomnia, headaches, depression, confusion, intracranial hypertension, agitation, dyspnea, shivering, fever, visual changes, earaches, hearing loss, bone pain, myalgia, arthralgia
Valrubicin (Valstar)	**I:** 200 mg/5 ml	Anthracycline	Dysuria, hematuria, urinary frequency/incontinence/urgency
Vandetanib (p. 1229) (Caprelsa)	**T:** 100 mg, 300 mg	Tyrosine kinase inhibitor	Diarrhea, rash, acne, nausea, hypertension, headache, fatigue, decreased appetite, abdominal pain
Vinblastine (p. 1243) (Velban)	**I:** 10 mg	Vinca alkaloid	Nausea, vomiting, stomatitis, constipation, myelosuppression, alopecia, peripheral neuropathy, loss of deep tendon reflexes, paresthesia, diarrhea
Vincristine (p. 1245) (Oncovin)	**I:** 1 mg, 2 mg, 3 mg	Vinca alkaloid	Nausea, vomiting, stomatitis, constipation, pharyngitis, polyuria, myelosuppression, alopecia, numbness, paresthesia, peripheral neuropathy, loss of deep tendon reflexes, headaches, abdominal pain
Vincristine liposomal (Marqibo)	**I:** 5 mg/31 ml	Vinca alkaloid	Constipation, nausea, pyrexia, fatigue, peripheral neuropathy, febrile neutropenia, diarrhea, anemia, reduced appetite, insomnia
Vinorelbine (p. 1247) (Navelbine)	**I:** 10 mg, 50 mg	Vinca alkaloid	Elevated hepatic function tests, nausea, vomiting, constipation, ileus, anorexia, stomatitis, myelosuppression, alopecia, vein discoloration, venous pain, phlebitis, interstitial pulmonary changes, asthenia (loss of strength, energy), fatigue, diarrhea, peripheral neuropathy, loss of deep tendon reflexes
Vismodegib (p. 1250) (Erivedge)	**C:** 150 mg	Hedgehog pathway inhibitor	Alopecia, muscle spasms, dysgensia, weight loss, fatigue, nausea, diarrhea, reduced appetite, vomiting, arthralgia
Vorinostat (p. 1260) (Zolinza)	**C:** 100 mg	Histone deacetylase inhibitor	Diarrhea, fatigue, nausea, thrombocytopenia, anorexia, dysgeusia
ziv-aflibercept (Zaltrap)	**I:** 25 mg/ml	Miscellaneous	Leukopenia, neutropenia, diarrhea, proteinuria, increased ALT/AST, stomatitis, thrombocytopenia, hypertension, epistaxis, headache, abdominal pain

C, Capsules; ***I,*** injection; ***T,*** tablets.

Cholinergic Agonists/Anticholinesterase

USES	ACTION
Paralytic ileus and atony of urinary bladder. Myasthenia gravis (weakness, marked fatigue of skeletal muscle). Terminates, reverses effects of neuromuscular blocking agents.	*Cholinergic agonists:* Referred to as *muscarinics* or *parasympathetics* and consist of two basic drug groups: choline esters and cholinomimetic alkaloids. Primary action mimics actions of acetylcholine at postganglionic parasympathetic nerves. Primary properties include the following: *Cardiovascular system:* Vasodilation; decreased cardiac rate; decreased conduction in SA, AV nodes; decreased force of myocardial contraction. *Gastrointestinal:* Increased tone, motility of GI smooth muscle, increased secretory activity of GI tract. *Urinary tract:* Increased contraction of detrusor muscle of urinary bladder, resulting in micturition. *Eye:* Miosis, contraction of ciliary muscle. *Anticholinesterase (anti-ChE),* also known as *cholinesterase inhibitors:* Inactivates cholinesterase, which prevents acetylcholine breakdown, causing acetylcholine to accumulate at cholinergic receptor sites. These agents can be considered indirect-acting cholinergic agonists. Primary properties include action of cholinergic agonists just noted. *Skeletal neuromuscular junction:* Effects are dose dependent. At therapeutic doses, increases force of skeletal muscle contraction; at toxic doses, reduces muscle strength.

CHOLINERGIC AGONISTS/ANTICHOLINESTERASE

Name	Availability	Uses	Dosage Range	Side Effects
Bethanechol (p. 128) (Urecholine)	**T:** 5 mg, 10 mg, 25 mg, 50 mg	Nonobstructive urinary retention	**PO:** 10–50 mg 3–4 times/day **Subcutaneous:** 2.5–5 mg 3–4 times/day	Increased urinary frequency, salivation, belching, nausea, dizziness, diarrhea

Edrophonium (Tensilon)	**I:** 10 mg/ml	Diagnosis of myasthenia gravis, reverses tubocurarine	**IV:** 10 mg over 30 sec up to 40 mg	Bradycardia, nausea, vomiting, diarrhea, urinary frequency
Neostigmine (p. 826) (Prostigmin)	**T:** 15 mg **I:** 0.25 mg/ml, 0.5 mg/ml, 1 mg/ml	Symptomatic control of myasthenia gravis, neuromuscular blocker	**PO:** 15–365 mg/day **Subcutaneous, IM:** 0.5 mg **IV:** 0.5–2 mg	Diarrhea, diaphoresis, nausea, vomiting, abdominal cramps
Pyridostigmine (p. 1004) (Mestinon)	**T:** 60 mg **T (ER):** 180 mg **S:** 60 mg/5 ml **I:** 5 mg/ml	Treats myasthenia gravis, reverses tubocurarine	**PO:** 60–1,500 mg/day **IM:** 0.5–1.5 mg/kg **IV:** 0.1–0.25 mg/kg	Diarrhea, diaphoresis, nausea, vomiting, abdominal cramps

ER, Extended-release; ***I,*** injection; ***S,*** suspension; ***T,*** tablets.

Contraception

ACTION

Combination oral contraceptives decrease fertility primarily by inhibition of ovulation. In addition, they can promote thickening of the cervical mucus, thereby creating a physical barrier for the passage of sperm. Also, they can modify the endometrium, making it less favorable for nidation.

CLASSIFICATION

Oral contraceptives either contain both an estrogen and a progestin (combination oral contraceptives) or contain only a progestin (progestin-only oral contraceptives). The combination oral contraceptives have three subgroups:

Monophasic: Daily estrogen and progestin dosage remains constant.

Biphasic: Estrogen remains constant, but the progestin dosage increases during the second half of the cycle.

Triphasic: Progestin changes for each phase of the cycle.

Over the past several years, options have expanded to include a combined hormonal patch (Ortho Evra), vaginal ring (NuvaRing), and extended cycle contraceptives (e.g., Loestrin-24 FE, Seasonale, Seasonique, Yaz). The latest oral contraceptive, Natazia, is a four-phase dosing regimen (estradiol steps down and dienogest, a progestin, steps up during the cycle to help avoid breakthrough bleeding).

(continued)

COMMON COMPLAINTS WITH ORAL CONTRACEPTIVES

Too much estrogen	Nausea, bloating, breast tenderness, increased B/P, melasma, headache
Too little estrogen	Early or midcycle breakthrough bleeding, increased spotting, hypomenorrhea
Too much progestin	Breast tenderness, headache, fatigue, changes in mood
Too little progestin	Late breakthrough bleeding
Too much androgen	Increased appetite, weight gain, acne, oily skin, hirsutism, decreased libido, increased breast size, breast tenderness, increased LDL cholesterol, decreased HDL cholesterol

Corticosteroids

USES	ACTION
Replacement therapy in adrenal insufficiency, including Addison's disease. Symptomatic treatment of multi-organ disease/conditions. Rheumatoid arthritis (RA), osteoarthritis, severe psoriasis, ulcerative colitis, lupus erythematosus, anaphylactic shock, acute exacerbation of asthma, status asthmaticus, organ transplant.	Suppress migration of polymorphonuclear leukocytes (PML) and reverse increased capillary permeability by their anti-inflammatory effect. Suppress immune system by decreasing activity of lymphatic system.

CORTICOSTEROIDS

Name	Availability	Route of Administration	Side Effects
Beclomethasone (p. 113) (Beconase)	**Inhalation, nasal:** 42 mcg/spray, 84 mcg/spray	Inhalation, intranasal	**I:** Cough, dry mouth/throat, headaches, throat irritation, increased blood glucose **Nasal:** Headaches, sore throat, intranasal ulceration, increased blood glucose
Betamethasone (p. 126) (Celestone, Diprolene)	**I:** 4 mg/ml	IV, intralesional, intra-articular	Nausea, vomiting, increased appetite, weight gain, insomnia, increased blood glucose
Budesonide (p. 152) (Pulmicort, Rhinocort)	**Nasal:** 32 mcg/spray	Intranasal	Headaches, sore throat, intranasal ulceration, increased blood glucose
Cortisone (p. 281) (Cortone)	**T:** 5 mg, 10 mg, 25 mg	PO	Insomnia, nervousness, increased appetite, indigestion, increased blood glucose
Dexamethasone (p. 332) (Decadron)	**T:** 0.5 mg, 1 mg, 4 mg, 6 mg **OS:** 0.5 mg/5 ml **I:** 4 mg/ml	PO, parenteral	Insomnia, weight gain, increased appetite, increased blood glucose

Corticosteroids: Topical

USES

Provide relief of inflammation/pruritus associated with corticosteroid-responsive disorders (e.g., contact dermatitis, eczema, insect bite reactions, first- and second-degree localized burns/sunburn).

ACTION

Diffuse across cell membranes, form complexes with cytoplasm. Complexes stimulate protein synthesis of inhibitory enzymes responsible for anti-inflammatory effects (e.g., inhibit edema, erythema, pruritus, capillary dilation, phagocytic activity).

Topical corticosteroids can be classified based on potency:

May use for facial and intertriginous application for only limited time.

High potency: For more severe inflammatory conditions (e.g., lichen simplex chronicus, psoriasis). May use for facial and intertriginous application for short time only. Used in areas of thickened skin due to chronic conditions.

Low potency: Modest anti-inflammatory effect, safest for chronic application, facial and intertriginous application, with occlusion, for infants/young children.

Medium potency: For moderate inflammatory conditions (e.g., chronic eczematous dermatoses).

Very high potency: Alternative to systemic therapy for local effect (e.g., chronic lesions caused by psoriasis). Increased risk of skin atrophy. Used for short periods on small areas. Avoid occlusive dressings.

CORTICOSTEROIDS: TOPICAL

Name	Availability	Potency	Side Effects
Alclometasone (Aclovate)	**C, O:** 0.05%	Low	Skin atrophy, contact dermatitis, stretch marks on skin, enlarged blood vessels in the skin, hair loss, pigment changes, secondary infections
Amcinonide (Cyclocort)	**C, O, L:** 0.1%	High	Same as alclometasone
Betamethasone dipropionate (p. 126)	**C, O, G, L:** 0.05%	High	Same as alclometasone

(continued)

CORTICOSTEROIDS: TOPICAL *(continued)*

Name	Availability	Potency	Side Effects

Diuretics

USES

Thiazides: Management of edema resulting from a number of causes (e.g., CHF, hepatic cirrhosis); hypertension either alone or in combination with other antihypertensives.
Loop: Management of edema associated with CHF, cirrhosis of the liver, and renal disease. Furosemide used in treatment of hypertension alone or in combination with other antihypertensives.
Potassium-sparing: Adjunctive treatment with thiazides, loop diuretics in treatment of CHF and hypertension.

ACTION

Act to increase the excretion of water/sodium and other electrolytes via the kidneys. Exact mechanism of antihypertensive effect unknown; may be due to reduced plasma volume or decreased peripheral vascular resistance. Subclassifications of diuretics are based on their mechanism and site of action.
Thiazides: Act at the cortical diluting segment of nephron, block reabsorption of Na, Cl, and water; promote excretion of Na, Cl, K, and water. *Loop:* Act primarily at the thick ascending limb of Henle's loop to inhibit Na, Cl, and water absorption.
Potassium-sparing: Spironolactone blocks aldosterone action on distal nephron (causes K retention, Na excretion). Triamterene, amiloride act on distal nephron, decreasing Na reuptake, reducing K secretion.

DIURETICS

Name	Availability	Dosage Range	Side Effects
Thiazide, Thiazide-related			
Chlorothiazide (Diuril)	**T:** 250 mg, 500 mg **S:** 250 mg/5 ml **I:** 500 mg	0.5–1 g 1–2 times/day	Confusion, fatigue, muscle cramps, abdominal discomfort
Chlorthalidone (Thalitone, Hygroton)	**T: Thalitone:** 15 mg **Hygroton:** 25 mg, 50 mg	25–200 mg/day	Same as chlorothiazide
Hydrochlorothiazide (p. 564) (HydroDIURIL)	**T:** 25 mg, 50 mg **C:** 12.5 mg	25–100 mg/day	Orthostatic hypotension, photosensitivity, hypokalemia, anorexia, epigastric distress, increased blood glucose

(continued)

DIURETICS *(continued)*

Name	Availability	Dosage Range	Side Effects
Indapamide (p. 605) (Lozol)	**T:** 1.25 mg, 2.5 mg	1.25–5 mg/day	Loss of appetite, diarrhea, headaches, dizziness, light-headedness, insomnia, upset stomach
Metolazone (p. 765) (Zaroxolyn)	**T:** 2.5 mg, 5 mg, 10 mg	2.5–20 mg/day	Orthostatic hypotension, dizziness, hypokalemia, nausea, diarrhea, abdominal pain
Loop			
Bumetanide (p. 154) (Bumex)	**T:** 0.5 mg, 1 mg, 2 mg **I:** 0.25 mg/ml	**Edema:** 1–10 mg/day	Orthostatic hypotension, cramps or pain, hypokalemia (dry mouth, fatigue, muscle cramps), blurred vision, headaches
Furosemide (p. 522) (Lasix)	**T:** 20 mg, 40 mg, 80 mg **OS:** 10 mg/ml, 40 mg/5 ml **I:** 10 mg/ml	**HTN:** 20–40 mg/day **Edema:** Up to 600 mg/day	Orthostatic hypotension, cramps or pain, hypokalemia (dry mouth, fatigue, muscle cramps), blurred vision, headaches
Torsemide (p. 1192) (Demadex)	**T:** 5 mg, 10 mg, 20 mg, 100 mg **I:** 10 mg/ml	**Edema:** 10–200 mg/day **HTN:** 5–10 mg/day	Constipation, dizziness, upset stomach, headache, hypokalemia (dry mouth, fatigue, muscle cramps)
Potassium-sparing			
Amiloride (Midamor)	**T:** 5 mg	5–20 mg/day	Hyperkalemia, nausea, abdominal pain, diarrhea
Eplerenone (p. 420) (Inspra)	**T:** 25 mg, 50 mg	**Heart Failure:** 25–50 mg/day **HTN:** 50–100 mg/day	Hyperkalemia, hypertriglyceridemia
Spironolactone (p. 1102) (Aldactone)	**T:** 25 mg, 50 mg, 100 mg	**Edema:** 100 mg/day **HTN:** 50–200 mg/day **Hypokalemia:** 25–100 mg/day **Heart Failure:** 25–50 mg/day	Hyperkalemia, nausea, vomiting, abdominal cramps, diarrhea
Triamterene (p. 1210) (Dyrenium)	**C:** 50 mg, 100 mg	**Edema:** 100–300 mg/day	Same as amiloride

C, Capsules; ***HTN,*** hypertension; ***I,*** injection; ***OS,*** oral solution; ***S,*** suspension; ***T,*** tablets.

Fertility Agents

Infertility is defined as unsuccessful conception after 12 months of attempting to conceive, as opposed to *sterility,* the inability to reproduce. Infertility may be due to reproduction dysfunction of the male, female, or both.

Female infertility can be due to disruption of any phase of the reproductive process. The most critical phases include follicular maturation, ovulation, transport of the ovum through the fallopian tubes, fertilization of the ovum, nidation, and growth/development of the conceptus. Causes of infertility include the following:

Anovulation, failure of follicular maturation: Absence of adequate hormonal stimulation; ovarian follicles do not ripen, and ovulation will not occur.

Unfavorable cervical mucus: Normally the cervical glands secrete large volumes of thin, watery mucus, but if the mucus is unfavorable (scant, thick, or sticky), sperm is unable to pass through to the uterus.

Hyperprolactinemia: Excessive prolactin secretion may cause amenorrhea, galactorrhea, and infertility.

Luteal phase defect: Progesterone secretion by the corpus luteum is insufficient to maintain endometrial integrity.

Endometriosis: Endometrial tissue is implanted in abnormal locations (e.g., uterine wall, ovary, extragenital sites).

Androgen excess: May decrease fertility (most common condition is polycystic ovary).

Male infertility is due to decreased density or motility of sperm or semen of abnormal volume or quality. The most obvious manifestation of male infertility is impotence (inability to achieve erection). Whereas in female infertility an identifiable endocrine disorder can be found, most cases of male infertility are not associated with an identifiable endocrine disorder.

ACTION

Antiestrogens: Nonsteroidal estrogen antagonist that increases follicle-stimulating hormone (FSH) and leutinizing hormone (LH) levels by blocking estrogen-negative feedback at the hypothalamus.

Gonadotropins: Produce ovulation induction in women with hypogonadotropic hypogonadism and polycystic ovary syndrome (PCOS). Ovaries must be able to respond normally to FSH and LH stimulation.

Gonadotropin-releasing hormone (GnRH) agonists: Causes down-regulation of endogenous FSH and LH levels. GnRH agonists stimulate release of pituitary gonadotropins. Suppression of endogenous LH can decrease number of oocytes released prematurely, improve oocyte quality, and increase pregnancy rates.

Gonadotropin-releasing hormone (GnRH) antagonists: Suppress endogenous LH surges during ovarian stimulation. GnRH antagonists avoid initial flare-up seen with GnRH agonists, shortening the number of days needed for LH suppression and allowing ovarian stimulation to begin within the spontaneous cycle.

MEDICATIONS TO INDUCE OVULATION

Name	Category	Availability	Uses	Side Effects
Cetrorelix (Cetrotide)	GnRH antagonist	**I:** 0.25 mg, 3 mg	Inhibition of premature LH surges in women undergoing ovarian hyperstimulation	OHSS (ovarian hyperstimulation syndrome): Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, shortness of breath, peripheral/dependent edema; headaches, pain/redness at injection site, mood swings, hot flashes, insomnia, vaginal dryness
Chorionic gonadotropin (p. 236) (Novarel, Ovidrel, Pregnyl)	Gonadotropin	**I:** 5,000 units, 10,000 units, 20,000 units	In conjunction with clomiphene, human menotropins or urofolitropin to stimulate ovulation	OHSS (ovarian hyperstimulation syndrome): Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, shortness of breath, peripheral/dependent edema; ovarian enlargement, ovarian cyst formation, headache, pain at injection site
Clomiphene (Clomid, Milophene, Serophene)	Antiestrogen	**T:** 50 mg	Anovulation, oligo-ovulation with intact pituitary/ovarian response and endogenous estrogen	Ovarian cyst formation, ovarian enlargement, visual disturbances, premenstrual syndrome, hot flashes, headaches, blurred vision, nausea, breast tenderness
Follitropin alpha (Gonal-F)	Gonadotropin	**I:** 37.5 international units FSH, 75 international units FSH, 150 international units FSH	In conjunction with human chorionic gonadotropin to stimulate ovarian follicular development in pts with ovulatory dysfunction not due to primary ovarian failure (e.g., anovulation, oligo-ovulation)	OHSS (ovarian hyperstimulation syndrome): Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, shortness of breath, peripheral/dependent edema; flu-like symptoms, upper respiratory tract infections, bleeding between menstrual periods, nausea, ovarian enlargement, ovarian cysts, acne, breast pain/tenderness, mood swings

Follitropin beta (Follistim AQ)	Gonadotropin	**I:** 75 international units FSH	In conjunction with human chorionic gonadotropin to stimulate ovarian follicular development in patients with ovulatory dysfunction not due to primary ovarian failure (e.g., anovulation, oligo-ovulation)	OHSS (ovarian hyperstimulation syndrome): Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, shortness of breath, peripheral/dependent edema; flu-like symptoms, breast tenderness, dry skin, rash, dizziness, fever, headaches, nausea, fatigue, mood swings
Ganirelex (Antagon)	GnRH antagonist	**I:** 250 mcg/0.5 ml	Inhibition of premature LH surges in women undergoing ovarian hyperstimulation	OHSS (ovarian hyperstimulation syndrome): Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, shortness of breath, peripheral/dependent edema; headaches, nausea, pain/redness at injection site, mood swings, hot flashes, insomnia, vaginal dryness
Goserelin (p. 550) (Zoladex)	GnRH agonist	**Implant:** 3.6 mg, 10.8 mg	Endometriosis, adjunct to menotropins for ovulation induction	Hot flashes, amenorrhea, blurred vision, edema, headaches, nausea, vomiting, breast tenderness, weight gain, mood swings, insomnia, vaginal dryness
Leuprolide (p. 676) (Lupron)	GnRH agonist	5 mg/ml for subcutaneous injection	Endometriosis, adjunct to menotropins/human chorionic gonadotropin for ovulation induction	Hot flashes, amenorrhea, blurred vision, edema, headaches, nausea, vomiting, breast tenderness, weight gain, mood swings, insomnia, vaginal dryness

(continued)

MEDICATIONS TO INDUCE OVULATION *(continued)*

Name	Category	Availability	Uses	Side Effects
Menotropins (Menopur, Repronex)	Gonadotropin	75 units FSH, 75 units LH activity; 150 units FSH, 150 units LH activity	In conjunction with chorionic gonadotropin for ovulation stimulation in pts with ovulatory dysfunction due to primary ovarian failure	OHSS (ovarian hyperstimulation syndrome): Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, shortness of breath, edema of lower extremities; ovarian enlargement, ovarian cyst formation, breast tenderness, mood swings
Nafarelin (Synarel)	GnRH	2 mg/ml nasal spray	Endometriosis, adjunct to menotropins/human chorionic gonadotropin for ovulation induction	Loss of bone mineral density, breast enlargement, bleeding between regular menstrual periods, acne, mood swings, seborrhea, hot flashes, headache, insomnia, vaginal dryness
Urofollitropin (Bravelle)	Gonadotropin	75 units FSH activity, 150 units FSH activity	In conjunction with human chorionic gonadotropin for ovulation stimulation in pts with polycystic ovary syndrome who have elevated LH:FSH ratio and have failed clomiphene therapy	OHSS (ovarian hyperstimulation syndrome): Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, shortness of breath, edema of lower extremities; ovarian enlargement, ovarian cyst formation, pain/redness at injection site, breast tenderness, nausea, vomiting, diarrhea, mood swings

I, Injection; ***T,*** tablets.

H_2 Antagonists

USES	ACTION
Short-term treatment of duodenal ulcer (DU), active benign gastric ulcer (GU), maintenance therapy of DU, pathologic hypersecretory conditions (e.g., Zollinger-Ellison syndrome), gastroesophageal reflux disease (GERD), and prevention of upper GI bleeding in critically ill pts.	Inhibit gastric acid secretion by interfering with histamine at the histamine H_2 receptors in parietal cells. Also inhibit acid secretion caused by gastrin. Inhibition occurs with basal (fasting), nocturnal, food-stimulated, or fundic distention secretion. H_2 antagonists decrease both the volume and H_2 concentration of gastric juices.

H_2 ANTAGONISTS

Name	Availability	Dosage Range	Side Effects
Cimetidine (p. 242) (Tagamet)	**T:** 200 mg, 300 mg, 400 mg, 800 mg **L:** 300 mg/5 ml **I:** 150 mg/ml	**Treatment of DU:** 800 mg at bedtime, 400 mg 2 times/day or 300 mg 4 times/day **Maintenance of DU:** 400 mg at bedtime **Treatment of GU:** 800 mg at bedtime or 300 mg 4 times/day **GERD:** 1,600 mg/day **Hypersecretory:** 1,200–2,400 mg/day	Headaches, fatigue, dizziness, confusion, diarrhea, gynecomastia

(continued)

H_2 ANTAGONISTS *(continued)*

Name	Availability	Dosage Range	Side Effects
Famotidine (p. 463) (Pepcid)	**T:** 10 mg, 20 mg, 40 mg **T (chewable):** 10 mg **DT:** 20 mg, 40 mg **Gelcap:** 10 mg **OS:** 40 mg/5 ml **I:** 10 mg/ml	**Treatment of DU:** 40 mg/day **Maintenance of DU:** 20 mg/day **Treatment of GU:** 40 mg/day **GERD:** 40–80 mg/day **Hypersecretory:** 80–640 mg/day	Headaches, dizziness, diarrhea, constipation, abdominal pain, tinnitus
Nizatidine (p. 849) (Axid)	**T:** 75 mg **C:** 150 mg, 300 mg	**Treatment of DU:** 300 mg/day **Maintenance of DU:** 150 mg/day	Fatigue, urticaria, abdominal pain, constipation, nausea
Ranitidine (p. 1020) (Zantac)	**T:** 75 mg, 150 mg, 300 mg **C:** 150 mg, 300 mg **Syrup:** 15 mg/ml **Granules:** 150 mg **I:** 0.5 mg/ml, 25 mg/ml	**Treatment of DU:** 300 mg/day **Maintenance of DU:** 150 mg/day **Treatment of GU:** 300 mg/day **GERD:** 300 mg/day **Hypersecretory:** 0.3–6 g/day	Blurred vision, constipation, nausea, abdominal pain

Hematinic Preparations

USES	ACTION
Prevention or treatment of iron deficiency resulting from improper diet, pregnancy, impaired absorption, or prolonged blood loss.	Iron supplements are provided to ensure adequate supplies for the formation of hemoglobin, which is needed for erythropoiesis and O_2 transport.

HEMATINIC (IRON) PREPARATIONS

Name	Availability	Elemental Iron	Side Effects
Ferrous fumarate (p. 476) (Femiron, Feostat)	**T:** 63 mg, 200 mg, 324 mg **S:** 100 mg/5 ml **D:** 45 mg/0.6 ml	33	Constipation, nausea, vomiting, diarrhea, abdominal pain/cramps
Ferrous gluconate (p. 476) (Fergon)	**T:** 240 mg, 325 mg	12	Same as ferrous fumarate
Ferrous sulfate (p. 476) (Fer-In-Sol)	**T:** 325 mg **Syrup:** 90 mg/5 ml **E:** 220 mg/5 ml **D:** 75 mg/0.6 ml	20	Same as ferrous fumarate
Ferrous sulfate exsiccated (Slow-Fe)	**T:** 187 mg, 200 mg **T (SR):** 160 mg **C (ER):** 160 mg	30	Same as ferrous fumarate

C, Caplets; ***D,*** drops; ***E,*** elixir; ***ER,*** extended-release; ***S,*** suspension; ***SR,*** sustained-release; ***T,*** tablets.

Hormones

USES

Functions of the body are regulated by two major control systems: the nervous system and the endocrine (hormone) system. Together they maintain homeostasis and control different metabolic functions in the body.

Hormones are concerned with control of different metabolic functions in the body (e.g., rates of chemical reactions in cells, transporting substances through cell membranes, cellular metabolism [growth/secretions]). By definition, a hormone is a chemical substance secreted into body fluids by cells and has control over other cells in the body.

Hormones can be local or general:

- *Local hormones* have specific local effects (e.g., acetylcholine, which is secreted at parasympathetic and skeletal nerve endings).

Hormones *(continued)*

ACTION

• *General hormones* are mostly secreted by specific endocrine glands (e.g., epinephrine/norepinephrine are secreted by the adrenal medulla in response to sympathetic stimulation), transported in the blood to all parts of the body, causing many different reactions.

Some general hormones affect all or almost all cells of the body (e.g., thyroid hormone from the thyroid gland increases the rate of most chemical reactions in almost all cells of the body); other general hormones affect only specific tissue (e.g., ovarian hormones are specific to female sex organs and secondary sexual characteristics of the female).

Endocrine hormones almost never directly act intracellularly affecting chemical reactions. They first combine with hormone receptors either on the cell surface or inside the cell (cell cytoplasm or nucleus). The combination of hormone and receptors alters the function of the receptor, and the receptor is the direct cause of the hormone effects. Altered receptor function may include the following:

Altered cell permeability, which causes a change in protein structure of the receptor, usually opening or closing a channel for one or more ions. The movement of these ions causes the effect of the hormone.

Activation of intracellular enzymes immediately inside the cell membrane (e.g., hormone combines with receptor that then becomes the activated enzyme adenyl cyclase, which causes formation of cAMP).
◄ALERT► cAMP has effects inside the cell. It is not the hormone but cAMP that causes these effects.
Regulation of hormone secretion is controlled by an internal control system, the negative feedback system:

- Endocrine gland oversecretes.
- Hormone exerts more and more of its effect.
- Target organ performs its function.
- Too much function in turn feeds back to endocrine gland to decrease secretory rate.

The endocrine system contains many glands and hormones. A summary of the important glands and their hormones secreted are as follows:

The pituitary gland (hypophysis) is a small gland found in the sella turcica at the base of the brain. The pituitary is divided into two portions physiologically: the anterior pituitary (adenohypophysis) and the posterior pituitary (neurohypophysis). Six important hormones are secreted from the anterior pituitary and two from the posterior pituitary.

Anterior pituitary hormones:

- Growth hormone (GH)
- Adrenocorticotropin (corticotropin)
- Thyroid-stimulating hormone (thyrotropin) (TSH)
- Follicle-stimulating hormone (FSH)
- Luteinizing hormone (LH)
- Prolactin

ACTION *(cont.)*

Posterior pituitary hormones:

- Antidiuretic hormone (vasopressin)
- Oxytocin

Almost all secretions of the pituitary hormones are controlled by hormonal or nervous signals from the hypothalamus. The hypothalamus is a center of information concerned with the well-being of the body, which in turn is used to control secretions of the important pituitary hormones just listed. Secretions from the posterior pituitary are controlled by nerve signals originating in the hypothalamus; anterior pituitary hormones are controlled by hormones secreted within the hypothalamus. These hormones are as follows:

- Thyrotropin-releasing hormone (TRH) releasing thyroid-stimulating hormone
- Corticotropin-releasing hormone (CRH) releasing adrenocorticotropin
- Growth hormone-releasing hormone (GHRH) releasing growth hormone and growth hormone inhibitory hormone (GHIH) (same as somatostatin)
- Gonadotropin-releasing hormone (GnRH) releasing the two gonadotropic hormones LH and FSH
- Prolactin inhibitory factor (PIF) causing inhibition of prolactin and prolactin-releasing factor

Anterior Pituitary Hormones

All anterior pituitary hormones (except growth hormone) have as their principal effect stimulating target glands.

Growth Hormone (GH)

Growth hormone affects almost all tissues of the body. GH (somatopropin) causes growth in almost all tissues of the body (increases cell size, increases mitosis with increased number of cells, and differentiates certain types of cells). Metabolic effects include increased rate of protein synthesis, mobilization of fatty acids from adipose tissue, decreased rate of glucose utilization.

Thyroid-Stimulating Hormone (TSH)

Thyroid-stimulating hormone controls secretion of the thyroid hormones. The thyroid gland is located immediately below the larynx on either side of and anterior to the trachea and secretes two significant hormones, thyroxine (T_4) and triiodothyroxine (T_3), which have a profound effect on increasing the metabolic rate of the body. The thyroid gland also secretes calcitonin, an important hormone for calcium metabolism. Calcitonin promotes deposition of calcium in the bones, which decreases calcium concentration in the extracellular fluid.

Adrenocorticotropin

Adrenocorticotropin causes the adrenal cortex to secrete adrenocortical hormones. The adrenal glands lie at the superior poles of the two kidneys. Each gland is composed of two distinct parts: the adrenal medulla and the cortex. The adrenal medulla, related to the sympathetic nervous system, secretes the hormones epinephrine and norepinephrine. When stimulated, they cause constriction of blood vessels, increased activity of the heart, inhibitory effects on the GI tract, and dilation of the pupils. The adrenal cortex secretes corticosteroids, of which there are two major types: mineralocorticoids and glucocorticoids. Aldosterone, the principal mineralocorticoid, primarily affects electrolytes of the extracellular fluids. Cortisol, the principal glucocorticoid, affects glucose, protein, and fat metabolism.

Luteinizing Hormone (LH)

Luteinizing hormone plays an important role in ovulation and causes secretion of female sex hormones by the ovaries and testosterone by the testes.

Follicle-Stimulating Hormone (FSH)

Follicle-stimulating hormone causes growth of follicles in the ovaries before ovulation and promotes formation of sperm in the testes.

Hormones *(continued)*

ACTION *(cont.)*

Ovarian sex hormones are estrogens and progestins. Estradiol is the most important estrogen; progesterone is the most important progestin.

Estrogens mainly promote proliferation and growth of specific cells in the body and are responsible for development of most of the secondary sex characteristics. Primarily cause cellular proliferation and growth of tissues of sex organs/other tissue related to reproduction. Ovaries, fallopian tubes, uterus, vagina increase in size. Estrogen initiates growth of breast and milk-producing apparatus, external appearance.

Progesterone stimulates secretion of the uterine endometrium during the latter half of the female sexual cycle, preparing the uterus for implantation of the fertilized ovum. Decreases the frequency of uterine contractions (helps prevent expulsion of the implanted ovum). Progesterone promotes development of breasts, causing alveolar cells to proliferate, enlarge, and become secretory in nature.

Testosterone is secreted by the testes and formed by the interstitial cells of Leydig. Testosterone production increases under the stimulus of the anterior pituitary gonadotropic hormones. It is responsible for distinguishing characteristics of the masculine body (stimulates the growth of male sex organs and promotes the development of male secondary sex characteristics, e.g., distribution of body hair, effect on voice, protein formation, and muscular development).

Prolactin

Prolactin promotes the development of breasts and secretion of milk.

POSTERIOR PITUITARY HORMONES

Antidiuretic Hormone (ADH) (Vasopressin)

ADH can cause antidiuresis (decreased excretion of water by the kidneys). In the presence of ADH, the permeability of the renal-collecting ducts and tubules to water increases, which allows water to be absorbed, conserving water in the body. ADH in higher concentrations is a very potent vasoconstrictor, constricting arterioles everywhere in the body, increasing B/P.

Oxytocin

Oxytocin contracts the uterus during the birthing process, esp. toward the end of the pregnancy, helping expel the baby. Oxytocin also contracts myoepithelial cells in the breasts, causing milk to be expressed from the alveoli into the ducts so that the baby can obtain it by suckling.

PANCREAS

The pancreas is composed of two tissue types: *acini* (secrete digestive juices in the duodenum) and *islets of Langerhans* (secrete insulin/glucagons directly into the blood). The islets of Langerhans contain three cells: alpha, beta, and delta. Alpha cells secrete glucagon, beta cells secrete insulin, and delta cells secrete somatostatin.

Insulin promotes glucose entry into most cells, thus controlling the rate of metabolism of most carbohydrates. Insulin also affects fat metabolism.

Glucagon effects are opposite those of insulin, the most important of which is increasing blood glucose concentration by releasing it from the liver into the circulating body fluids.

Somatostatin (same chemical as secreted by the hypothalamus) has multiple inhibitory effects: depresses secretion of insulin and glucagon, decreases GI motility, decreases secretions/absorption of the GI tract.

Human Immunodeficiency Virus (HIV) Infection

USES

Antiretroviral agents are used in the treatment of HIV infection.

ACTION

Seven classes of antiretroviral agents are used in the treatment of HIV disease. *Nucleoside reverse transcriptase inhibitors (NRTIs)* compete with natural substrates for formation of proviral DNA by reverse transcriptase inhibiting viral replication.

Nucleotide reverse transcriptase inhibitors (*NtRTIs*) inhibit reverse transcriptase by competing with the natural substrate deoxyadenosine triphosphate and by DNA chain termination.

Non-nucleoside reverse transcriptase inhibitors (NNRTIs) directly bind to reverse transcriptase and block RNA-dependent and DNA-dependent DNA polymerase activities by disrupting the enzyme's catalytic site.

Protease inhibitors (PIs) bind to the active site of HIV-1 protease and prevent the processing of viral gag and gag-pol polyprotein precursors resulting in immature, noninfectious viral particles.

Fusion inhibitors interfere with the entry of HIV-1 into cells by inhibiting fusion of viral and cellular membranes.

CCR5 co-receptor antagonist selectively binds to human chemokine receptor CCR5 present on cell membrane preventing HIV-1 from entering cells.

Integrase inhibitor inhibits catalytic activity of HIV-1 integrase, an HIV-1 encoded enzyme required for viral replication.

Human Immunodeficiency Virus (HIV) Infection *(continued)*

ANTIRETROVIRAL AGENTS FOR TREATMENT OF HIV INFECTION

Name	Availability	Dosage Range	Side Effects
Nucleoside Analogues			
Abacavir (p. 1) (Ziagen)	**T:** 300 mg **OS:** 20 mg/ml	**A:** 300 mg 2 times/day or 600 mg once/day	Nausea, vomiting, malaise, rash, fever, headaches, asthenia (loss of strength, energy), fatigue
Abacavir/lamivudine (Epzicom)	**T:** 600 mg abacavir/ 300 mg lamivudine	**A:** once/day	Allergic reaction, insomnia, headaches, depression, dizziness, fatigue, diarrhea, fever, abdominal pain, anxiety
Didanosine (p. 349) (Videx EC)	**DR:** 125 mg, 200 mg, 250 mg, 400 mg **OS:** 2 g/bottle, 4 g/bottle	**DR (weighing 60 kg or more):** 400 mg once/day; **(weighing 25–59 kg):** 250 mg once/day; **(weighing 20–24 kg):** 200 mg once/day **OS (weighing more than 60 kg):** 200 mg q12h or 400 mg once/day; **(weighing less than 60 kg):** 125 mg q12h or 250 mg once/day	Peripheral neuropathy, pancreatitis, diarrhea, nausea, vomiting, headaches, insomnia, rash, hepatitis, seizures
Emtricitabine (p. 404) (Emtriva)	**C:** 200 mg **OS:** 10 mg/ml	**A:** 200 mg/day **(C)** 240 mg/day **(OS)**	Headaches, insomnia, depression, diarrhea, nausea, vomiting, rhinitis, asthenia (loss of strength, energy), rash
Emtricitabine/efavirenz/ tenofovir (Atripla)	**T:** 200 mg emtricitabine/ 600 mg efavirenz/ 300 mg tenofovir	**A:** once/day	Lactic acidosis, headaches, dizziness, abdominal pain, nausea, vomiting, rash

Emtricitabine/rilpivirine/ tenofovir (Complera)	**T:** 200 mg emtricitabine/ 25 mg rilpivirine/300 mg tenofovir	**A:** 1 tablet once daily with food	Insomnia, headache, diarrhea, nausea, fatigue, dizziness, depression, rash
Emtricitabine/tenofovir (Truvada)	**T:** 200 mg emtricitabine/ 300 mg tenofovir	**A:** 1 tablet once daily with food	Dizziness, diarrhea, headaches, rash, belching/ flatulence, skin discoloration
Emtricitabine/ elvitegravir/cobicistat/ tenofovir (Stribild)	**T:** 200 mg emtricitabine 150 mg elvitegravir 150 mg cobicistat 300 mg tenofovir	**A:** 1 tablet once daily with food	Nausea, diarrhea
Lamivudine (p. 658) (Epivir)	**T:** 100 mg, 150 mg, 300 mg **OS:** 5 mg/ml, 10 mg/ml	**A:** 150 mg 2 times/day or 300 mg once/day **C:** 4 mg/kg 2 times/day	Diarrhea, malaise, fatigue, headaches, nausea, vomiting, abdominal pain, peripheral neuropathy, arthralgia, myalgia, skin rash
Stavudine (p. 1104) (Zerit)	**C:** 15 mg, 20 mg, 30 mg, 40 mg **OS:** 1 mg/ml	**A (weighing more than 60 kg):** 40 mg 2 times/day (20 mg 2 times/day if peripheral neuropathy occurs); **(weighing 60 kg or less):** 30 mg 2 times/day (15 mg 2 times/day if peripheral neuropathy occurs)	Peripheral neuropathy, anemia, leukopenia, neutropenia
Zidovudine (p. 1267) (Retrovir)	**C:** 100 mg **T:** 300 mg **Syrup:** 50 mg/5 ml, 10 mg/ml	**A:** 500–600 mg/day (100 mg 5 times/ day or 300 mg 2 times/day)	Anemia, granulocytopenia, myopathy, nausea, malaise, fatigue, insomnia
Zidovudine/lamivudine (AZT/3TC) (Combivir)	**C:** 300 mg AZT/150 mg 3TC	**A:** 1 capsule 2 times/day	Myelosuppression, peripheral neuropathy, pancreatitis
Zidovudine/lamivudine/ abacavir (AZT/3TC/ABC) (Trizivir)	**C:** 300 mg AZT/150 mg 3TC/ 300 mg ABC	**A:** 1 capsule 2 times/day	Myelosuppression, peripheral neuropathy, anaphylactic reaction

(continued)

ANTIRETROVIRAL AGENTS FOR TREATMENT OF HIV INFECTION *(continued)*

Name	Availability	Dosage Range	Side Effects
Nucleotide Analogues			
Tenofovir (p. 1140) (Viread)	**T:** 300 mg	**A:** 300 mg/day	Nausea, vomiting, diarrhea, headache, fatigue
Tenofovir/elvitegravir/ cobicistat/emtricitabine (Stribild)	**T:** 300 mg tenofovir 150 mg elvitegravir 150 mg cobicistat 200 mg emtricitabine	**A:** 1 tablet daily with food	Nausea, diarrhea
Non-nucleoside Analogues			
Delavirdine (p. 321) (Rescriptor)	**T:** 100 mg, 200 mg	**A:** 200 mg 3 times/day for 14 days, then 400 mg 3 times/day	Rash, nausea, headaches, elevated hepatic function tests
Efavirenz (p. 400) (Sustiva)	**C:** 50 mg, 200 mg **T:** 600 mg	**A:** 600 mg/day **C:** 200–600 mg/day based on weight	Headaches, dizziness, insomnia, fatigue, rash, nightmares
Etravirine (p. 452) (Intelence)	**T:** 100 mg, 200 mg	**A:** 200 mg 2 times/day	Skin reactions (e.g., Stevens-Johnson syndrome, erythema multiforme), nausea, abdominal pain, vomiting
Nevirapine (p. 829) (Viramune, Viramune XR)	**T:** 200 mg **T (ER):** 400 mg **S:** 50 mg/ml	**A:** 200 mg/day for 14 days, then (if no rash) 200 mg 2 times/day	Rash, nausea, fatigue, fever, headaches, abnormal hepatic function tests
Rilpivirine (p. 1039)	**T:** 25 mg	**A:** 25 mg once/day with a meal	Depression, insomnia, headache, rash
Protease Inhibitors			
Atazanavir (p. 85) (Reyataz)	**C:** 100 mg, 150 mg, 200 mg, 300 mg	**A:** 400 mg/day or 300 mg (with 100 mg ritonavir) once/day	Headaches, diarrhea, abdominal pain, nausea, rash

Darunavir (p. 308) (Prezista)	**T:** 400 mg, 600 mg	**A:** 600 mg 2 times/day (with ritonavir 100 mg) or 800 mg once/day with ritonavir 100 mg	Diarrhea, nausea, vomiting, headaches, skin rash, constipation
Fosamprenavir (p. 513) (Lexiva)	**T:** 700 mg **OS:** 50 mg/ml	**A:** 1,400–2,800 mg/day with 100 mg ritonavir	Headaches, fatigue, rash, nausea, diarrhea, vomiting, abdominal pain
Indinavir (p. 607) (Crixivan)	**C:** 200 mg, 400 mg	**A:** 800 mg q8h or 800 mg 2 times/day with ritonavir 100 mg	Nephrolithiasis, hyperbilirubinemia, abdominal pain, asthenia (loss of strength, energy), fatigue, flank pain, nausea, vomiting, diarrhea, headaches, insomnia, dizziness, altered taste
Lopinavir/ritonavir (p. 707) (Kaletra)	**C:** 133/33 mg **OS:** 80/20 mg	**A:** 400 mg/100 mg 2 times/day or 800 mg/200 mg once/day **C (4–12 yrs):** 10–13 mg/kg 2 times/day	Diarrhea, nausea, vomiting, abdominal pain, headaches, rash
Nelfinavir (p. 825) (Viracept)	**T:** 250 mg **Oral Powder:** 50 mg/g	**A:** 750 mg q8h or 1,250 mg 2 times/day **C:** 20–25 mg/kg q8h	Diarrhea, fatigue, asthenia (loss of strength, energy), headaches, hypertension, impaired concentration
Ritonavir (p. 1046) (Norvir)	**C:** 100 mg **OS:** 80 mg/ml	**A:** Titrate up to 800 mg/day based on protease inhibitor	Nausea, vomiting, diarrhea, altered taste, fatigue, elevated hepatic function tests and triglyceride levels
Saquinavir (p. 1067) (Invirase)	**C:** 200 mg **T:** 500 mg	**A:** 1,000 mg 2 times/day with ritonavir 100 mg	Diarrhea, elevated hepatic function tests, hypertriglycerides, cholesterol, abnormal fat accumulation, hyperglycemia
Tipranavir (p. 1174) (Aptivus)	**C:** 250 mg **OS:** 100 mg/ml	**A:** 500 mg (with 200 mg ritonavir) 2 times/day	Diarrhea, nausea, fatigue, headaches, vomiting
Fusion Inhibitors			
Enfuvirtide (p. 408) (Fuzeon)	**I:** 108 mg (90 mg when reconstituted)	**Subcutaneous:** 90 mg 2 times/day	Insomnia, depression, peripheral neuropathy, decreased appetite, constipation, asthenia (loss of strength, energy), cough

(continued)

Immunosuppressive Agents

USES

Improvement of both short- and long-term allograft survivals.

ACTION

Basiliximab: An interleukin-2 (IL-2) receptor antagonist inhibiting IL-2 binding. This prevents activation of lymphocytes, and the response of the immune system to antigens is impaired.

Cyclosporine: Inhibits production and release of IL-2.

Daclizumab: An IL-2 receptor antagonist inhibiting IL-2 binding.

Mycophenolate: A prodrug that reversibly binds and inhibits inosine monophosphate dehydrogenase (IMPD), resulting in inhibition of purine nucleotide synthesis, inhibiting DNA and RNA synthesis and subsequent synthesis of T and B cells.

Sirolimus: Inhibits IL-2–stimulated T-lymphocyte activation and proliferation, which may occur through formation of a complex.

Tacrolimus: Inhibits IL-2–stimulated T-lymphocyte activation and proliferation, which may occur through formation of a complex.

IMMUNOSUPPRESSIVE AGENTS

Name	Availability	Dosage	Side Effects
Basiliximab (p. 112) (Simulect)	**I:** 20 mg	20 mg for 2 doses	Abdominal pain, asthenia (loss of strength, energy), cough, dizziness, dyspnea, dysuria, edema, hypertension, infection, tremors
Cyclosporine (p. 291) (Neoral, Sandimmune)	**C:** 25 mg, 50 mg, 100 mg **S:** 100 mg/ml **I:** 50 mg/ml	7–10 mg/kg/day	Hypertension, hyperkalemia, nephrotoxicity, coarsening of facial features, hirsutism, gingival hyperplasia, nausea, vomiting, diarrhea, hepatotoxicity, hyperuricemia, hypertriglyceridemia, hypercholesterolemia, tremors, paresthesia, seizures, risk of infection/malignancy
Mycophenolate (p. 804) (CellCept)	**C:** 250 mg **I:** 500 mg **S:** 200 mg/ml **T:** 500 mg	1 g 2 times/day	Diarrhea, vomiting, leukopenia, neutropenia, infections
Sirolimus (p. 1086) (Rapamune)	**S:** 1 mg/ml **T:** 1 mg	2–10 mg/day	Dyspnea, leukopenia, thrombocytopenia, hyperlipidemia, abdominal pain, acne, arthralgia, fever, diarrhea, constipation, headaches, vomiting, weight gain
Tacrolimus (p. 1118) (Prograf)	**C:** 0.5 mg, 1 mg, 5 mg **I:** 5 mg/ml	0.1–0.15 mg/kg/day	Nephrotoxicity, neurotoxicity, hyperglycemia, nausea, vomiting, photophobia, infections, hypertension, hyperlipidemia

C, Capsules; ***I,*** injection; ***S,*** oral solution or suspension; ***T,*** tablets.

Laxatives

USES

Short-term treatment of constipation; colon evacuation before rectal/bowel examination; prevention of straining (e.g., after anorectal surgery, MI); to reduce painful elimination (e.g., episiotomy, hemorrhoids, anorectal lesions); modification of effluent from ileostomy, colostomy; prevention of fecal impaction; removal of ingested poisons.

ACTION

Laxatives ease or stimulate defecation. Mechanisms by which this is accomplished include (1) attracting, retaining fluid in colonic contents due to hydrophilic or osmotic properties; (2) acting directly or indirectly on mucosa to decrease absorption of water and NaCl; or (3) increasing intestinal motility, decreasing absorption of water and NaCl by virtue of decreased transit time.

Bulk-forming: Act primarily in small/large intestine. Retain water in stool, may bind water, ions in colonic lumen (soften feces, increase bulk); may increase colonic bacteria growth (increases fecal mass). Produce soft stool in 1–3 days.

Osmotic agents: Act in colon. Similar to saline laxatives. Osmotic action may be enhanced in distal ileum/colon by bacterial metabolism to lactate, other organic acids. This decrease in pH increases motility, secretion. Produce soft stool in 1–3 days.

Saline: Acts in small/large intestine, colon (sodium phosphate). Poorly, slowly absorbed; causes hormone cholecystokinin release from duodenum (stimulates fluid secretion, motility); possesses osmotic properties; produces watery stool in 2–6 hrs (small doses produce semifluid stool in 6–12 hrs).

Stimulant: Acts in colon. Enhances accumulation of water/electrolytes in colonic lumen, enhances intestinal motility. May act directly on intestinal mucosa. Produces semifluid stool in 6–12 hrs.

◀ALERT▶ Bisacodyl suppository acts in 15–60 min.

Stool softener: Acts in small/large intestine. Hydrates and softens stools by its surfactant action, facilitating penetration of fat and water into stool. Produces soft stool in 1–3 days.

LAXATIVES

Name	Onset of Action	Uses	Side Effects/Precautions
Bulk-forming			
Methylcellulose (Citrucel)	12–24 hrs up to 3 days	Treatment of constipation for postpartum women, elderly, pts with diverticulosis, irritable bowel syndrome, hemorrhoids	Gas, bloating, esophageal obstruction, colonic obstruction, calcium and iron malabsorption
Psyllium (p. 1002) (Metamucil)	Same as methylcellulose	Treatment of chronic constipation and constipation associated with rectal disorders; management of irritable bowel syndrome	Diarrhea, constipation, abdominal cramps, esophageal/colon obstruction, bronchospasm
Stool Softener			
Docusate (p. 372) (Colace, Surfak)	1–3 days	Treatment of constipation due to hard stools, in painful anorectal conditions, and for those who need to avoid straining during bowel movements	Stomachache, mild nausea, cramping, diarrhea, irritated throat (with liquid and syrup dose forms)
Saline			
Magnesium citrate (p. 723) (Citrate of Magnesia, Citro-Mag)	30 min–3 hrs	Bowel evacuation prior to certain surgical and diagnostic procedures	Hypotension, abdominal cramping, diarrhea, gas formation, electrolyte abnormalities
Magnesium hydroxide (p. 723)	30 min–3 hrs	Short-term treatment of occasional constipation	Electrolyte abnormalities can occur; use caution in pts with renal or cardiac impairment; diarrhea, abdominal cramps, hypotension

(continued)

LAXATIVES *(continued)*

Name	Onset of Action	Uses	Side Effects/Precautions
Sodium phosphate (Fleet Phospho-Soda)	2–15 min	Relief of occasional constipation; bowel evacuation prior to certain surgical and diagnostic procedures	Electrolyte abnormalities; do not use for pts with CHF, severe renal impairment, ascites, GI obstruction, active inflammatory bowel disease
Osmotic			
Lactulose (p. 657) (Kristalose)	24–48 hrs	Short-term relief of constipation	Nausea, vomiting, diarrhea, abdominal cramping, bloating, gas
Polyethylene glycol (p. 957) (MiraLax)	24–48 hrs	Short-term relief of constipation	Bitter taste, diarrhea
Stimulant			
Bisacodyl (p. 133) (Dulcolax)	**PO:** 6–12 hrs **Rectal:** 15–60 min	Short-term relief of constipation	Elecrolyte imbalance, abdominal discomfort, gas, potential for overuse/abuse
Senna (p. 1075) (Senokot)	6–12 hrs	Short-term relief of constipation	Abdominal discomfort, cramps

Neuromuscular Blockers

USES

Adjuvant in surgical anesthesia to relax skeletal muscle (esp. abdominal wall) for surgery (allows lighter level of anesthesia; valuable in orthopedic procedures). Neuromuscular blocking agents of short duration often used to facilitate endotracheal intubation, laryngoscopy, bronchoscopy, and esophagoscopy in combination with general anesthetics. Provide muscle relaxation in pts undergoing mechanical ventilation, muscle relaxation in diagnosis of myasthenia gravis. Prevent convulsive movements during electroconvulsive therapy.

ACTION

Paralysis results from blocking of normal neuromuscular transmission. Succinylcholine, a depolarizing agent, attaches to the acetylcholine (ACh) receptor on the motor end plate, causing depolarization. It prevents the binding of ACh to the receptor. Nondepolarizing agents also bind to the receptor at the motor end plate but competitively block ACh from attaching to the receptor. These agents also block presynaptic channels that cause the release of ACh.

NEUROMUSCULAR BLOCKERS

Name	Class	Intubation Dose	ICU Dose	Side Effects
Cisatracurium (Nimbex)	Intermediate	0.15–2 mg/kg	0.10–0.2 mg/kg bolus, then 2.5–3 mcg/kg/min	Skin rash, flushing
Doxacurium (Nuromax)	Long	0.05 mg/kg	0.025–0.05 mg/kg bolus, then 0.3–0.5 mg/kg/min	Injection site reaction, urticaria
Mivacurium (Mivacron)	Short	0.15–0.2 mg/kg	0.15–0.25 mg/kg bolus, then 9–10 mcg/kg/min	Flushing, hypotension, dizziness, muscle spasm

(continued)

NEUROMUSCULAR BLOCKERS *(continued)*

Name	Class	Intubation Dose	ICU Dose	Side Effects
Pancuronium (Pavulon)	Long	0.06–0.1 mg/kg	0.05–0.1 mg/kg bolus, then 1–2 mcg/kg/hr	Increased B/P, increased salivation, pruritus
Rocuronium (Zemuron)	Intermediate	0.45–1.2 mg/kg	0.15–0.25 mg/kg bolus, then 10–12 mcg/kg/min	Pain at injection site, hypertension, hypotension
Succinylcholine (Anectine, Quelicin)	Ultrashort	1–2 mg/kg	NA	Increased intracranial pressure, increased intraocular pressure, postop muscle pain, weakness, increased salivation, bradycardia, cardiac arrhythmias
Vecuronium (Norcuron)	Intermediate	0.08–0.1 mg/kg	0.08–0.1 mg/kg bolus, then 0.8–1.2 mcg/kg/min	Skeletal muscle weakness with prolonged use

Nitrates

USES	ACTION
Sublingual: Acute relief of angina pectoris. *Oral, topical:* Long-term prophylactic treatment of angina pectoris. *Intravenous:* Adjunctive treatment in CHF associated with acute MI. Produce controlled hypotension during surgical procedures; control B/P in perioperative hypertension, angina unresponsive to organic nitrates or beta-blockers.	Relax most smooth muscles, including arteries and veins. Effect is primarily on veins (decrease left/right ventricular end-diastolic pressure). In angina, nitrates decrease myocardial work and O_2 requirements (decrease preload by venodilation and afterload by arteriodilation). Nitrates also appear to redistribute blood flow to ischemic myocardial areas, improving perfusion without increase in coronary blood flow.

NITRATES

Name	Availability	Dosage Range	Side Effects
Isosorbide dinitrate (p. 637) (Isordil)	**T:** 5 mg, 10 mg, 20 mg, 30 mg, 40 mg **T (ER):** 30 mg, 40 mg, 60 mg, 120 mg **SL:** 2.5 mg, 5 mg **T (chewable):** 5 mg, 10 mg **C (SR):** 40 mg	**SL:** 2.5–10 mg q2–3h **PO:** 10–40 mg q6h **PO (SR):** 40–80 mg q8–12h	Flushing, headaches, nausea, vomiting, orthostatic hypotension, restlessness, tachycardia
Isosorbide mononitrate (p. 637) (Imdur, ISMO)	**T:** 30 mg, 60 mg, 120 mg	**PO:** 30–240 mg once/day	Same as isosorbide dinitrate

(continued)

NITRATES *(continued)*

Name	Availability	Dosage Range	Side Effects
Nitroglycerin (p. 845) (Minitran, Nitro-Bid, Nitro-Dur, Nitrostat)	**SL:** 0.4 mg **T (SR):** 2.6 mg, 6.5 mg, 9 mg **C (SR):** 2.5 mg, 6.5 mg, 9 mg, 13 mg **Topical:** 2% ointment **Trans:** 0.1 mg/hr, 0.2 mg/hr, 0.3 mg/hr, 0.4 mg/hr, 0.6 mg/hr, 0.8 mg/hr **I:** 0.5 mg/ml, 5 mg/ml **Infusion:** 100 mcg/ml, 200 mcg/ml	**SL:** 0.4 mg up to 3 times q15min **SR:** 2.5–26 mg 3–4 times/day **Trans:** 0.1–0.8 mg/hr **T:** 1–2 inches up to 4–5 inches q4h	Same as isosorbide dinitrate

C, Capsules; ***ER,*** extended-release; ***I,*** injection; ***SL,*** sublingual; ***SR,*** sustained-release; ***T,*** tablets; ***Trans,*** transdermal.

Nonsteroidal Anti-Inflammatory Drugs (NSAIDs)

USES

Provide symptomatic relief from *pain/inflammation* in the treatment of musculoskeletal disorders (e.g., rheumatoid arthritis [RA], osteoarthritis, ankylosing spondylitis), *analgesic* for low to moderate pain, *reduction in fever* (many agents not suited for routine/prolonged therapy due to toxicity). By virtue of its action on platelet function, aspirin is used in treatment or prophylaxis of diseases associated with hypercoagulability (reduces risk of stroke/heart attack).

ACTION

Exact mechanism for anti-inflammatory, analgesic, antipyretic effects unknown. Inhibition of enzyme cyclooxygenase, the enzyme responsible for prostaglandin synthesis, appears to be a major mechanism of action. May inhibit other mediators of inflammation (e.g., leukotrienes). Direct action on hypothalamus heat-regulating center may contribute to antipyretic effect.

NSAIDs

Name	Availability	Dosage Range	Side Effects
Aspirin (p. 83)	**T:** 81 mg, 160 mg, 325 mg **Supplement:** 300 mg, 600 mg	**P (A):** 325–650 mg q4h as needed **C:** Up to 60–80 mg/kg/day **Arthritis:** 3.2–6 g/day **JRA:** 60–110 mg/kg/day **RF (A):** 5–8 g/day **C:** 75–100 mg/kg/day **TIA:** 1,300 mg/day **MI:** 81–325 mg/day	GI discomfort, dizziness, headaches, increased risk of bleeding
Celecoxib (p. 222) (Celebrex)	**C:** 50 mg, 100 mg, 200 mg, 400 mg	**OA:** 200 mg/day **RA:** 100–200 mg 2 times/day **FAP:** 400 mg 2 times/day	Diarrhea, back pain, dizziness, heartburn, headaches, nausea, abdominal pain
Diclofenac (p. 345) (Voltaren)	**T:** 25 mg, 50 mg, 75 mg, 100 mg	**Arthritis:** 100–200 mg/day	Indigestion, constipation, diarrhea, nausea, headaches, fluid retention, abdominal cramps
Diflunisal (Dolobid)	**T:** 250 mg, 500 mg	**Arthritis:** 0.5–1 g/day **P:** 0.5 g q8–12h	Headaches, abdominal cramps, indigestion, diarrhea, nausea
Etodolac (p. 448) (Lodine)	**T:** 400 mg, 500 mg **T (ER):** 400 mg, 500 mg, 600 mg **C:** 200 mg, 300 mg	**Arthritis:** 600–800 mg/day **P:** 200–400 mg q6–8h	Indigestion, dizziness, headaches, bloated feeling, diarrhea, nausea, weakness, abdominal cramps
Fenoprofen (Nalfon)	**C:** 200 mg, 400 mg **T:** 600 mg	**Arthritis:** 300–600 mg 3–4 times/day **P:** 200 mg q4–6h as needed	Nausea, indigestion, anxiety, constipation, shortness of breath, heartburn

(continued)

NSAIDs *(continued)*

Name	Availability	Dosage Range	Side Effects
Flurbiprofen (p. 500) (Ansaid)	**T:** 50 mg, 100 mg	**Arthritis:** 200–300 mg/day	Indigestion, nausea, fluid retention, headaches, abdominal cramps, diarrhea
Ibuprofen (p. 583) (Advil, Caldolor, Motrin)	**I:** 100 mg/ml **T:** 100 mg, 200 mg, 400 mg, 600 mg, 800 mg **T (chewable):** 50 mg, 100 mg **C:** 200 mg **S:** 100 mg/5 ml, 100 mg/2.5 ml **Drops:** 40 mg/ml	**Arthritis:** 1.2–3.2 g/day **P: (PO):** 400 mg q4–6h as needed; **(I):** 400–800 mg q6h as needed **Fever: (PO):** 200 mg q4–6h as needed; **(I):** 400 mg q4–6h as needed or 100–200 mg q4h as needed **JA:** 30–40 mg/kg/day	Dizziness, abdominal cramps, abdominal pain, heartburn, nausea
Indomethacin (p. 608) (Indocin)	**C:** 25 mg, 50 mg **C (SR):** 75 mg **S:** 25 mg/5 ml **Supplement:** 50 mg	**Arthritis:** 50–200 mg/day **Bursitis/tendonitis:** 75–150 mg/day **GA:** 150 mg/day	Fluid retention, dizziness, headaches, abdominal pain, indigestion, nausea
Ketoprofen (p. 649) (Orudis KT)	**T:** 12.5 mg **C:** 25 mg, 50 mg, 75 mg **C (ER):** 100 mg, 150 mg, 200 mg	**Arthritis:** 150–300 mg/day **P:** 25–50 mg q6–8h as needed	Headaches, anxiety, abdominal pain, bloated feeling, constipation, diarrhea, nausea
Ketorolac (p. 650) (Toradol)	**T:** 10 mg **I:** 15 mg/ml, 30 mg/ml	**P: (PO):** 10 mg q4–6h as needed; **(IM/IV):** 60–120 mg/day	Fluid retention, abdominal pain, diarrhea, dizziness, headaches, nausea
Meloxicam (p. 735) (Mobic)	**C:** 7.5 mg, 15 mg **S:** 7.5 mg/5 ml	**Arthritis:** 7.5–15 mg/day	Heartburn, indigestion, nausea, diarrhea, headaches

Nabumetone (p. 806) (Relafen)	**T:** 500 mg, 750 mg	**Arthritis:** 1–2 g/day	Fluid retention, dizziness, headaches, abdominal pain, constipation, diarrhea, nausea
Naproxen (p. 816) (Anaprox, Naprosyn)	**T:** 200 mg, 250 mg, 375 mg, 500 mg **T (CR):** 375 mg **S:** 125 mg/5 ml	**Arthritis:** 250–550 mg/day **P:** 250 mg q6–8h **JA:** 10 mg/kg/day **GA:** 750 mg once, then 250 mg q8h	Tinnitus, fluid retention, shortness of breath, dizziness, drowsiness, headaches, abdominal pain, constipation, heartburn, nausea
Oxaprozin (p. 883) (Daypro)	**C:** 600 mg	**Arthritis:** 600–1,800 mg/day	Constipation, diarrhea, nausea, indigestion
Piroxicam (p. 953) (Feldene)	**C:** 10 mg, 20 mg	**Arthritis:** 20 mg/day	Abdominal pain, stomach pain, nausea
Sulindac (p. 1113) (Clinoril)	**T:** 150 mg, 200 mg	**Arthritis:** 300 mg/day **GA:** 400 mg/day	Dizziness, abdominal pain, constipation, diarrhea, nausea
Tolmetin (Tolectin)	**T:** 200 mg, 600 mg **C:** 400 mg	**Arthritis:** 600–1,800 mg/day **JA:** 15–30 mg/kg/day	Fluid retention, dizziness, headaches, weakness, abdominal pain, diarrhea, indigestion, nausea, vomiting

Nutrition: Enteral

Enteral nutrition (EN), also known as *tube feedings,* provides food/nutrients via the GI tract using special formulas, delivery techniques, and equipment. All routes of EN consist of a tube through which liquid formula is infused.

INDICATIONS

Tube feedings are used in pts with major trauma, burns; those undergoing radiation and/or chemotherapy; pts with hepatic failure, severe renal impairment, physical or neurologic impairment; preop and postop to promote anabolism; prevention of cachexia, malnutrition.

ROUTES OF ENTERAL NUTRITION DELIVERY

NASOGASTRIC (NG):

INDICATIONS: Most common for short-term feeding in pts unable or unwilling to consume adequate nutrition by mouth. Requires at least a partially functioning GI tract.

ADVANTAGES: Does not require surgical intervention and is fairly easily inserted. Allows full use of digestive tract. Decreases abdominal distention, nausea, vomiting that may be caused by hyperosmolar solutions.

DISADVANTAGES: Temporary. May be easily pulled out during routine nursing care. Has potential for pulmonary aspiration of gastric contents, risk of reflux esophagitis, regurgitation.

NASODUODENAL (ND), NASOJEJUNAL (NJ):

INDICATIONS: Pts unable or unwilling to consume adequate nutrition by mouth. Requires at least a partially functioning GI tract.

ADVANTAGES: Does not require surgical intervention and is fairly easily inserted. Preferred for pts at risk for aspiration. Valuable for pts with gastroparesis.

ROUTES OF ENTERAL NUTRITION DELIVERY *(cont.)*

DISADVANTAGES: Temporary. May be pulled out during routine nursing care. May be dislodged by coughing, vomiting. Small lumen size increases risk of clogging when medication is administered via tube, more susceptible to rupturing when using infusion device. Must be radiographed for placement, frequently extubated.

GASTROSTOMY:

INDICATIONS: Pts with esophageal obstruction or impaired swallowing; pts in whom NG, ND, or NJ not feasible; when long-term feeding indicated.

ADVANTAGES: Permanent feeding access. Tubing has larger bore, allowing noncontinuous (bolus) feeding (300–400 ml over 30–60 min q3–6h). May be inserted endoscopically using local anesthetic (procedure called *percutaneous endoscopic gastrostomy* [PEG]).

DISADVANTAGES: Requires surgery; may be inserted in conjunction with other surgery or endoscopically (see **ADVANTAGES**). Stoma care required. Tube may be inadvertently dislodged. Risk of aspiration, peritonitis, cellulitis, leakage of gastric contents.

JEJUNOSTOMY:

INDICATIONS: Pts with stomach or duodenal obstruction, impaired gastric motility; pts in whom NG, ND, or NJ not feasible; when long-term feeding indicated.

ADVANTAGES: Allows early postop feeding (small bowel function is least affected by surgery). Risk of aspiration reduced. Rarely pulled out inadvertently.

DISADVANTAGES: Requires surgery (laparotomy). Stoma care required. Risk of intraperitoneal leakage. Can be dislodged easily.

INITIATING ENTERAL NUTRITION

With continuous feeding, initiation of isotonic (about 300 mOsm/L) or moderately hypertonic feeding (up to 495 mOsm/L) can be given full strength, usually at a slow rate (30–50 ml/hr) and gradually increased (25 ml/hr q6–24h). Formulas with osmolality greater than 500 mOsm/L are generally started at half strength and gradually increased in rate, then concentration. Tolerance is increased if the rate and concentration are not increased simultaneously.

Nutrition: Enteral *(continued)*

SELECTION OF FORMULAS

Protein: Has many important physiologic roles and is the primary source of nitrogen in the body. Provides 4 kcal/g protein. Sources of protein in enteral feedings: sodium caseinate, calcium caseinate, soy protein, dipeptides.

Carbohydrate (CHO): Provides energy for the body and heat to maintain body temperature. Provides 3.4 kcal/g carbohydrate. Sources of CHO in enteral feedings: corn syrup, cornstarch, maltodextrin, lactose, sucrose, glucose.

Fat: Provides concentrated source of energy. Referred to as ***kilocalorie dense*** or ***protein sparing.*** Provides 9 kcal/g fat. Sources of fat in enteral feedings: corn oil, safflower oil, medium-chain triglycerides.

Electrolytes, vitamins, trace elements: Contained in formulas (not found in specialized products for renal/hepatic insufficiency).
All products containing protein, fat, carbohydrate, vitamin, electrolytes, trace elements are nutritionally complete and designed to be used by pts for long periods.

COMPLICATIONS

MECHANICAL: Usually associated with some aspect of the feeding tube.

Aspiration pneumonia: Caused by delayed gastric emptying, gastroparesis, gastroesophageal reflux, or decreased gag reflex. May be prevented or treated by reducing infusion rate, using lower-fat formula, feeding beyond pylorus, checking residuals, using small-bore feeding tubes, elevating head of bed 30°–45° during and for 30–60 min after intermittent feeding, and regularly checking tube placement.

Esophageal, mucosal, pharyngeal irritation, otitis: Caused by using large-bore NG tube. Prevented by use of small bore whenever possible.

Irritation, leakage at ostomy site: Caused by drainage of digestive juices from site. Prevented by close attention to skin/stoma care.

Tube, lumen obstruction: Caused by thickened formula residue, formation of formula-medication complexes. Prevented by frequently irrigating tube with clear water (also before and after giving formulas/medication), avoiding instilling medication if possible.

GASTROINTESTINAL: Usually associated with formula, rate of delivery, unsanitary handling of solutions or delivery system.

Diarrhea: Caused by low-residue formulas, rapid delivery, use of hyperosmolar formula, hypoalbuminemia, malabsorption, microbial contamination, or rapid GI transit time. Prevented by using fiber supplemented formulas, decreasing rate of delivery, using dilute formula, and gradually increasing strength.

Cramps, gas, abdominal distention: Caused by nutrient malabsorption, rapid delivery of refrigerated formula. Prevented by delivering formula by continuous methods, giving formulas at room temperature, decreasing rate of delivery.

Nausea, vomiting: Caused by rapid delivery of formula, gastric retention. Prevented by reducing rate of delivery, using dilute formulas, selecting low-fat formulas.

COMPLICATIONS *(cont.)*

Constipation: Caused by inadequate fluid intake, reduced bulk, inactivity. Prevented by supplementing fluid intake, using fiber-supplemented formula, encouraging ambulation.

METABOLIC: Fluid/serum electrolyte status should be monitored. Refer to monitoring section. In addition, the very young and very old are at greater risk of developing complications such as dehydration or overhydration.

MONITORING

Daily: Estimate nutrient intake, fluid intake/output, weight of pt, clinical observations.

Weekly: Serum electrolytes (potassium, sodium, magnesium, calcium, phosphorus), blood glucose, BUN, creatinine, hepatic function tests (e.g., AST, alkaline phosphatase), 24-hr urea and creatinine excretion, total iron-binding capacity (TIBC) or serum transferrin, triglycerides, cholesterol.

Monthly: Serum albumin.

Other: Urine glucose, acetone (when blood glucose is greater than 250), vital signs (temperature, respirations, pulse, B/P) q8h.

DRUG THERAPY: DOSAGE FOR SELECTION/ ADMINISTRATION:

Drug therapy should not have to be compromised in pts receiving enteral nutrition:

- Temporarily discontinue medications not immediately necessary.
- Consider an alternate route for administering medications (e.g., transdermal, rectal, intravenous).
- Consider alternate medications when current medication is not available in alternate dosage forms.

ENTERAL ADMINISTRATION OF MEDICATIONS:

Medications may be given via feeding tube with several considerations:

- Tube type
- Tube location in the GI tract
- Site of drug action
- Site of drug absorption
- Effects of food on drug absorption
- Use of liquid dosage forms is preferred whenever possible; many tablets may be crushed; contents of many capsules may be emptied and given through large-bore feeding tubes.
- Many oral products should not be crushed (e.g., sustained-release, enteric coated).
- Some medications should not be given with enteral formulas because they form precipitates that may clog the feeding tube and reduce drug absorption.
- Feeding tube should be flushed with water before and after administration of medications to clear any residual medication.

Nutrition: Parenteral

Parenteral nutrition (PN), also known as *total parenteral nutrition* (TPN) or *hyperalimentation* (HAL), provides required nutrients to pts by IV route of administration. The goal of PN is to maintain or restore nutritional status caused by disease, injury, or inability to consume nutrients by other means.

INDICATIONS

Conditions when pt is unable to use alimentary tract via oral, gastrostomy, or jejunostomy route. Impaired absorption of protein caused by obstruction, inflammation, or antineoplastic therapy. Bowel rest necessary because of GI surgery or ileus, fistulas, or anastomotic leaks. Conditions with increased metabolic requirements (e.g., burns, infection, trauma). Preserve tissue reserves (e.g., acute renal failure). Inadequate nutrition from tube feeding methods.

COMPONENTS OF PN

To meet IV nutritional requirements, six essential categories in PN are needed for tissue synthesis and energy balance.

Protein: In the form of crystalline amino acids (CAA), primarily used for protein synthesis. Several products are designed to meet specific needs for pts with renal failure (e.g., NephrAmine), hepatic disease (e.g., HepatAmine), stress/trauma (e.g., Aminosyn HBC), use in neonates and pediatrics (e.g., Aminosyn PF, TrophAmine). Calories: 4 kcal/g protein.

Energy: In the form of dextrose, available in concentrations of 5%–70%. Dextrose less than 10% may be given peripherally; concentrations greater than 10% must be given centrally. Calories: 3.4 kcal/g dextrose.

IV fat emulsion: Available in 10% and 20% concentrations. Provides a concentrated source of energy/calories (9 kcal/g fat) and is a source of essential fatty acids. May be administered peripherally or centrally.

COMPONENTS OF PN *(cont.)*

Electrolytes: Major electrolytes (calcium, magnesium, potassium, sodium; also acetate, chloride, phosphate). Doses of electrolytes are individualized, based on many factors (e.g., renal/hepatic function, fluid status).

Vitamins: Essential components in maintaining metabolism and cellular function; widely used in PN.

Trace elements: Necessary in long-term PN administration. Trace elements include zinc, copper, chromium, manganese, selenium, molybdenum, iodine.

Miscellaneous: Additives include insulin, albumin, heparin, and histamine$_2$ blockers (e.g., cimetidine, ranitidine, famotidine). Other medication may be included, but compatibility for admixture should be checked on an individual basis.

ROUTE OF ADMINISTRATION

PN is administered via either peripheral or central vein.

Peripheral: Usually involves 2–3 L/day of 5%–10% dextrose with 3%–5% amino acid solution along with IV fat emulsion. Electrolytes, vitamins, trace elements are added according to pt needs. Peripheral solutions provide about 2,000 kcal/day and 60–90 g protein/day.

ADVANTAGES: Lower risks vs. central mode of administration.

DISADVANTAGES: Peripheral veins may not be suitable (esp. in pts with illness of long duration); more susceptible to phlebitis (due to osmolalities over 600 mOsm/L); veins may be viable only 1–2 wks; large volumes of fluid are needed to meet nutritional requirements, which may be contraindicated in many pts.

Central: Usually utilizes hypertonic dextrose (concentration range of 15%–35%) and amino acid solution of 3%–7% with IV fat emulsion. Electrolytes, vitamins, trace elements are added according to pt needs. Central solutions provide 2,000–4,000 kcal/day. Must be given through large central vein with high blood flow, allowing rapid dilution, avoiding phlebitis/thrombosis (usually through percutaneous insertion of catheter into subclavian vein then advancement of catheter to superior vena cava).

ADVANTAGES: Allows more alternatives/flexibility in establishing regimens; allows ability to provide full nutritional requirements without need of daily fat emulsion; useful in pts who are fluid restricted (increased concentration), those needing large nutritional requirements (e.g., trauma, malignancy), or those for whom PN indicated more than 7–10 days.

DISADVANTAGES: Risk with insertion, use, maintenance of central line; increased risk of infection, catheter-induced trauma, and metabolic changes.

Nutrition: Parenteral *(continued)*

MONITORING

May vary slightly from institution to institution.

Baseline: CBC, platelet count, PT, weight, body length/head circumference (in infants), serum electrolytes, glucose, BUN, creatinine, uric acid, total protein, cholesterol, triglycerides, bilirubin, alkaline phosphatase, LDH, AST, albumin, other tests as needed.

Daily: Weight, vital signs (temperature, pulse, respirations [TPR]), nutritional intake (kcal, protein, fat), serum electrolytes (potassium, sodium chloride), glucose (serum, urine), acetone, BUN, osmolarity, other tests as needed.

2–3 times/wk: CBC, coagulation studies (PT, PTT), serum creatinine, calcium, magnesium, phosphorus, acid-base status, other tests as needed.

Weekly: Nitrogen balance, total protein, albumin, prealbumin, transferrin, hepatic function tests (AST, ALT), serum alkaline phosphatase, LDH, bilirubin, Hgb, uric acid, cholesterol, triglycerides, other tests as needed.

COMPLICATIONS

Mechanical: Malfunction in system for IV delivery (e.g., pump failure; problems with lines, tubing, administration sets, catheter). Pneumothorax, catheter misdirection, arterial puncture, bleeding, hematoma formation may occur with catheter placement.

Infectious: Infections (pts often more susceptible to infections), catheter sepsis (e.g., fever, shaking chills, glucose intolerance where no other site of infection is identified).

Metabolic: Includes hyperglycemia, elevated serum cholesterol and triglycerides, abnormal serum hepatic function tests.

Fluid, electrolyte, acid-base disturbances: May alter serum potassium, sodium, phosphate, magnesium levels.

Nutritional: Clinical effects seen may be due to lack of adequate vitamins, trace elements, essential fatty acids.

DRUG THERAPY/ADMINISTRATION METHODS: Compatibility of other intravenous medications pts may be administered while receiving parenteral nutrition is an important concern.

Intravenous medications usually are given as a separate admixture via piggyback to the parenteral nutrition line, but in some instances may be added directly to the parenteral nutrition solution. Because of the possibility of incompatibility when adding medication directly to the parenteral nutrition solution, specific criteria should be considered:

- Stability of the medication in the parenteral nutrition solution
- Properties of the medication, including pharmacokinetics that determine if the medication is appropriate for continuous infusion
- Documented chemical and physical compatibility with the parenteral nutrition solution

In addition, when medication is given via piggyback using the parenteral nutrition line, important criteria should include:

- Stability of the medication in the parenteral nutrition solution
- Documented chemical and physical compatibility with the parenteral nutrition solution

Obesity Management

USES	ACTIONS	
Adjunct to diet and physical activity in the treatment of chronic, relapsing obesity.	Two categories of medications are used for weight control. *Appetite suppressants:* Block neuronal uptake of norepinephrine, serotonin, dopamine, causing a feeling of fullness or satiety.	*Digestion inhibitors:* Reversible lipase inhibitors that block the breakdown and absorption of fats, decreasing appetite and reducing calorie intake.

ANOREXIANTS

Name	Availability	Dosage	Side Effects
Diethylpropion (Tenuate, Tenuate Dospan)	**T:** 25 mg, 75 mg	25 mg 3 times/day or 75 mg once/day in midmorning	Headaches, insomnia, nervousness, anxiety, irritability, dry mouth, constipation, euphoria, palpitations, hypertension, pulmonary hypertension, valvular heart disease, seizures, bone marrow depression
Lorcaserin (BelViq)	**C:** 10 mg	10 mg twice daily	Nausea, headache, dizziness, fatigue, dry mouth, diarrhea, constipation, hypoglycemia, hallucinations, decreased white/red blood cells
Orlistat (p. 878) (Alli, Xenical)	**C:** 60 mg, 120 mg	60–120 mg 3 times/day with meals	Flatulence, rectal incontinence, oily stools, cholelithiasis, abdominal/rectal pain, hepatitis, pancreatitis
Phenteramine (Apidex-P)	**C:** 15 mg, 30 mg, 37.5 mg **T:** 37.5 mg	15–37.5 mg/day in 1 or 2 divided doses	Headaches, insomnia, nervousness, anxiety, irritability, dry mouth, constipation, euphoria, palpitations, hypertension, pulmonary hypertension, valvular heart disease, tremor
Phenteramine/topiramate (Qsymia)	**C:** 13.75 mg/23 mg	3.75 mg/23 mg to 15 mg/92 mg once daily	Paresthesia, dizziness, insomnia, depression, tachycardia, cognitive impairment, angle-closure glaucoma, hypokalemia, metabolic acidosis

AS, Appetite suppressant; ***C,*** capsules; ***DI,*** digestion inhibitor; ***T,*** tablets.

Ophthalmic Medications for Allergic Conjunctivitis

Ophthalmic products used for allergic conjunctivitis include antihistamines, mast cell stabilizing agents, combination antihistamine/decongestants, and corticosteroids. **Antihistamines** selectively inhibit the H_1 histamine receptor, thus antagonizing histamine-stimulated vascular permeability in the conjunctiva.

Mast cell stabilizing agents block the release of mediators of hypersensitivity reactions from mast cells, eosinophils, neutrophils, macrophages, monocytes, and platelets. They inhibit the release of histamine from mast cells. **Combination antihistamine/decongestants** are used only for a short time because the regular use of a decongestant may cause rebound congestion.

Mast cell stabilizers/antihistamine combinations provide both the quick action of the antihistamine and more delayed action of the mast cell stabilizer. This latter combination is used for mild to moderately severe allergic conjunctivitis. **Corticosteroids,** although having no definite mechanism of action, exert their effect by controlling the biosynthesis of potent mediators of inflammation.

ANTIHISTAMINE

Names	Dosage	Comments/Side Effects
Alcaftadine 0.25% (Lastacaft)	One drop each eye once daily	Eye irritation, burning/stinging on instillation, eye redness/pruritus, nasopharyngitis, headache, influenza

ANTIHISTAMINE/DECONGESTANTS

Names	Dosage	Comments/Side Effects
Naphazoline/pheniramine (Naphcon-A, Opcon-A, Visine-A)	One or two drops into affected eye(s) up to 4 times/day	Remove contact lenses prior to using Do not use for more than 3 days Not for use in pts with heart disease, enlarged prostate, high blood pressure, and/or glaucoma Side effects: headache, mydriasis, pain in eye

MAST CELL STABILIZER

Names	Dosage	Comments/Side Effects
Lodoxamine 0.1% (Alomide)	One to two drops in affected eye(s) 4 times/day	Avoid wearing contact lenses during treatment Side effects: burning, stinging, or irritation of eyes; watery, itching eyes; blurred vision; headache; dizziness; nausea or stomach discomfort
Nedocromil 2% (Alocril)	One or two drops in affected eye(s) 2 times/day	Remove contact lenses prior to using; may reinsert after 15 min if eyes are not red Side effects: headache, dizziness, blurring sensation in eye, light intolerance
Pemirolast 0.1% (Alamast)	One or two drops in affected eye(s) 4 times/day	Avoid wearing contact lenses if eyes are red Remove contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: foreign body sensation, headache, dry eyes, burning sensation

ANTIHISTAMINE/MAST CELL STABILIZER

Names	Dosage	Comments/Side Effects
Azelastine 0.05% (p. 102) (Optivar)	One drop in affected eye(s) 2 times/day	Avoid wearing contact lenses if eyes are red Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: headache, drowsiness, burning sensation in eye
Epinastine 0.05% (Elestat)	One drop in affected eye(s) 2 times/day	Avoid wearing contact lenses if eyes are red Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: headache, burning sensation in eye
Ketotifen 0.025% (Alaway, Zaditor)	One drop in affected eye(s) 2 times/day	Avoid wearing contact lenses if eyes are red Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: headache, dry eyes, eye irritation, pain in eye

(continued)

ANTIHISTAMINE/MAST CELL STABILIZER *(continued)*

Names	Dosage	Comments/Side Effects
Olopatadine 0.1% (Patanol)	One drop in affected eye(s) 2 times/day	Avoid wearing contact lenses if eyes are red Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: headache, burning sensation in eye

CORTICOSTEROIDS

Names	Dosage	Comments/Side Effects
Loteprednol 0.2% (Alrex)	One drop in affected eye(s) 4 times/day	Recommended for short-term use only Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: abnormal vision, blurred vision, burning sensation in eye, itching in eye, light intolerance
Loteprednol 0.5% (Lotemax)	One or two drops in affected eye(s) 4 times/day	Recommended for short-term use only Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: abnormal vision, blurred vision, burning sensation in eye, itching in eye, light intolerance
Prednisolone 1% (p. 975) (AK-Pred)	Two drops in affected eye(s) 2–4 times/day	Recommended for short-term use only Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: blurred vision, burning sensation or irritation in eye, pain in eye

Opioid Analgesics

USES

Relief of moderate to severe pain associated with surgical procedures, MI, burns, cancer, or other conditions. May be used as an adjunct to anesthesia, either as a preop medication or intraoperatively as a supplement to anesthesia. Also used for obstetric analgesia. Codeine and hydrocodone have an antitussive effect. Opium tinctures, such as paregoric, are used for severe diarrhea. Methadone relieves severe pain but is used primarily as part of heroin detoxification.

ACTION

Opioids refer to all drugs having actions similar to morphine and to receptors combining with these agents. Major effects are on the CNS (produce analgesia, drowsiness, mood changes, impaired concentration, analgesia without loss of consciousness, nausea and vomiting) and GI tract (decrease HCl secretion; diminish biliary, pancreatic, and intestinal secretions; diminish propulsive peristalsis). Also affect respiration (depressed) and cardiovascular system (peripheral vasodilation, decrease peripheral resistance, inhibit baroreceptor reflexes).

OPIOID ANALGESICS

		Analgesic Effect

Osteoporosis

HISTORY

Osteoporosis is a bone disease that can lead to fractures. Bone mineral density (BMD) is reduced, bone microarchitecture is disrupted, and the amount and variety of proteins in bone are altered. Osteoporosis primarily affects women after menopause (postmenopausal osteoporosis) but may develop in men, in anyone in the presence of particular hormonal disorders (e.g., parathyroid glands), after overconsumption of dietary proteins, or as a result of medications (e.g., glucocorticoids). Several pharmacologic options, along with lifestyle changes, that can be used to prevent and/or treat osteoporotic fractures include bisphosphonates, selective estrogen receptor modulator (SERM), parathyroid hormone (PTH), calcitonin, and monoclonal antibodies.

ACTION

Bisphosphonates: Inhibit bone resorption via actions on osteoclasts or osteoclast precursors, decrease the rate of bone resorption, leading to an indirect increase in BMD.

Selective estrogen receptor modulator (SERM): Decreases bone resorption, increasing BMD and decreasing the incidence of fractures.

Parathyroid hormone: Stimulates osteoblast function, increasing gastrointestinal calcium absorption and increasing renal tubular reabsorption of calcium. This increases BMD, bone mass, and strength, resulting in a decrease in osteoporosis-related fractures.

Calcitonin: Inhibitor of bone resorption. Efficacy not observed in early postmenopausal women and is used only in women with osteoporosis who are at least 5 yrs beyond menopause.

Monoclonal antibody: Inhibits the RANK ligand (RANKL), a cytokine member of the tumor necrosis factor family. This inhibits osteoclast formation, function, and survival, which decreases bone resorption and increases bone mass and strength in cortical and trabecular bone.

BISPHOSPHONATES

Name	Availability	Dosage	Side Effects
Alendronate (p. 30) (Fosamax)	**T:** 5 mg, 10 mg, 35 mg, 40 mg, 70 mg **S:** 70 mg/75ml	**Prevention:** 5 mg/day or 35 mg/wk **Treatment:** 10 mg/day or 70 mg/wk	Transient, mild hypocalcemia, hypophosphatemia, dysphagia, esophagitis, esophageal and gastric ulcer, abdominal pain, diarrhea, musculoskeletal pain
Ibandronate (p. 580) (Boniva)	**T:** 2.5 mg, 150 mg **I:** 1 mg/ml	**Prevention and treatment:** 2.5 mg/day or 150 mg/mo **IV Injection: Treatment:** 3 mg/3 mos	Dyspepsia, back pain, dysphagia, esophagitis, esophageal and gastric ulcer, abdominal pain, diarrhea, musculoskeletal pain

I, injection; ***IM,*** intramuscular; ***IV,*** intravenous; ***S,*** solution (oral); ***T,*** tablet

(continued)

BISPHOSPHONATES *(continued)*

Name	Availability	Dosage	Side Effects
Risedronate (p. 1042) (Actonel)	**T:** 5 mg, 30 mg, 35 mg, 150 mg	**Prevention and treatment:** 5 mg/day, 35 mg/wk, or 150 mg/month	Hypertension, headache, rash, dysphagia, esophagitis, esophageal and gastric ulcer, abdominal pain, diarrhea, musculoskeletal pain
Zoledronic acid (p. 1271) (Aclasta)	**I:** 5 mg	**Prevention: IV:** 5 mg every 2 yrs **Treatment: IV:** 5 mg every yr	Hypertension, pain, fever, headache, chills, fatigue, nausea, musculoskeletal pain

SERM

Name	Availability	Dosage	Side Effects
Raloxifene (p. 1014) (Evista)	**T:** 60 mg	**Prevention and treatment:** 60 mg/day	Peripheral edema, hot flashes, arthralgia, leg cramps, muscle spasms, flu syndrome, infection

PARATHYROID HORMONE

Name	Availability	Dosage	Side Effects
Teriparatide (p. 1148) (Forteo)	**I:** 250 mcg/ml syringe delivers 20 mcg/dose	**Treatment:** 20 mcg subcutaneously once daily	Hypercalcemia, muscle cramps, nausea, dizziness, headache

CALCITONIN

Name	Availability	Dosage	Side Effects
Calcitonin (p. 168) (Fortical, Miacalcin)	**I (Miacalcin):** 200 units/ml **Nasal (Fortical, Miacalcin):** 200 units/activation	**Treatment: IM/Subcutaneous (Miacalcin):** 100 units every other day **Nasal:** 200 units in 1 nostril daily	Rhinitis, local nasal irritation. **Injection:** nausea, local inflammation, flushing of face, hands

MONOCLONAL ANTIBODY RANKL INHIBITOR

Name	Availability	Dosage	Side Effects
Denosumab (p. 324) (Prolia)	**I:** 60 mg/ml	**Subcutaneous:** 60 mg once every 6 mos	Back pain, pain in extremity, hypercholesterolemia, musculoskeletal pain, cystitis

I, injection; ***IM,*** intramuscular; ***IV,*** intravenous; ***S,*** solution (oral); ***T,*** tablet

Parkinson's Disease Treatment

USES	ACTION
To slow or stop clinical progression of Parkinson's disease and to improve function and quality of life in pts with Parkinson's disease, a progressive neurodegenerative disorder.	Normal motor function is dependent on the synthesis and release of dopamine by neurons projecting from the substantia nigra to the corpus striatum. In Parkinson's disease, disruption of this pathway results in diminished levels of the neurotransmitter dopamine. Medication is aimed at providing improved function using the lowest effective dose.

TYPES OF MEDICATIONS FOR PARKINSON'S DISEASE

DOPAMINE PRECURSOR

Levodopa/carbidopa:

Levodopa: Dopamine precursor supplementation to enhance dopaminergic neurotransmission. A small amount of levodopa crosses the blood-brain barrier and is decarboxylated to dopamine, which is then available to stimulate dopaminergic receptors.

Carbidopa: Inhibits peripheral decarboxylation of levodopa, decreasing its conversion to dopamine in peripheral tissues, which results in an increased availability of levodopa for transport across the blood-brain barrier.

COMT INHIBITORS

Entacapone, tolcapone: Reversible inhibitor of catechol-*O*-methyltransferase (COMT). COMT is responsible for catalyzing levodopa. In the presence of a decarboxylase inhibitor (carbidopa), COMT becomes the major metabolizing enzyme for levodopa in the brain and periphery. By inhibiting COMT, higher plasma levels of levodopa are attained, resulting in more dopaminergic stimulation in the brain and lessening the symptoms of Parkinson's disease.

DOPAMINE RECEPTOR AGONISTS

Bromocriptine: Stimulates postsynaptic dopamine type 2 receptors in the neostriatum of the CNS.

Pramipexole: Stimulates dopamine receptors in the striatum of the CNS.

Ropinirole: Stimulates postsynaptic dopamine D2 type receptors within the caudate putamen in the brain.

MONOAMINE OXIDASE B INHIBITORS

Rasagiline, Selegiline: Increase dopaminergic activity due to irreversible inhibition of monoamine oxidase type B (MAO B). MAO B is involved in the oxidative deamination of dopamine in the brain.

Parkinson's Disease Treatment

MEDICATIONS FOR TREATMENT OF PARKINSON'S DISEASE

Name	Type	Availability	Dosage	Side Effects
Bromocriptine (p. 150) (Parlodel)	Dopamine agonist	**T:** 2.5 mg **C:** 5 mg	15–45 mg/day in 2–3 divided doses	Nausea, drowsiness, lower extremity edema, postural hypotension, confusion, toxic psychosis (avoid use in pts with dementia)
Carbidopa/levodopa (p. 182) (Parcopa, Sinemet, Sinemet CR)	Dopamine precursor	**Orally-disintegrating (Parcopa):** 10/100 mg, 25/100 mg, 25/250 mg **Immediate-release (Sinemet):** 10/100 mg, 25/100 mg, 25/250 mg **Controlled-release (Sinemet CR):** 25/100 mg, 50/200 mg	**Parcopa:** 300–1,500 mg levodopa in divided doses **Sinemet:** 300–1,500 mg levodopa in divided doses **Sinemet CR:** 400–2,200 mg levodopa in divided doses	Anorexia, nausea, vomiting, orthostatic hypotension initially; vivid dreams, hallucinations, delusions, confusion, and sleep disturbances with chronic use
Entacapone (p. 412) (Comtan)	COMT inhibitor	**T:** 200 mg	200 mg 3–4 times/day	Dyskinesias, nausea, diarrhea, urine discoloration
Pramipexole (p. 967) (Mirapex, Mirapex ER)	Dopamine agonist	**T:** 0.125 mg, 0.25 mg, 0.5 mg, 1 mg, 1.5 mg **ER:** 0.375 mg, 0.75 mg, 1.5 mg, 3 mg, 4.5 mg	**T:** 0.5–1.5 mg 3 times/day **ER:** 0.375–4.5 mg/day	Nausea, drowsiness, lower extremity edema, postural hypotension, confusion, toxic psychosis (avoid use in pts with dementia)
Rasagiline (p. 1023) (Azilect)	MAO B inhibitors	**T:** 0.5 mg, 1 mg	0.5–1 mg once daily	Nausea, orthostatic hypotension

Ropinirole (p. 1058) (Requip, Requip XL)	Dopamine agonist	**T:** 0.25 mg, 0.5 mg, 1 mg, 2 mg, 3 mg, 4.5 mg **XL:** 2 mg, 4 mg, 6 mg, 8 mg, 12 mg	**T:** 3–8 mg 3 times/day **XL:** Up to 24 mg/day	Nausea, drowsiness, lower extremity edema, postural hypotension, confusion, toxic psychosis (avoid use in pts with dementia)
Selegiline (p. 1074) (Eldepryl, Zelapar)	MAO B inhibitor	**C (Eldepryl):** 5 mg **OD (Zelapar):** 1.25 mg	**C:** 5 mg with breakfast and lunch **OD:** 1.25–2.5 mg daily in the morning	Nausea, orthostatic hypotension
Tolcapone (Tasmar)	COMT inhibitor	**T:** 100 mg, 200 mg	100 mg 3 times/day	Dyskinesias, nausea, diarrhea, urine discoloration

C, Capsules; ***COMT,*** catechol-*O*-methyltransferase; ***ER,*** extended-release; ***I,*** injection; ***MAO B,*** monoamine oxidase B; ***OD,*** orally-disintegrating; ***T,*** tablets; ***XL,*** extended-release.

Proton Pump Inhibitors

USES	ACTION
Treatment of various gastric disorders, including gastric and duodenal ulcers, gastroesophageal reflex disease (GERD), pathologic hypersecretory conditions.	Suppress gastric acid secretion by specific inhibition of the hydrogen-potassium-adenosine triphosphatase (H^+/K^+ ATPase) enzyme system, which transports the acid at the gastric parietal cells. These agents do not have anticholinergic or histamine receptor antagonistic properties.

PROTON PUMP INHIBITORS

Name	Availability	Indications	Usual Dosage	Side Effects
Dexlansoprazole (p. 335) (Dexilant)	**C:** 30 mg, 60 mg	Erosive esophagitis, heartburn associated with nonerosive GERD	30 mg/day	Diarrhea, abominal pain, nausea, upper respiratory tract infection, vomiting, flatulence
Esomeprazole (p. 437) (Nexium)	**C:** 20 mg, 40 mg **I:** 20 mg	*H. pylori* eradication, GERD, erosive esophagitis	20–40 mg/day	Headaches, diarrhea, abdominal pain, nausea
Lansoprazole (p. 663) (Prevacid)	**C:** 15 mg, 30 mg **I:** 30 mg	Duodenal ulcer, gastric ulcer, NSAID-associated gastric ulcer, hypersecretory conditions, *H. pylori* eradication, GERD, erosive esophagitis	15–30 mg/day	Diarrhea, skin rash, pruritus, headaches
Omeprazole (p. 873) (Prilosec)	**C:** 10 mg, 20 mg, 40 mg	Duodenal ulcer, gastric ulcer, hypersecretory conditions, *H. pylori* eradication, GERD, erosive esophagitis	20–40 mg/day	Headaches, diarrhea, abdominal pain, nausea
Omeprazole and Sodium Bicarbonate (p. 873) (Zegerid)	**C:** 20 mg, 40 mg **P:** 20 mg, 40 mg	Duodenal ulcer, benign gastric ulcer, GERD, erosive esophagitis	20–40 mg/day	Headaches, abdominal pain, diarrhea, nausea
Pantoprazole (p. 906) (Protonix)	**T:** 20 mg, 40 mg **I:** 40 mg	Erosive esophagitis, hypersecretory conditions	40 mg/day	Diarrhea, headaches
Rabeprazole (p. 1013) (Aciphex)	**T:** 20 mg	Duodenal ulcer, hypersecretory conditions, *H. pylori* eradication, GERD, erosive esophagitis	20 mg/day	Headaches

C, Capsules; ***GERD,*** gastroesophageal reflux disease; ***I,*** injection; ***NSAID,*** nonsteroidal anti-inflammatory drug; ***P,*** powder for suspension; ***T,*** tablets.

Sedative-Hypnotics

USES	ACTION
Treatment of insomnia (i.e., difficulty falling asleep initially, frequent awakening, awakening too early).	*Benzodiazepines* are the most widely used agents and largely replace barbiturates due to greater safety, lower incidence of drug dependence. Benzodiazepines nonselectively bind to at least three receptor subtypes accounting for sedative, anxiolytic, relaxant, and anticonvulsant properties. Benzodiazepines enhance the effect of the inhibitory neurotransmitter gamma-aminobutyric acid (GABA), which inhibits impulse transmission in the CNS reticular formation in brain. Benzodiazepines decrease sleep latency, number of nocturnal awakenings, and time spent in awake stage of sleep; increase total sleep time. The *nonbenzodiazepines* zaleplon and zolpidem preferentially bind with one receptor subtype, reducing sleep latency and nocturnal awakenings and increasing total sleep time.

SEDATIVE-HYPNOTICS

Name	Availability	Dosage Range	Side Effects
Benzodiazepines			
Estazolam (ProSom)	**T:** 1 mg, 2 mg	**A:** 1–2 mg **E:** 0.5–1 mg	Daytime sedation, memory and psychomotor impairment, tolerance, withdrawal reactions, rebound insomnia, dependence
Flurazepam (p. 499) (Dalmane)	**C:** 15 mg, 30 mg	**A/E:** 15–30 mg	Headaches, unpleasant taste, dry mouth, dizziness, anxiety, nausea
Quazepam (Doral)	**T:** 7.5 mg, 15 mg	**A:** 7.5–15 mg **E:** 7.5 mg	Same as flurazepam
Temazepam (p. 1134) (Restoril)	**C:** 7.5 mg, 15 mg, 30 mg	**A:** 15–30 mg **E:** 7.5–15 mg	Same as flurazepam

(continued)

SEDATIVE-HYPNOTICS *(continued)*

Name	Availability	Dosage Range	Side Effects
Nonbenzodiazepines			
Eszopiclone (p. 444) (Lunesta)	**T:** 1 mg, 2 mg, 3 mg	**A:** 2–3 mg **E:** 1–2 mg	Headaches, unpleasant taste, dry mouth, dizziness, anxiety, nausea
Ramelteon (p. 1017) (Rozerem)	**T:** 8 mg	**A, E:** 8 mg	Headaches, dizziness, fatigue, nausea
Zaleplon (p. 1264) (Sonata)	**C:** 5 mg, 10 mg	**A:** 5–10 mg **E:** 5 mg	Headaches, dizziness, myalgia, drowsiness, asthenia (loss of strength, energy), abdominal pain
Zolpidem (p. 1274) (Ambien, Ambien CR, Edluar, Zolpimist)	**T:** 5 mg, 10 mg **CR:** 6.25 mg, 12.5 mg **SL:** 5 mg, 10 mg **OS:** 5 mg/actuation	**A:** 10 mg, 12.5 mg **E:** 5 mg, 6.25 mg	Dizziness, daytime drowsiness, headaches, confusion, depression, hangover, asthenia (loss of strength, energy)

A, Adults; ***C,*** capsules; ***CR,*** controlled-release; ***E,*** elderly; ***OS,*** oral solution; ***SL,*** sublingual; ***T,*** tablets.

Skeletal Muscle Relaxants

USES	ACTION
Central acting muscle relaxants: Adjunct to rest, physical therapy for relief of discomfort associated with acute, painful musculoskeletal disorders (i.e., local spasms from muscle injury).	*Central acting muscle relaxants:* Exact mechanism unknown. May act in CNS at various levels to depress polysynaptic reflexes; sedative effect may be responsible for relaxation of muscle spasm.
Baclofen, dantrolene, diazepam: Treatment of spasticity characterized by heightened muscle tone, spasm, loss of dexterity caused by multiple sclerosis, cerebral palsy, spinal cord lesions, CVA.	*Baclofen, diazepam:* May mimic actions of gamma-aminobutyric acid on spinal neurons; does not directly affect skeletal muscles. *Dantrolene:* Acts directly on skeletal muscle, relieving spasticity.

SKELETAL MUSCLE RELAXANTS

Name	Indication	Dosage Range	Side Effects/Comments
Baclofen (p. 110) (Lioresal)	Spasticity associated with multiple sclerosis, spinal cord injury	Initially 5 mg 3 times/day Increase by 5 mg 3 times/day q3days **Maximum:** 20 mg 4 times/day	Drowsiness, dizziness, GI effects Caution with renal impairment, seizure disorders Withdrawal syndrome (e.g., hallucinations, psychosis, seizures)

(continued)

SKELETAL MUSCLE RELAXANTS *(continued)*

Name	Indication	Dosage Range	Side Effects/Comments
Carisoprodol (Rela)	Discomfort due to acute, painful, musculoskeletal conditions	250–350 mg 4 times/day	Drowsiness, dizziness, GI effects Hypomania at higher than recommended doses Withdrawal syndrome Hypersensitivity reaction (skin reaction, bronchospasm, weakness, burning eyes, fever) or idiosyncratic reaction (weakness, visual or motor disturbances, confusion) usually occurring within first 4 doses
Chlorzoxazone (Parafon Forte)	Discomfort due to acute, painful, musculoskeletal conditions	Initially 250–500 mg 3–4 times/day **Maximum:** 750 mg 3–4 times/day	Drowsiness, dizziness, GI effects; rare hepatotoxicity Hypersensitivity reaction (urticaria, itching) Urine discoloration to orange, red, or purple
Cyclobenzaprine (p. 287) (Flexeril)	Muscle spasm, pain, tenderness, restricted movement due to acute, painful, musculoskeletal conditions	Initially 5–10 mg 3 times/day **Maximum:** 20 mg 3 times/day	Drowsiness, dizziness, GI effects Anticholinergic effects (dry mouth, urinary retention) Quinidine-like effects on heart (QT prolongation) Long half-life
Dantrolene (p. 301) (Dantrium)	Spasticity associated with multiple sclerosis, cerebral palsy, spinal cord injury	Initially 25 mg/day for 1 week, then 25 mg 3 times/day for 1 week, then 50 mg 3 times/day for 1 week, then 100 mg 3 times/day **Maximum:** 100 mg 4 times/day	Drowsiness, dizziness, GI effects Contraindicated with hepatic disease Dose-dependent hepatotoxicity Diarrhea that is dose dependent and may be severe, requiring discontinuation

Diazepam (p. 342) (Valium)	Spasticity associated with cerebral palsy, spinal cord injury; reflex spasm due to muscle, joint trauma or inflammation	2–10 mg 3–4 times/day	Drowsiness, dizziness, GI effects Abuse potential
Metaxalone (p. 746) (Skelaxin)	Discomfort due to acute, painful, musculoskeletal conditions	800 mg 3–4 times/day	Drowsiness (low risk), dizziness, GI effects Paradoxical muscle cramps Mild withdrawal syndrome Contraindicated in serious hepatic or renal disease
Methocarbamol (p. 752) (Robaxin)	Discomfort due to acute, painful, musculoskeletal conditions	Initially 1,500 mg 4 times/day **Maintenance:** 1,000 mg 4 times/day	Drowsiness, dizziness, GI effects Urine discoloration to brown, brown-black, or green
Orphenadrine (Norflex)	Discomfort due to acute, painful, musculoskeletal conditions	100 mg 2 times/day	Drowsiness, dizziness, GI effects Long half-life Anticholinergic effects (dry mouth, urinary retention) Rare aplastic anemia Some products may contain sulfites
Tizanidine (p. 1176) (Zanaflex)	Spasticity	Initially 4 mg q6–8h (**Maximum** 3 times/day), may increase by 2–4 mg as needed/tolerated **Maximum:** 36 mg (limited information on doses greater than 24 mg)	Drowsiness, dizziness, GI effects Hypotension (20% decrease in B/P) Hepatotoxicity (usually reversible) Withdrawal syndrome (hypertension, tachycardia, hypertonia) Effect is short lived (3–6 hrs) Dose cautiously with creatinine clearance less than 25 ml/min

Smoking Cessation Agents

Tobacco smoking is associated with the development of lung cancer and chronic obstructive pulmonary disease. Smoking is harmful not just to the smoker but also to family members, coworkers, and others breathing cigarette smoke.

Quitting smoking decreases the risk of developing lung cancer, other cancers, heart disease, stroke, and respiratory illnesses. Several medications have proved useful as smoking cessation aids. Nausea and light-headedness are possible signs of overdose of nicotine warranting a reduction in dosage.

SMOKING CESSATION AGENTS

Name	Availability	Dose Duration	Cautions/Side Effects	Comments
Bupropion (p. 158) (Zyban)	**T:** 150 mg	150 mg every morning for 3 days, then 150 mg 2 times/day Start 1–2 wks before quit date **Duration:** 7–12 wks up to 6 mos for maintenance	History of seizure, eating disorder, use of MAOI within previous 14 days, bipolar disorder **Side Effects:** Insomnia, dry mouth, tremor, rash	Stop smoking during second wk of treatment and use counseling support services along with medication
Clonidine (p. 265) (Catapres, Catapres-TTS)	**T:** 0.1 mg, 0.2 mg **Patch:** 0.1 mg/24 hrs, 0.2 mg/24 hrs, 0.3 mg/24 hrs	**Oral:** 0.15–0.75 mg/day **Patch:** 0.1–0.2 mg daily **Duration:** 3–10 weeks	Rebound hypertension. **Side Effects:** Dry mouth, drowsiness, dizziness, sedation, constipation	Abrupt discontinuation can result in anxiety, agitation, headaches, tremors accompanied or followed by rapid rise in B/P

Nicotine gum (p. 835) (Nicorette, Thrive)	**Squares:** 2 mg, 4 mg	1 gum q1–2h for 6 wks, then q2–4h for 3 wks **Maximum:** 24 pieces/day **Duration:** up to 12 wks	Recent MI (within 2 wks), serious arrhythmias, serious or worsening angina pectoris **Side Effects:** Dyspepsia, mouth soreness, hiccups	2 mg recommended for pts smoking less than 25 cigarettes/day, 4 mg for pts smoking 25 or more cigarettes/day Chew until a peppery or minty taste emerges and then "park" between cheek and gums to facilitate nicotine absorption through oral mucosa Chew slowly and intermittently to avoid jaw ache and achieve maximum benefit Only water should be taken 15 min before and during chewing
Nicotine inhaler (p. 835) (Nicotrol)	**Cartridge:** 10 mg (delivers 4 mg nicotine)	6–16 cartridges daily; taper frequency of use over the last 6–12 wks **Duration:** up to 6 mos	Recent MI (within 2 wks), serious arrhythmias, serious or worsening angina pectoris **Side Effects:** Local irritation of mouth and throat, coughing, rhinitis	Use at or above room temperature (cold temperatures decrease amount of nicotine inhaled)
Nicotine lozenge (p. 835) (Commit)	**Lozenges:** 2 mg, 4 mg	One lozenge q1–2h for 6 wks, then q2–4h for 3 wks, then q4–8h for 3 wks **Duration:** 12 wks	Recent MI (within 2 wks), serious arrhythmias, serious or worsening angina pectoris **Side Effects:** Local skin reaction, insomnia, nausea, sore throat	First cigarette smoked within 30 min of waking, use 4 mg; after 30 min of waking, use 2 mg Use at least 9 lozenges/day first 6 wks Only 1 lozenge at a time, 5 per 6 hrs and 20 per 24 hrs Do not chew or swallow

(continued)

SMOKING CESSATION AGENTS *(continued)*

Name	Availability	Dose Duration	Cautions/Side Effects	Comments
Nicotine nasal spray (p. 835) (Nicotrol NS)	10 mg/ml (delivers 0.5 mg/spray)	8–40 doses/day A dose consists of one 0.5 mg delivery to each nostril; initial dose is 1–2 sprays/hr, increasing as needed **Duration:** 3–6 mos	Recent MI (within 2 wks), serious arrhythmias, serious or worsening angina pectoris **Side Effects:** Nasal irritation	Do not sniff, swallow, or inhale through nose while administering nicotine doses (may increase irritation) Tilt head back slightly for best results
Nicotine patch (p. 835) (NicoDerm CQ)	**Nicoderm CQ:** 7 mg/24 hrs, 14 mg/24 hrs, 21 mg/24 hrs **Nicotrol:** 5 mg/16 hrs, 10 mg/16 hrs, 15 mg/16 hrs	Apply upon waking on quit date: **Nicoderm CQ:** 21 mg/24 hrs for 4 wks, then 14 mg/24 hrs for 2 wks, then 7 mg/24 hrs for 2 wks **Nicotrol:** 15 mg/16 hrs for 6 wks, then 10 mg/16 hrs for 2 wks, then 5 mg/16 hrs for 2 wks	Recent MI (within 2 wks), serious arrhythmias, serious or worsening angina pectoris **Side Effects:** Local skin reaction, insomnia	The 16- and 24-hr patches are of comparable efficacy Begin with a lower-dose patch in pts smoking 10 or fewer cigarettes/day Place new patch on relatively hair-free location, usually between neck and waist, in the morning If insomnia occurs, remove the 24-hr patch prior to bedtime or use the 16-hr patch Rotate patch site to diminish skin irritation
Nortriptyline (p. 854) (Pamelor)	**T:** 25 mg, 50 mg, 75 mg, 100 mg	Initially 25 mg/day, increasing gradually to target dose of 75–100 mg/day **Duration:** up to 12 wks	Risk of arrhythmias **Side Effects:** Sedation, dry mouth, blurred vision, urinary retention, light-headedness, shaky hands	Initiate therapy 10–28 days before the quit date to allow steady state of nortriptyline at target dose

Varenicline (p. 1232) (Chantix)	**T:** 0.5 mg, 1 mg	**Days 1–3:** 0.5 mg daily; **days 4–7:** 0.5 mg 2 times/day; **day 8 to end of treatment:** 1 mg 2 times/day **Duration:** begin 1 wk before set quit date continue for 12 wks. May use additional 12 wks if failed to quit after first 12 wks	**Side Effects:** Nausea; sleep disturbances; headaches; may impair ability to drive, operate machinery; depressed mood; altered behavior; suicidal ideation reported	Use lower dosage if not able to tolerate nausea and vomiting Use counseling support services along with medication

MAOI, Monoamine oxidase inhibitor; ***MI,*** myocardial infarction; ***T,*** tablets.

Sympathomimetics

USES

Stimulation of alpha$_1$-receptors: Induce vasoconstriction primarily in skin and mucous membranes, nasal decongestion; combine with local anesthetics to delay anesthetic absorption; increases B/P in certain hypotensive states; produce mydriasis, facilitating eye exams, ocular surgery.

Stimulation of beta$_1$-receptors: Treatment of cardiac arrest, heart failure, shock, AV block.

Stimulation of beta$_2$-receptors: Treatment of asthma.

Stimulation of dopamine receptors: Treatment of shock.

ACTION

The sympathetic nervous system (SNS) is involved in maintaining homeostasis (involved in regulation of heart rate, force of cardiac contractions, B/P, bronchial airway tone, carbohydrate, fatty acid meters [primarily norepinephrine, epinephrine, and dopamine]), which act on adrenergic receptors. These receptors include beta$_1$, beta$_2$, alpha$_1$, alpha$_2$, and dopaminergic. Sympathomimetics differ widely in their actions based on their specificity to affect these receptors.

- *Alpha$_1$:* Causes mydriasis, constriction of arterioles, veins.
- *Alpha$_2$:* Inhibits transmitter release.
- *Beta$_1$:* Increases rate, force of contraction, conduction velocity of heart; releases renin from kidney.
- *Beta$_2$:* Dilates arterioles, bronchi, relaxes uterus.
- *Dopaminergic:* Dilates kidney vasculature.

Sympathomimetics *(continued)*

SYMPATHOMIMETICS

Name	Availability	Receptor Specificity	Uses	Dosage Range
Dobutamine (p. 368) (Dobutrex)	**I:** 12.5 mg/ml, 500 mg/250 ml	$Beta_1$, $beta_2$, $alpha_1$	Inotropic support in cardiac decompensation	**IV infusion:** 2.5–10 mcg/kg/min
Dopamine (p. 377) (Intropin)	**I:** 40 mg/ml, 80 mg/ml, 160 mg/ml vials, 800 mcg/ml, 1,600 mcg/ml	$Beta_1$, $alpha_1$, dopaminergic	Vasopressor, cardiac stimulant	**Dopaminergic:** 0.5–3 mcg/kg/min **$Beta_1$:** 2–10 mcg/kg/min **$Alpha_1$:** more than 10 mcg/kg/min
Ephedrine	**I:** 50 mg/ml	Alpha, $beta_1$, $beta_2$	Acute hypotensive states, esp. with spinal anesthesia	**IV:** 5–25 mg
Epinephrine (p. 416) (Adrenalin)	**I:** 0.1 mg/ml, 1 mg/ml	$Beta_1$, $beta_2$, $alpha_1$	Cardiac arrest, anaphylactic shock	**Vasopressor:** 1–10 mcg/min **Cardiac arrest:** 1 mg q3–5min during resuscitation
Norepinephrine (p. 851) (Levophed)	**I:** 1 mg/ml	$Beta_1$, $alpha_1$	Vasopressor	**IV:** 0.5–1 mcg/min up to 2–12 mcg/min
Phenylephrine (p. 942) (Neo-Synephrine)	**I:** 10 mg/ml	$Alpha_1$	Vasopressor	**IV:** Initially, 10–180 mcg/min, then 40–60 mcg/min

I, Injection.

Thyroid

USES	ACTION
Treatment of hypothyroidism, a common endocrine disorder in which the thyroid fails to release sufficient amounts of thyroid hormones.	Thyroid hormones are necessary for proper metabolism, growth, and homeostasis. Thyroid hormone regulates energy and heat production; facilitates development of the CNS, growth, and puberty. Regulates the synthesis of proteins that are important in hepatic, cardiac, neurologic, and muscular functions.

THYROID

Name	Availability	Dosage Average	Side Effects
Levothyroxine (p. 685) (Levothroid, Levoxyl, Synthroid, Unithroid)	**T:** 25 mcg, 50 mcg, 75 mcg, 88 mcg, 100 mcg, 112 mcg, 125 mcg, 137 mcg, 150 mcg, 175 mcg, 200 mcg, 300 mcg	75–100 mcg/day	Side effects are due to excessive amounts of medication, including diarrhea, heat intolerance, palpitations, tremors, tachycardia, vomiting, weight loss, increased B/P
Liothyronine (Cytomel, Triostat)	**T:** 5 mcg, 25 mcg, 50 mcg	25–50 mcg/day	Same as levothyroxine
Liotrix (Thyrolar)	**T:** ¼ grain, ½ grain, 1 grain, 2 grains, 3 grains	½–1 grain/day	Same as levothyroxine
Thyroid dessicated (Armour Thyroid Nature Throid, Wes Throid)	**T:** 15 mg, 30 mg, 60 mg, 90 mg, 120 mg, 180 mg, 240 mg, 300 mg	60–120 mg/day	Same as levothyroxine

T, Tablets.

Vitamins

INTRODUCTION

Vitamins are organic substances required for growth, reproduction, and maintenance of health and are obtained from food or supplementation in small quantities (vitamins cannot be synthesized by the body or the rate of synthesis is too slow/inadequate to meet metabolic needs). Vitamins are essential for energy transformation and regulation of metabolic processes. They are catalysts for all reactions using proteins, fats, carbohydrates for energy, growth, and cell maintenance.

WATER SOLUBLE

Water-soluble vitamins include vitamin C (ascorbic acid), B_1 (thiamine), B_2 (riboflavin), B_3 (niacin), B_5 (pantothenic acid), B_6 (pyridoxine), folic acid, B_{12} (cyanocobalamin). Water-soluble vitamins act as coenzymes for almost every cellular reaction in the body. B-complex vitamins differ from one another in both structure and function but are grouped together because they first were isolated from the same source (yeast and liver).

FAT SOLUBLE

Fat-soluble vitamins include vitamins A, D, E, and K. They are soluble in lipids and are usually absorbed into the lymphatic system of the small intestine and then into the general circulation. Absorption is facilitated by bile. These vitamins are stored in the body tissue when excessive quantities are consumed. May be toxic when taken in large doses (see sections on individual vitamins).

VITAMINS

Name	Uses	RDA	Side Effects
Vitamin A (p. 1251) (Aquasol A)	Required for normal growth, bone development, vision, reproduction, maintenance of epithelial tissue	**M:** 1,000 mcg **F:** 800 mcg	**High dosages:** Hepatotoxicity, cheilitis, facial dermatitis, photosensitivity, mucosal dryness
Vitamin B_1 (p. 1156) (thiamine)	Important in red blood cell formation, carbohydrate metabolism, neurologic function, myocardial contractility, growth, energy production	**M:** 1.5 mg **F:** 1.1 mg	**Large parenteral doses:** May cause pain on injection
Vitamin B_2 (riboflavin)	Necessary for function of coenzymes in oxidation-reduction reactions, essential for normal cellular growth, assists in absorption of iron and pyridoxine	**M:** 1.7 mg **F:** 1.3 mg	Orange-yellow discoloration in urine
Vitamin B_3 (p. 831) (niacin)	Coenzyme for many oxidation-reduction reactions	**M:** 19 mg **F:** 15 mg	**High dosage (over 500 mg):** Nausea, vomiting, diarrhea, gastritis, hepatotoxicity, skin rash, facial flushing, headaches
Vitamin B_5 (pantothenic acid)	Precursor to coenzyme A, important in synthesis of cholesterol, hormones, fatty acids	**M:** 4–7 mg **F:** 4–7 mg	Occasional GI disturbances (e.g., diarrhea)
Vitamin B_6 (p. 1006) (pyridoxine)	Enzyme cofactor for amino acid metabolism, essential for erythrocyte production, Hgb synthesis	**M:** 2 mg **F:** 1.6 mg	**High dosages:** May cause sensory neuropathy

(continued)

VITAMINS *(continued)*

Name	Uses	RDA	Side Effects
Vitamin B_{12} (p. 286) (cyanocobalamin)	Coenzyme in cells, including bone marrow, CNS, and GI tract, necessary for lipid metabolism, formation of myelin	**M:** 2.4 mcg **F:** 2.4 mcg	Skin rash, diarrhea, pain at injection site
Vitamin C (p. 79) (ascorbic acid)	Cofactor in various physiologic reactions, necessary for collagen formation, acts as antioxidant	**M:** 90 mg **F:** 75 mg (increased with smoking, pregnancy, lactation)	**High dosages:** May cause calcium oxalate crystalluria, esophagitis, diarrhea
Vitamin D (p. 1252) (Calciferol)	Necessary for proper formation of bone, calcium, mineral homeostasis, regulation of parathyroid hormone, calcitonin, phosphate	**M:** 200–400 units **F:** 200–400 units	Hypercalcemia, kidney stones, renal failure, hypertension, psychosis, diarrhea, nausea, vomiting, anorexia, fatigue, headaches, altered mental status
Vitamin E (p. 1256) (Aquasol E)	Antioxidant	**M:** 15 mg **F:** 15 mg	**High dosages:** GI disturbances, malaise, headaches

F, Females; ***M,*** males.

abacavir

ah-**bak**-ah-veer
(Ziagen)

BLACK BOX ALERT Serious, sometimes fatal hypersensitivity reactions, lactic acidosis, severe hepatomegaly with steatosis (fatty liver) have occurred.

FIXED-COMBINATION(S)

Epzicom: abacavir/lamivudine (antiretroviral): 600 mg/300 mg. **Trizivir:** abacavir/lamivudine (antiretroviral)/zidovudine (antiretroviral): 300 mg/150 mg/300 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiretroviral agent. **CLINICAL:** Antiviral (see pp. 67C, 114C).

ACTION

Inhibits activity of HIV-1 reverse transcriptase by competing with natural substrate dGTP and by its incorporation into viral DNA. **Therapeutic Effect:** Inhibits viral DNA replication.

PHARMACOKINETICS

Rapidly and extensively absorbed after PO administration. Protein binding: 50%. Widely distributed, including to cerebrospinal fluid (CSF) and erythrocytes. Metabolized in liver to inactive metabolites. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 1.5 hrs.

USES

Treatment of HIV infection, in combination with other agents.

PRECAUTIONS

Contraindications: Hypersensitivity to abacavir (do **not** rechallenge). Moderate or severe hepatic impairment. **Cautions:** Mild hepatic disease. Pts at risk for coronary heart disease (e.g., hypertension, hyperlipidemia, diabetes, smoking).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if excreted in breast milk. Breast-feeding not recommended (may increase potential for HIV transmission, adverse effects). **Pregnancy Category C. Children:** Safety and efficacy not established in those less than 3 mos of age. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol may increase concentration, risk of toxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, GGT, blood glucose, triglycerides. May decrease Hgb, leukocytes, lymphocytes.

AVAILABILITY (Rx)

Solution, Oral: 20 mg/ml. **Tablets:** 300 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Oral solution may be refrigerated. Do not freeze.

INDICATIONS/ROUTES/DOSAGE

HIV Infection (in Combination with Other Antiretrovirals)

PO: ADULTS: 300 mg twice a day or 600 mg once a day. **CHILDREN 3 MOS–16 YRS:** 8 mg/kg twice a day. **Maximum:** 300 mg twice a day.

Dosage in Hepatic Impairment

Mild impairment: 200 mg twice a day (oral solution recommended). **Moderate to severe impairment:** Not recommended (contraindicated by manufacturer).

SIDE EFFECTS

Adult: Frequent: Nausea (47%), nausea with vomiting (16%), diarrhea (12%), decreased appetite (11%). **Occasional:** Insomnia (7%). **Children: Frequent:** Nausea with vomiting (39%), fever (19%), headache, diarrhea (16%), rash (11%). **Occasional:** Decreased appetite (9%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction may be life-threatening. Signs and symptoms include fever, rash, fatigue, intractable nausea/vomiting, severe diarrhea, abdominal pain, cough, pharyngitis, dyspnea. Life-threatening hypotension may occur. Lactic acidosis, severe hepatomegaly may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy. Obtain baseline laboratory testing, esp. hepatic function tests, before beginning therapy and at periodic intervals during therapy. Increased risk of sensitivity (cutaneous, GI, pulmonary) in those with positive HLA-B 5701 genotype status. Offer emotional support.

INTERVENTION/EVALUATION

Assess for nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess eating pattern; monitor for weight loss. Monitor lab values carefully, particularly hepatic function. Stop abacavir if 3 or more of the following occur: rash, fever, GI disturbances (diarrhea, nausea, vomiting), flu-like symptoms, respiratory difficulty.

PATIENT/FAMILY TEACHING

• Do not take any medications, including OTC drugs, without consulting physician. • Small, frequent meals may offset anorexia, nausea. • Abacavir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pt must continue practices to prevent HIV transmission.

abatacept

TOP 200

a-**bay**-ta-sept
(Orencia)
Do not confuse Orencia with Oracea.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective T-cell costimulation modulator. **CLINICAL:** Rheumatoid arthritis agent.

ACTION

Inhibits T-lymphocyte activation, necessary in the inflammatory cascade leading to joint inflammation and destruction. **Therapeutic Effect:** Induces major clinical response in adult pts with moderate to severely active rheumatoid arthritis (RA).

PHARMACOKINETICS

Higher clearance with increasing body weight. Age, gender do not affect clearance. **Half-life:** 8–25 days.

USES

Reduces signs and symptoms, progression of structural damage in adults with moderate to severe rheumatoid arthritis (RA) alone or in combination with other disease-modifying antirheumatic medications. Treatment of moderate to severe active polyarticular juvenile idiopathic arthritis in pts 6 yrs and older. May use alone or in combination with methotrexate (do not use with anakinra or tumor necrosis factor [TNF] antagonists).

PRECAUTIONS

Contraindications: None known. **Cautions:** Chronic, latent, or localized infection, COPD (higher incidence of adverse effects), elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Cautious use due to increased risk of serious infection and malignancy.

INTERACTIONS

DRUG: May increase risk of infection, decrease efficacy of immune response associated with **live vaccines. Tumor necrosis factor (TNF) antagonists**

(adalimumab, etanercept, infliximab) may increase risk of infection. **HERBAL: Echinacea** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 250 mg. **Injection, Solution:** 125 mg/ml single-dose prefilled syringe.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute powder in each vial with 10 ml Sterile Water for Injection using the silicone-free syringe provided with each vial and an 18- to 21-gauge needle. • Rotate solution gently to prevent foaming until powder is completely dissolved. • From a 100-ml 0.9% NaCl infusion bag, withdraw and discard an amount equal to the volume of the reconstituted vials (for 2 vials remove 20 ml, for 3 vials remove 30 ml, for 4 vials remove 40 ml). • Slowly add the reconstituted solution from each vial into the infusion bag using the same syringe provided with each vial. • Concentration in the infusion bag will be 10 mg/ml or less abatacept.

Rate of Administration • Infuse over 30 min using a 0.2- to 1.2-micron low protein-binding filter.

Storage • Store vials in refrigerator. • Any reconstitution that has been prepared by using siliconized syringes will develop translucent particles and must be discarded. • Solution should appear clear and colorless to pale yellow. Discard if solution is discolored or contains precipitate. • Solution is stable for up to 24 hrs after reconstitution. • Reconstituted solution may be stored at room temperature or refrigerated.

Subcutaneous

• Store prefilled syringes in refrigerator. • Inject in front of thigh, outer areas of upper arms or abdomen. • Avoid areas of tenderness, bruised, red, scaly, or hard. • Do not rub injection site.

IV INCOMPATIBILITIES

Do not infuse concurrently in same IV line as other agents.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA)

IV: BODY WEIGHT 101 KG OR MORE: 1 g (4 vials) given as a 30-min infusion. Following initial therapy, give at 2 wks and 4 wks after first infusion, then q4wks thereafter. **BODY WEIGHT 60–100 KG:** 750 mg (3 vials) given as a 30-min infusion. Following initial therapy, give at 2 wks and 4 wks after first infusion, then q4wks thereafter. **BODY WEIGHT 59 KG OR LESS:** 500 mg (2 vials) given as a 30-min infusion. Following initial therapy, give at 2 wks and 4 wks after first infusion, then q4wks thereafter.

Subcutaneous: Following a single IV infusion, 125 mg given within a day, then 125 mg once a week.

Juvenile Idiopathic Arthritis

IV: CHILDREN 6 YRS AND OLDER, WEIGHING LESS THAN 75 KG: 10 mg/kg. **CHILDREN WEIGHING 75 KG OR MORE:** Refer to adult dosing. **Maximum:** 1,000 mg. Following initial therapy, give 2 wks and 4 wks after first infusion, then q4wks thereafter.

SIDE EFFECTS

Frequent (18%): Headache. **Occasional (9%–6%):** Dizziness, cough, back pain, hypertension, nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory tract infection, nasopharyngitis, sinusitis, UTI, influenza, bronchitis occur in 5% of pts. Serious infections manifested as pneumonia, cellulitis, diverticulitis, acute pyelonephritis occur in 3% of pts. Hypersensitivity reaction (rash, urticaria, hypotension, dyspnea) occurs rarely.

A

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joint for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Monitor for hypersensitivity reaction (headache, B/P change, light-headedness).

PATIENT/FAMILY TEACHING

• Consult physician or nurse if infection, hypersensitivity reaction, infusion-related reaction occurs. • Do not receive live vaccines during treatment or within 3 mos of its discontinuation. • COPD pts to report worsening of respiratory symptoms.

abciximab

HIGH ALERT

ab-**six**-ih-mab
(c7E3 Fab, ReoPro)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycoprotein IIb/IIIa receptor inhibitor. **CLINICAL:** Antiplatelet; antithrombotic (see p. 32C).

ACTION

Rapidly inhibits platelet aggregation by preventing the binding of fibrinogen to GP IIb/IIIa receptor sites on platelets. **Therapeutic Effect:** Prevents occlusion of treated coronary arteries. Prevents acute cardiac ischemic complications.

PHARMACOKINETICS

Rapidly cleared from plasma. Initial-phase half-life is less than 10 min; second-phase half-life is 30 min.

USES

Adjunct to aspirin and heparin therapy to prevent cardiac ischemic complications in pts undergoing percutaneous coronary intervention (PCI) and those with unstable angina not responding to conventional medical therapy when PCI is planned within 24 hrs. **OFF-LABEL:** Support PCI during ST-segment elevation myocardial infarction (STEMI); STEMI as adjunct to half-dose thrombolytics.

PRECAUTIONS

Contraindications: Active internal bleeding, arteriovenous malformation or aneurysm, CVA with residual neurologic deficit, history of CVA (within the past 2 yrs) or oral anticoagulant use within the past 7 days unless PT is less than 1.2× control, history of vasculitis, hypersensitivity to murine proteins, intracranial neoplasm, prior IV dextran use before or during percutaneous transluminal coronary angioplasty (PTCA), recent surgery or trauma (within the past 6 wks), recent GI or GU bleeding (within the past 6 wks), thrombocytopenia (less than 100,000 cells/mcl), and severe uncontrolled hypertension. Concomitant use of another glycoprotein IIb/IIIa inhibitor. **Cautions:** Pts who weigh less than 75 kg; those older than 65 yrs; those with history of GI disease; those receiving thrombolytics; PTCA in less than 12 hrs of onset of symptoms for acute MI; prolonged PTCA (longer than 70 min); failed PTCA.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Increased risk of major bleeding.

INTERACTIONS

DRUG: **Antiplatelet medications, heparin, other anticoagulants, thrombolytics, NSAIDs, direct factor Xa inhibitors, thrombin inhibitors** may increase risk of bleeding. **HERBAL:** None

significant. **FOOD:** None known. **LAB VALUES:** Increases activated clotting time (ACT), prothrombin time (PT), activated partial thromboplastin time (aPTT); decreases platelet count.

AVAILABILITY (Rx)

Injection Solution: 2 mg/ml (5-ml vial).

ADMINISTRATION/HANDLING

IV

Reconstitution • Bolus dose: Withdraw bolus dose into syringe using a 0.2- or 0.5-micron low protein-binding filter. • **Continuous infusion:** Withdraw dose through a 0.2- or 0.5-micron low protein-binding filter and further dilute into 250 ml D_5W or 0.9% NaCl.

Rate of Administration • Bolus given over 1 min.

Administration Precautions • Give in separate IV line; do not add any other medication to infusion. • For bolus injection and continuous infusion, use sterile, nonpyrogenic, low protein-binding 0.2- or 0.22-micron filter. • While vascular sheath is in position, maintain pt on complete bed rest with head of bed elevated at 30°. • Maintain affected limb in straight position. • After sheath removal, apply femoral pressure for 30 min, either manually or mechanically, then apply pressure dressing.

Storage • Store vials in refrigerator. • Solution appears clear, colorless. • Do not shake. • Prepared solution is stable for 12 hrs. Discard any unused portion left in vial or if preparation contains *any* opaque particles.

IV INCOMPATIBILITY

Administer in separate line; no other medication should be added to infusion solution.

IV COMPATIBILITIES

Adenosine (Adenocard), atropine sulfate, bivalirudin (Angiomax), diphenhydramine (Benadryl), fentanyl (Sublimaze), midazolam (Versed).

INDICATIONS/ROUTES/DOSAGE

Percutaneous Coronary Intervention (PCI)

IV Bolus: ADULTS: 0.25 mg/kg 10–60 min before PCI, then 12-hr IV infusion of 0.125 mcg/kg/min. **Maximum:** 10 mcg/min.

PCI (Unstable Angina)

IV Bolus: ADULTS: 0.25 mg/kg, followed by 18- to 24-hr infusion of 10 mcg/min, ending 1 hr after procedure.

SIDE EFFECTS

Frequent: Nausea (16%), hypotension (12%). **Occasional (9%):** Vomiting. **Rare (3%):** Bradycardia, confusion, dizziness, pain, peripheral edema, UTI.

ADVERSE EFFECTS/ TOXIC REACTIONS

Major bleeding complications may occur; stop infusion immediately. Hypersensitivity reaction (rash, urticaria, hypotension, dyspnea) may occur. Atrial fibrillation or flutter, pulmonary edema, complete AV block occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Heparin should be discontinued 4 hrs before arterial sheath removal. Maintain pt on bed rest for 6–8 hrs following sheath removal or drug discontinuation, whichever is later. Check platelet count, PT, aPTT before infusion (assess for preexisting blood abnormalities), 2–4 hrs following treatment, and at 24 hrs or before discharge, whichever is first. Check insertion site, distal pulse of affected limb while femoral artery sheath is in place, and then routinely for 6 hrs following femoral artery sheath removal. Minimize need for injections, blood draws, catheters, other invasive procedures.

INTERVENTION/EVALUATION

Stop abciximab and/or heparin infusion if serious bleeding occurs that is uncontrolled by pressure. Observe for mental status changes. Assess skin for ecchymosis,

A

petechiae, particularly at femoral arterial access, also at catheter insertion, arterial and venous puncture, cutdown, needle sites. Handle pt carefully and as infrequently as possible to prevent bleeding. Do not obtain B/P in lower extremities (possible deep vein thrombi). Assess for decrease in B/P, increase in pulse rate, complaint of abdominal or back pain, severe headache, evidence of GI hemorrhage. Monitor ACT, PT, aPTT, platelet counts, Hgb, Hct. Question for increase in discharge during menses. Assess urinary output for hematuria. Monitor for hematoma. Use care in removing any dressing, tape.

PATIENT/FAMILY TEACHING

• Assess skin for bruising up to 3 days after infusion. • Report signs of bleeding.

abiraterone

ah-bir-**ah**-ter-own
(Zytiga)
Do not confuse Zytiga with Zetia or Zyrtec.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Androgen biosynthesis inhibitor. **CLINICAL:** Testosterone agent (see p. 79C).

ACTION

Inhibits androgen production in adrenal gland, testes, and prostate tumors. **Therapeutic Effect:** Lowers serum testosterone to castrate levels.

PHARMACOKINETICS

Protein binding: 99%. Primarily excreted in feces. **Peak plasma concentration:** 2 hrs. **Half-life:** 12 hrs (up to 19 hrs with hepatic impairment).

USES

Treatment of metastatic castration-resistant prostate cancer with combination of prednisone in pts who have received prior chemotherapy containing docetaxel.

◄ALERT► Must be given on empty stomach. No food is to be consumed 2 hrs before or 1 hr after each dose. Food may increase absorption up to 10 times normal limit. Sexually active men must wear condoms during and for 1 wk after treatment due to potential risks to fetus.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of cardiovascular disease, arrhythmia, hypertension, hypokalemia, fluid retention, heart failure, moderate hepatic impairment, adrenal insufficiency.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in women who are or may become pregnant. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/toxicity of **silodosin, tamoxifen, thioridazine, topotecan.** May decrease effect of **clopidogrel, tramadol. CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole)** may increase concentration. **CYP3A4 inducers (e.g., carbamazepine)** may decrease concentration. **HERBAL:** None significant. **FOOD:** Do not give with **food** (no **food** should be consumed for at least 2 hrs before or 1 hr after giving abiraterone). **LAB VALUES:** May increase serum AST, ALT, bilirubin, triglycerides. May decrease potassium, phosphorus.

AVAILABILITY (Rx)

Tablets: 250 mg.

ADMINISTRATION/HANDLING

PO

• Give on empty stomach only. • Give with water. • Swallow whole. Do not break, crush, dissolve, or divide tablets.

INDICATIONS/ROUTES/DOSAGE

◄ALERT► Consider increased dosage of prednisone during unusual stress or infection. Interrupting prednisone ther-

apy may induce adrenocorticoid insufficiency.

Metastatic Castration-Resistant Prostate Cancer

PO: ADULTS, ELDERLY: 1,000 mg once daily. Coadminister with prednisone, 5 mg PO twice daily.

Dosage Modification

Hepatic Enzymes Greater Than Upper Limit of Normal (ULN)

Lab Values	Recommendation
AST, ALT elevations greater than 5 × ULN or bilirubin greater than 3 × ULN with 1,000 mg	Interrupt treatment and restart at 750 mg once AST, ALT less than 2.5 × ULN or bilirubin less than 1.5 × ULN.
AST, ALT elevations greater than 5 × ULN or bilirubin greater than 3 × ULN with 750 mg	Interrupt treatment and restart at 500 mg once AST, ALT less than 2.5 × ULN or bilirubin less than 1.5 × ULN.

If hepatotoxicity occurs at reduced dose of 500 mg daily, discontinue treatment. **Mild hepatic impairment:** No dosage adjustment necessary. **Moderate hepatic impairment:** Reduce dose to 250 mg daily. Discontinue if AST/ALT greater than 5 times ULN or bilirubin greater than 3 times ULN. **Severe hepatic impairment:** Contraindicated.

SIDE EFFECTS

Frequent (30%–26%): Joint swelling/discomfort, peripheral edema, muscle spasm, musculoskeletal pain, hypokalemia. **Occasional (19%–6%):** Hot flashes, diarrhea, UTI, cough, hypertension, urinary frequency, nocturia. **Rare (less than 6%):** Heartburn, upper respiratory tract infection.

ADVERSE EFFECTS/ TOXIC REACTIONS

Mineralocorticoid excess (severe fluid retention, hypokalemia, hypertension) may compromise pts with prior cardiovascular history. Safety not established in pts with left ventricular ejection fraction less than 50%. Tachycardia, atrial fibrillation, supraventricular tachycardia, atrial flutter, complete AV block, bradyarrhythmia reported in 7% of pts. Chest pain, unstable angina, CHF reported in less than 4% of pts. Stress, infection, or interruption of daily steroids may signal adrenocortical insufficiency. Hepatotoxicity (AST/ALT greater than 5 times ULN) reported in 2% of pts. Pts with hepatic impairment are more likely to develop hepatotoxicity.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate history of heart failure, myocardial infarction, arrhythmias, angina pectoris, peripheral edema, hepatic impairment, adrenal or pituitary abnormalities, left ventricular ejection fraction if applicable. Obtain baseline BMP, ALT/AST, alkaline phosphatase, bilirubin. Question possibility of pregnancy before treatment (Pregnancy Category X). Question history of corticosteroid intolerance if applicable.

INTERVENTION/EVALUATION

Assess for peripheral edema behind medial malleolus (sacral area in bedridden patients). Monitor BMP, hepatic function. Monitor for mineralocorticoid excess (hypokalemia, hypertension, fluid retention) at least once monthly. Assess for cardiac arrhythmia if hypokalemia occurs. Obtain EKG for palpitations, shortness of breath, dizziness. Monitor signs and symptoms of adrenocortical insufficiency during prednisone interruption, periods of stress, infection. Measure AST/ALT, bilirubin every 2 wks for 3 mos, then monthly. If hepatotoxicity occurs, dosage modification will be ordered. Pts with moderate hepatic impairment must have hepatic function tests every wk for first month, then every 2 wks for 2 mos, then monthly. If AST/ALT above 5 times ULN or

bilirubin above 3 times ULN, treatment should be discontinued.

PATIENT/FAMILY TEACHING

• Must be taken on empty stomach (no food 2 hrs before and 1 hr after dose). • If taken with food, toxic levels may result. • Sexually active men must wear condom during treatment and for 1 wk after treatment. • Women who are pregnant or are planning pregnancy may not touch medication without gloves. • Prednisone must be taken, characterized by increase in blood pressure, swelling. • Dizziness, palpitations, headache, confusion, muscle weakness, leg swelling/discomfort may become more apparent during periods of unusual stress, infection, or interruption of prednisone therapy. • Pt will need routine blood draws during treatment. • Report signs of liver problems (yellowing of skin, bruising, light-colored stool, right upper quadrant pain), chest pain, palpitations. • An increase in urinary frequency or nocturia is expected as treatment becomes therapeutic.

acarbose HIGH ALERT

a-**car**-bose
(Glucobay, Precose)
Do not confuse Precose with PreCare.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha glucosidase inhibitor. **CLINICAL:** Antidiabetic: Oral (see p. 43C).

ACTION

Delays glucose absorption and digestion of carbohydrates, resulting in a smaller rise in blood glucose concentration after meals. **Therapeutic Effect:** Lowers postprandial hyperglycemia.

USES

Adjunctive therapy to diet in treatment of pts with type 2 diabetes. Primarily used to reduce postprandial rise in blood glucose. May be used alone or in combination with other antidiabetic agents (sulfonylurea, metformin, insulin).

PRECAUTIONS

Contraindications: Chronic intestinal diseases associated with marked disorders of digestion or absorption, cirrhosis, colonic ulceration, conditions that may deteriorate as a result of increased gas formation in intestine, diabetic ketoacidosis, hypersensitivity to acarbose, inflammatory bowel disease, partial intestinal obstruction or predisposition to intestinal obstruction, significant renal dysfunction (serum creatinine level greater than 2 mg/dl). **Cautions:** Moderate renal impairment. **Pregnancy Category B.**

INTERACTIONS

DRUG: **Digestive enzymes, intestinal absorbents (e.g., charcoal)** reduce effect, do not use concurrently. May increase levels/effects of **hypoglycemic agents. Thiazides, corticosteroids** may decrease effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Give with the first bite of each main meal.

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus

PO: ADULTS, ELDERLY: Initially, 25 mg 3 times a day with first bite of each main meal. May increase at 4- to 8-wk intervals. **Maximum:** For pts weighing more than 60 kg, 100 mg 3 times a day; for pts weighing 60 kg or less, 50 mg 3 times a day.

SIDE EFFECTS

Side effects diminish in frequency and intensity over time. **Frequent:** Transient GI disturbances: flatulence (77%), diarrhea (33%), abdominal pain (21%).

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check blood glucose level. Discuss lifestyle to determine extent of learning, emotional needs.

INTERVENTION/EVALUATION

Monitor blood glucose, glycosylated hemoglobin, ALT, AST, food intake. Assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, numbness in mouth, hunger, diplopia) or hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep/rapid breathing). Be alert to conditions that alter glucose requirements: fever, increased activity/stress, trauma, infection, surgical procedure.

PATIENT/FAMILY TEACHING

• Do not skip or delay meals. • Check with physician when glucose demands are altered (e.g., fever, infection, trauma, stress, heavy physical activity). • Limit alcoholic beverages. • Weight control, exercise, hygiene (including foot care), nonsmoking are essential parts of therapy.

TOP 200

acetaminophen

ah-see-tah-**min**-oh-fen

(Abenol, Acephen, Apo-Acetaminophen, Atasol, Feverall, Mapap, Ofirmev, Tempra, Tylenol, Tylenol Arthritis Pain, Tylenol Children's Meltaways, Tylenol Junior Meltaways, Tylenol Extra Strength)

BLACK BOX ALERT Potential for severe liver injury.

Do not confuse Acephen with Aciphex, Feverall with Fiberall, Fioricet with Fiorinal, Percocet with Percodan, Tylenol with atenolol, timolol, Tylenol PM, or Tylox, or Vicodin with Hycodan.

FIXED-COMBINATION(S)

Note: The amount of acetaminophen in combination products will be limited to no more than 325 mg per FDA mandate.

Capital with Codeine, Tylenol with Codeine: acetaminophen/codeine: 120 mg/12 mg per 5 ml. **Endocet:** acetaminophen/oxycodone: 325 mg/5 mg, 325 mg/7.5 mg, 325 mg/10 mg, 500 mg/7.5 mg, 650 mg/10 mg. **Fioricet:** acetaminophen/caffeine/butalbital: 325 mg/40 mg/50 mg. **Hycet:** acetaminophen/hydrocodone: 325 mg/7.5 mg per 15 ml. **Lortab:** acetaminophen/hydrocodone: 500 mg/5 mg, 500 mg/7.5 mg. **Lortab Elixir:** acetaminophen/hydrocodone: 167 mg/2.5 mg per 5 ml. **Norco:** acetaminophen/hydrocodone: 325 mg/5 mg, 325 mg/7.5 mg, 325 mg/10 mg. **Percocet, Roxicet:** acetaminophen/oxycodone: 325 mg/5 mg. **Tylenol with Codeine:** acetaminophen/codeine: 300 mg/15 mg, 300 mg/30 mg, 300 mg/60 mg. **Tylox:** acetaminophen/oxycodone: 500 mg/5 mg. **Ultracet:** acetaminophen/tramadol: 325 mg/37.5 mg. **Vicodin:** acetaminophen/hydrocodone: 300 mg/5 mg. **Vicodin ES:** acetaminophen/hydrocodone: 300 mg/7.5 mg. **Vicodin HP:** acetaminophen/hydrocodone: 300 mg/10 mg. **Xodol:** acetaminophen/hydrocodone: 300 mg/5 mg, 300 mg/7.5 mg, 300 mg/10 mg. **Zydone:** acetaminophen/hydrocodone: 400 mg/5 mg, 400 mg/7.5 mg, 400 mg/10 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Central analgesic. **CLINICAL:** Non-narcotic analgesic, antipyretic.

ACTION

Appears to inhibit prostaglandin synthesis in the CNS and, to a lesser extent, block pain impulses through peripheral action. Acts centrally on hypothalamic heat-regulating center, producing peripheral vasodilation (heat loss, skin erythema, diaphoresis). **Therapeutic Effect:** Results in antipyresis. Produces analgesic effect.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	Less than 60 min	1–3 hrs	4–6 hrs

Rapidly, completely absorbed from GI tract; rectal absorption variable. Protein binding: 20%–50%. Widely distributed to most body tissues. Metabolized in liver; excreted in urine. Removed by hemodialysis. **Half-life:** 1–4 hrs (increased in those with hepatic disease, elderly, neonates; decreased in children).

USES

Relief of mild to moderate pain, fever.
IV: (Additional) Management of moderate to severe pain when combined with opioid analgesia.

PRECAUTIONS

Contraindications: Severe hepatic impairment or severe active liver disease (Ofirmev). **Cautions:** Sensitivity to acetaminophen; severe renal impairment; alcoholic hepatic disease, hepatic impairment, or active hepatic disease; chronic malnutrition and hypovolemia (Ofirmev); G6PD deficiency. Limit dose to less than 4 g/day.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. Routinely used in all stages of pregnancy, appears safe for short-term use. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol (chronic use), **hepatotoxic medications (e.g., phenytoin), hepatic enzyme inducers (e.g., phenytoin, rifampin)** may increase risk of hepatotoxicity with prolonged high dose or single toxic dose. May increase risk of bleeding with **warfarin** with chronic, high-dose use. **HERBAL: St. John's wort** may decrease blood levels. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, bilirubin, prothrombin levels (may indicate hepatotoxicity). **Therapeutic serum level:** 10–30 mcg/ml; **toxic serum level:** greater than 200 mcg/ml.

AVAILABILITY (OTC)

Caplets (Tylenol): 500 mg. **Elixir:** 160 mg/5 ml. **Injection, Solution (Ofirmev):** 1,000 mg/100 ml glass vial. **Liquid (Oral [Tylenol Extra Strength]):** 160 mg/5 ml, 500 mg/5 ml, 500 mg/15 ml. **Solution (Oral Drops [Mapap]):** 80 mg/0.8 ml. **Suppository (Acephen, Feverall):** 120 mg, 325 mg, 650 mg. **Suspension (Mapap):** 160 mg/5 ml. **Tablets (Mapap, Tylenol):** 325 mg, 500 mg. **Tablets (Chewable [Mapap]):** 80 mg. **Tablets (Orally Disintegrating):** 80 mg, 160 mg.

Caplets: (Extended-Release [Tylenol Arthritis Pain]): 650 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Does not require further dilution. • Store at room temperature. • Withdraw doses less than 1,000 mg. • Place in separate empty, sterile container.
Rate of Administration • Infuse over 15 min.
Stability • Once opened or transferred, stable for 6 hrs at room temperature.

PO

• Give without regard to meals. • Tablets may be crushed. • Do not crush extended-release caplets. • Suspension:

Shake well before use. • Take with full glass of water.

Rectal

• Moisten suppository with cold water before inserting well up into rectum. • Do not freeze suppositories.

INDICATIONS/ROUTES/DOSAGE

Analgesia and Antipyresis

IV: ADULTS, ADOLESCENTS WEIGHING 50 KG OR MORE: 1,000 mg q6h or 650 mg q4h. **Maximum single dose:** 1,000 mg; **maximum total daily dose:** 4,000 mg. **ADULTS, ADOLESCENTS WEIGHING LESS THAN 50 KG:** 15 mg/kg q6h or 12.5 mg/kg q4h. **Maximum single dose:** 750 mg; **maximum total daily dose:** 75 mg/kg/day (3,750 mg). **CHILDREN 2–12 YRS:** 15 mg/kg q6h or 12.5 mg/kg q4h. **Maximum:** 75 mg/kg/day, not to exceed 3,750 mg/day. **INFANTS AND CHILDREN LESS THAN 2 YRS:** 7.5–15 mg/kg q6h. **Maximum:** 60 mg/kg/day. **NEONATES:** Loading dose: 20 mg/kg, then 10 mg/kg q6–12h. **Maximum daily dose:** 22.5–40 mg/day depending on gestational age. **PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER:** 325–650 mg q4–6h or 1 g 3–4 times a day. **Maximum:** 4 g/day. **CHILDREN 12 YRS AND YOUNGER:** 10–15 mg/kg/dose q4–6h as needed. **Maximum:** 5 doses/24 hrs. **NEONATES:** 10–15 mg/kg/dose q4–8h as needed depending on gestational age. **Maximum daily dose:** 40–90 mg/kg/day depending on gestational age. **Rectal: ADULTS:** 325–650 mg q4–6h. **Maximum:** 4 g/24 hrs. **CHILDREN:** 10–20 mg/kg/dose q4–6h as needed. **Maximum:** 5 doses/24 hrs. **NEONATES:** 15–20 mg/kg/dose q6–12h as needed depending on gestational age. **Maximum:** 40–90 mg/kg/day depending on gestational age.

Dosage in Renal Impairment

Creatinine Clearance	Frequency
ORAL	
10–50 ml/min	q6h
Less than 10 ml/min	q8h
Continuous renal replacement therapy	q8h
IV	
30 ml/min or less (Use caution, decrease daily dose, extend dosing interval).	

SIDE EFFECTS

Rare: Hypersensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Early Signs of Acetaminophen Toxicity: Anorexia, nausea, diaphoresis, fatigue within first 12–24 hrs. **Later Signs of Toxicity:** Vomiting, right upper quadrant tenderness, elevated hepatic function tests within 48–72 hrs after ingestion. **Antidote:** Acetylcysteine (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If given for analgesia, assess onset, type, location, duration of pain. Effect of medication is reduced if full pain response recurs prior to next dose. Assess for fever. Assess alcohol usage.

INTERVENTION/EVALUATION

Assess for clinical improvement and relief of pain, fever. **Therapeutic serum level:** 10–30 mcg/ml; **toxic serum level:** greater than 200 mcg/ml. Do not exceed maximum daily recommended dose: 4 g/day.

PATIENT/FAMILY TEACHING

• Consult physician for use in children younger than 2 yrs, oral use longer than 5 days (children) or longer than 10 days (adults), or fever lasting longer than 3 days. • Severe/recurrent pain or high/continuous fever may indicate serious illness. • Advise not to take more than 4 g/24-hr period. Many nonprescription combination products contain acetaminophen. Avoid alcohol use.

*acetaZOLAMIDE

a-seet-ah-**zole**-ah-myde
(Acetazolam, Diamox, Diamox Sequels)
Do not confuse Diamox with Trimox.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbonic anhydrase inhibitor. **CLINICAL:** Antiglaucoma, anticonvulsant, diuretic, urinary alkalinizer (see p. 52C).

ACTION

Reduces formation of hydrogen and bicarbonate ions by inhibiting the enzyme carbonic anhydrase. **Therapeutic Effect:** Increases excretion of sodium, potassium, bicarbonate, water in kidney; decreases formation of aqueous humor in eye; retards abnormal discharge from CNS neurons.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 90%. Excreted unchanged in urine. **Half-life:** Tablets: 10–15 hrs.

USES

Treatment of glaucoma; control of IOP before surgery; adjunct in management of seizures; edema (drug-induced or associated with CHF); decreases or prevents incidence/severity of symptoms associated with acute altitude sickness. **OFF-LABEL:** Urine alkalinization, respiratory stimulant in COPD, metabolic alkalosis.

PRECAUTIONS

Contraindications: Hypersensitivity to sulfonamides, severe renal/hepatic disease, adrenal insufficiency, hypochloremic acidosis, hypokalemia, hyponatremia, long-term administration in pts with chronic noncongestion angle-closure glaucoma. **Cautions:** Diabetes mellitus, gout, obstructive pulmonary disease, respiratory acidosis, moderate renal impairment. **Pregnancy Category C.**

INTERACTIONS

DRUG: May increase levels/effects of **anticonvulsants (barbituates, hydantoins), antihypertensives, carbamazepine, memantine, cyclosporine, amphetamines.** **HERBAL:** **Licorice** retains sodium; increases potassium. **FOOD:** None known. **LAB VALUES:** May increase serum ammonia, bilirubin, glucose, chloride, uric acid, calcium; may decrease serum bicarbonate, potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg. **Tablets:** 125 mg, 250 mg.

Capsules (Extended-Release [Diamox Sequels]): 500 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute with at least 5 ml Sterile Water for Injection to provide concentration not more than 100 mg/ml.
Rate of Administration • Maximum rate: 500 mg/min.
Storage • Following reconstitution, stable for 12 hrs at room temperature, 1 wk if refrigerated.

PO

• Give with food. • May crush tablets. • Do not crush, chew extended-release capsule. • May open, sprinkle on food.

IV INCOMPATIBILITY

Diltiazem (Cardizem).

IV COMPATIBILITIES

Cimetidine (Tagamet), pantoprazole (Protonix), ranitidine (Zantac).

INDICATIONS/ROUTES/DOSAGE

Open-Angle Glaucoma

IV: ADULTS, ELDERLY: 250–500 mg; may repeat in 2–4 hrs to a maximum of 1 g/day. **CHILDREN:** 5–10 mg/kg q6h. **Maximum:** 1 g a day.

PO: ADULTS, ELDERLY: 250 mg 1–4 times a day. **CHILDREN:** 8–30 mg/kg/day in divided doses q8h.
PO *(Extended-Release)*: ADULTS, ELDERLY: 500 mg twice a day.

Edema

PO, IV: ADULTS: 250–375 mg once daily. **CHILDREN:** 5 mg/kg/dose once a day.

Epilepsy

PO: ADULTS, ELDERLY, CHILDREN: 8–30 mg/kg/day in up to 4 divided doses. **Maximum:** 30 mg/kg/day or 1 g/day. Extended-release formulation not recommended for epilepsy.

Altitude Sickness

PO: ADULTS: 500–1,000 mg/day as 250 mg immediate-release q8–12h or 500 mg extended-release capsule q12–24h. Begin 24–48 hrs before and continue during ascent and for at least 48 hrs following arrival at high altitude.

Dosage in Renal Impairment

Creatinine Clearance	Dosage Interval
10–50 ml/min	q12h
Less than 10 ml/min	Not recommended

SIDE EFFECTS

Frequent: Fatigue, diarrhea, increased urination/frequency, decreased appetite/weight, altered taste (metallic), nausea, vomiting, paresthesia, circumoral numbness. **Occasional:** Depression, drowsiness. **Rare:** Headache, photosensitivity, confusion, tinnitus, severe muscle weakness, loss of taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term therapy may result in acidotic state. Nephrotoxicity/hepatotoxicity occurs occasionally, manifested as dark urine/stools, pain in lower back, jaundice, dysuria, crystalluria, renal colic/calculi. Bone marrow depression may occur manifested as aplastic anemia, thrombocytopenia, thrombocytopenic purpura, leukopenia, agranulocytosis, hemolytic anemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Glaucoma: Assess affected pupil for dilation, response to light. Question potential for eye discomfort, decrease in visual acuity. **Epilepsy:** Obtain history of seizure disorder (length, intensity, duration of seizure, presence of aura, level of consciousness [LOC]).

INTERVENTION/EVALUATION

Monitor for acidosis (headache, lethargy progressing to drowsiness, CNS depression, Kussmaul's respiration).

PATIENT/FAMILY TEACHING

• Report tingling/tremor in hands or feet, unusual bleeding or bruising, unexplained fever, sore throat, flank pain. • Avoid tasks that require alertness, motor skills until response to drug is established. • Use sunscreen, wear protective clothing.

acetylcysteine (*N*-acetylcysteine)

ah-**seet**-il-**sis**-teen
(Acetadote, Mucomyst, Parvolex)
Do not confuse acetylcysteine with acetylcholine, or Mucomyst with Mucinex.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Respiratory inhalant, intratracheal. **CLINICAL:** Mucolytic, antidote.

ACTION

Splits linkage of mucoproteins, reducing viscosity of pulmonary secretions. **Therapeutic Effect:** Facilitates removal of

pulmonary secretions by coughing, postural drainage, mechanical means. Protects against acetaminophen overdose-induced hepatotoxicity.

USES

Inhalation: Adjunctive treatment for abnormally viscid mucous secretions present in acute and chronic bronchopulmonary disease and pulmonary complications of cystic fibrosis and surgery, diagnostic bronchial studies. **Injection, PO:** Antidote in acute acetaminophen toxicity. **OFF-LABEL:** Prevention of contrast-induced renal dysfunction from dyes given during certain diagnostic tests (such as CT scans). Treatment of distal intestinal obstruction syndrome.

PRECAUTIONS

Contraindications: None known. **Cautions:** Systemic effects may occur in pts with bronchial asthma; debilitated pts with severe respiratory insufficiency. **Pregnancy Category B.**

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Inhalation Solution (Mucomyst): 10% (100 mg/ml), 20% (200 mg/ml). **Injection Solution (Acetadote):** 20% (200 mg/ml).

ADMINISTRATION/HANDLING

IV

The total dose is 300 mg/kg administered over 21 hrs. Dose preparation is based upon pt weight. Total volume administered should be adjusted for pts less than 40 kg and for those requiring fluid restriction. Store unopened vials at room temperature. Following dilution in D_5W, stable for 24 hrs at room temperature. Color change of opened vials may occur (does not affect potency).

Three-Bag Method (as Antidote): Loading, Second, and Third Doses

Pts Greater Than or Equal to 40 kg:

Loading dose: 150 mg/kg in 200 ml of diluent administered over 60 min.
Second dose: 50 mg/kg in 500 ml of diluent administered over 4 hrs.
Third dose: 100 mg/kg in 1,000 ml of diluent administered over 16 hrs.

Pts Greater Than 20 kg but Less Than 40 kg:

Loading dose: 150 mg/kg in 100 ml of diluent administered over 60 min.
Second dose: 50 mg/kg in 250 ml of diluent administered over 4 hrs.
Third dose: 100 mg/kg in 500 ml of diluent administered over 16 hrs.

Pts Less Than or Equal to 20 kg:

Loading dose: 150 mg/kg in 3 ml/kg of body weight of diluent administered over 60 min.
Second dose: 50 mg/kg in 7 ml/kg of body weight of diluent administered over 4 hrs.
Third dose: 100 mg/kg in 14 ml/kg of body weight of diluent administered over 16 hrs.

PO

• For treatment of acetaminophen overdose. • Give as 5% solution. • Dilute 20% solution 1:3 with cola, orange juice, other soft drink. • Give within 1 hr of preparation.

Inhalation, Nebulization

• May administer either undiluted or diluted with 0.9% NaCl. 10% solution may be undiluted. 20% solution can be diluted with D_5W or 0.9% NaCl.

IV COMPATIBILITIES

Cefepime (Maxipime), ceftazidime (Fortaz).

INDICATIONS/ROUTES/DOSAGE

Bronchopulmonary Disease

Inhalation, Nebulization

◀ALERT▶ Bronchodilators should be given 10–15 min before acetylcysteine.
ADULTS, ELDERLY, CHILDREN: 3–5 ml (20%

solution) 3–4 times a day or 6–10 ml (10% solution) 3–4 times a day. Range: 1–10 ml (20% solution) q2–6h or 2–20 ml (10% solution) q2–6h. **INFANTS:** 1–2 ml (20%) or 2–4 ml (10%) 3–4 times a day.

Intratracheal: ADULTS, CHILDREN: 1–2 ml of 10% or 20% solution instilled into tracheostomy q1–4h.

Acetaminophen Overdose

◄ALERT► It is essential to initiate treatment as soon as possible after overdose and, in any case, within 24 hrs of ingestion.

PO *(Oral Solution 5%)*: ADULTS, ELDERLY, CHILDREN: Loading dose of 140 mg/kg, followed in 4 hrs by maintenance dose of 70 mg/kg q4h for 17 additional doses (or until acetaminophen assay reveals nontoxic level). Repeat dose if emesis occurs within 1 hr of administration.

IV: ADULTS, ELDERLY, CHILDREN: 150 mg/kg infused over 60 min, then 50 mg/kg infused over 4 hrs, then 100 mg/kg infused over 16 hrs (see Administration/Handling for dilution). Duration of administration may vary depending upon acetaminophen levels and hepatic function tests obtained during treatment. Pts who still have detectable levels of acetaminophen or elevated hepatic function test results continue to benefit from additional acetylcysteine administration beyond 24 hrs.

Prevention of Contrast-Induced Nephropathy

PO: ADULTS, ELDERLY: 600–1,200 mg twice a day for 4 doses starting the day before the procedure. Hydrate pt with 0.9% NaCl concurrently.

Diagnostic Bronchial Studies

Inhalation, Nebulization: ADULTS: 1–2 ml of 20% solution or 2–4 ml of 10% solution 2–3 times before the procedure.

SIDE EFFECTS

IV: (7%–6%): Acute flushing, erythema. **(4%):** Pruritus. **Frequent: Inhalation:** Stickiness on face, transient unpleasant odor. **Occasional: Inhalation:** Increased bronchial secretions, throat irritation, nausea, vomiting, rhinorrhea. **Rare: Inhalation:** Rash. **PO:** Facial edema, bronchospasm, wheezing, nausea, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Large doses may produce severe nausea/vomiting. **(Less than 2%):** Serious anaphylactoid reactions including cough, wheezing, stridor, respiratory distress, bronchospasm, hypotension, and death have been known to occur with IV administration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Mucolytic: Assess pretreatment respirations for rate, depth, rhythm. **IV antidote:** Obtain baseline labs, including serum AST, ALT, bilirubin, PT/INR, BUN, creatinine, glucose, and drug screen. For use as antidote, obtain acetaminophen level to determine need for treatment with acetylcysteine.

INTERVENTION/EVALUATION

If bronchospasm occurs, discontinue treatment, notify physician; bronchodilator may be added to therapy. Monitor rate, depth, rhythm, type of respiration (abdominal, thoracic). Check sputum for color, consistency, amount. **IV antidote:** Administer within 8 hrs of acetaminophen ingestion for maximal hepatic protection; ideally, within 4 hrs after immediate-release and 2 hrs after liquid acetaminophen formulations.

PATIENT/FAMILY TEACHING

• Slight, disagreeable odor from solution may be noticed during initial administration but disappears quickly. • Adequate hydration is important part of therapy. • Follow guidelines for proper coughing and deep breathing techniques.

A

aclidinium

ack-lih-**din**-ee-um
(Tudorza)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Long-acting antimuscarinic, anticholinergic. **CLINICAL:** Bronchodilator (see p. 73C).

ACTION

Inhibits M_1 to M_5 muscarinic receptors at smooth muscle of airway preventing acetylcholine induced bronchospasm. **Therapeutic Effect:** Bronchodilation.

PHARMACOKINETICS

Peak plasma levels noted within 10 min following inhalation. Extensively metabolized via hydrolysis, both chemically and enzymatically by esterases. Primarily eliminated in urine, with a smaller amount excreted in feces. **Half-life:** 5–8 hrs.

USES

Long-term, maintenance treatment of airflow obstruction in pts with chronic obstructive pulmonary disease (COPD), including chronic bronchitis and emphysema.

PRECAUTIONS

◀ALERT▶ Not indicated for use as a rescue medication. Contact physician if paradoxical bronchospasm, worsening of narrow-angle glaucoma, worsening of urinary retention, or immediate hypersensitivity occurs.

Contraindications: None known. **Cautions:** Prostatic hyperplasia, bladder-neck obstruction, narrow-angle glaucoma, hypersensitivity to milk proteins, atropine.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce teratogenic effects. May be excreted in breast milk; do not breast-feed. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effectiveness of **anticholinergic agents.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Powder for Inhalation: 400 mcg/inhalation.

ADMINISTRATION/HANDLING

Inhalation

• Remove inhaler from pouch; allows 60 doses for oral inhalation. • The inhaler is a white and green device with a dose indicator, a storage unit containing drug product formulation, and a mouthpiece covered by a green protective cap. • Each actuation delivers 375 mcg of medication from the mouthpiece. • Follow manufacturer guidelines for assembly of plastic dosing mechanism and proper use of inhaler.

Storage • Store pouch at room temperature; inhaler should be stored inside the sealed pouch and only be opened immediately before use. • Discard inhaler 45 days after opening the pouch, after the marking "0" with a red background shows in middle of dose indicator, or when the device locks out, whichever comes first.

INDICATIONS/ROUTES/DOSAGE

Maintenance Therapy:

Inhalation: ADULTS, ELDERLY: 450 mcg once daily.

SIDE EFFECTS

Occasional (7%–3%): Headache, nasopharyngitis, cough, diarrhea. **Rare (2%–1%):** Sinusitis, rhinitis, toothache, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe shortness of breath may indicate paradoxical bronchospasm. Acute nar-

row-angle glaucoma (eye pain or discomfort, blurred vision, visual halos, or colored images in association with red eyes from conjunctival congestion and corneal edema) occur rarely. Signs and symptoms of prostatic hyperplasia or bladder-neck obstruction (difficulty passing urine, painful urination). Hypersensitivity reaction has been noted rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess rate, depth, rhythm, type of respirations. Monitor EKG, serum potassium, ABG determinations, O_2 saturation, pulmonary function test. Assess lung sounds for wheezing (bronchoconstriction), rales. Receive full medication history and screen for possible drug interactions.

INTERVENTION/EVALUATION

Monitor lung sounds. Observe for sudden shortness of breath (pulmonary bronchospasm). Routinely monitor BMP, blood glucose, O_2 saturation. Evaluate EKG for palpitation, tachycardia. Monitor hypokalemia results. Monitor I&O for urinary retention. Question for eye pain or discomfort, changes in vision, conjunctival congestion (worsening of narrow-angle glaucoma).

PATIENT/FAMILY TEACHING

• Discard pouch after 45 days, after the marking "0" with a red background shows in the middle of the dose indicator, or when device locks out, whichever comes first. • The inhaler contains 60 doses of medication, with the number 60 on dose indicator. • As each dose is used, the dose indicator will display down in intervals of 10. • The marking "0" with a red background shows in the middle of the dose indicator. • Increase fluid intake (decreases lung secretion viscosity). • Report difficulty breathing, painful or difficulty passing urine, visual changes.

acyclovir

TOP 200

aye-**sigh**-klo-veer
(Apo-Acyclovir, Novo-Acyclovir, Zovirax)

Do not confuse acyclovir with ganciclovir, Retrovir, or valacyclovir, or Zovirax with Doribax, Valtrex, Zithromax, Zostrix, Zyloprim, or Zyvox.

FIXED-COMBINATION(S)

Liposivir: acyclovir/hydrocortisone (a steroid): 5%/1%.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic nucleoside. **CLINICAL:** Antiviral (see p. 67C).

ACTION

Converts to acyclovir triphosphate, becoming part of DNA chain. **Therapeutic Effect:** Interferes with DNA synthesis and viral replication. Virustatic.

PHARMACOKINETICS

Poorly absorbed from GI tract; minimal absorption following topical application. Protein binding: 9%–36%. Widely distributed. Partially metabolized in liver. Excreted primarily in urine. Removed by hemodialysis. **Half-life:** 2.5 hrs (increased in renal impairment).

USES

Parenteral

Treatment of initial and prophylaxis of recurrent mucosal and cutaneous herpes simplex (HSV 1 and HSV 2) in immunocompromised pts. Treatment of severe initial episodes of herpes genitalis in immunocompetent pts. Treatment of herpes simplex encephalitis including neonatal herpes simplex virus. Treatment of varicella-zoster virus (VZV) infections in immunocompetent pts.

Oral

Treatment of initial episodes and prophylaxis of recurrent herpes simplex (HSV 2 genital herpes). Treatment of chickenpox (varicella). Acute treatment of herpes zoster (shingles).

Topical

Cream: Treatment of recurrent herpes labialis (cold sores). **Ointment:** Treatment of mucocutaneous HSV in immunocompromised pts. **OFF-LABEL:** Prevention of HSV reactivation in HIV positive pts; hematopoietic stem cell transplant (HSCT); during periods of neutropenia in pts with cancer; prevention of VZV reactivation in allogenic HSCT; treatment of disseminated HSC or VZV in immunocompromised pts with cancer; empiric treatment of suspected encephalitis in immunocompromised pts with cancer; treatment of initial and prophylaxis of recurrent mucosal and cutaneous herpes simplex infections in immunocompromised pts.

PRECAUTIONS

Contraindications: Use in neonates when acyclovir is reconstituted with Bacteriostatic Water for Injection containing benzyl alcohol. Hypersensitivity to valacyclovir. **Cautions:** Renal/hepatic impairment, dehydration, fluid/electrolyte imbalance, concurrent use of nephrotoxic agents, neurologic abnormalities, immunocompromised pts, elderly, substantial hypoxia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 2 yrs (younger than 1 yr for IV use). **Elderly:** Age-related renal impairment may require decreased dosage. May experience more neurologic effects (e.g., agitation, confusion, hallucinations).

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum creatinine concentrations, hepatic function tests.

AVAILABILITY (Rx)

Cream: 5%. **Injection, Powder for Reconstitution:** 500 mg, 1,000 mg. **Injection, Solution:** 50 mg/ml. **Ointment:** 5%. **Suspension, Oral:** 200 mg/5 ml. **Tablets:** 400 mg, 800 mg.

Capsules: 200 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 10 ml Sterile Water for Injection to each 500-mg vial (50 mg/ml). Do not use Bacteriostatic Water for Injection containing benzyl alcohol or parabens (will cause precipitate). • Shake well until solution is clear. • Further dilute with at least 100 ml D_5W or 0.9 NaCl. Final concentration should be 7 mg/ml or less. (Concentrations greater than 10 mg/ml increase risk of phlebitis.)

Rate of Administration • Infuse over at least 1 hr (renal tubular damage may occur with too-rapid rate). • Maintain adequate hydration during infusion and for 2 hrs following IV administration.

Storage • Store vials at room temperature • Solutions of 50 mg/ml stable for 12 hrs at room temperature; may form precipitate if refrigerated. Potency not affected by precipitate and redissolution. • IV infusion (piggyback) stable for 24 hrs at room temperature. Yellow discoloration does not affect potency.

PO

• May give without regard to food. • Do not crush/break capsules. • Store capsules at room temperature.

Topical

• Avoid eye contact. • Use finger cot/rubber glove to prevent autoinoculation.

IV INCOMPATIBILITIES

Aztreonam (Azactam), cefepime (Maxipime), diltiazem (Cardizem), dobuta-

mine (Dobutrex), dopamine (Intropin), levofloxacin (Levaquin), lipids, meropenem (Merrem IV), ondansetron (Zofran), piperacillin and tazobactam (Zosyn), total parenteral nutrition (TPN).

IV COMPATIBILITIES

Allopurinol (Alloprim), amikacin (Amikin), ampicillin, cefazolin (Ancef), cefotaxime (Claforan), ceftazidime (Fortaz), ceftriaxone (Rocephin), cimetidine (Tagamet), clindamycin (Cleocin), diphenhydramine (Benadryl), famotidine (Pepcid), fluconazole (Diflucan), gentamicin, heparin, hydromorphone (Dilaudid), imipenem (Primaxin), lorazepam (Ativan), magnesium sulfate, meperidine (Demerol), methylprednisolone (Solu-Medrol), metoclopramide (Reglan), metronidazole (Flagyl), morphine, multivitamins, potassium chloride, propofol (Diprivan), ranitidine (Zantac), vancomycin.

INDICATIONS/ROUTES/DOSAGE

Genital Herpes (Initial Episode)

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 5 mg/kg q8h for 5–7 days.

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 200 mg q4h 5 times a day for 10 days or 400 mg 3 times a day for 5–10 days. **CHILDREN YOUNGER THAN 12 YRS:** 40–80 mg/kg/day in 3–4 divided doses for 5–10 days. **Maximum:** 1 g/day.

Topical: ADULTS: (Ointment) ½ inch for 4-inch square surface q3h (6 times a day) for 7 days.

Genital Herpes (Recurrent)

Intermittent Therapy

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 200 mg q4h 5 times a day for 5 days or 400 mg 3 times a day for 5–10 days.

Chronic Suppressive Therapy

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 400 mg twice a day or 200 mg 3–5 times a day for up to 12 mos. **CHILDREN YOUNGER THAN 12 YRS:** 80 mg/kg/day in 3 divided doses. **Maximum:** 1 g/day.

Herpes Simplex Mucocutaneous

PO: ADULTS, ELDERLY: 400 mg 5 times a day for 7–14 days.

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 5 mg/kg/dose q8h for 7–14 days. **CHILDREN YOUNGER THAN 12 YRS:** 10 mg/kg q8h for 7 days.

Topical: ADULTS: (Ointment) ½ inch for 4-inch square surface q3h (6 times a day) for 7 days.

Herpes Simplex Neonatal

IV: CHILDREN YOUNGER THAN 4 MOS: 10 mg/kg q8h for 10 days.

Herpes Simplex Encephalitis

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 10 mg/kg q8h for 10 days. **CHILDREN 3 MOS–YOUNGER THAN 12 YRS:** 20 mg/kg q8h for 10 days.

Herpes Zoster (Shingles)

IV: ADULTS, CHILDREN 12 YRS AND OLDER: (immunocompromised) 10 mg/kg/dose q8h for 7 days. **CHILDREN YOUNGER THAN 12 YRS:** (immunocompromised) 20 mg/kg/dose q8h for 7 days.

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 800 mg q4h 5 times a day for 7–10 days.

Herpes Labialis (Cold Sores)

Topical: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Apply to affected area 5 times a day for 4 days.

Varicella-Zoster (Chickenpox)

◀ALERT▶ Begin treatment within 24 hrs of onset of rash.

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 10 mg/kg/dose q8h for 7 days. **CHILDREN LESS THAN 12 YRS:** 20 mg/kg/dose q8h for 7 days.

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS AND CHILDREN 2–12 YRS, WEIGHING 40 KG OR MORE: 800 mg 4 times a day for 5 days. **CHILDREN 2–12 YRS, WEIGHING LESS THAN 40 KG:** 20 mg/kg 4 times a day for 5 days. **Maximum:** 800 mg/dose.

Usual Neonatal Dosage

IV: NEONATES: 20 mg/kg/dose q8h for 14–21 days.

Dosage in Renal Impairment

Dosage and frequency are modified based on severity of infection and degree of renal impairment.

PO: Normal dose 200 mg q4h, 200 mg q8h, or 400 mg q12h.
Creatinine clearance 10 ml/min and less: 200 mg q12h.

PO: Normal dose 800 mg q4h.
Creatinine clearance greater than 25 ml/min: Give usual dose and at normal interval, 800 mg q4h. **Creatinine clearance 10–25 ml/min:** 800 mg q8h. **Creatinine clearance less than 10 ml/min:** 800 mg q12h.
IV:

Creatinine Clearance	Dosage
Greater than 50 ml/min	100% of normal q8h
25–50 ml/min	100% of normal q12h
10–24 ml/min	100% of normal q24h
Less than 10 ml/min	50% of normal q24h
HD	2.5–5 mg/kg q24h (give after HD)
PD	50% normal dose q24h
CRRT	5–10 mg/kg q12–24h (q12h for viral meningoenphalitis/VZV infection)

SIDE EFFECTS

Frequent: Parenteral (9%–7%): Phlebitis or inflammation at IV site, nausea, vomiting. **Topical (28%):** Burning, stinging. **Occasional: Parenteral (3%):** Pruritus, rash, urticaria. **PO (12%–6%):** Malaise, nausea. **Topical (4%):** Pruritus. **Rare: PO (3%–1%):** Vomiting, rash, diarrhea, headache. **Parenteral (2%–1%):** Confusion, hallucinations, seizures, tremors. **Topical (less than 1%):** Rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Rapid parenteral administration, excessively high doses, or fluid and electrolyte imbalance may produce renal failure (abdominal pain, decreased urination, decreased appetite, increased thirst, nausea, vomiting). Toxicity not reported with oral or topical use.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to acyclovir. Assess herpes simplex lesions before treatment to compare baseline with treatment effect.

INTERVENTION/EVALUATION

Assess IV site for phlebitis (heat, pain, red streaking over vein). Evaluate cutaneous lesions. Ensure adequate ventilation. Manage chickenpox and disseminated herpes zoster with strict isolation. Provide analgesics and comfort measures; esp. exhausting to elderly. Encourage fluids.

PATIENT/FAMILY TEACHING

• Drink adequate fluids. • Do not touch lesions with bare fingers to prevent spreading infection to new site. • **Genital Herpes:** Continue therapy for full length of treatment. • Space doses evenly. • Use finger cot/rubber glove to apply topical ointment. • Avoid sexual intercourse during duration of lesions to prevent infecting partner. • Acyclovir does not cure herpes infections. • Pap smear should be done at least annually due to increased risk of cervical cancer in women with genital herpes.

adalimumab

TOP 200

ah-dah-**lim**-yoo-mab
(Humira)

BLACK BOX ALERT Tuberculosis, invasive fungal infections, other opportunistic infections have occurred. Test for tuberculosis prior to and during treatment.

Lymphoma, other malignancies reported primarily in pts with Crohn's disease or ulcerative colitis and concomitant azathioprine or mercaptopurine.

Do not confuse Humira with Humalog or Humulin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Rheumatoid arthritis agent.

ACTION

Binds specifically to tumor necrosis factor (TNF) alpha cell, blocking its interaction with cell surface TNF receptors. **Therapeutic Effect:** Reduces inflammation, tenderness, swelling of joints; slows or prevents progressive destruction of joints in rheumatoid arthritis (RA).

PHARMACOKINETICS

Half-life: 10–20 days.

USES

Reduces signs/symptoms, progression of structural damage and improves physical function in adults with moderate to severe RA. May be used alone or in combination with other disease-modifying antirheumatic drugs. First-line treatment of moderate to severe RA, treatment of psoriatic arthritis, treatment of ankylosing spondylitis, to induce/maintain remission of moderate to severe active Crohn's disease, moderate to severe plaque psoriasis, reduce signs and symptoms of moderate to severe active polyarticular juvenile rheumatoid arthritis in pts 4 yrs and older.

PRECAUTIONS

Contraindications: (Canada labeling) Severe infections (e.g., sepsis, TB). **Cautions:** Pts with chronic infections, predisposition to infections, decreased left ventricular function, CHF, demyelinating disorders, invasive fungal infections.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Cautious use due to increased risk of serious infection and malignancy.

INTERACTIONS

DRUG: Abatacept, anakinra, immunosuppressive therapy may increase risk of infections. May decrease efficacy of immune response with **live vaccines.** **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum cholesterol, other lipids, alkaline phosphatase.

AVAILABILITY (Rx)

Injection Solution: 20 mg/0.4 ml, 40 mg/0.8 ml in prefilled syringes.

ADMINISTRATION/HANDLING

Subcutaneous

• Refrigerate; do not freeze. • Discard unused portion. • Rotate injection sites. Give new injection at least 1 inch from an old site and never into area where skin is tender, bruised, red, or hard.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA)

Subcutaneous: ADULTS, ELDERLY: 40 mg every other wk. Dose may be increased to 40 mg/wk in those not taking methotrexate.

Ankylosing Spondylitis, Psoriatic Arthritis

Subcutaneous: ADULTS, ELDERLY: 40 mg every other wk.

Crohn's Disease

Subcutaneous: ADULTS, ELDERLY: Initially, 160 mg given as 4 injections on day 1 or 2 injections/day over 2 days, then 80 mg 2 wks later (day 15). Maintenance: 40 mg every other wk beginning at day 29.

Plaque Psoriasis

Subcutaneous: ADULTS, ELDERLY: Initially, 80 mg, then 40 mg every other week starting 1 week after initial dose.

A

Juvenile Rheumatoid Arthritis

Subcutaneous: CHILDREN 4 YRS AND OLDER, WEIGHING 15–29 KG: 20 mg every other week. **WEIGHING 30 KG OR MORE:** 40 mg every other week.

SIDE EFFECTS

Frequent (20%): Injection site erythema, pruritus, pain, swelling. **Occasional (12%–9%):** Headache, rash, sinusitis, nausea. **Rare (7%–5%):** Abdominal or back pain, hypertension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reactions (rash, urticaria, hypotension, dyspnea), infections (primarily upper respiratory tract, bronchitis, urinary tract) occur rarely. More serious infections (pneumonia, tuberculosis, cellulitis, pyelonephritis, septic arthritis) also occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain or inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition. If pt is to self-administer, instruct on subcutaneous injection technique, including areas of the body acceptable for injection sites.

INTERVENTION/EVALUATION

Monitor lab values, particularly CBC. Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Injection site reaction generally occurs in first month of treatment and decreases in frequency during continued therapy. • Do not receive live vaccines during treatment. Report rash, nausea.

adefovir

a-**def**-o-veer
(Hepsera)

BLACK BOX ALERT May cause HIV resistance in unrecognized or untreated HIV infection. Lactic acidosis, severe hepatomegaly with steatosis (fatty liver), acute exacerbation of hepatitis have occurred. Use with caution in pts with renal dysfunction or in pts at risk for renal toxicity.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiviral. **CLINICAL:** Hepatitis B agent (see p. 67C).

ACTION

Inhibits DNA polymerase, an enzyme, causing DNA chain termination after its incorporation into viral DNA. **Therapeutic Effect:** Prevents cell replication.

PHARMACOKINETICS

Rapidly converted to adefovir in intestine. Binds to proteins after PO administration. Protein binding: less than 4%. Excreted in urine. **Half-life:** 7 hrs (increased in renal impairment).

USES

Treatment of chronic hepatitis B in adults with evidence of active viral replication based on persistent elevations of serum AST or ALT or histologic evidence.

PRECAUTIONS

Contraindications: None known. **Cautions:** Pts with known risk factors for hepatic disease, renal impairment, elderly. Concurrent administration with tenofovir-containing products.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment,

decreased cardiac function requires cautious use.

INTERACTIONS

DRUG: May increase effects of **tenofovir.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, amylase.

AVAILABILITY (Rx)

Tablets: 10 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Avoid alcohol (increased risk of hepatotoxicity).

INDICATIONS/ROUTES/DOSAGE

Chronic Hepatitis B (Normal Renal Function)

PO: ADULTS, ELDERLY: 10 mg once a day.

Chronic Hepatitis B (Impaired Renal Function)

PO: ADULTS, ELDERLY WITH CREATININE CLEARANCE 30–49 ML/MIN: 10 mg q48h. **ADULTS, ELDERLY WITH CREATININE CLEARANCE 10–29 ML/MIN:** 10 mg q72h. **ADULTS, ELDERLY ON HEMODIALYSIS:** 10 mg every 7 days following dialysis.

SIDE EFFECTS

Frequent (13%): Asthenia (loss of strength, energy). **Occasional (9%–4%):** Headache, abdominal pain, nausea, flatulence. **Rare (3%):** Diarrhea, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Nephrotoxicity, characterized by increased serum creatinine and decreased serum phosphorus levels, is treatment-limiting toxicity of adefovir therapy. Lactic acidosis, severe hepatomegaly occur rarely, particularly in female pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline renal function lab values before therapy begins and routinely thereafter. Those with renal insufficiency, preexisting or during treatment, may require dose adjustment. HIV antibody testing should be performed before therapy begins (unrecognized or untreated HIV infection may result in emergence of HIV resistance).

INTERVENTION/EVALUATION

Monitor I&O, serum creatinine; AST, ALT, alkaline phosphatase levels. Closely monitor for adverse reactions in those taking other medications that are excreted renally or with other drugs known to affect renal function.

PATIENT/FAMILY TEACHING

• Report nausea, vomiting, abdominal pain. • Avoid alcohol.

adenosine

ah-**den**-oh-seen
(Adenocard, Adenoscan)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cardiac agent, diagnostic aid. **CLINICAL:** Antiarrhythmic.

ACTION

Slows impulse formation in SA node and conduction time through AV node. Acts as a diagnostic aid in myocardial perfusion imaging or stress echocardiography. **Therapeutic Effect:** Depresses left ventricular function, restores normal sinus rhythm.

USES

Adenocard: Treatment of paroxysmal supraventricular tachycardia (PSVT), including those associated with accessory bypass tracts (Wolff-Parkinson-White syndrome). **Adenoscan:** Adjunct in diagnosis in myocardial perfusion imaging or stress echocardiography. **OFF-LABEL:** Stable and unstable narrow complex regular tachycardia; stable regular monomorphic wide complex tachycardia; acute vasodilator testing in pulmonary artery hypertension.

A

PRECAUTIONS

Contraindications: Atrial fibrillation/flutter, second- or third-degree AV block, symptomatic bradycardia, sick sinus syndrome (except in pts with functioning pacemaker). Atrial fibrillation/flutter with underlying Wolff-Parkinson-White syndrome, bronchoconstrictive or bronchospastic lung disease, asthma. **Cautions:** Underlying dysfunction of sinus or A-V node, obstructive lung disease, elderly, concurrent use of digoxin or verapamil. **Pregnancy Category C.**

INTERACTIONS

DRUG: Methylxanthines (e.g., theophylline) may decrease effect. **Dipyridamole, nicotine** may increase effect. **Carbamazepine** may increase degree of heart block caused by adenosine. **HERBAL:** None significant. **FOOD:** Avoid **caffeine** (may decrease effect). **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Adenocard): 3 mg/ml in 2-ml, 4-ml vials. **Injection Solution (Adenoscan):** 3 mg/ml in 20-ml, 30-ml vials.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Administer very rapidly (over 1–2 sec) undiluted directly into vein, or if using IV line, use closest port to insertion site. If IV line is infusing any fluid other than 0.9% NaCl, flush line first. • After rapid bolus injection, follow with 0.9% NaCl flush.

Storage • Store at room temperature. Solution appears clear. • Crystallization occurs if refrigerated; if crystallization occurs, dissolve crystals by warming to room temperature. • Discard unused portion.

IV INCOMPATIBILITIES

Any drug or solution other than 0.9% NaCl, D_5W, or Ringer's lactate.

INDICATIONS/ROUTES/DOSAGE

Paroxysmal Supraventricular Tachycardia (PSVT) (Adenocard)

Rapid IV Bolus: ADULTS, ELDERLY, CHILDREN WEIGHING 50 KG OR MORE: Initially, 6 mg given over 1–2 sec. If first dose does not convert within 1–2 min, give 12 mg; may repeat 12-mg dose in 1–2 min if no response has occurred. Follow each dose with 20 ml 0.9% NaCl by rapid IV push. **CHILDREN WEIGHING LESS THAN 50 KG:** Initially 0.05–0.1 mg/kg. If first dose does not convert within 1–2 min, may increase dose by 0.05–0.1 mg/kg. May repeat until sinus rhythm is established or up to a maximum single dose of 0.3 mg/kg or 12 mg. Follow each dose with 5–10 ml 0.9% NaCl by rapid IV push.

Diagnostic Testing (Adenoscan)

IV Infusion: ADULTS: 140 mcg/kg/min for 6 min using syringe or infusion pump. Total dose: 0.84 mg/kg. Thallium is injected at midpoint (3 min) of infusion.

SIDE EFFECTS

Frequent (18%–12%): Facial flushing, dyspnea. **Occasional (7%–2%):** Headache, nausea, light-headedness, chest pressure. **Rare (1% or less):** Paresthesia, dizziness, diaphoresis, hypotension, palpitations; chest, jaw, or neck pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Frequently produces transient, short-lasting heart block.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Identify arrhythmia per cardiac monitor and assess apical pulse.

INTERVENTION/EVALUATION

Assess cardiac performance per continuous EKG. Monitor B/P, apical pulse (rate, rhythm, quality). Auscultate pt breath sounds for clarity. Monitor respiratory

rate. Monitor I&O; assess for fluid retention. Check electrolytes.

PATIENT/FAMILY TEACHING

- Flushing/headache may occur temporarily following drug administration.
- Report continued chest pain, lightheadedness, head or neck pain, difficulty breathing.

albumin, human

al-**bue**-min
(Albuminar-5, Albuminar-25, AlbuRx, Albutein, Buminate, Flexbumin, Plasbumin)

Do not confuse albumin with albuterol, or Buminate with bumetanide.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Plasma protein fraction. **CLINICAL:** Blood derivative.

ACTION

Blood volume expander. **Therapeutic Effect:** Provides temporary increase in blood volume, reduces hemoconcentration and blood viscosity.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	15 min (in well-hydrated pt)	N/A	Dependent on initial blood volume

Distributed throughout extracellular fluid. **Half-life:** 15–20 days.

USES

Used for plasma volume expansion, maintenance of cardiac output in treatment of shock or impending shock. May be useful in treatment of severe burns, adult respiratory distress syndrome (ARDS), cardiopulmonary bypass, hemodialysis. **OFF-LABEL:** Large-volume paracentesis. In cirrhotics, with diuretics to help facilitate diuresis; volume expansion in dehydrated, mildly hypotensive cirrhotics. Used for prevention of renal impairment; reduced mortality associated with spontaneous bacterial peritonitis.

PRECAUTIONS

Contraindications: Heart failure, severe anemia. **Cautions:** Pts for whom sodium restriction is necessary, hepatic/renal failure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase.

AVAILABILITY (Rx)

Injection Solution: (5%): 50 ml, 250 ml, 500 ml. **(25%):** 20 ml, 50 ml, 100 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • A 5% solution may be made from 25% solution by adding 1 volume 25% to 4 volumes 0.9% NaCl (NaCl preferred). Do not use Sterile Water for Injection (life-threatening hemolysis, acute renal failure can result).

Rate of Administration • Give by IV infusion. Rate is variable, depending on use, blood volume, concentration of solute. 5%: Do not exceed 2–4 ml/min in pts with normal plasma volume, 5–10 ml/min in pts with hypoproteinemia. 25%: Do not exceed 1 ml/min in pts with normal plasma volume, 2–3 ml/min in pts with hypoproteinemia. 5% is administered undiluted; 25% may be administered undiluted or diluted. • May give without regard to pt blood group or Rh factor.

Storage • Store at room temperature. Appears as clear, brownish, odorless, moderately viscous fluid. • Do not use if solution has been frozen, appears turbid, contains sediment, or if not used within 4 hrs of opening vial.

IV INCOMPATIBILITIES

Lipids, midazolam (Versed), vancomycin (Vancocin), verapamil (Isoptin).

IV COMPATIBILITIES

Diltiazem (Cardizem), lorazepam (Ativan).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ 5% should be used in hypovolemic or intravascularly depleted pts. 25% should be used in pts in whom fluid and sodium intake must be minimized.

Usual Dosage

IV: ADULTS, ELDERLY: Initially, 25 g; may repeat in 15–30 min. **Maximum:** 250 g within 48 hrs.

Hypovolemia

IV: ADULTS, ELDERLY: 5% albumin: 0.5–1 g/kg/dose, repeat as needed. **CHILDREN:** 0.5–1 g/kg/dose (10–20 ml/kg/dose of 5% albumin). **Maximum:** 6 g/kg/day.

Hypoproteinemia

IV: ADULTS, ELDERLY, CHILDREN: 0.5–1 g/kg/dose, repeat every 1–2 days as needed to replace ongoing losses.

Hemodialysis

IV: ADULTS, ELDERLY: 50–100 ml (12.5–25 g) of 25% albumin as needed.

SIDE EFFECTS

Occasional: Hypotension. **Rare:** High dose in repeated therapy: altered vital signs, chills, fever, increased salivation, nausea, vomiting, urticaria, tachycardia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Fluid overload may occur, marked by increased B/P, distended neck veins. Pulmonary edema may occur, evidenced by labored respirations, dyspnea, rales, wheezing, coughing. Neurologic changes that may occur include headache, weakness, blurred vision, behavioral changes, incoordination, isolated muscle twitching.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, pulse, respirations immediately before administration. Adequate hydration required before albumin is administered.

INTERVENTION/EVALUATION

Monitor B/P for hypotension/hypertension. Monitor Hgb, Hct, urine specific gravity. Assess frequently for evidence of fluid overload, pulmonary edema (see Adverse Effects/Toxic Reactions). Check skin for flushing, urticaria. Monitor I&O ratio (watch for decreased output). Assess for therapeutic response (increased B/P, decreased edema).

albuterol

TOP 200

al-**byoo**-ter-all
(AccuNeb, Airomir, Apo-Salvent, PMS-Salbutamol, ProAir HFA, Proventil HFA, Ventolin HFA, VoSpire ER)

Do not confuse albuterol with Albumin or atenolol, Proventil with Bentyl, Prilosec, or Prinivil, or Ventolin with Benylin or Vantin.

FIXED-COMBINATION(S)

Combivent: albuterol/ipratropium (a bronchodilator): 103 mcg/18 mcg per actuation. **DuoNeb:** albuterol/ipratropium 3 mg/0.5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic (adrenergic agonist). **CLINICAL:** Bronchodilator (see p. 74C).

ACTION

Stimulates beta$_2$-adrenergic receptors in lungs, resulting in relaxation of bronchial smooth muscle. **Therapeutic Effect:** Relieves bronchospasm and reduces airway resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–30 min	2–3 hrs	4–6 hrs
PO (extended-release)	30 min	2–4 hrs	12 hrs
Inhalation	5–15 min	0.5–2 hrs	2–5 hrs

Rapidly, well absorbed from GI tract; rapidly absorbed from bronchi after inhalation. Metabolized in liver. Primarily excreted in urine. **Half-life:** 3.8–6 hrs.

USES

Relief of bronchospasm due to reversible obstructive airway disease, prevention of exercise-induced bronchospasm.

PRECAUTIONS

Contraindications: History of hypersensitivity to sympathomimetics. **Cautions:** Hypertension, cardiovascular disease, hyperthyroidism, diabetes mellitus, heart failure, convulsive disorders, glaucoma, hypokalemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Appears to cross placenta; unknown if distributed in breast milk. May inhibit uterine contractility. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 2 yrs (syrup) or younger than 6 yrs (tablets). **Elderly:** May be more sensitive to tremor or tachycardia due to age-related increased sympathetic sensitivity.

INTERACTIONS

DRUG: **Beta-adrenergic blocking agents (beta-blockers)** antagonize effects. May produce bronchospasm. **Atomoxetine, MAOIs, tricyclic antidepressants** may potentiate cardiovascular effects. May increase effects of **loop diuretics** (produce hypokalemia), **sympathomimetics** (increase CNS stimulation). **HERBAL: St. John's wort** may decrease levels/effects. **Ephedra, yohimbe** may cause CNS stimulation. **FOOD:** Limit caffeine (may cause CNS stimulation). **LAB VALUES:** May increase blood glucose level. May decrease serum potassium level.

AVAILABILITY (Rx)

Inhalation Aerosol (ProAir HFA, Proventil HFA, Ventolin HFA): 90 mcg/spray. **Solution for Nebulization: AccuNeb:** 0.63 mg/3 ml (0.021%), 1.25 mg/3 ml (0.042%). **Proventil:** 2.5 mg/3 ml (0.084%), 5 mg/ml (0.5%). **Syrup:** 2 mg/5 ml. **Tablets (Proventil, Ventolin):** 2 mg, 4 mg.

Tablets (Extended-Release [VoSpire ER]): 4 mg, 8 mg.

ADMINISTRATION/HANDLING

PO

• Do not crush/chew extended-release tablets. • Administer with food.

Inhalation

• Shake container well before inhalation. • Wait 2 min before inhaling second dose (allows for deeper bronchial penetration). • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness).

Nebulization

• Administer over 5–15 min. • Nebulizer should be used with compressed air or O_2 at rate of 6–10 L/min.

INDICATIONS/ROUTES/DOSAGE

Acute Bronchospasm

Inhalation: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 4–8 puffs q20min up to 4 hrs, then q1–4h as needed. **CHILDREN 12 YRS AND YOUNGER:** 4–8 puffs q20min for 3 doses, then q1–4h as needed.

Nebulization: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 2.5–5 mg q20min for 3 doses, then 2.5–10 mg q1–4h or 10–15 mg/hr continuously. **CHILDREN 12 YRS AND YOUNGER:** 0.15 mg/kg q20min for 3 doses (minimum: 2.5 mg), then 0.15–0.3 mg/kg q1–4h as needed. **Maximum:** 10 mg q1–4h as needed or 0.5 mg/kg/hr by continuous infusion.

Chronic Bronchospasm

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: 2–4 mg 3–4 times a day. **Maximum:** 8 mg 4 times a day. **ELDERLY:** 2 mg 3–4 times a day. **Maximum:** 8 mg 4 times a day. **CHILDREN 6–12 YRS:** 2 mg 3–4 times a day. **Maximum:** 24 mg/day. **CHILDREN 2–5 YRS:** 0.1–0.2 mg/kg/dose 3 times a day. **Maximum:** 4 mg 3 times a day.

PO *(Extended-Release)*: ADULTS, CHILDREN OLDER THAN 12 YRS: 4–8 mg q12h. **Maximum:** 32 mg/day. **CHILDREN 6–12 YRS:** 4 mg q12h. **Maximum:** 24 mg/day. **Nebulization: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER:** 1.25–5 mg q4–8h as needed. **CHILDREN 4 YRS AND YOUNGER:** 0.63–2.5 mg q4–6h as needed. **Inhalation: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER:** 1–2 puffs q4–6h. **Maximum:** 12 puffs per day.

Exercise-Induced Bronchospasm

Inhalation: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 2 puffs 5–30 min before exercise. **CHILDREN 4 YRS AND YOUNGER:** 1–2 puffs 5–30 min before exercise.

Usual Neonatal Dosage

Nebulization: 1.25–2.5 mg q8h. **Inhalation:** (mechanically ventilated) 90 mcg/spray, 1–2 sprays q6h.

SIDE EFFECTS

Frequent: Headache (27%); restlessness, nervousness, tremors (20%); nausea (15%); dizziness (less than 7%); throat dryness and irritation, pharyngitis (less than 6%); B/P changes, including hypertension (5%–3%); heartburn, transient wheezing (less than 5%). **Occasional (3%–2%):** Insomnia, asthenia (loss of strength, energy), altered taste. **Inhalation:** Dry, irritated mouth or throat; cough; bronchial irritation. **Rare:** Drowsiness, diarrhea, dry mouth, flushing, diaphoresis, anorexia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive sympathomimetic stimulation may produce palpitations, extrasystole, tachycardia, chest pain, slight increase in B/P followed by substantial decrease, chills, diaphoresis, blanching of skin. Too-frequent or excessive use may lead to decreased bronchodilating effectiveness and severe, paradoxical bronchoconstriction.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess lung sounds, pulse, B/P, color, character of sputum noted. Offer emotional support (high incidence of anxiety due to difficulty in breathing and sympathomimetic response to drug).

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality and rate of pulse; EKG; serum potassium, glucose, ABG determinations. Assess lung sounds for wheezing (bronchoconstriction), rales.

PATIENT/FAMILY TEACHING

• Follow guidelines for proper use of inhaler. • Increase fluid intake (decreases lung secretion viscosity). • Do not take more than 2 inhalations at any one time (excessive use may produce paradoxical bronchoconstriction or decreased bronchodilating effect). • Rinsing mouth with water immediately after inhalation may prevent mouth/throat dryness. • Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola, cocoa).

alemtuzumab

HIGH ALERT

al-em-**tooz**-oo-mab
(Campath, MabCampath)

BLACK BOX ALERT Serious infections (bacterial, viral, fungal, protozoal) have been reported. Potentially fatal infusion-related reactions (respiratory distress, cardiac arrest, hypotension) may occur. Profound myelosuppression (anemia, thrombocytopenia) has occurred.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic (see p. 79C).

ACTION

Binds to CD52, cell surface glycoprotein, found on surface of all B- and T-lymphocytes, most monocytes, macrophages, natural killer cells, granulocytes. **Therapeutic Effect:** Produces cytotoxicity, reducing tumor size.

PHARMACOKINETICS

Half-life: About 12 days. Peak and trough levels rise during first few wks of therapy and approach steady state by about wk 6.

USES

Treatment of B-cell chronic lymphocytic leukemia (B-CLL). **OFF-LABEL:** Treatment of refractory, cutaneous, peripheral T-cell leukemia; autoimmune cytopenia; preconditioning regimen for stem cell transplantation, renal and liver transplantation.

PRECAUTIONS

Contraindications: Pts with infection. **Cautions:** Ischemic heart disease or those taking antihypertensive medications.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential to cause fetal B- and T-lymphocyte depletion. Breast-feeding not recommended during treatment and for at least 3 mos after last dose. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase levels/effects of **clozapine, natalizumab, vaccines (live). Pimecrolimus, tacrolimus** may decrease levels/effect. **HERBAL: Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May decrease Hgb level, platelet count, WBC count.

AVAILABILITY (Rx)

Injection Solution: 30 mg/ml.

ADMINISTRATION/HANDLING

IV

ALERT Do not give by IV push or bolus.

Reconstitution • Withdraw needed amount from ampule into a syringe. • Using a low protein-binding, non–fiber-releasing 5-micron filter, inject into 100 ml 0.9% NaCl or D_5W. • Invert bag to mix; do not shake.

Rate of Administration • Give the 100-ml solution as a 2-hr IV infusion.

Storage • Refrigerate undiluted ampules; do not freeze. (If frozen, may be thawed in refrigerator.) • Use within 8 hrs after dilution. Diluted solution may be stored at room temperature or refrigerated. • Discard if particulate matter is present or if solution is discolored.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

ALERT Pretreatment with acetaminophen 500–1,000 mg and diphenhydramine 50 mg before each infusion may prevent infusion-related side effects.

Chronic Lymphocytic Leukemia

ALERT Dose escalation required. Do not exceed single doses greater than 30 mg or cumulative doses more than 90 mg/wk.

IV: ADULTS, ELDERLY: Initially, 3 mg/day as a 2-hr infusion. When tolerated (with only low-grade or no infusion-related toxicities), increase daily dose to 10 mg.

A

When the 10 mg/day dose is tolerated, maintenance dose may be initiated. Maintenance: 30 mg/day 3 times a wk on alternate days (such as Monday, Wednesday, and Friday or Tuesday, Thursday, and Saturday) for up to 12 wks. The increase to 30 mg/day is usually achieved in 3–7 days. Adjust dosage for hematologic toxicity (severe neutropenia or thrombocytopenia).

SIDE EFFECTS

Frequent: Rigors, tremors (86%), fever (85%), nausea (54%), vomiting (41%), rash (40%), fatigue (34%), hypotension (32%), urticaria (30%), pruritus, skeletal pain, headache (24%), diarrhea (22%), anorexia (20%). **Occasional (less than 10%):** Myalgia, dizziness, abdominal pain, throat irritation, vomiting, neutropenia, rhinitis, bronchospasm, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia occurs in 85% of pts, anemia occurs in 80% of pts, and thrombocytopenia occurs in 72% of pts. Rash occurs in 40% of pts. Respiratory toxicity, manifested as dyspnea, cough, bronchitis, pneumonitis, and pneumonia, occurs in 26%–16% of pts. Serious, sometimes fatal bacterial, viral, fungal, and protozoan infections have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pretreatment with acetaminophen and diphenhydramine before each infusion may prevent infusion-related side effects. CBC, platelet count should be obtained frequently during and after therapy to assess for neutropenia, anemia, thrombocytopenia.

INTERVENTION/EVALUATION

Monitor for infusion-related symptoms complex consisting mainly of rigors, fever, chills, hypotension, generally occurring within 30 min–2 hrs of beginning of first infusion. Slowing infusion rate resolves symptoms. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bleeding/bruising from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with those who recently received live virus vaccine; do not receive vaccinations. • Report dyspnea, fever, chills, rash, nausea.

alendronate

TOP 200

ah-**len**-dro-nate
(Apo-Alendronate, Binosto, Fosamax, Novo-Alendronate)
Do not confuse alendronate with risedronate, or Fosamax with Flomax.

FIXED-COMBINATION(S)

Fosamax Plus D: alendronate/cholecalciferol (vitamin D analogue): 70 mg/2,800 international units, 70 mg/5,600 international units.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Bisphosphonate. **CLINICAL:** Bone resorption inhibitor, calcium regulator (see p. 143C).

ACTION

Inhibits normal and abnormal bone resorption, without retarding mineralization. **Therapeutic Effect:** Leads to significantly increased bone mineral density; reverses progression of osteoporosis.

PHARMACOKINETICS

Poorly absorbed after PO administration. Protein binding: 78%. After PO administration, rapidly taken into bone, with uptake greatest at sites of active bone turnover. Excreted in urine, feces (as unabsorbed drug). **Terminal half-life:**

Greater than 10 yrs (reflects release from skeleton as bone is resorbed).

USES

Treatment of osteoporosis in men. Treatment of glucocorticoid-induced osteoporosis in men and women with low bone mineral density who are receiving at least 7.5 mg prednisone (or equivalent), treatment and prevention of osteoporosis in postmenopausal women, treatment of Paget's disease. **Binosto:** Treatment of osteoporosis in post-menopausal women. Increase bone mass in men with osteoporosis.

PRECAUTIONS

Contraindications: Hypocalcemia, abnormalities of the esophagus, inability to stand or sit upright for at least 30 min, sensitivity to alendronate or other bisphosphonates; oral solution should not be used in pts at risk for aspiration. **Cautions:** Renal impairment, dysphagia, esophageal disease, gastritis, ulcers, or duodenitis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Possible incomplete fetal ossification, decreased maternal weight gain, delay in delivery. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Calcium, antacids** may decrease absorption. **Aspirin, NSAIDs** may increase risk of ulcers, upper GI adverse effects. **HERBAL:** None significant. **FOOD:** Concurrent **beverages, dietary supplements, food** may interfere with alendronate absorption. **Caffeine** may reduce efficacy. **LAB VALUES:** Reduces serum calcium, phosphate concentrations. Significant decrease in serum alkaline phosphatase noted in those with Paget's disease.

AVAILABILITY (Rx)

Solution, Oral: 70 mg/75 ml. **Tablets:** 5 mg, 10 mg, 35 mg, 40 mg, 70 mg. **Tablets, Effervescent: (Binosto):** 70 mg.

ADMINISTRATION/HANDLING

PO

• Give at least 30 min before first food, beverage, or medication of the day. • **Tablets:** Give with 6–8 oz plain water only (mineral water, coffee, tea, juice will decrease absorption). • **Oral Solution:** Follow with 2 oz water. • Instruct pt **not** to lie down or eat for at least 30 min after administering medication (allows medication to reach stomach quickly, minimizing esophageal irritation). • **Tablets, Effervescent:** Dissolve in 4 oz water. Wait at least 5 min after effervescence stops. Stir for 10 sec and take.

INDICATIONS/ROUTES/DOSAGE

Osteoporosis (in Men)

PO: ADULTS, ELDERLY: 10 mg once a day in the morning or 70 mg weekly.

Glucocorticoid-Induced Osteoporosis

PO: ADULTS, ELDERLY: 5 mg once a day in the morning. **POSTMENOPAUSAL WOMEN NOT RECEIVING ESTROGEN:** 10 mg once a day in the morning.

Postmenopausal Osteoporosis

PO *(Treatment)*: ADULTS, ELDERLY: 10 mg once a day in the morning or 70 mg weekly.

PO *(Prevention)*: ADULTS, ELDERLY: 5 mg once a day in the morning or 35 mg weekly.

Paget's Disease

PO: ADULTS, ELDERLY: 40 mg once a day in the morning for 6 mos.

Dosage in Renal Impairment

Not recommended with creatinine clearance less than 35 ml/min.

SIDE EFFECTS

Frequent (8%–7%): Back pain, abdominal pain. **Occasional (3%–2%):** Nausea, ab-

A

dominal distention, constipation, diarrhea, flatulence. **Rare (less than 2%):** Rash, severe bone, joint, muscle pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces hypocalcemia, hypophosphatemia, significant GI disturbances. Esophageal irritation occurs if not given with 6–8 oz of plain water or if pt lies down within 30 min of administration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Hypocalcemia, vitamin D deficiency must be corrected before therapy. Check chemistries (esp. calcium and alkaline phosphatase serum levels).

INTERVENTION/EVALUATION

Monitor chemistries (esp. serum calcium, phosphorus, and alkaline phosphatase levels).

PATIENT/FAMILY TEACHING

• Expected benefits occur only when medication is taken with full glass (6–8 oz) of plain water, first thing in the morning and at least 30 min before first food, beverage, or medication of the day is taken. Any other beverage (mineral water, orange juice, coffee) significantly reduces absorption of medication. • Do not lie down for at least 30 min after taking medication (potentiates delivery to stomach, reducing risk of esophageal irritation). • Report if swallowing difficulties develop, pain when swallowing, chest pain, new/worsening heartburn. • Consider weight-bearing exercises, modify behavioral factors (e.g., cigarette smoking, alcohol consumption). • Supplemental calcium and vitamin D should be taken if dietary intake inadequate.

alfuzosin

TOP 200

ale-few-**zoe**-sin
(Apo-Alfuzosin, Uroxatral, Xatral)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Alpha_1$-adrenergic blocker. **CLINICAL:** Benign prostatic hyperplasia agent.

ACTION

Targets receptors around bladder neck and prostate capsule. **Therapeutic Effect:** Relaxes smooth muscle; improves urinary flow, symptoms of prostatic hyperplasia.

PHARMACOKINETICS

Readily absorbed (decreased under fasting conditions). Protein binding: 90%. Extensively metabolized in liver. Primarily excreted in urine. **Half-life:** 10 hrs.

USES

Treatment of signs and symptoms of benign prostatic hyperplasia (BPH).

PRECAUTIONS

Contraindications: Moderate to severe hepatic impairment; concurrent use of strong CYP3A4 inhibitors (e.g., ketoconazole). **Cautions:** Pts with known QT prolongation. Severe renal or mild hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated for use in this pt population. **Pregnancy Category B. Children:** Not indicated for use in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Other alpha-blocking agents (doxazosin, prazosin, tamsulosin, terazosin) may have additive effect. **CYP3A4 inhibitors (e.g., ritonavir, ketoconazole) PDE5 inhibitors (e.g., sildenafil)** may increase levels/effects. **HERBAL:** St. **John's wort** may decrease levels/effect. **FOOD: Food** increases absorption. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Extended-Release): 10 mg.

ADMINISTRATION/HANDLING

PO

• Give immediately after the same meal each day. • Swallow whole; do not chew/crush extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Benign Prostatic Hyperplasia

PO: ADULTS: 10 mg once a day, after same meal each day.

SIDE EFFECTS

Frequent (7%–6%): Dizziness, headache, malaise. **Occasional (4%):** Dry mouth. **Rare (3%–2%):** Nausea, dyspepsia (heartburn, epigastric discomfort), diarrhea, orthostatic hypotension, tachycardia, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Ischemia-related chest pain may occur rarely (2%). Priapism has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for sensitivity to alfuzosin, use of other alpha-blocking agents (doxazosin, prazosin, tamsulosin, terazosin). Obtain B/P.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Report headache. Monitor for hypotension. Question for improvement in urine flow, hesitancy.

PATIENT/FAMILY TEACHING

• Take after the same meal each day. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not chew/crush extended-release tablets.

aliskiren

TOP 200 HIGH ALERT

a-lis-**kye**-ren
(Rasilez 🍁, Tekturna)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse Tekturna with Valturna.

FIXED-COMBINATION(S)

Amturnide: aliskiren/amlodipine (a calcium channel blocker)/hydrochlorothiazide (a diuretic): 150 mg/5 mg/12.5 mg, 300 mg/5 mg/12.5 mg, 300 mg/5 mg/25 mg, 300 mg/10 mg/12.5 mg, 300 mg/10 mg/25 mg. **Tekamlo:** aliskiren/amlodipine (a calcium channel blocker): 150 mg/5 mg, 150 mg/10 mg, 300 mg/5 mg, 300 mg/10 mg. **Tekturna HCT:** aliskiren/hydrochlorothiazide (a diuretic): 150 mg/12.5 mg, 150 mg/25 mg, 300 mg/12.5 mg, 300 mg/25 mg. **Valturna:** aliskiren/valsartan (an angiotensin II receptor antagonist): 150 mg/160 mg, 300 mg/320 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Renin-angiotensin system antagonist. **CLINICAL:** Antihypertensive (see p. 62C).

ACTION

Direct renin inhibitor. Decreases plasma renin activity (PRA), inhibiting the conversion of angiotensinogen to angiotensin I, blocking the effect of increased renin levels. **Therapeutic Effect:** Reduces B/P.

PHARMACOKINETICS

Peak plasma concentration reached within 1–3 hrs. Protein binding: 49%. Metabolized in liver. Minimally excreted in urine. **Half-life:** 24 hrs. Peak plasma steady-state levels reached in 7–8 days.

USES

Treatment of hypertension. May be used alone or in combination with other antihypertensives. **OFF-LABEL:** Treatment of persistent proteinuria in pts with type 2 diabetes, hypertension, nephropathy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe renal impairment. History of angioedema, dialysis, nephrotic syndrome, renovascular hypertension. Concurrent use with P-glycoprotein inhibitors (e.g., cyclosporine).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Carcinogenic potential to fetus. May cause fetal/neonatal morbidity, mortality. Unknown if distributed in breast milk. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Cyclosporine, itraconazole** may increase levels. **HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic, black cohosh** may increase antihypertensive effect. **FOOD:** **High-fat meals** substantially decrease absorption. **Grapefruit** may reduce antihypertensive effects. Separate by 4 hrs. **LAB VALUES:** May increase BUN, serum creatinine, uric acid, creatinine kinase, potassium. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets, Film-Coated: 150 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• High-fat meals substantially decrease absorption. • Consistent administration with regard to meals is recommended. • Do not crush film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Hypertension:

PO: ADULTS, ELDERLY: Initially, 150 mg/day. May increase to 300 mg/day.

SIDE EFFECTS

Rare (2%–1%): Diarrhea, particularly in women, elderly (older than 65 yrs), gastroesophageal reflux, cough, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Angioedema, periorbital edema, edema of hands, generalized edema have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Correct hypovolemia in pts on concurrent diuretic therapy. Obtain B/P and apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated.

INTERVENTION/EVALUATION

Assess for edema. Monitor I&O, volume status; weigh daily. Monitor daily pattern of bowel activity, stool consistency. Monitor B/P, renal function tests, potassium, Hgb, Hct.

PATIENT/FAMILY TEACHING

• Pregnant pts should avoid second- and third-trimester exposure to aliskiren. • Inform physician if diarrhea, swelling of face/lips/tongue, difficulty breathing occurs. • Avoid exercising during hot weather (risk of dehydration, hypotension).

allopurinol

TOP 200

al-oh-**pure**-ee-nahl
(Aloprim, Apo-Allopurinol, Novo-Purol, Zyloprim)

Do not confuse allopurinol with Apresoline or haloperidol, or Zyloprim with Zorprin or Zovirax.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Xanthine oxidase inhibitor. **CLINICAL:** Antigout.

ACTION

Decreases uric acid production by inhibiting xanthine oxidase, an enzyme. **Ther-**

apeutic Effect: Reduces uric acid concentrations in serum and urine.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO, IV	2–3 days	1–3 wks	1–2 wks

Well absorbed from GI tract. Widely distributed. Protein binding: less than 1%. Metabolized in liver to active metabolite. Excreted primarily in urine. Removed by hemodialysis. **Half-life:** 1–3 hrs; metabolite, 12–30 hrs.

USES

PO: Management of primary or secondary gout (e.g., acute attack, nephropathy). Treatment of secondary hyperuricemia that may occur during cancer treatment. Management of recurrent uric acid and calcium oxalate calculi. **Injection:** Management of elevated uric acid in cancer treatment for leukemia, lymphoma, or solid tumor malignancies. **OFF-LABEL:** In mouthwash following fluorouracil therapy to prevent stomatitis.

PRECAUTIONS

Contraindications: Asymptomatic hyperuricemia. **Cautions:** Renal/hepatic impairment, pts taking diuretics, mercaptopurine or azathioprine, other drugs causing myelosuppression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Thiazide diuretics** may increase effect. May increase effect of **oral anticoagulants.** May increase concentration, toxicity of **azathioprine, mercaptopurine. Amoxicillin, ampicillin** may increase incidence of rash. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, AST, ALT, creatinine.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Aloprim): 500 mg. **Tablets (Zyloprim):** 100 mg, 300 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 500-mg vial with 25 ml Sterile Water for Injection, giving a clear, almost colorless solution (concentration of 20 mg/ml). • Further dilute with 0.9% NaCl or D_5W (50–100 ml) to a concentration of 6 mg/ml or less.
Rate of Administration • Infuse over 15–60 min. Daily doses can be given as a single infusion or in equally divided doses at 6-, 8-, or 12-hr intervals.
Storage • Store unreconstituted vials at room temperature. • Do not refrigerate reconstituted and/or diluted solution. Must administer within 10 hrs of preparation. • Do not use if precipitate forms or solution is discolored.

PO

• Give after meals with plenty of fluid. • Fluid intake should yield slightly alkaline urine and output of approximately 2 L in adults. • Dosages greater than 300 mg/day to be administered in divided doses.

IV INCOMPATIBILITIES

Amikacin (Amikin), carmustine (BiCNU), cefotaxime (Claforan), chlorpromazine (Thorazine), cimetidine (Tagamet), clindamycin (Cleocin), cytarabine (Ara-C), dacarbazine (DTIC), diphenhydramine (Benadryl), doxorubicin (Adriamycin), doxycycline (Vibramycin), droperidol (Inapsine), fludarabine (Fludara), gentamicin (Garamycin), haloperidol (Haldol), hydroxyzine (Vistaril), idarubicin (Idamycin), imipenem-cilastatin (Primaxin), meperidine (Demerol), methylprednisolone (Solu-Medrol), metoclopramide (Reglan), ondansetron (Zofran), prochlorperazine

(Compazine), promethazine (Phenergan), streptozocin (Zanosar), tobramycin (Nebcin), vinorelbine (Navelbine).

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, furosemide (Lasix), heparin, hydromorphone (Dilaudid), lorazepam (Ativan), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Doses greater than 300 mg given in divided doses.

Gouty Arthritis

PO: ADULTS, CHILDREN OLDER THAN 10 YRS: (Mild): 200–300 mg/day. **(Moderate to severe):** 400–600 mg/day in 2–3 divided doses. **Maximum:** 800 mg/day.

Secondary Hyperuricemia Associated with Chemotherapy

PO: ADULTS, CHILDREN OLDER THAN 10 YRS: 600–800 mg/day in 2–3 divided doses for 2–3 days starting 1–2 days before chemotherapy. **CHILDREN 6–10 YRS:** 300 mg/day in 2–3 divided doses. **CHILDREN YOUNGER THAN 6 YRS:** 150 mg/day in 3 divided doses. **◀ALERT▶ IV** daily dose can be given as single infusion or at 6-, 8-, or 12-hr intervals.

IV: ADULTS, ELDERLY, CHILDREN 10 YRS OR OLDER: 200–400 mg/m^2/day beginning 24–48 hrs before initiation of chemotherapy. **CHILDREN YOUNGER THAN 10 YRS:** 200 mg/m^2/day. **Maximum:** 600 mg/day.

Recurrent Uric Acid Calcium Oxalate Calculi

PO: ADULTS: 200–300 mg/day in single or divided doses.

Usual Elderly Dosage

PO: Initially, 100 mg/day, gradually increase until optimal uric acid level is reached.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance. **PO:** Removed by hemodialysis, adult maintenance doses based on creatinine clearance. Administer dose posthemodialysis or administer 50% supplemental dose.

IV/PO

Creatinine Clearance	Dosage
10–20 ml/min	200 mg/day
3–9 ml/min	100 mg/day
Less than 3 ml/min	100 mg at extended intervals
HD	100 mg q48h (increase cautiously to 300 mg)

SIDE EFFECTS

Occasional: PO: Drowsiness, unusual hair loss. **IV:** Rash, nausea, vomiting. **Rare:** Diarrhea, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pruritic maculopapular rash possibly accompanied by malaise, fever, chills, joint pain, nausea, vomiting should be considered a toxic reaction. Severe hypersensitivity (hypotension, wheezing, dyspnea) may follow appearance of rash. Bone marrow depression, hepatotoxicity, peripheral neuritis, acute renal failure occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Instruct pt to drink minimum of 2,500–3,000 ml of fluid daily while taking medication.

INTERVENTION/EVALUATION

Discontinue medication immediately if rash or other evidence of allergic reaction appears. Monitor I&O (output should be at least 2,000 ml/day). Assess CBC, uric acid, hepatic function serum levels. Assess urine for cloudiness, unusual color, odor. **Gout:** Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• May take 1 wk or longer for full therapeutic effect. • Drink 2,500–3,000 ml of fluid daily while taking medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Maintain adequate hydration. • Avoid alcohol (may increase uric acid).

almotriptan

al-moe-**trip**-tan
(Axert)
Do not confuse almotriptan with alvimopan, or Axert with Antivert.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor agonist (5-HT_{1B}). **CLINICAL:** Antimigraine (see p. 63C).

ACTION

Binds selectively to vascular receptors, producing a vasoconstrictive effect on cranial blood vessels. **Therapeutic Effect:** Produces relief of migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 35%. Metabolized by liver to inactive metabolite, primarily excreted in urine. **Half-life:** 3–4 hrs.

USES

Acute treatment of migraine headache with or without aura in adults. Acute treatment of migraine headache in adolescents 12–17 yrs with history of migraine with or without aura, and having attacks usually lasting 4 or more hrs when left untreated.

PRECAUTIONS

Contraindications: Cerebrovascular disease (e.g., stroke, transient ischemic attacks), peripheral vascular disease (e.g., ischemic bowel disease), hemiplegic or basilar migraine, ischemic heart disease (including angina pectoris, history of MI, silent ischemia, and Prinzmetal's angina), uncontrolled hypertension, use within 24 hrs of ergotamine-containing preparations or another 5-HT_{1B} agonist. **Cautions:** Mild to moderate renal or hepatic impairment, pt profile suggesting cardiovascular risks, controlled hypertension, history of CVA, sulfonamide allergy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Ergotamine-containing drugs** may produce vasospastic reaction. **MAOIs** may increase concentration. Combined use of **SSRIs,** or **SNRIs (e.g., fluoxetine, fluvoxamine, paroxetine, sertraline)** may produce weakness, hyperreflexia, incoordination. **CYP3A4 inhibitors (e.g., erythromycin, itraconazole, ketoconazole, ritonavir)** may increase plasma concentration of almotriptan. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 6.5 mg, 12.5 mg.

ADMINISTRATION/HANDLING

PO

• Swallow tablets whole. • Take with full glass of water. • May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Migraine Headache

PO: ADULTS, ELDERLY, ADOLESCENTS 12–17 YRS: Initially, 6.25–12.5 mg as a single dose. If headache returns, dose may be repeated after 2 hrs. **Maximum:** 2 doses/24 hrs (25 mg).

Dosage in Renal/Hepatic Impairment
For adult and elderly pts, recommended initial dose is 6.25 mg, maximum daily dose is 12.5 mg.

SIDE EFFECTS

Rare (2%–1%): Nausea, dry mouth, headache, dizziness, somnolence, paresthesia, flushing.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive dosage may produce tremor, redness of extremities, decreased respirations, cyanosis, seizures, chest pain. Serious arrhythmias occur rarely but particularly in pts with hypertension, diabetes, obesity, smokers, and those with strong family history of coronary artery disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of peripheral vascular disease, cardiac conduction disorders. Question pt regarding onset, location, duration of migraine, and possible precipitating factors.

INTERVENTION/EVALUATION

Evaluate for relief of migraine headache and resulting photophobia, phonophobia (sound sensitivity), nausea, vomiting.

PATIENT/FAMILY TEACHING

• Take a single dose as soon as symptoms of an actual migraine attack appear. • Medication is intended to relieve migraine, not to prevent or reduce number of attacks. • Lie down in quiet, dark room for additional benefit after taking medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • If palpitations, pain or tightness in chest or throat, or pain or weakness of extremities occurs, contact physician immediately.

alprazolam

TOP 200

al-**praz**-oh-lam
(Alprazolam Intensol, Apo-Alpraz, Niravam, Novo-Alprazol, Xanax, Xanax XR)
Do not confuse alprazolam with lorazepam, or Xanax with Tenex, Tylox, Xopenex, Zantac, or Zyrtec.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Antianxiety (see p. 13C).

ACTION

Enhances the action of the neurotransmitter gamma-aminobutyric acid in the brain. **Therapeutic Effect:** Produces anxiolytic effect due to CNS depressant action.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 80%. Metabolized in liver. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 6–27 hrs.

USES

Management of anxiety disorders (with or without agoraphobia), anxiety associated with depression, panic disorder. **OFF-LABEL:** Anxiety in children.

PRECAUTIONS

Contraindications: Acute narrow angle-closure glaucoma, concurrent use with ketoconazole or itraconazole. **Cautions:** Renal/hepatic impairment, predisposition to urate nephropathy, obese pts. Concurrent CYP3A4 inhibitors/inducers and major CYP3A4 substrates; debilitated pt, respiratory disease, depression (esp. suicidal risk).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. Chronic ingestion during pregnancy may produce withdrawal symptoms, CNS depression in neonates. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Use small initial doses with gradual increase to avoid ataxia (muscular incoordination) or excessive sedation.

INTERACTIONS

DRUG: Potentiated effects when used with **other CNS depressants (including alcohol). CYP3A4 inhibitors: (e.g., antifungal agents [azole], olanzapine, protease inhibitors, SSRIs)** may increase CNS effects. **CYP3A4 inducers (e.g., carbamazepine, rifampin)** may decrease effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depressant effect. **St. John's wort, yohimbe** may decrease effectiveness. **FOOD: Grapefruit juice** may increase level, effects. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Solution, Oral (Alprazolam Intensol): 1 mg/ml. **Tablets (Orally-Disintegrating [Niravam]):** 0.25 mg, 0.5 mg, 1 mg, 2 mg. **Tablets (Immediate-Release [Xanax]):** 0.25 mg, 0.5 mg, 1 mg, 2 mg.

Tablets (Extended-Release [Xanax XR]): 0.5 mg, 1 mg, 2 mg, 3 mg.

ADMINISTRATION/HANDLING

PO, Immediate-Release

• May give without regard to meals. • Tablets may be crushed. • Orally-disintegrating tablets may be given sublingually.

PO, Extended-Release

• Administer once daily. • Do not crush, chew, break extended-release tablets. Swallow whole.

PO, Orally-Disintegrating

• Place tablet on tongue, allow to dissolve. • Swallow with saliva. • Administration with water not necessary. • If using 1/2 tab, discard remaining 1/2 tab.

INDICATIONS/ROUTES/DOSAGE

Anxiety Disorders

PO *(Immediate-Release)*: ADULTS: Initially, 0.25–0.5 mg 3 times a day. May titrate q3–4days. **Maximum:** 4 mg/day in divided doses. **CHILDREN, YOUNGER THAN 18 YRS:** 0.125 mg 3 times a day. May increase by 0.125–0.25 mg/dose. **Maximum:** 0.06 mg/kg/day.

PO *(Orally-Disintegrating)*: ADULTS: 0.25–0.5 mg 3 times a day. **Maximum:** 4 mg/day in divided doses. **ELDERLY, DEBILITATED PTS, PTS WITH HEPATIC DISEASE OR LOW SERUM ALBUMIN:** Initially, 0.25 mg 2–3 times a day. Gradually increase to optimum therapeutic response.

Anxiety with Depression

PO: ADULTS: (average dose required) 2.5–3 mg/day in divided doses.

Panic Disorder

PO *(Immediate-Release)*: ADULTS: Initially, 0.5 mg 3 times a day. May increase at 3- to 4-day intervals in increments of 1 mg or less a day. Range: 5–6 mg/day. **Maximum:** 10 mg/day. **ELDERLY:** Initially, 0.125–0.25 mg twice a day. May increase in 0.125-mg increments until desired effect attained.

PO *(Extended-Release)*:

◀ALERT▶ To switch from immediate-release to extended-release form, give total daily dose (immediate-release) as a single daily dose of extended-release form.

ADULTS: Initially, 0.5–1 mg once a day. May titrate at 3- to 4-day intervals. Range: 3–6 mg/day. **Maximum:** 10 mg/day. **ELDERLY:** Initially, 0.5 mg once a day.

PO *(Orally-Disintegrating)*: ADULTS: Initially, 0.5 mg 3 times a day. May increase at 3- to 4-day intervals. Range: 5–6 mg/day. **Maximum:** 10 mg/day.

SIDE EFFECTS

Frequent (41%–20%): Ataxia, light-headedness, drowsiness, slurred speech (particu-

larly in elderly or debilitated pts). **Occasional (15%–5%):** Confusion, depression, blurred vision, constipation, diarrhea, dry mouth, headache, nausea. **Rare (4% or less):** Behavioral problems such as anger, impaired memory; paradoxical reactions (insomnia, nervousness, irritability).

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt or too-rapid withdrawal may result in pronounced restlessness, irritability, insomnia, hand tremors, abdominal/ muscle cramps, diaphoresis, vomiting, seizures. Overdose results in drowsiness, confusion, diminished reflexes, coma. Blood dyscrasias noted rarely. **Antidote:** Flumazenil (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess degree of anxiety; assess for drowsiness, dizziness, light-headedness. Assess motor responses (agitation, trembling, tension), autonomic responses (cold/clammy hands, diaphoresis).

INTERVENTION/EVALUATION

For those on long-term therapy, perform hepatic/renal function tests, blood counts periodically. Assess for paradoxical reaction, particularly during early therapy. Evaluate for therapeutic response: calm facial expression, decreased restlessness, insomnia. Monitor respiratory and cardiovascular status.

PATIENT/FAMILY TEACHING

• Drowsiness usually disappears during continued therapy. • If dizziness occurs, change positions slowly from recumbent to sitting position before standing. • Avoid tasks that require alertness, motor skills until response to drug is established. • Smoking reduces drug effectiveness. • Sour hard candy, gum, sips of tepid water may relieve dry mouth. • Do not abruptly withdraw medication after long-term therapy. • Avoid alcohol. • Do not take other medications without consulting physician.

alprostadil (prostaglandin E_1; PGE_1)

al-**pros**-ta-dil
(Prostin VR Pediatric)

BLACK BOX ALERT Apnea may occur in 10%–12% of neonates with congenital heart defects, esp. in those weighing less than 4.4 lb.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Prostaglandin. **CLINICAL:** Patent ductus arteriosus agent.

ACTION

Direct effect on vascular and ductus arteriosus smooth muscle; relaxes trabecular smooth muscle. **Therapeutic Effect:** Causes vasodilation.

USES

Temporarily maintains patency of ductus arteriosus until surgery is performed in those with congenital heart defects and dependent on patent ductus for survival (e.g., pulmonary atresia or stenosis). **OFF-LABEL:** Treatment of pulmonary hypertension in infants, children.

PRECAUTIONS

Contraindications: Respiratory distress syndrome (hyaline membrane disease). **Cautions:** Neonates with bleeding tendencies. **Pregnancy Category:** Not indicated for use in pregnant women.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin. May decrease serum glucose, potassium.

AVAILABILITY (Rx)

Injection, Solution (Prostin VR Pediatric): 500 mcg/ml.

ADMINISTRATION/HANDLING

IV (Prostin VR Pediatric)

Reconstitution • Dilute 500-mcg ampule with D_5W or 0.9% NaCl to volume depending on infusion pump capabilities. • **Maximum concentration:** 20 mcg/ml.

Rate of Administration • Infuse into a large vein or through an umbilical artery catheter placed at ductal opening. • Infuse for shortest time, lowest dose possible. • If significant decrease in arterial pressure is noted via umbilical artery catheter, auscultation, or Doppler transducer, decrease infusion rate immediately. • Discontinue infusion immediately if apnea or bradycardia occurs (overdosage).

Storage • Store parenteral form in refrigerator. • Must dilute before use. • Prepare fresh q24h. • Discard unused portions.

IV INCOMPATIBILITIES

No information available.

INDICATIONS/ROUTES/DOSAGE

Maintain Patency of Ductus Arteriosus

IV Infusion: NEONATES: Initially, 0.05–0.1 mcg/kg/min. Maintenance: 0.01–0.4 mcg/kg/min. **Maximum:** 0.4 mcg/kg/min. Therapeutic response is indicated by increased pH in pts with acidosis or increase in oxygenation (usually seen within 30 min).

SIDE EFFECTS

Frequent: Systemic (greater than 1%): Fever, flushing, bradycardia, hypotension, tachycardia, diarrhea. **Occasional: Systemic (less than 1%):** Anxiety, lethargy, myalgia, arrhythmias, respiratory depression, anemia, bleeding, hematuria.

ADVERSE EFFECTS/ TOXIC REACTIONS

◄ALERT► Apnea experienced by 10%–12% of neonates with congenital heart defects.

Overdose manifested as apnea, flushing of the face/arms, bradycardia. Cardiac arrest, sepsis, seizures, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor arterial pressure by umbilical artery catheter, auscultation, Doppler transducer. If significant decrease in arterial pressure occurs, decrease infusion rate immediately. Maintain continuous cardiac monitoring. Assess heart sounds, femoral pulse (circulation to lower extremities), respiratory status frequently. Monitor for symptoms of hypotension. Assess B/P, arterial blood gases, temperature. If apnea or bradycardia occurs, discontinue infusion and notify physician. In infants with restricted systemic blood flow, efficacy should be measured by monitoring improvement of systemic B/P and blood pH.

PATIENT/FAMILY TEACHING

• Therapy maintains patency of ductus arteriosus until surgery is performed.

alteplase

HIGH ALERT

al-teh-place
(Activase, Cathflo Activase)
Do not confuse alteplase or Activase with Altace, or Activase with Cathflo Activase.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tissue plasminogen activator (tPA). **CLINICAL:** Thrombolytic (see p. 33C).

ACTION

Binds to fibrin in a thrombus and converts entrapped plasminogen to plasmin, initiating fibrinolysis. **Therapeutic Effect:** Degrades fibrin clots, fibrinogen, other plasma proteins.

PHARMACOKINETICS

Rapidly metabolized in liver. Primarily excreted in urine. **Half-life:** 35 min.

USES

Treatment of acute MI for lysis of thrombi in coronary arteries, acute ischemic stroke, acute massive pulmonary embolism. Treatment of occluded central venous catheters. **OFF-LABEL:** Acute peripheral occlusive disease, basilar artery occlusion, cerebral infarction, deep vein thrombosis, femoropopliteal artery occlusion, mesenteric or subclavian vein occlusion, pleural effusion (parapneumonic). Acute ischemic stroke presenting 3–4½ hrs after onset of symptoms.

PRECAUTIONS

Contraindications: Active internal bleeding, AV malformation or aneurysm, bleeding diathesis, intracranial neoplasm, intracranial or intraspinal surgery or trauma, recent (within past 2 mos) CVA, severe uncontrolled hypertension, suspected aortic dissection. **Cautions:** Recent (within 10 days) major surgery or GI bleeding, OB delivery, organ biopsy, recent trauma or CPR, left heart thrombus, endocarditis, severe hepatic disease, pregnancy, elderly, cerebrovascular disease, diabetic retinopathy, thrombophlebitis, occluded AV cannula at infected site.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use only when benefit outweighs potential risk to fetus. Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Risk of bleeding with thrombolytic therapy increases; careful pt selection, monitoring recommended.

INTERACTIONS

DRUG: Heparin, low molecular weight heparins, medications altering platelet function (e.g., clopidogrel, NSAIDs, thrombolytics), oral anticoagulants increase risk of hemorrhage. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo, ginseng, green tea, horse chestnut, red clover** may increase risk of bleeding due to antiplatelet activity. **FOOD:** None known. **LAB VALUES:** Decreases plasminogen, fibrinogen levels during infusion, decreases clotting time (confirms the presence of lysis). Decreases Hgb, Hct.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 2 mg (Cathflo Activase), 50 mg (Activase), 100 mg (Activase).

ADMINISTRATION/HANDLING

IV

Reconstitution • Activase: Reconstitute immediately before use with Sterile Water for Injection. • Reconstitute 100-mg vial with 100 ml Sterile Water for Injection (50-mg vial with 50 ml sterile water) without preservative to provide a concentration of 1 mg/ml. **Activase Cathflo:** Add 2.2 ml Sterile Water for Injection to provide concentration of 1 mg/ml. • Avoid excessive agitation; gently swirl or slowly invert vial to reconstitute. **Rate of Administration • Activase:** Give by IV infusion via infusion pump (see Indications/Routes/Dosage). • If minor bleeding occurs at puncture sites, apply pressure for 30 sec; if unrelieved, apply pressure dressing. • If uncontrolled hemorrhage occurs, discontinue infusion immediately (slowing rate of infusion may produce worsening hemorrhage). • Avoid undue pressure when drug is injected into catheter (can rupture catheter or expel clot into circulation). **Activase Cathflo:** Instill dose into occluded catheter. • After 30 min, assess catheter function by attempting to aspirate blood. • If still occluded, let dose dwell an additional 90 min. • If function not restored, a second dose may be instilled.

Storage • Activase: Store vials at room temperature. • After reconstitution, solution appears colorless to pale yellow. • Solution is stable for 8 hrs after reconstitution. Discard unused portions. • **Activase Cathflo:** Refrigerate vials.

IV INCOMPATIBILITIES

Dobutamine (Dobutrex), dopamine (Intropin), heparin, nitroglycerin.

IV COMPATIBILITIES

Lidocaine, metoprolol (Lopressor), morphine, propranolol (Inderal).

INDICATIONS/ROUTES/DOSAGE

Acute MI

IV Infusion: ADULTS WEIGHING MORE THAN 67 KG: Total dose: 100 mg over 90 min, starting with 15-mg bolus over 1–2 min, then 50 mg over 30 min, then 35 mg over 60 min. **ADULTS WEIGHING 67 KG OR LESS: Total dose:** Start with 15-mg bolus over 1–2 min, then 0.75 mg/kg over 30 min (**maximum:** 50 mg), then 0.5 mg/kg over 60 min (**maximum:** 35 mg).

Acute Pulmonary Emboli

IV Infusion: ADULTS: 100 mg over 2 hrs. Institute or reinstitute heparin near end or immediately after infusion when activated partial thromboplastin time (aPTT) or thrombin time (TT) returns to twice normal or less.

Acute Ischemic Stroke

◀ALERT▶ Dose should be given within the first 3 hrs of the onset of symptoms. Recommended total dose: 0.9 mg/kg. **Maximum:** 90 mg.

IV Infusion: ADULTS WEIGHING 100 KG OR LESS: 0.09 mg/kg as IV bolus over 1 min, then 0.81 mg/kg as continuous infusion over 60 min. **WEIGHING GREATER THAN 100 KG:** 9 mg bolus over 1 min, then 81 mg as continuous infusion over 60 min.

Central Venous Catheter Clearance

IV: ADULTS, ELDERLY: Up to 2 mg; may repeat after 2 hrs. If catheter functional, withdraw 4–5 ml blood to remove drug and residual clot.

SIDE EFFECTS

Frequent: Superficial bleeding at puncture sites, decreased B/P. **Occasional:** Allergic reaction (rash, wheezing, bruising).

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe internal hemorrhage may occur. Lysis of coronary thrombi may produce atrial or ventricular arrhythmias or stroke.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline B/P, apical pulse. Record weight. Evaluate 12-lead EKG, cardiac enzymes, electrolytes. Assess Hct, platelet count, thrombin time (TT), prothrombin time (PT), activated partial thromboplastin time (aPTT), fibrinogen level before therapy is instituted. Type and crossmatch, hold blood.

INTERVENTION/EVALUATION

Perform continuous cardiac monitoring for arrhythmias. Check B/P, pulse, respirations q15min until stable, then hourly. Check peripheral pulses, heart and lung sounds. Monitor for chest pain relief and notify physician of continuation or recurrence (note location, type, intensity). Assess for bleeding: overt blood, blood in any body substance. Monitor aPTT per protocol. Maintain B/P; avoid any trauma that might increase risk of bleeding (e.g., injections, shaving). Assess neurologic status frequently.

alvimopan

al-**vie**-moe-pan
(Entereg)

BLACK BOX ALERT Available only for short-term (15 doses) use in hospitalized pts. Only hospitals that have registered in and met all requirements for Entereg

A

Access Support and Education (E.A.S.E.) program may use this medication.

Do not confuse alvimopan with almotriptan.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Peripherally acting mu-opioid receptor antagonist. **CLINICAL:** Anti-ileus agent.

ACTION

Binds to opioid receptors in GI tract. **Therapeutic Effect:** Accelerates GI recovery period as defined by time to first bowel movement or flatus.

PHARMACOKINETICS

Protein binding: 80%–90%. Undergoes no significant hepatic metabolism but is metabolized by intestinal flora. Excreted 50% by biliary route. Unabsorbed drug and unchanged alvimopan resulting from biliary excretion is hydrolyzed to its metabolite by gut microflora. Metabolite eliminated in feces and urine as unchanged. **Half-life:** 10–17 hrs.

USES

Accelerates time to upper and lower GI recovery following partial large or small bowel resection surgery with primary anastomosis.

PRECAUTIONS

Contraindications: Pts who have taken therapeutic doses of opioids for more than 7 consecutive days prior to initiation of alvimopan (recent exposure to opioids heightens pt's sensitivity to drug's effects, increasing susceptibility to abdominal pain, nausea, vomiting, diarrhea). **Cautions:** Complete bowel obstruction, hepatic/renal impairment, recent exposure to opioids.

LIFESPAN CONSIDERATIONS:

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Opioids may increase levels/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May reduce Hgb, Hct, serum potassium.

AVAILABILITY (Rx)

Capsules: 12 mg.

ADMINISTRATION/HANDLING

PO

• First dose given 30 min to 5 hrs prior to surgery; remaining dosage given without regard to meals.

INDICATIONS/ROUTES/DOSAGE

PO: ADULTS, ELDERLY: 12 mg given 30 min to 5 hrs prior to surgery followed by 12 mg twice daily beginning the day after surgery for a maximum of 7 days or until discharge. Pts should receive no more than 15 doses.

SIDE EFFECTS

Occasional (9%–6%): Hypokalemia, constipation, flatulence, dyspepsia (epigastric distress, heartburn, indigestion). **Rare (3%):** Back pain, urinary retention.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Inform pts that they must disclose long-term or intermittent opioid pain therapy, including any use of opioids in the wk prior to receiving alvimopan. Treatment should not be instituted unless pt is opioid-free for 7 days.

INTERVENTION/EVALUATION

Monitor closely for evidence of hepatotoxicity (abdominal pain lasting more than a few days, white bowel movements,

dark urine, jaundice), increased AST, ALT, serum bilirubin.

PATIENT/FAMILY TEACHING

• Recent use of opioids may increase susceptibility to adverse reactions, primarily those limited to GI tract (e.g., abdominal pain, nausea, vomiting, diarrhea). • Inform pts that the most common side effects in those undergoing bowel resection are constipation, dyspepsia, flatulence. • Report abdominal pain, nausea, vomiting, diarrhea.

amantadine

ah-**man**-tih-deen
(Endantadine, PMS-Amantadine, Symmetrel)
Do not confuse amantadine with ranitidine or rimantadine, or Symmetrel with Synthroid.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopaminergic agonist. **CLINICAL:** Antiviral, antiparkinson agent (see p. 67C).

ACTION

Blocks uncoating of influenza A virus, preventing penetration into the host and inhibiting M2 protein in the assembly of progeny virions. Blocks reuptake of dopamine into presynaptic neurons and causes direct stimulation of postsynaptic receptors. **Therapeutic Effect:** Antiviral, antiparkinsonian activity.

PHARMACOKINETICS

Rapidly and completely absorbed from GI tract. Protein binding: 67%. Widely distributed. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 11–15 hrs (increased in elderly, decreased in renal impairment).

USES

Prevention, treatment of respiratory tract infections due to influenza virus, Parkinson's disease, drug-induced extrapyramidal reactions.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of seizures, orthostatic hypotension, CHF, peripheral edema, hepatic disease, recurrent eczematoid dermatitis, cerebrovascular disease, renal dysfunction, those receiving CNS stimulants, uncontrolled psychosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted in those older than 1 yr. **Elderly:** May exhibit increased sensitivity to anticholinergic effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Alcohol** may increase CNS effects. **Anticholinergics, antihistamines, phenothiazines, tricyclic antidepressants** may increase anticholinergic effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 100 mg. **Solution, Oral:** 50 mg/5 ml. **Syrup:** 50 mg/5 ml. **Tablets:** 100 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Administer nighttime dose several hrs before bedtime (prevents insomnia).

INDICATIONS/ROUTES/DOSAGE

Treatment of Influenza A

PO: ADULTS: 100 mg twice a day or 200 mg once/day. Initiate within 24–48 hrs after onset of symptoms; discontinue as soon as possible based on clinical response. **ELDERLY:** 100 mg once daily. **CHILDREN 10 YRS AND OLDER, WEIGHING 40 KG OR MORE:** 100 mg twice a day. **WEIGHING LESS THAN 40 KG:** 5 mg/kg/day. **Maximum:** 150 mg/day. **CHILDREN**

A

1–9 YRS: 5 mg/kg/day. **Maximum:** 150 mg/day.

Prevention of Influenza A

PO: ADULTS: 100 mg twice a day or 200 mg once/day. **CHILDREN**: Refer to treatment dosing above.

Parkinson's Disease, Extrapyramidal Symptoms

PO: ADULTS, ELDERLY: 100 mg twice a day. May increase up to 400 mg/day in divided doses.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine Clearance	Dosage
30–50 ml/min	200 mg first day; 100 mg/day thereafter
15–29 ml/min	200 mg first day; 100 mg on alternate days
Less than 15 ml/min	200 mg every 7 days
Hemodialysis	200 mg every 7 days

SIDE EFFECTS

Frequent (10%–5%): Nausea, dizziness, poor concentration, insomnia, nervousness. **Occasional (5%–1%):** Orthostatic hypotension, anorexia, headache, livedo reticularis (reddish-blue, netlike blotching of skin), blurred vision, urinary retention, dry mouth or nose, agitation, confusion, hallucinations. **Rare:** Vomiting, depression, irritation or swelling of eyes, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

CHF, leukopenia, neutropenia occur rarely. Hyperexcitability, seizures, ventricular arrhythmias may occur. Neuroleptic malignant syndrome (NMS) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

When treating infections caused by influenza A virus, obtain specimens for viral diagnostic tests before giving first dose (therapy may begin before results are known).

INTERVENTION/EVALUATION

Monitor I&O, renal function tests if ordered; check for peripheral edema. Evaluate food tolerance, vomiting. Assess skin for mottling or rash. Assess for dizziness. **Parkinson's disease:** Assess for clinical reversal of symptoms (improvement of tremor of head/hands at rest, mask-like facial expression, shuffling gait, muscular rigidity).

PATIENT/FAMILY TEACHING

• Do not take any other medications without consulting physician. • Avoid alcoholic beverages. • Avoid tasks that require alertness, motor skills until response to drug is established (may cause dizziness, blurred vision). • Get up slowly from a sitting or lying position. • Inform physician of new symptoms, esp. blotching, rash, dizziness, blurred vision, nausea/vomiting, muscle rigidity. • Take nighttime dose several hours before bedtime to prevent insomnia.

ambrisentan

am-**bris**-en-tan
(Letairis, Volibris)

BLACK BOX ALERT Likely to produce serious birth defects if used by pregnant women.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Endothelin receptor antagonist. **CLINICAL:** Vasodilator.

ACTION

Blocks endothelin receptor subtypes ET_A and ET_B on vascular endothelium and smooth muscle, leading to vasodilation. **Therapeutic Effect:** Improves symptoms of pulmonary arterial hypertension (e.g., improves exercise ability), decreases rate of clinical deterioration.

PHARMACOKINETICS

Rapidly absorbed. Protein binding: high (99%). Not eliminated by renal pathways. **Half-life:** 9 hrs.

USES

Treatment of pulmonary arterial hypertension (PAH) to improve exercise ability, decrease rate of clinical deterioration.

PRECAUTIONS

Contraindications: Pregnancy, women who may become pregnant. **Extreme Caution:** Moderate to severe hepatic impairment. **Cautions:** Mild hepatic impairment, anemia, hemoglobinemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause serious birth defects, including malformation of heart and great vessels, facial abnormalities. Breast-feeding not recommended. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** Age-related hepatic impairment requires strict monitoring.

INTERACTIONS

DRUG: **Cyclosporine** may increase plasma concentration. **FOOD:** **Grapefruit/grapefruit juice** may increase levels/effect. **HERBAL:** **St. John's wort** may decrease levels/effect. **LAB VALUES:** May increase serum AST, ALT to at least 3 times upper limit of normal levels (ULN). May increase serum aminotransferase more than 3 times ULN. May increase serum bilirubin more than 2 times ULN. May cause marked decrease in Hgb, Hct.

AVAILABILITY (Rx)

Tablets, Film-Coated: 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Swallow whole. Do not crush/break or chew tablets. • Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Pulmonary Arterial Hypertension (PAH)

PO: ADULTS, ELDERLY: Initially, 5 mg once a day. Dose may be increased to 10 mg once a day if 5 mg is tolerated. Dosage modification based on transaminase elevation.

SIDE EFFECTS

Frequent (17%–15%): Peripheral edema, headache. **Occasional (6%–3%):** Nasal congestion, palpitations, constipation, flushing, nasopharyngitis, dyspnea, abdominal pain, sinusitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Potential for serious hepatic injury.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pregnancy must be excluded before the start of treatment and prevented thereafter. Obtain pregnancy test prior to initiation of treatment and monthly during treatment. Measure Hgb prior to therapy, 1 mo, and periodically thereafter. Assess hepatic function tests (including aminotransferase, bilirubin) prior to initiating therapy and then monthly thereafter.

INTERVENTION/EVALUATION

If elevation in hepatic enzymes is noted, changes in monitoring and treatment must be initiated, or if bilirubin level increases, stop treatment. Monitor Hgb, Hct levels at 1 and 3 mos of treatment, then every 3 mos. Monitor Hgb, Hct levels for decrease. Monitor for signs/symptoms of hepatotoxicity (abdominal pain, fever, jaundice).

PATIENT/FAMILY TEACHING

• Female pts should take measures to avoid pregnancy during treatment (Pregnancy Category X). • Hepatic function tests, pregnancy test must be obtained every mo during treatment. • Report clinical symptoms of hepatic injury (nausea, vomiting, fever, abdominal pain, fatigue, jaundice) immediately.

amikacin

am-ih-**kay**-sin
(Amikin)

BLACK BOX ALERT May cause ototoxicity, nephrotoxicity, and/or neuromuscular blockade and respiratory paralysis. Ototoxicity usually is irreversible; nephrotoxicity usually is reversible.

Do not confuse amikacin or Amikin with Amicar, or amikacin with anakinra.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Aminoglycoside. **CLINICAL:** Antibiotic (see p. 21C).

ACTION

Irreversibly binds to protein on bacterial ribosomes. **Therapeutic Effect:** Interferes with protein synthesis of susceptible microorganisms.

PHARMACOKINETICS

Rapid, complete absorption after IM administration. Protein binding: 0%–10%. Widely distributed (penetrates blood-brain barrier when meninges are inflamed). Excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 2–4 hrs (increased in renal impairment, neonates; decreased in cystic fibrosis, burn pts, febrile pts).

USES

Treatment of susceptible infections due to *Pseudomonas,* other gram-negative organisms (*Proteus, Serratia,* other gram-negative bacilli) including biliary tract, bone and joint, CNS, intra-abdominal, skin and soft tissue, urinary tract. Treatment of bacterial pneumonia, septicemia.

PRECAUTIONS

Contraindications: Hypersensitivity to amikacin, other aminoglycosides (cross-sensitivity), or their components. **Cautions:** Myasthenia gravis, neonates, pre-existing renal impairment, auditory or vestibular impairment, hypocalcemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; small amounts distributed in breast milk. May produce fetal nephrotoxicity. **Pregnancy Category D. Children:** Neonates, premature infants may be more susceptible to toxicity due to immature renal function. **Elderly:** Higher risk of toxicity due to age-related renal impairment, increased risk of hearing loss.

INTERACTIONS

DRUG: **Nephrotoxic and ototoxic medications** may increase toxicity. May increase effects of **cyclosporine, neuromuscular blocking agents.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine BUN, AST, ALT, bilirubin, LDH; may decrease serum calcium, magnesium, potassium, sodium concentrations. **Therapeutic levels:** Peak: life threatening infections: 25–40 mcg/ml; serious infections: 20–25 mcg/ml; urinary tract infections: 15–20 mcg/ml. **Trough:** less than 8 mcg/ml. **Toxic levels:** Peak: greater than 40 mcg/ml; **trough:** greater than 10 mcg/ml.

AVAILABILITY (Rx)

Injection Solution: 50 mg/ml, 250 mg/ml (Amikin).

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute to concentration of 0.25–5 mg/ml in 0.9% NaCl or D_5W.

Rate of Administration • Infuse over 30–60 min.

Storage • Store vials at room temperature. • Solution appears clear but may become pale yellow (does not affect potency). • Intermittent IV infusion (piggyback) is stable for 24 hrs at room temperature, 2 days if refrigerated. • Discard if precipitate forms or dark discoloration occurs.

IM

• To minimize discomfort, give deep IM slowly. • Less painful if injected into gluteus maximus rather than in lateral aspect of thigh.

IV INCOMPATIBILITIES

Amphotericin, ampicillin, cefazolin (Ancef), heparin, propofol (Diprivan).

IV COMPATIBILITIES

Amiodarone (Cordarone), aztreonam (Azactam), calcium gluconate, cefepime (Maxipime), cimetidine (Tagamet), ciprofloxacin (Cipro), clindamycin (Cleocin), diltiazem (Cardizem), diphenhydramine (Benadryl), enalapril (Vasotec), esmolol (BreviBloc), fluconazole (Diflucan), furosemide (Lasix), levofloxacin (Levaquin), lipids, lorazepam (Ativan), magnesium sulfate, meperidine (Demerol), midazolam (Versed), morphine, ondansetron (Zofran), potassium chloride, ranitidine (Zantac), total parenteral nutrition (TPN), vancomycin.

INDICATIONS/ROUTES/DOSAGE

Usual Parenteral Dosage

IV, IM: ADULTS, ELDERLY, CHILDREN, INFANTS: 15–22.5 mg/kg/day in divided doses q8h. **NEONATES:** 7.5–10 mg/kg/dose q8–24h.

Dosage in Renal Impairment

Dosage and frequency are modified based on degree of renal impairment and serum drug concentration. After a loading dose of 5–7.5 mg/kg, maintenance dose and frequency are based on serum creatinine levels and creatinine clearance.

Creatinine Clearance	Dosing Interval
60 ml/min or greater	q8h
40–59 ml/min	q12h
20–39 ml/min	q24h
Less than 20 ml/min	Loading dose, monitor levels
Hemodialysis	q48–72h (give after HD on dialysis days)
Continuous renal replacement therapy (CRRT)	Initially, 10 mg/kg, then 7.5 mg/kg q24h

SIDE EFFECTS

Frequent: Phlebitis, thrombophlebitis. **Occasional:** Hypersensitivity reactions (rash, fever, urticaria, pruritus). **Rare:** Neuromuscular blockade (difficulty breathing, drowsiness, weakness).

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious reactions include nephrotoxicity (as evidenced by increased thirst, decreased appetite, nausea, vomiting, increased BUN and serum creatinine levels, decreased creatinine clearance); neurotoxicity (manifested as muscle twitching, visual disturbances, seizures, paresthesia); ototoxicity (as evidenced by tinnitus, dizziness, loss of hearing).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Dehydration must be treated prior to aminoglycoside therapy. Establish pt's baseline hearing acuity before beginning therapy. Question for history of allergies, esp. to aminoglycosides and sulfite. Obtain specimen for culture, sensitivity before giving first dose (therapy may begin before results are known).

INTERVENTION/EVALUATION

Monitor I&O (maintain hydration), urinalysis (casts, RBC, WBC, decrease in specific gravity). Monitor results of serum peak/trough levels. Be alert to ototoxic, neurotoxic, nephrotoxic symptoms (see Adverse Effects/Toxic Reactions). Check IM injection site for pain, induration. Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Assess for skin rash, superinfection (particularly genital/anal pruritus), changes of oral mucosa, diarrhea. When treating pts with neuro-

muscular disorders, assess respiratory response carefully. **Therapeutic levels:** Peak: life-threatening infections: 25–40 mcg/ml; serious infections: 20–25 mcg/ml; urinary tract infections: 15–20 mcg/ml. **Trough:** less than 8 mcg/ml. **Toxic levels:** Peak: greater than 40 mcg/ml; **trough:** greater than 10 mcg/ml.

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • IM injection may cause discomfort. • Notify physician of any hearing, visual, balance, urinary problems even after therapy is completed. • Do not take other medications without consulting physician. • Lab tests are essential part of therapy.

amiodarone

TOP 200 HIGH ALERT

ah-mee-**oh**-da-rone
(Apo-Amiodarone, Cordarone, Nexterone, Novo-Amiodarone, Pacerone)

BLACK BOX ALERT Pts should be hospitalized when amiodarone is initiated. Alternative therapies to be tried first before using amiodarone. Only indicated for pts with life-threatening arrhythmias due to risk of toxicity. Lung damage may occur without symptoms. Hepatotoxicity is common, usually mild (rarely possible). Can exacerbate arrhythmias.

Do not confuse amiodarone with amiloride, or Cordarone with Cardura.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cardiac agent. **CLINICAL:** Antiarrhythmic (see p. 17C).

ACTION

Prolongs duration of myocardial cell action potential and refractory period by acting directly on all cardiac tissue. Decreases AV and sinus node function. **Therapeutic Effect:** Suppresses arrhythmias.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	3 days–3 wks	1 wk–5 mos	7–50 days after discontinuation

Slowly, variably absorbed from GI tract. Protein binding: 96%. Extensively metabolized in liver to active metabolite. Excreted via bile; not removed by hemodialysis. **Half-life:** 26–107 days; metabolite, 61 days.

USES

Management of life-threatening recurrent ventricular fibrillation, hemodynamically unstable ventricular tachycardia (VT). Unresponsive to other therapy. **OFF-LABEL:** Treatment of atrial fibrillation, paroxysmal supraventricular tachycardia (SVT); ventricular tachyarrhythmias.

PRECAUTIONS

Contraindications: Bradycardia-induced syncope (except in the presence of a pacemaker), second- and third-degree AV block (except in presence of a pacemaker), severe sinus node dysfunction, cardiogenic shock. Hypersensitivity to iodine. **Cautions:** May prolong QT interval. Thyroid disease, electrolyte imbalance, hepatic disease, hypotension, left ventricular dysfunction, pulmonary disease. Pts taking warfarin, surgical pts.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. May adversely affect fetal development. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to effects on thyroid function. May experience increased incidence of ataxia, other neurotoxic effects.

INTERACTIONS

DRUG: May increase thioridazine concentration and produce additive prolongation of QT interval. May increase cardiac effects with **other antiarrhythmics.** May increase effect of **beta-blockers, oral anticoagulants (e.g., warfarin).**

May increase concentration, toxicity of **aripiprazole, colchicine, digoxin, phenytoin.** May increase risk of **simvastatin** toxicity, myopathy, rhabdomyolysis. **HERBAL: St. John's wort** may decrease effect. **FOOD: Grapefruit, grapefruit juice** may alter effects. Avoid use during therapy. **LAB VALUES:** May increase serum AST, ALT, alkaline phosphatase, ANA titer. May cause changes in EKG, thyroid function test results. **Therapeutic serum level:** 0.5–2.5 mcg/ml; toxic serum level not established.

AVAILABILITY (Rx)

Infusion (Pre-Mix): Nexterone: 150 mg/100 ml; 360 mg/200 ml. **Injection, Solution (Cordarone I.V.):** 50 mg/ml. **Tablets:** 100 mg (Pacerone), 200 mg (Cordarone, Pacerone), 400 mg (Pacerone).

ADMINISTRATION/HANDLING

IV

Reconstitution • Infusions longer than 2 hrs must be administered/diluted in glass or polyolefin bottles. • Dilute loading dose (150 mg) in 100 ml D_5W (1.5 mg/ml). • Dilute maintenance dose (900 mg) in 500 ml D_5W (1.8 mg/ml). Concentrations greater than 3 mg/ml cause peripheral vein phlebitis.

Rate of Administration • Does not need protection from light during administration. • Administer through central venous catheter (CVC) if possible, using in-line filter. • Bolus over 10 min (15 mg/min) not to exceed 30 mg/min; then 1 mg/min over 6 hrs; then 0.5 mg/min over 18 hrs. • Infusions longer than 1 hr, concentration not to exceed 2 mg/ml unless CVC used.

Storage • Store at room temperature. • Stable for 24 hrs when diluted in glass or polyolefin containers; stable for 2 hrs when diluted in PVC containers.

PO

• Give consistently with regard to meals to reduce GI distress. • Tablets may be crushed • Do not give with grapefruit juice, grapefruit.

IV INCOMPATIBILITIES

Aminophylline (theophylline), cefazolin (Ancef), heparin, sodium bicarbonate.

IV COMPATIBILITIES

Dobutamine (Dobutrex), dopamine (Intropin), furosemide (Lasix), insulin (regular), labetalol (Normodyne), lidocaine, lorazepam (Ativan), midazolam (Versed), morphine, nitroglycerin, norepinephrine (Levophed), phenylephrine (Neo-Synephrine), potassium chloride, vancomycin.

INDICATIONS/ROUTES/DOSAGE

Ventricular Arrhythmias

PO: ADULTS, ELDERLY: Initially, 800–1,600 mg/day in 1–2 divided doses for 1–3 wks. After arrhythmia is controlled or side effects occur, reduce to 600–800 mg/day for 4 wks. Maintenance: 200–600 mg/day. **CHILDREN:** Initially, 10–20 mg/kg/day for 4–14 days, then 5 mg/kg/day for several wks. Maintenance: 5 mg/kg/day or lowest effective maintenance dose for 5–7 days/wk. **NEONATE:** 10–20 mg/kg/day in 2 divided doses for 7–10 days, then 5–10 mg/kg once daily.

IV Infusion: ADULTS: Initially, 1,050 mg over 24 hrs; 150 mg over 10 min, then 360 mg over 6 hrs; then 540 mg over 18 hrs. May continue at 0.5 mg/min. After first 24 hrs, infuse 720 mg/24 hrs (0.5 mg/min) with a concentration of 1–6 mg/ml. **CHILDREN, NEONATES:** Loading dose: 5 mg/kg over 60 min, then IV infusion. Initially 5 mcg/kg/min. Range: 5–15 mcg/kg/min.

SIDE EFFECTS

Expected: Corneal microdeposits noted in almost all pts treated for more than 6 mos (can lead to blurry vision). **Frequent (greater than 3%): PO:** Constipation, headache, decreased appetite, nausea, vomiting, paresthesia, photosensitivity, muscular incoordination. **Parenteral:** Hypotension, nausea, fever, bradycardia. **Occasional (less than 3%): PO:** Bitter or metallic taste; decreased libido; dizziness; facial flushing; blue-gray coloring

of skin (face, arms, and neck); blurred vision; bradycardia; asymptomatic corneal deposits. **Rare (less than 1%): PO:** Rash, visual disturbances, halo vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious, potentially fatal pulmonary toxicity (alveolitis, pulmonary fibrosis, pneumonitis, acute respiratory distress syndrome) may begin with progressive dyspnea and cough with crackles, decreased breath sounds, pleurisy, CHF, or hepatotoxicity. May worsen existing arrhythmias or produce new arrhythmias.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline pulmonary function tests, chest X-ray, hepatic enzyme tests, serum AST, ALT, alkaline phosphatase, EKG. Assess B/P, apical pulse immediately before drug is administered (if pulse is 60/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Monitor for symptoms of pulmonary toxicity (progressively worsening dyspnea, cough). Dosage should be discontinued or reduced if toxicity occurs. Assess pulse for quality, rhythm, bradycardia. Monitor EKG for cardiac changes (e.g., widening of QRS, prolongation of PR and QT intervals). Notify physician of any significant interval changes. Assess for nausea, fatigue, paresthesia, tremor. Monitor for signs of hypothyroidism (periorbital edema, lethargy, pudgy hands/feet, cool/pale skin, vertigo, night cramps) and hyperthyroidism (hot/dry skin, bulging eyes [exophthalmos], frequent urination, eyelid edema, weight loss, difficulty breathing). Monitor serum AST, ALT, alkaline phosphatase for evidence of hepatic toxicity. Assess skin, cornea for bluish discoloration in those who have been on drug therapy longer than 2 mos. Monitor thyroid function test results. If elevated hepatic enzymes occur, dosage reduction or discontinuation is necessary. Monitor for therapeutic serum level (0.5–2.5 mcg/ml). Toxic serum level not established.

PATIENT/FAMILY TEACHING

• Protect against photosensitivity reaction on skin exposed to sunlight. • Bluish skin discoloration gradually disappears when drug is discontinued. • Report shortness of breath, cough. • Outpatients should monitor pulse before taking medication. • Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control arrhythmias. • Restrict salt, alcohol intake. • Avoid grapefruit, grapefruit juice. • Recommend ophthalmic exams q6mos. • Report any vision changes, signs/symptoms of cardiac arrhythmias.

amitriptyline

TOP 200

a-mee-**trip**-ti-leen
(Apo-Amitriptyline, Elavil, Levate, Novo-Tryptyn)

BLACK BOX ALERT Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse amitriptyline with aminophylline, imipramine, or nortriptyline, or Elavil with Eldepryl, enalapril, Equanil, or Mellaril.

FIXED-COMBINATION(S)

Limbitrol: amitriptyline/chlordiazepoxide (an antianxiety): 12.5 mg/5 mg, 25 mg/10 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic.
CLINICAL: Antidepressant, antineuralgic, antibulimic (see p. 37C).

ACTION

Blocks reuptake of neurotransmitters (norepinephrine, serotonin) at presyn-

aptic membranes, increasing availability at postsynaptic receptor sites. Strong anticholinergic activity. **Therapeutic Effect:** Antidepressant effect.

PHARMACOKINETICS

Rapidly and well absorbed from GI tract. Protein binding: 90%. Undergoes first-pass metabolism in liver. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 10–26 hrs.

USES

Treatment of various forms of depression, exhibited as persistent, prominent dysphoria (occurring nearly every day for at least 2 wks) manifested by 4 of 8 symptoms: appetite change, sleep pattern change, increased fatigue, impaired concentration, feelings of guilt or worthlessness, loss of interest in usual activities, psychomotor agitation or retardation, suicidal tendencies. **OFF-LABEL:** Relief of neuropathic pain, such as that experienced by pts with diabetic neuropathy or postherpetic neuralgia; treatment of migraine. Treatment of depression in children, post-traumatic stress disorder (PTSD).

PRECAUTIONS

Contraindications: Acute recovery period after MI, use within 14 days of MAOIs. **Cautions:** Prostatic hypertrophy, history of urinary retention or obstruction, narrow-angle glaucoma, diabetes mellitus, history of seizures, hyperthyroidism, cardiac/hepatic/renal disease, schizophrenia, xerostomia, visual problems, constipation or history of bowel obstruction, elderly, increased intraocular pressure (IOP), hiatal hernia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; minimally distributed in breast milk. **Pregnancy Category C. Children:** More sensitive to increased dosage, toxicity, increased risk of suicidal ideation, worsening of depression. **Elderly:** Increased risk of toxicity. Increased sensitivity to anticholinergic effects. Cautions in those with cardiovascular disease.

INTERACTIONS

DRUG: CNS depressants (including alcohol, anticonvulsants, barbiturates, phenothiazines, sedative-hypnotics) may increase sedation, respiratory depression, hypotensive effects. **Dronedarone, thioridazine, toremefine, ziprasidone** levels may be increased. **Quetiapine** may increase levels/effects. May increase risk of hypertensive crisis, hyperpyresis, seizures with **MAOIs.** **HERBAL: St. John's wort** may decrease levels. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May alter EKG readings (flattened T wave), serum glucose (increase or decrease). **Therapeutic serum level:** Peak: 120–250 ng/ml; **toxic serum level:** greater than 500 ng/ml.

AVAILABILITY (Rx)

Tablets (Elavil): 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

- Give with food or milk if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: 25–150 mg/day as a single dose at bedtime or in divided doses. May gradually increase up to 300 mg/day. Titrate to lowest effective dosage. **ELDERLY:** Initially, 10–25 mg at bedtime. May increase by 10–25 mg at weekly intervals. Range: 25–150 mg/day. **CHILDREN 6–12 YRS:** 1–5 mg/kg/day in divided doses.

Pain Management

PO: ADULTS, ELDERLY: 25–100 mg at bedtime. **CHILDREN:** Initially, 0.1 mg/kg. May increase over 2 wks to 0.5–2 mg/kg at bedtime.

A

SIDE EFFECTS

Frequent: Dizziness, drowsiness, dry mouth, orthostatic hypotension, headache, increased appetite, weight gain, nausea, unusual fatigue, unpleasant taste. **Occasional:** Blurred vision, confusion, constipation, hallucinations, delayed micturition, eye pain, arrhythmias, fine muscle tremors, parkinsonian syndrome, anxiety, diarrhea, diaphoresis, heartburn, insomnia. **Rare:** Hypersensitivity, alopecia, tinnitus, breast enlargement, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce confusion, seizures, severe drowsiness, changes in cardiac conduction, fever, hallucinations, agitation, dyspnea, vomiting, unusual fatigue, weakness. Abrupt withdrawal after prolonged therapy may produce headache, malaise, nausea, vomiting, vivid dreams. Blood dyscrasias, cholestatic jaundice occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Observe and record behavior. Assess psychological status, thought content, suicidal tendencies, sleep patterns, appearance, interest in environment. For those on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood. Monitor B/P, pulse for hypotension, arrhythmias. **Therapeutic serum level:** Peak: 120–250 ng/ml; **toxic serum level:** greater than 500 ng/ml.

PATIENT/FAMILY TEACHING

• Change positions slowly to avoid hypotensive effect. Tolerance to postural hypotension, sedative and anticholinergic effects usually develop during early therapy. • Maximum therapeutic effect may be noted in 2–4 wks. • Sensitivity to sun may occur. • Report visual disturbances. • Do not abruptly discontinue medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Sips of tepid water may relieve dry mouth.

amlodipine

TOP 200

am-**loe**-di-peen
(Apo-Amlodipine, Norvasc, Novo-Amlodipine)
Do not confuse amlodipine with amiloride, or Norvasc with Navane or Vascor.

FIXED-COMBINATION(S)

Anturnide: amlodipine/aliskiren (a renin inhibitor)/hydrochlorothiazide (a diuretic): 5 mg/150 mg/12.5 mg, 5 mg/300 mg/12.5 mg, 5 mg/300 mg/25 mg, 10 mg/300 mg/12.5 mg, 10 mg/300 mg/25 mg. **Azor:** amlodipine/olmesartan (an angiotensin II receptor antagonist): 5 mg/20 mg, 10 mg/20 mg, 5 mg/40 mg, 10 mg/40 mg. **Caduet:** amlodipine/atorvastatin (hydroxamethylglutaryl-CoA [HMG-CoA] reductase inhibitor): 2.5 mg/10 mg, 2.5 mg/20 mg, 2.5 mg/40 mg, 5 mg/10 mg, 10 mg/10 mg, 5 mg/20 mg, 10 mg/20 mg, 5 mg/40 mg, 10 mg/40 mg, 5 mg/80 mg, 10 mg/80 mg. **Exforge:** amlodipine/valsartan (an angiotensin II receptor antagonist): 5 mg/160 mg, 10 mg/160 mg, 5 mg/320 mg, 10 mg/320 mg. **Exforge HCT:** amlodipine/valsartan/hydrochlorothiazide (a diuretic): 5 mg/160 mg/12.5 mg, 5 mg/160 mg/25 mg, 10 mg/160 mg/12.5 mg, 10 mg/160 mg/25 mg, 10 mg/320 mg/25 mg. **Lotrel:** amlodipine/benazepril (an angiotensin-converting enzyme [ACE] inhibitor): 2.5 mg/10 mg, 5 mg/10 mg, 5 mg/20 mg, 5 mg/40 mg, 10 mg/20 mg, 10 mg/40 mg. **Tekamlo:** amlodipine/aliskiren (a

renin inhibitor): 5 mg/150 mg, 5 mg/300 mg, 10 mg/150 mg, 10 mg/300 mg. **Tribenzor:** amlodipine/olmesartan/hydrochlorothiazide: 5 mg/20 mg/12.5 mg, 5 mg/40 mg/12.5 mg, 5 mg/40 mg/25 mg, 10 mg/40 mg/12.5 mg, 10 mg/40 mg/25 mg. **Twynsta:** amlodipine/telmisartan (an angiotensin II receptor antagonist): 5 mg/40 mg, 5 mg/80 mg, 10 mg/40 mg, 10 mg/80 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. **CLINICAL:** Antihypertensive, antianginal (see p. 61C, 77C).

ACTION

Inhibits calcium movement across cardiac and vascular smooth muscle cell membranes. **Therapeutic Effect:** Dilates coronary arteries, peripheral arteries/arterioles. Decreases total peripheral vascular resistance and B/P by vasodilation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–1 hr	N/A	24 hrs

Slowly absorbed from GI tract. Protein binding: 95%–98%. Undergoes first-pass metabolism in liver. Excreted primarily in urine. Not removed by hemodialysis. **Half-life:** 30–50 hrs (increased in elderly, those with hepatic cirrhosis).

USES

Management of hypertension, chronic stable angina, vasospastic (Prinzmetal's or variant) angina. May be used alone or with other antihypertensives or antianginals.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment, aortic stenosis, hypertophic cardiomyopathy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Half-life may be increased, more sensitive to hypotensive effects.

INTERACTIONS

DRUG: May increase levels of **simvastatin. Azole antifungals, cyclosporine protease inhibitors** may increase concentration. **Carbamazepine, rifampin** may decrease levels/effect. **HERBAL: St. John's wort** may decrease concentration. **Ephedra, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD: Grapefruit, grapefruit juice** may increase concentration, hypotensive effects. **LAB VALUES:** May increase hepatic enzymes.

AVAILABILITY (Rx)

Tablets: 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 5 mg/day as a single dose. May increase by 2.5 mg/day every 7–14 days. **Maximum:** 10 mg/day. **SMALL-FRAME, FRAGILE, ELDERLY:** Initially, 2.5 mg/day as a single dose. **CHILDREN 6–17 YRS:** 2.5–5 mg/day.

Angina (Chronic Stable or Vasospastic)

PO: ADULTS: 5–10 mg/day as a single dose. **ELDERLY, PTS WITH HEPATIC INSUFFICIENCY:** 5 mg/day as a single dose.

Dosage in Hepatic Impairment

ADULTS, ELDERLY: (Hypertension) 2.5 mg/day. (Angina) 5 mg/day.

SIDE EFFECTS

Frequent (greater than 5%): Peripheral edema, headache, flushing. **Occasional (5%–1%):** Dizziness, palpitations, nausea, unusual fatigue or weakness (asthenia). **Rare (less than 1%):** Chest pain, bradycardia, orthostatic hypotension.

A

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce excessive peripheral vasodilation, marked hypotension with reflex tachycardia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function tests, B/P, apical pulse.

INTERVENTION/EVALUATION

Assess B/P (if systolic B/P is less than 90 mm Hg, withhold medication, contact physician). Assess for peripheral edema behind medial malleolus (sacral area in bedridden pts). Assess skin for flushing. Question for headache, asthenia (loss of strength, energy).

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control hypertension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid concomitant ingestion of grapefruit juice.

amoxicillin

TOP 200

a-**mox**-i-sil-in
(Apo-Amoxi, Moxatag, Novamoxin)
Do not confuse amoxicillin with amoxapine or Atarax.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin.
CLINICAL: Antibiotic (see p. 29C).

ACTION

Inhibits bacterial cell wall synthesis. **Therapeutic Effect:** Bactericidal in susceptible microorganisms.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 20%. Partially metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 1–1.3 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to streptococci, *E. coli, E. faecalis, P. mirabilis, H. influenzae, N. gonorrhoeae* including ear, nose and throat, lower respiratory tract, skin and skin structure, UTIs, acute uncomplicated gonorrhea, *H. pylori*. **OFF-LABEL:** Treatment of Lyme disease and typhoid fever. Postexposure prophylaxis for anthrax exposure.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillin. **Cautions:** History of allergies (esp. cephalosporins), infectious mononucleosis, renal impairment, asthma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta, appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Pregnancy Category B. Children:** Immature renal function in neonate/young infant may delay renal excretion. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Allopurinol** may increase incidence of rash. **Probenecid** may increase concentration, toxicity risk. May decrease effects of **oral contraceptives.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, LDH, bilirubin, creatinine, BUN. May cause positive Coombs' test.

AVAILABILITY (Rx)

Capsules: 250 mg, 500 mg. **Powder for Oral Suspension:** 125 mg/5 ml, 200 mg/5 ml, 250 mg/5 ml, 400 mg/5ml. **Tablets:**

500 mg, 875 mg. **Tablets (Chewable):** 125 mg, 200 mg, 250 mg, 400 mg. **Tablets, Extended-Release (Moxatag):** 775 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Instruct pt to chew/crush chewable tablets thoroughly before swallowing. • Oral suspension dose may be mixed with formula, milk, fruit juice, water, cold drink. Give immediately after mixing. • After reconstitution, oral suspension is stable for 14 days at either room temperature or refrigerated. **Moxatag:** Take within 1 hr of finishing a meal.

INDICATIONS/ROUTES/DOSAGE

Susceptible Infections

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 250–500 mg q8h or 500–875 mg q12h or 775 mg (Moxatag) once daily. **CHILDREN OLDER THAN 3 MOS:** 20–50 mg/kg/day in divided doses q8–12h. **CHILDREN 3 MOS AND YOUNGER:** 20–30 mg/kg/day in divided doses q12h.

Lower Respiratory Tract Infection

PO: ADULTS, ELDERLY: 500 mg q8h or 875 mg q12h. **CHILDREN:** 45 mg/kg/day in divided doses q12h or 40 mg/kg/day in divided doses q8h.

H. Pylori Infection

PO: ADULTS, ELDERLY: 1 g twice a day in combination with at least 1 other antibiotic and an acid-suppressing agent (proton pump inhibitor or H_2 antagonist).

Otitis Media

PO: CHILDREN: 80–90 mg/kg/day in 2 divided doses.

Pharyngitis/Tonsillitis

PO *(Moxatag)*: ADULTS, CHILDREN 12 YRS AND OLDER: 775 mg once daily.

Endocarditis Prophylaxis

PO: ADULTS, ELDERLY: 2 g 1 hr before procedure. **CHILDREN:** 50 mg/kg 1 hr before procedure. **Maximum:** 2 g.

Dosage in Renal Impairment

◄ALERT► Immediate-release 875-mg tablet or 775-mg extended-release tablet should not be used in pts with creatinine clearance less than 30 ml/min. Dosage interval is modified based on creatinine clearance. **Creatinine clearance 10–30 ml/min:** 250–500 mg q12h. **Creatinine clearance less than 10 ml/min:** 250–500 mg q24h.

SIDE EFFECTS

Frequent: GI disturbances (mild diarrhea, nausea, vomiting), headache, oral/vaginal candidiasis. **Occasional:** Generalized rash, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Severe hypersensitivity reactions, including anaphylaxis, acute interstitial nephritis, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. penicillins, cephalosporins.

INTERVENTION/EVALUATION

Hold medication and promptly report rash, diarrhea (fever, abdominal pain, mucus and blood in stool may indicate antibiotic-associated colitis). Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor renal/hepatic function tests.

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • Take with meals if GI upset occurs. • Thoroughly chew the chewable tablets before swallowing. • Notify physician if rash, diarrhea, other new symptoms occur.

amoxicillin/clavulanate

TOP 200

a-**mox**-i-sil-in/**klav**-yoo-la-nate (Amoclan, Apo-Amoxi-Clav, Augmentin, Augmentin ES 600, Augmentin XR, Clavulin, Novo-Clavamoxin)

Do not confuse Augmentin with amoxicillin or Azulfidine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin.
CLINICAL: Antibiotic (see p. 29C).

ACTION

Amoxicillin inhibits bacterial cell wall synthesis. Clavulanate inhibits bacterial beta-lactamase. **Therapeutic Effect:** Amoxicillin is bactericidal in susceptible microorganisms. Clavulanate protects amoxicillin from enzymatic degradation.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 20%. Partially metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 1–1.3 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to *streptococci, E. coli, E. faecalis, P. mirabilis,* beta-lactamase producing *H. influenzae, Klebsiella* spp., *M. catarrhalis*, and *S. aureus* (not methicillin-resistant *Staphylococcus aureus* [MRSA]) including lower respiratory, skin and skin structure, UTIs, otitis media, sinusitis. **OFF-LABEL:** Treatment of bronchitis, chancroid.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillins, history of cholestatic jaundice or hepatic impairment. Augmentin XR: Severe renal impairment, hemodialysis pt. **Cautions:** History of allergies, esp. cephalosporins; renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta, appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Pregnancy Category B. Children:** Immature renal function in neonate/young infant may delay renal excretion. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Allopurinol** may increase incidence of rash. **Probenecid** may increase concentration, toxicity risk. May decrease effects of **oral contraceptives.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT. May cause positive Coombs' test.

AVAILABILITY (Rx)

Powder for Oral Suspension (Amoclan, Augmentin): 125 mg–31.25 mg/5 ml, 200 mg–28.5 mg/5 ml, 250 mg–62.5 mg/5 ml, 400 mg–57 mg/5 ml, 600 mg–42.9 mg/5 ml. **Tablets (Augmentin):** 250 mg–125 mg, 500 mg–125 mg, 875 mg–125 mg. **Tablets (Chewable [Augmentin]):** 200 mg–28.5 mg, 400 mg–57 mg.

Tablets (Extended-Release [Augmentin XR]): 1,000 mg–62.5 mg.

ADMINISTRATION/HANDLING

PO

• Store tablets at room temperature. • After reconstitution, oral suspension is stable for 10 days but should be refrigerated. • May mix dose of suspension with milk, formula, or juice and give immediately. • Give without regard to meals. • Give with food to increase absorption, decrease stomach upset. • Instruct pt to chew/crush chewable tablets thoroughly before swallowing. • Do not crush extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Usual Adult Dosage

PO: ADULTS: 250–500 mg q8h or 875 mg q12h.

Usual Pediatric Dosage

PO: CHILDREN OLDER THAN 3 MOS, WEIGHING 40 KG OR LESS: 20–90 mg/kg/day divided q8–12h.

Otitis Media

PO: CHILDREN: 90 mg/kg/day (600 mg/5 ml suspension) in divided doses q12h for 10 days.

Usual Neonate Dosage

PO: NEONATES, CHILDREN YOUNGER THAN 3 MOS: 30 mg/kg/day (125 mg/5 ml suspension) in divided doses q12h.

Dosage in Renal Impairment

◄ALERT► Do not use 875-mg tablet or extended-release tablets for creatinine clearance less than 30 ml/min.

Dosage and frequency are modified based on creatinine clearance. **Creatinine clearance 10–30 ml/min:** 250–500 mg q12h. **Creatinine clearance less than 10 ml/min:** 250–500 mg q24h. **HD:** 250–500 mg q24h, give dose during and after dialysis. **PD:** 250 mg q12h

SIDE EFFECTS

Occasional (9%–4%): Diarrhea, loose stools, nausea, skin rashes, urticaria. **Rare (less than 3%):** Vomiting, vaginitis, abdominal discomfort, flatulence, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Severe hypersensitivity reactions, including anaphylaxis, acute interstitial nephritis, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. penicillins, cephalosporins.

INTERVENTION/EVALUATION

Hold medication and promptly report rash, diarrhea (fever, abdominal pain, mucus and blood in stool may indicate antibiotic-associated colitis). Be alert for signs of superinfection including fever, vomiting, diarrhea, black/hairy tongue, ulceration or changes of oral mucosa, anal/genital pruritus. Monitor renal/hepatic tests with prolonged therapy.

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • Take with meals if GI upset occurs. • Thoroughly chew the chewable tablets before swallowing. • Notify physician if rash, diarrhea, other new symptoms occur.

amphotericin B HIGH ALERT

am-foe-**ter**-ih-sin

(Abelcet, AmBisome, Amphotec, Fungizone 🍁)

BLACK BOX ALERT (Nonliposomal) To be used primarily for pts with progressive, potentially fatal fungal infection. Not to be used for noninvasive forms of fungal disease (oral thrush, vaginal candidiasis).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Polyene antifungal. **CLINICAL:** Antifungal, antiprotozoal (see p. 46C).

ACTION

Generally fungistatic but may become fungicidal with high dosages or very susceptible microorganisms. Binds to sterols in fungal cell membrane. **Therapeutic Effect:** Increases fungal cell membrane permeability, allowing loss of potassium,

other cellular components, resulting in cell death.

PHARMACOKINETICS

Protein binding: 90%. Widely distributed. Metabolic fate unknown. Cleared by nonrenal pathways. Minimal removal by hemodialysis. Amphotec and Abelcet are not dialyzable. **Half-life:** Fungizone, 24 hrs (increased in neonates and children); Abelcet, 7.2 days; AmBisome, 100–153 hrs; Amphotec, 26–28 hrs.

USES

Abelcet: Treatment of aspergillosis or any type of invasive fungal infections refractory or intolerant to Fungizone. **AmBisome:** Empiric treatment of fungal infection in febrile neutropenic pts. *Aspergillus, Candida* species, *Cryptococcus* infections refractory to Fungizone or pt with renal impairment or toxicity with Fungizone. Treatment of cryptococcal meningitis in HIV-infected pts. Treatment of visceral leishmaniasis. **Amphotec:** Treatment of invasive aspergillosis in pts with renal impairment or toxicity or prior treatment failure with Fungizone. **Fungizone:** Treatment of severe systemic and CNS infections caused by susceptible fungi including *Candida* spp., *Histoplasma, Cryptococcus, Aspergillus, Blastomyces.* Treatment of fungal peritonitis. **OFF-LABEL: Abelcet, Amphotec:** Serious *Candida* infections. **AmBisome:** Treatment of systemic histoplasmosis infection.

PRECAUTIONS

Contraindications: Hypersensitivity to amphotericin B or sulfites. **Cautions:** Renal impairment; in combination with antineoplastic therapy. Give only for progressive, potentially fatal fungal infection.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established, but use the least amount for therapeutic regimen. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antineoplastic agents may increase potential for bronchospasm, renal toxicity, hypotension. **Steroids** may cause severe hypokalemia. May increase **digoxin** toxity (due to hypokalemia). **Nephrotoxic medications** may increase nephrotoxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, alkaline phosphatase, BUN, serum creatinine. May decrease serum calcium, magnesium, potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50 mg (AmBisome, Amphotec, Fungizone), 100 mg (Amphotec). **Injection, Suspension (Abelcet):** 5 mg/ml.

ADMINISTRATION/HANDLING

IV

• Observe strict aseptic technique because no bacteriostatic agent or preservative is present in diluent.

Reconstitution

ABELCET

• Shake 20-ml (100-mg) vial gently until contents are dissolved. Withdraw required dose using 5-micron filter needle (supplied by manufacturer). • Dilute with D_5W to 1–2 mg/ml.

AMBISOME

• Reconstitute each 50-mg vial with 12 ml Sterile Water for Injection to provide concentration of 4 mg/ml. • Shake vial vigorously for 30 sec. Withdraw required dose and empty syringe contents through a 5-micron filter into an infusion of D_5W to provide final concentration of 1–2 mg/ml (0.2–0.5 mg/ml for infants and small children).

AMPHOTEC

• Add 10 ml Sterile Water for Injection to each 50-mg vial to provide concentration of 5 mg/ml. Shake gently. • Further dilute

only with D_5W to a concentration of 0.1–2 mg/ml.

FUNGIZONE

• Add 10 ml Sterile Water for Injection to each 50-mg vial. • Further dilute with 250–500 ml D_5W. • Final concentration should not exceed 0.1 mg/ml (0.25 mg/ml for central infusion).

Rate of Administration

• Give by slow IV infusion. Infuse conventional amphotericin over 4–6 hrs; Abelcet over 2 hrs (shake contents if infusion longer than 2 hrs); Amphotec over 2–4 hrs (avoid rate faster than 1 mg/kg/hr); AmBisome over 1–2 hrs.

Storage

ABELCET

• Refrigerate unreconstituted solution. Reconstituted solution is stable for 48 hrs if refrigerated, 6 hrs at room temperature.

AMBISOME

• Refrigerate unreconstituted solution. Reconstituted solution of 4 mg/ml is stable for 24 hrs. Concentration of 1–2 mg/ml is stable for 6 hrs.

AMPHOTEC

• Refrigerate intact vials.• Reconstituted solution is stable for 24 hrs if refrigerated.

FUNGIZONE

• Refrigerate intact vials. • Once reconstituted, vials stable for 24 hrs at room temperature, 7 days if refrigerated. • Diluted solutions stable for 24 hrs at room temperature, 2 days if refrigerated.

IV INCOMPATIBILITIES

Abelcet, AmBisome, Amphotec: Do not mix with any other drug, diluent, or solution. Fungizone: Allopurinol (Aloprim), amifostine (Ethyol), aztreonam (Azactam), calcium gluconate, cefepime (Maxipime), cimetidine (Tagamet), ciprofloxacin (Cipro), diphenhydramine (Benadryl), docetaxel (Taxotere), dopamine (Intropin), doxorubicin (Adriamycin), enalapril (Vasotec), etoposide (VP-16), filgrastim (Neupogen), fluconazole (Diflucan), fludarabine (Fludara), foscarnet (Foscavir), gemcitabine (Gemzar), lipids, magnesium sulfate, meperidine (Demerol), meropenem (Merrem IV), ondansetron (Zofran), paclitaxel (Taxol), piperacillin and tazobactam (Zosyn), potassium chloride, propofol (Diprivan), total parenteral nutrition (TPN), vinorelbine (Navelbine).

IV COMPATIBILITY

Lorazepam (Ativan).

INDICATIONS/ROUTES/DOSAGE

Usual Abelcet Dose

IV Infusion *(Abelcet)*: ADULTS, CHILDREN: 2.5–5 mg/kg/day at rate of 2.5 mg/kg/hr.

Usual AmBisome Dose

IV Infusion *(Ambisome)*: ADULTS, CHILDREN: 3–6 mg/kg/day over 2 hrs.

Usual Amphotec Dose

IV Infusion *(Amphotec)*: ADULTS, CHILDREN: 3–4 mg/kg/day at rate no faster than 1 mg/kg/hr. **Maximum:** 7.5 mg/kg/day.

Fungizone, Usual Dose

IV Infusion: ADULTS, ELDERLY: Dosage based on pt tolerance and severity of infection. Initially, 1-mg test dose is given over 20–30 min. If test dose is tolerated, 0.25 mg/kg is given on same day and 0.5 mg/kg on second day; then dosage is increased until desired daily dose reached. Total daily dose: 1 mg/kg/day up to 1.5 mg/kg every other day. **Maximum:** 1.5 mg/kg/day. **CHILDREN:** Test dose of 0.1 mg/kg/dose (**maximum:** 1 mg) is infused over 20–60 min. If test dose is tolerated, initial dose of 0.4 mg/kg may be given on same day; dosage is then increased in 0.25-mg/kg increments as needed. Maintenance dose: 0.25–1 mg/kg/day.

SIDE EFFECTS

Frequent (greater than 10%): Abelcet: Chills, fever, increased serum creatinine, multiple

A

organ failure. **AmBisome:** Hypokalemia, hypomagnesemia, hyperglycemia, hypocalcemia, edema, abdominal pain, back pain, chills, chest pain, hypotension, diarrhea, nausea, vomiting, headache, fever, rigors, insomnia, dyspnea, epistaxis, increased hepatic/renal function test results. **Amphotec:** Chills, fever, hypotension, tachycardia, increased serum creatinine, hypokalemia, bilirubinemia. **Amphocin:** Fever, chills, headache, anemia, hypokalemia, hypomagnesemia, anorexia, malaise, generalized pain, nephrotoxicity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiovascular toxicity (hypotension, ventricular fibrillation), anaphylaxis occur rarely. Altered vision/hearing, seizures, hepatic failure, coagulation defects, multiple organ failure, sepsis may be noted. Each alternative formulation is less nephrotoxic than conventional amphotericin (Amphocin).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to amphotericin B, sulfite. Avoid, if possible, other nephrotoxic medications. Obtain premedication orders to reduce adverse reactions during IV therapy (antipyretics, antihistamines, antiemetics, corticosteroids).

INTERVENTION/EVALUATION

Monitor B/P, temperature, pulse, respirations; assess for adverse reactions (fever, tremors, chills, anorexia, nausea, vomiting, abdominal pain) q15min twice, then q30min for 4 hrs of initial infusion. If symptoms occur, slow infusion, administer medication for symptomatic relief. For severe reaction, stop infusion and notify physician. Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Monitor I&O, renal function tests for nephrotoxicity. Monitor serum potassium and magnesium levels, hematologic and hepatic function test results.

PATIENT/FAMILY TEACHING

• Prolonged therapy (wks or mos) is usually necessary. • Fever reaction may decrease with continued therapy. • Muscle weakness may be noted during therapy (due to hypokalemia).

ampicillin

am-pi-**sill**-in
(Apo-Ampi, Novo-Ampicillin, Nu-Ampi)
Do not confuse ampicillin with aminophylline.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin.
CLINICAL: Antibiotic (see p. 29C).

ACTION

Inhibits cell wall synthesis in susceptible microorganisms. **Therapeutic Effect:** Bactericidal in susceptible microorganisms.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: 15%–25%. Widely distributed. Partially metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 1–1.5 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to streptococci, *S. pneumoniae,* staphylococci (non-penicillinase producing), meningococci, *Listeria*, some *Klebsiella*, *E. coli*, *H. influenzae*, *Salmonella*, *Shigella* including GI, GU, respiratory infections, meningitis, endocarditis prophylaxis.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillin, infectious mononucleosis. **Cautions:** History of allergies, esp. cephalosporins, renal impairment, asthmatic pts, infectious mononucleosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Pregnancy Category B. Children:** Immature renal function in neonates/young infants may delay renal excretion. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Allopurinol may increase incidence of rash. **Probenecid** may increase concentration, toxicity risk. May decrease effects of **oral contraceptives.** May increase level/effects of **methotrexate.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT. May cause positive Coombs' test.

AVAILABILITY (Rx)

Capsules: 250 mg, 500 mg. **Injection, Powder for Reconsitution:** 125 mg, 250 mg, 500 mg, 1 g, 2 g. **Powder for Oral Suspension:** 125 mg/5 ml, 250 mg/5 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV injection, dilute each vial with 5 ml Sterile Water for Injection or 0.9% NaCl (10 ml for 1- and 2-g vials). **Maximum concentration:** 100 mg/ml for IV push. • For intermittent IV infusion (piggyback), further dilute with 50–100 ml 0.9% NaCl. **Maximum concentration:** 30 mg/ml.

Rate of Administration • For IV injection, give over 3–5 min at a rate not to exceed 100 mg/min. • For intermittent IV infusion (piggyback), infuse over 15–30 min. • Due to potential for hypersensitivity/anaphylaxis, start initial dose at few drops per min, increase slowly to ordered rate; stay with pt first 10–15 min, then check q10min.

Storage • IV solution, diluted with 0.9% NaCl, is stable for 8 hrs at room temperature or 2 days if refrigerated. • If diluted with D_5W, is stable for 2 hrs at room temperature or 3 hrs if refrigerated. • Discard if precipitate forms.

IM

• Reconstitute each vial with Sterile Water for Injection or Bacteriostatic Water for Injection (consult individual vial for specific volume of diluent). • Stable for 1 hr. • Give deeply in large muscle mass.

PO

• Oral suspension, after reconstitution, is stable for 7 days at room temperature, 14 days if refrigerated. • Give orally 1–2 hrs before meals for maximum absorption. • Shake oral suspension well before using.

IV INCOMPATIBILITIES

Amikacin (Amikin), diltiazem (Cardizem), gentamicin, midazolam (Versed), ondansetron (Zofran).

IV COMPATIBILITIES

Calcium gluconate, cefepime (Maxipime), dopamine (Intropin), famotidine (Pepcid), furosemide (Lasix), heparin, hydromorphone (Dilaudid), insulin (regular), levofloxacin (Levaquin), lipids, magnesium sulfate, meperidine (Demerol), morphine, multivitamins, potassium chloride, propofol (Diprivan), total parenteral nutrition (TPN) (if ampicillin sodium concentration is less than 40 mg/ml).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 250–500 mg q6h. **CHILDREN:** 50–100 mg/kg/day in divided doses q6h. **Maximum:** 2–4 g/day.

IV, IM: ADULTS, ELDERLY: 500 mg–3 g q4–6h. **Maximum:** 14 g/day. **CHILDREN:** 100–400 mg/kg/day in divided doses q6h. **Maximum:** 12 g/day. **NEONATES:** 50–100 mg/kg/day in divided doses q6–12h.

A

Dosage in Renal Impairment

Creatinine Clearance	Dosage
10–50 ml/min	Administer q6–12h
Less than 10 ml/min	Administer q12–24h
Hemodialysis	1–2 g q12–24h
Peritoneal dialysis	250 mg q12h
Continuous renal replacement therapy (CRRT)	2g, then 1–2 g q6–8h

SIDE EFFECTS

Frequent: Pain at IM injection site, GI disturbances (mild diarrhea, nausea, vomiting), oral or vaginal candidiasis. **Occasional:** Generalized rash, urticaria, phlebitis or thrombophlebitis (with IV administration), headache. **Rare:** Dizziness, seizures (esp. with IV therapy).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Severe hypersensitivity reactions, including anaphylaxis, acute interstitial nephritis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. penicillins, cephalosporins.

INTERVENTION/EVALUATION

Hold medication and promptly report rash (although common with ampicillin, may indicate hypersensitivity) or diarrhea (fever, abdominal pain, mucus and blood in stool may indicate antibiotic-associated colitis). Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Check IM injection site for pain, induration. Monitor I&O, urinalysis, renal function tests. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • More effective if taken 1 hr before or 2 hrs after food/beverages. • Discomfort may occur with IM injection. • Notify physician if rash, diarrhea, or other new symptoms occur.

ampicillin/ sulbactam

amp-ih-**sill**-in/sull-**bak**-tam (Unasyn)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin.
CLINICAL: Antibiotic (see p. 29C).

ACTION

Ampicillin inhibits bacterial cell wall synthesis. Sulbactam inhibits bacterial beta-lactamase. **Therapeutic Effect:** Ampicillin is bactericidal in susceptible microorganisms. Sulbactam protects ampicillin from enzymatic degradation.

PHARMACOKINETICS

Protein binding: 28%–38%. Widely distributed. Partially metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 1–1.3 hrs (increased in renal impairment).

USES

Treatment of susceptible infections, including intra-abdominal, skin/skin structure, gynecologic infections, due to beta-lactamase-producing organisms including *H. influenzae, E. coli, Klebsiella, Acinetobacter, Enterobacter, S. aureus,* and *Bacteroides* spp.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillins or sulbactam. **Cautions:** History of allergies, esp. cephalosporins,

renal impairment, infectious mononucleosis, asthmatic pts.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 1 yr. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Allopurinol** may increase incidence of rash. **Probenecid** may increase concentration, toxicity risk. May decrease effects of **oral contraceptives.** May increase level/effects of **methotrexate.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, alkaline phosphatase, LDH, creatinine. May cause positive Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconsitution: 1.5 g (ampicillin 1 g/sulbactam 500 g), 3 g (ampicillin 2 g/sulbactam 1 g).

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV injection, dilute with Sterile Water for Injection to provide concentration of 375 mg/ml. • For intermittent IV infusion (piggyback), further dilute with 50–100 ml 0.9% NaCl.

Rate of Administration • For IV injection, give slowly over minimum of 10–15 min. • For intermittent IV infusion (piggyback), infuse over 15–30 min. • Due to potential for hypersensitivity/anaphylaxis, start initial dose at few drops per min, increase slowly to ordered rate; stay with pt first 10–15 min, then check q10min.

Storage • IV solution, diluted with 0.9% NaCl, is stable for 8 hrs at room temperature, 72 hrs if refrigerated. • Discard if precipitate forms.

IM

• Reconstitute each 1.5-g vial with 3.2 ml Sterile Water for Injection or lidocaine to provide concentration of 250 mg ampicillin/125 mg sulbactam/ml. • Give deeply into large muscle mass within 1 hr after preparation.

IV INCOMPATIBILITIES

Diltiazem (Cardizem), idarubicin (Idamycin), ondansetron (Zofran), sargramostim (Leukine), total parenteral nutrition (TPN).

IV COMPATIBILITIES

Famotidine (Pepcid), heparin, insulin (regular), lipids, meperidine (Demerol), morphine.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IV, IM: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 1.5 g (1 g ampicillin/500 mg sulbactam) to 3 g (2 g ampicillin/1 g sulbactam) q6h. **Maximum:** 12 g/day (Unasyn). **IV: CHILDREN 12 YRS AND YOUNGER:** 100–400 mg ampicillin/kg/day in divided doses q6h. **Maximum:** 12 g/day (Unasyn).

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
Greater than 30 ml/min	1.5–3 g q6–8h
15–30 ml/min	1.5–3 g q12h
5–14 ml/min	1.5–3 g q24h
Hemodialysis	1.5–3 g q12–24h
Peritoneal dialysis	3 g q24h
Continuous renal replacement therapy (CRRT)	3 g, then 1.5–3 g q6–12h

SIDE EFFECTS

Frequent: Diarrhea, rash (most common), urticaria, pain at IM injection site, thrombophlebitis with IV administration, oral or vaginal candidiasis. **Occasional:**

A

Nausea, vomiting, headache, malaise, urinary retention.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps; severe, watery diarrhea; fever) may result from altered bacterial balance. Severe hypersensitivity reactions, including anaphylaxis, acute interstitial nephritis, blood dyscrasias, may occur. High dosage may produce seizures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. penicillins, cephalosporins.

INTERVENTION/EVALUATION

Hold medication and promptly report rash (although common with ampicillin, may indicate hypersensitivity) or diarrhea (fever, abdominal pain, mucus and blood in stool may indicate antibiotic-associated colitis). Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Check IM injection site for pain, induration. Monitor I&O, urinalysis, renal function tests. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Take antibiotic for full length of treatment. • Space doses evenly. • Discomfort may occur with IM injection. • Notify physician if rash, diarrhea, or other new symptoms occur.

anakinra

an-a-**kin**-ra
(Kineret)
Do not confuse anakinra with amikacin or Ampyra.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Interleukin-1 receptor antagonist. **CLINICAL:** Anti-inflammatory.

ACTION

Blocks the binding of interleukin-1 (IL-1), a protein that is a major mediator of joint pathology and is present in excess amounts in pts with rheumatoid arthritis. **Therapeutic Effect:** Inhibits inflammatory response.

PHARMACOKINETICS

No accumulation of anakinra in tissues or organs was observed after daily subcutaneous doses. Excreted in urine. **Half-life:** 4–6 hrs.

USES

Treatment of signs and symptoms or to slow progression of structural damage of moderate to severely active rheumatoid arthritis (RA) in pts who have failed treatment with one or more disease-modifying antirheumatic drugs. May use alone or with other disease-modifying antirheumatic drugs (other than tumor necrosis factor blocking medications).

PRECAUTIONS

Contraindications: Known hypersensitivity to *Escherichia coli*–derived proteins, serious infection. **Cautions:** Renal impairment (risk of toxic reaction is increased), asthma (higher incidence of serious infection), elderly, history of significant hematologic abnormalities.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require caution.

INTERACTIONS

DRUG: Increased risk of infection with **etanercept. HERBAL: Echinacea** may

decrease effect. **FOOD:** None known. **LAB VALUES:** May decrease WBC count, platelet count, absolute neutrophil count (ANC). May increase eosinophil count.

AVAILABILITY (Rx)

Injection Solution: 100-mg syringe.

ADMINISTRATION/HANDLING

Subcutaneous

• Store in refrigerator; do not freeze or shake. • Do not use if particulate or discoloration is noted. • Give by subcutaneous route (thigh, abdomen, upper arm).

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA)

Subcutaneous: ADULTS, ELDERLY: 100 mg/day, given at same time each day.

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min and/or end-stage renal disease: 100 mg every other day.

SIDE EFFECTS

Occasional: Injection site ecchymosis, erythema, inflammation. **Rare:** Headache, nausea, diarrhea, abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Infections, including upper respiratory tract infection, sinusitis, flu-like symptoms, cellulitis, have been noted. Neutropenia may occur, particularly when anakinra is used in combination with tumor necrosis factor-blocking agents.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess pt's range of motion, pain, swelling in joints.

INTERVENTION/EVALUATION

Monitor neutrophil count before therapy begins, monthly for 3 mos while receiving therapy, then quarterly for up to 1 yr. Assess for hypersensitivity reaction, esp. during first 4 wks of therapy (uncommon after first mo of therapy).

PATIENT/FAMILY TEACHING

• Follow dosage and administration procedures carefully. • Dispose of syringes and needles properly. • Avoid live/inactive virus vaccines during therapy.

anastrozole

HIGH ALERT

an-**as**-troe-zole
(Arimidex)

Do not confuse anastrozole with letrozole, or Arimidex with Imitrex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aromatase inhibitor. **CLINICAL:** Antineoplastic hormone (see p. 79C).

ACTION

Decreases circulating estrogen level by inhibiting aromatase, the enzyme that catalyzes the final step in estrogen production. **Therapeutic Effect:** Inhibits growth of breast cancers that are stimulated by estrogens by lowering serum estradiol concentration.

PHARMACOKINETICS

Well absorbed into systemic circulation (absorption not affected by food). Protein binding: 40%. Extensively metabolized in liver. Eliminated by biliary system and, to a lesser extent, kidneys. **Mean half-life:** 50 hrs in postmenopausal women. Steady-state plasma levels reached in about 7 days.

USES

Treatment of advanced breast cancer in postmenopausal women who have developed progressive disease while receiving tamoxifen therapy. First-line therapy in advanced or metastatic breast cancer in postmenopausal women. Adjuvant treatment in early breast cancer in postmeno-

A

pausal women. **OFF-LABEL:** Treatment of recurrent or metastatic endometrial or uterine cancers; treatment of ovarian cancer.

PRECAUTIONS

Contraindications: Pregnancy, those with potential for pregnancy. **Cautions:** Preexisting ischemic cardiac disease or osteopenia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; may cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Estrogen therapies** may reduce concentration/effects. **Tamoxifen** may reduce plasma concentration. **HERBAL:** Avoid **black cohosh, dong quai, licorice, red clover.** **FOOD:** None known. **LAB VALUES:** May elevate serum GGT level in pts with liver metastases. May increase serum AST, ALT, alkaline phosphate, total cholesterol, LDL.

AVAILABILITY (Rx)

Tablets: 1 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Breast Cancer

PO: ADULTS, ELDERLY: 1 mg once a day.

SIDE EFFECTS

Frequent (16%–8%): Asthenia (loss of strength, energy), nausea, headache, hot flashes, back pain, vomiting, cough, diarrhea. **Occasional (6%–4%):** Constipation, abdominal pain, anorexia, bone pain, pharyngitis, dizziness, rash, dry mouth, peripheral edema, pelvic pain, depression, chest pain, paresthesia. **Rare (2%–1%):** Weight gain, diaphoresis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombophlebitis, anemia, leukopenia occur rarely. Vaginal hemorrhage occurs rarely (2%).

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor for asthenia (loss of strength, energy) and dizziness and assist with ambulation if needed. Assess for headache, pain. Offer antiemetic for nausea, vomiting. Monitor for onset of diarrhea; offer antidiarrheal medication.

PATIENT/FAMILY TEACHING

- Notify physician if nausea, asthenia (loss of strength, energy), hot flashes become unmanageable.

anidulafungin

a-nid-yoo-lah-**fun**-jin
(Eraxis)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Echinocandin. **CLINICAL:** Antifungal (see p. 47C).

ACTION

Inhibits synthesis of the enzyme glucan, (vital component of fungal cell formation), preventing fungal cell wall formation. **Therapeutic Effect:** Fungistatic.

PHARMACOKINETICS

Distributed in tissue. Moderately bound to albumin. Protein binding: 84%–99%. Slow chemical degradation; 30% excreted in feces over 9 days. Not removed by hemodialysis. **Half-life:** 40–50 hrs.

USES

Treatment of candidemia, other forms of *Candida* infections (intra-abdominal abscess, peritonitis), esophageal candidiasis. **OFF-LABEL:** Treatment of infections due to *Aspergillus*.

PRECAUTIONS

Contraindications: Hypersensitivity to anidulafungin, other echinocandins. **Cautions:** Hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be embryotoxic. Crosses placental barrier. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, bilirubin, alkaline phosphatase, LDH, transferase, amylase, lipase, CPK, creatinine, calcium. May decrease serum albumin, bicarbonate, magnesium, protein, potassium, Hgb, Hct, WBCs, neutrophils, platelet count. May prolong prothrombin time (PT).

AVAILABILITY (Rx)

Injection, Powder for Reconsitution: 50-mg vial, 100-mg vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 50-mg vial with 15 ml Sterile Water for Injection (100 mg with 30 ml). Swirl, do not shake. • Further dilute 50 mg with 50 ml D_5W or 0.9% NaCl (100 mg with 100 ml, 200 mg with 200 ml).

Rate of Administration • Do not exceed infusion rate of 1.1 mg/min. Not for IV bolus injection.

Storage • Refrigerate unreconstituted vials. • Final reconstituted infusion solution stable for 24 hrs refrigerated.

IV INCOMPATIBILITIES

Amphotericin B (Abelcet, AmBisome), ertapenem (Invanz), sodium bicarbonate.

IV COMPATIBILITIES

Dexamethasone (Decadron), famotidine (Pepcid), furosemide (Lasix), hydromorphone (Dilaudid), lorazepam (Ativan), meperidine (Demerol), methylprednisolone (Solu-Medrol), morphine.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Duration of treatment based on pt's clinical response. In general, treatment is continued for at least 14 days after last positive culture.

Candidemia, Other Candida Infections

IV: ADULTS, ELDERLY: Give single 200-mg loading dose on day 1, followed by 100 mg/day thereafter for at least 14 days after last positive culture.

Esophageal Candidiasis

IV: ADULTS, ELDERLY: Give single 100-mg loading dose on day 1, followed by 50 mg/day thereafter for a minimum of 14 days and for at least 7 days following resolution of symptoms.

SIDE EFFECTS

Rare (3%–1%): Diarrhea, nausea, headache, rigors, peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypokalemia occurs in 4% of pts. Hypersensitivity reaction characterized by facial flushing, hypotension, pruritus, urticaria, rash occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain specimens for fungal culture prior to therapy. Treatment may be instituted before results are known. Obtain baseline hepatic enzyme levels.

INTERVENTION/EVALUATION

Monitor serum chemistry results for evidence of hepatic dysfunction, hypokalemia. Monitor daily pattern of bowel activity, stool consistency. Assess for rash, urticaria.

PATIENT/FAMILY TEACHING

• For esophageal candidiasis, maintain diligent oral hygiene.

antihemophilic factor (factor VIII, AHF)

an-tee-hee-moe-**fill**-ick **fak**-tor (**Antihemophilic Factor/von Willebrand Factor Complex:** Alphanate, Humate-P, Wilate. **Human:** Hemofil M, Koate-DVI, Monarc-M, Monoclate-P. **Recombinant:** Advate, Hexilate FS, Kogenate FS, Recombinate, Refacto, Xyntha)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihemophilic agent. **CLINICAL:** Hemostatic.

ACTION

Assists in conversion of prothrombin to thrombin, essential for blood coagulation. Replaces missing clotting factor VIII. **Therapeutic Effect:** Produces hemostasis; corrects or prevents bleeding episodes.

PHARMACOKINETICS

Half-life: 8–27 hrs.

USES

Human: Prevention/treatment of hemorrhagic episodes, perioperative management of hemophilia A. **Alphanate, Humate-P, Wilate:** Prevention/treatment of hemorrhagic episodes in pts with hemophilia A. Prophylaxis with surgical/invasive procedures, treatment of bleeding in pts with von Willebrand disease (vWD) when desmopressin is known or suspected to be inadequate. **Recombinant:** Management of hemophilia A, prevention and control of bleeding episodes, perioperative management of hemophilia A, prophylaxis of joint bleeding and reduce risk of joint damage in children with hemophilia A. **OFF-LABEL:** Treatment of disseminated intravascular coagulation.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic disease, those with blood types A, B, AB.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Human: Injection, Powder for Reconsitution (Hemofil M, Koate-DVI, Monarc-M, Monoclate-P): Actual number of units listed on each vial. **Alphanate:** 250 units, 500 units, 1,000 units, 1,500 units. **Humate-P:** 250 units, 500 units, 1,000 units. **Recombinant: Injection, Powder for Reconsitution: Advate:** 250 units, 500 units, 1,000 units, 1,500 units, 2,000 units, 3,000 units. **Hexilate, Kogenate, Recombinate:** 250 units, 500 units, 1,000 units. **Refacto, Xyntha:** 250 units, 500 units, 1,000 units, 2,000 units.

ADMINISTRATION/HANDLING

IV

Reconstitution • Warm concentrate and diluent to room temperature. • Using needle supplied by the manufacturer, add diluent to powder to dissolve, gently agitate or rotate. Do not shake vigorously. Complete dissolution may take 5–10 min. • Use second filtered needle supplied by the manufacturer, and add to infusion bag. **Rate of Administration** • **Advate:** Over 5 min or less. **Maximum:** 10 ml/min. • **Hexilate FS, Kogenate FS:** Over 1–15 min based on pt tolerance. • **Xyntha:** Over several min. • **Hemofil M,**

Koate-DVI, Monarc-M: Over 5–10 min. **Maximum:** 10 ml/min. • **Monoclate-P:** Infuse at 2 ml/min. • **Alphanate:** 10 ml/min. **Humate-P:** 4 ml/min.

Administration precautions • Check pulse rate prior to and following administration. If pulse rate increases, reduce or stop administration. • After administration, apply prolonged pressure on venipuncture site. • Monitor IV site for oozing q5–15min for 1–2 hrs following administration.

Storage • May refrigerate or store at room temperature. • See individual products for specific storage durations.

IV INCOMPATIBILITIES

Do not mix with other IV solutions or medications.

INDICATIONS/ROUTES/DOSAGE

Hemophilia A, Von Willebrand Disease

IV: ADULTS, ELDERLY, CHILDREN: Dosage is highly individualized and is based on pt's weight, severity of bleeding, coagulation studies.

SIDE EFFECTS

Occasional: Allergic reaction, including fever, chills, urticaria, wheezing, hypotension, nausea, feeling of chest tightness; stinging at injection site; dizziness; dry mouth; headache; altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Risk of transmitting viral hepatitis. Intravascular hemolysis may occur if large or frequent doses are used with blood group A, B, or AB.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

When monitoring B/P, avoid overinflation of cuff. Remove adhesive tape from any pressure dressing very carefully and slowly.

INTERVENTION/EVALUATION

Following IV administration, apply prolonged pressure on venipuncture site. Monitor IV site for oozing q5–15 min for 1–2 hrs following administration. Assess for allergic reaction. Report immediately any evidence of hematuria or change in vital signs. Assess for decreases in B/P, increased pulse rate, complaint of abdominal or back pain, severe headache (may be evidence of hemorrhage). Question for increased discharge during menses. Assess skin for bruises, petechiae. Check for excessive bleeding from minor cuts, scratches. Assess gums for erythema, gingival bleeding. Assess urine for hematuria. Evaluate for therapeutic relief of pain, reduction of swelling, restricted joint movement.

PATIENT/FAMILY TEACHING

• Use electric razor, soft toothbrush to prevent bleeding. • Report any sign of bleeding, including red or dark urine, black/red stool, coffee-ground vomitus, blood-tinged mucus from cough. • Wear identification indicating a hemolytic condition. • Bring adequate supply of agent when traveling.

aprepitant/ fosaprepitant

ah-**prep**-ih-tant
(Emend, Emend for Injection)
Do not confuse fosaprepitant with aprepitant, fosamprenavir, or fospropofol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective receptor antagonist. **CLINICAL:** Antinausea, antiemetic.

ACTION

Inhibits chemotherapy-induced nausea, vomiting centrally in the chemoreceptor trigger zone. **Therapeutic Effect:** Prevents acute and delayed phases of chemotherapy-induced emesis, including vomiting caused by high-dose cisplatin.

PHARMACOKINETICS

Moderately absorbed from GI tract. Crosses blood-brain barrier. Extensively metabolized in liver. Protein binding: greater than 95%. Eliminated primarily by liver metabolism (not excreted renally). **Half-life:** 9–13 hrs.

USES

PO/IV: Prevention of nausea, vomiting associated with repeat courses of moderate to high emetogenic cancer chemotherapy, including high-dose cisplatin. **PO:** Prevention of postop nausea, vomiting.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe hepatic impairment. Concurrent use of medications metabolized through CYP3A4 **(docetaxol, etoposide, ifosfamide, imatinib, irinotecan, paclitaxel, vinbastine, vincristine, vinorelbine).**

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong **CYP3A4 inhibitors (e.g., ketoconazole, clarithromycin)** may increase concentration. Strong **CYP3A4 inducers (e.g., carbamazepine, rifampin)** may decrease concentration. May decrease effectiveness of **hormonal contraceptives.** May decrease effectiveness of **warfarin.** **HERBAL:** **St. John's wort** may decrease plasma concentration. **FOOD:** **Grapefruit, grapefruit juice** may increase plasma concentration. **LAB VALUES:** May increase BUN, serum creatinine, glucose, alkaline phosphatase, AST, ALT. May produce proteinuria.

AVAILABILITY (Rx)

Capsules (Emend): 40 mg, 80 mg, 125 mg. **Emend (Combination):** 80 mg (2), 125 mg (1). **Injection, Powder for Reconstitution (Fosaprepitant):** 115 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

IV

Reconstitution • Reconstitute each vial with 5 ml 0.9% NaCl. • Add 0.9% NaCl to provide a final concentration of 1 mg/ml.
Rate of Administration • Infuse 110 mg over 15 min 30 min prior to chemotherapy, 150 mg over 20–30 min 30 min prior to chemotherapy.
Storage • Refrigerate unreconstituted vials. • After reconstitution, solution is stable at room temperature for 24 hrs.

IV INCOMPATIBILITIES

Do not infuse with any solutions containing calcium or magnesium.

INDICATIONS/ROUTES/DOSAGE

Prevention of Chemotherapy-Induced Nausea, Vomiting

PO: ADULTS, ELDERLY: 125 mg 1 hr before chemotherapy on day 1 and 80 mg once a day in the morning on days 2 and 3. **Note:** Emend for Injection 115 mg may be substituted for Emend 125 mg on day 1 only.
IV: ADULTS, ELDERLY (SINGLE-DOSE REGIMEN): 150 mg over 20–30 min 30 min prior to chemotherapy (in combination with a 5-HT_3 antagonist on day 1 and dexamethasone on days 1 to 4). **(3-day regimen):** 115 mg over 15 min 30 min prior to chemotherapy, followed by aprepitant 80 mg orally on days 2 and 3 (in combination with a 5-HT_3 antagonist and dexamethasone).

Prevention of Postop Nausea, Vomiting

PO: ADULTS, ELDERLY: 40 mg once within 3 hrs prior to induction of anesthesia.

SIDE EFFECTS

Frequent (17%–10%): Fatigue, nausea, hiccups, diarrhea, constipation, anorexia. **Occasional (8%–4%):** Headache, vomiting, dizziness, dehydration, heartburn. **Rare (3%**

or less): Abdominal pain, epigastric discomfort, gastritis, tinnitus, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia, mucous membrane disorders occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for dehydration if excessive vomiting occurs (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue).

INTERVENTION/EVALUATION

Monitor hydration, nutritional status, I&O. Assess bowel sounds for peristalsis. Assist with ambulation if dizziness occurs. Provide supportive measures. Monitor daily pattern of bowel activity, stool consistency. Record time of evacuation.

PATIENT/FAMILY TEACHING

- Relief from nausea/vomiting generally occurs shortly after drug administration.
- Report persistent vomiting, headache.
- May decrease effectiveness of oral contraceptives.

argatroban

HIGH ALERT

ar-**gat**-roe-ban

Do not confuse argatroban with Aggrestat.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thrombin inhibitor. **CLINICAL:** Anticoagulant (see p. 30C).

ACTION

Direct thrombin inhibitor that reversibly binds to thrombin-active sites. Inhibits thrombin-catalyzed or thrombin-induced reactions, including fibrin formation, activation of coagulant factors V, VIII, and XIII; inhibits protein C formation, platelet aggregation. **Therapeutic Effect:** Produces anticoagulation.

PHARMACOKINETICS

Following IV administration, distributed primarily in extracellular fluid. Protein binding: 54%. Metabolized in liver. Primarily excreted in the feces, presumably through biliary secretion. **Half-life:** 39–51 min.

USES

Prophylaxis or treatment of thrombosis in heparin-induced thrombocytopenia (HIT). Prevention of HIT during percutaneous coronary procedures. **OFF-LABEL:** Maintain extracorporeal circuit patency of continuous renal replacement therapy (CRRT) in pts with HIT.

PRECAUTIONS

Contraindications: Overt major bleeding. **Cautions:** Severe hypertension, immediately following lumbar puncture, spinal anesthesia, major surgery, pts with congenital or acquired bleeding disorders, ulcerations, hepatic impairment, critically ill pts.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if excreted in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antiplatelet agents, other anticoagulants, thrombolytics, NSAIDs may increase the risk of bleeding. **HERBAL: Dong quai, evening primrose oil, ginkgo, policosanol, willow bark** may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** Increases prothrombin time (PT), activated partial thromboplastin time (aPTT), international normalized ratio (INR). May increase Hgb, Hct.

AVAILABILITY (Rx)

Infusion (Pre-Mix): 125 mg/125 ml 0.9% NaCl; 50 mg/50 ml Sterile Water for In-

jection. **Injection Solution:** 100 mg/ml (2.5 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute each 250-mg vial with 250 ml 0.9% NaCl, D_5W, or lactated Ringer's solution to provide a final concentration of 1 mg/ml. • The solution must be mixed by repeated inversion of the diluent bag for 1 min. • After reconstitution, solution may show a brief haziness due to formation of microprecipitates that rapidly dissolve upon mixing.

Rate of Administration • Rate of administration is based on body weight at 2 mcg/kg/min (e.g., 50-kg pt infuse at 6 ml/hr).

Storage • Discard if solution appears cloudy or an insoluble precipitate is noted. • Following reconstitution, stable for 96 hrs at room temperature or refrigerated. • Avoid direct sunlight.

IV INCOMPATIBILITY

Amiodarone (Cardarone).

IV COMPATIBILITIES

Diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), furosemide (Lasix), midazolam (Versed), morphine, vasopressin (Pitressin).

INDICATIONS/ROUTES/DOSAGE

Heparin-Induced Thrombocytopenia (HIT)

IV Infusion: ADULTS, ELDERLY: Initially, 2 mcg/kg/min administered as a continuous infusion. After initial infusion, dose may be adjusted until steady-state aPTT is 1.5–3 times initial baseline value, not to exceed 100 sec. Dosage should not exceed 10 mcg/kg/min.

Percutaneous Coronary Intervention

IV Infusion: ADULTS, ELDERLY: Initially, administer bolus of 350 mcg/kg over 3–5 min, then infuse at 25 mcg/kg/min. Check ACT (activated clotting time) 5–10 min following bolus. If ACT is less than 300 sec, give additional bolus 150 mcg/kg, increase infusion to 30 mcg/kg/min. If ACT is greater than 450 sec, decrease infusion to 15 mcg/kg/min. Once ACT of 300–450 sec achieved, continue dose through duration of procedure.

Dosage in Hepatic Impairment

ADULTS, ELDERLY: Initially, 0.5 mcg/kg/min. **CHILDREN:** Initially, 0.2 mcg/kg/min. Adjust dose in increments of 0.05 mcg/kg/min or less.

SIDE EFFECTS

Frequent (8%–3%): Dyspnea, hypotension, fever, diarrhea, nausea, pain, vomiting, infection, cough.

ADVERSE EFFECTS/ TOXIC REACTIONS

Ventricular tachycardia, atrial fibrillation occur occasionally. Major bleeding, sepsis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check CBC, platelet count, PT, PTT. Determine initial B/P. Minimize need for multiple injection sites, blood draws, catheters.

INTERVENTION/EVALUATION

Assess for any sign of bleeding: bleeding at surgical site, hematuria, blood in stool, bleeding from gums, petechiae, ecchymoses, bleeding from injection sites. Handle pt carefully and infrequently to prevent bleeding. Do not obtain B/P in lower extremities (possible deep vein thrombi). Assess for decreased B/P, increased pulse rate, complaint of abdominal/back pain, severe headache (indicates evidence of hemorrhage). Monitor ACT, PT, aPTT, platelet count, Hgb, Hct. Question for increase in discharge during menses. Assess urinary output for hematuria. Observe skin for any occurring ecchymoses, petechiae, hematoma. Use care in removing any dressing, tape.

PATIENT/FAMILY TEACHING

• Use electric razor, soft toothbrush to prevent cuts, gingival trauma. • Report

any sign of bleeding, including red/dark urine, black/red stool, coffee-ground vomitus, blood-tinged mucus from cough.

aripiprazole

TOP 200

ar-i-**pip**-ra-zole
(Abilify, Abilify Discmelt)

BLACK BOX ALERT Increased risk of mortality in elderly pts with dementia-related psychosis, mainly due to pneumonia, heart failure. Risk may be increased by dehydration. Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Abilify with Ambien, or aripiprazole with esomeprazole, omeprazole, pantoprazole, or rabeprazole (proton pump inhibitors).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopamine agonist. **CLINICAL:** Antipsychotic agent (see p. 64C).

ACTION

Provides partial agonist activity at dopamine and serotonin ($5\text{-}HT_{1A}$) receptors and antagonist activity at serotonin ($5\text{-}HT_{2A}$) receptors. **Therapeutic Effect:** Diminishes schizophrenic behavior.

PHARMACOKINETICS

Well absorbed through GI tract. Protein binding: 99% (primarily albumin). Reaches steady levels in 2 wks. Metabolized in liver. Eliminated primarily in feces and, to a lesser extent, in urine. Not removed by hemodialysis. **Half-life:** 75 hrs.

USES

PO: Treatment of schizophrenia. Maintains stability in pts with schizophrenia. Treatment of bipolar disorder. Maintenance treatment of bipolar disorder as an adjunct to either lithium or valproate. Adjunct treatment in major depressive disorder. Treatment of irritability associated with autistic disorder in children 6–17 yrs of age. **IM:** Agitation associated with schizophrenia/bipolar disorder. **OFF-LABEL:** Schizoaffective disorder, depression with psychotic features, aggression, bipolar disorder (children), conduct disorder (children), Tourette's syndrome (children), psychosis/agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Concurrent use of CNS depressants (including alcohol), cardiovascular or cerebrovascular diseases (may induce hypotension), Parkinson's disease (potential for exacerbation), history of seizures or conditions that may lower seizure threshold (Alzheimer's disease), diabetes mellitus. Pts at risk for pneumonia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta. May be distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Alcohol** may potentiate cognitive and motor effects. **CYP3A4 inducers (e.g., carbamazepine)** may decrease concentration. **CYP3A4 inhibitors (e.g., itraconazole, ketoconazole)** may increase concentrations. **HERBAL:** **St. John's wort** may decrease levels. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Solution: 9.75 mg/1.3 ml (7.5 mg/ml). **Solution, Oral:** 1 mg/ml. **Tablets:** 2 mg, 5 mg, 10 mg, 15 mg, 20 mg, 30 mg. **Tablets, Orally-Disintegrating:** 10 mg, 15 mg.

A

ADMINISTRATION/HANDLING

IM

• For IM use only (inject slowly into deep muscle mass). Do not administer IV or subcutaneous.

PO

• Give without regard to food.

Orally-Disintegrating Tablet

• Remove tablet, place entire tablet on tongue. • Do not break, split tablet. • May give without liquid.

INDICATIONS/ROUTES/DOSAGE

Schizophrenia

PO: ADULTS, ELDERLY: Initially, 10–15 mg once a day. May increase up to 30 mg/day. Titrate dose at minimum of 2-wk intervals. **CHILDREN 13–17 YRS:** Initially, 2 mg/day for 2 days, then 5 mg/day for 2 days. May further increase to target dose of 10 mg/day. May then increase in increments of 5 mg up to maximum of 30 mg/day.

Bipolar Disorder

PO: ADULTS, ELDERLY: (15 mg once a day with lithium/valproic acid): Initially, 10–15 mg. May increase to 30 mg/day based on pt tolerance. **CHILDREN 10–17 YRS:** Initially, 2 mg/day for 2 days, then 5 mg/day for 2 days. May further increase to a target of 10 mg/day. Give subsequent dose increases of 5 mg/day. **Maximum:** 30 mg/day.

Major Depressive Disorder (Adjunct to Antidepressants)

PO: ADULTS, ELDERLY: Initially, 2–5 mg/day. May increase up to 15 mg/day. Titrate dose in 5-mg increments of at least 1-wk intervals.

Agitation with Schizophrenia/Bipolar Disorder

IM: ADULTS, ELDERLY: 5.25–15 mg as a single dose. May repeat after 2 hrs. **Maximum:** 30 mg/day.

Irritability with Autistic Disorder

PO: CHILDREN 6–17 YRS: Initially, 2 mg/day for 7 days followed by increase to 5 mg/day. Subsequent increases made in 5-mg increments at intervals of at least 1 week. **Maximum:** 15 mg/day.

SIDE EFFECTS

Frequent (11%–5%): Weight gain, headache, insomnia, vomiting. **Occasional (4%–3%):** Light-headedness, nausea, akathisia, drowsiness. **Rare (2% or less):** Blurred vision, constipation, asthenia (loss of strength, energy), anxiety, fever, rash, cough, rhinitis, orthostatic hypotension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extrapyramidal symptoms, neuroleptic malignant syndrome occur rarely. Prolonged QT interval occurs rarely. May cause leukopenia, neutropenia, agranulocytosis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content. Correct dehydration, hypovolemia. Assess for suicidal tendencies.

INTERVENTION/EVALUATION

Periodically monitor weight. Monitor for extrapyramidal symptoms (abnormal movement), tardive dyskinesia (protrusion of tongue, puffing of cheeks, chewing/puckering of the mouth). Periodically monitor B/P, pulse (particularly in those with preexisting cardiovascular disease). Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

• Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report worsening depression, suicidal ideation, unusual changes in behavior, extrapyramidal effects.

armodafinil

TOP 200 HIGH ALERT

ar-moe-**daf**-i-nil
(Nuvigil)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Alpha_1$ agonist. **CLINICAL:** Antinarcoleptic.

ACTION

Binds to dopamine reuptake carrier sites in the brain, increasing alpha activity, decreasing delta, theta, and beta activity. **Therapeutic Effect:** Reduces number of sleep episodes, total daytime sleep.

PHARMACOKINETICS

Well absorbed. Widely distributed. Mainly eliminated by hepatic metabolism with less than 10% excreted by kidneys. Unknown if removed by hemodialysis. **Half-life:** 15 hrs.

USES

Treatment of excessive daytime sleepiness associated with obstructive sleep apnea-hypopnea syndrome, narcolepsy, shift-work sleep disorder.

PRECAUTIONS

Contraindications: History of sensitivity to modafinil. **Cautions:** History of mitral valve prolapse, left ventricular hypertrophy, hepatic impairment, recent history of MI, unstable angina, cardiac ischemia. History of psychosis, renal impairment, elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Use caution if given to pregnant women. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 17 yrs. **Elderly:** Age-related renal/hepatic impairment may require decreased dosage.

INTERACTIONS

DRUG: Carbamazine, erythromycin, ketoconazole, phenobarbital, rifampin can alter plasma levels of armodafinil. May reduce effects of **cyclosporine, oral contraceptives.** May increase concentrations of **diazepam, omeprazole, phenytoin, propanolol, tricyclic antidepressants, warfarin. HERBAL:** None significant. **FOOD: Food** slows peak concentration by 2–4 hrs; may affect time of onset, length of drug action. **LAB VALUES:** May increase alkaline phosphatase, GGT. May decrease serum uric acid.

AVAILABILITY (Rx)

Tablets: 50 mg, 150 mg, 250 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Food slows peak concentration by 2–4 hrs, may affect time of onset, length of action. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Narcolepsy, Obstructive Sleep Apnea-Hypopnea Syndrome

PO: ADULTS, ELDERLY: 150 or 250 mg/day given as a single dose in the morning.

Shift-Work Sleep Disorder

PO: ADULTS, ELDERLY: 150 mg given daily approximately 1 hr prior to the start of work shift.

SIDE EFFECTS

Frequent (17%–7%): Headache, nausea. **Occasional (5%–4%):** Dizziness, insomnia, dry mouth, diarrhea, anxiety. **Rare (2%):** Depression, fatigue, palpitations, dyspepsia, rash, upper abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Small risk of serious rash, including Stevens-Johnson syndrome.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline evidence of narcolepsy or other sleep disorders, including pattern, environmental situations, lengths of time of

A

sleep episodes. Question for sudden loss of muscle tone (cataplexy) precipitated by strong emotional responses before sleep episode. Assess frequency/severity of sleep episodes prior to drug therapy.

INTERVENTION/EVALUATION

Monitor sleep pattern, evidence of restlessness during sleep, length of insomnia episodes at night. Assess for dizziness, anxiety; initiate fall precautions. Sips of tepid water may relieve dry mouth.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid or limit alcohol. • Use alternative contraceptives during therapy and 1 mo after discontinuing drug (reduces effectiveness of oral contraceptives). Report rash, depression, diarrhea, insomnia.

arsenic trioxide HIGH ALERT

ahr-sen-ik tri-**ox**-ide
(Trisenox)

BLACK BOX ALERT May prolong QT interval. May lead to multiform ventricular tachycardia (torsade de pointes) or complete AV block. May cause retinoic acid–acute promyelocytic leukemia (RA-APL) syndrome or acute promyelocytic leukemia.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antineoplastic. **CLINICAL:** Antineoplastic (see p. 79C).

ACTION

Produces morphologic changes and DNA fragmentation in promyelocytic leukemia cells. **Therapeutic Effect:** Produces cell death.

PHARMACOKINETICS

Distributed in liver, kidneys, heart, lungs, hair, and nails. Metabolized in liver. Eliminated by kidneys. **Half-life:** Not available.

USES

Induction of remission and consolidations in pts with acute promyelocytic leukemia (APL). **OFF-LABEL:** Treatment of myelodysplastic syndrome; initial treatment of APL.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, preexisting QT-interval prolongation, concomitant medications that prolong QT interval.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. May cause fetal harm. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 5 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May prolong QT interval in those taking **antiarrhythmics, moxifloxacin, thioridazine. Amphotericin B, cyclosporine, diuretics** may produce electrolyte abnormalities. **HERBAL: Bilberry, fenugreek, garlic, ginger, ginseng** may worsen hypoglycemia. **FOOD:** None known. **LAB VALUES:** May decrease WBC count, Hgb, platelet count, serum magnesium, calcium. May increase serum AST, ALT. Higher risk of hypokalemia than hyperkalemia, hyperglycemia than hypoglycemia.

AVAILABILITY (Rx)

Injection Solution: 1 mg/ml.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Central venous line is not required for drug administration.

Reconstitution • After withdrawing drug from ampule, dilute with 100–250 ml D_5W or 0.9% NaCl.

Rate of Administration • Infuse over 1–2 hrs. Duration of infusion may be

extended up to 4 hrs if acute vasomotor reactions occur.

Storage • Store at room temperature. • Diluted solution is stable for 24 hrs at room temperature, 48 hrs if refrigerated.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

Acute Promyelocytic Leukemia

IV: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: Induction: 0.15 mg/kg/day until bone marrow remission. Do not exceed 60 induction doses. **Consolidation:** Beginning 3–6 wks after completion of induction therapy, 0.15 mg/kg/day for maximum 25 doses over a period of up to 5 wks.

SIDE EFFECTS

Expected (75%–50%): Nausea, cough, fatigue, fever, headache, vomiting, abdominal pain, tachycardia, diarrhea, dyspnea. **Frequent (43%–30%):** Dermatitis, insomnia, edema, rigors, prolonged QT interval, sore throat, pruritus, arthralgia, paresthesia, anxiety. **Occasional (28%–20%):** Constipation, myalgia, hypotension, epistaxis, anorexia, dizziness, sinusitis. **(15%–8%):** Ecchymosis, nonspecific pain, weight gain, herpes simplex infections, wheezing, flushing, diaphoresis, tremor, hypertension, palpitations, dyspepsia, eye irritation, blurred vision, asthenia (loss of strength, energy), adventitious or diminished breath sounds (crackles). **Rare:** Confusion, petechiae, dry mouth, oral candidiasis, incontinence, pulmonary rhonchi.

ADVERSE EFFECTS/ TOXIC REACTIONS

Seizures, GI hemorrhage, renal impairment or failure, pleural or pericardial effusion, hemoptysis, sepsis occur rarely. Prolonged QT interval, complete AV block, unexplained fever, dyspnea, weight gain, effusion are evidence of arsenic toxicity. Treatment should be halted, steroid therapy instituted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess platelet count, Hgb, Hct, WBC, serum electrolytes, coagulation profiles before and frequently during treatment. Ask if pt is breast-feeding, pregnant, or planning to become pregnant (may cause fetal harm).

INTERVENTION/EVALUATION

Monitor hepatic function test results, CBC, serum values. Monitor for arsenic toxicity syndrome (fever, dyspnea, weight gain, confusion, muscle weakness, seizures).

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid tasks that require alertness, motor skills until response to drug is established. • Contact physician if high fever, vomiting, difficulty breathing, or rapid heart rate occurs.

ascorbic acid (vitamin C)

a-**skor**-bic **as**-id

(C-Gram, Proflavanol C, Revitalose C-1000, Vita-C)

◆CLASSIFICATION

CLINICAL: Vitamin (see p. 162C).

ACTION

Assists in collagen formation, tissue repair, and is involved in oxidation reduction reactions, other metabolic reactions. **Therapeutic Effect:** Involved in carbohydrate utilization and metabolism, as well as synthesis of carnitine, lipids, proteins. Preserves blood vessel integrity.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 25%. Metabolized in liver. Excreted in urine. Removed by hemodialysis.

USES

Prevention and treatment of scurvy, acidification of urine, dietary supplement. **OFF-LABEL:** Prevention of common cold, urinary acidifier.

PRECAUTIONS

Contraindications: None known. **Cautions:** None significant.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; excreted in breast milk. Large doses during pregnancy may produce scurvy in neonates. **Pregnancy Category A (C if used in doses above recommended daily allowance). Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase levels of **estrogen.** May decrease levels of **cyclosporine.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum bilirubin, urinary pH. May increase serum uric acid, urinary oxalate.

AVAILABILITY

Capsules: 500 mg, 1,000 mg. **Crystals:** 4 g/tsp. **Injection, Solution:** 500 mg/ml. **Liquid, Oral:** 500 mg/5 ml. **Tablets:** 100 mg, 250 mg, 500 mg, 1,000 mg. **Tablets (Chewable):** 250 mg, 500 mg.

Capsules (Timed-Release): 500 mg. **Tablets (Timed-Release):** 500 mg, 1,000 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give undiluted or dilute in D_5W, 0.9% NaCl, lactated Ringer's solution. • For IV push, dilute with equal volume D_5W or 0.9% NaCl and infuse over 10 min.

Storage • Refrigerate. • Protect from freezing and light.

PO

• Give without regard to food but best given with meals. • Do not crush time-release formulations.

IV INCOMPATIBILITIES

Nafcillin, sodium bicarbonate, theophylline.

IV COMPATIBILITIES

Calcium gluconate, heparin, lipids.

INDICATIONS/ROUTES/DOSAGE

Dietary Supplement

PO: ADULTS, ELDERLY: 50–200 mg/day. **CHILDREN:** 35–100 mg/day.

Acidification of Urine

PO: ADULTS, ELDERLY: 4–12 g/day in 3–4 divided doses. **CHILDREN:** 500 mg q6–8h.

Scurvy

PO: ADULTS, ELDERLY: 100–250 mg 1–2 times a day for at least 2 wks. **CHILDREN:** 100–300 mg/day in divided doses for at least 2 wks.

Prevention, Reduction of Severity of Colds

PO: ADULTS, ELDERLY: 1–3 g/day in divided doses.

SIDE EFFECTS

Rare: Abdominal cramps, nausea, vomiting, diarrhea, increased urination with doses exceeding 1 g. **Parenteral:** Flushing, headache, dizziness, sleepiness or insomnia, soreness at injection site.

ADVERSE EFFECTS/ TOXIC REACTIONS

May acidify urine, leading to crystalluria. Large doses of IV ascorbic acid may lead to deep vein thrombosis. Prolonged use of large doses may produce rebound ascorbic acid deficiency when dosage is reduced to normal range.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Assess for clinical improvement (improved sense of well-being and sleep patterns). Observe for reversal of deficiency symptoms (improving gingivitis, bleeding gums, poor wound healing, digestive difficulties, joint pain).

PATIENT/FAMILY TEACHING

• Larger doses may cause diarrhea, nausea, abdominal cramping. • Foods rich in vitamin C include rose hips, guava, black currant jelly, Brussels sprouts, green peppers, spinach, watercress, strawberries, citrus fruits.

asparaginase HIGH ALERT

as-par-**a**-jin-ace
(Elspar, Erwinaze, Kidrolase)

Do not confuse asparaginase with pegaspargase.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Enzyme.
CLINICAL: Antineoplastic (see p. 79C).

ACTION

Inhibits DNA, RNA, protein synthesis by breaking down asparagine, depriving tumor cells of this essential amino acid. Cell cycle–specific for G_1 phase of cell division. **Therapeutic Effect:** Toxic to leukemic cells.

PHARMACOKINETICS

Metabolized by reticuloendothelial system through slow sequestration. **Half-life: IM:** 39–49 hrs; **IV:** 8–30 hrs.

USES

Treatment of acute lymphocytic leukemia (ALL). **OFF-LABEL:** Treatment of chronic lymphocytic leukemia (CLL).

PRECAUTIONS

Contraindications: History of hypersensitivity to asparaginase. History of serious thrombosis, pancreatitis, or hemorrhagic events with prior asparaginase therapy. **Cautions:** Underlying coagulopathy, preexisting hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breast-feeding not recommended. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase levels of **dexamethasone.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ammonia, BUN, uric acid, glucose, partial thromboplastin time (PTT), platelet count, prothrombin time (PT), thrombin time (TT), AST, ALT, alkaline phosphatase, bilirubin. May decrease blood clotting factors (plasma fibrinogen, antithrombin, plasminogen), serum albumin, calcium, cholesterol.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 10,000 international units.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration. Handle voided urine as infectious waste. Powder, solution may irritate skin on contact. Wash area for 15 min if contact occurs.

IV

◀ALERT▶ Administer intradermal test dose (2 international units) before initiating therapy or when longer than 1 wk has elapsed between doses.
• Observe pt for 1 hr for appearance of wheal or erythema.
Test Solution • Reconstitute 10,000 international units vial with 5 ml Sterile Wa-

A

ter for Injection or 0.9% NaCl. • Shake to dissolve.

Reconstitution • Test Dose: Withdraw 0.1 ml, inject into vial containing 9.9 ml same diluent for concentration of 20 international units/ml. • **Regular dose:** Reconstitute 10,000 international units vial with 5 ml Sterile Water for Injection or 0.9% NaCl to provide a concentration of 2,000 international units/ml. • Shake gently to ensure complete dissolution (vigorous shaking produces foam, some loss of potency). Further dilute in 50–250 ml D_5W or 0.9% NaCl.

Rate of Administration • Infuse over at least 30–60 min.

Storage • Refrigerate powder for reconstitution. • Reconstituted solution stable for 8 hrs if refrigerated. • Gelatinous fiber-like particles may develop (remove via 5-micron filter during administration).

IM

• Add 2 ml 0.9% NaCl injection to 10,000 international units vial to provide a concentration of 5,000 international units/ml. • Administer no more than 2 ml into large muscle mass.

IV INCOMPATIBILITIES

None known.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV: ADULTS, ELDERLY, CHILDREN: (Elspar): 6,000 units/m^2/dose 3 times/wk for 6–9 doses or 1,000 units/kg/day for 10 days.

IM: ADULTS, ELDERLY, CHILDREN: (Elspar): 6,000 units/m^2/dose 3 times/wk for 6–9 doses.

Erwinaze

IM: ADULTS, ELDERLY, CHILDREN: As a substitute for pegaspargase: 25,000 units/m^2 3 times/wk for 6 doses. As a substitute for Elspar: 25,000 units/m^2 for each planned Elspar dose.

SIDE EFFECTS

Frequent: Allergic reaction (rash, urticaria, arthralgia, facial edema, hypotension, respiratory distress), pancreatitis (severe abdominal pain, nausea and vomiting). **Occasional:** CNS effects (confusion, drowsiness, depression, anxiety, fatigue), stomatitis, hypoalbuminemia or uric acid nephropathy (manifested as pedal or lower extremity edema), hyperglycemia. **Rare:** Hyperthermia (including fever or chills), thrombosis, seizures.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity usually occurs within 2 wks of initial treatment. Risk of allergic reaction, including anaphylaxis, increases after repeated therapy. Myelosuppression may be severe.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Before giving medication, agents for adequate airway and allergic reaction (antihistamine, epinephrine, O_2, IV corticosteroid) should be readily available. Assess baseline CNS functions. CBC, comprehensive serum chemistry should be performed before therapy begins and when 1 or more wks have elapsed between doses.

INTERVENTION/EVALUATION

Monitor vital signs, CBC, urinalysis, serum amylase, hepatic enzymes, coagulation profile, glucose, uric acid. Discontinue medication at first sign of renal dysfunction (oliguria, anuria), pancreatitis (abdominal pain, nausea, vomiting). Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding), symptoms of anemia (excessive fatigue, weakness), hypersensitivity reaction.

PATIENT/FAMILY TEACHING

• Increase fluid intake (protects against renal impairment). • Nausea may decrease during therapy. • Do not have immunizations without physician's approval (drug lowers body's resistance).

• Avoid contact with those who have recently taken a live virus vaccine. • Notify physician if abdominal pain, rash, nausea, vomiting occurs.

aspirin (acetylsalicylic acid, ASA)

TOP 200 HIGH ALERT

as-pir-in
(Asaphen E.C. 🍁, Ascriptin, Bayer, Bufferin, Ecotrin, Entrophen 🍁, Halfprin, Novasen 🍁)
Do not confuse aspirin or Ascriptin with Afrin, Aricept, or Asendin, Ecotrin with Epogen.

FIXED-COMBINATION(S)

Aggrenox: aspirin/dipyridamole (an antiplatelet agent): 25 mg/200 mg. **Fiorinal:** aspirin/butalbital/caffeine (a barbiturate): 325 mg/50 mg/40 mg. **Lortab/ASA:** aspirin/hydrocodone (an analgesic): 325 mg/5 mg. **Percodan:** aspirin/oxycodone (an analgesic): 325 mg/2.25 mg, 325 mg/4.5 mg. **Pravigard:** aspirin/pravastatin (a cholesterol-lowering agent): 81 mg/20 mg, 81 mg/40 mg, 81 mg/80 mg, 325 mg/20 mg, 325 mg/40 mg, 325 mg/80 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonsteroidal salicylate. **CLINICAL:** Anti-inflammatory, antipyretic, anticoagulant (see pp. 32C, 128C).

ACTION

Inhibits prostaglandin synthesis, acts on the hypothalamus heat-regulating center, interferes with production of thromboxane A, a substance that stimulates platelet aggregation. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain; decreases fever; inhibits platelet aggregation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2–4 hrs	4–6 hrs

Rapidly and completely absorbed from GI tract; enteric-coated absorption delayed; rectal absorption delayed and incomplete. Protein binding: High. Widely distributed. Rapidly hydrolyzed to salicylate. **Half-life:** 15–20 min (aspirin); 2–3 hrs (salicylate at low dose); more than 20 hrs (salicylate at high dose).

USES

Treatment of mild to moderate pain, fever. Reduces inflammation related to rheumatoid arthritis (RA), juvenile arthritis, osteoarthritis, rheumatic fever. As platelet aggregation inhibitor in the prevention of transient ischemic attacks (TIAs), cerebral thromboembolism, MI or reinfarction. Adjunctive treatment of Kawasaki's disease. **OFF-LABEL:** Prevention of preeclampsia; alternative therapy for preventing thromboembolism associated with atrial fibrillation where warfarin cannot be used; pericarditis associated with MI; prosthetic valve thromboprophylaxis.

PRECAUTIONS

Contraindications: Hypersensitivity to salicylates, NSAIDs; asthma, rhinitis, nasal polyps; inherited or acquired bleeding disorders; use in children for viral infections; pregnancy. **Cautions:** Platelet/bleeding disorders, severe renal/hepatic impairment, dehydration, erosive gastritis, peptic ulcer disease, sensitivity to tartrazine dyes.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. May prolong gestation and labor; decrease fetal birth weight; increase incidence of stillbirths, neonatal mortality, hemorrhage. Avoid use during last trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category C (D if full**

dose used in third trimester of pregnancy). Children: Caution in those with acute febrile illness (Reye's syndrome). **Elderly:** May be more susceptible to toxicity; lower dosages recommended.

INTERACTIONS

DRUG: Alcohol, NSAIDs may increase risk of GI effects (e.g., ulceration). **Antacids, urinary alkalinizers** increase excretion. **Anticoagulants, heparin, thrombolytics, rivaroxaban, ticagrelor** increase risk of bleeding. **HERBAL:** Avoid **cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, green tea, horse chestnut, red clover** (possess antiplatelet activity). **FOOD:** None known. **LAB VALUES:** May alter serum AST, ALT, alkaline phosphatase, uric acid; prolongs prothrombin time (PT), bleeding time. May decrease serum cholesterol, potassium, T_3, T_4.

AVAILABILITY (OTC)

Caplets (Bayer): 81 mg, 325 mg, 500 mg. **Suppositories:** 300 mg, 600 mg. **Tablets:** 325 mg. **Tablets (Chewable [Bayer, St. Joseph]):** 81 mg.

Tablets (Enteric-Coated [Bayer, Ecotrin, St. Joseph]): 81 mg, 325 mg, 500 mg, 650 mg.

ADMINISTRATION/HANDLING

PO

• Do not crush or break enteric-coated tablets. • May give with water, milk, meals if GI distress occurs.

Rectal

• Refrigerate suppositories; do not freeze. • If suppository is too soft, chill for 30 min in refrigerator or run cold water over foil wrapper. • Moisten suppository with cold water before inserting well into rectum.

INDICATIONS/ROUTES/DOSAGE

Analgesia, Fever

PO, Rectal: ADULTS, ELDERLY: 325–650 mg q4–6h. **CHILDREN:** 10–15 mg/kg/dose q4–6h. **Maximum:** 4 g/day.

Anti-Inflammatory

PO: ADULTS, ELDERLY: Initially, 2.4–3.6 g/day in divided doses, then 3.6–5.4 g/day. **CHILDREN:** Initially, 60–90 mg/kg/day in divided doses, then 80–100 mg/kg/day.

Platelet Aggregation Inhibitor

PO: ADULTS, ELDERLY: 80–325 mg/day.

Kawasaki's Disease

PO: CHILDREN: 80–100 mg/kg/day in divided doses q6h. After fever resolves, 3–5 mg/kg once a day.

SIDE EFFECTS

Occasional: GI distress (including abdominal distention, cramping, heartburn, mild nausea); allergic reaction (including bronchospasm, pruritus, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

High doses of aspirin may produce GI bleeding and/or gastric mucosal lesions. Dehydrated, febrile children may experience aspirin toxicity quickly. Reye's syndrome may occur in children with chickenpox or flu. Low-grade toxicity characterized by tinnitus, generalized pruritus (may be severe), headache, dizziness, flushing, tachycardia, hyperventilation, diaphoresis, thirst. Marked toxicity characterized by hyperthermia, restlessness, seizures, abnormal breathing patterns, respiratory failure, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Do not give to children or teenagers who have flu or chickenpox (increases risk of Reye's syndrome). Do not use if vinegar-like odor is noted (indicates chemical breakdown). Assess type, location, duration of pain, inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition. **Therapeutic serum level for antiarthritic effect:** 20–30 mg/dl (toxicity occurs if level is greater than 30 mg/dl).

INTERVENTION/EVALUATION

Monitor urinary pH (sudden acidification, pH from 6.5 to 5.5, may result in toxicity). Assess skin for evidence of ecchymosis. If given as antipyretic, assess temperature directly before and 1 hr after giving medication. Evaluate for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Do not crush or chew enteric-coated tablets. • Avoid alcohol. • Report tinnitus or persistent abdominal GI pain, bleeding. • Therapeutic anti-inflammatory effect noted in 1–3 wks. • Behavioral changes, vomiting may be early signs of Reye's syndrome. Contact physician.

atazanavir

TOP 200

ah-tah-**zan**-ah-veer
(Reyataz)
Do not confuse Reyataz with Retavase.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiretroviral. **CLINICAL:** Protease inhibitor (see p. 116C).

ACTION

Acts as an HIV-1 protease inhibitor, selectively preventing the processing of viral precursors found in cells infected with HIV-1. **Therapeutic Effect:** Prevents formation of mature HIV viral cells.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 86%. Extensively metabolized in liver. Excreted primarily in urine and, to a lesser extent, in feces. **Half-life:** 5–8 hrs.

USES

Treatment of HIV-1 infection in combination with other antiretroviral agents.

PRECAUTIONS

Contraindications: Concurrent use with alfuzosin, ergot derivatives, indinavir, lovastatin, midazolam (oral), pimozide, rifampin, simvastatin, triazolam. **Cautions:** Preexisting conduction system defects (first-, second-, or third-degree AV block), diabetes mellitus, elderly, renal impairment, hemophilia A or B, hepatitis B or C.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or distributed in breast milk. Lactic acidosis syndrome, hyperbilirubinemia, kernicterus have been reported. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 3 mos. **Elderly:** Age-related hepatic impairment may require dose reduction.

INTERACTIONS

DRUG: May increase concentration, toxicity of **amiodarone, atorvastatin, bepridil, clarithromycin, cyclosporine, diltiazem, felodipine, lidocaine, lovastatin, nicardipine, nifedipine, rosuvastatin, sildenafil, simvastatin, sirolimus, tacrolimus, tadalafil, tricyclic antidepressants, vardenafil, verapamil, warfarin. H_2-receptor antagonists, proton pump inhibitors, rifampin** may decrease concentration/effects. **Ritonavir, voriconazole** may increase concentration. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD: High-fat meals** may decrease absorption. **LAB VALUES:** May increase serum bilirubin, AST, ALT, amylase, lipase. May decrease Hgb, neutrophil count, platelets. May alter LDL, triglycerides.

AVAILABILITY (Rx)

Capsules: 100 mg, 150 mg, 200 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• Give with food. • Swallow whole; do not open. • Administer at least 2 hrs be-

fore or 10 hrs after H_2 antagonist, 12 hrs after proton pump inhibitor.

INDICATIONS/ROUTES/DOSAGE

Note: Dosage adjustment may be necessary with colchicine, bosentin, H_2 antagonists, proton pump inhibitors, PDE5 inhibitors.

HIV-1 Infection

PO: ADULTS, ELDERLY (ANTIRETROVIRAL-NAIVE): 300 mg and ritonavir 100 mg, once a day, or 400 mg (2 capsules) once a day with food. **CHILDREN 6–17 YRS WEIGHING 39 KG OR MORE:** 300 mg and ritonavir 100 mg once daily. **WEIGHING 32–38 KG:** 250 mg and ritonavir 100 mg once daily. **WEIGHING 25–31 KG:** 200 mg and ritonavir 100 mg once daily. **WEIGHING 15–24 KG:** 150 mg and ritonavir 80 mg once daily. **ADULTS, ELDERLY (ANTIRETROVIRAL-EXPERIENCED):** 300 mg and ritonavir (Norvir) 100 mg once a day.

HIV-1 Infection (Concurrent Therapy with Efavirenz)

PO: ADULTS, ELDERLY: 300 mg atazanavir, 100 mg ritonavir (as a single dose given with food), and 600 mg efavirenz as a single daily dose on an empty stomach (preferably at bedtime).

HIV-1 Infection (Concurrent Therapy with Didanosine)

PO: ADULTS, ELDERLY: Give atazanavir with food 2 hrs before or 1 hr after didanosine.

HIV-1 Infection (Concurrent Therapy with Tenofovir)

PO: ADULTS, ELDERLY: 300 mg atazanavir, 100 mg ritonavir, and 300 mg tenofovir given as a single daily dose with food. **For treatment-experienced pregnant women during 2nd or 3rd trimester:** 400 mg with ritonavir 100 mg once daily.

HIV-1 Infection (Concurrent Therapy with Maraviroc)

PO: ADULTS, ELDERLY: 300 mg atazanavir, 100 mg ritonavir once daily, and 150 mg maraviroc twice daily.

HIV-1 Infection in Pts with Mild to Moderate Hepatic Impairment

◀ALERT▶ Avoid use in pts with severe hepatic impairment.

PO: ADULTS, ELDERLY: 300 mg once a day with food.

SIDE EFFECTS

Frequent (16%–14%): Nausea, headache. **Occasional (9%–4%):** Rash, vomiting, depression, diarrhea, abdominal pain, fever. **Rare (3% or less):** Dizziness, insomnia, cough, fatigue, back pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe hypersensitivity reaction (angioedema, chest pain), jaundice may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline chemistries, CBC, hepatic function tests before beginning therapy and at periodic intervals during therapy. Offer emotional support.

INTERVENTION/EVALUATION

Check lab results. Assess for nausea, vomiting; assess eating pattern. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Question for evidence of headache. Assess mood for evidence of depression.

PATIENT/FAMILY TEACHING

• Take with food. • Small, frequent meals may offset nausea, vomiting. • Pt must continue practices to prevent HIV transmission. • Report dizziness, light-headedness, yellowing of skin or whites of eyes, pain in side or when urinating, blood in urine, skin rash.

atenolol

TOP 200 HIGH ALERT

a-**ten**-oh-lol

(Apo-Atenol, Tenormin)

BLACK BOX ALERT Do not abruptly discontinue; taper gradually to avoid acute tachycardia, hypertension, ischemia.

Do not confuse atenolol with albuterol, timolol, or Tylenol, or Tenormin with Imuran, Norpramin, or thiamine.

FIXED-COMBINATION(S)

Tenoretic: atenolol/chlorthalidone (a diuretic): 50 mg/25 mg, 100 mg/25 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Beta_1$-adrenergic blocker. **CLINICAL:** Antihypertensive, antianginal, antiarrhythmic (see pp. 61C, 71C).

ACTION

Blocks $beta_1$-adrenergic receptors in cardiac tissue. **Therapeutic Effect:** Slows sinus node heart rate, decreasing cardiac output, B/P. Decreases myocardial oxygen demand.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2–4 hrs	24 hrs

Incompletely absorbed from GI tract. Protein binding: 6%–16%. Minimal liver metabolism. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 6–9 hrs (increased in renal impairment).

USES

Treatment of hypertension, alone or in combination with other agents; management of angina; secondary prevention of post-MI. **OFF-LABEL:** Acute alcohol withdrawal, arrhythmia (esp. supraventricular and ventricular tachycardia), prevention of migraine.

PRECAUTIONS

Contraindications: Cardiogenic shock, uncompensated heart failure, second- or third-degree heart block (except with functioning pacemaker), sinus bradycardia, sinus node dysfunction, pulmonary edema, pregnancy. **Cautions:** Renal impairment, peripheral vascular disease, diabetes, thyroid disease, bronchospastic disease, compensated heart failure, concurrent use with digoxin, verapamil or diltiazem, myasthenia gravis, psychiatric disease. History of anaphylaxis to allergens.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. Avoid use during first trimester. May produce bradycardia, apnea, hypoglycemia, hypothermia during delivery; low birthweight infants. **Pregnancy Category D. Children:** No age-related precautions noted. **Elderly:** Age-related peripheral vascular disease, renal impairment require caution.

INTERACTIONS

DRUG: Diuretics, other antihypertensives may increase hypotensive effects. **Sympathomimetics, xanthines** may mutually inhibit effects. May mask symptoms of hypoglycemia, prolong hypoglycemic effect of **insulin, oral antidiabetic medications. NSAIDs** may decrease antihypertensive effect. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum ANA titer, BUN, serum creatinine, potassium, uric acid, lipoprotein, triglycerides.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 25–50 mg once a day. May increase dose up to 100 mg

A

once a day. **ELDERLY:** Usual initial dose, 25 mg/day. **CHILDREN:** Initially, 0.5–1 mg/kg/dose given once a day. Range: 0.5–1.5 mg/kg/day. **Maximum:** 2 mg/kg/day up to 100 mg/day.

Angina Pectoris

PO: ADULTS: Initially, 50 mg once a day. May increase dose up to 200 mg once a day. **ELDERLY:** Usual initial dose, 25 mg/day.

Post-MI

PO: ADULTS: 100 mg once a day or 50 mg twice a day for 6–9 days post-MI.

Dosage in Renal Impairment

Dosage interval is modified based on creatinine clearance.

Creatinine Clearance	Maximum Dosage
15–35 ml/min	50 mg/day
Less than 15 ml/min	50 mg every other day
Hemodialysis (HD)	Give dose post-HD or give 25–50 mg supplemental dose

SIDE EFFECTS

Atenolol is generally well tolerated, with mild and transient side effects. **Frequent:** Hypotension manifested as cold extremities, constipation or diarrhea, diaphoresis, dizziness, fatigue, headache, nausea. **Occasional:** Insomnia, flatulence, urinary frequency, impotence or decreased libido, depression. **Rare:** Rash, arthralgia, myalgia, confusion (esp. in the elderly), altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremors. May precipitate CHF, MI in pts with cardiac disease; thyroid storm in those with thyrotoxicosis; peripheral ischemia in those with existing peripheral vascular disease. Hypoglycemia may occur in previously controlled diabetes. Thrombocytopenia (unusual bruising, bleeding) occurs rarely. **Antidote:** Glucagon (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, apical pulse immediately before drug is administered (if pulse is 60/min or less, or systolic B/P is less than 90 mm Hg, withhold medication, contact physician). **Antianginal:** Record onset, quality (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress). Assess baseline renal/hepatic function tests.

INTERVENTION/EVALUATION

Monitor B/P for hypotension, pulse for bradycardia, respiration for difficulty in breathing, EKG. Monitor daily pattern of bowel activity and stool consistency. Assess for evidence of CHF: dyspnea (particularly on exertion or lying down), night cough, peripheral edema, distended neck veins. Monitor I&O (increased weight, decreased urinary output may indicate CHF). Assess extremities for coldness. Assist with ambulation if dizziness occurs.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy essential to control hypertension, angina. • To reduce hypotensive effect, rise slowly from lying to sitting position and permit legs to dangle from bed momentarily before standing. • Avoid tasks that require alertness, motor skills until response to drug is established. • Advise diabetic pts to monitor blood glucose carefully (may mask signs of hypoglycemia). • Report dizziness, depression, confusion, rash, unusual bruising/bleeding. • Outpatients should monitor B/P, pulse before taking medication, following correct technique. • Restrict salt, alcohol intake. • Therapeutic antihypertensive effect noted in 1–2 wks.

atomoxetine

TOP 200

at-oh-**mox**-e-teen
(Strattera)

BLACK BOX ALERT Increased risk of suicidal thinking and behavior in children and adolescents with attention-deficit hyperactivity disorder (ADHD).

Do not confuse atomoxetine with atorvastatin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Norepinephrine reuptake inhibitor. **CLINICAL:** Psychotherapeutic agent.

ACTION

Enhances noradrenergic function by selective inhibition of the presynaptic norepinephrine transporter. **Therapeutic Effect:** Improves symptoms of ADHD.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 98% (primarily to albumin). Eliminated primarily in urine and, to a lesser extent, in feces. Not removed by hemodialysis. **Half-life:** 4–5 hrs (increased in moderate to severe hepatic insufficiency).

USES

Treatment of ADHD.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, use within 14 days of MAOIs. Pheochromocytoma or history of pheochromocytoma. Severe cardiovascular disease. **Cautions:** Hypertension, tachycardia, cardiovascular disease (e.g., structural abnormalities, cardiomyopathy), urinary retention, moderate or severe hepatic impairment, suicidal ideation, emergent psychotic or manic symptoms, renal impairment, poor metabolizers of CYP2D6 metabolized drugs (e.g., fluoxetine, paroxetine).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 6 yrs. May produce suicidal thoughts in children and adolescents. **Elderly:** Age-related hepatic/renal impairment, cardiovascular or cerebrovascular disease may increase risk of effects.

INTERACTIONS

DRUG: **MAOIs** may increase concentration and toxic effects. **Fluoxetine, paroxetine** may increase concentration. Avoid concurrent use of **medications that can increase heart rate or B/P.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase hepatic enzymes, serum bilirubin.

AVAILABILITY (Rx)

Capsules: 10 mg, 18 mg, 25 mg, 40 mg, 60 mg, 80 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Swallow capsules whole, do not open (powder in capsule is ocular irritant).

INDICATIONS/ROUTES/DOSAGE

Attention-Deficit Hyperactivity Disorder (ADHD)

PO: ADULTS, CHILDREN 6 YRS AND OLDER WEIGHING 70 KG OR MORE: 40 mg once a day. May increase after at least 3 days to 80 mg as a single daily dose or in divided doses. **Maximum:** 100 mg. **CHILDREN 6 YRS AND OLDER WEIGHING LESS THAN 70 KG:** Initially, 0.5 mg/kg/day. May increase after at least 3 days to 1.2 mg/kg/day. **Maximum:** 1.4 mg/kg/day or 100 mg, whichever is less.

Dosage in Hepatic Impairment

Expect to administer 50% of normal atomoxetine dosage to pts with moderate hepatic impairment and 25% of normal dosage to those with severe hepatic impairment.

A

Dosage with Strong CYP2D6 Inhibitors
ADULTS: Do not exceed 80 mg/day with dosage adjustments at 4-wk intervals. **CHILDREN:** 1.2 mg/kg/day only after 4-wk interval.

SIDE EFFECTS

Frequent: Headache, dyspepsia, nausea, vomiting, fatigue, decreased appetite, dizziness, altered mood. **Occasional:** Tachycardia, hypertension, weight loss, delayed growth in children, irritability. **Rare:** Insomnia, sexual dysfunction in adults, fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Urinary retention, urinary hesitancy may occur. In overdose, gastric lavage, activated charcoal may prevent systemic absorption. Severe hepatic injury occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess pulse, B/P before therapy, following dose increases, and periodically during therapy. Assess attention span, interactions with others.

INTERVENTION/EVALUATION

Monitor urinary output; complaints of urinary retention/hesitancy may be a related adverse reaction. Monitor B/P, pulse periodically and following dose increases. Monitor growth, attention span, hyperactivity, unusual changes in behavior, suicidal ideation. Assist with ambulation if dizziness occurs. Be alert to mood changes. Monitor fluid and electrolyte status in those with significant vomiting.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Take last dose early in evening to avoid insomnia. • Report palpitations, fever, vomiting, irritability. • Monitor growth rate, weight. • Report new or worsened psychiatric problems (e.g., behavior, suicidal ideation), chest pain, palpitations, dyspnea.

atorvastatin

TOP 200

a-**tor**-va-sta-tin
(Apo-Atorvastatin, Lipitor, Novo-Atorvastatin)
Do not confuse atorvastatin with atomoxetine, lovastatin, nystatin, pitavastatin, pravastatin, or simvastatin, or Lipitor with labetalol, Levatol, lisinopril, or Zocor.

FIXED-COMBINATION(S)

Caduet: atorvastatin/amlodipine (calcium channel blocker): 10 mg/2.5 mg, 10 mg/5 mg, 10 mg/10 mg, 20 mg/2.5 mg, 20 mg/5 mg, 20 mg/10 mg, 40 mg/2.5 mg, 40 mg/5 mg, 40 mg/10 mg, 80 mg/5 mg, 80 mg/10 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydroxymethylglutaryl CoA (HMG-CoA) reductase inhibitor. **CLINICAL:** Antihyperlipidemic (see p. 57C).

ACTION

Inhibits HMG-CoA reductase, the enzyme that catalyzes the early step in cholesterol synthesis. **Therapeutic Effect:** Decreases LDL and VLDL, plasma triglyceride levels; increases HDL concentration.

PHARMACOKINETICS

Poorly absorbed from GI tract. Protein binding: greater than 98%. Metabolized in liver. Minimally eliminated in urine, primarily eliminated in feces (biliary). **Half-life:** 14 hrs.

USES

Primary prevention of cardiovascular disease in high-risk pts. Reduces risk of stroke and heart attack in pts with type 2 diabetes with or without evidence of heart disease. Reduces risk of stroke in pts with or without evidence of heart

disease with multiple risk factors other than diabetes. Adjunct to diet therapy in management of hyperlipidemias (reduces elevations in total cholesterol, LDL-C, apolipoprotein B triglycerides in pts with primary hypercholesterolemia), homozygous familial hypercholesterolemia, heterozygous familial hypercholesterolemia in pts 10–17 yrs of age, females more than 1 yr postmenarche. **OFF-LABEL:** Secondary prevention of myocardial ischemia in pts with CHF. Secondary prevention in pts who have experienced a noncardioembolic stroke/TIA or following an acute coronary syndrome (ACS) event.

PRECAUTIONS

Contraindications: Active hepatic disease, lactation, pregnancy, unexplained elevated hepatic function test results. **Cautions:** Anticoagulant therapy; history of hepatic disease; substantial alcohol consumption; major surgery; severe acute infection; trauma; hypotension; severe metabolic, endocrine, electrolyte disorders; uncontrolled seizures.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Contraindicated during pregnancy. May produce skeletal malformation. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong **CYP3A4 inhibitors (e.g., clarithromycin, protease inhibitors, itraconazole)** may increase concentration. **Cyclosporine** may increase concentration. **Gemfibrozil, fibrates, niacin, colchicine** may increase risk of myopathy, rhabdomyolysis. Strong **CYP3A4 inducers (e.g., rifampin, efavirenz)** may decrease concentration. **HERBAL: St. John's wort** may decrease levels. **FOOD: Grapefruit juice in large quantities (greater than 1 quart/day)** may increase serum concentrations. **Red yeast rice** may increase serum levels (2.4 mg lovastatin per 600 mg rice). **LAB VALUES:** May increase serum transaminase, creatinine kinase concentrations.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food or time of day. • Do not break film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Do not use in active hepatic disease.

Hyperlipidemias

PO: ADULTS, ELDERLY: Initially, 10–20 mg/day (40 mg in pts requiring greater than 45% reduction in LDL-C). Range: 10–80 mg/day.

Primary Prevention of Cardiovascular Disease

PO: ADULTS, ELDERLY: 10 mg/day.

Heterozygous Hypercholesterolemia

PO: CHILDREN 10–17 YRS: Initially, 10 mg/day. **Maximum:** 20 mg/day.

Dosage Adjustment with Concomitant Medication

Cyclosporine: Maximum atorvastatin dose: 10 mg/1 day. Strong **CYP3A4 inhibitors:** Ensure lowest dose of atorvastatin.

SIDE EFFECTS

Common: Atorvastatin is generally well tolerated. Side effects are usually mild and transient. **Frequent (16%):** Headache. **Occasional (5%–2%):** Myalgia, rash, pruritus, allergy. **Rare (less than 2%–1%):** Flatulence, dyspepsia, depression.

ADVERSE EFFECTS/TOXIC REACTIONS

Potential for cataracts, photosensitivity, myalgia, rhabdomyolysis.

A

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy before initiating therapy (Pregnancy Category X). Assess baseline lab results: cholesterol, triglycerides, hepatic function tests. Obtain dietary history.

INTERVENTION/EVALUATION

Monitor for headache. Assess for rash, pruritus, malaise. Monitor cholesterol, triglyceride lab values for therapeutic response. Monitor hepatic function tests, CPK.

PATIENT/FAMILY TEACHING

• Follow special diet (important part of treatment). • Periodic lab tests are essential part of therapy. • Do not take other medications without consulting physician. • Report dark urine, muscle fatigue, bone pain. • Avoid excessive alcohol intake, large quantities of grapefruit juice.

atovaquone

a-**toe**-va-kwone
(Mepron)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Systemic anti-infective. **CLINICAL:** Antiprotozoal.

ACTION

Inhibits mitochondrial electron transport system at the cytochrome bc1 complex (Complex III) interrupting nucleic acid, adenosine triphosphate synthesis. **Therapeutic Effect:** Antiprotozoal, antipneumocystic activity.

USES

Treatment or prevention of mild to moderate *Pneumocystis jiroveci* pneumonia (PCP) in those intolerant to trimethoprim-sulfamethoxazole (TMP-SMZ). **OFF-LABEL:** Treatment of babesiosis. Prophylaxis in HIV pts at high risk for developing *Toxoplasma gondii* encephalitis.

PRECAUTIONS

Contraindications: Development or history of potentially life-threatening allergic reaction to the drug. **Cautions:** Elderly, pts with severe PCP, chronic diarrhea, malabsorption syndromes, severe hepatic impairment. **Pregnancy Category C.**

INTERACTIONS

DRUG: Rifabutin, rifampin may decrease concentration. May increase **rifampin** concentration. **HERBAL: Bilberry, fenugreek, garlic, ginger, ginseng** may enhance risk of hypoglycemia. **FOOD: High-fat meals** increase absorption. **LAB VALUES:** May elevate serum AST, ALT, alkaline phosphatase, amylase. May decrease serum sodium.

AVAILABILITY (Rx)

Suspension, Oral: 750 mg/5 ml.

ADMINISTRATION/HANDLING

PO

• Must give with food or high-fat meals. Shake gently prior to using.

INDICATIONS/ROUTES/DOSAGE

Pneumocystis Jiroveci Pneumonia (PCP)

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: 750 mg twice a day with food for 21 days. **CHILDREN 4–24 MOS:** 45 mg/kg/day in 2 divided doses with food. **Maximum:** 1,500 mg/day. **CHILDREN 1–3 MOS OR OLDER THAN 24 MOS:** 30–40 mg/kg/day in 2 divided doses with food. **Maximum:** 1,500 mg/day.

Prevention of PCP

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: 1,500 mg once a day with food. **CHILDREN 4–24 MOS:** 45 mg/kg/day as single dose. **Maximum:** 1,500 mg/day. **CHILDREN 1–3 MOS OR OLDER THAN 24 MOS:** 30 mg/kg/day as single dose. **Maximum:** 1,500 mg/day.

SIDE EFFECTS

Frequent (greater than 10%): Rash, nausea, diarrhea, headache, vomiting, fever,

insomnia, cough. **Occasional (less than 10%):** Abdominal discomfort, thrush, asthenia (loss of strength, energy), anemia, neutropenia.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab studies, esp. hepatic function tests.

INTERVENTION/EVALUATION

Assess for GI discomfort, nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Monitor I&O, renal function tests, CBC, hepatic enzymes, serum chemistries, amylase. Monitor elderly closely for decreased hepatic, renal, cardiac function.

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Do not take any other medications unless approved by physician. • Notify physician of rash, diarrhea, or other new symptoms. • Must be taken with high-fat meal or food.

atropine

at-roe-peen
(AtroPen Auto Injector, Atropine-Care, Isopto Atropine, Sal-Tropine)

FIXED-COMBINATION(S)

Donnatal: atropine/hyoscyamine (anticholinergic)/phenobarbital (sedative)/scopolamine (anticholinergic): 0.0194 mg/0.1037 mg/16.2 mg/0.0065 mg. **Lomotil:** atropine/diphenoxylate (peristaltic inhibitor): 0.025 mg/2.5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Acetylcholine antagonist. **CLINICAL:** Antiarrhythmic, antispasmodic, antidote, cycloplegic, antisecretory, anticholinergic.

ACTION

Competes with acetylcholine for common binding sites on muscarinic receptors located on exocrine glands, cardiac and smooth muscle ganglia, intramural neurons. **Therapeutic Effect:** Decreases GI motility, secretory activity, GU muscle tone (ureter, bladder); produces ophthalmic cycloplegia, mydriasis; abolishes various types of reflex vagal cardiac slowing or asystole.

PHARMACOKINETICS

Rapidly and well absorbed after IM administration. Widely distributed. Metabolized in liver. Excreted in urine (30%–50% as unchanged drug). **Half-life:** 2–3 hrs.

USES

Injection: Preop to inhibit salivation/secretions; treatment of symptomatic sinus bradycardia; AV block; ventricular asystole; antidote for organophosphate pesticide poisoning. Adjuvant to decrease side effects during reversal of neuromuscular blockage. **Ophthalmic:** Produce mydriasis and cycloplegia for examination of retina and optic disc; uveitis. **OFF-LABEL:** Malignant glaucoma, pulseless electric activity, asystole, neuromuscular blockage reversal.

PRECAUTIONS

Contraindications: Bladder neck obstruction due to prostatic hypertrophy, cardiospasm, intestinal atony, myasthenia gravis in those not treated with neostigmine, narrow-angle glaucoma, obstructive disease of GI tract, paralytic ileus, severe ulcerative colitis, tachycardia secondary to cardiac insufficiency or thyrotoxicosis, toxic megacolon, unstable cardiovascular status in acute hemorrhage, hepatic disease, bronchial asthma. **Cautions:**

Autonomic neuropathy, hyperthyroidism, hypertension, tachyarrhythmias, CHF, coronary artery disease, esophageal reflux or hiatal hernia associated with reflux esophagitis; infants, children with spastic paralysis or brain damage; elderly; biliary tract disease, chronic pulmonary disease. **Ophthalmic:** Spastic paralysis, brain injury, Down syndrome.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children/Elderly:** Increased susceptibility to atropine effects.

INTERACTIONS

DRUG: **Anticholinergics** may increase effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection (AtroPen): 0.25 mg/0.3 ml, 0.5 mg/0.7 ml, 1 mg/0.7 ml, 2 mg/0.7 ml. **Injection, Solution:** 0.05 mg/ml, 0.1 mg/ml, 0.4 mg/ml, 1 mg/ml. **Ophthalmic Ointment:** 1%. **Ophthalmic Solution:** 1%.

ADMINISTRATION/HANDLING

IV

• Must be given rapidly (prevents paradoxical slowing of heart rate).

IM

• May be given subcutaneously or IM.

IM, AtroPen

• Store at room temperature. • Give as soon as symptoms of organophosphate or carbamate poisoning appear. • Do not use more than three AtroPen autoinjectors for each person at risk for carbamate or organophosphate poisoning.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Hold dropper above pocket and place prescribed number of drops or ¼–½ inch of ointment into pocket. • Instruct pt to close eye gently (so medication will not be squeezed out of the sac). • For solution, apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption. • For ointment, instruct pt to roll eyeball to increase contact area of drug to eye.

IV INCOMPATIBILITY

Pentothal (Thiopental).

IV COMPATIBILITIES

Diphenhydramine (Benadryl), droperidol (Inapsine), fentanyl (Sublimaze), glycopyrrolate (Robinul), heparin, hydromorphone (Dilaudid), midazolam (Versed), morphine, potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Preanesthetic

IV, IM, Subcutaneous: ADULTS, ELDERLY: 0.4–0.6 mg 30–60 min preop. **CHILDREN WEIGHING 5 KG OR MORE:** 0.01–0.02 mg/kg/dose to maximum of 0.4 mg/dose. Minimum dose: 0.1 mg. **CHILDREN WEIGHING LESS THAN 5 KG:** 0.02 mg/kg/dose 30–60 min preop.

Bradycardia

IV: ADULTS, ELDERLY: 0.5–1 mg q5min not to exceed total of 3 mg or 0.04 mg/kg. **CHILDREN:** 0.02 mg/kg with a minimum of 0.1 mg to a maximum of 0.5 mg as a single dose. May repeat in 5 min. **Maximum total dose:** 1 mg.

Cycloplegic Refraction, Postop Mydriasis, Uveitis

Ophthalmic Solution: ADULTS, ELDERLY: Instill 1 drop in affected eye(s) up to 4 times a day.

Ophthalmic Ointment: ADULTS, ELDERLY: Apply ointment several hours prior to examination when used for refraction.

Antidote for Organophosphate or Carbamate Poisoning

IM: ADULTS, CHILDREN WEIGHING MORE THAN 90 LB: AtroPen 2 mg (green). May

repeat in 10 min. **Maximum:** 3 doses. **CHILDREN WEIGHING 40–90 LB:** AtroPen 1 mg (dark red). **CHILDREN WEIGHING 15–39 LB:** AtroPen 0.5 mg (blue). **INFANTS WEIGHING LESS THAN 15 LB:** 0.05 mg/kg. Do not use AtroPen.

SIDE EFFECTS

Frequent: Dry mouth, nose, throat (may be severe); decreased diaphoresis; constipation; irritation at subcutaneous or IM injection site. **Occasional:** Dysphagia, blurred vision, bloated feeling, impotence, urinary hesitancy. **Ophthalmic:** Mydriasis, blurred vision, photophobia, decreased visual acuity, tearing, dry eyes or dry conjunctiva, eye irritation, crusting of eyelid. **Rare:** Allergic reaction, including rash, urticaria; mental confusion or excitement, particularly in children; fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce tachycardia, palpitations, hot/dry/flushed skin, absence of bowel sounds, increased respiratory rate, nausea, vomiting, confusion, drowsiness, slurred speech, dizziness, CNS stimulation. Overdose may also produce psychosis as evidenced by agitation, restlessness, rambling speech, visual hallucinations, paranoid behavior, delusions, followed by depression. Ophthalmic form may rarely produce increased IOP.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine if pt is sensitive to atropine, homatropine, scopolamine. Treatment with AtroPen autoinjector may be instituted without waiting for lab results.

INTERVENTION/EVALUATION

Monitor changes in B/P, pulse, temperature. Observe for tachycardia if pt has cardiac abnormalities. Assess skin turgor, mucous membranes to evaluate hydration status (encourage adequate fluid intake unless NPO for surgery), bowel sounds for peristalsis. Be alert for fever (increased risk of hyperthermia). Monitor I&O, palpate bladder for urinary retention. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/ FAMILY TEACHING

- For preop use, explain that warm, dry, flushing feeling may occur.

avanafil

a-**van**-a-fill
(Stendra)
Do not confuse with Stelara, avanafil with sildenafil, vardenafil or tadalafil.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphodiesterase inhibitor. **CLINICAL:** Erectile dysfunction adjunct.

ACTION

Inhibits PDE5, a phosphodiesterase type 5 enzyme responsible for degradation of cyclic GMP, predominant isoenzyme in human corpus cavernosum in the penis, resulting in smooth muscle relaxation, increased blood flow. **Therapeutic Effect:** Facilitates erection.

PHARMACOKINETICS

Onset: PO: 15–30 min. Rapidly absorbed. Protein binding: 99%. Extensively metabolized in liver. Primarily excreted in feces with a smaller amount eliminated in urine. **Half-life:** 5 hrs.

USES

Treatment of male erectile dysfunction.

PRECAUTIONS

Contraindications: Concurrent use of nitrates in any form. **Cautions:** Renal/hepatic dysfunction; anatomical deformation of the penis; cardiovascular disease, particularly myocardial infarction, stroke, life-threatening arrhythmia, or

A

coronary revascularization within the last 6 months; those with resting hypotension or hypertension, unstable angina, New York Heart Association class 2 or greater CHF; pts who may be predisposed to priapism (sickle cell anemia, multiple myeloma, leukemia); left ventricular outflow obstruction (e.g., aortic stenosis); concurrent use of alpha-adrenergic blockers.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated for use in women, newborns. **Pregnancy Category C. Children:** Not indicated in pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Nitrates**, **alpha-adrenergic blockers (alfuzosin, doxazosin, prazosin, tamsulosin, terazosin)** may significantly lower B/P. Strong **CYP3A4 inhibitors (erythromycin, itraconazole, indinavir, ketoconazole, nelfinavir, ritonavir, saquinavir)** may significantly increase concentration; do not use. **Antihypertensives, especially amlodipine, enalapril** may potentiate hypotension. **HERBAL:** None significant. **FOOD:** **High-fat meals** reduce rate of absorption. **LAB VALUES:** May increase serum glucose.

AVAILABILITY (Rx)

Tablets: 50 mg, 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• May take without regard to food. • May take approximately 30 min before sexual activity. • The lowest effective dose.

INDICATIONS/ROUTES/DOSAGE

Erectile Dysfunction

PO: ADULTS, ELDERLY: Initially, 100 mg 30 min prior to sexual activity. May increase to 200 mg. **Range:** 50–200 mg. **Maximum dosing frequency:** Once daily.

Dosage with Concurrent Alpha Blocker (e.g., Alfuzosin, Doxazosin, Prazosin, Terazosin)

PO: ADULTS, ELDERLY: Initially, 50 mg. **Maximum dosing frequency:** Once daily.

Dosage with Concurrent Moderate CYP3A4 Inhibitors (e.g., Amprenavir, Aprepitant, Diltiazem, Fluconazole, Fosamprenavir, Verapamil)

PO: ADULTS, ELDERLY: Initially, 50 mg. **Maximum dosing frequency:** Once daily.

SIDE EFFECTS

Occasional (6%–4%): Headache, flushing. **Rare (3%–2%):** Nasal congestion, nasopharyngitis, back pain. **Less than 2%:** Dizziness, arthralgia, diarrhea, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Sudden hearing decrease, sudden loss of vision in one or both eyes noted rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess cardiovascular status before initiating treatment for erectile dysfunction.

PATIENT/FAMILY TEACHING

• Medication has no effect in absence of sexual stimulation. • Seek treatment immediately if erection lasts longer than 4 hrs. • Avoid nitrate drugs while taking avanafil. • Report sudden decrease or loss of hearing or vision.

axitinib

ax-**i**-tin-nib
(Inlyta)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic (see p. 79C).

ACTION

Interferes with proliferation of tumor vasculature, preventing tumor growth. **Therapeutic Effect:** Blocks tumor growth, inhibits angiogenesis.

PHARMACOKINETICS

Undergoes extensive hepatic metabolism. Protein binding: greater than 99%. Eliminated primarily in feces with a lesser amount excreted in urine. **Half-life:** 2.5–6 hrs.

USES

Treatment of advanced renal cell carcinoma after failure of one prior systemic chemotherapy.

PRECAUTIONS

Contraindications: None significant. Do not use in those with untreated brain metastasis or recent active GI bleeding. **Cautions:** Those with increased risk or history of thrombotic events, GI perforation or fistula formation, renal/hepatic impairment, hypertension.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown whether distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established in children younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong **CYP3A4/5 inhibitors (e.g., erythromycin, itraconazole, indinavir, ketoconazole, nelfinavir, ritonavir, saquinavir)** may significantly increase concentration; do not use concurrently. Coadministration with strong **CYP3A4/5 inducers (e.g., rifampin, dexamethasone, phenytoin, carbamazepine, rifabutin, rifapentine, phenobarbital)** may significantly decrease concentration; do not use concurrently. **HERBAL:** **St. John's wort** may decrease concentration. **FOOD:** **Grapefruit, grapefruit juice** may increase concentration. **LAB VALUES:** May decrease Hgb, WBC count, platelets, serum calcium, alkaline phosphatase, albumin, sodium. May increase serum ALT, AST, bilirubin, BUN, creatinine, serum potassium, lipase, amylase. May alter serum glucose.

AVAILABILITY (Rx)

Tablets film-coated: 1 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Swallow tablets whole with full glass of water; do not break, crush, dissolve, or divide.

INDICATIONS/ROUTES/DOSAGE

Renal Cell Carcinoma

PO: ADULTS, ELDERLY: Initially, 5 mg twice daily, given approximately 12 hrs apart.

Moderate Hepatic Impairment

PO: ADULTS, ELDERLY: Reduce initial dose by half. May be increased or decreased based on individual safety, tolerability. Not recommended in pts with severe hepatic impairment.

SIDE EFFECTS

Frequent (55%–20%): Diarrhea, hypertension, fatigue, decreased appetite, nausea, dysphonia, palmar-plantar erythrodysesthesia (hand-foot) syndrome, weight loss, vomiting, asthenia, constipation. **Occasional (19%–11%):** Hypothyroidism, cough, stomatitis, arthralgia, dyspnea, abdominal pain, headache, peripheral pain, rash, proteinuria, dysgeusia (altered sense of taste). **Rare (10%–2%):** Dry skin, dyspepsia, dizziness, myalgia, pruritus, epistaxis, alopecia, hemorrhoids, tinnitus, erythema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Arterial and venous thrombotic events (MI, CVA), GI perforation, fistula have been observed and can be fatal. Hypothyroidism requiring thyroid hormone replacement has been noted. Reversible

posterior leukoencephalopathy syndrome (RPLS) has been observed.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Assess medical history, esp. hepatic function abnormalities. Obtain baseline EKG, CBC, serum chemistries, and renal/hepatic function tests (BUN, creatinine, ALT, AST, bilirubin) before initiation of, and periodically throughout, treatment. B/P should be well controlled prior to initiating treatment. Stop medication at least 24 hrs prior to scheduled surgery. Monitor thyroid function before initiation of, and periodically throughout, treatment.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor CBC, serum chemistries, urinalysis, thyroid tests for changes from baseline. Assess for evidence of bleeding or hemorrhage. Assess for hypertension. For persistent hypertension despite use of antihypertensive medications, dose should be reduced. Permanently discontinue if signs or symptoms of RPLS occur (extreme lethargy, increased B/P from pt baseline, pyuria). Contact physician if changes in voice, redness of skin, or rash is noted.

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine; do not receive vaccinations. • Swallow tablet whole; do not chew, crush, dissolve, or divide. • Grapefruit products should be avoided. • Notify physician if diarrhea, extreme fatigue occur, easy bruising, or unusual bleeding from any site or diarrhea persists.

azacitidine

HIGH ALERT

ay-za-**sye**-ti-deen
(Vidaza)

Do not confuse azacitidine with azathioprine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: DNA demethylation agent. **CLINICAL:** Antineoplastic (see p. 80C).

ACTION

Exerts cytotoxic effect on rapidly dividing cells by causing demethylation of DNA in abnormal hematopoietic cells in bone marrow. **Therapeutic Effect:** Restores normal function to tumor-suppressor genes regulating cellular differentiation, proliferation.

PHARMACOKINETICS

Rapidly absorbed after subcutaneous administration. Metabolized by liver. Eliminated in urine. **Half-life:** 4 hrs.

USES

Treatment of myelodysplastic syndromes (MDS), specifically refractory anemia, myelomonocytic leukemia. **OFF-LABEL:** Treatment of acute myelogenous leukemia.

PRECAUTIONS

Contraindications: Advanced malignant hepatic tumors, hypersensitivity to mannitol. **Cautions:** Hepatic disease, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be embryotoxic; may cause developmental abnormalities of the fetus. Mothers should avoid breast-feeding. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may increase risk of renal toxicity.

INTERACTIONS

DRUG: Bone marrow suppressants may increase myelosuppression. May alter effects of **live virus vaccines.** May increase levels of **clozapine, natalizumab. Pimecrolimus, tacrolimus**

(topical) may increase concentration. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, WBC, RBC, platelet counts. May increase serum creatinine, potassium, AST, ALT, alkaline phosphatase.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 100 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each vial with 10 ml Sterile Water for Injection to provide a concentration of 10 mg/ml. • Vigorously shake/roll vial until all solids are dissolved. Solution should be clear. • Further dilute desired dose with 50–100 ml 0.9% NaCl.

Rate of Administration • Administer total dose over 10–40 min. • Administration should be completed within 1 hr of reconstitution of vial.

Stability • Store unreconstituted vial at room temperature. • Solution is stable for 1 hr following reconstitution.

SUBCUTANEOUS

Reconstitution • Reconstitute with 4 ml Sterile Water for Injection. • Reconstituted solution will appear cloudy.

Rate of Administration • Doses greater than 4 ml should be divided equally into 2 syringes. • Contents of syringe must be resuspended by inverting the syringe 2–3 times and rolling the syringe between the palms for 30 sec immediately before administration. • Rotate site for each injection (thigh, upper arm, abdomen). New injections should be administered at least 1 inch from the old site.

Storage • Store vials at room temperature. • Reconstituted solution may be stored for up to 1 hr at room temperature or up to 8 hrs if refrigerated. • Solution may be allowed to return to room temperature and used within 30 min.

IV INCOMPATIBILITIES

Dextrose, hespan, solutions containing sodium bicarbonate.

IV COMPATIBILITIES

Lactated Ringer's, sodium chloride.

INDICATIONS/ROUTES/DOSAGE

MDS

◀ALERT▶ Dosage adjustment based on hematology testing.

IV/Subcutaneous: ADULTS, ELDERLY: 75 mg/m²/day for 7 days every 4 wks. Dosage may be increased to 100 mg/m² if initial dose is insufficient and toxicity is manageable. Treatment recommended for at least 4 cycles.

SIDE EFFECTS

Frequent (71%–29%): **IV/Subcutaneous:** Nausea, vomiting, fever, diarrhea, fatigue, injection site erythema, constipation, ecchymosis, cough, dyspnea, weakness. **IV:** Petechiae, weakness, rigors, hypokalemia. **Occasional (26%–16%):** **IV/Subcutaneous:** Rigors, petechiae, injection site pain, pharyngitis, arthralgia, headache, limb pain, dizziness, peripheral edema, back pain, erythema, epistaxis, weight loss, myalgia. **Rare (13%–8%):** **IV/Subcutaneous:** Anxiety, abdominal pain, rash, depression, tachycardia, insomnia, night sweats, stomatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity, manifested as anemia, leukopenia, neutropenia, thrombocytopenia, occurs commonly.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Give emotional support to pt and family. Use strict aseptic technique and protect pt from infection. Obtain blood counts, electrolytes, BUN, serum creatinine, hepatic enzyme levels routinely to monitor response and toxicity but particularly before each dosing cycle.

INTERVENTION/EVALUATION

Monitor for hematologic toxicity (fever, sore throat, signs of local infections, unusual bruising/bleeding), symptoms of anemia (excessive fatigue, weakness). Assess response to medication; monitor and report nausea, vomiting, diarrhea. Avoid rectal temperatures, other traumas that may induce bleeding.

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid crowds, persons with known infections. • Report signs of infection (fever, flu-like symptoms) immediately. • Contact physician if nausea/vomiting continues at home. • Men should use barrier contraception while receiving treatment.

azathioprine

a-za-**thy**-o-preen
(Apo-Azathioprine, Azasan, Imuran)

BLACK BOX ALERT Chronic immunosuppression increases risk of neoplastic syndrome, serious infections.

Do not confuse azathioprine with Azulfidine, azacitidine, or azithromycin, or Imuran with Elmiron, Imdur, or Inderal.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunologic agent. **CLINICAL:** Immunosuppressant.

ACTION

Antagonizes purine metabolism, inhibits DNA, protein, and RNA synthesis. **Therapeutic Effect:** Suppresses cell-mediated hypersensitivities; alters antibody production, immune response in transplant recipients. Reduces symptoms of arthritis severity.

USES

Adjunct in prevention of rejection in kidney transplantation; treatment of rheumatoid arthritis (RA) in those unresponsive to conventional therapy. **OFF-LABEL:** Treatment of dermatomyositis, polymyositis. Adjunct in preventing rejection of solid organ (nonrenal) transplants. Maintenance, remission, or reduction of steroid use in Crohn's disease, erythema multiforme, pemphigus vulgaris, lupus nephritis, chronic refractory immune thrombocytopenic purpura, relapsing/remitting multiple sclerosis.

PRECAUTIONS

Contraindications: Pregnant women with rheumatoid arthritis (RA), those previously treated for RA with alkylating agents (cyclophosphamide, chlorambucil, melphalan). **Cautions:** Immunosuppressed pts, those with hepatic/renal impairment, active infection. Testing for genetic deficiency of thiopurine methyltransferase should be obtained. (Absence or reduced levels increase risk of myelosuppression).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May depress spermatogenesis, reduction of sperm viability, count. May cause fetal harm. Do not breast-feed. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Allopurinol, sulfamethoxazole/trimethoprim** may increase activity, toxicity. **Bone marrow depressants** may increase myelosuppression. **Other immunosuppressants** may increase risk of infection or development of neoplasms. May increase effects of **live virus vaccines.** **HERBAL:** Avoid **cat's claw, echinacea** (immunostimulant properties). **FOOD:** None known. **LAB VALUES:** May decrease Hgb, serum albumin, uric acid. May increase serum AST, ALT, alkaline phosphatase, amylase, bilirubin.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Imuran): 100-mg vial. **Tablets:** 50 mg (Imuran), 75 mg (Azasan), 100 mg (Azasan).

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 100-mg vial with 10 ml Sterile Water for Injection to provide concentration of 10 mg/ml. • Swirl vial gently to mix and dissolve solution. • May further dilute in 50 ml D_5W or 0.9% NaCl.

Rate of Administration • Give IVP over 5 min at concentration not to exceed 10 mg/ml or as intermittent infusion over 15–60 min.

Storage • Store parenteral form at room temperature. • After reconstitution, IV solution stable for 24 hrs.

PO

• Give with food or in divided doses to reduce potential for GI disturbances. • Store oral form at room temperature.

IV INCOMPATIBILITIES

Methyl and propyl parabens, phenol.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Reduce dose to 1/3 or 1/4 usual dose when used with allopurinol or low/absent thiopurine methyltransfurase genetic deficiency.

Prevention of Renal Allograft Rejection

PO, IV: ADULTS, ELDERLY, CHILDREN: 3–5 mg/kg/day on day of transplant, then 1–3 mg/kg/day as maintenance dose.

Rheumatoid Arthritis (RA)

PO: ADULTS: Initially, 1 mg/kg/day as a single dose or in 2 divided doses for 6–8 wks. May increase by 0.5 mg/kg/day after 6–8 wks at 4-wk intervals. **Maximum:** 2.5 mg/kg/day. Maintenance: Lowest effective dosage. May decrease dose by 0.5 mg/kg or 25 mg/day q4wks (while other therapies, such as rest, physiotherapy, and salicylates, are maintained). **ELDERLY:** Initially, 1 mg/kg/day (50–100 mg); may increase by 25 mg/day until response or toxicity.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
10–50 ml/min	75% of normal
Less than 10 ml/min	50% of normal
Hemodialysis	50% of normal (Adults: additional 0.25 mg/kg)
Continuous renal replacement therapy (CRRT)	75% of normal

SIDE EFFECTS

Frequent: Nausea, vomiting, anorexia (particularly during early treatment and with large doses). **Occasional:** Rash. **Rare:** Severe nausea/vomiting with diarrhea, abdominal pain, hypersensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increases risk of neoplasia (new abnormal-growth tumors). Significant leukopenia and thrombocytopenia may occur, particularly in those undergoing renal transplant rejection. Hepatotoxicity occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Arthritis: Assess onset, type, location, and duration of pain, fever, inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

CBC, platelet count, hepatic function studies should be performed weekly during first mo of therapy, twice monthly during second and third mos of treatment, then monthly thereafter. If WBC falls rapidly, dosage should be reduced or discontinued. Assess particularly for delayed myelosuppression. Routinely

watch for any change from baseline. **Arthritis:** Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Contact physician if unusual bleeding/bruising, sore throat, mouth sores, abdominal pain, fever occurs. • Therapeutic response in rheumatoid arthritis may take up to 12 wks. • Women of childbearing age must avoid pregnancy.

azelastine

TOP 200

a-**zel**-as-teen
(Astelin, Astepro, Optivar)
Do not confuse Astelin with Astepro, or Optivar with Optiray.

FIXED COMBINATION(S)

Dymista: azelastine/fluticasone (a corticosteroid): 137 mcg/50 mcg per spray

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihistamine. **CLINICAL:** Antiallergy (see p. 3C, 139C).

ACTION

Competes with histamine for histamine receptor sites on cells in blood vessels, GI tract, respiratory tract. **Therapeutic Effect:** Relieves symptoms associated with seasonal allergic rhinitis (increased mucus production, sneezing) and symptoms associated with allergic conjunctivitis (redness, itching, excessive tearing).

PHARMACOKINETICS

Route	Onset	Peak	Duration
Nasal spray	0.5–1 hr	2–3 hrs	12 hrs
Ophthalmic	N/A	3 min	8 hrs

Well absorbed through nasal mucosa. Primarily excreted in feces. Protein binding: 88%. Metabolized in liver. **Half-life:** 22 hrs.

USES

Nasal: Treatment of symptoms of seasonal and vasomotor rhinitis. **Ophthalmic:** Treatment of itching associated with allergic conjunctivitis.

PRECAUTIONS

Contraindications: History of hypersensitivity to antihistamines. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Do not use during third trimester. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol, CNS depressants, anticholinergics may increase CNS depression. **Cimetidine** may increase plasma concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May suppress wheal and flare reaction to antigen skin testing unless drug is discontinued 4 days before testing. May increase serum ALT.

AVAILABILITY (Rx)

Nasal Spray (Astelin): (0.1%) 137 mcg/spray. **(Astepro):** (0.15%) 205.5 mcg/spray. **Ophthalmic Solution (Optivar):** 0.05%.

ADMINISTRATION/HANDLING

Nasal

• Instruct pt to clear nasal passages as much as possible before use. • Tilt pt's head slightly forward. • Insert spray tip into nostril, pointing toward nasal passage, away from nasal septum. • Spray into nostril while pt holds the other nostril closed and concurrently inhales through nose to permit medication as high into nasal passage as possible.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place prescribed number of drops into pocket. • Instruct pt to close eye gently for 1–2 min (so medication will not be squeezed out of the sac) and to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption.

INDICATIONS/ROUTES/DOSAGE

Seasonal Allergic Rhinitis

Nasal: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: (Astelin, Astepro): 1–2 sprays in each nostril twice a day. **CHILDREN 5–11 YRS: (Astelin):** 1 spray in each nostril twice a day.

Vasomotor Rhinitis

Nasal: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2 sprays in each nostril twice daily.

Allergic Conjunctivitis

Ophthalmic: ADULTS, ELDERLY, CHILDREN 3 YRS AND OLDER: 1 drop into affected eye twice a day.

SIDE EFFECTS

Nasal: Frequent (20%–15%): Headache, bitter taste. **Rare:** Nasal burning, paroxysmal sneezing, drowsiness. **Ophthalmic:** Transient eye burning or stinging, bitter taste, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Epistaxis occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to antihistamines.

INTERVENTION/EVALUATION

Assess therapeutic response to medication.

PATIENT/FAMILY TEACHING

• May cause drowsiness, impair ability to perform tasks requiring mental alertness or physical coordination. • Avoid alcohol.

azilsartan

ay-zil-**sar**-tan
(Edarbi)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

FIXED-COMBINATION(S)

Edarbyclor: azilsartan/chlorthalidone, a diuretic: 40 mg/12.5 mg, 40 mg/25 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor blocker (ARB). **CLINICAL:** Antihypertensive (see p. 10C, 60C).

ACTION

Potent vasodilator. Blocks vasoconstriction, aldosterone-secreting effects of angiotension II, inhibiting binding of angiotension II to AT_1 receptors. **Therapeutic Effect:** Produces vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Hydrolyzed to active metabolite in GI tract. Moderately absorbed (60%). Peak plasma concentration: 1.5–3 hrs. Metabolized in liver. Protein binding: greater than 99%. Excreted primarily in feces and urine. **Half-life:** 11 hrs.

USES

Treatment of hypertension alone or in combination with other antihypertensives. Lowers risk of stroke and myocardial infarction related to hypertension.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, unstented re-

A

nal artery stenosis, significant aortic/mitral stenosis, severe CHF, volume depletion/salt-depleted pts.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm when administered during third trimester. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C (D if used in second and third trimester). Children:** Safety and efficacy not established. **Elderly:** Elevated creatinine levels may occur in pts older than 75 yrs.

INTERACTIONS

DRUG: ACE inhibitors, potassium-sparing diuretics, potassium supplements may increase risk of hyperkalemia. **NSAIDs, COX-2 inhibitors (e.g., celecoxib)** may decrease effect. **Hypotensive agents** may increase hypotensive effects. **HERBAL: Yohimbe, ephedra, licorice, ginseng** may increase B/P. **Garlic** may enhance antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: 80 mg once daily. Reduce to 40 mg once daily if giving high-dose diuretic concurrently.

SIDE EFFECTS

Occasional (2%–0.4%): Diarrhea, orthostatic hypotension. **Rare (0.3%):** Nausea, fatigue, muscle spasm, cough.

ADVERSE EFFECTS/ TOXIC REACTIONS

Oliguria, acute renal failure may occur in pts with history of renal artery stenosis, severe CHF, volume depletion.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). Question possibility of pregnancy. Assess medication history (esp. diuretics). Question history of hepatic/renal impairment, renal artery stenosis, severe CHF. Obtain baseline BMP, AST, ALT, BUN, creatinine, alkaline phosphatase, bilirubin, Hgb, Hct.

INTERVENTION/EVALUATION

Maintain hydration (offer fluids frequently). Monitor serum electrolytes, B/P, pulse, hepatic/renal function. Observe for symptoms of hypotension. If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated. Correct volume or salt depletion prior to treatment.

PATIENT/FAMILY TEACHING

• Take measures to avoid pregnancy. If pregnancy occurs, inform physician immediately. • Low blood pressure is more likely to occur if pt takes diuretics or other medications to control blood pressure, consumes low-salt diet, experiences vomiting or diarrhea, or becomes dehydrated. • Change positions slowly, particularly from lying to standing position. • If lightheadedness or dizziness occurs, immediately lie down and call physician. • Report swollen extremities or decreased urine output despite fluid intake.

azithromycin

TOP 200

a-**zith**-roe-**my**-sin

(Apo-Azithromycin, AzaSite, Novo-Azithromycin, Zithromax, Zithromax TRI-PAK, Zithromax Z-PAK, Zmax)

Do not confuse azithromycin with azathioprine or erythromycin, or Zithromax with Fosamax or Zovirax.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Macrolide.
CLINICAL: Antibiotic (see p. 26C).

ACTION

Binds to ribosomal receptor sites of susceptible organisms, inhibiting RNA-dependent protein synthesis. **Therapeutic Effect:** Bacteriostatic or bactericidal, depending on drug dosage.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 7%–50%. Widely distributed. Metabolized in liver. Eliminated primarily by biliary excretion. **Half-life:** 68 hrs.

USES

IV/PO: Treatment of susceptible infections due to *Chlamydia pneumoniae, C. trachomatis, H. influenzae, Legionella, M. catarrhalis, Mycoplasma pneumoniae, N. gonorrhoeae, S. aureus., S. pneumoniae, S. pyogenes,* including mild to moderate infections of upper respiratory tract (pharyngitis, tonsillitis), lower respiratory tract (acute bacterial exacerbations, COPD, pneumonia), uncomplicated skin and skin-structure infections, sexually transmitted diseases (nongonococcal urethritis, cervicitis due to *Chlamydia trachomatis*), chancroid. Prevents disseminated *Mycobacterium avium* complex (MAC). Treatment of mycoplasma pneumonia, community-acquired pneumonia, pelvic inflammatory disease (PID). Prevention/treatment of MAC in pts with advanced HIV infection. **Ophthalmic:** Treatment of bacterial conjunctivitis caused by susceptible infections due to *H. influenzae, S. aureus, S. mitis, S. pneumoniae.* **OFF-LABEL:** Prophylaxis of endocarditis, pertussis.

PRECAUTIONS

Contraindications: Hypersensitivity to other macrolide antibiotics. History of cholestatic jaundice/hepatic dysfunction associated with prior azithromycin therapy. **Cautions:** Hepatic/renal dysfunction. Hepatocellular and/or cholestatic hepatitis (with or without jaundice), hepatic necrosis. May prolong QT interval (rare), myasthenia gravis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 16 yrs for IV use and younger than 6 mos for oral use. **Elderly:** No age-related precautions in those with normal renal function.

INTERACTIONS

DRUG: **Aluminum/magnesium-containing antacids** may decrease concentration (give 1 hr before or 2 hrs after antacid). May increase levels of **amiodarone, cyclosporine, dronedarone, QT-prolonging medications, thioridazine, toremifene, ziprasidone. Quetiapine** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatine phosphokinase (CPK), AST, ALT, bilirubin, LDH, potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Zithromax): 500 mg. **Ophthalmic Solution (AzaSite):** 1%. **Suspension, Oral (Zithromax):** 100 mg/5 ml, 200 mg/5 ml, 1-g single dose packet. **Suspension, Oral (Extended-Release [Zmax]):** 2-g single-dose packet. **Tablets:** 250 mg, 500 mg, 600 mg (Zithromax). Tri-Pak: 3 × 500 mg (Zithromax TRI-PAK). Z-PAK: 6 × 250 mg (Zithromax Z-PAK).

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 500-mg vial with 4.8 ml Sterile Water for Injection to provide concentration of 100 mg/ml. • Shake well to ensure dissolution. • Further dilute with 250 or 500 ml 0.9% NaCl or D_5W to provide final concentration of 2 mg/ml with 250 ml diluent or 1 mg/ml with 500 ml diluent.

A

Rate of Administration • Infuse over 60 min (2 mg/ml). Infuse over 3 hrs (1 mg/ml).

Storage • Store vials at room temperature. • Following reconstitution, diluted solution is stable for 24 hrs at room temperature or 7 days if refrigerated.

PO (Immediate-Release Suspension)

• Give tablets without regard to food. • May store suspension at room temperature. Stable for 10 days after reconstitution.

PO (Extended-Release Suspension)

• Do not administer oral suspension with food. Give at least 1 hr before or 2 hrs after meals. • Give Zmax within 12 hrs of reconstitution. • Give tablets with food to decrease GI effects.

PO

• Tablets: May give with food to decrease GI effects.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place prescribed number of drops into pocket. • Instruct pt to close eye gently for 1 to 2 min (so medication will not be squeezed out of sac) and to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption.

IV INCOMPATIBILITIES

Ceftriaxone (Rocephin), ciprofloxacin (Cipro), famotidine (Pepcid), furosemide (Lasix), ketorolac (Toradol), levofloxacin (Levaquin), morphine, piperacillin/tazobactam (Zosyn), potassium chloride.

IV COMPATIBILITY

Diphenhydramine (Benadryl).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: 250–600 mg once daily or 1–2 g as single dose. **CHILDREN 6 MOS AND OLDER:** 5–12 mg/kg (**maximum:** 500 mg) once daily or 30 mg/kg (**maximum:** 1,500 mg) as single dose.
IV: ADULTS, ELDERLY: 250–500 mg once daily (not currently approved in children).

Acute Exacerbations of COPD

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 500 mg/day for 3 days or 500 mg on day 1, then 250 mg/day on days 2–5.

Acute Bacterial Sinusitis

PO *(ZMAX)*: ADULTS, ELDERLY: 2 g as a single dose.
PO: ADULTS, ELDERLY: 500 mg/day for 3 days. **CHILDREN 6 MOS AND OLDER:** 10 mg/kg for 3 days. **Maximum:** 500 mg/day.

Cervicitis

PO: ADULTS, ELDERLY: 1–2 g as single dose.

Chancroid

PO: ADULTS, ELDERLY: 1 g as single dose.

MAC Prevention

PO: ADULTS, ELDERLY: 1,200 mg once weekly. **CHILDREN:** 20 mg/kg once weekly. **Maximum:** 1,200 mg/dose.

MAC Treatment

PO: ADULTS, ELDERLY: 600 mg/day with ethambutol. **CHILDREN:** 10–12 mg/kg/day (**maximum:** 500 mg) with ethambutol.

Otitis Media

PO: CHILDREN 6 MOS AND OLDER: 30 mg/kg as single dose (**maximum:** 1,500 mg) or 10 mg/kg/day for 3 days (**maximum:** 500 mg) or 10 mg/kg on day 1 (**maximum:** 500 mg), then 5 mg/kg on days 2–5 (**maximum:** 250 mg).

Pharyngitis, Tonsillitis

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 500 mg on day 1, then 250 mg on days 2–5. **CHILDREN 2–15 YRS:** 12 mg/kg daily for 5 days (**maximum:** 500 mg).

Pneumonia, Community-Acquired

PO *(Zmax)*: **ADULTS, ELDERLY:** 2 g as a single dose.

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 500 mg on day 1, then 250 mg on days 2–5 or 500 mg/day IV for 2 days, then 500 mg/day PO to complete course of therapy. **CHILDREN 6 MOS–15 YRS:** 10 mg/kg on day 1 (**maximum:** 500 mg), then 5 mg/kg (**maximum:** 250 mg) on days 2–5.

Skin and Skin-Structure Infections

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 500 mg on day 1, then 250 mg on days 2–5.

Pelvic Inflammatory Disease (PID)

IV: ADULTS, ELDERLY: 500 mg/day for at least 2 days, then 250 mg/day to complete a 7-day course of therapy.

Bacterial Conjunctivitis

Ophthalmic: ADULTS, ELDERLY: 1 drop in affected eye twice a day for 2 days, then 1 drop once a day for 5 days.

SIDE EFFECTS

Occasional: Systemic: Nausea, vomiting, diarrhea, abdominal pain. **Ophthalmic:** Eye irritation. **Rare: Systemic:** Headache, dizziness, allergic reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Acute interstitial nephritis, hepatotoxicity occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hepatitis, allergies to azithromycin, erythromycins. Assess for infection (WBC count, appearance of wound, evidence of fever).

INTERVENTION/EVALUATION

Check for GI discomfort, nausea, vomiting. Monitor daily pattern of bowel activity and stool consistency. Monitor hepatic function tests, CBC. Assess for hepatotoxicity: malaise, fever, abdominal pain, GI disturbances. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Avoid concurrent administration of aluminum- or magnesium-containing antacids. • Bacterial conjunctivitis: Do not wear contact lenses.

aztreonam

az-**tree**-oo-nam
(Azactam, Cayston)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monobactam. **CLINICAL:** Antibiotic.

ACTION

Inhibits bacterial cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Completely absorbed after IM administration. Protein binding: 56%–60%. Partially metabolized by hydrolysis. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 1.4–2.2 hrs (increased in renal/hepatic impairment).

USES

Treatment of infections caused by susceptible gram-negative microorganisms *P. aeruginosa, E. coli, S. marcescens, K. pneumoniae, P. mirabilis, H. influenzae, Enterobacter, Citrobacter* spp. including lower respiratory tract, skin/skin structure, intraabdominal, gynecologic, complicated/uncomplicated UTIs; septicemia; cystic fibrosis. **Cayston:** Improve respiratory symptoms in cystic fibrosis pts with *P. aeruginosa.* **OFF-LABEL:** Treatment of bone and joint infections.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of allergy, esp. cephalosporins, penicillins; renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta, distributed in amniotic fluid; low concentration in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 9 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, creatinine, LDH, AST, ALT levels. Produces a positive Coombs' test. May prolong partial thromboplastin time (PTT), prothrombin time (PT).

AVAILABILITY (Rx)

Injection, Infusion Solution (Azactam): Premix 1 g/50 ml, 2 g/50 ml. **Injection, Powder for Reconstitution (Azactam):** 1 g, 2 g. **Oral Inhalation, Powder for Reconstitution (Cayston):** 75 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV push, dilute each gram with 6–10 ml Sterile Water for Injection. • For intermittent IV infusion, further dilute with 50–100 ml D_5W or 0.9% NaCl.

Rate of Administration • For IV push, give over 3–5 min. • For IV infusion, administer over 20–60 min.

Storage • Store vials at room temperature. • Solution appears colorless to light yellow. • Following reconstitution, solution is stable for 48 hrs at room temperature or 7 days if refrigerated. • Discard if precipitate forms. Discard unused portions.

IM

• Shake immediately, vigorously after adding diluent. • Inject deeply into large muscle mass. • Following reconstitution, solution is stable for 48 hrs at room temperature or 7 days if refrigerated.

Inhalation

• Administer only with an Altera nebulizer system. • Nebulize over 2–3 min. • Give bronchodilator 15 min–4 hrs (short-acting) or 30 min–12 hrs (long-acting) before administration. • Reconstituted solution must be used immediately.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin (Fungizone), daunorubicin (Cerubidine), ganciclovir (Cytovene), lorazepam (Ativan), metronidazole (Flagyl), vancomycin (Vancocin).

IV COMPATIBILITIES

Aminophylline, bumetanide (Bumex), calcium gluconate, cimetidine (Tagamet), diltiazem (Cardizem), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), famotidine (Pepcid), furosemide (Lasix), heparin, hydromorphone (Dilaudid), insulin (regular), lipids, magnesium sulfate, meperidine (Demerol), morphine, potassium chloride, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

UTIs

IV, IM: ADULTS, ELDERLY: 500 mg–1 g q8–12h.

Moderate to Severe Systemic Infections

IV, IM: ADULTS, ELDERLY: 1–2 g q8–12h.

Severe or Life-Threatening Infections

IV: ADULTS, ELDERLY: 2 g q6–8h. **Maximum:** 8 g/day.

Cystic Fibrosis

IV: CHILDREN: 50 mg/kg/dose q6–8h up to 200 mg/kg/day. **Maximum:** 8 g/day. **Inhalation: ADULTS, CHILDREN 7 YRS OR OLDER:** 75 mg 3 times/day (at least 4 hrs apart) for 28 days, then off for 28-day cycle.

Moderate to Severe Infections in Children
IV: CHILDREN: 30 mg/kg q6–8h. **Maximum:** 120 mg/kg/day. **NEONATES:** 60–120 mg/kg/day divided q6–12h (dosage based on age and weight).

Dosage in Renal Impairment
Dosage and frequency are modified based on creatinine clearance and severity of infection:

Creatinine Clearance	Dosage
10–30 ml/min	50% usual dose at usual intervals
Less than 10 ml/min	25% usual dose at usual intervals
Hemodialysis	500 mg–2 g, then 25% of initial dose at usual interval
Continuous renal replacement therapy	2 g, then 1 g q8–12h or 2g q12h

SIDE EFFECTS

Frequent (greater than 5%): Cayston: Cough, nasal congestion, wheezing, pharyngolaryngeal pain, pyrexia, chest discomfort, abdominal pain, vomiting. **Occasional (less than 3%):** Discomfort and swelling at IM injection site, nausea, vomiting, diarrhea, rash. **Rare (less than 1%):** Phlebitis or thrombophlebitis at IV injection site, abdominal cramps, headache, hypotension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Severe hypersensitivity reactions, including anaphylaxis, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to aztreonam, other antibiotics.

INTERVENTION/EVALUATION

Evaluate for phlebitis (heat, pain, red streaking over vein), pain at IM injection site. Assess for GI discomfort, nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor renal/hepatic function.

PATIENT/FAMILY TEACHING

- Report nausea, vomiting, diarrhea, rash.

bacitracin

bas-i-**tray**-sin
(Baciguent)
Do not confuse bacitracin with Bactrim or Bactroban.

FIXED-COMBINATION(S)

With polymyxin B, an antibiotic **(Polysporin);** with polymyxin B and neomycin, antibiotics **(Neosporin).**

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiinfective. **CLINICAL:** Antibiotic.

ACTION

Interferes with plasma membrane permeability, inhibits bacterial cell wall synthesis in susceptible microorganisms. **Therapeutic Effect:** Bacteriostatic.

USES

Ophthalmic: Superficial ocular infections (conjunctivitis, keratitis, corneal ulcers, blepharitis). **Topical:** Minor skin abrasions, superficial infections. **Irrigation:** Treatment, prophylaxis of surgical procedures.

PRECAUTIONS

Contraindications: None known. **Cautions:** None known. **Pregnancy Category C.**

B

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Ophthalmic Ointment: 500 units/g. **Powder for Irrigation:** 50,000 units. **Topical Ointment (Baciguent [OTC]):** 500 units/g.

ADMINISTRATION/HANDLING

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. Place ¼–½ inch ointment into pocket. • Instruct pt to close eye gently for 1–2 min, and roll eyeball (increases contact area of drug to eye).

Topical

• Gently cleanse area prior to application. • Without touching application tip to skin, apply on area thoroughly.

INDICATIONS/ROUTES/DOSAGE

Superficial Ocular Infections

Ophthalmic: ADULTS: ¼- to ½-inch ribbon in conjunctival sac q3–4h.

Skin Abrasions, Superficial Skin Infections

Topical: ADULTS, CHILDREN: Apply to affected area 1–5 times a day.

Surgical Treatment, Prophylaxis

Irrigation: ADULTS, ELDERLY: 50,000–150,000 units, as needed.

SIDE EFFECTS

Rare: Ophthalmic: Burning, itching, redness, swelling, pain. **Topical:** Hypersensitivity reaction (allergic contact dermatitis, burning, inflammation, pruritus).

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe hypersensitivity reaction (apnea, hypotension) occur rarely.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Topical: Evaluate for hypersensitivity reaction: itching, burning, inflammation. With preparations containing corticosteroids, consider masking effect on clinical signs. **Ophthalmic:** Assess eye for therapeutic response or increased redness, swelling, burning, itching (hypersensitivity reaction).

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • Report burning, itching, rash, increased irritation.

baclofen

bak-loe-fen
(Apo-Baclofen, Lioresal, Liotec, Novo-Baclofen, Nu-Baclo)

BLACK BOX ALERT Abrupt withdrawal of intrathecal form has resulted in severe hyperpyrexia, obtundation, rebound or exaggerated spasticity, muscle rigidity, leading to organ failure, death.

Do not confuse baclofen with Bactroban or Beclovent, or Lioresal with lisinopril or Lotensin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Skeletal muscle relaxant. **CLINICAL:** Antispastic, analgesic in trigeminal neuralgia (see p. 151C).

ACTION

Inhibits transmission of reflexes at spinal cord level. **Therapeutic Effect:** Relieves muscle spasticity.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 30%. Partially metabolized in liver. Primarily excreted in urine. **Half-life:** 2.5–4 hrs.

USES

Treatment of cerebral spasticity, reversible spasticity associated with multiple sclerosis, spinal cord lesions. **Intrathecal:** For those unresponsive to oral therapy or exhibiting intolerable side effects. **OFF-LABEL:** Treatment of bladder spasms, cerebral palsy, intractable hiccups or pain, Huntington's chorea, trigeminal neuralgia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment, seizure disorder, preexisting psychiatric disorders, peptic ulcer disease, stroke, ovarian cysts.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. Limited published data in children. **Elderly:** Increased risk of CNS toxicity (hallucinations, sedation, confusion, mental depression); age-related renal impairment may require decreased dosage.

INTERACTIONS

DRUG: Potentiated effects when used with other **CNS depressants (including alcohol). HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS sedation. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, alkaline phosphatase, glucose.

AVAILABILITY (Rx)

Intrathecal Injection Solution: 50 mcg/ml, 500 mcg/ml, 2,000 mcg/ml. **Tablets:** 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

• Give with food or milk. • Tablets may be crushed.

Intrathecal

• For screening, a 50 mcg/ml concentration should be used for injection. • For maintenance therapy, solution should be diluted for pts who require concentrations other than 500 mcg/ml or 2,000 mcg/ml.

INDICATIONS/ROUTES/DOSAGE

◀ ALERT ▶ Avoid abrupt withdrawal.

Spasticity

PO: ADULTS: Initially, 5 mg 3 times a day. May increase by 15 mg/day (5 mg/dose) at 3-day intervals. Range: 40–80 mg/day. **Maximum:** 80 mg/day. **ELDERLY:** Initially, 5 mg 2–3 times a day. May gradually increase dosage. **CHILDREN 8 YRS AND OLDER:** 30–40 mg/day in divided doses q8h. May increase dose by 5–15 mg/day q3days. **Maximum:** 120 mg/day. **CHILDREN 2–7 YRS:** 20–30 mg/day in divided doses q8h. May increase dose by 5–15 mg/day q3days. **Maximum:** 60 mg/day. **CHILDREN YOUNGER THAN 2 YRS:** 10–20 mg/day in divided doses q8h. May increase dose by 5–15 mg/day. **Maximum:** 40 mg/day.

Intrathecal Dose

ADULTS, ELDERLY, CHILDREN: Test dose: 50–100 mcg. Dose greater than 50 mcg given in 25-mcg increments, separated by 24 hrs. Following positive response to test dose, maintenance infusion can be given via implanted intrathecal pump. Initial dose is twice the test dose.

SIDE EFFECTS

Frequent (greater than 10%): Transient drowsiness, asthenia (loss of strength, energy), dizziness, light-headedness, nausea, vomiting. **Occasional (10%–2%):** Headache, paresthesia, constipation, anorexia, hypotension, confusion, nasal congestion. **Rare (less than 1%):** Paradoxical CNS excitement or restlessness, slurred speech, tremor, dry mouth, diarrhea, nocturia, impotence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt discontinuation may produce hallucinations, seizures. Overdose results in blurred vision, seizures, myosis, mydriasis, severe muscle weakness, strabismus, respiratory depression, vomiting.

B

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type, location, duration of muscular spasm. Check for immobility, stiffness, swelling.

INTERVENTION/EVALUATION

Assess for paradoxical reaction. Observe pt for drowsiness, dizziness, ataxia. Assist with ambulation at all times. For those on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically. Evaluate for therapeutic response: decreased intensity of skeletal muscle pain.

PATIENT/FAMILY TEACHING

• Drowsiness usually diminishes with continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not abruptly withdraw medication after long-term therapy (may result in muscle rigidity, rebound spasticity, high fever, altered mental status). • Avoid alcohol, CNS depressants.

basiliximab

bas-ih-**lix**-ih-mab
(Simulect)

BLACK BOX ALERT Must be administered by certified chemotherapy personnel under supervision of a physician experienced in immunosuppression therapy.

Do not confuse basiliximab with daclizumab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Immunosuppressive (see p. 119C).

ACTION

Binds to and blocks receptor of interleukin-2, a protein that stimulates proliferation of T-lymphocytes, which play a major role in organ transplant rejection. **Therapeutic Effect:** Prevents lymphocytic activity, impairs response of immune system to antigens, preventing acute renal transplant rejection.

PHARMACOKINETICS

Half-life: 4–10 days (adults); 5–17 days (children).

USES

Adjunct with cyclosporine, corticosteroids in prevention of acute organ rejection in pts receiving renal transplant. **OFF-LABEL:** Treatment of refractory graft-vs-host disease, prevention of liver or cardiac transplant rejection.

PRECAUTIONS

Contraindications: None known. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Tacrolimus** (topical), **trastuzumab** may increase concentration. **HERBAL:** **Echinacea** may decrease therapeutic effect. **Bilberry, garlic, ginger, ginseng** may increase hypoglycemic effect. **FOOD:** None known. **LAB VALUES:** May alter serum calcium, glucose, potassium, Hgb, Hct. May increases serum cholesterol, BUN, creatinine, uric acid. May decrease serum magnesium, phosphate, platelet count.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 10 mg, 20 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 10-mg vial with 2.5 ml and 20-mg vial with 5 ml Sterile Water for Injection. • Shake gently to dissolve. • May further dilute with 25–50 ml 0.9% NaCl or D_5W to a final

concentration of 0.4 mg/ml. • Gently invert to avoid foaming. Do not shake bag. **Rate of Administration** • IV bolus over 10 min. • IV infusion over 20–30 min. **Storage** • Refrigerate intact vials. • After reconstitution, use within 4 hrs (24 hrs if refrigerated). • Discard if precipitate forms.

IV INCOMPATIBILITIES

Specific information not available. Do not add other medications simultaneously through same IV line.

INDICATIONS/ROUTES/DOSAGE

Prophylaxis of Organ Rejection

IV: ADULTS, ELDERLY, CHILDREN WEIGHING 35 KG OR MORE: 20 mg within 2 hrs before transplant surgery and 20 mg 4 days after transplant. **CHILDREN WEIGHING LESS THAN 35 KG:** 10 mg within 2 hrs before transplant surgery and 10 mg 4 days after transplant.

SIDE EFFECTS

Frequent (greater than 10%): GI disturbances (constipation, diarrhea, dyspepsia), CNS effects (dizziness, headache, insomnia, tremor), respiratory tract infection, dysuria, acne, leg or back pain, peripheral edema, hypertension. **Occasional (10%–3%):** Angina, neuropathy, abdominal distention, tachycardia, rash, hypotension, urinary disturbances (urinary frequency, genital edema, hematuria), arthralgia, hirsutism, myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe acute hypersensitivity reactions including anaphylaxis characterized by hypotension, tachycardia, cardiac failure, dyspnea, wheezing, bronchospasm, pulmonary edema, respiratory failure, urticaria, rash, pruritus, sneezing, as well as capillary leak syndrome and cytokine release syndrome, have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline BUN, serum creatinine, potassium, uric acid, glucose, calcium, phosphatase levels and vital signs, particularly B/P, pulse rate. Breast-feeding not recommended.

INTERVENTION/EVALUATION

Diligently monitor CBC, all chemistry lab results. Assess B/P for hypertension/hypotension; pulse for evidence of tachycardia. Question for GI disturbances, CNS effects, urinary changes. Monitor for presence of wound infection, signs of infection (fever, sore throat, unusual bleeding/bruising), hypersensitivity reaction.

PATIENT/FAMILY TEACHING

• Report difficulty in breathing or swallowing, palpitations, bruising/bleeding, rash, itching, swelling of lower extremities, weakness. • Female pts should take measures to avoid pregnancy.

TOP 200

beclomethasone

be-kloe-**meth**-a-sone (Apo-Beclomethasone, Beconase AQ, QNASL, QVAR, Rivanase AQ)

Do not confuse Beconase with baclofen.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocorticosteroid. **CLINICAL:** Anti-inflammatory, immunosuppressant (see pp. 2C, 75C, 97C).

ACTION

Controls or prevents inflammation by altering rate of protein synthesis; migration of polymorphonuclear leukocytes, fibroblasts; reverses capillary permeability. **Therapeutic Effect: Inhalation:** Inhibits bronchoconstriction, produces smooth muscle relaxation, decreases mucus secretion. **Intranasal:** Decreases response to seasonal, perennial rhinitis.

B

PHARMACOKINETICS

Rapidly absorbed from pulmonary, nasal, GI tissue. Hydrolyzed by pulmonary esterase prior to absorption. Metabolized in liver. Protein binding: 87%. Primarily eliminated in feces. **Half-life:** 15 hrs.

USES

Inhalation: Long-term control of bronchial asthma. Reduces need for oral corticosteroid therapy for asthma. **Intranasal:** Relief of seasonal/perennial rhinitis; prevention of nasal polyp recurrence after surgical removal; treatment of nonallergic rhinitis. **QNASL:** Treatment of seasonal and perennial allergic rhinitis in adults and adolescents 12 yrs and older. **OFF-LABEL:** Prevention of seasonal rhinitis (nasal form).

PRECAUTIONS

Contraindications: Hypersensitivity to beclomethasone, acute exacerbation of asthma, status asthmaticus. **Cautions:** Thyroid disease, hepatic impairment, renal impairment, cardiovascular disease, diabetes, glaucoma, cataracts, myasthenia gravis, seizures, risk for osteoporosis, peptic ulcer, ulcerative colitis, following acute MI, elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Prolonged treatment/high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effect of **antidiabetic agents.** **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Inhalation, Oral (Qvar): 40 mcg/inhalation, 80 mcg/inhalation. **QNASL:** 50 mcg/actuation. **Nasal Inhalation (Beconase AQ):** 42 mcg/inhalation.

ADMINISTRATION/HANDLING

Inhalation

• Shake container well. Instruct pt to exhale completely, place mouthpiece between lips, inhale, hold breath as long as possible before exhaling. • Allow at least 1 min between inhalations. • Rinsing mouth after each use decreases dry mouth, hoarseness.

Intranasal

• Instruct pt to clear nasal passages as much as possible before use. • Tilt pt's head slightly forward. Insert spray tip into nostril, pointing toward nasal passages, away from nasal septum. • Spray into one nostril while pt holds the other nostril closed, concurrently inhaling through nose to permit medication as high into nasal passages as possible.

INDICATIONS/ROUTES/DOSAGE

Long-Term Control of Bronchial Asthma

Oral Inhalation *(QVAR):* ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 40–160 mcg twice a day. **Maximum:** 320 mcg twice a day. **CHILDREN 5–11 YRS:** 40 mcg twice a day. **Maximum:** 80 mcg twice a day.

Rhinitis, Prevention of Recurrence of Nasal Polyps

Nasal Inhalation *(QVAR):* ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 1–2 sprays in each nostril twice a day.

Allergic Rhinitis

Oral Inhalation *(QNASL):* ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2 sprays in each nostril daily.

SIDE EFFECTS

Frequent: Inhalation (14%–4%): Throat irritation, dry mouth, hoarseness, cough. **Intranasal:** Nasal burning, mucosal dryness. **Occasional: Inhalation (3%–2%):** Localized fungal infection (thrush). **Intranasal:** Nasal-crusting epistaxis, sore throat, ulceration of nasal mucosa. **Rare: Inhalation:** Transient bronchospasm, esophageal candidiasis. **Intranasal:** Nasal and pharyngeal candidiasis, eye pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Acute hypersensitivity reaction (urticaria, angioedema, severe bronchospasm) occurs rarely. Change from systemic to local steroid therapy may unmask previously suppressed bronchial asthma condition.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline history for asthma, rhinitis. Question for hypersensitivity to any corticosteroids.

INTERVENTION/EVALUATION

Monitor respiratory status, lung sounds; observe for signs of oral candidiasis. In those receiving bronchodilators by inhalation concomitantly with inhalation of steroid therapy, advise to use bronchodilator several minutes before corticosteroid aerosol (enhances penetration of steroid into bronchial tree).

PATIENT/FAMILY TEACHING

• Do not change dose schedule or stop taking drug; must taper off gradually under medical supervision. • **Inhalation:** Maintain diligent oral hygiene. • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness, fungal infection of mouth). • Contact physician if sore throat or mouth occurs. • **Intranasal:** Contact physician if symptoms do not improve or sneezing, nasal irritation occurs. • Clear nasal passages prior to use. • Improvement noted after several days.

belatacept

bel-**at**-a-sept
(Nulojix)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of therapy at appropriate medical facility. Increased risk of malignancies, tuberculosis, and opportunistic infection. Test for tuberculosis prior to and during treatment, regardless of initial result. Increased risk of post-transplant lymphoproliferative disorder (PTLD), mainly in central nervous system. JC virus-associated progressive multifocal leukoencephalopathy (PML) and polyoma virus nephropathy may lead to graft loss, deteriorated renal function, or death. Pts who are Epstein-Barr virus (EBV) antibody negative are at increased risk of developing PTLD. Cytomegalovirus and pneumocystitis prophylaxis are recommended after transplantation. Not recommended for hepatic transplants due to increased risk of graft loss, death.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective T-cell costimulation blocker. **CLINICAL:** Immunosuppressive agent.

ACTION

Inhibits T-lymphocyte proliferation and production of cytokines including interleukin-2 (IL-2), interferon-γ, interleukin-4 (IL-4), TNF-α; a critical pathway in cellular immune response involved in allograft rejection. **Therapeutic Effect:** Prevents renal transplant rejection. Decreases production of antidonor antibodies.

PHARMACOKINETICS

Half-life: 8–10 days.

USES

Prevention of acute organ rejection in pts receiving renal transplants (in combination with basiliximab induction, mycophenolate mofetil, corticosteroids). For use in Epstein–Barr virus (EBV) seropositive renal transplant recipients.

PRECAUTIONS

Contraindications: Transplant pts who are Epstein-Barr virus (EBV) seronegative or unknown sero-status. **Cautions:** History of opportunistic infections: bacterial, mycobacterial, invasive fungal, viral, protozoal, (histoplasmosis, aspergillosis, candidiasis, coccidioidomycosis, listeriosis, HIV, tuberculosis, pneumocystosis). Recent open wounds, ulcerations. Not recommended in liver transplants. Avoid use of live vaccines.

B

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Must either discontinue breast-feeding or discontinue drug regimen. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/effects of **belimumab, mycophenolate. Pimecrolimus, tacrolimus** (topical) may increase belatacept concentration. **Live vaccines** not recommended. **HERBAL: Echinacea** may reduce belatacept effects. **FOOD:** None known. **LAB VALUES:** May increase serum potassium, cholesterol, uric acid, urine protein, glucose. May decrease serum phosphate, potassium, calcium, magnesium, WBC, Hgb, Hct.

AVAILABILITY (Rx)

Lyophilized Powder for Injection: 250 mg per vial.

ADMINISTRATION/HANDLING

◄ALERT► Use only silicone-free disposable syringe provided. Using different syringe may produce translucent particles. Must infuse with sterile, nonpyrogenic, low protein-binding filter (pore size 0.2–1.2 μm). Administer with dedicated line only.

IV

Reconstitution • Calculate number of vials needed for injection (solution will equal 25 mg/ml after mixing). • Reconstitute vial with 10.5 ml of suitable diluent (0.9% NaCl, D_5W, or Sterile Water for Injection) using provided syringe, 18- to 20-gauge needle. • Direct stream to glass wall (avoids foaming). • Swirl gently (do not shake). • Discard if opaque particles, discoloration, or foreign particles are present. • Infusion bag must match diluent (0.9% NaCl with 0.9% NaCl, D_5W with D_5W, Sterile Water for Injection with NaCl or D_5W). • To mix infusion bag, withdraw and discard volume equal to the volume of reconstituted solution. • Using same silicone-free disposable syringe, gently inject reconstituted solution into 100- to 250-ml bag (based on concentration). • Final concentration of infusion bag should range from 2 mg/ml to 10 mg/ml. • IV infusion stable for 24 hrs at room temperature.

Rate of Administration • Infuse over 30 min.

Storage • Solution should be clear to slightly opalescent and colorless to slightly yellow. • May refrigerate solution up to 24 hrs. • Discard if reconstituted solution remains at room temperature longer than 24 hrs.

INDICATIONS/ROUTES/DOSAGE

Prophylaxis of Acute Renal Transplant Rejection (in Combination with an Immunosuppressant)

IV: ADULTS, ELDERLY: 10 mg/kg on day 1 (day of transplantation, prior to implantation), day 5, end of wk 2, 4, 8, and 12 after transplantation. 5 mg/kg end of wk 16 and q4wks thereafter. **Dosage Modification:** Infusion is based on actual body weight at the time of transplantation; modify dose for weight changes greater than 10% during treatment. Prescribed dose must be evenly divisible by 12.5 to match closest increment (0, 12.5, 25, 37.5, 50, 62.5, 75, 87.5, 100) in mg. For example, the actual dose for a 64-kg pt is 637.5 mg, not 640 mg.

SIDE EFFECTS

Frequent (45%–20%): Anemia, diarrhea, UTI, peripheral edema, constipation, hypertension, pyrexia, nausea, cough, vomiting, headache. **Occasional (19%–5%):** Abdominal pain, hypotension, arthralgia, hematuria, upper respiratory infection, insomnia, nasopharyngitis, back pain, dyspnea, influenza, dysuria, bronchitis, stomatitis, anxiety, dizziness, abdominal pain, muscle tremor, acne, alopecia, hyperhidrosis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious conditions including malignancies (esp. skin cancer), progressive multifocal leukoencephalopathy (caused by JC virus), cytomegalovirus, polyoma virus nephropathy, viral reactivation (herpes zoster, hepatitis). Other opportunistic infections such as bacterial, fungal, viral, protozoal may cause tuberculosis, cryptococcal meningitis, Chagas' disease, West Nile encephalitis, Guillain-Barré syndrome, cerebral aspergillosis. Additional complications including chronic allograft nephropathy, renal tubular necrosis, renal artery necrosis, atrial fibrillation, hematoma at incision site, wound dehiscence, lymphocele, arteriovenous fistula thrombosis, hydronephrosis, urinary incontinence, anti-belatacept antibody formation have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate pt for active tuberculosis or latent infection prior to initiating treatment and periodically during therapy. Induration of 5 mm or greater with tuberculin skin test should be considered a positive result when assessing whether treatment for latent tuberculosis is necessary. Assess baseline mental status to compare any worsening cognitive symptoms. Obtain Epstein-Barr virus (EBV) serology prior to treatment (contraindicated in pts who are EBV seronegative). Note any skin discoloration, ulcers, excoriation, lesions. Question history of hypertension/hypotension, arrhythmia, diabetes, HIV, hepatitis, home medications. Question possibility of pregnancy. Obtain baseline CBC, serum chemistries, renal panel, glomerular filtration rate (GFR), magnesium, ionized calcium, phosphate, urinalysis, lipid panel, urine pregnancy if applicable.

INTERVENTION/EVALUATION

Monitor B/P, vital signs, I&O, weight. Diligently monitor CBC, renal panel, serum electrolytes (hypokalemia may result in changes in muscle strength, muscle cramps, altered mental status, cardiac arrhythmias). Routinely monitor glucose levels for new-onset diabetes after transplantation, corticosteroid use. Monitor for fever, tenderness over transplantation site, skin lesions, changing characteristics of moles, neurologic deterioration related to PTLD or PML. Monitor blood sugar (new-onset diabetes may occur following transplantation).

PATIENT/FAMILY TEACHING

• Inform pt that therapy may increase risk of malignancies and life-threatening infections. • Detail concomitant immunosuppressive therapy with basiliximab induction, corticosteroids. • Report history of HIV, opportunistic infections, hepatitis, coughing of blood, or close relatives with active tuberculosis. • Avoid sunlight, sunlamps. • Seek immediate attention if adverse reactions occur. • Do not receive live vaccines during treatment. • Notify physician if pregnant or plan on becoming pregnant. • Pt must adhere to strict dosing schedule. • Report any chest pain, palpitations, edema, fever, night sweats, weight loss, swollen glands, flu-like symptoms, stomach pain, vomiting, diarrhea, weakness, or urinary changes (color, frequency, odor, concentration, burning, blood).

belimumab

be-**lim**-ue-mab
(Benlysta)
Do not confuse belimumab with bevacizumab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** B-lymphocyte stimulator (BLYS) inhibitor.

ACTION

Inhibits binding of B-lymphocyte stimulator (BLyS) to B-cell receptors. Inhibits

B

survival of B cells, including autoreactive B cells, and reduces differentiation into immunoglobulin-producing plasma cells. **Therapeutic Effect:** Limits lupus erythematosus disease activity.

PHARMACOKINETICS

Half-life: 19 days.

USES

Treatment for active, autoantibody-positive, systemic lupus erythematosus, in addition to standard therapy.

PRECAUTIONS

Contraindications: Prior anaphylaxis with belimumab. **Cautions:** Severe, active infections. Depression, pts at risk for suicide, other mood changes. Avoid live vaccines.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not recommended in pregnancy unless benefits outweigh risks. Unknown if crosses placenta or distributed in breast milk. Contraception should be considered during therapy and for at least 4 wks after final treatment. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Abatacept, belatacept, etanercept, pimecrolimus, tacrolimus** (topical) may increase concentration. **Cyclophosphamide** not recommended. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May decrease WBC.

AVAILABILITY (Rx)

Lyophilized Powder for Injection: 120 mg, 400 mg.

ADMINISTRATION/HANDLING

Reconstitution • Remove vials from refrigerator and let stand until room temperature (10–15 min). • Reconstitute 120-mg vial with 1.5 ml Sterile Water for Injection or 400-mg vial with 4.8 ml Sterile Water for Injection (both vials will have concentration of 80 mg/ml after reconstitution). • Direct stream toward glass wall to avoid foaming. • Gently swirl for 60 sec every 5 min until fully dissolved (usually 10–30 min). • If mechanical reconstitution device used, do not swirl greater than 30 min or exceed 500 rpm. • Small air bubbles expected, acceptable. • Dilute in 250 ml 0.9% NaCl only. • From infusion bag, withdraw and discard volume equal to the volume of reconstituted solution. • Invert bag and gently inject to mix. • Infuse within 8 hrs of reconstitution.

Rate of Administration • Infuse over 1 hr.

Storage • Refrigerate vials/infusion bag until time of use. • Solution should be opalescent and colorless to pale yellow with no particles present. • Discard solution if particulate matter or discoloration observed. • Protect from sunlight.

IV INCOMPATIBILITIES

Do not infuse with dextrose-based solution. Use dedicated line only.

INDICATIONS/ROUTES/DOSAGE

Active Systemic Lupus Erythematosus

IV: ADULTS: 10 mg/kg at 2-wk intervals for 3 doses, then every 4 wks thereafter.

SIDE EFFECTS

Frequent (15%–12%): Nausea, diarrhea. **Occasional (10%–5%):** Pyrexia, nasopharyngitis, bronchitis, insomnia, extremity pain, depression, migraine, pharyngitis. **Rare (less than 4%):** Cystitis, viral gastroenteritis.

ADVERSE EFFECTS/ TOXIC REACTIONS

May increase risk of mortality. Anti-belimumab antibody formation reported in less than 1%. Hypersensitivity reaction including anaphylactic reaction (systemic): uticaria, pruritus, erythema, dyspnea, angioedema, hypotension. Infusion reactions such as nausea, headaches, flushing occur more frequently. Serious infections related to immunosuppression including respiratory tract infection, pneumonia, nasopharyngitis, sinusitis, influenza, UTI, cellulitis, bron-

chitis, viral reactivation may occur. Mental health issues including psychiatric events (16%) and depression (6%). Life-threatening psychiatric events and depression (including suicide) reported in less than 1%. Those who experienced life-threatening episodes had prior psychiatric history.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline vital signs, CBC with differential, CMP, IgG. Assess history of recent immunizations, malignancies, open sores, ulcerations, weight loss, HIV, chronic infection. Assess psychiatric history including insomnia, anxiety, depression, impulsiveness, suicidal ideations, mood changes. Question possibility of pregnancy, current breast-feeding.

INTERVENTION/EVALUATION

Monitor vital signs, CBC. If hypersensitivity reaction occurs, immediately notify physician. Premedication with antihistamines, antipyretics, and/or corticosteroids may prevent subsequent reactions. Discontinue treatment if anaphylactic reaction occurs; initiate appropriate medical treatment. Routinely inspect skin, paying close attention to areas that are discolored, irregular, or have ill-defined borders (may indicate malignancies). Obtain anti-belimumab antibody titer if immunogenicity suspected. Consider interrupting therapy if acute infection occurs.

PATIENT/FAMILY TEACHING

• Report any signs of hypersensitivity reaction (see Adverse Reactions/Toxic Effects). • If anaphylactic reaction occurs, pt may require rapid sequence intubation. • Hypersensitivity reactions include itching, hives, dizziness, or difficulty breathing. • Notify physician if pregnant or plan on becoming pregnant. • Contraception recommended during treatment and at least 4 mos after treatment. • Contact physician if experiencing any suicidal ideation, mood changes, or worsening depression. • Do not receive live vaccines 30 days before or during treatment. • Report any fever, cough, night sweats, flu-like symptoms, skin changes, or painful/burning urination.

benazepril

TOP 200

ben-**ay**-ze-pril
(Lotensin)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse benazepril with Benadryl, or Lotensin with Lioresal or lovastatin.

FIXED-COMBINATION(S)

Lotensin HCT: benazepril/hydrochlorothiazide (a diuretic): 5 mg/625 mg, 10 mg/12.5 mg, 20 mg/12.5 mg, 20 mg/25 mg. **Lotrel:** benazepril/amlodipine (a calcium blocker): 2.5 mg/10 mg, 5 mg/10 mg, 5 mg/20 mg, 5 mg/40 mg, 10 mg/20 mg, 10 mg/40 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin-converting enzyme (ACE) inhibitor. **CLINICAL:** Antihypertensive (see p. 9C, 59C).

ACTION

Decreases rate of conversion of angiotensin I to angiotensin II, a potent vasoconstrictor. Reduces peripheral arterial resistance. **Therapeutic Effect:** Lowers B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2–4 hrs	24 hrs

Partially absorbed from GI tract. Protein binding: 97%. Metabolized in liver to active metabolite. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 35 min; metabolite, 10–11 hrs.

B

USES

Treatment of hypertension. Used alone or in combination with other antihypertensives.

PRECAUTIONS

Contraindications: History of angioedema with or without previous treatment with ACE inhibitors. **Cautions:** Renal impairment; hypertophic cardiomyopathy without flow tract obstruction; severe aortic stenosis; before, during, or immediately following major surgery; unstented renal artery stenosis; diabetes mellitus.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. May cause fetal, neonatal mortality or morbidity. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: Diuretics, hypotensive agents may increase effects. **NSAIDs, sympathomimetics** may decrease effect. **Potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. May increase **cyclosporine, lithium** concentration/effectiveness. **HERBAL: Ephedra, ginseng, licorice** may worsen hypertension. **Black cohosh, periwinkle** may have increased antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum potassium, AST, ALT, alkaline phosphatase, bilirubin, BUN, creatinine, glucose. May decrease serum sodium, Hgb, Hct. May cause positive ANA titer.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension (Monotherapy)

PO: ADULTS: Initially, 10 mg/day. Maintenance: 20–40 mg/day as single dose or in 2 divided doses. **Maximum:** 80 mg/day. **ELDERLY:** Initially, 5–10 mg/day. Range: 20–40 mg/day.

Hypertension (Combination Therapy)

PO: ADULTS: Discontinue diuretic 2–3 days prior to initiating benazepril, then dose as noted above. If unable to discontinue diuretic, begin benazepril at 5 mg/day.

Usual Pediatric Dosage

PO: CHILDREN 6 YRS AND OLDER: Initially, 0.2 mg/kg/day (up to 10 mg/day). Range: 0.1–0.6 mg/kg/day. **Maximum:** 40 mg/day.

Dosage in Renal Impairment

For adult pts with creatinine clearance less than 30 ml/min, initially, 5 mg/day titrated up to maximum of 40 mg/day.
HD: Give dose post-HD or administer 25–35% supplemental dose.

SIDE EFFECTS

Frequent (6%–3%): Cough, headache, dizziness. **Occasional (2%):** Fatigue, drowsiness, nausea. **Rare (less than 1%):** Rash, fever, myalgia, diarrhea, loss of taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive hypotension ("first-dose syncope") may occur in those with CHF, severe salt or volume depletion. Angioedema (swelling of face, lips), hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in those with renal impairment, collagen vascular disease (scleroderma, systemic lupus erythematosus). Nephrotic syndrome may be noted in pts with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in

B/P occurs, place pt in supine position with legs elevated. In pts with renal impairment, autoimmune disease, or taking drugs that affect leukocytes or immune response, CBC should be performed before therapy begins and q2wks for 3 mos, then periodically thereafter.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Monitor B/P, renal function, urinary protein, potassium. Monitor CBC with differential if pt has collagen vascular disease or renal impairment.

PATIENT/FAMILY TEACHING

• To reduce hypotensive effect, rise slowly from lying to sitting position, permit legs to dangle from bed momentarily before standing. • Full therapeutic effect may take 2–4 wks. • Skipping doses or noncompliance with drug therapy may produce severe, rebound hypertension. • Report light-headedness, dizziness, persistent cough.

bendamustine

ben-dah-**mus**-teen
(Treanda)
Do not confuse bendamustine with carmustine or lomustine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic (see p. 80C).

ACTION

Alkylates and cross-links macromolecules, resulting in DNA, RNA, and protein synthesis inhibition. **Therapeutic Effect:** Inhibits tumor cell growth, causes cell death.

PHARMACOKINETICS

Metabolized via hydrolysis to metabolites. Protein binding: 64%–95%. Eliminated primarily in feces. **Half-life:** 40 min.

USES

Treatment of chronic lymphocytic leukemia (CLL). Treatment of indolent B-cell non-Hodgkin's lymphoma (NHL) that has progressed during or within 6 mos of treatment with rituximab or a rituximab-containing regimen. **OFF-LABEL:** Treatment of mantle cell lymphoma, relapsed multiple myeloma. First-line treatment for follicular lymphoma. Treatment of Waldenström's macroglobulinemia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Myelosuppression (may increase risk of infection), renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D.** Impaired spermatogenesis, azoospermia have been reported in male pts. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

Ciprofloxacin, fluvoxamine may increase bendamustine concentration, decrease plasma concentrations of active metabolites. **CYP1A2 inhibitors (e.g., omeprazole), nicotine** may decrease concentration. **HERBAL:** None known. **FOOD:** None known. **LAB VALUES:** May increase serum AST, bilirubin, creatinine, uric acid. May decrease WBCs, neutrophils, Hgb, platelets, serum potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 25 mg, 100 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 100-mg vial with 20 ml Sterile Water for Injection (25-mg vial with 5 ml) for a concentration of 5 mg/ml. • Powder should completely dissolve in 5 min. • Discard if particulate matter is ob-

B

served. • Withdraw volume needed for required dose (based on 5 mg/ml concentration) and immediately transfer to 500-ml infusion bag of 0.9% NaCl to final concentration of 0.2–0.6 mg/ml. • Reconstituted solution must be transferred to infusion bag within 30 min of reconstitution. • After transferring, thoroughly mix contents of infusion bag.

Rate of Administration • Infuse over 30 min for CLL and 60 min for NHL.

Storage • Reconstituted solution appears clear, colorless to pale yellow solution, free from visual particulates. • Final solution is stable for 24 hrs if refrigerated or 3 hrs at room temperature. • Administration must be completed within these stability time frames.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ During first few wks of treatment, allopurinol should be given as a preventive measure in those at risk for tumor lysis syndrome.

Chronic Lymphocytic Leukemia

IV Infusion: ADULTS/ELDERLY: 100 mg/m^2 given over 30 min daily on days 1 and 2 of a 28-day cycle, up to 6 cycles.

Non-Hodgkin's Lymphoma

IV Infusion: ADULTS/ELDERLY: 120 mg/m^2 on days 1 and 2 of a 21-day cycle, up to 8 cycles.

SIDE EFFECTS

Frequent (24%–16%): Fever, nausea, vomiting. **Occasional (9%–8%):** Diarrhea, fatigue, asthenia (loss of strength, energy), rash, decreased weight, nasopharyngitis. **Rare (6%–3%):** Chills, pruritus, cough, herpes simplex infections.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression characterized as neutropenia (28%), thrombocytopenia (23%), anemia (19%), leukopenia (18%). Infection, including pneumonia, sepsis may occur. Tumor lysis syndrome may lead to acute renal failure. Worsening hypertension occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy. Offer emotional support. Obtain baseline CBC, serum chemistries including hepatic function tests (bilirubin, ALT, AST, alkaline phosphatase) before treatment begins and routinely thereafter.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess skin for evidence of rash. Monitor for signs of infection (fever, chills, cough, flu-like symptoms). Monitor for hypertension. Hematologic nadirs occur in 3rd week of therapy and may require dose delays if recovery to recommended values has not occurred by day 28.

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine. • Do not have immunizations without physician's approval (drug lowers body resistance). • Promptly report fever, chills, flu-like symptoms, sore throat, unusual bruising/bleeding from any site. • Male pts should be warned of potential risk to their reproductive capacities.

benzonatate

ben-**zoe**-nah-tate
(Tessalon Perles, Zonatuss)
Do not confuse benzonatate with benazepril, benzocaine, or benztropine, or Tessalon with Tussionex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Non-narcotic antitussive. **CLINICAL:** Cough suppressant.

ACTION

Anesthetizes stretch or cough receptors in alveoli of lungs, bronchi, and pleura, suppressing the cough reflex. **Therapeutic Effect:** Reduces cough production.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–20 min	—	3–8 hrs

Metabolized in liver. Primarily excreted in urine. **Half-life:** Unknown.

USES

Relief of nonproductive cough, including acute cough of minor throat/bronchial irritation.

PRECAUTIONS

Contraindications: Allergy to topical anesthetic medicines (tetracaine, procaine). **Cautions:** Productive cough.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 10 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CNS depressants** may increase effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules, Liquid Filled (Tessalon Perles): 100 mg, 200 mg. **Capsules (Zonatuss):** 150 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Swallow whole; do not chew or dissolve in mouth (may produce temporary local anesthesia of oral mucosa). • Take with full glass of water.

INDICATIONS/ROUTES/DOSAGE

Antitussive

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 10 YRS: 100 mg, 200 mg 3 times a day, or every 4 hrs up to 600 mg/day.

SIDE EFFECTS

Occasional (10%–5%): Mild drowsiness, mild dizziness, constipation, nausea, skin eruptions, nasal congestion.

ADVERSE EFFECTS/ TOXIC REACTIONS

Paradoxical reaction (restlessness, insomnia, euphoria, nervousness, tremors) has been noted. Chest pain or numbness, choking feeling, sense of faintness, confusion, hallucinations may result from chewing or sucking on capsule.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess type, severity, frequency of cough. Monitor amount, color, consistency of sputum.

INTERVENTION/EVALUATION

Initiate deep breathing and coughing exercises, particularly in pts with impaired pulmonary function. Monitor for paradoxical reaction. Increase fluid intake and environmental humidity to lower viscosity of lung secretions. Assess for clinical improvement and record onset of cough relief.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Dry mouth, drowsiness, dizziness may be expected responses to drug. • Sucking or chewing on capsule may cause numbness of mouth or throat.

benztropine

benz-**trow**-peen
(Apo-Benztropine, Cogentin)

B

Do not confuse benztropine with bromocriptine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Antiparkinson agent.

ACTION

Selectively blocks central cholinergic receptors, assists in balancing cholinergic/dopaminergic activity. **Therapeutic Effect:** Reduces incidence/severity of akinesia, rigidity, tremor.

PHARMACOKINETICS

Well absorbed following PO and IM administration. Metabolized in liver. PO onset of action: 1–2 hrs, IM onset of action: minutes. Pharmacologic effects may not be apparent until 2–3 days after initiation of therapy and may persist for up to 24 hrs after discontinuation of drug. **Half-life:** Extended.

USES

Treatment of Parkinson's disease, drug-induced extrapyramidal reactions (except tardive dyskinesia).

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, stenosing peptic ulcer, children younger than 3 yrs, pyloric or duodenal obstruction, myasthenia gravis, bladder neck obstruction, esophageal achalasia. **Cautions:** Glaucoma, heart disease, hypertension, hypotension; pts with tachycardia, arrhythmias, prostatic hypertrophy, hepatic/renal impairment, obstructive diseases of GI/GU tract, urinary retention.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted, but there is a higher risk for adverse effects.

INTERACTIONS

DRUG: Alcohol, CNS depressants may increase sedation. May increase effects of **anticholinergics. HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Solution: 1 mg/ml. **Tablets:** 0.5 mg, 1 mg, 2 mg.

ADMINISTRATION/HANDLING

IM

• Inject slow, deep IM.

PO

• Give without regard to food. • Give with food if GI upset occurs.

INDICATIONS/ROUTES/DOSAGE

Parkinsonism

PO: ADULTS: 0.5–6 mg/day as a single dose or in 2 divided doses. Titrate by 0.5 mg at 5–6 day intervals. **ELDERLY:** Initially, 0.5 mg once or twice a day. Titrate by 0.5 mg at 5–6 day intervals. **Maximum:** 4 mg/day.

Drug-Induced Extrapyramidal Symptoms

PO, IM, IV: ADULTS: 1–4 mg once or twice a day or 1–2 mg 2–3 times/day. **CHILDREN OLDER THAN 3 YRS:** 0.02–0.05 mg/kg/dose once or twice a day.

Acute Dystonic Reactions

IV, IM: ADULTS: Initially, 1–2 mg as a single dose.

SIDE EFFECTS

Frequent: Drowsiness, dry mouth, blurred vision, constipation, urinary retention, GI upset, photosensitivity. **Occasional:** Headache, memory loss, muscle cramps, anxiety, peripheral paresthesia, orthostatic hypotension, abdominal cramps. **Rare:** Rash, confusion, eye pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce severe anticholinergic effects (unsteadiness, drowsiness, tachycardia, dyspnea, skin flushing, dry-

ness of mouth/nose/throat). Severe paradoxical reactions (hallucinations, tremor, seizures, toxic psychosis) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess mental status for confusion, disorientation, agitation, psychotic-like symptoms (medication frequently produces such side effects in those older than 60 yrs).

INTERVENTION/EVALUATION

Be alert to neurologic effects: headache, drowsiness, mental confusion, agitation. Assess for clinical reversal of symptoms (improvement of tremor of head and hands at rest, mask-like facial expression, shuffling gait, muscular rigidity). Monitor daily pattern of bowel activity, stool consistency, esp. constipation. Monitor I/O. Assess for urinary retention.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Dry mouth, drowsiness, dizziness may be an expected response to drug. • Avoid alcoholic beverages during therapy. • Drowsiness tends to diminish or disappear with continued therapy. • Report sudden muscle weakness or stiffness.

beractant

ber-**ak**-tant
(Survanta)
Do not confuse Survanta with Sufenta.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Natural bovine lung extract. **CLINICAL:** Pulmonary surfactant.

ACTION

Lowers alveolar surface tension during respiration, stabilizing alveoli. **Therapeutic Effect:** Improves lung compliance, respiratory gas exchange.

PHARMACOKINETICS

Not absorbed systemically.

USES

Prevention and treatment (rescue therapy) of respiratory distress syndrome (RDS—hyaline membrane disease) in premature infants. **Prevention:** Body weight less than 1,250 g in infants at risk for developing or with evidence of surfactant deficiency (give within 15 min of birth). **Rescue therapy:** Treatment of infants with RDS confirmed by X-ray, requiring mechanical ventilation (give within 8 hrs of birth).

PRECAUTIONS

Contraindications: None known. **Cautions:** Those at risk for circulatory overload. This drug is for use only in neonates. **Pregnancy Category:** Not indicated for use in pregnant women.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Suspension, Intratracheal: 25 mg/ml (4 ml, 8 ml).

ADMINISTRATION/HANDLING

Intratracheal

Rate of Administration • Instill through catheter inserted into infant's endotracheal tube. Do not instill into main-stem bronchus. • Administer dose in 4-ml/kg aliquots over 2–3 sec with infant in different positions. • Monitor for bradycardia, decreased O_2 saturation during administration. Stop dosing procedure if these effects occur; begin appropriate measures before reinstituting therapy.

Storage • Refrigerate vials. • Warm by standing vial at room temperature for 20 min or warm in hand 8 min. • If settling

B

occurs, gently swirl vial (do not shake) to redisperse. • After warming, may return to refrigerator within 8 hrs one time only. • Each vial should be injected through needle only one time; discard unused portions. • Color appears off-white to light brown.

INDICATIONS/ROUTES/DOSAGE

Prevention and Treatment (Rescue Therapy) of RDS or Hyaline Membrane Disease in Premature Infants

Intratracheal: INFANTS: 100 mg of phospholipids/kg birth weight (4 ml/kg). Give within 15 min of birth if infant weighs less than 1,250 g and has evidence of surfactant deficiency; give within 8 hrs when RDS is confirmed by X-ray and pt requires mechanical ventilation. May repeat in 6 hrs or longer after preceding dose. **Maximum:** 4 doses in the first 48 hrs of life.

SIDE EFFECTS

Frequent: Transient bradycardia, oxygen (O_2) desaturation, increased carbon dioxide (CO_2) retention. **Occasional:** Endotracheal tube reflux. **Rare:** Apnea, endotracheal tube blockage, hypotension or hypertension, pallor, vasoconstriction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Life-threatening nosocomial sepsis may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Drug must be administered in highly supervised setting. Clinicians caring for neonate must be experienced with intubation, ventilator management. Offer emotional support to parents.

INTERVENTION/EVALUATION

Monitor infant with arterial or transcutaneous measurement of systemic O_2, CO_2. Assess for adventitious breath sounds (rales, rhonchi).

betamethasone

bay-ta-**meth**-a-sone
(Betaderm, Betaject, Betnesol, Betnovate, Celestone, Celestone Soluspan, Diprolene, Diprolene AF, Ectosone, Luxiq)
Do not confuse Luxiq with Lasix.

FIXED-COMBINATION(S)

Lotrisone: betamethasone/clotrimazole (an antifungal): 0.05%/1%. **Taclonex:** betamethasone/calcipotriene (an antipsoriatic): 0.064%/0.005%.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocorticosteroid. **CLINICAL:** Anti-inflammatory, immunosuppressant (see pp. 97C, 99C, 100C).

ACTION

Controls rate of protein synthesis, depresses migration of polymorphonuclear leukocytes/fibroblasts, reverses capillary permeability, prevents or controls inflammation. **Therapeutic Effect:** Decreases tissue response to inflammatory process.

PHARMACOKINETICS

Rapidly and almost completely absorbed following PO administration. Protein binding: 64%. After topical application, limited absorption systemically. Metabolized in liver. Excreted in urine. **Half-life:** 6.5 hrs.

USES

Systemic: Anti-inflammatory, immunosuppressant, corticosteroid replacement therapy. **Topical:** Relief of inflammatory and pruritic dermatoses. **Foam:** Relief of inflammation, itching associated with dermatosis.

PRECAUTIONS

Contraindications: Systemic fungal infections; IM administration in idiopathic

thrombocytopenia purpura. **Cautions:** Hypothyroidism, hepatic/renal impairment, cardiovascular disease, diabetes, glaucoma, cataracts, myasthenia gravis, pts at risk for osteoporosis/seizures/GI disease, following acute MI, elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta, distributed in breast milk. **Pregnancy Category C (D if used in first trimester). Children:** Prolonged treatment, high-dose therapy may decrease short-term growth rate, cortisol secretion. **Elderly:** Higher risk for developing hypertension, osteoporosis.

INTERACTIONS

DRUG: **Amphotericin** may increase hypokalemia. May decrease effect of **insulin, oral hypoglycemics, potassium supplements.** May increase **digoxin** toxicity (due to hypokalemia). **Hepatic enzyme inducers** may decrease effect. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Cat's claw, echinacea** possess immunostimulant effects. **FOOD:** None known. **LAB VALUES:** May decrease serum calcium, potassium, thyroxine. May increase serum cholesterol, lipids, glucose, sodium, amylase.

AVAILABILITY (Rx)

Cream (Diprolene AF): 0.05%. **Foam (Luxiq):** 0.12%. **Gel:** 0.05%. **Injection, Suspension (Celestone Soluspan):** 3 mg/ml. **Lotion (Diprolene):** 0.05%. **Ointment:** 0.05%, 0.1%.

ADMINISTRATION/HANDLING

IM

• Inject slowly, deep IM into large muscle mass.

PO

• Give with milk or food (decreases GI upset). • Give single doses in the morning; give multiple doses at evenly spaced intervals.

Topical

• Gently cleanse area before application. • Apply sparingly and rub into area thoroughly. • Do not apply to face, groin, axillae, or inguinal areas. Not for use on broken skin, areas of infection, or in diaper area. • Do not dispense foam directly into hands; use fingers to apply small amounts.

INDICATIONS/ROUTES/DOSAGE

Anti-Inflammation, Immunosuppression, Corticosteroid Replacement Therapy

PO: ADULTS, ELDERLY: 0.6–7.2 mg/day. **CHILDREN:** 0.0175–0.25 mg/kg/day in 3–4 divided doses.

IM: ADULTS, ELDERLY: 0.6–9 mg/day in 2 divided doses. **CHILDREN:** 0.0175–0.125 mg/kg/day in 3–4 divided doses.

Relief of Inflamed and Pruritic Dermatoses

Topical: ADULTS, ELDERLY: 1–3 times a day. **Foam:** Apply twice a day (morning and night).

SIDE EFFECTS

Frequent: **Systemic:** Increased appetite, abdominal distention, nervousness, insomnia, false sense of well-being. **Topical:** Burning, stinging, pruritus. **Occasional:** **Systemic:** Dizziness, facial flushing, diaphoresis, decreased or blurred vision, mood swings. **Topical:** Allergic contact dermatitis, purpura or blood-containing blisters, thinning of skin with easy bruising, telangiectases, raised dark red spots on skin, angiomas.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may cause systemic hypercorticism, adrenal suppression.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroid, sulfite. Obtain baseline values for height, weight, B/P, serum glucose, electrolytes. Obtain baseline results of

B

initial tests (tuberculosis [TB] skin test, X-rays, EKG).

INTERVENTION/EVALUATION

Monitor B/P, blood glucose, electrolytes. Apply topical preparation sparingly. Do not use on broken skin or in areas of infection. Do not apply to wet skin, face, inguinal areas.

PATIENT/FAMILY TEACHING

• Take with food, milk. • Take single daily dose in the morning. • Do not stop abruptly. • Apply topical preparations in a thin layer. • Do not receive smallpox vaccination during or immediately after therapy.

bethanechol

be-**than**-e-kole
(Duvoid, Urecholine)
Do not confuse bethanechol with betaxolol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Parasympathomimetic choline ester. **CLINICAL:** Cholinergic (see p. 90C).

ACTION

Acts directly at cholinergic receptors in smooth muscle of urinary bladder, GI tract. Increases detrusor muscle tone. **Therapeutic Effect:** May initiate micturition, bladder emptying. Stimulates gastric, intestinal motility.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–90 min	60 min	6 hrs

Poorly absorbed following PO administration. Does not cross blood-brain barrier. **Half-life:** Unknown.

USES

Treatment of acute postoperative and postpartum nonobstructive urinary retention, retention due to neurogenic bladder. **OFF-LABEL:** Treatment of gastroesophageal reflux.

PRECAUTIONS

Contraindications: Mechanical obstruction of GI/GU tract. GI or bladder wall instability, hyperthyroidism, epilepsy, bronchial asthma, coronary artery disease, hypotension, parkinsonism, peptic ulcer, pronounced bradycardia, vasomotor instability. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Beta-blockers, anticholinesterase inhibitors may increase effects/toxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase, AST, ALT.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 25 mg, 50 mg.

ADMINISTRATION/HANDLING

PO

• Administer 1 hr before or 2 hrs after meals.

INDICATIONS/ROUTES/DOSAGE

Nonobstructive Urinary Retention, Atony of Bladder

PO: ADULTS, ELDERLY: 10–50 mg 3–4 times a day. Minimum effective dose determined by giving 5–10 mg initially, repeating same amount at 1-hr intervals until desired response is achieved. **CHILDREN:** 0.3–0.6 mg/kg/day in 3–4 divided doses.

SIDE EFFECTS

Occasional: Belching, changes in vision, blurred vision, diarrhea, urinary urgency or frequency. **Rare:** Shortness of breath, chest tightness, bronchospasm.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces CNS stimulation (insomnia, anxiety, orthostatic hypotension), cholinergic stimulation (headache, increased salivation/diaphoresis, nausea, vomiting, flushed skin, abdominal pain, seizures).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Ensure pt has emptied bladder prior to procedure.

INTERVENTION/EVALUATION

Monitor urine output. Palpate bladder for evidence of urinary retention.

PATIENT/FAMILY TEACHING

- Report nausea, vomiting, diarrhea, diaphoresis, increased salivary secretions, irregular heartbeat, muscle weakness, severe abdominal pain, difficulty breathing.

bevacizumab

TOP 200 HIGH ALERT

bev-ah-**siz**-oo-mab
(Avastin)

BLACK BOX ALERT May result in development of GI perforation, presented as intra-abdominal abscess, fistula, wound dehiscence, wound healing complications. Pulmonary hemorrhage, manifested as severe or fatal hemoptysis has occurred.

Do not confuse Avastin with Astelin, or bevacizumab with cetuximab or rituximab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic (see p. 80C).

ACTION

Binds to and inhibits vascular endothelial growth factor, a protein that plays a major role in formation of new blood vessels to tumors. **Therapeutic Effect:** Inhibits metastatic disease progression.

PHARMACOKINETICS

Clearance varies by body weight, gender, tumor burden. **Half-life:** 20 days (range: 11–50 days).

USES

Combination chemotherapy with 5-fluorouracil (5-FU) for treatment of pts with colorectal cancer. Treatment with carboplatin and paclitaxel for nonsquamous, non–small-cell lung cancer (NSCLC). Treatment of renal cell carcinoma (metastatic) with interferon alfa, brain cancer (glioblastoma) that has progressed following prior therapy. **OFF-LABEL:** Adjunctive therapy in malignant mesothelioma, ovarian cancer, prostate cancer, age-related macular degeneration. Treatment of metastatic breast cancer.

PRECAUTIONS

Contraindications: None known. **Cautions:** Cardiovascular disease, acquired coagulopathy, preexisting hypertension, pts at risk of thrombocytopenia. Pts with CNS metastasis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Teratogenic. Potential for fertility impairment. May decrease maternal and fetal body weight; increase risk of skeletal fetal abnormalities. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Higher incidence of severe adverse reactions in those older than 65 yrs.

INTERACTIONS

DRUG: Sunitinib may increase concentration/effectiveness. May increase levels of **clozapine, sorafenib, sunitinib.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium, sodium, WBC count, Hgb, Hct, platelet count.

AVAILABILITY (Rx)

Injection, Solution: 25-mg/ml vial.

B

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Do not give by IV push or bolus.

Reconstitution • Dilute prescribed dose in 100 ml 0.9% NaCl. • Avoid dextrose-containing solutions. • Discard any unused portion.

Rate of Administration • Usually given following other chemotherapy. Infuse initial dose over 90 min. • If first infusion is well tolerated, second infusion may be administered over 60 min. • If 60-min infusion is well tolerated, all subsequent infusions may be administered over 30 min.

Storage • Refrigerate vials. • Diluted solution may be stored for up to 8 hrs if refrigerated.

IV INCOMPATIBILITIES

Do not mix with dextrose solutions.

INDICATIONS/ROUTES/DOSAGE

Colorectal Cancer

IV: ADULTS, ELDERLY: 5–10 mg/kg once every 14 days (with fluorouracil-based chemotherapy).

Non–Small-Cell Lung Cancer (NSCLC)

IV: ADULTS, ELDERLY: 15 mg/kg every 3 wks (in combination with carboplatin and paclitaxel).

Metastatic Renal Cell Carcinoma

IV: ADULTS, ELDERLY: 10 mg/kg once every 2 wks (with interferon alfa).

Brain Cancer

IV: ADULTS, ELDERLY: 10 mg/kg every 2 wks (as monotherapy).

Dose Adjustment for Toxicity

Temporary suspension: Mild to moderate proteinuria, severe hypertension not controlled with medical management. **Permanent discontinuation:** Wound dehiscence requiring intervention, GI perforation, hypertensive crises, serious bleeding, nephrotic syndrome.

SIDE EFFECTS

Frequent (73%–25%): Asthenia (loss of strength, energy), vomiting, anorexia, hypertension, epistaxis, stomatitis, constipation, headache, dyspnea. **Occasional (21%–15%):** Altered taste, dry skin, exfoliative dermatitis, dizziness, flatulence, excessive lacrimation, skin discoloration, weight loss, myalgia. **Rare (8%–6%):** Nail disorder, skin ulcer, alopecia, confusion, abnormal gait, dry mouth.

ADVERSE EFFECTS/ TOXIC REACTIONS

UTI, manifested as urinary frequency/urgency, proteinuria, occurs frequently. Most serious adverse effects include CHF, deep vein thrombosis, GI perforation, wound dehiscence, hypertensive crisis, nephrotic syndrome, severe hemorrhage. Anemia, neutropenia, thrombocytopenia occur occasionally. Hypersensitivity reactions occur rarely. May increase risk of tracheoesophageal fistula development.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Monitor B/P regularly during treatment. Assess for proteinuria with urinalysis. For those with 2+ or greater urine dipstick reading, a 24-hr urine collection is advisable. Monitor CBC, serum potassium, sodium levels at regular intervals during therapy.

INTERVENTION/EVALUATION

Monitor B/P for hypertension. Assess for asthenia (loss of strength, energy). Assist with ambulation if asthenia (loss of strength, energy) occurs. Monitor for fever, chills, abdominal pain, epistaxis. Offer antiemetic if nausea, vomiting occur. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Report abdominal pain, vomiting, constipation, headache. • Do not have immunizations without physician's approval (lowers body's resistance). • Avoid con-

tact with anyone who recently received a live virus vaccine. • Avoid crowds, those with infection. • Female pts should take measures to avoid pregnancy during treatment.

bexarotene

HIGH ALERT

beks-**air**-oh-teen
(Targretin)

BLACK BOX ALERT Do not administer to pregnant women (high risk of birth defects).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Retinoid.
CLINICAL: Antineoplastic (see p. 80C).

ACTION

Binds to and activates retinoid X receptor subtypes that regulate the genes controlling cellular differentiation and proliferation. **Therapeutic Effect:** Inhibits growth of tumor cell lines of hematopoietic and squamous cell origin, induces tumor regression.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: greater than 99%. Metabolized in liver. Primarily eliminated through the hepatobiliary system. **Half-life:** 7 hrs.

USES

PO: Treatment of cutaneous T-cell lymphoma (CTCL) in those refractory to at least one prior systemic therapy. **Topical:** Treatment of cutaneous lesions in those with refractory CTCL (stage 1A and 1B) or not tolerant of other therapies. **OFF-LABEL:** Treatment of diabetes mellitus; head, neck, lung, renal cell carcinomas; Kaposi's sarcoma.

PRECAUTIONS

Contraindications: Pregnancy. **Cautions:** Hepatic impairment, diabetes mellitus, lipid abnormalities, excessive alcohol consumption, biliary tract disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Bone marrow depressants, medications causing blood dyscrasias may have adverse additive effects. **CYP3A4 inducers (e.g., phenobarbital, phenytoin, rifampin)** may decrease plasma concentration. **CYP3A4 inhibitors (e.g., erythromycin, gemfibrozil, itraconazole, ketoconazole)** may increase plasma concentration. Bexarotene may reduce **tamoxifen** concentration. **HERBAL: Dong quai, St. John's wort** may cause photosensitization. **St. John's wort** may decrease plasma concentration. **FOOD: Grapefruit, grapefruit juice** may increase concentration/toxicity. **LAB VALUES:** May increase serum bilirubin, AST, ALT, cholesterol, glucose, potassium, triglycerides, total cholesterol, LDL. May decrease HDL. CA-125 in ovarian cancer may be increased.

AVAILABILITY (Rx)

Capsules (Soft Gelatin [Targretin]): 75 mg.
Topical Gel (Targretin): 1%.

ADMINISTRATION/HANDLING

PO

• Give following a high-fat meal.

Topical

• Generously coat lesions with gel. • Allow to dry before covering. • Avoid applying gel to normal skin surrounding lesions or near mucosal surfaces. • Use of occlusive dressings not recommended.

INDICATIONS/ROUTES/DOSAGE

Cutaneous T-Cell Lymphoma Refractory to at Least One Prior Systemic Therapy

PO: ADULTS: 300 mg/m^2/day. If no tumor response after 8 wks and initial dose is

B

well tolerated, may be increased to 400 mg/m^2/day. If not tolerated, may be decreased to 200 mg/m^2/day, then to 100 mg/m^2/day, or temporarily suspended to manage toxicity. **Topical: ADULTS:** Initially, apply once every other day for first wk. May increase at weekly intervals to once a day, then twice a day, then 3 times a day up to 4 times a day based on tolerance.

SIDE EFFECTS

Frequent: Hyperlipidemia (79%), headache (30%), hypothyroidism (29%), asthenia (loss of strength, energy) (20%). **Occasional:** Rash (17%); nausea (15%); peripheral edema (13%); dry skin, abdominal pain (11%); chills, exfoliative dermatitis (10%); diarrhea (7%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Pancreatitis, hepatic failure, pneumonia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline lipid profile, WBC, hepatic function, thyroid function. Question about possibility of pregnancy (Pregnancy Category X). Warn women of childbearing age about potential fetal risk if pregnancy occurs.

INTERVENTION/EVALUATION

Monitor serum cholesterol, triglycerides, CBC, hepatic, thyroid function tests.

PATIENT/FAMILY TEACHING

• Do not use medicated, drying, abrasive soaps; wash with gentle, bland soap. • Inform physician if pregnant or planning to become pregnant (Pregnancy Category X). • Instruct on need for use of 2 reliable forms of contraceptives concurrently during therapy and for 1 mo after discontinuation of therapy, even in infertile, premenopausal woman.

bicalutamide

HIGH ALERT

bye-ka-**loo**-ta-mide
(Apo-Bicalutamide, Casodex, Novo-Bicalutamide)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiandrogen hormone. **CLINICAL:** Antineoplastic (see p. 80C).

ACTION

Competitively inhibits androgen action by binding to androgen receptors in target tissue. **Therapeutic Effect:** Decreases growth of prostatic carcinoma.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 96%. Metabolized in liver to inactive metabolite. Excreted in urine and feces. Not removed by hemodialysis. **Half-life:** 5.8–7 days.

USES

Treatment of advanced metastatic prostatic carcinoma (in combination with luteinizing hormone-releasing hormone [LHRH] agonist analogues, e.g., leuprolide). Treatment with both drugs must be started at same time. **OFF-LABEL:** Monotherapy for locally advanced prostate cancer.

PRECAUTIONS

Contraindications: Women, esp. those who are or may become pregnant. **Cautions:** Moderate to severe hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May inhibit spermatogenesis, not used in women. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effect of **aripiprazole, budesonide, colchicine, fen-**

tanyl, salmeterol, saxagliptan. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, alkaline phosphatase, creatinine, bilirubin, BUN, glucose. May decrease WBC, Hgb.

AVAILABILITY (Rx)

Tablets: 50 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Give at same time each day.

INDICATIONS/ROUTES/DOSAGE

Prostatic Carcinoma

PO: ADULTS, ELDERLY: 50 mg once a day in morning or evening, given concurrently with an LHRH analogue or after surgical castration.

SIDE EFFECTS

Frequent: Hot flashes (49%), breast pain (38%), muscle pain (27%), constipation (17%), asthenia (loss of strength, energy) (15%), diarrhea (10%), nausea (11%). **Occasional (9%–8%):** Nocturia, abdominal pain, peripheral edema. **Rare (7%–3%):** Vomiting, weight loss, dizziness, insomnia, rash, impotence, gynecomastia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Sepsis, CHF, hypertension, iron deficiency anemia, interstitial pneumonitis, pulmonary fibrosis may occur. Severe hepatotoxicity occurs rarely within the first 3–4 mos after treatment initiation.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab tests including CBC, hepatic function, PSA, serum testosterone, leutinizing hormone (LH) levels.

INTERVENTION/EVALUATION

Monitor lab studies for changes from baseline. Perform periodic hepatic function tests. If AST, ALT increase over 2 times the upper limit of normal (ULN) or jaundice is noted, discontinue treatment. Monitor for diarrhea, nausea, vomiting.

PATIENT/FAMILY TEACHING

• Do not stop taking medication (both drugs must be continued). • Take medications at same time each day. • Explain possible expectancy of frequent side effects. • Contact physician if persistent nausea, vomiting, diarrhea occur.

bisacodyl

bi-sah-koe-dil
(Alophen, Apo-Bisacodyl, Dulcolax, Fleet Bisacodyl Enema, Veracolate)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: GI stimulant. **CLINICAL:** Laxative (see p. 122C).

ACTION

Direct effect on colonic smooth musculature by stimulating intramural nerve plexi. **Therapeutic Effect:** Promotes fluid and ion accumulation in colon, increasing peristalsis, producing laxative effect.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	6–12 hrs	N/A	N/A
Rectal	15–60 min	N/A	N/A

Minimal absorption following PO and rectal administration. Absorbed drug is excreted in urine; remainder is eliminated in feces.

USES

Treatment of constipation, colonic evacuation before examinations or procedures.

PRECAUTIONS

Contraindications: Abdominal pain, appendicitis, intestinal obstruction, nausea, undi-

B

agnosed rectal bleeding, vomiting, pregnancy, lactation. **Cautions:** Excessive use may lead to fluid, electrolyte imbalance.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Use with caution in those younger than 6 yrs (usually unable to describe symptoms or more severe side effects). **Elderly:** Repeated use may cause weakness, orthostatic hypotension due to fluid, electrolyte imbalance.

INTERACTIONS

DRUG: **Antacids** may decrease effect, cause premature dissolution of enteric coating and possible gastric irritation. **HERBAL:** None significant. **FOOD:** **Milk** may cause rapid dissolution of bisacodyl. **LAB VALUES:** May increase serum glucose concentration. May decrease serum potassium.

AVAILABILITY (OTC)

Rectal Enema (Fleet Bisacodyl Enema): 10 mg/30 ml. **Suppositories (Dulcolax):** 10 mg.

Tablets (Enteric-Coated [Dulcolax]): 5 mg.

ADMINISTRATION/HANDLING

PO

• Give on empty stomach (faster action). • Offer 6–8 glasses of water a day (aids stool softening). • Administer tablets whole; do not crush or chew. • Avoid giving within 1 hr of antacids, milk, other oral medication.

Rectal, Enema

• Shake bottle, and remove orange protective shield from tip. • Position pt on left side with left knee slightly bent and right leg drawn up, or in knee-chest position. • Insert tip into rectum, aiming at pt's umbilicus.

Rectal, Suppository

• If suppository is too soft, chill for 30 min in refrigerator or run cold water over foil wrapper. • Moisten suppository with cold water before inserting well into rectum. **Storage** • Store rectal enema, suppositories at room temperature.

INDICATIONS/ROUTES/DOSAGE

Treatment of Constipation

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: 5–15 mg as needed. **Maximum:** 30 mg. **CHILDREN 3–12 YRS:** 5–10 mg or 0.3 mg/kg at bedtime or after breakfast. **ELDERLY:** Initially, 5 mg/day.

Rectal, Enema: ADULTS, CHILDREN OLDER THAN 12 YRS: One 1.25-oz bottle in a single daily dose.

Rectal, Suppository: ADULTS, CHILDREN OLDER THAN 12 YRS: 10 mg to induce bowel movement. **CHILDREN 2–12 YRS:** 5–10 mg as a single dose. **CHILDREN YOUNGER THAN 2 YRS:** 5 mg. **ELDERLY:** 5–10 mg/day.

SIDE EFFECTS

Frequent: Some degree of abdominal discomfort, nausea, mild cramps, faintness. **Occasional:** Rectal administration: burning of rectal mucosa, mild proctitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term use may result in laxative dependence, chronic constipation, loss of normal bowel function. Chronic use or overdose may result in electrolyte or metabolic disturbances (hypokalemia, hypocalcemia, metabolic acidosis, alkalosis), persistent diarrhea, vomiting, muscle weakness, malabsorption, weight loss.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Observe for evidence of constipation. Assess pattern of bowel activity, stool consistency.

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency; record time of evacuation. Assess for abdominal disturbances. Monitor serum

electrolytes in those exposed to prolonged, frequent, or excessive use of medication.

PATIENT/FAMILY TEACHING

• Institute measures to promote defecation: increase fluid intake, exercise, high-fiber diet. • Do not take antacids, milk, or other medication within 1 hr of taking medication (decreased effectiveness). • Report unrelieved constipation, rectal bleeding, muscle pain or cramps, dizziness, weakness. • Do not crush or chew tablets.

bismuth

bis-muth
(Diotame, Kaopectate, Pepto-Bismol)
Do not confuse Kaopectate with Kayexalate.

FIXED-COMBINATION(S)

Helidac: bismuth/metronidazole/tetracycline: 262 mg/250 mg/500 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antisecretory, antimicrobial. **CLINICAL:** Antidiarrheal, antinausea, antiulcer (see p. 45C).

ACTION

Absorbs water, toxins in large intestine, forms a protective coating in intestinal mucosa. Possesses antisecretory and antimicrobial effects. **Therapeutic Effect:** Prevents diarrhea.

USES

Treatment of mild, nonspecific diarrhea, indigestion, nausea. Part of multidrug regimen in treatment of *H. pylori* eradication to reduce risk of duodenal ulcer recurrence. Prevention of traveler's diarrhea.

PRECAUTIONS

Contraindications: History of severe GI bleeding or coagulopathy. **Cautions:** Elderly, diabetic pts. History of bleeding disorder; gastric ulcer disease; concomitant use of anticoagulants, clopidogrel, NSAIDs, or oral antidiabetic agents. **Pregnancy Category C (D if used in third trimester).**

INTERACTIONS

DRUG: May decrease absorption of **tetracyclines.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May alter serum alkaline phosphatase, AST, ALT, uric acid levels. May decrease serum potassium. May prolong prothrombin time (PT).

AVAILABILITY (OTC)

Caplets: (Pepto-Bismol): 262 mg. **Liquid:** 262 mg/15 ml **(Diotame, Kaopectate, Pepto-Bismol),** 525 mg/15 ml **(Kaopectate Extra Strength, Maalox Total Stomach Relief, Pepto-Bismol Maximum Strength). Suspension:** 262 mg/15 ml. **Tablets, Chewable (Diotame, Pepto-Bismol):** 262 mg.

ADMINISTRATION/HANDLING

• Shake suspension well. • Instruct pt to chew or dissolve chewable tablet before swallowing.

INDICATIONS/ROUTES/DOSAGE

Diarrhea, Gastric Distress

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 2 tablets (30 ml) q30–60min. **Maximum:** 8 doses in 24 hrs. **CHILDREN 9–12 YRS:** 1 tablet or 15 ml q30–60min. **Maximum:** 8 doses in 24 hrs. **CHILDREN 6–8 YRS:** ⅔ tablet or 10 ml q30–60min. **Maximum:** 8 doses in 24 hrs. **CHILDREN 3–5 YRS:** ⅓ tablet or 5 ml q30–60min. **Maximum:** 8 doses in 24 hrs.

H. Pylori–Associated Duodenal Ulcer, Gastritis

PO: ADULTS, ELDERLY: 525 mg 4 times a day, requires combination therapy.

Chronic Infant Diarrhea

PO: CHILDREN 2–24 MOS: 2.5 ml q4h; **25–48 MOS:** 5 ml q4h; **49–70 MOS:** 10 ml q4h.

B

SIDE EFFECTS

Frequent: Grayish black stools. **Rare:** Constipation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Debilitated pts and infants may develop impaction.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristaltic activity. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Stool may appear gray/black. • Chew chewable tablets thoroughly before swallowing. • Report diarrhea lasting more than 2 days.

bisoprolol

HIGH ALERT

bi-**soe**-proe-lol
(Apo-Bisoprolol, Novo-Bisoprolol, Zebeta)
Do not confuse Zebeta with DiaBeta or Zetia.

FIXED-COMBINATION(S)

Ziac: bisoprolol/hydrochlorothiazide (a diuretic): 2.5 mg/6.25 mg, 5 mg/6.25 mg, 10 mg/6.25 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta-adrenergic blocker. **CLINICAL:** Antihypertensive (see p. 71C).

ACTION

Blocks $beta_1$-adrenergic receptors in cardiac tissue. **Therapeutic Effect:** Slows sinus heart rate, decreases B/P.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 26%–33%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 9–12 hrs (increased in renal impairment).

USES

Management of hypertension, alone or in combination with diuretics, other medications. **OFF-LABEL:** Angina pectoris, premature ventricular contractions, supraventricular arrhythmias, CHF.

PRECAUTIONS

Contraindications: Cardiogenic shock, marked sinus bradycardia, overt cardiac failure, second- or third-degree heart block (except in pts with pacemaker). **Cautions:** Renal/hepatic impairment, hyperthyroidism, diabetes, bronchospastic disease, myasthenia gravis, psychiatric disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. Avoid use during first trimester. May produce bradycardia, apnea, hypoglycemia, hypothermia during delivery, low birth-weight infants. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** Age-related peripheral vascular disease may increase risk of decreased peripheral circulation.

INTERACTIONS

DRUG: Diuretics, other antihypertensives may increase hypotensive effect. May mask symptoms of hypoglycemia, prolong hypoglycemic effect of **insulin, oral hypoglycemics. NSAIDs** may decrease antihypertensive effect. **Verapamil, diltiazem, digoxin** may increase risk of bradycardia or heart block. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may have increased antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase ANA titer, BUN, serum creatinine, potassium, uric acid, lipoproteins, triglycerides.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Scored tablet may be crushed.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 2.5–5 mg/day. May increase up to 20 mg/day. **ELDERLY:** Initially, 2.5 mg/day. May increase by 2.5–5 mg/day. **Maximum:** 20 mg/day.

Dosage in Renal Impairment

For adults and elderly pts whose creatinine clearance is less than 40 ml/min, initially give 2.5 mg.

SIDE EFFECTS

Frequent (11%–8%): Fatigue, headache. **Occasional (4%–2%):** Dizziness, arthralgia, peripheral edema, URI, rhinitis, pharyngitis, diarrhea, nausea, insomnia. **Rare (less than 2%):** Chest pain, asthenia (loss of strength, energy), dyspnea, vomiting, bradycardia, dry mouth, diaphoresis, decreased libido, impotence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremors. May precipitate CHF, MI in pts with cardiac disease, thyroid storm in those with thyrotoxicosis, peripheral ischemia in those with existing peripheral vascular disease. Hypoglycemia may occur in previously controlled diabetes. Thrombocytopenia, unusual bruising/bleeding occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function tests. Assess B/P, apical pulse immediately before drug is administered (if pulse is 60/min or less or systolic B/P is less than 90 mm Hg, withhold medications, contact physician).

INTERVENTION/EVALUATION

Assess B/P, pulse for quality, irregular rate, bradycardia. Assist with ambulation if dizziness occurs. Assess for peripheral edema (usually, first area of lower extremity swelling is behind medial malleolus in ambulatory, sacral area in bedridden). Monitor daily pattern of bowel activity, stool consistency. Assess neurologic status.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control hypertension. • If dizziness occurs, sit or lie down immediately. • Avoid tasks that require alertness, motor skills until response to drug is established. • Teach pts how to take pulse properly before each dose and to report excessively slow pulse rate (less than 60 beats/min), peripheral numbness, dizziness. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician's approval. • Restrict salt, alcohol intake.

bivalirudin

HIGH ALERT

bye-**val**-ih-roo-din
(Angiomax)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thrombin inhibitor. **CLINICAL:** Anticoagulant (see p. 37C).

ACTION

Specifically and reversibly inhibits thrombin by binding to its receptor sites. **Therapeutic Effect:** Decreases acute ischemic complications in pts with unstable angina pectoris.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	Immediate	N/A	1 hr

B

Primarily eliminated by kidneys. Twenty-five percent removed by hemodialysis. **Half-life:** 25 min (increased in moderate to severe renal impairment).

USES

Anticoagulant in pts with unstable angina undergoing percutaneous transluminal coronary angioplasty (PTCA) in conjunction with aspirin. Pts with heparin-induced thrombocytopenia (HIT) and thrombosis syndrome (HITTS) while undergoing percutaneous coronary intervention (PCI). **OFF-LABEL:** HIT; ST-segment elevation MI (STEMI) undergoing PCI.

PRECAUTIONS

Contraindications: Active major bleeding. **Cautions:** Renal impairment. Conditions associated with increased risk of bleeding (e.g., bacterial endocarditis, recent major bleeding, CVA, stroke, intracerebral surgery, hemorrhagic diathesis, severe hypertension, severe renal/hepatic impairment, recent major surgery).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Antiplatelets, NSAIDs, salicylates, thrombolytics may increase effects. **HERBAL: Ginkgo biloba,** other herbs with anticoagulant/antiplatelet properties may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** Prolongs activated partial thromboplastin time (aPTT), prothrombin time (PT).

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 250 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • To each 250-mg vial add 5 ml Sterile Water for Injection. • Gently swirl until all material is dissolved. • Further dilute each vial in 50 ml D_5W or 0.9% NaCl to yield final concentration of 5 mg/ml (1 vial in 50 ml, 2 vials in 100 ml, 5 vials in 250 ml). • If low-rate infusion is used after initial infusion, reconstitute the 250-mg vial with added 5 ml Sterile Water for Injection. • Gently swirl until all material is dissolved. • Further dilute each vial in 500 ml D_5W or 0.9% NaCl to yield final concentration of 0.5 mg/ml. • Produces a clear, colorless solution (do not use if cloudy or contains a precipitate).

Rate of Administration • Adjust IV infusion based on aPTT or pt's body weight.

Storage • Store unreconstituted vials at room temperature. • Reconstituted solution may be refrigerated for up to 24 hrs. • Final dilution with a concentration of 0.5–5 mg/ml is stable at room temperature for up to 24 hrs.

IV INCOMPATIBILITIES

Alteplase (Activase), amiodarone (Cordarone), amphotericin B (AmBisome, Abelcet), chlorpromazine (Thorazine), diazepam (Valium), dobutamine (incompatible at 12.5 mg/ml, compatible at 4 mg/ml) (Dobutrex), prochlorperazine (Compazine), reteplase (Retavase), streptokinase (Streptase), vancomycin (Vancocin).

INDICATIONS/ROUTES/DOSAGE

Anticoagulant in Pts with Unstable Angina, HIT, or HITTS Undergoing PTCA

IV: ADULTS, ELDERLY: 0.75 mg/kg as IV bolus, followed by IV infusion at rate of 1.75 mg/kg/hr for duration of procedure and up to 4 hrs postprocedure. IV infusion may be continued beyond initial 4 hrs at rate of 0.2 mg/kg/hr for up to 20 hrs.

Dosage in Renal Impairment

◀ALERT▶ Initial bolus dose remains unchanged.

Creatinine Clearance	Dosage
30 ml/min or greater	1.75 mg/kg/hr
10–29 ml/min	1 mg/kg/hr
Dialysis	0.25 mg/kg/hr

SIDE EFFECTS

Frequent (42%): Back pain. **Occasional (15%–12%):** Nausea, headache, hypotension, generalized pain. **Rare (8%–4%):** Injection site pain, insomnia, hypertension, anxiety, vomiting, pelvic or abdominal pain, bradycardia, nervousness, dyspepsia, fever, urinary retention.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hemorrhagic events occur rarely, characterized by significant fall in B/P or Hct.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBC, bleeding time, renal function. Determine initial B/P.

INTERVENTION/EVALUATION

Monitor aPTT, Hct, urine and stool specimen for occult blood, renal function studies. Monitor for evidence of bleeding. Assess for decrease in B/P, increase in pulse rate. Question for increase in amount of discharge during menses. Assess urine for hematuria.

bleomycin

HIGH ALERT

blee-oh-**mye**-sin
(Blenoxane)

BLACK BOX ALERT Pulmonary fibrosis (commonly presenting as pneumonitis) occurs more often in elderly, pts receiving more than 400 units total lifetime dose or single dose more than 30 units, smokers, prior radiation treatment, or receiving concurrent oxygen. A severe reaction (hypotension, mental confusion, fever, chills, wheezing) is reported rarely.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycopeptide antibiotic. **CLINICAL:** Antineoplastic, sclerosing agent (see p. 80C).

ACTION

Binds to portions of DNA, producing DNA single-strand breaks. Most effective in G_2 phase of cell division. **Therapeutic Effect:** Inhibits cell replication.

PHARMACOKINETICS

Protein binding: Low (1%). Metabolism varies. Excreted in urine as unchanged drug. **Half-life:** 115 min.

USES

Treatment of Hodgkin's and non-Hodgkin's lymphoma, sclerosing agent for malignant pleural effusions, squamous cell carcinoma (e.g., head, neck, penis, cervix, vulva), testicular carcinoma. **OFF-LABEL:** Sclerosing agent for malignant pleural effusion, treatment of mycosis fungoides, osteosarcoma, ovarian tumors, renal carcinoma, soft tissue sarcoma.

PRECAUTIONS

Contraindications: Previous allergic reaction. **Cautions:** Severe renal or pulmonary impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Increased risk of pulmonary toxicity.

INTERACTIONS

DRUG: May alter effects of **live vaccines. Pimecrolimus, tacrolimus** (topical) may increase concentration. **HERBAL: Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Blenoxane): 15 units, 30 units.

B

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Reconstitution • Reconstitute 15-unit vial with at least 5 ml (30-unit vial with at least 10 ml) 0.9% NaCl to provide a concentration not greater than 3 units/ml.

Rate of Administration • Administer over at least 10 min for IV injection.

Storage • Refrigerate vials. Intact vials are stable for 4 wks at room temperature. • After reconstitution with 0.9% NaCl, solution is stable for 24 hrs at room temperature.

IM, Subcutaneous

Rate of Administration • Reconstitute 15-unit vial with 1–5 ml (30-unit vial with 2–10 ml) Sterile Water for Injection, 0.9% NaCl, or Bacteriostatic Water for Injection to provide concentration of 3–15 units/ml. Do not use D_5W.

Storage • Refrigerate vials. • After reconstitution, solution is stable for 24 hrs at room temperature.

IV INCOMPATIBILITIES

Diazepam (Valium), furosemide (Lasix), hydrocortisone sodium succinate (Solu-Cortef).

IV COMPATIBILITIES

Cefepime (Maxipime), dacarbazine (DTIC), dexamethasone (Decadron), diphenhydramine (Benadryl), fludarabine (Fludara), gemcitabine (Gemzar), ondansetron (Zofran), paclitaxel (Taxol), piperacillin/tazobactam (Zosyn), vinblastine (Velban), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Maximum lifetime dose = 400 units.

Usual Dosage

(Refer to individual protocols)

IV, IM, Subcutaneous: ADULTS, ELDERLY: 10–20 units/m^2 (0.25–0.5 units/kg) 1–2 times a wk.

Sclerosing Agent

ADULTS, ELDERLY: 60 units as a single instillation (mix with 50–100 ml 0.9% NaCl). May repeat at intervals of several days if fluid continues to accumulate.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
40–50 ml/min	70% of normal
30–39 ml/min	60% of normal
20–29 ml/min	55% of normal
10–19 ml/min	45% of normal
5–9 ml/min	40% of normal

SIDE EFFECTS

Frequent: Anorexia, weight loss, erythematous skin swelling, urticaria, rash, striae, vesiculation, hyperpigmentation (particularly at areas of pressure, skin folds, cuticles, IM injection sites, scars), stomatitis (usually evident 1–3 wks after initial therapy); may be accompanied by decreased skin sensitivity followed by skin hypersensitivity, nausea, vomiting, alopecia. With parenteral form, fever, chills typically occurring a few hrs after large single dose, lasting 4–12 hrs occur frequently.

ADVERSE EFFECTS/ TOXIC REACTIONS

Interstitial pneumonitis occurs in 10% of pts, occasionally progresses to pulmonary fibrosis. Appears to be dose-, age-related (older than 70 yrs, those receiving total dose greater than 400 units). Nephrotoxicity, hepatotoxicity occur infrequently.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline chest X-ray.

INTERVENTION/EVALUATION

Adventitious breath sounds may indicate pulmonary toxicity (rales, rhonchi). Observe for dyspnea. Monitor hematologic, pulmonary, hepatic, renal function tests. Assess skin daily for cutaneous toxicity (erythema, rash, vesiculation). Monitor for stomatitis (burning, erythema of oral mucosa at inner margin of lips), hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Report fever, chills, wheezing, difficulty breathing, prolonged nausea, vomiting, oral pain or lesions. • Fever or chills reaction occurs less frequently with continued therapy. • Improvement of Hodgkin's disease, testicular tumors noted within 2 wks, squamous cell carcinoma within 3 wks. • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid contact with those who have recently taken live virus vaccine or had a viral infection (e.g., cold virus, herpetic infection).

boceprevir

boe-**sep**-re-veer
(Victrelis)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antiviral.

ACTION

Inhibits hepatitis C virus (HCV) protease needed for cleavage of HCV-encoded polyproteins by binding to active serine protease sites. **Therapeutic Effect:** Inhibits viral replication of hepatitis C virus.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 75%. Extensively metabolized in liver. Excreted primarily in feces. Minimal removal by hemodialysis. **Half-life:** 3.4 hrs.

USES

Treatment of chronic hepatitis C genotype 1 in combination with peginterferon alfa and ribavirin. Indicated for compensated liver disease, including cirrhosis, in pts who are previously untreated or who have failed previous interferon and ribavirin therapy.

PRECAUTIONS

◀ALERT▶ Safety and efficacy not established in decompensated cirrhosis, organ transplant, coinfected with HIV, hepatitis B, previous failed therapies with protease inhibitors.

Contraindications: Pregnancy, breast-feeding, drugs utilizing CYP3A4/5 for clearance, CYP3A4/5 inducers, contraindications to peginterferon alfa or ribavirin. **Cautions:** Anemia, neutropenia, thrombocytopenia, HIV.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Strictly avoid pregnancy. May cause birth defects or fetal demise. **Pregnancy Category B (X when used in ribavirin).** Women of childbearing age must use two different forms of birth control: intrauterine device and barrier methods during treatment and at least 6 mos after treatment. Hormonal contraceptives may have decreased effectiveness. Do not initiate therapy until negative pregnancy test confirmed. Unknown if crosses placenta or into breast milk. Breast-feeding contraindicated. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Contraindicated with **alfuzosin, carbamazepine, dihydroergotamine, ergonovine, ergotamine, lovastatin, methylergonovine, midazolam, phenobarbital, phenytoin, pimozide, rifampin, sildenafil, simvastatin,**

B

tadalafil, triazolam. May increase concentrations of **antiarrhythmics (amiodarone, bepridil, digoxin, flecanide, propafenone, quinidine), antifungals (itraconazole, ketoconazole, posaconazole, voriconazole), atorvastatin, budesonide, calcium channel blockers (dihydropyridine, felodipine, nicardipine, nifedipine), colchicine, clarithromycin, desipramine, dexamethasone, fluticasone, HIV nonnucleoside reverse transcriptase inhibitors, immunosuppressants, opioid analgesics, oral contraceptives, rifabutin, salmeterol, sildenafil, trazadone, warfarin.** May alter therapeutic levels of **buprenorphine, ethinyl estradiol, HIV protease inhibitors, methadone, warfarin. Dexamethasone, HIV non-nucleoside reverse transcriptase inhibitors, rifabutin** may decrease antiviral effectiveness. **HERBAL: St. John's wort** may decrease effectiveness (contraindicated). **FOOD:** None known. **LAB VALUES:** May decrease RBC, Hgb, Hct, neutrophils, platelets.

AVAILABILITY (Rx)

Capsules: 200 mg.

ADMINISTRATION/HANDLING

- Give with food.

INDICATIONS/ROUTES/DOSAGE

Chronic Hepatitis C with Non-Cirrhosis, Previously Untreated or Previous Partial Responders or Relapsers

PO: ADULTS, ELDERLY: 800 mg 3 times a day with food. Begin after 4 wks of peginterferon alfa, ribavirin therapy. Duration based on Response-Guided Therapy (RGT) guidelines. **Response-Guided Therapy Guidelines with HCV-RNA Level** Based on prior treatment and HCV-RNA results at wks 8, 12, 24. For previously untreated pts, if HCV-RNA undetectable at wk 8 to wk 24, complete three-medicine regimen at wk 28. If HCV-RNA detectable at wk 8 but undetectable at wk 24, continue three-medicine regimen until wk 36, then finish with peginterferon alfa, ribavirin until wk 48. For previous partial responders or relapsers, if HCV-RNA undetectable at wk 8 to wk 24, complete three-medicine regimen at wk 36. If HCV-RNA detectable at wk 8 but undetectable at wk 24, continue three-medicine regimen until wk 36, then finish with peginterferon alfa, ribavirin until wk 48. **Treatment Futility** Discontinue treatment if HCV-RNA viral load greater than or equal to 100 international units/ml at wk 12, or HCV-RNA detectable at wk 24.

Chronic Hepatitis C with Cirrhosis, or Poor Responders to Interferon

PO: ADULTS, ELDERLY: 800 mg 3 times a day with food for 44 wks. Start after 4 wks with peginterferon alfa, ribavirin therapy. **Dosage Modification** Do not reduce boceprevir during treatment. If adverse reaction or neutropenia occurs, recommend reduction/discontinuation of peginterferon alfa and/or ribavirin. If Hgb less than 10 g/dl, reduce or interrupt ribavirin. If Hgb less than 8.5 g/dl, discontinue ribavirin.

SIDE EFFECTS

Frequent (58%–25%): Fatigue, anemia, nausea, dysgeusia (altered taste), chills, insomnia, alopecia, decreased appetite, diarrhea. **Occasional (22%–8%):** Irritability, vomiting, arthralgia, dizziness, dry skin, rash, asthenia (loss of strength, energy), dry mouth, exertional dyspnea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk of thromboembolic events associated with peginterferon alfa, erythropoiesis-stimulating agent. Life-threatening infections related to neutropenia. Simultaneous use of contraindicated medications use may result in hypertension/hypotension, peripheral vasospasm/ischemia (ergot toxicity), arrhythmias, rhabdomyolysis (statins), hyperkalemia (oral contraception), visual abnormalities, syncope, increased sedation or respiratory depression (sedative/hypnotics), loss of virologic response.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess vital signs, O_2 saturation. Obtain CBC, HCV-RNA level, INR if on warfarin. Receive full history of home medications including vitamins, minerals, herbal products and screen contraindications. Confirm negative pregnancy test before initiating treatment. Question history of anemia, HIV, hepatitis B, organ transplant.

INTERVENTION/EVALUATION

Assess vital signs, O_2 saturation routinely. Monitor CBC with differential (wk 4, 8, 12), and HCV-RNA levels (wk 4, 8, 12, 24), urine pregnancy every month and 6 mos after final treatment. Assess for anemia-related dizziness, exertional dyspnea, fatigue, weakness, syncope. Report decreases in Hgb, Hct, platelets, neutrophils. Check INR if on warfarin. Monitor for acute infection (fever, diaphoresis, lethargy, oral mucosal changes, productive cough), bloody stools, bruising, hematuria, DVT, pulmonary embolism. Encourage nutritional intake and assess anorexia, weight loss. Monitor for intrauterine device failures if applicable. Obtain EKG for hypokalemia, palpitations, tachycardia. Reinforce birth control compliance.

PATIENT/FAMILY TEACHING

• Must be used in combination with peginterferon alfa, ribavirin. • Inform side effects/contraindications of three-medication regimen. • Blood levels will be drawn routinely. • Immediately report any newly prescribed medications. • Women of childbearing age must use two different forms of birth control: intrauterine device and barrier methods during treatment and for at least 6 mos after treatment. • Hormonal birth control (oral, vaginal rings, injections) may be ineffective. • Immediately notify physician if partner becomes pregnant. • May alter taste of food or decrease appetite. • Report bloody stool/urine, increased bruising, difficulty breathing, weakness, dizziness, palpitations, weight loss. • Avoid alcohol. • Take with meals.

bortezomib

HIGH ALERT

bor-**tez**-oh-mib
(Velcade)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antineoplastic (see p. 80C).

ACTION

Degrades conjugated proteins required for cell-cycle progression and mitosis, disrupting cell proliferation. **Therapeutic Effect:** Produces antitumor and chemosensitizing activity, cell death.

PHARMACOKINETICS

Widely distributed. Protein binding: 83%. Primarily metabolized by enzymatic action. Significant biliary excretion, with lesser amount excreted in urine. **Half-life:** 9–15 hrs.

USES

Treatment of relapsed or refractory multiple myeloma, mantle cell lymphoma. Initial treatment of multiple myeloma. **OFF-LABEL:** Treatment of Waldenström's macroglobulinemia; peripheral or cutaneous T-cell lymphoma; systemic light-chain amyloidosis.

PRECAUTIONS

Contraindications: Hypersensitivity to boron or mannitol. **Cautions:** History of syncope, pts receiving medication known to be associated with hypotension, dehydrated pts, hepatic impairment, preexisting cardiac disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May induce degenerative effects in ovary, degenerative changes in testes. May affect male/female fertility. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established.

B

Elderly: Increased incidence of grades 3 or 4 thrombocytopenia.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., itraconazole, ketoconazole)** may increase concentration. **CYP3A4 inducers (e.g., rifampin)** may decrease concentration/effectiveness. **HERBAL:** **Green tea extracts** may diminish effect. **St. John's wort** may decrease level/effect. **FOOD:** **Grapefruit juice** may increase drug level. **LAB VALUES:** May significantly decrease WBC, Hgb, Hct, platelet count, neutrophils.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 3.5 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute vial with 3.5 ml 0.9% NaCl to provide a concentration of 1 mg/ml.
Rate of Administration • Give as bolus IV injection over 3–5 sec.
Storage • Store unopened vials at room temperature. • Once reconstituted, solution may be stored at room temperature for up to 3 days or for 5 days if refrigerated.

SUBCUTANEOUS
Reconstitution • Reconstitute vial with 1.4 ml 0.9% NaCl to provide a concentration of 2.5 mg/ml.

INDICATIONS/ROUTES/DOSAGE

Relapsed or Refractory Multiple Myeloma, Mantle Cell Lymphoma
IV: Subcutaneous: ADULTS, ELDERLY: Treatment cycle consists of 1.3 mg/m^2 twice weekly on days 1, 4, 8, and 11 for 2 wks followed by a 10-day rest period on days 12 to 21. Consecutive doses separated by at least 72 hrs.

Multiple Myeloma (Initial Treatment)
IV: Subcutaneous: ADULTS, ELDERLY: 1.3 mg/m^2 (with melphalan and prednisone) for a total of nine 6-wk treatment cycles (cycles 1–4 administer twice weekly; cycles 5–9 administer once weekly).

Dosage Adjustment Guidelines
Therapy is withheld at onset of grade 3 nonhematologic or grade 4 hematologic toxicities, excluding neuropathy. When symptoms resolve, therapy is restarted at a 25% reduced dosage.

Dosage Adjustment Guidelines with Neuropathic Pain, Peripheral Sensory Neuropathy
For grade 1 toxicity with pain or grade 2 (interfering with function but not activities of daily living [ADL]), 1 mg/m^2. For grade 2 toxicity with pain or grade 3 (interfering with ADL), withhold drug until toxicity is resolved, then reinitiate with 0.7 mg/m^2. For grade 4 toxicity (permanent sensory loss that interferes with function), discontinue bortezomib.

SIDE EFFECTS

Expected (65%–36%): Fatigue, malaise, asthenia (loss of strength, energy), nausea, diarrhea, anorexia, constipation, fever, vomiting. **Frequent (28%–21%):** Headache, insomnia, arthralgia, limb pain, edema, paresthesia, dizziness, rash. **Occasional (18%–11%):** Dehydration, cough, anxiety, bone pain, muscle cramps, myalgia, back pain, abdominal pain, taste alteration, dyspepsia, pruritus, hypotension (including orthostatic hypotension), rigors, blurred vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombocytopenia occurs in 40% of pts. Platelet count peaks at day 11, returns to baseline by day 21. GI, intracerebral hemorrhage are associated with drug-induced thrombocytopenia. Anemia occurs in 32% of pts. New onset or worsening of existing neuropathy occurs in 37% of pts. Symptoms may improve in some pts upon drug discontinuation. Pneumonia occurs occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC. Ensure adequate hydration prior to initiation of therapy. Antiemetics, antidiarrheals may be effective in preventing, treating nausea, vomiting, diarrhea.

INTERVENTION/EVALUATION

Routinely assess B/P; monitor pt for orthostatic hypotension. Maintain strict I&O. Monitor CBC, esp. platelet count, throughout treatment. Monitor renal, hepatic, pulmonary function throughout therapy. Encourage adequate fluid intake to prevent dehydration. Monitor temperature and be alert to high potential for fever. Monitor for peripheral neuropathy (burning sensation, neuropathic pain, paresthesia, hyperesthesia). Avoid IM injections, rectal temperatures, other traumas that may induce bleeding.

PATIENT/FAMILY TEACHING

• Report new/worsening vomiting, bruising/bleeding, breathing difficulties. • Discuss importance of pregnancy testing, avoidance of pregnancy, measures to prevent pregnancy. • Increase fluid intake. • Avoid tasks that require mental alertness, motor skills until response to drug is established.

bosentan

boe-sen-tan
(Tracleer)

BLACK BOX ALERT Do not use in pregnancy or in moderate to severe hepatic impairment.

Do not confuse Tracleer with Tricor.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Endothelin receptor antagonist. **CLINICAL:** Vasodilator, neurohormonal blocker.

ACTION

Blocks the neurohormone that constricts pulmonary arteries. **Therapeutic Effect:** Improves exercise ability, slows clinical worsening of pulmonary arterial hypertension (PAH).

PHARMACOKINETICS

Protein binding: greater than 98%. Metabolized in liver. Eliminated by biliary excretion. **Half-life:** Approximately 5 hrs (increased in cardiac failure).

USES

Treatment of PAH in those with class II, III, or IV symptoms (World Health Organization). **OFF-LABEL:** CHF, pulmonary hypertension secondary to scleroderma.

PRECAUTIONS

Contraindications: Administration with cyclosporine or glyburide, pregnancy. **Extreme Caution:** Moderate to severe hepatic impairment. **Cautions:** Mild hepatic impairment, anemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May induce male infertility, atrophy of seminiferous tubules of testes; reduce sperm count. Expected to cause fetal harm, teratogenic effects, including malformations of head, mouth, face, large vessels. Breast-feeding not recommended. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** Use caution in dosage due to higher frequency of decreased hepatic, renal, cardiac function.

INTERACTIONS

DRUG: May decrease concentration of **atorvastatin, glyburide, hormonal contraceptives (oral, injectable, implantable), lovastatin, simvastatin, warfarin. Cyclosporine, ketoconazole** may increase plasma concentration. **Clarithromycin** may increase risk of hepatotoxicity. **PDE5 inhibitors (e.g., sildenafil)** may increase concentration. **HERBAL: St. John's wort** may decrease concentration. **FOOD:**

B

Grapefruit, grapefruit juice may increase concentration. **LAB VALUES:** May increase serum bilirubin, AST, ALT levels. May decrease Hgb, Hct levels.

AVAILABILITY (Rx)

Tablets: 62.5 mg, 125 mg.

ADMINISTRATION/HANDLING

• Give in morning and evening, with or without food. • Instruct pt to not chew film-coated tablets. • Avoid grapefruit, grapefruit juice.

INDICATIONS/ROUTES/DOSAGE

Pulmonary Arterial Hypertension

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS AND WEIGHING 40 KG OR GREATER: 62.5 mg twice a day for 4 wks; then increase to maintenance dosage of 125 mg twice a day. **ADULTS, ELDERLY, CHILDREN WEIGHING LESS THAN 40 KG:** 62.5 mg twice a day.

◀ALERT▶ When discontinuing adult/elderly dosage, reduce dosage to 62.5 mg twice a day for 3–7 days to avoid clinical deterioration.

Dosage Based on Hepatic Enzyme Elevations

Any elevation accompanied by symptoms of hepatic injury or serum bilirubin 2 or more times upper limit of normal (ULN), stop treatment. AST/ALT greater than 3 or less than 6 times ULN, reduce dose or interrupt treatment. AST/ALT greater than 5 and up to 8 times ULN, confirm with additional test and, if confirmed, stop treatment. AST/ALT greater than 8 times ULN, stop treatment.

SIDE EFFECTS

Frequent (22%–11%): Headache, nasopharyngitis. **Occasional (9%–5%):** Flushing, peripheral edema, palpitations. **Rare (less than 5%):** Fatigue, dyspepsia, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious hepatic injury has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pregnancy must be excluded before starting treatment and prevented thereafter. A negative pregnancy test performed during the first 5 days of a normal menstrual period and at least 11 days after the last act of sexual intercourse must be obtained. Monthly follow-up pregnancy tests must be maintained. Obtain, assess baseline lab tests, esp. hepatic function.

INTERVENTION/EVALUATION

Assess hepatic enzyme levels before initiating therapy then monthly thereafter. If elevation in hepatic enzymes is noted, changes in monitoring and treatment must be initiated. If clinical symptoms of hepatic injury (nausea, vomiting, fever, abdominal pain, fatigue, jaundice) occur or if serum bilirubin level increases to 2 or more times ULN, stop treatment. Assess for peripheral edema. Monitor Hgb levels at 1 mo and 3 mos of treatment, then q3mos for decrease.

PATIENT/FAMILY TEACHING

• Discuss importance of pregnancy testing, avoidance of pregnancy, measures to prevent pregnancy. • Report palpitations, extremity swelling, unusual weight gain, fatigue, yellowing of skin or eyes, change in color of stool, urine. • Do not chew film-coated tablets. • Avoid grapefruit, grapefruit juice.

bosutinib

boe-**sue**-ti-nib
(Bosulif)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic (see p. 80C).

ACTION

Inhibits Bcr-Abl tyrosine kinase, a translocation-created enzyme, created by the

Philadelphia chromosome (Ph^1) abnormality noted in chronic myelogenous leukemia (CML). Inhibits Src-family kinase including Src, Lyn, and Hck. **Therapeutic Effect:** Inhibits tumor cell growth and proliferation in chronic, accelerated, or blast phase CML.

PHARMACOKINETICS

Well absorbed following oral administration. Protein binding: 94%. Metabolized in liver. Mainly eliminated in feces with a low amount eliminated in urine. **Half-life:** 22.5 hrs.

USES

Treatment of chronic, accelerated, or blast phase Ph^1 chronic myelogenous leukemia with resistance or intolerance to prior therapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Baseline anemia, thrombocytopenia, neutropenia, hepatic impairment, recent history of diarrhea, pulmonary edema, CHF, fluid retention.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Potential for embryo/fetal toxicity. Avoid pregnancy. Must use effective contraception during, and for at least 30 days after treatment. Unknown if distributed in breast milk. Avoid breast-feeding. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A inhibitors and/or P-glycoprotein (P-gp) inhibitors (e.g., clarithromycin, ketoconazole, ritonavir, misoprostol, nafcillin, salmeterol) and **moderate CYP3A4 inhibitors (ciprofloxacin, diltiazem, erythromycin, verapamil)** may increase concentration/effectiveness. **Strong CYP3A4 inducers (e.g., rifampin, phenytoin, phenobarbital)** and **moderate CYP3A4 inducers (bosentan, nafcillin, modafinil)** may decrease plasma concentration/effectiveness. **Proton pump inhibitors (e.g., omeprazole, lansoprazole, pantoprazole)** may reduce absorption, concentration of bosutinib. **HERBAL: St. John's wort** may decrease effectiveness. **FOOD: Grapefruit, grapefruit juice** may decrease bosutinib concentration. **LAB VALUES:** May decrease Hgb, platelets, WBCs, phosphorous. May increase ALT, AST, bilirubin, lipase.

AVAILABILITY (Rx)

Tablets: 100 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

- Give with food. Do not crush, cut, or chew tablets.

INDICATIONS/ROUTES/DOSAGE

Chronic Myelogenous Leukemia (CML)

PO: ADULTS: 500 mg once daily with food. May increase to 600 mg once daily for poor responders without high-grade adverse reactions.

CML with Baseline Hepatic Impairment

PO: ADULTS: 200 mg once daily with food.

Dosage Modification

Hepatotoxicity: Withhold treatment until AST/ALT less than or equal to 2.5× ULN. Then, resume at 400 mg once daily with food. Discontinue if recovery lasts longer than 4 wks or hepatotoxicity including elevated bilirubin levels are greater than 2× ULN. **Severe Diarrhea:** Withhold until recovery to low-grade diarrhea. Then, resume at 400 mg once daily with food. **Myelosuppression:** Withhold until neutrophil count greater than 1000×10^6 L and platelet count greater than $50{,}000 \times 10^6$ L. Then, resume at same dose if recovery occurs within 2 wks. May reduce dose to 400 mg for recovery lasting greater than 2 wks.

B

SIDE EFFECTS

Frequent (82%–35%): Diarrhea, nausea, vomiting, abdominal pain, rash. **Occasional (26%–10%):** Pyrexia, fatigue, headache, cough, peripheral edema, arthralgia, anorexia, upper respiratory infection, asthenia (loss of strength, energy), back pain, nasopharyngitis, dizziness, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe fluid retention may result in pleural effusion, pericardial effusion, pulmonary edema, ascites. Neutropenia, thrombocytopenia, or anemia is an expected response of drug therapy. Severe diarrhea may result in fluid loss, electrolyte imbalance, hypotension. Hepatotoxicity occurred in 7%–9% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Assess baseline weight, serum chemistries, particularly AST, ALT, BUN, creatinine. Confirm negative pregnancy test before initiating treatment. Obtain full medication history including vitamins, minerals, herbal products. Screen for peripheral edema, signs/symptoms of CHF, anemia.

INTERVENTION/EVALUATION

Weigh daily and monitor for unexpected rapid weight gain, edema. Monitor for changes in serum chemistry tests during treatment. Offer antiemetics for nausea, vomiting. Monitor stool frequency, consistency. Monitor CBC for neutropenia, thrombocytopenia, anemia. Assess for bruising, hematuria, jaundice, right upper abdominal pain, weight loss, or acute infection (fever, diaphoresis, lethargy, productive cough).

PATIENT/FAMILY TEACHING

• Serum lab studies will be obtained routinely. • Take medication with meals. • Encourage fluid intake (diarrhea may result in dehydration). • Swallow whole; Do not chew, dissolve, or divide tablets. • Strictly avoid pregnancy. • Use contraception during treatment and for at least 30 days after treatment. • Report urine changes, bloody or clay-colored stools, upper abdominal pain, nausea, vomiting, bruising, persistent diarrhea, fever, cough, difficulty breathing, chest pain. • Immediately report any newly prescribed medications. • Avoid alcohol, grapefruit, and grapefruit juice. • Discuss using antacids for indigestion, heartburn, upset stomach (omeprazole, lansoprazole, pantoprazole may reduce absorption, concentration of bosutinib). • Separate antacid dosing by more than 2 hrs before and after medication.

brentuximab vedotin

bren-**tux**-ih-mab veh-**doe**-tin (Adcetris)

BLACK BOX ALERT JC virus infection resulting in progressive multifocal leukoencephalopathy and death can occur.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody, antimitotic. **CLINICAL:** Antineoplastic (see p. 80C).

ACTION

Binds to specific monoclonal antibodies (CD-30), allowing the antibody to direct the drug to a target on lymphoma cells, disrupting the microtubule network within the cell. **Therapeutic Effect:** Induces cell cycle arrest, cell death.

PHARMACOKINETICS

Minimally metabolized. Protein binding: 68%–82%. Eliminated primarily in feces (72%). **Half-life:** 4–6 days.

USES

Treatment of Hodgkin's lymphoma after failure of autologous stem cell transplant

or after failure of at least two prior multiagent chemotherapy regimens in pts who are not transplant candidates. Treatment of systemic anaplastic large-cell lymphoma after failure of at least one prior multiagent chemotherapy regimen.

PRECAUTIONS

Contraindications: Avoid use with bleomycin (increased risk for pulmonary toxicity). **Cautions:** Peripheral neuropathy, infusion reactions, neutropenia, tumor lysis syndrome, Stevens-Johnson syndrome, pregnancy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm (embryo-fetal toxicities). Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Safety and efficacy not established.

INTERACTIONS

DRUG: Strong **CYP3A4 inhibitors (e.g., atazanavir, itraconazole, clarithromycin, ketoconazole)** increase concentration. **CYP3A4 inducers (e.g., rifampin)** reduce concentration. **FOOD:** None known. **HERBAL:** **Echinacea** may decrease effect. **LAB VALUES:** May decrease Hgb, Hct, WBC, RBC, platelets. May increase serum bicarbonate, lactate dehydrogenase, glucose, albumin, magnesium, sodium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50-mg single-use vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 50-mg vial with 10.5 ml Sterile Water for Injection, directing the stream toward wall of vial and not at powder. • Gently swirl (do not shake). • This will yield a concentration of 5 mg/ml. • The dose for pts weighing over 100 kg should be calculated for 100 kg. • Reconstituted solution must be transferred to infusion bag with a minimum 100 ml diluent, yielding a final concentration range of 0.4 mg/ml to 1.8 mg/ml brentuximab. • Gently invert bag to mix solution.

Rate of Administration • Infuse over 30 min.

Storage • Discard if solution contains particulate or is discolored; solution should appear clear to slightly opalescent, colorless. • May store solution at 36°–46°F. • Use within 24 hrs after reconstitution.

IV COMPATIBILITIES

0.9% NaCl, D_5W, lactated Ringer's.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Do not give by IV bolus or IV push.

Hodgkin's Lymphoma

IV Infusion: ADULTS/ELDERLY: 1.8 mg/kg IV infused over 30 min every 3 wks. Continue treatment until a maximum of 16 cycles, disease progression, or unacceptable toxicity occurs.

Systemic Anaplastic Large-Cell Lymphoma

IV Infusion: ADULTS/ELDERLY: 1.8 mg/kg IV infused over 30 min every 3 wks. Continue treatment until a maximum of 16 cycles, disease progression, or unacceptable toxicity occurs.

SIDE EFFECTS

◀ALERT▶ Effects present as mild, manageable.

Frequent (52%–22%): Peripheral neuropathy, fatigue, respiratory tract infection, nausea, diarrhea, fever, rash, abdominal pain, cough, vomiting. **Occasional (19%–11%):** Headache, dizziness, constipation, chills, bone/muscle pain, insomnia, peripheral edema, alopecia. **Rare (10%–5%):** Anxiety, muscle spasm, decreased appetite, dry skin.

B

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression characterized as neutropenia (54%), peripheral neuropathy (52%), thrombocytopenia (28%), anemia (19%) was noted. Infusion reactions (including anaphylaxis), Stevens-Johnson syndrome have been reported. Tumor lysis syndrome may lead to acute renal failure. Progressive multifocal leukoencephalopathy (changes in mood, confusion, loss of memory, changes in speech, walking, and vision, decreased strength or weakness on one side of body) has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for evidence of peripheral neuropathy (hypoesthesia, hyperesthesia, paresthesia, discomfort, burning sensation, neuropathic pain or weakness). Those experiencing new or worsening neuropathy may require a delay, dose change, or discontinuation of treatment. Obtain baseline CBC before treatment begins and as needed to monitor response and toxicity but particularly prior to each dosing cycle. Use strict asepsis and protect pt from infection.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, easy bruising, unusual bleeding), symptoms of anemia (excessive fatigue, weakness). Assess response to medication; monitor and report nausea, vomiting, diarrhea. Monitor daily pattern of bowel activity, stool consistency. Assess skin for evidence of rash.

PATIENT/FAMILY TEACHING

• Avoid crowds, persons with known infections. • Report signs of infection at once (fever, flu-like symptoms). • Avoid contact with anyone who recently received live virus vaccine. • Do not have immunizations without physician's approval (drug lowers body resistance). • Promptly report fever, easy bruising or unusual bleeding from any site. • Male pts should be warned of potential risk to their reproductive capacities.

bromocriptine

broe-moe-**krip**-teen
(Apo-Bromocriptine, Cycloset, Parlodel)
Do not confuse bromocriptine with benztropine, Cycloset with Glyset, or Parlodel with pindolol or Provera.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopamine agonist. **CLINICAL:** Infertility therapy adjunct, antihyperprolactinemic, lactation inhibitor, antidyskinetic, growth hormone suppressant (see p. 44C, 146C).

ACTION

Directly stimulates dopamine receptors in corpus striatum, inhibits prolactin secretion. Suppresses secretion of growth hormone. **Therapeutic Effect:** Improves symptoms of parkinsonism, suppresses galactorrhea, reduces serum growth hormone concentrations in acromegaly.

PHARMACOKINETICS

Indication	Onset	Peak	Duration
Prolactin lowering	1–2 hrs	5–10 hrs	8–12 hrs

Minimally absorbed from GI tract. Protein binding: 90%–96%. Metabolized in liver. Excreted in feces by biliary secretion. **Half-life:** 15 hrs.

USES

Treatment of pituitary prolactinomas, conditions associated with hyperprolactinemia (amenorrhea, galactorrhea, hypogonadism, infertility), parkinsonism, acromegaly. **Cycloset:** Control blood

glucose in type 2 diabetes. **OFF-LABEL:** Neuroleptic malignant syndrome.

PRECAUTIONS

Contraindications: Hypersensitivity to ergot alkaloids, peripheral vascular disease, pregnancy, severe ischemic heart disease, uncontrolled hypertension. Concomitant use with serotonin agonists (e.g., buspirone, sumatriptan, trazodone). **Cautions:** Impaired hepatic or cardiac function, hypertension, psychiatric disorders, peptic ulcer disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not recommended during pregnancy or breastfeeding. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** CNS effects may occur more frequently.

INTERACTIONS

DRUG: May increase concentration/side effects of **salicylates, sulfonamides, probenecid. Phenothiazines, thioxanthenes** may diminish effect. May increase **ergot-related drugs** side effects (e.g., nausea, vomiting), reduce effect of ergot drugs. **CYP3A4 inhibitors** may increase concentration; **CYP3A4 inducers** may decrease concentration/effects. **HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase plasma concentration of growth hormone.

AVAILABILITY (Rx)

Capsules: 5 mg. **Tablets:** 2.5 mg. **(Cycloset):** 0.8 mg.

ADMINISTRATION/HANDLING

PO

• Give with food (decreases incidence of nausea). • **Cycloset:** Take in morning, within 2 hrs of awakening.

INDICATIONS/ROUTES/DOSAGE

Hyperprolactinemia

PO: ADULTS, ELDERLY: Initially, 1.25–2.5 mg at bedtime. May increase by 2.5 mg q3–7days up to 5–7.5 mg/day in divided doses. Maintenance: 2.5 mg 2–3 times a day. Range: 2.5–15 mg/day.

Pituitary Prolactinomas

PO: ADULTS, ELDERLY: Initially, 1.25 mg 2–3 times a day. May gradually increase over several wks to 10–20 mg/day in divided doses. Maintenance: 2.5–20 mg/day in divided doses.

Parkinsonism

PO: ADULTS, ELDERLY: Initially, 1.25 mg 1–2 times a day. May take single doses at bedtime. May increase by 2.5 mg/day at 14- to 28-day intervals. Maintenance: 2.5–40 mg/day in divided doses. Range: 30–90 mg/day in 3 divided doses. **Maximum:** 100 mg/day.

Acromegaly

PO: ADULTS, ELDERLY: Initially, 1.25–2.5 mg at bedtime. May increase by 1.25–2.5 mg q3–7days up to 30 mg/day in divided doses. Maintenance: 20–30 mg/day in divided doses. **Maximum:** 100 mg/day.

Type 2 Diabetes (Cycloset)

PO: ADULTS, ELDERLY: Initially, 0.8 mg once daily. Increase by 0.8 mg/day weekly up to maximum of 4.8 mg/day.

SIDE EFFECTS

Cycloset: Somnolence, hypotension, syncope during initiation and dose titration. **Frequent:** Nausea (49%), headache (19%), dizziness (17%). **Occasional (7%–3%):** Fatigue, light-headedness, vomiting, abdominal cramps, diarrhea, constipation, nasal congestion, drowsiness, dry mouth. **Rare:** Muscle cramps, urinary hesitancy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Visual or auditory hallucinations in pts with Parkinson's disease have been reported. Long-term, high-dose therapy may produce continuing rhinorrhea, syncope, GI hemorrhage, peptic ulcer, severe abdominal pain.

B

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluation of pituitary gland (rule out tumor) should be done before treatment for hyperprolactinemia with amenorrhea or galactorrhea, infertility. Obtain baseline lab tests including CBC, hepatic function, prolactin level, pregnancy test.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness is noted after administration. Assess for therapeutic response (decrease in engorgement, parkinsonism symptoms). Monitor daily pattern of bowel activity, stool consistency. Monitor cardiac function.

PATIENT/FAMILY TEACHING

• To reduce light-headedness, rise slowly from lying to sitting position, permit legs to dangle momentarily before standing. • Avoid sudden changes in posture. • Avoid tasks that require alertness, motor skills until response to drug is established. • Use contraceptive measures (other than oral) during treatment. • Report watery nasal discharge to physician. • Avoid alcohol intake.

budesonide

TOP 200

bue-**des**-oh-nide
(Entocort EC, Pulmicort Flexhaler, Pulmicort Respules, Rhinocort Aqua)

FIXED-COMBINATION(S)

Symbicort: budesonide/formoterol (bronchodilator): 80 mcg/4.5 mcg, 160 mcg/4.5 mcg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glucocorticosteroid. **CLINICAL:** Anti-inflammatory, antiallergy (see pp. 2C, 75C, 97C).

ACTION

Inhibits accumulation of inflammatory cells, decreases and prevents tissues from responding to inflammatory process. **Therapeutic Effect:** Relieves symptoms of allergic rhinitis, Crohn's disease.

PHARMACOKINETICS

Form	Onset	Peak	Duration
Pulmicort Respules	2–8 days	4–6 wks	—
Rhinocort Aqua	10 hrs	2 wks	—

Minimally absorbed from nasal tissue; moderately absorbed from inhalation. Protein binding: 88%. Primarily metabolized in liver. **Half-life:** 2–3 hrs.

USES

Nasal: Management of seasonal or perennial allergic rhinitis, nonallergic rhinitis. **Nebulization:** Maintenance or prophylaxis therapy for bronchial asthma. **PO:** Treatment of mild to moderate active Crohn's disease. Maintenance of clinical remission of mild to moderate Crohn's disease. **Oral Inhalation:** Maintenance and prophylactic treatment of asthma. **OFF-LABEL:** Treatment of vasomotor rhinitis.

PRECAUTIONS

Contraindications: Hypersensitivity to any corticosteroid or its components, primary treatment of status asthmaticus, acute episodes of asthma. **Cautions:** Thyroid disease, hepatic impairment, renal impairment, cardiovascular disease, diabetes, glaucoma, cataracts, myasthenia gravis, pts at risk for osteoporosis, seizures, GI disease, post acute MI, elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B (Inhalation); C (PO). Children:** Prolonged treatment or high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., itraconazole, ketoconazole)** may increase plasma concentration. **HERBAL:** **Echinacea** may decrease effects. **FOOD:** **Grapefruit, grapefruit juice** may increase systemic exposure of budesonide. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Oral Inhalation Powder (Pulmicort Flexhaler): 90 mcg per inhalation; 180 mcg per inhalation. **Inhalation Suspension for Nebulization (Pulmicort Respules):** 0.25 mg/2 ml; 0.5 mg/2 ml; 1 mg/2 ml. **Nasal Spray (Rhinocort Aqua):** 32 mcg/spray.

Capsules, Enteric-Coated (Entocort EC): 3 mg.

ADMINISTRATION/HANDLING

Inhalation

• Shake container well. Instruct pt to exhale completely, place mouthpiece between lips, inhale, hold breath as long as possible before exhaling. • Allow at least 1 min between inhalations. • Rinsing mouth after each use decreases dry mouth, hoarseness.

Intranasal

• Instruct pt to clear nasal passages before use. • Tilt pt's head slightly forward. • Insert spray tip into nostril, pointing toward nasal passages, away from nasal septum. • Spray into one nostril while pt holds other nostril closed and concurrently inspires through nostril to allow medication as high into nasal passages as possible.

Nebulization

• Shake well before use. • Administer with mouthpiece or face mask. • Rinse mouth following treatment.

PO

• Swallow whole. Do not crush or chew capsule.

INDICATIONS/ROUTES/DOSAGE

Rhinitis

Intranasal: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 1 spray (32 mcg) in each nostril once a day. **Maximum:** 8 sprays (256 mcg)/day for adults and children 12 yrs and older; 4 sprays (128 mcg)/day for children younger than 12 yrs.

Bronchial Asthma

Nebulization: CHILDREN 12 MOS–8 YRS: ***(Previous therapy with bronchodilators alone):*** 0.5 mg/day as a single dose or 2 divided doses. **Maximum:** 0.5 mg/day. ***(Previous therapy with inhaled corticosteroids):*** 0.5 mg/day as a single dose or 2 divided doses. **Maximum:** 1 mg/day. ***(Previous therapy of oral corticosteroids):*** 1 mg/day as a single dose in 2 divided doses. **Maximum:** 1 mg/day.

Oral Inhalation: ***(Pulmicort Flexhaler):*** **ADULTS, ELDERLY:** Initially, 360 mcg 2 times/day. **Maximum:** 720 mcg 2 times/day. **CHILDREN, 6 YRS AND OLDER:** 180 mcg 2 times/day. **Maximum:** 360 mcg 2 times/day.

Crohn's Disease

PO: ADULTS, ELDERLY: 9 mg once a day for up to 8 wks. Recurring episodes may be treated with a repeat 8-wk course of treatment.

SIDE EFFECTS

Frequent (greater than 3%): **Nasal:** Mild nasopharyngeal irritation, burning, stinging, dryness; headache, cough. **Inhalation:** Flu-like symptoms, headache, pharyngitis. **Occasional (3%–1%):** **Nasal:** Dry mouth, dyspepsia, rebound congestion, rhinorrhea, loss of taste. **Inhalation:** Back pain, vomiting, altered taste, voice changes, abdominal pain, nausea, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Acute hypersensitivity reaction (urticaria, angioedema, severe bronchospasm) occurs rarely.

B

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroids, components.

INTERVENTION/EVALUATION

Monitor for relief of symptoms.

PATIENT/FAMILY TEACHING

• Improvement noted in 24 hrs, but full effect may take 3–7 days. • Contact physician if no improvement in symptoms, sneezing, nasal irritation occurs.

bumetanide

bue-**met**-ah-nide
(Burinex)

BLACK BOX ALERT Excess dosage can lead to profound diuresis with fluid and electrolyte loss.

Do not confuse bumetanide with Buminate.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Loop diuretic. **CLINICAL:** Diuretic (see p. 102C).

ACTION

Enhances excretion of sodium, chloride, and, to lesser degree, potassium, by direct action at ascending limb of loop of Henle and in proximal tubule. **Therapeutic Effect:** Produces diuresis.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–60 min	60–120 min	4–6 hrs
IV	Rapid	15–30 min	2–3 hrs

Completely absorbed from GI tract (absorption decreased in CHF, nephrotic syndrome). Protein binding: 94%–96%. Partially metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1–1.5 hrs.

USES

Treatment of edema associated with CHF, chronic renal failure (including nephrotic syndrome), hepatic cirrhosis with ascites. **OFF-LABEL:** Treatment of hypertension.

PRECAUTIONS

Contraindications: Anuria, hepatic coma, severe electrolyte depletion (until condition improves or is corrected). **Cautions:** Hypersensitivity to sulfonamides.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C (D if used in pregnancy-induced hypertension). Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotension/electrolyte effects. Increased risk for circulatory collapse or thrombolytic episode. Age-related renal impairment may require reduced or extended dosage interval.

INTERACTIONS

DRUG: **Agents inducing hypokalemia** (e.g., **metolazone, hydrochlorothiazide**) may have increased hypokalemic effect. May increase risk of **lithium** toxicity. **NSAIDs** may reduce effect. **HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may have increased antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, BUN, uric acid, urinary phosphate. May decrease serum calcium, chloride, magnesium, potassium, sodium.

AVAILABILITY (Rx)

Injection Solution: 0.25 mg/ml. **Tablets:** 0.5 mg, 1 mg, 2 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give undiluted but is compatible with D_5W, 0.9% NaCl, or lactated Ringer's solution. • Administer IV push over 1–2 min. • May give

through Y tube or 3-way stopcock. • May give as continuous infusion.
Storage • Store at room temperature. • Stable for 24 hrs if diluted.

PO
• Give with food to avoid GI upset, preferably with breakfast (may prevent nocturia).

IV INCOMPATIBILITY

Midazolam (Versed).

IV COMPATIBILITIES

Aztreonam (Azactam), cefepime (Maxipime), diltiazem (Cardizem), dobutamine (Dobutrex), furosemide (Lasix), lipids, lorazepam (Ativan), milrinone (Primacor), morphine, piperacillin and tazobactam (Zosyn), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Edema
PO: ADULTS: 0.5–2 mg as a single dose in the morning. May repeat q4–5h. **Maximum:** 10 mg/day. **ELDERLY:** 0.5 mg/day, increased as needed.
IV, IM: ADULTS, ELDERLY: 0.5–2 mg/dose; may repeat in 2–3 hrs (**maximum:** 10 mg/day) or 0.5–2 mg/hr by continuous IV infusion.

Hypertension
PO: ADULTS, ELDERLY: Initially, 0.5 mg/day. Range: 0.5–2 mg/day. **Maximum:** 5 mg/day. Larger doses may be given 2–3 doses/day.

Usual Pediatric Dosage
IV, IM, PO: CHILDREN: 0.015–0.1 mg/kg/dose q6–24h. **Maximum:** 10 mg/day. **NEONATES:** 0.01–0.05 mg/kg/dose q12–48h.

SIDE EFFECTS

Expected: Increased urinary frequency and urine volume. **Frequent (5%):** Muscle cramps, dizziness, hypotension, headache, nausea. **Occasional (3%–1%):** Impaired hearing, pruritus, EKG changes, weakness, hives, abdominal pain, dyspepsia, musculoskeletal pain, rash, nausea, vomiting. **Rare (less than 1%):** Chest pain, ear pain, fatigue, dry mouth, premature ejaculation, impotence, nipple tenderness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Vigorous diuresis may lead to profound water and electrolyte depletion, resulting in hypokalemia, hyponatremia, dehydration, coma, circulatory collapse. Ototoxicity manifested as deafness, vertigo, tinnitus may occur, esp. in pts with severe renal impairment or those taking other ototoxic drugs. Blood dyscrasias, acute hypotensive episodes have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check vital signs, esp. B/P for hypotension, before administration. Assess baseline electrolytes, particularly for low serum potassium. Assess for edema. Observe skin turgor, mucous membranes for hydration status. Initiate I&O, obtain baseline weight.

INTERVENTION/EVALUATION

Continue to monitor B/P, vital signs, electrolytes, I&O, weight. Note extent of diuresis. Watch for changes from initial assessment (hypokalemia may result in muscle strength changes, tremor, muscle cramps, altered mental status, cardiac arrhythmias; hyponatremia may result in confusion, thirst, cold/clammy skin).

PATIENT/FAMILY TEACHING

• Expect increased urinary frequency/volume. • Report auditory abnormalities (e.g., sense of fullness in ears, tinnitus) to physician. • Eat foods high in potassium such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins. • Rise slowly from sitting/lying position.

B

buprenorphine TOP 200

byoo-pre-**nor**-feen
(Buprenex, Butrans, Suboxone, Subutex)

BLACK BOX ALERT Transdermal: Potential for abuse, misuse, and diversion. Do not exceed dose of one 20 mcg/hr patch due to risk of QT interval prolongation.

Do not confuse Buprenex with Bumex, or buprenorphine with bupropion.

FIXED-COMBINATION(S)

Suboxone: buprenorphine/naloxone (narcotic antagonist): 2 mg/0.5 mg, 8 mg/2 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist, antagonist injection **(Schedule V);** tablet **(Schedule III).** **CLINICAL:** Opioid dependence adjunct, analgesic.

ACTION

Binds to opioid receptors within CNS. **Therapeutic Effect:** Suppresses opioid withdrawal symptoms, cravings. Alters pain perception, emotional response to pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Sublingual	15 min	1 hr	6 hrs
IV	Less than 15 min	Less than 1 hr	6 hrs
IM	15 min	1 hr	6 hrs

Excreted primarily in feces with lesser amount eliminated in urine. Protein binding: High. **Half-life: Parenteral:** 2–3 hrs; **Sublingual:** 37 hrs (increased in hepatic impairment).

USES

Tablet: Treatment of opioid dependence. **Injection:** Relief of moderate to severe pain. **Transdermal:** Moderate to severe chronic pain requiring continuous around-the-clock opioid analgesic for extended period of time. **OFF-LABEL:** Injection: Heroin/opioid withdrawal.

PRECAUTIONS

Contraindications: Transdermal patch: Significant respiratory depression; severe asthma; paralytic ileus; management of mild, acute, or intermittent pain, postoperative pain. **Cautions:** Hepatic/renal impairment, elderly, debilitated, pediatric pts, head injury/increased intracranial pressure, pts at risk for respiratory depression, hyperthyroidism, myxedema, adrenal cortical insufficiency (e.g., Addison's disease), urethral stricture, CNS depression, morbid obesity, toxic psychosis, prostatic hypertrophy, delirium tremens, kyphoscoliosis, biliary tract dysfunction, acute pancreatitis, acute abdominal conditions, acute alcoholism, pts with prolonged QT syndrome, concurrent use of antiarrhythmics.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Breastfeeding not recommended. Neonatal withdrawal noted in infant if mother was treated with buprenorphine during pregnancy with onset of withdrawal symptoms generally noted on day 1, manifested as hypertonia, tremor, agitation, myoclonus. Apnea, bradycardia, seizures occur rarely. **Pregnancy Category C. Children:** Safety and efficacy of injection form not established in those 2–12 yrs. Safety and efficacy of tablet, fixed-combination form not established in those 16 yrs or younger. **Elderly:** Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: CNS depressants, MAOIs may increase CNS or respiratory depression, hypotension. **CYP3A4 inhibitors (e.g., azole antifungals, macrolide antibiotics, protease inhibitors)** may increase plasma concentration. **CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifampin)** may cause in-

creased clearance of buprenorphine. May decrease effects of **other opioid analgesics.** **HERBAL: St. John's wort, kava kava, gotu kola, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection Solution (Buprenex): 0.3 mg/1 ml. **Tablets, Sublingual (Fixed-Combination [Suboxone]):** 2 mg/0.5 mg, 8 mg/2 mg. **Transdermal (Butrans):** 5 mcg/hr, 10 mcg/hr, 20 mcg/hr.

ADMINISTRATION/HANDLING

IV

Reconstitution • May be diluted with lactated Ringer's solution, D_5W, 0.9% NaCl.

Rate of Administration • If given as IV push, administer over at least 2 min.

IM

• Give deep IM into large muscle mass.

Sublingual

• Instruct pt to dissolve tablet(s) under tongue; avoid swallowing (reduces drug bioavailability). • For doses greater than 2 tablets, either place all tablets at once or 2 tablets at a time under the tongue.

Storage • Store parenteral form at room temperature. • Protect from prolonged exposure to light. • Store tablets at room temperature.

Transdermal

• Apply to clean, dry, intact skin of upper outer arm, upper chest, upper back, or side of chest. • Wear for 7 days. • Wait minimum of 21 days before reapplying to same site. • If patch falls off during 7-day dosing interval, apply new patch to a different skin site.

IV INCOMPATIBILITIES

Amphotericin B (Abelcet, AmBisome), diazepam (Valium), furosemide (Lasix), lansoprazole (Prevacid), lorazepam (Ativan).

IV COMPATIBILITIES

Allopurinol (Aloprim, Zyloprim), aztreonam (Azactam), cefepime (Maxipime), diphenhydramine (Benadryl), granisetron (Kytril), haloperidol (Haldol), heparin, linezolid (Zyvox), lipids, midazolam (Versed), piperacillin/tazobactam (Zosyn), promethazine (Phenergan), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Opioid Dependence

Sublingual: ADULTS, CHILDREN 13 YRS AND OLDER: 8 mg on day 1, then 16 mg on day 2 and subsequent induction days. Range: 12–16 mg/day of Subutex used as induction with switch to Suboxone for maintenance.

Moderate to Severe Pain

IM/IV: ADULTS, CHILDREN 13 YRS AND OLDER: 0.3 mg (1 ml) q6–8h prn; may repeat once 30–60 min after initial dose. **CHILDREN 2–12 YRS:** 2–6 mcg/kg q4–6h prn.

Usual Elderly Dosage

IM/IV: 0.15 mg q6h prn.

Sublingual: ADULTS, ELDERLY: For pts taking heroin/other short-acting opioids, give at least 4 hrs after pt last used opioids or when early signs of withdrawal appear. Maintenance: 16 mg/day. Range: 4–24 mg/day.

Transdermal: ADULTS, ELDERLY: (OPIOID NAIVE): Initial dose always 5 mcg/hr. **THOSE ALREADY RECEIVING OPIOIDS:** Refer to conversion chart in package insert. Do not increase dose until pt exposed to previous dose for 72 hrs.

SIDE EFFECTS

Frequent: Sedation (67%), dizziness, nausea (10%). **Butrans (more than 5%):** Nausea, headache, pruritus at application site, dizziness, rash, vomiting, constipation, dry mouth. **Occasional (5%–1%):** Headache, hypotension, vomiting, miosis, diaphoresis.

B

Rare (less than 1%): Dry mouth, pallor, visual abnormalities, injection site reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdosage results in cold, clammy skin, weakness, confusion, severe respiratory depression, cyanosis, pinpoint pupils, seizures, extreme drowsiness progressing to stupor, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline B/P, pulse rate. Assess mental status, alertness. Assess type, location, intensity of pain. Obtain history of pt's last opioid use. Assess for early signs of withdrawal symptoms before initiating therapy.

INTERVENTION/EVALUATION

Monitor for change in respirations, B/P, rate/quality of pulse, mental status. Assess lab results. Initiate deep breathing, coughing exercises, particularly in those with pulmonary impairment. Assess for clinical improvement; record onset of relief of pain.

PATIENT/FAMILY TEACHING

• Change positions slowly to avoid dizziness, orthostatic hypotension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, sedatives, antidepressants, tranquilizers.

*buPROPion

TOP 200

bue-**pro**-pee-on

(Aplenzin, Budeprion SR, Budeprion XL, Buproban, Wellbutrin, Wellbutrin SR, Wellbutrin XL, Zyban)

BLACK BOX ALERT Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders. Agitation, hostility, depressed mood also reported. Use in smoking cessation may cause serious neuropsychiatric events.

Do not confuse Aplenzin with Relenza, bupropion with buspirone, Wellbutrin SR with Wellbutrin XL, or Zyban with Diovan or Zagam.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aminoketone. **CLINICAL:** Antidepressant, smoking cessation aid (see pp. 40C, 154C).

ACTION

Blocks reuptake of neurotransmitters, (serotonin, norepinephrine) at CNS presynaptic membranes, increasing availability at postsynaptic receptor sites. Reduces firing rate of noradrenergic neurons. **Therapeutic Effect:** Relieves depression. Eliminates nicotine withdrawal symptoms.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 84%. Crosses the blood-brain barrier. Undergoes extensive first-pass metabolism in liver to active metabolite. Primarily excreted in urine. **Half-life:** 14 hrs.

USES

Treatment of depression, particularly endogenous depression, exhibited as persistent and prominent dysphoria (occurring nearly every day for at least 2 wks) manifested by 4 of 8 symptoms: appetite change, sleep pattern change, increased fatigue, impaired concentration, feelings of guilt or worthlessness, loss of interest in usual activities, psychomotor agitation or retardation, suicidal tendencies. Assists in smoking cessation. Prevents depression in pts with seasonal affective disorder (SAD). **OFF-LABEL:** Treatment of ADHD in adults, children. Depression associated with bipolar disorder.

PRECAUTIONS

Contraindications: Current or prior diagnosis of anorexia nervosa or bulimia, sei-

zure disorder, use within 14 days of MAOIs, concomitant use of other bupropion products, pts undergoing abrupt discontinuation of alcohol or sedatives. **Cautions:** History of seizure, cranial trauma, cardiovascular disease, history of hypertension or coronary artery disease, elderly, pts at high risk for suicide, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** More sensitive to increased dosage, toxicity, increased risk of suicidal ideation, worsening of depression. Safety and efficacy not established in those younger than 18 yrs. **Elderly:** More sensitive to anticholinergic, sedative, cardiovascular effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Ritonavir, efavirenz may reduce concentration. **Carbamazepine, phenobarbital, phenytoin** may decrease effectiveness. **MAOIs** may increase risk of toxicity. **Levodopa, amantadine** may increase risk of side effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May decrease WBC.

AVAILABILITY (Rx)

Tablets (Sustained-Release): 100 mg, 150 mg, 200 mg **(Wellbutrin SR),** 150 mg **(Zyban). Tablets (Wellbutrin):** 75 mg, 100 mg. **Tablets (Extended-Release):** 174 mg, 348 mg, 522 mg **(Aplenzin),** 100 mg, 150 mg **(Budeprion SR),** 150 mg **(Buproban),** 150 mg, 300 mg **(Budeprion XL, Wellbutrin XL).**

ADMINISTRATION/HANDLING

PO

• Give without regard to food (give with food if GI irritation occurs). • Give at least 4-hr interval for immediate onset and 8-hr interval for sustained-release tablet to avoid seizures. • Give Aplenzin once daily in the morning. • Avoid bedtime dosage (decreases risk of insomnia). • Do not crush, chew, or divide extended-release preparations.

INDICATIONS/ROUTES/DOSAGE

Depression

PO *(Immediate-Release)*: ADULTS: Initially, 100 mg twice a day. May increase to 100 mg 3 times a day no sooner than 3 days after beginning therapy. **Maximum:** 450 mg/day. **ELDERLY:** Initially, 50–100 mg/day. May increase by 50–100 mg/day q3–4 days. Maintenance: Lowest effective dosage.

PO *(Sustained-Release)*: ADULTS: Initially, 150 mg/day as a single dose in the morning. May increase to 150 mg twice a day as early as day 4 after beginning therapy. **Maximum:** 400 mg/day in 2 divided doses.

PO *(Extended-Release)*: ADULTS: 150 mg once a day. May increase to 300 mg once a day. **Maximum:** 450 mg/day. ***(Aplenzin)*:** Initially, 174 mg once daily in morning; may increase as soon as 4 days to 348 mg/day. **Maximum:** 522 mg/day.

Smoking Cessation

PO: ADULTS: (Zyban): Initially, 150 mg a day for 3 days, then 150 mg twice a day for 7–12 wks.

Prevention of Seasonal Affective Disorder

PO: ADULTS, ELDERLY: (Wellbutrin XL): 150 mg/day for 1 wk, then 300 mg/day. Begin in autumn (Sept–Nov). End of treatment begins in spring (Mar–Apr) by decreasing dose to 150 mg/day for 2 wks before discontinuation.

Dosage in Hepatic Impairment

Mild to moderate: Use caution, reduce dosage. **Severe:** Use extreme caution. Maximum dose: Aplenzin: 174 mg every other day. Wellbutrin: 75 mg/day. Wellbutrin SR: 100 mg/day or 150 mg every other day. Wellbutrin XL: 150 mg every other day. Zyban: 150 mg every other day.

B

SIDE EFFECTS

Frequent (32%–18%): Constipation, weight gain or loss, nausea, vomiting, anorexia, dry mouth, headache, diaphoresis, tremor, sedation, insomnia, dizziness, agitation. **Occasional (10%–5%):** Diarrhea, akinesia, blurred vision, tachycardia, confusion, hostility, fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Risk of seizures increases in pts taking more than 150 mg/dose, history of bulimia, seizure disorders, discontinuing drugs that may lower seizure threshold.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess psychological status, thought content, suicidal tendencies, appearance. For those on long-term therapy, hepatic/renal function tests should be performed periodically.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy and dose changes (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood changes.

PATIENT/FAMILY TEACHING

• Full therapeutic effect may be noted in 4 wks. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report signs/symptoms of seizure, worsening depression, suicidal ideation, unusual behavioral changes. • Avoid alcohol.

*busPIRone

bue-**spy**-rone
(Apo-Buspirone, BuSpar, Buspirex, Bustab, Novo-Buspirone)

Do not confuse buspirone with bupropion.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonbarbiturate. **CLINICAL:** Antianxiety (see p. 14C).

ACTION

Binds to serotonin, dopamine at presynaptic neurotransmitter receptors in CNS. **Therapeutic Effect:** Produces anxiolytic effect.

PHARMACOKINETICS

Rapidly and completely absorbed from GI tract. Protein binding: 95%. Undergoes extensive first-pass metabolism. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–3 hrs.

USES

Short-term management (up to 4 wks) of generalized anxiety disorder (GAD). **OFF-LABEL:** Augmenting medication for antidepressants; management of aggression in mental retardation, secondary mental disorders, major depression; premenstrual syndrome (aches, pain, fatigue, irritability).

PRECAUTIONS

Contraindications: None known. **Cautions:** Concurrent use of MAOIs, severe hepatic/renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol, other CNS depressants potentiate effects, may increase sedation. **CYP3A4 inhibitors (e.g., erythromycin, ketoconazole)** may increase con-

centration. **CYP3A4 inducers (e.g., rifampin)** may decrease concentration. May increase effects of **MAOIs.** **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD: Grapefruit, grapefruit juice** may increase concentration, risk of toxicity. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 5 mg, 7.5 mg, 10 mg, 15 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Short-Term Management (up to 4 wks) of Anxiety Disorders

PO: ADULTS: 5 mg 2–3 times a day or 7.5 mg twice a day. May increase by 5 mg/day every 2–4 days. Maintenance: 15–30 mg/day in 2–3 divided doses. **Maximum:** 60 mg/day. **ELDERLY:** Initially, 5 mg twice a day. May increase by 5 mg/day every 2–3 days. **Maximum:** 60 mg/day. **CHILDREN 6 YRS AND OLDER:** Initially, 5 mg/day. May increase by 5 mg/day at weekly intervals. **Maximum:** 60 mg/day in 2–3 divided doses.

SIDE EFFECTS

Frequent (12%–6%): Dizziness, drowsiness, nausea, headache. **Occasional (5%–2%):** Nervousness, fatigue, insomnia, dry mouth, light-headedness, mood swings, blurred vision, poor concentration, diarrhea, paresthesia. **Rare:** Muscle pain/stiffness, nightmares, chest pain, involuntary movements.

ADVERSE EFFECTS/ TOXIC REACTIONS

No evidence of drug tolerance, psychological or physical dependence, withdrawal syndrome. Overdose may produce severe nausea, vomiting, dizziness, drowsiness, abdominal distention, excessive pupil constriction.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess degree/manifestations of anxiety. Offer emotional support to anxious pt. Assess motor responses (agitation, trembling, tension), autonomic responses (cold, clammy hands; diaphoresis).

INTERVENTION/EVALUATION

For those on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically. Assist with ambulation if drowsiness, light-headedness occur. Evaluate for therapeutic response: calm facial expression, decreased restlessness, insomnia, mental status.

PATIENT/FAMILY TEACHING

• Improvement may be noted in 7–10 days, but optimum therapeutic effect generally takes 3–4 wks. • Drowsiness usually disappears during continued therapy. • If dizziness occurs, change position slowly from recumbent to sitting position before standing. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, large quantities of grapefruit juice.

busulfan HIGH ALERT

bue-**sul**-fan
(Busulfex, Myleran)

BLACK BOX ALERT Must be administered by certified chemotherapy personnel. Major effect characterized by severe bone marrow suppression.

Do not confuse Myleran with Alkeran, Leukeran, or Mylicon.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic (see p. 80C).

ACTION

Interferes with DNA replication, RNA synthesis. Cell cycle–phase nonspecific.

B

Therapeutic Effect: Disrupts nucleic acid function. Myelosuppressant.

PHARMACOKINETICS

Completely absorbed from GI tract. Protein binding: 33%. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 2.5 hrs.

USES

PO: Treatment of chronic myelogenous leukemia (CML), conditioning regimen for bone marrow transplant. **IV:** Conditioning regimen prior to allogeneic hematopoietic progenitor cell transplantation for chronic myelogenous leukemia. **OFF-LABEL:** Treatment of acute myelocytic leukemia. **PO:** Bone marrow disorders (e.g., polycythemia vera). Thrombocytosis.

PRECAUTIONS

Contraindications: Pts without a definitive diagnosis of CML. **Extreme Caution:** Compromised bone marrow reserve. **Cautions:** History of seizure disorder, head trauma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Cytotoxic agents** may increase cytotoxicity. **Bone marrow depressants** may increase risk of myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease antibody response to vaccine. **HERBAL:** **St. John's wort** may decrease concentration. **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May decrease serum magnesium, potassium, phosphate, sodium. May increase serum glucose, calcium, bilirubin, AST, ALT, creatinine, alkaline phosphatase, BUN.

AVAILABILITY (Rx)

Injection Solution (Busulfex): 6 mg/ml. **Tablets (Myleran):** 2 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during administration. Use of gloves recommended. If contact occurs with skin/mucosa, wash thoroughly with water.

IV

Reconstitution • Dilute with 0.9% NaCl or D_5W only. Diluent quantity must be 10 times the volume of busulfan (e.g., 9.3 ml busulfan must be diluted with 93 ml diluent). • Use filter to withdraw busulfan from ampule. • Add busulfan to calculated diluent. • Use infusion pump to administer busulfan.

Rate of Administration • Infuse over 2 hrs. • Before and after infusion, flush catheter line with 5 ml 0.9% NaCl or D_5W.

Storage • Refrigerate ampules. • Following dilution, stable for 8 hrs at room temperature, 12 hrs if refrigerated when diluted with 0.9% NaCl. • Infusion must be completed within 8- or 12-hr time frame.

PO

• May give without regard to meals.

IV INCOMPATIBILITIES

Do not mix busulfan with any other medications.

INDICATIONS/ROUTES/DOSAGE

Remission Induction in CML

PO: ADULTS, ELDERLY: 4–8 mg/day up to 12 mg/day. Maintenance: 1–4 mg/day to 2 mg/wk. Continue until WBC count is 10,000–20,000/mm^3, resume when WBC count reaches 50,000/mm^3. **CHILDREN:** 0.06–0.12 mg/kg/day. Maintenance: Titrate to maintain leukocyte count above 40,000/mm^3, reduce dose by 50% if count is 30,000–40,000/mm^3, and discontinue if the count is 20,000/mm^3 or less.

Marrow Ablative Conditioning and Bone Marrow Transplantation

IV: ADULTS, ELDERLY, CHILDREN WEIGHING MORE THAN 12 KG: 0.8 mg/kg/dose q6h for total of 16 doses. (Use ideal body weight [IBW] or actual body weight [ABW], whichever is lower.) **CHILDREN WEIGHING 12 KG OR LESS:** 1.1 mg/kg/dose (IBW) q6h for 16 doses.

PO: ADULTS, ELDERLY, CHILDREN: 1 mg/kg/dose (IBW) q6h for 16 doses.

SIDE EFFECTS

Expected (98%–72%): Nausea, stomatitis, vomiting, anorexia, insomnia, diarrhea, fever, abdominal pain, anxiety. **Frequent (69%–44%):** Headache, rash, asthenia (loss of strength, energy), infection, chills, tachycardia, dyspepsia. **Occasional (38%–16%):** Constipation, dizziness, edema, pruritus, cough, dry mouth, depression, abdominal enlargement, pharyngitis, hiccups, back pain, alopecia, myalgia. **Rare (13%–5%):** Injection site pain, arthralgia, confusion, hypotension, lethargy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Major adverse effect is myelosuppression resulting in hematologic toxicity (anemia, severe leukopenia, severe thrombocytopenia). Very high dosages may produce blurred vision, muscle twitching, tonic-clonic seizures. Long-term therapy (more than 4 yrs) may produce pulmonary syndrome ("busulfan lung"), characterized by persistent cough, congestion, adventitious breath sounds (rales, crackles), dyspnea. Hyperuricemia may produce uric acid nephropathy, renal calculi, acute renal failure.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC with differential, hepatic/renal function studies should be performed weekly (dosage based on hematologic values).

INTERVENTION/EVALUATION

Monitor lab values diligently for evidence of bone marrow depression. Assess mouth for onset of stomatitis (redness/ulceration of oral mucous membranes, gum inflammation, difficulty swallowing). Initiate antiemetics to prevent nausea/vomiting. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Educate pt/family regarding expected effects of therapy. • Maintain adequate daily fluid intake (may protect against renal impairment). • Report consistent cough, congestion, difficulty breathing. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site. • Report signs of abrupt weakness, fatigue, weight loss, nausea, vomiting. • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid contact with those who have recently taken live virus vaccine. • Take at same time each day. • Contraception is recommended during therapy.

cabazitaxel

ka-**baz**-i-**tax**-el

(Jevtana)

BLACK BOX ALERT All pts should be premedicated with a corticosteroid, an antihistamine, and an H_2 antagonist prior to infusion. Severe hypersensitivity reaction has occurred. Immediately discontinue infusion and give appropriate treatment if hypersensitivity reaction occurs. Neutropenic deaths reported. CBC, particularly ANC, should be obtained prior to and during treatment. Do not administer with neutrophil count 1,500/mm^3 or less.

Do not confuse cabazitaxel with paclitaxel or Paxil, or Jevtana with Januvia, Levitra, or Sentra.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Microtubule inhibitor. **CLINICAL:** Antineoplastic.

C

ACTION

Disrupts microtubular cell network, essential for cellular function. Results in inhibition of mitotic and interphase cellular functions. **Therapeutic Effect:** Blocks cells in mitotic phase of cell cycle, leading to cell death.

PHARMACOKINETICS

Demonstrates activity in tumor models insensitive to chemotherapy, including docetaxel. Subcutaneously distributed throughout total body water. Protein binding: 89%–92%. Extensively metabolized in liver. Primarily excreted in feces (76%), with lesser amount eliminated in urine (3.7%). **Half-life:** 95 hrs.

USES

Used in combination with prednisone for treatment of hormone-refractory metastatic prostate cancer previously treated with docetaxel-containing regimen.

PRECAUTIONS

Contraindications: Those with neutrophil count of 1,500/mm^3 or less, history of hypersensitivity to polysorbate 80. **Extreme Caution:** Severe hepatic impairment (bilirubin equal to or greater than ULN or AST and/or ALT over 1.5 times ULN). **Cautions:** Avoid concurrent use of strong CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, voriconazole). Concurrent use of moderate CYP3A4 inhibitors (e.g., diltiazem, erythromycin, fluconazole, fosamprenavir, verapamil) or strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin). Elderly, pregnancy, renal impairment (creatinine clearance less than 50 ml/min).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Crosses placental barrier. Do not breast-feed. **Pregnancy Category D. Children:** Safety and effectiveness not established. **Elderly:** Those 65 yrs and older have 5% greater risk of developing neutropenia, fatigue, dizziness, fever, urinary tract infection, dehydration.

INTERACTIONS

DRUG: Concurrent administration of strong **CYP3A4 inhibitors (atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, voriconazole)** may increase concentration of cabazitaxel and is not recommended. Strong **CYP3A4 inducers (carbamazepine, phenobarbital, phenytoin, rifabutin, rifampin, rifapentine)** may decrease cabazitaxel concentration. **Live virus vaccine** may potentiate virus replication, increase vaccine's side effects, decrease response to vaccine. **HERBAL: St. John's wort, valerian** may increase CNS depression. **Echinacea** may decrease effect. **FOOD: Grapefruit, grapefruit juice** may increase concentration/effects. **LAB VALUES:** May increase serum bilirubin AST, ALT. May decrease Hgb, Hct, neutrophils, platelets.

AVAILABILITY (Rx)

Injection, Single-Use Vials, 2 per Kit: 60 mg/1.5 ml polysorbate 80 vial and one vial containing 13% ethanol (in diluent).

ADMINISTRATION/HANDLING

◀ALERT▶ Wear gloves during preparation, handling. Two-step dilution process must be performed under aseptic conditions to prepare second (final) infusion solution. Medication undergoes two dilutions. After first dilution, administration should be initiated within 30 min.

Reconstitution

Step 1, First Dilution: • Each vial of cabazitaxel contains 60 mg/1.5 ml; must first be mixed with entire contents of supplied diluent. • Once reconstituted, resultant solution contains 10 mg/ml of cabazitaxel. • When transferring diluent, direct needle onto inside vial wall and inject slowly to limit foaming. • Remove syringe and needle, then gently mix initial diluted solution by repeated inversions

for at least 45 sec to ensure full mixing of drug and diluent. • Do not shake. • Allow any foam to dissipate.

Step 2, Final Dilution: • Withdraw recommended dose and further dilute with 250 ml 0.9% NaCl or D_5W. • If dose greater than 65 mg is required, use larger volume of 0.9% NaCl or D_5W so that concentration of 0.26 mg/ml is not exceeded. • Concentration of final infusion should be between 0.10 and 0.26 mg/ml.

Rate of Administration • Use in-line 0.22-micron filter during administration. • Infuse over 1 hr.

Storage • Store vials at room temperature. • First dilution solution stable for 30 min. • Final dilution solution stable for 8 hrs at room temperature or 24 hrs if refrigerated.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Antihistamine (dexchlorpheniramine 5 mg, diphenhydramine 25 mg, or equivalent antihistamine), corticosteroid (dexamethasone 8 mg or equivalent steroid), and H_2 antagonist (ranitidine 50 mg or equivalent H_2 antagonist) should be given 30 min before initiation of treatment and at least 30 min prior to each dose to reduce risk/severity of hypersensitivity.

Hormone-Refractory Metastatic Prostate Cancer

◀ALERT▶ Monitoring of CBC is essential on weekly basis during cycle 1 and before each treatment cycle thereafter so that the dose can be adjusted.

IV Infusion: ADULTS, ELDERLY: 25 mg/m^2 given as 1-hr infusion every 3 wks in combination with 10 mg prednisone daily throughout treatment. Dose modifications: grade 3 neutropenia, febrile neutropenia, severe or persistent diarrhea. Reduce dosage to 20 mg/m^2.

SIDE EFFECTS

Frequent (47%–16%): Diarrhea, fatigue, nausea, vomiting, constipation, esthesia (decreased sensitivity to touch), abdominal pain, anorexia, back pain. **Occasional (13%–5%):** Peripheral neuropathy, fever, dyspnea, cough, arthralgia, dysgeusia, dyspepsia, alopecia, peripheral edema, weight decrease, urinary tract infection, dizziness, headache, muscle spasm, dysuria, hematuria, mucosal inflammation, dehydration.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction may include generalized rash, erythema, hypotension, bronchospasm. 94% of pts develop grade 1–4 neutropenia and associated complications, including anemia, thrombocytopenia, sepsis. GI abnormalities and their effects, hypertension, arrhythmias, renal failure may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support to pt/family. Monitoring of CBC, ANC is essential on weekly basis during cycle 1 and before each treatment cycle thereafter; do not administer if ANC is 1,500 cells/mm^3 or less. Obtain baseline EKG, electrolyte parameters, ALT, AST, bilirubin, alkaline phosphatase, testosterone levels prior to initiation of therapy.

INTERVENTION/EVALUATION

Assess CBC, ANC prior to each infusion; do not administer if ANC less than 1,500 cells/mm^3. Monitor ALT, AST. Monitor for hypersensitivity reaction (rash, erythema, dyspnea). Encourage adequate fluid intake. Monitor daily pattern of bowel activity, stool consistency. Offer antiemetics if nausea, vomiting occur. Maintain due diligence to signs/symptoms of neutropenia.

PATIENT/FAMILY TEACHING

• Report fever, chills, persistent sore throat, unusual bruising/bleeding, pale skin, fatigue. • Avoid tasks that require alertness, motor skills until response to drug is established. • Maintain fastidious oral hygiene. • Do not have immunizations

without physician approval (drug lowers body's resistance). • Avoid those who have recently taken live virus vaccine. • Avoid crowds, those with cough, sneezing.

C

cabozantinib

ka-boe-**zan**-ti-nib
(Cometriq)

BLACK BOX ALERT Complications including gastrointestinal perforation and fistula formation have occurred. Severe and sometimes fatal hemorrhaging including hemoptysis, GI bleeding occurred in 3% of pts. Discontinue if visceral perforation, fistula formation (GI, tracheal/esophageal), severe hemorrhaging occurs.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

ACTION

Inhibits tyrosine kinase activity in tumor cells. Inhibits cell migration, proliferation, survival, and angiogenesis (new blood vessel formation). **Therapeutic Effect:** Inhibits thyroid tumor cell growth and metastasis.

PHARMACOKINETICS

Well absorbed after PO administration. Metabolized in liver. Protein binding: greater than 99%. Peak plasma concentration: 2–5 hrs. Excreted in feces (54%), urine (27%). **Half-life:** 55 hrs.

USES

Treatment of progressive, metastatic medullary thyroid cancer.

PRECAUTIONS

Contraindications: None known. **Cautions:** Moderate to severe hepatic impairment, baseline thrombocytopenia, anemia, neutropenia, recent surgery or dental procedures, open wounds, chronic electrolyte imbalance, dehydration, diarrhea, hypertension, recent history of hemorrhage or hemoptysis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Not recommended in nursing mothers. Must either discontinue drug or discontinue breast-feeding. Unknown if distributed in breast milk. Contraception recommended during treatment and up to 4 mos after discontinuation. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, boceprevir, indinavir, itraconazole, ketoconazole, nelfinavir, ritonavir, saquinavir, voriconazole)** may increase concentration. **CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifabutin, rifampin)** may decrease concentration. **HERBAL:** **St. John's wort** may decrease effect. **FOOD:** **Grapefruit, grapefruit juice** may increase concentration. **High fatty meals** may increase absorption/exposure. **LAB VALUES:** May decrease lymphocytes, neutrophils, platelets, serum calcium, magnesium, phosphorus, potassium, sodium. May increase serum ALT, AST, alkaline phosphatase, bilirubin, lipase, TSH, urine protein.

AVAILABILITY (Rx)

Capsules: 20 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• Give on empty stomach only; do not eat for at least 2 hrs before or 1 hr after administration. • Give with water. • Avoid grapefruit juice. • Do not break, crush, dissolve, or divide capsules.

INDICATIONS/ROUTES/DOSAGE

Metastatic Medullary Thyroid Cancer
PO: ADULTS: 140 mg once daily.

Dosage Modification

Hematologic/Nonhematologic Reaction, Drug Intolerance: Interrupt treatment and restart at 100 mg once daily (if previously taking 140 mg), or 60 mg once daily (if previously taking 100 mg). If previously taking 60 mg/day, resume 60 mg/day if tolerated.

SIDE EFFECTS

Frequent (63%–34%): Diarrhea, stomatitis, weight loss, decreased appetite, nausea, fatigue, oral pain, dysgeusia. **Occasional (27%–7%):** Constipation, abdominal pain, vomiting, asthenia, dysphonia, dry skin, headache, alopecia, dizziness, arthralgia, dysphagia, muscle spasms, erythema, dyspepsia, anxiety, musculoskeletal pain, paresthesia, peripheral neuropathy, hyperkeratosis.

ADVERSE EFFECTS/ TOXIC REACTIONS

May cause GI perforation (3%), GI fistula formation (1%), severe GI hemorrhaging (3%). Malignant hypertension may occur despite continued medical management. Thromboembolic events including venous/arterial thromboembolism, cerebral infarction, myocardial infarction have been reported. May cause ineffective wound healing or wound dehiscence requiring medical intervention. Osteonecrosis of the jaw has been noted presenting as mandibular pain, jaw bone erosion, periodontal/gingival infection or ulceration, osteomyelitis, impaired healing of the mouth after dental procedures. Palmar-plantar erythrodysesthesia syndrome (PPES), a chemotherapy-induced skin condition that presents as redness, swelling, numbness, skin sloughing of the hands and feet, has been reported. Reversible posterior leukoencephalopathy syndrome (RPLS) was reported in less than 1% of pts. Proteinuria may indicate nephrotic syndrome.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline vital signs, CBC with differential, CMP, magnesium, phosphate, ionized calcium, urinalysis. Assess for recent surgeries, dental procedures. Question for possibility of pregnancy, current breast-feeding status. Obtain negative urine pregnancy before initiating treatment. Obtain full medication history including vitamins, supplements, herbal products. Question for history of hypertension, hepatic impairment.

INTERVENTION/EVALUATION

Monitor CBC, electrolytes, urinalysis. Routinely assess vital signs and report any change in blood pressure. Persistent diastolic hypertension may indicate hypertensive emergency. Reversible posterior leukoencephalopathy syndrome should be considered in pt with seizure, headache, visual disturbances, confusion, altered mental status. Assess hydration status. Encourage PO intake. Immediately report any hemorrhaging, bloody stools, abdominal pain, hemoptysis (may indicate GI perforation/fistula formation). Notify physician, obtain EKG for palpitations, chest pain, hypokalemia, hyperkalemia, hypocalcemia, bradycardia, ventricular arrhythmias.

PATIENT/FAMILY TEACHING

• Serum laboratory testing will be routinely monitored. • Strictly avoid pregnancy. • Contraception should be utilized during treatment and up to 4 mos after discontinuation. • Report any yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine, decreased urine output, skin changes. • Report neurologic changes including altered mental status, seizures, headache, blurry vision, trouble speaking, one-sided weakness (may indicate stroke, high blood pressure crisis, or life-threatening brain swelling). • Do not take herbal supplements. • Report any jaw pain or sores, skin changes including skin sloughing or rash. • Notify physician before any

planned surgeries or dental procedures. • Do not eat grapefruit or drink grapefruit juice. • Do not take with food. Wait at least 2 hrs before or 1 hr after.

caffeine citrate

kaf-een **sit**-rate
(Cafcit)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Citrate salt of caffeine. **CLINICAL:** Bronchial smooth muscle relaxant.

ACTION

Stimulates medullary respiratory center. Appears to increase sensitivity of respiratory center to stimulatory effects of CO_2. **Therapeutic Effect:** Increases alveolar ventilation, reducing severity, frequency of apneic episodes.

USES

Short-term treatment of apnea in premature infants from 28 wks to younger than 33 wks gestational age.

PRECAUTIONS

Pregnancy Category C.

INTERACTIONS

DRUG: **CNS stimulants** may cause excessive CNS stimulation (e.g., nervousness, insomnia, seizures, arrhythmias). **CYP1A2 inhibitors (e.g., cimetidine, ciprofloxacin)** may increase concentration, risk of side effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml. **Oral Solution:** 20 mg/ml.

ADMINISTRATION/HANDLING

PO

• May give without regard to meals. • May administer injectable solution orally.

IV

• Infuse loading dose over at least 30 min; maintenance dose over at least 10 min. • May give without further dilution.

INDICATIONS/ROUTES/DOSAGE

Apnea

PO, IV: Loading dose: 10–20 mg/kg as caffeine citrate (5–10 mg/kg as caffeine base). If theophylline given within previous 72 hrs, a modified dose (50%–75%) may be given. Maintenance: 5 mg/kg/day as caffeine citrate (2.5 mg/kg/day as caffeine base). Dosage adjusted based on pt response.

SIDE EFFECTS

Frequent (10%–5%): Feeding intolerance, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Sepsis, necrotizing enterocolitis may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Baseline serum caffeine levels should be measured in infants previously treated with theophylline (preterm infants metabolize theophylline to caffeine).

INTERVENTION/EVALUATION

Monitor respirations diligently. Assess skin for rash. Monitor heart rate, number/severity of apnea spells, serum caffeine levels.

calcitonin

kal-si-**toe**-nin
(Apo-Calcitonin, Calcimar, Caltine, Fortical, Miacalcin)
Do not confuse calcitonin with calcitriol, or Miacalcin with Micatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic hormone. **CLINICAL:** Calcium regulator, bone resorption inhibitor (see p. 144C).

ACTION

Decreases osteoclast activity in bones, decreases tubular reabsorption of sodium and calcium in kidneys, increases absorption of calcium in GI tract. **Therapeutic Effect:** Regulates serum calcium concentrations.

PHARMACOKINETICS

Nasal form rapidly absorbed. Injection form rapidly metabolized primarily in kidneys; primarily excreted in urine. **Half-life: Nasal:** 43 min; **Injection:** 70–90 min.

USES

Parenteral: Treatment of Paget's disease, hypercalcemia, postmenopausal osteoporosis. **Intranasal**: Postmenopausal osteoporosis. **OFF-LABEL:** Treatment of secondary osteoporosis due to drug therapy or hormone disturbance.

PRECAUTIONS

Contraindications: Hypersensitivity to salmon protein. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Does not cross placenta; unknown if distributed in breast milk. Safe usage during lactation not established (inhibits lactation in animals). **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease **lithium** concentration/effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Miacalcin): 200 international units/ml (calcitonin-salmon). **Nasal Spray (Fortical, Miacalcin Nasal):** 200 international units/activation (calcitonin-salmon).

ADMINISTRATION/HANDLING

IM, Subcutaneous

• IM route preferred if injection volume greater than 2 ml. Subcutaneous injection for outpatient self-administration unless volume greater than 2 ml. • Skin test should be performed before therapy in pts suspected of sensitivity to calcitonin. • Bedtime administration may reduce nausea, flushing.

Intranasal

• Refrigerate unopened nasal spray. Store at room temperature after initial use. • Instruct pt to clear nasal passages as much as possible. • Tilt head slightly forward. • Insert spray tip into nostril, pointing toward nasal passages, away from nasal septum. • Spray into one nostril while pt holds other nostril closed and concurrently inspires through nose to permit medication as high into nasal passage as possible. Spray into one nostril daily.

INDICATIONS/ROUTES/DOSAGE

Skin Testing before Treatment in Pts with Suspected Sensitivity to Calcitonin-Salmon

Intracutaneous: ADULTS, ELDERLY: Prepare a 10-international units/ml dilution; withdraw 0.05 ml from a 200-international units/ml vial in a tuberculin syringe; fill up to 1 ml with 0.9% NaCl. Give 0.1 ml intracutaneously on inner aspect of forearm. Observe after 15 min; a positive response is the appearance of more than mild erythema or wheal.

Paget's Disease

IM, Subcutaneous: ADULTS, ELDERLY: Initially, 100 international units/day. Maintenance: 50 international units/day or 50–100 international units every 1–3 days.

C

Postmenopausal Osteoporosis

IM, Subcutaneous: ADULTS, ELDERLY: 100 international units every other day with adequate calcium and vitamin D intake.
Intranasal: ADULTS, ELDERLY: 200 international units/day as a single spray, alternating nostrils daily.

Hypercalcemia

IM, Subcutaneous: ADULTS, ELDERLY: Initially, 4 international units/kg q12h; may increase to 8 international units/kg q12h if no response in 2 days; may further increase to 8 international units/kg q6h if no response in another 2 days.

SIDE EFFECTS

Frequent: IM, Subcutaneous (10%): Nausea (may occur soon after injection, usually diminishes with continued therapy), inflammation at injection site. **Nasal (12%–10%):** Rhinitis, nasal irritation, redness, lesions. **Occasional: IM, Subcutaneous (5%–2%):** Flushing of face, hands. **Nasal (5%–3%):** Back pain, arthralgia, epistaxis, headache. **Rare: IM, Subcutaneous:** Epigastric discomfort, dry mouth, diarrhea, flatulence. **Nasal:** Itching of earlobes, pedal edema, rash, diaphoresis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pts with a protein allergy may develop a hypersensitivity reaction (rash, dyspnea, hypotension, tachycardia).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline electrolyte levels.

INTERVENTION/EVALUATION

Ensure rotation of injection sites; check for inflammation. Assess vertebral bone mass (document stabilization/improvement). Assess for allergic response: rash, urticaria, swelling, shortness of breath, tachycardia, hypotension. Monitor serum electrolytes, calcium, alkaline phosphatase.

PATIENT/FAMILY TEACHING

• Instruct pt/family on aseptic technique, proper injection method of subcutaneous medication, including rotation of sites, proper administration of nasal medication. • Nausea is transient and usually decreases with continued therapy. • Notify physician immediately if rash, itching, shortness of breath, significant nasal irritation occur. • Explain to pt/family that improvement in biochemical abnormalities and bone pain usually occurs in the first few months of treatment. • Explain improvement may take more than a year with neurologic lesions.

calcium acetate

(Eliphos, PhosLo)

calcium carbonate

(Apo-Cal, Caltrate 600, OsCal, Titralac, Tums)

calcium chloride

calcium citrate

(Cal-Citrate, Citracal, Osteocit)

calcium glubionate

calcium gluconate

kal-see-um
Do not confuse Citracal with Citrucel, OsCal with Asacol, or PhosLo with ProSom.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Electrolyte replenisher. **CLINICAL:** Antacid, antihypocalcemic, antihyperkalemic, antihypermagnesemic, antihyperphosphatemic (see p. 12C).

ACTION

Essential for function, integrity of nervous, muscular, skeletal systems. Plays an impor-

tant role in normal cardiac/renal function, respiration, blood coagulation, cell membrane and capillary permeability. Assists in regulating release/storage of neurotransmitters/hormones. Neutralizes/reduces gastric acid (increases pH). **Calcium acetate:** Combines with dietary phosphate, forming insoluble calcium phosphate. **Therapeutic Effect:** Replaces calcium in deficiency states; controls hyperphosphatemia in end-stage renal disease, relieves heartburn, indigestion.

PHARMACOKINETICS

Moderately absorbed from small intestine (absorption depends on presence of vitamin D metabolites, pH). Primarily eliminated in feces.

USES

Parenteral (calcium chloride, calcium gluconate): Acute hypocalcemia (e.g., neonatal hypocalcemic tetany, alkalosis), electrolyte depletion, cardiac arrest (strengthens myocardial contractions), hyperkalemia (reverses cardiac depression), hypermagnesemia (aids in reversing CNS depression). **Calcium carbonate:** Antacid, treatment/prevention of calcium deficiency, hyperphosphatemia. **Calcium citrate:** Antacid, treatment/prevention of calcium deficiency, hyperphosphatemia. **Calcium acetate:** Controls hyperphosphatemia in end-stage renal disease. **OFF-LABEL (Calcium chloride):** Calcium channel blocker overdose, severe hyperkalemia, malignant arrhythmias associated with hypermagnesemia.

PRECAUTIONS

Contraindications: Calcium-based renal calculi, hypercalcemia, ventricular fibrillation, digoxin toxicity. **Cautions:** Chronic renal impairment, hypokalemia, concurrent use with digoxin.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Unknown whether calcium chloride or gluconate is distributed in breast milk. **Pregnancy Category C. Children:** Extreme irritation, possible tissue necrosis or sloughing with IV. Restrict IV use due to small vasculature. **Elderly:** Oral absorption may be decreased.

INTERACTIONS

DRUG: Hypercalcemia may increase **digoxin** toxicity. Oral form may decrease absorption of **biphosphonates (e.g., risedronate), calcium channel blockers, tetracycline derivatives, thyroid products.** **HERBAL:** None significant. **FOOD:** Food may increase calcium absorption. **LAB VALUES:** May increase serum pH, calcium, gastrin. May decrease serum phosphate, potassium.

AVAILABILITY

CALCIUM ACETATE

Gelcap (PhosLo): 667 mg (equivalent to 169 mg elemental calcium). **Tablets (Eliphos):** 667 mg (equivalent to 169 mg elemental calcium).

CALCIUM CARBONATE

Tablets: 1,250 mg (equivalent to 500 mg elemental calcium); 1,500 mg (equivalent to 600 mg elemental calcium) (Caltrate 600). **Tablets (Chewable):** 500 mg (equivalent to 200 mg elemental calcium) (Tums); 1,250 mg (equivalent to 500 mg elemental calcium).

CALCIUM CHLORIDE

Injection Solution: 10% (100 mg/ml) equivalent to 27.2 mg elemental calcium per ml.

CALCIUM GLUBIONATE

Syrup: 1.8 g/5 ml (equivalent to 115 mg elemental calcium per 5 ml).

CALCIUM GLUCONATE

Injection Solution: 10% (equivalent to 9 mg elemental calcium per ml).

ADMINISTRATION/HANDLING

IV

Dilution

Calcium Chloride • May give undiluted or may dilute with 0.9% NaCl or Sterile Water for Injection.

Calcium Gluconate • May give undiluted or may dilute with 100 ml 0.9% NaCl or D_5W.

C

Rate of Administration

Calcium Chloride • **Note:** Rapid administration may produce bradycardia, metallic/chalky taste, drop in B/P, sensation of heart, peripheral vasodilation. • **IV push:** Infuse slowly at maximum rate of 50–100 mg/min (in cardiac arrest, may administer over 10–20 sec). • **IV infusion:** Dilute to maximum final concentration of 20 mg/ml and infuse over 1 hr or no faster than 45–90 mg/kg/hr. Give via a central line. Do **NOT** use scalp, small hand or foot veins. Stop infusion if pt complains of pain or discomfort.

Calcium Gluconate • **Note:** Rapid administration may produce vasodilation, drop in B/P, arrhythmias, syncope, cardiac arrest. • **IV push:** Infuse slowly over 3–5 min or at maximum rate of 50–100 mg/min (in cardiac arrest, may administer over 10–20 sec). • **IV infusion:** Dilute 1–2 g in 100 ml 0.9% NaCl or D_5W and infuse over 1 hr.

Storage • Store at room temperature. • Once diluted, stable for 24 hrs at room temperature.

PO

Calcium Acetate • Administer with plenty of fluids with meals to optimize effectiveness.

Calcium Carbonate • Administer with or immediately following meals with plenty of water (give with meals if used for phosphate binding). Thoroughly chew chewable tablets before swallowing.

Calcium Citrate • Give without regard to food (give with food when used to treat hyperphosphatemia).

Calcium Glucobionate • Give with or following meals (give on empty stomach before meals when used to treat hyperphosphatemia).

IV INCOMPATIBILITIES

Calcium chloride: Amphotericin B complex (Abelcet, AmBisome, Amphotec), phosphate-containing solutions, propofol (Diprivan), sodium bicarbonate. **Calcium gluconate:** Amphotericin B complex (Abelcet, AmBisome, Amphotec), fluconazole (Diflucan).

IV COMPATIBILITIES

Calcium chloride: Amikacin (Amikin), dobutamine (Dobutrex), lidocaine, milrinone (Primacor), morphine, norepinephrine (Levophed). **Calcium gluconate:** Ampicillin, aztreonam (Azactam), cefazolin (Ancef), cefepime (Maxipime), ciprofloxacin (Cipro), dobutamine (Dobutrex), enalapril (Vasotec), famotidine (Pepcid), furosemide (Lasix), heparin, lidocaine, lipids, magnesium sulfate, meropenem (Merrem IV), midazolam (Versed), milrinone (Primacor), norepinephrine (Levophed), piperacillin and tazobactam (Zosyn), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Hyperphosphatemia

PO ***(Calcium Acetate)*****: ADULTS, ELDERLY:** 2 tablets 3 times a day with meals. May increase gradually up to 4 tablets 3 times a day to bring serum phosphate level to less than 6 mg/dl as long as hypercalcemia does not develop.

PO ***(Calcium Carbonate)*****: ADULTS, ELDERLY, CHILDREN:** 1 g with each meal. **Maximum:** 4–7 g/day.

Hypocalcemia

PO ***(Calcium Carbonate)*****: ADULTS, ELDERLY:** 1–2 g/day in 3–4 divided doses. **CHILDREN:** 45–65 mg/kg/day in 3–4 divided doses. **NEONATES:** 50–150 mg/kg/day in 4–6 divided doses. **Maximum:** 1 g/day.

PO ***(Calcium Glubionate)*****: ADULTS, ELDERLY:** 6–18 g/day in 4–6 divided doses. **CHILDREN, INFANTS:** 0.6–2 g/kg/day in 4 divided doses. **NEONATES:** 1.2 g/kg/day in 4–6 divided doses.

IV ***(Calcium Chloride)*****: ADULTS, ELDERLY:** 0.5–1 g repeated q4–6h as needed. **CHILDREN:** 20 mg/kg q4–6h. **NEONATES:** 10–20 mg/kg/dose q4–6h.

IV ***(Calcium Gluconate)*****: ADULTS, ELDERLY:** 2–15 g/24 hr. **CHILDREN:** 200–500 mg/kg/day. **NEONATES:** 200–800 mg/kg/day.

Antacid

PO ***(Calcium Carbonate)*****: ADULTS, ELDERLY:** 1–2 tabs (5–10 ml) q2h as needed. **CHILDREN 6–11 YRS:** 2 tabs (800 mg). **Maximum:** 6 tabs/day. **CHILDREN 2–5 YRS:** 1 tab (400 mg). **Maximum:** 3 tabs/day.

Osteoporosis

PO ***(Calcium Carbonate)*****: ADULTS, ELDERLY:** 1,200 mg/day.

Cardiac Arrest

IV ***(Calcium Chloride)*****: ADULTS, ELDERLY:** 500–1,000 mg. May repeat as necessary. **CHILDREN, NEONATES:** 20 mg/kg. May repeat in 10 min as necessary.

Hypocalcemia Tetany

IV ***(Calcium Chloride)*****: ADULTS, ELDERLY:** 1 g. May repeat in 6 hrs. **CHILDREN, NEONATES:** 10 mg/kg over 5–10 min. May repeat q6–8h. **Maximum:** 200 mg/kg/day.

IV ***(Calcium Gluconate)*****: ADULTS, ELDERLY:** 1–3 g over 10–30 min; may repeat after 6 hrs. **CHILDREN, NEONATES:** 100–200 mg/kg/dose over 5–10 min. May repeat after 6 hrs. **Maximum:** 500 mg/kg/day.

Supplement

PO ***(Calcium Citrate)*****: ADULTS, ELDERLY:** 0.5–2 g 2–4 times a day. **CHILDREN:** 45–65 mg/kg/day in 4 divided doses.

SIDE EFFECTS

Frequent: PO: Chalky taste. **Parenteral:** Pain, rash, redness, burning at injection site, flushing, feeling of warmth, nausea, vomiting, diaphoresis, hypotension. **Occasional: PO:** Mild constipation, fecal impaction, peripheral edema, metabolic alkalosis (muscle pain, restlessness, slow respirations, altered taste). **Calcium carbonate:** Milk-alkali syndrome (headache, decreased appetite, nausea, vomiting, unusual fatigue). **Rare:** Urinary urgency, painful urination.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypercalcemia: Early signs: Constipation, headache, dry mouth, increased thirst, irritability, decreased appetite, metallic taste, fatigue, weakness, depression. **Later signs:** Confusion, drowsiness, hypertension, photosensitivity, arrhythmias, nausea, vomiting, painful urination.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, EKG and cardiac rhythm, renal function, serum magnesium, phosphate, potassium concentrations.

INTERVENTION/EVALUATION

Monitor B/P, EKG, cardiac rhythm, serum magnesium, phosphate, potassium, renal function. Monitor serum, urine calcium concentrations. Monitor for signs of hypercalcemia.

PATIENT/FAMILY TEACHING

- Do not take within 1–2 hrs of other oral medications, fiber-containing foods.
- Avoid excessive alcohol, tobacco, caffeine.

calfactant

cal-**fak**-tant
(Infasurf)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Natural lung extract. **CLINICAL:** Pulmonary surfactant.

ACTION

Reduces alveolar surface tension, stabilizing the alveoli. **Therapeutic Effect:** Restores surface activity to infant lungs, improves lung compliance, respiratory gas exchange.

PHARMACOKINETICS

No studies have been performed.

USES

Prevention of respiratory distress syndrome (RDS) in premature infants

younger than 29 wks of gestational age; treatment of premature infants younger than 72 hrs of age who develop RDS and require endotracheal intubation.

C

PRECAUTIONS

Contraindications: None known. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated in this pt population. **Pregnancy Category:** Not indicated for use in pregnant women. **Children:** Used only in neonates. No age-related precautions noted. **Elderly:** Not indicated in this pt population.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Intratracheal Suspension: 35-mg/ml vials.

ADMINISTRATION/HANDLING

Intratracheal

• Refrigerate. • Unopened, unused vials may be returned to refrigerator within 24 hrs for future use. Avoid repeated warming to room temperature. • Do not shake. • Enter vial only once, discard unused suspension.

INDICATIONS/ROUTES/DOSAGE

Note: Reflux of calfactant into endotracheal tube, cyanosis, bradycardia, airway obstruction have occurred.

Respiratory Distress Syndrome (RDS)

Intratracheal: NEONATES: 3 ml/kg of birth weight administered as soon as possible after birth in 2 doses of 1.5 ml/kg. Repeat 3-ml/kg doses, up to a total of 3 doses given 12 hrs apart.

SIDE EFFECTS

Frequent: Cyanosis (65%), airway obstruction (39%), bradycardia (34%), reflux of surfactant into endotracheal tube (21%), need for manual ventilation (16%). **Occasional:** Need for reintubation (3%).

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Drug must be administered in highly supervised setting. Clinicians in charge of care of neonate must be experienced with intubation, ventilator management. Offer emotional support to parents.

INTERVENTION/EVALUATION

Monitor infant with arterial or transcutaneous measurement of systemic O_2, CO_2. Auscultate lungs for adventitious breath sounds (rales, crackles, rhonchi). Frequent ABG sampling necessary to prevent post-dosing hyperoxia and hypocarbia.

candesartan

kan-de-**sar**-tan
(Apo-Candesartan, Atacand)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

FIXED-COMBINATION(S)

Atacand HCT: candesartan/hydrochlorothiazide (a diuretic): 16 mg/12.5 mg, 32 mg/12.5 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive (see p. 10C, 60C).

ACTION

Blocks vasoconstrictor, aldosterone-secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT_1 receptors. **Therapeutic Effect:** Produces

vasodilation; decreases peripheral resistance, B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	2–3 hrs	6–8 hrs	Greater than 24 hrs

Rapidly, completely absorbed. During absorption, undergoes rapid/complete hydrolysis to form active drug. Protein binding: greater than 99%. Undergoes minor hepatic metabolism to inactive metabolite. Excreted unchanged in urine and in feces through biliary system. Not removed by hemodialysis. **Half-life:** 9 hrs.

USES

Treatment of hypertension alone or in combination with other antihypertensives, heart failure (reduces risk of death from cardiovascular causes, reduces hospitalization for heart failure).

PRECAUTIONS

Contraindications: Severe hepatic impairment and/or cholestasis, pregnancy, breast-feeding. **Cautions:** Significant aortic/mitral stenosis, renal/hepatic impairment, unstented (unilateral/bilateral) renal artery stenosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. May cause fetal/neonatal morbidity/mortality. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration, risk of **lithium** toxicity. **NSAIDs** may decrease effects. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, AST, ALT. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 4 mg, 8 mg, 16 mg, 32 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY, PTS WITH MILD HEPATIC OR RENAL IMPAIRMENT: Initially, 16 mg once a day in those who are not volume depleted. Can be given once or twice a day with total daily doses of 8–32 mg. Give lower dosage in those treated with diuretics or with severe renal impairment. **CHILDREN 6–16 YRS, GREATER THAN 50 KG:** Initially, 8–16 mg/day in 1–2 divided doses. **Range:** 4–32 mg; **Maximum:** 32 g/day. **50 KG OR LESS:** Initially, 4–8 mg in 1–2 divided doses. **Range:** 2–16 mg/day. **Maximum:** 32 mg/day. **CHILDREN 1–5 YRS:** Initially, 0.2 mg/kg/day in 1–2 divided doses. **Range:** 0.05–0.4 mg/kg/day.

Heart Failure

PO: ADULTS, ELDERLY: Initially, 4 mg once daily. May double dose at approximately 2-wk intervals up to a target dose of 32 mg/day.

SIDE EFFECTS

Occasional (6%–3%): Upper respiratory tract infection, dizziness, back/leg pain. **Rare (2%–1%):** Pharyngitis, rhinitis, headache, fatigue, diarrhea, nausea, dry cough, peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdosage may manifest as hypotension, tachycardia. Bradycardia occurs less often. Institute supportive measures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations).

Question for possibility of pregnancy (see Black Box Alert). Assess medication history (esp. diuretic). Question for history of hepatic/renal impairment, renal artery stenosis. Obtain BUN, serum creatinine, AST, ALT, alkaline phosphatase, bilirubin, Hgb, Hct.

INTERVENTION/EVALUATION

Maintain hydration (offer fluids frequently). Assess for evidence of upper respiratory infection. Assist with ambulation if dizziness occurs. Monitor electrolytes, serum creatinine, BUN, urinalysis. Assess B/P for hypertension/hypotension. If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated.

PATIENT/FAMILY TEACHING

• Inform female pt regarding potential for fetal injury, mortality with second- and third-trimester exposure to candesartan. • Report pregnancy to physician as soon as possible. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report any sign of infection (sore throat, fever). • Do not stop taking medication. • Explain need for lifelong control. • Caution against exercising during hot weather (risk of dehydration, hypotension).

capecitabine HIGH ALERT

kap-eh-**sye**-ta-bean
(Xeloda)

BLACK BOX ALERT May increase anticoagulant effect of warfarin.

Do not confuse Xeloda with Xenical.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic (see p. 81C).

ACTION

Enzymatically converted to 5-fluorouracil (5-FU). Inhibits enzymes necessary for synthesis of essential cellular components. **Therapeutic Effect:** Interferes with DNA synthesis, RNA processing, protein synthesis.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: less than 60%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 45 min.

USES

Treatment of metastatic breast cancer resistant to other therapy, colorectal cancer. Adjuvant (postsurgical) treatment of Dukes C colon cancer. **OFF-LABEL:** Gastric cancer, pancreatic cancer, esophageal cancer, ovarian cancer, metastatic renal cell cancer, metastatic CNS lesions, neuroendocrine tumors.

PRECAUTIONS

Contraindications: Severe renal impairment (creatinine clearance less than 30 ml/min), dihydropyrimidine dehydrogenase (DPD) deficiency, hypersensitivity to 5-fluorouracil (5-FU). **Cautions:** Existing bone marrow depression, hepatic impairment, moderate renal impairment, previous cytotoxic therapy/radiation therapy, elderly (80 yrs of age or older).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be harmful to fetus. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** May be more sensitive to GI side effects.

INTERACTIONS

DRUG: May increase concentration, toxicity of **warfarin, phenytoin.** Myelosuppression may be enhanced when given concurrently with **bone marrow depressants. Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: Echinacea** may decrease levels/effect. **FOOD:** None known. **LAB VALUES:** May increase

serum alkaline phosphatase, bilirubin, AST, ALT. May decrease Hgb, Hct, WBC count. May increase PT, INR.

AVAILABILITY (Rx)

Tablets: 150 mg, 500 mg.

ADMINISTRATION/HANDLING

• Give within 30 min after meals with water.

INDICATIONS/ROUTES/DOSAGE

Metastatic Breast Cancer, Colorectal Cancer, Adjuvant (Postsurgery) Treatment of Dukes C Colon Cancer

PO: ADULTS, ELDERLY: Initially, 2,500 mg/m^2/day in 2 equally divided doses approximately q12h for 2 wks. Follow with a 1-wk rest period; given in 3-wk cycles.

Dosage in Renal Impairment

Creatinine clearance 50–80 ml/min: No adjustment. **Creatinine clearance 30–49 ml/min:** 75% of normal dose. **Creatinine clearance less than 30 ml/min:** Contraindicated.

SIDE EFFECTS

Frequent (55%–25%): Diarrhea, nausea, vomiting, stomatitis, hand-and-foot syndrome (painful palmar-plantar swelling with paresthesia, erythema, blistering), fatigue, anorexia, dermatitis. **Occasional (24%–10%):** Constipation, dyspepsia, headache, dizziness, insomnia, edema, myalgia, pyrexia, dehydration, dyspnea, back pain. **Rare (less than 10%):** Mood changes, depression, sore throat, epistaxis, cough, visual abnormalities.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious reactions include myelosuppression (neutropenia, thrombocytopenia, anemia), cardiovascular toxicity (angina, cardiomyopathy, deep vein thrombosis), respiratory toxicity (dyspnea, epistaxis, pneumonia), lymphedema.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess sensitivity to capecitabine or 5-fluorouracil. Obtain baseline Hgb, Hct, serum chemistries, renal function.

INTERVENTION/EVALUATION

Monitor for severe diarrhea, nausea, vomiting; if dehydration occurs, fluid and electrolyte replacement therapy should be initiated. Assess hands/feet for erythema (chemotherapy induced). Monitor CBC for evidence of bone marrow depression. Monitor renal/hepatic function. Monitor for blood dyscrasias (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Notify physician if nausea, vomiting, diarrhea, hand-and-foot syndrome, stomatitis occur. • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever higher than 100.5°F, sore throat, signs of local infection, unusual bruising/bleeding from any site.

captopril

kap-toe-pril
(Apo-Capto, Capoten, Novo-Captoril)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse captopril with calcitriol, Capitrol, or carvedilol.

FIXED-COMBINATION(S)

Capozide: captopril/hydrochlorothiazide (a diuretic): 25 mg/15 mg, 25 mg/25 mg, 50 mg/15 mg, 50 mg/25 mg.

C

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin-converting enzyme (ACE) inhibitor. **CLINICAL:** Antihypertensive, vasodilator (see p. 9C).

ACTION

Suppresses renin-angiotensin-aldosterone system (prevents conversion of angiotensin I to angiotensin II, a potent vasoconstrictor; may inhibit angiotensin II at local vascular and renal sites). Decreases plasma angiotensin II, increases plasma renin activity, decreases aldosterone secretion. **Therapeutic Effect:** Reduces peripheral arterial resistance, pulmonary capillary wedge pressure; improves cardiac output, exercise tolerance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.25 hr	0.5–1.5 hrs	Dose-related

Rapidly, well absorbed from GI tract (absorption decreased in presence of food). Protein binding: 25%–30%. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** Less than 3 hrs (increased in renal impairment).

USES

Treatment of hypertension, CHF, diabetic nephropathy, post-MI for prevention of ventricular failure. **OFF-LABEL:** Delays progression of nephropathy and reduces risk of cardiovascular events in hypertensive pts with type 1 and type 2 diabetes. Treatment of hypertensive crisis, rheumatoid arthritis; hypertension secondary to scleroderma renal crisis; diagnosis of aldosteronism; diagnosis of renal artery stenosis; idiopathic edema; Bartter's syndrome; increases circulation in Raynaud's syndrome.

PRECAUTIONS

Contraindications: History of angioedema from previous treatment with ACE inhibitors. **Cautions:** Renal impairment, collagen vascular disease, pts with volume depletion. Unstented unilateral/bilateral renal artery stenosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. May cause fetal/neonatal mortality/morbidity. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects; caution recommended.

INTERACTIONS

DRUG: **Antihypertensives, diuretics** may increase hypotensive effects. May increase **lithium** concentration, toxicity. **NSAIDs** may decrease antihypertensive effect. **Potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. **HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** **Licorice** may cause sodium and water retention, increase loss of potassium. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, potassium, AST, ALT. May decrease serum sodium. May cause positive ANA titer.

AVAILABILITY (Rx)

Tablets: 12.5 mg, 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Best taken 1 hr before or 2 hrs after meals for maximum absorption (food may decrease drug absorption). • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 12.5–25 mg 2–3 times a day. After 1–2 wks, may increase by 12.5–25 mg/dose. Diuretic may be added if no response in additional 1–2 wks. If taken in combination with diuretic, may increase to 100–150

mg 2–3 times a day after 1–2 wks. Maintenance: 25–150 mg 2–3 times a day. **Maximum:** 450 mg/day. **CHILDREN:** 0.3–0.5 mg 3 times a day. **Maximum:** 6 mg/kg/day in 2–4 divided doses. **INFANTS:** 0.15–0.3 mg/kg/dose. May titrate up to maximum of 6 mg/kg/day in 1–4 divided doses. Usual range: 2.5–6 mg/kg/day. **NEONATES:** 0.01–0.1 mg/kg/dose q8–24h. **Maximum:** 0.5 mg/kg/dose q6–24h.

CHF

PO: ADULTS, ELDERLY: Initially, 6.25–25 mg 3 times a day. **Target dose:** 50 mg 3 times/day.

Post-MI

PO: ADULTS, ELDERLY: Initially, 6.25 mg, then 12.5 mg 3 times a day. Increase to 25 mg 3 times a day over several days, up to 50 mg 3 times a day over several wks.

Diabetic Nephropathy, Prevention of Renal Failure

PO: ADULTS, ELDERLY: 25 mg 3 times a day.

Dosage in Renal Impairment

Creatinine clearance 10–50 ml/min: 75% of normal dosage. **Creatinine clearance less than 10 ml/min:** 50% of normal dosage.

SIDE EFFECTS

Frequent (7%–4%): Rash. **Occasional (4%–2%):** Pruritus, dysgeusia (altered taste). **Rare (less than 2%):** Headache, cough, insomnia, dizziness, fatigue, paresthesia, malaise, nausea, diarrhea or constipation, dry mouth, tachycardia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive hypotension ("first-dose syncope") may occur in pts with CHF and in those who are severely sodium/volume depleted. Angioedema (swelling of face/tongue/lips), hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in those with collagen vascular disease (scleroderma, systemic lupus erythematosus), renal impairment. Nephrotic syndrome may be noted in those with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position with legs elevated. In pts with prior renal disease or receiving dosages greater than 150 mg/day, urine test for protein by dipstick method should be made with first urine of day before therapy begins and periodically thereafter. In pts with renal impairment, autoimmune disease, or taking drugs that affect leukocytes or immune response, CBC should be performed before beginning therapy, q2wks for 3 mos, then periodically thereafter.

INTERVENTION/EVALUATION

Assess skin for rash, pruritus. Assist with ambulation if dizziness occurs. Monitor urinalysis for proteinuria. Assess for anorexia secondary to altered taste perception. Monitor serum potassium levels in those on concurrent diuretic therapy. Monitor B/P, BUN, serum creatinine, CBC. Discontinue medication, contact physician if angioedema (swelling of face, lips, tongue) occurs.

PATIENT/FAMILY TEACHING

• Full therapeutic effect of B/P reduction may take several wks. • Skipping doses or voluntarily discontinuing drug may produce severe rebound hypertension. • Limit alcohol. • Notify physician if swelling of face, lips, or tongue, difficulty breathing, vomiting, diarrhea, excessive perspiration, dehydration, persistent cough, sore throat, fever occur. • Inform physician if pregnant or planning to become pregnant. • Rise slowly from sitting/lying position.

C

TOP 200

carbamazepine

kar-ba-**maz**-e-peen
(Apo-Carbamazepine, Carbatrol, Epitol, Equetro, Tegretol, Tegretol XR)

BLACK BOX ALERT Potentially fatal aplastic anemia, agranulocytosis reported. Potentially fatal, severe dermatologic reactions (e.g., Stevens-Johnson syndrome, toxic epidermal necrolysis) may occur.

Do not confuse carbamazepine with oxcarbazepine, or Tegretol with Mebaral, Toprol XL, Toradol, or Trental.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Iminostilbene derivative. **CLINICAL:** Anticonvulsant, antineuralgic, antimanic, antipsychotic (see p. 34C).

ACTION

Decreases sodium, calcium ion influx into neuronal membranes, reducing post-tetanic potentiation at synapses. **Therapeutic Effect:** Produces anticonvulsant effect; decreases pain response.

PHARMACOKINETICS

Slowly, completely absorbed from GI tract. Protein binding: 75%–90%. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 25–65 hrs (decreased with chronic use).

USES

Carbatrol, Epitol, Tegretol, Tegretol XR: Treatment of partial seizures with complex symptomatology, generalized tonic-clonic seizures, mixed seizure patterns, pain relief of trigeminal neuralgia, diabetic neuropathy. **Equetro:** Acute manic and mixed episodes associated with bipolar disorder. **OFF-LABEL:** Posttraumatic stress disorder, restless legs syndrome.

PRECAUTIONS

Contraindications: Concomitant or within 14 days of use of MAOIs, myelosuppression, hypersensitivity to tricyclic antidepressants. **Cautions:** High risk of suicide; increased IOP; concurrent use of strong CYP3A4 inhibitors or inducers; hepatic, renal impairment; history of cardiac impairment; EKG abnormalities.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. Accumulates in fetal tissue. **Pregnancy Category D. Children:** Behavioral changes more likely to occur. **Elderly:** More susceptible to confusion, agitation, AV block, bradycardia, syndrome of inappropriate antidiuretic hormone (SIADH).

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., cimetidine, clarithromycin, azole antifungals, protease inhibitors) may increase concentration of **carbamazepine. CYP3A4 inducers (e.g., rifampin, phenytoin)** may decrease concentration/effects of **carbamazepine. Carbamazepine** may decrease concentration/effects of **hormonal contraceptives, warfarin, trazodone. HERBAL: Evening primrose** may decrease seizure threshold. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD: Grapefruit, grapefruit juice** may increase absorption, concentration. **LAB VALUES:** May increase BUN, serum glucose, alkaline phosphatase, bilirubin, AST, ALT, protein, cholesterol, HDL, triglycerides. May decrease serum calcium, thyroid hormone (T_3, T_4 index) levels. **Therapeutic serum level:** 4–12 mcg/ml; **toxic serum level:** greater than 12 mcg/ml.

AVAILABILITY (Rx)

Suspension (Tegretol): 100 mg/5 ml. **Tablets (Epitol, Tegretol):** 200 mg. **Tablets (Chewable [Tegretol]):** 100 mg.

Capsules (Extended-Release [Carbatrol, Equetro]): 100 mg, 200 mg, 300 mg. **Tablets (Extended-Release [Tegretol XR]):** 100 mg, 200 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

• Store oral suspension, tablets at room temperature. • Give with meals to reduce risk of GI distress. • May give extended-release capsules without regard to food. • Extended-release tablets should be given with meals. • Shake oral suspension well. Do not administer simultaneously with other liquid medicine. • Do not crush or chew extended-release capsules or tablets. • Extended-release capsules may be opened and sprinkled over food (e.g., applesauce).

INDICATIONS/ROUTES/DOSAGE

◄ALERT► Suspension must be given on a 3–4 times/day schedule; tablets on a 2–4 times/day schedule; extended-release capsules 2 times/day.

Seizure Control

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: Initially, 200 mg twice a day. May increase dosage by 200 mg/day at weekly intervals. Range: 400–1,200 mg/day in 2–4 divided doses. **Maximum: ADULTS:** 1.6–2.4 g/day; **CHILDREN OLDER THAN 15 YRS:** 1,200 mg/day; **CHILDREN 13–15 YRS:** 1,000 mg/day. **CHILDREN 6–12 YRS:** Initially, 100 mg twice a day (tablets) or 4 times/day (oral suspension). May increase by 100 mg/day at weekly intervals. Range: 400–800 mg/day. **Maximum:** 1,000 mg/day. **CHILDREN YOUNGER THAN 6 YRS:** Initially, 10–20 mg/kg/day in 2–3 divided doses. May increase at weekly intervals until optimal response and therapeutic levels are achieved. **Maximum:** 35 mg/kg/day. **ELDERLY:** Initially, 100 mg 1–2 times a day. May increase by 100 mg/day at weekly intervals. Usual dose 400–1,000 mg/day.

Trigeminal Neuralgia, Diabetic Neuropathy

PO: ADULTS: Initially, 100 mg twice a day (tablets) or 4 times/day (oral suspension). May increase by 100 mg twice a day up to 400–800 mg/day. **Maximum:** 1,200 mg/day. **ELDERLY:** Initially 100 mg 1–2 times a day. May increase by 100 mg/day at weekly intervals. Usual dose 400–1,000 mg/day.

Bipolar Disorder

PO: ADULTS, ELDERLY (Equetro): Initially, 400 mg/day in 2 divided doses (tablets) or 4 times/day (oral suspension). May adjust dose in 200-mg increments. **Maximum:** 1,600 mg/day in divided doses.

Dosage in Renal Impairment

CrCl less than 10 ml/min: 75% of normal dose. **HD:** 75% of normal dose. **CRRT:** 75% of normal dose.

SIDE EFFECTS

Frequent (more than 10%): Vertigo, somnolence, ataxia, fatigue, leucopenia, rash, urticaria, nausea, vomiting. **Occasional (10%–1%):** Headache, diplopia, blurred vision, thrombocytopenia, dry mouth, edema, fluid retention, increased weight. **Rare (less than 1%):** Tremors, visual disturbances, lymphadenopathy, jaundice, involuntary muscle movements, nystagmus, dermatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Toxic reactions appear as blood dyscrasias (aplastic anemia, agranulocytosis, thrombocytopenia, leukopenia, leukocytosis, eosinophilia), cardiovascular disturbances (CHF, hypotension/hypertension, thrombophlebitis, arrhythmias), dermatologic effects (rash, urticaria, pruritus, photosensitivity). Abrupt withdrawal may precipitate status epilepticus.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Seizures: Review history of seizure disorder (intensity, frequency, duration, level of

consciousness [LOC]). Provide safety precautions, quiet/dark environment. **Neuralgia:** Assess facial pain, stimuli that may cause facial pain. **Bipolar:** Assess mental status, cognitive abilities. CBC, serum iron determination, urinalysis, BUN should be performed before therapy begins and periodically during therapy.

INTERVENTION/EVALUATION

Seizures: Observe frequently for recurrence of seizure activity. Monitor for therapeutic serum levels. Assess for clinical improvement (decrease in intensity, frequency of seizures). Assess for clinical evidence of early toxicity (fever, sore throat, mouth ulcerations, unusual bruising/bleeding, joint pain). **Neuralgia:** Avoid triggering tic douloureux (draft, talking, washing face, jarring bed, hot/warm/cold food or liquids). **Bipolar:** Monitor for suicidal ideation, behavioral changes. Observe for excessive sedation. **Therapeutic serum level:** 4–12 mcg/ml; **toxic serum level:** greater than 12 mcg/ml.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication after long-term use (may precipitate seizures). • Strict maintenance of drug therapy is essential for seizure control. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report visual disturbances. • Blood tests should be repeated frequently during first 3 mos of therapy and at monthly intervals thereafter for 2–3 yrs. • Do not take oral suspension simultaneously with other liquid medicine. • Do not take with grapefruit juice. • Report serious skin reactions.

carbidopa/levodopa

kar-bi-doe-pa/**lee**-voe-doe-pa (Apo-Levocarb, Novo-Levocarbidopa, Parcopa, Sinemet, Sinemet CR)

Do not confuse Sinemet with Serevent.

FIXED-COMBINATION(S)

Stalevo: carbidopa/levodopa/entacapone (antiparkinson agent): 12.5 mg/50 mg/200 mg, 18.75 mg/75 mg/200 mg, 25 mg/100 mg/200 mg, 31.25 mg/125 mg/200 mg, 37.5 mg/150 mg/200 mg, 50 mg/200 mg/200 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopamine precursor. **CLINICAL:** Antiparkinson agent (see p. 146).

ACTION

Converted to dopamine in basal ganglia, increasing dopamine concentration in brain, inhibiting hyperactive cholinergic activity. Carbidopa prevents peripheral breakdown of levodopa, making more levodopa available for transport into brain. **Therapeutic Effect:** Reduces tremor.

PHARMACOKINETICS

Carbidopa is rapidly and completely absorbed from GI tract. Widely distributed. Excreted primarily in urine. Levodopa is converted to dopamine. Excreted primarily in urine. **Half-life:** 1–2 hrs (carbidopa); 1–3 hrs (levodopa).

USES

Treatment of idiopathic Parkinson's disease (paralysis agitans), postencephalitic parkinsonism, symptomatic parkinsonism following CNS injury by CO_2 poisoning, manganese intoxication. **OFF-LABEL:** Restless legs syndrome.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, use within 14 days of MAOIs, undiagnosed skin lesions, history of melanoma. **Cautions:** History of MI, arrhythmias, bronchial asthma (tartrazine sensitivity), emphysema; severe cardiac, pulmonary, endocrine disease; severe renal/hepatic impairment; active peptic ulcer; treated open-angle glau-

coma; seizure disorder; pts at risk for hypotension.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. May inhibit lactation. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** More sensitive to effects of levodopa. Anxiety, confusion, nervousness more common when receiving anticholinergics.

INTERACTIONS

DRUG: Isoniazid, antipsychotics, phenytoin, pyridoxine may decrease effects of carbidopa and levodopa. **MAOIs** may increase levels, effects of orthostatic hypotension. **Selegiline, antihypertensives** may increase risk of orthostatic hypotension. **HERBAL: Kava kava** may decrease effect. **FOOD: High-protein** diets may cause decreased or erratic response to levodopa. **LAB VALUES:** May increase BUN, serum LDH, alkaline phosphatase, bilirubin, AST, ALT. May decrease Hgb, Hct, WBC count.

AVAILABILITY (Rx)

Tablets (Immediate-Release [Sinemet]): 10 mg carbidopa/100 mg levodopa, 25 mg carbidopa/100 mg levodopa, 25 mg carbidopa/250 mg levodopa. **Tablets (Orally-Disintegrating [Parcopa], Immediate-Release):** 10 mg carbidopa/100 mg levodopa, 25 mg carbidopa/100 mg levodopa, 25 mg carbidopa/250 mg levodopa.

Tablets (Extended-Release [Sinemet CR]): 25 mg carbidopa/100 mg levodopa, 50 mg carbidopa/200 mg levodopa.

ADMINISTRATION/HANDLING

Note: Space doses evenly over waking hours.

PO

• Scored tablets may be crushed. • Give with meals to decrease GI upset. • Do not crush extended-release tablets; may cut in half.

PO (Parcopa)

• Place orally-disintegrating tablet on top of tongue. Tablet will dissolve in seconds, pt to swallow with saliva. Not necessary to administer with liquid.

INDICATIONS/ROUTES/DOSAGE

Parkinsonism

PO: ADULTS (IMMEDIATE-RELEASE ORALLY-DISINTEGRATING TABLET): Initially, 25/100 mg 3 times a day. May increase every other day by 1 tablet up to 200/2,000 mg daily. **ELDERLY:** Initially, 25/100 mg twice a day. May increase as necessary. **(EXTENDED-RELEASE):** 50/200 mg 2 times a day at least 6 hrs apart. Intervals between doses of Sinemet CR should be 4–8 hrs while awake, with smaller doses at end of day if doses are not equal.

SIDE EFFECTS

Frequent: Uncontrolled movements of face, tongue, arms, upper body; nausea/vomiting (80%); anorexia (50%). **Occasional:** Depression, anxiety, confusion, nervousness, urinary retention, palpitations, dizziness, light-headedness, decreased appetite, blurred vision, constipation, dry mouth, flushed skin, headache, insomnia, diarrhea, unusual fatigue, darkening of urine and sweat. **Rare:** Hypertension, ulcer, hemolytic anemia (marked by fatigue).

ADVERSE EFFECTS/ TOXIC REACTIONS

High incidence of involuntary choreiform, dystonic, dyskinetic movements in those on long-term therapy. Numerous mild to severe CNS and psychiatric disturbances may occur (reduced attention span, anxiety, nightmares, daytime drowsiness, euphoria, fatigue, paranoia, psychotic episodes, depression, hallucinations).

C

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess symptoms of Parkinson's disease (e.g., rigidity, pill rolling, gait).

INTERVENTION/EVALUATION

Be alert to neurologic effects (headache, lethargy, mental confusion, agitation). Monitor for evidence of dyskinesia (difficulty with movement). Assess for clinical reversal of symptoms (improvement of tremor of head and hands at rest, mask-like facial expression, shuffling gait, muscular rigidity). Monitor B/P (standing, sitting, supine).

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Sugarless gum, sips of tepid water may relieve dry mouth. • Take with food to minimize GI upset. • Effects may be delayed from several wks to mos. • May cause darkening of urine or sweat (not harmful). • Report any uncontrolled movement of face, eyelids, mouth, tongue, arms, hands, legs; mental changes; palpitations; severe or persistent nausea/vomiting; difficulty urinating. • Report exacerbations of asthma, underlying depression, psychosis.

carboplatin

HIGH ALERT

kar-boe-**plat-tin**
(Paraplatin-AQ)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents (high potential for severe reactions, including anaphylaxis [may occur within minutes of administration] and sudden death). Profound myelosuppression (anemia, thrombocytopenia) has occurred.

Do not confuse carboplatin with Cisplatin or oxaliplatin, or Paraplatin with Platinol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Platinum coordination complex. **CLINICAL:** Antineoplastic (see p. 81C).

ACTION

Inhibits DNA synthesis by cross-linking with DNA strands, preventing cell division. Cell cycle–phase nonspecific. **Therapeutic Effect:** Interferes with DNA function.

PHARMACOKINETICS

Protein binding: Low. Hydrolyzed in solution to active form. Primarily excreted in urine. **Half-life:** 2.6–5.9 hrs.

USES

Treatment of ovarian carcinoma. **OFF-LABEL:** Brain tumors, Hodgkin's and non-Hodgkin's lymphomas, malignant melanoma, retinoblastoma, treatment of breast, bladder, cervical, endometrial, esophageal, small-cell lung, non–small-cell lung, head and neck, testicular carcinomas, germ cell tumors, osteogenic sarcoma.

PRECAUTIONS

Contraindications: History of severe allergic reaction to cisplatin, platinum compounds, mannitol; severe bleeding, severe myelosuppression. **Cautions:** Moderate bone marrow depression, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Peripheral neurotoxicity increased, myelotoxicity may be more severe. Age-related renal impairment may require decreased dosage, more careful monitoring of blood counts.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **Nephrotoxic, ototoxic medications** may increase risk of toxicity. **HERBAL:** Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **Echinacea** may decrease levels/effects. **FOOD:** None known. **LAB VALUES:** May decrease serum calcium, magnesium, potassium, sodium. May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, AST.

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Reconstitution • Dilute with D_5W or 0.9% NaCl to a final concentration of 0.5–2 mg/ml.

Rate of Administration • Infuse over 15–60 min. • Rarely, anaphylactic reaction occurs minutes after administration. Use of epinephrine, corticosteroids alleviates symptoms.

Storage • Store vials at room temperature. •After dilution, solution is stable for 8 hrs.

IV INCOMPATIBILITY

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Etoposide (VePesid), granisetron (Kytril), lipids, ondansetron (Zofran), paclitaxel (Taxol).

INDICATIONS/ROUTES/DOSAGE

Ovarian Carcinoma (Monotherapy)

IV: ADULTS: 360 mg/m^2 on day 1, every 4 wks. Do not repeat dose until neutrophil and platelet counts are within acceptable levels. Adjust dosage in previously treated pts based on lowest post-treatment platelet or neutrophil count. Increase dosage only once to no more than 125% of starting dose.

Ovarian Carcinoma (Combination Therapy)

IV: ADULTS: 300 mg/m^2 (with cyclophosphamide) on day 1, every 4 wks. Do not repeat dose until neutrophil and platelet counts are within acceptable levels.

Usual Dose for Children

300–600 mg/m^2 every 4 wks for solid tumor, or 175 mg/m^2 every 4 wks for brain tumor.

Dosage in Renal Impairment

Initial dosage is based on creatinine clearance; subsequent dosages are based on pt's tolerance, degree of myelosuppression.

Creatinine Clearance	Dosage Day 1
60 ml/min or greater	360 mg/m^2
41–59 ml/min	250 mg/m^2
16–40 ml/min	200 mg/m^2

SIDE EFFECTS

Frequent: Nausea (80%–75%), vomiting (65%). **Occasional:** Generalized pain (17%), diarrhea/constipation (6%), peripheral neuropathy (4%). **Rare (3%–2%):** Alopecia, asthenia (loss of strength, energy), hypersensitivity reaction (erythema, pruritus, rash, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression may be severe, resulting in anemia, infection (sepsis, pneumonia), major bleeding. Prolonged treatment may result in peripheral neurotoxicity.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Do not repeat treatment until WBC recovers from previous therapy. Transfusions may be needed in those receiving prolonged therapy (my-

elosuppression increased in those with previous therapy, renal impairment).

INTERVENTION/EVALUATION

Monitor hematologic status, pulmonary function studies, hepatic/renal function tests, CBC, serum electrolytes. Monitor for fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Nausea, vomiting generally abate in less than 24 hrs. • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid contact with those who have recently received live virus vaccine.

carfilzomib

kar-**fil**-zoh-mib
(Kyprolis)
Do not confuse carfilzomib with crizotinib, pazopanib, or sunitinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Proteasome inhibitor. **CLINICAL:** Antineoplastic.

ACTION

Blocks action of proteasomes, intracellular proteins to induce cell death in rapidly dividing cells. **Therapeutic Effect:** Inhibits activity, delays tumor growth in multiple myeloma, hematologic, and solid tumors.

PHARMACOKINETICS

Protein Binding: 97%. Rapidly, extensively metabolized. Excreted primarily extrahepatically. Minimal removal by hemodialysis. **Half-life:** Equal to or less than 1 hr on day 1 of cycle 1. Proteasome inhibition was maintained for 48 hrs or longer following first dose of carfilzomib for each week of dosing.

USES

Treatment of pts with multiple myeloma who have received at least 2 prior therapies including bortezomib and an immunomodulatory agent and have demonstrated disease progression on or within 60 days of completion of last therapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Preexisting CHF, myocardial abnormalities, complications of pulmonary hypertension (e.g., dyspnea), impaired hepatic function.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Strictly avoid pregnancy. May cause fetal harm. Unknown if excreted in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None significant. **LAB VALUES:** May increase serum creatinine, aspartate aminotransferase, glucose, creatinine, AST, ALT, bilirubin, calcium. May decrease RBC count, Hgb, Hct, absolute neutrophil count (ANC), platelet count, serum magnesium, phosphate, potassium, sodium.

AVAILABILITY (Rx)

Injection Powder for Reconstitution (Single-Use Vial): 60 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Dose is calculated using pts' actual body surface area at baseline. Pts with a body surface area greater than 2.2 m^2 should receive dose based on a body surface area of 2.2 m^2. Dose adjustments do not need to be made for weight changes of less than or equal to 20%.

IV

Reconstitution • Slowly inject 29 ml Sterile Water for Injection, directing solution to inside wall of vial (minimizes foaming). • Swirl and invert vial slowly for 1 min or until complete dissolution of any cake or powder occurs. • Do not shake. • If foaming occurs, rest vial for 2–5 min until foaming subsides. • Withdraw calculated dose from vial and dilute into 50 ml D_5W. • Final concentration of reconstituted solution: 2 mg/ml.

Rate of administration • Infuse over 2–10 min. • Do not administer as a bolus.

Storage • Refrigerate undiluted vial. • Reconstituted solution may be refrigerated up to 24 hrs before use. • At room temperature, use diluted solution within 4 hrs.

IV INCOMPATIBILITIES

Do not mix with other IV medications or additives or infuse concurrently via a common IV line. Flush IV administration line with NaCl or D_5W immediately before and after carfilzomib administration.

INDICATIONS/ROUTES/DOSAGE

◄ALERT► Prior to each dose in cycle 1, give 250 ml to 500 ml NaCl. Give an additional 250 ml to 500 ml IV fluid following administration. Continue IV hydration in subsequent cycles (reduces risk of renal toxicity, tumor lysis syndrome).

Premedicate with dexamethasone 4 mg PO or IV prior to all doses during cycle 1 and prior to all doses during first cycle of dose escalation to 27 mg/m^2 (reduces incidence, severity of infusion reactions). Reinstate dexamethasone premedication (4 mg PO or IV) if symptoms develop or reappear during subsequent cycles.

Multiple Myeloma

IV Infusion: ADULTS, ELDERLY: 20 mg/m^2, given on 2 consecutive days, each wk for 3 wks (days 1, 2, 8, 9, 15, and 16), followed by a 12-day rest period (days 17 to 28). Each 28-day period is considered one treatment cycle. If tolerated in cycle 1, escalate dose to 27 mg/m^2 beginning in cycle 2 and continued at 27 mg/m^2 in subsequent cycles. Treatment may be continued until disease progression or unacceptable toxicity occurs. Dosage should be modified if hematologic, cardiac, pulmonary, renal/hepatic toxicities, peripheral neuropathy occurs.

SIDE EFFECTS

Frequent (56%–20%): Fatigue, anemia, nausea, exertional dyspnea, diarrhea, fever, headache, cough, peripheral edema, vomiting, constipation, back pain. **Occasional (18%–14%):** Insomnia, chills, arthralgia, muscle spasms, hypertension, asthenia (loss of strength, energy), extremity pain, dizziness, hypoesthesia (decreased sensitivity to stimuli, particularly touch), anorexia.

ADVERSE EFFECTS/ TOXIC REACTIONS

The most common serious adverse reactions were pneumonia (10%), acute renal failure (4%), pyrexia (3%), and CHF (3%). Adverse reactions leading to discontinuation of medication occurred in 15% of pts. Upper respiratory tract infection was seen in 28% of pts. Pneumonia occurs in 13% of pts. Cardiac failure events (e.g., CHF, pulmonary edema, decrease in ejection fraction) were reported in 7% of pts. Systemic infusion reaction characterized by chills, fever, wheezing, facial flushing, dyspnea, vomiting, sense of chest tightness can occur immediately following or up to 24 hrs after administration. Tumor lysis syndrome occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain full history of home medications including vitamins, minerals, herbal products. Maintain adequate fluid volume status throughout treatment. Monitor blood and serum chemistries closely. Assess vital signs, O_2 saturation. Assess

AST, ALT, bilirubin for evidence of hepatotoxicity. Platelet nadirs occur around day 8 of each 28-day cycle and recover to baseline by start of the next 28-day cycle.

INTERVENTION/EVALUATION

Monitor for fluid overload. Monitor platelet count frequently during treatment and adjust dose according to grade of thrombocytopenia. Monitor vital signs, O_2 saturation routinely. Assess for palpitations, tachycardia. Assess for anemia-related dizziness, exertional dyspnea, fatigue, weakness, syncope. Report decreases in Hgb, Hct, platelets, neutrophils. Monitor for acute infection (fever, diaphoresis, lethargy, oral mucosal changes, productive cough), bloody stools, bruising, hematuria, DVT, pulmonary embolism. Encourage nutritional intake and assess anorexia, weight loss. Monitor cardiac function and manage as needed. Reinforce birth control compliance. Monitor daily pattern of bowel activity, stool consistency. Offer antiemetics if nausea, vomiting occur. Maintain due diligence to signs/symptoms of neutropenia.

PATIENT/FAMILY TEACHING

• Blood levels will be drawn routinely. • Immediately report any newly prescribed medications. • May alter taste of food or decrease appetite. • Report bloody stool/ urine, increased bruising, difficulty breathing, weakness, dizziness, palpitation, weight loss. • Maintain fastidious oral hygiene. • Do not have immunizations without physician approval (drug lowers body's resistance). • Avoid those who have recently taken live virus vaccine. • Avoid crowds, those with cough, sneezing.

carisoprodol TOP 200

kar-eye-sow-**proe**-dole
(Soma)

Do not confuse carisoprodol with carbamazepine, or Soma with senna.

FIXED-COMBINATION(S)

Soma Compound: carisoprodol/aspirin (a nonsteroidal salicylate): 200 mg/325 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbamic acid ester. **CLINICAL:** Skeletal muscle relaxant (see p. 152C).

ACTION

Skeletal muscle relaxant action may be related to its sedative properties. May produce muscle relaxation by altering interneuronal activity in the descending reticular formation of the brain and spinal cord. Does not directly affect skeletal muscle. **Therapeutic Effect:** Relieves musculoskeletal pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	—	4–6 hrs

Readily absorbed from GI tract. Distributed throughout CNS. Converts to its active metabolite, meprobamate. Protein binding: 60%. Metabolized in liver; excreted in urine. Removed by hemodialysis, peritoneal dialysis. **Half-life:** 2 hrs.

USES

Relief of discomfort associated with acute, painful musculoskeletal conditions. Not to be used for more than 3 wks.

PRECAUTIONS

Contraindications: Acute intermittent porphyria, hypersensitivity to meprobamate (Equanil, Miltown). **Cautions:** History of seizures, addiction-prone pts, elderly, debilitated pts, poor CYP2C19 metabolizers, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk; decreases milk production. Crosses placenta. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CNS depressants,** including **alcohol, benzodiazepines, tricyclic antidepressants,** may increase CNS effects. **CYP2C19 inhibitors (e.g., omeprazole)** may increase concentration. **CYP2C19 inducers (e.g., rifampin)** may decrease concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 250 mg, 350 mg.

ADMINISTRATION/HANDLING

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 16 YRS: 250–350 mg 4 times daily with last dose at bedtime.

SIDE EFFECTS

Frequent (17%–13%): Drowsiness. **Occasional (8%–3%):** Dizziness, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Idiosyncratic reactions and/or severe allergic reactions may occur within min or hr of first dose (severe weakness, transient quadriplesia, euphoria, temporary vision loss). Prolonged use at high dosage can lead to tolerance, dependence, withdrawal symptoms. Abrupt withdrawal following long-term use results in anxiety, abdominal cramps, insomnia, nausea, vomiting, confusion, and occasionally chills, seizures, hallucinations. Onset of withdrawal occurs 12–48 hrs following cessation of use and can last another 12–48 hrs. Overdose may result in tachycardia, facial flushing, ataxia, tremors, agitation, irritability. Overdose has resulted in stupor, coma, shock, respiratory depression, death.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type, location, duration of musculoskeletal pain, inflammation. Inspect appearance of affected joints for immobility, stiffness, swelling.

INTERVENTION/EVALUATION

Assist with ambulation. Initiate fall precautions. Evaluate for therapeutic response: relief of pain, stiffness, swelling; improved mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

- Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Should only be used for short periods (2–3 wks). • Report withdrawal symptoms (syncope, tachyarrhythmia or excessive fatigue, unusual mental status changes).

carmustine

HIGH ALERT

kar-**mus**-teen
(BiCNU, Gliadel Wafer)

BLACK BOX ALERT Profound myelosuppression (leukopenia, thrombocytopenia) is major toxicity. High risk of pulmonary toxicity. Must be administered by personnel trained in administration/handling of chemotherapeutic agents (high potential for severe reactions, including anaphylaxis, sudden death).

Do not confuse carmustine with bendamustine or lomustine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent, nitrosourea. **CLINICAL:** Antineoplastic (see p. 81C).

C

ACTION

Inhibits DNA, RNA synthesis by cross-linking with DNA, RNA strands, preventing cell division. Cell cycle–phase nonspecific. **Therapeutic Effect:** Interferes with DNA, RNA function.

PHARMACOKINETICS

Crosses blood-brain barrier. Metabolized in liver. Excreted in urine. **Half-life:** 15–30 min.

USES

Treatment of brain tumors, Hodgkin's lymphomas, non-Hodgkin's lymphomas, multiple myeloma. **Gliadel Wafer:** Adjunct to surgery to prolong survival in recurrent glioblastoma multiforme. **OFF-LABEL:** Treatment of mycosis fungoides.

PRECAUTIONS

Contraindications: None known. **Cautions:** Pts with decreased platelet, leukocyte, erythrocyte counts; renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid during pregnancy, particularly first trimester; may cause fetal harm. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Bone marrow depressants, cimetidine may enhance myelosuppressive effect. **Hepatotoxic, nephrotoxic medications** may increase risk of hepatotoxicity, nephrotoxicity. **Live-virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, AST, ALT.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (BiCNU): 100 mg. **Implant Device (Gliadel Wafer):** 7.7 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Wear protective gloves during preparation of drug; may cause transient burning, brown staining of skin.

IV

Reconstitution • Reconstitute 100-mg vial with 3 ml sterile dehydrated (absolute) alcohol, followed by 27 ml Sterile Water for Injection to provide concentration of 3.3 mg/ml. • Further dilute with 50–250 ml D_5W or 0.9% NaCl to final concentration of 0.2–1 mg/ml.

Rate of Administration • Infuse over 1–2 hrs (shorter duration may produce intense burning pain at injection site, intense flushing of skin, conjunctiva). • Flush IV line with 5–10 ml 0.9% NaCl or D_5W before and after administration to prevent irritation at injection site.

Storage • Refrigerate unopened vials of dry powder. • Reconstituted vials are stable for 8 hrs at room temperature or 24 hrs if refrigerated. • Solutions further diluted to 0.2 mg/ml with D_5W or 0.9% NaCl are stable for 48 hrs if refrigerated or an additional 8 hrs at room temperature. • Solutions appear clear, colorless to yellow. • Discard if precipitate forms, color change occurs, or oily film develops on bottom of vial. **Gliadel Wafers:** Store at or below −20°C (−4°F). Unopened pouches may be kept at room temperature for maximum of 6 hrs.

IV INCOMPATIBILITY

Allopurinol (Aloprim), sodium bicarbonate.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Refer to individual oncology protocols.

Usual Dosage

IV *(BiCNU)*: ADULTS, ELDERLY: 150–200 mg/m² as a single dose q6–8wks or 75–100 mg/m² on 2 successive days q6–8wks. **CHILDREN:** 200–250 mg/m² q4–6wks as a single dose.

◀ALERT▶ Next dosage is based on clinical and hematologic response to previous dose (platelets greater than 100,000/mm³ and leukocytes greater than 4,000/mm³).

Implantation *(Gliadel Wafer)*: ADULTS, ELDERLY, CHILDREN: Up to 8 wafers (62.6 mg) may be placed in resection cavity.

Dosage in Renal Impairment

Creatinine Clearance (ml/min)	Dosage
46–60	80% of dose
31–45	75% of dose
Less than 31	Not recommended

SIDE EFFECTS

Frequent: Nausea/vomiting within minutes to 2 hrs after administration (may last up to 6 hrs). **Occasional:** Diarrhea, esophagitis, anorexia, dysphagia, hyperpigmentation. **Rare:** Thrombophlebitis, burning sensation, pain at injection site.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity due to myelosuppression occurs frequently. Thrombocytopenia occurs approximately 4 wks after carmustine treatment begins and lasts 1–2 wks. Leukopenia is evident 5–6 wks after treatment begins and lasts 1–2 wks. Anemia occurs less frequently, is less severe. Mild, reversible hepatotoxicity occurs frequently. Prolonged high-dose carmustine therapy may produce impaired renal function, pulmonary toxicity (pulmonary infiltrate/fibrosis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Perform CBC, renal/hepatic function studies before beginning therapy and periodically thereafter. Perform blood counts weekly during and for at least 6 wks after therapy ends.

INTERVENTION/EVALUATION

Monitor CBC, BUN, serum transaminase, alkaline phosphatase, bilirubin, pulmonary function, renal/hepatic function tests. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Monitor for pulmonary toxicity: Observe for dyspnea. Monitor for adventitious breath sounds (rales, rhonchi, crackles).

PATIENT/FAMILY TEACHING

• Maintain adequate daily fluid intake (may protect against renal impairment). • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid contact with those who have recently received live virus vaccine. • Contact physician if nausea/vomiting, fever, sore throat, chills, unusual bleeding/bruising occurs.

carvedilol

TOP 200 HIGH ALERT

kar-**ve**-dil-ole

(Apo-Carvedilol 🍁, Coreg, Coreg CR, Novo-Carvedilol 🍁)

Do not confuse carvedilol with atenolol, captopril, or carteolol, or Coreg with Corgard, Cortef, or Cozaar.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta-adrenergic blocker. **CLINICAL:** Antihypertensive (see p. 71C).

ACTION

Possesses nonselective beta-blocking and alpha-adrenergic blocking activity. Causes vasodilation. **Therapeutic Effect:** Reduces cardiac output, exercise-induced

tachycardia, reflex orthostatic tachycardia; reduces peripheral vascular resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	1–2 hrs	24 hrs

Rapidly, extensively absorbed from GI tract. Protein binding: 98%. Metabolized in liver. Excreted primarily via bile into feces. Minimally removed by hemodialysis. **Half-life:** 7–10 hrs. Food delays rate of absorption.

USES

Treatment of mild to severe heart failure, left ventricular dysfunction following MI, hypertension. Reduces risk of recurrent MI in pts with heart failure or ischemic injury. **OFF-LABEL:** Treatment of angina pectoris, idiopathic cardiomyopathy.

PRECAUTIONS

Contraindications: Bronchial asthma or related bronchospastic conditions, cardiogenic shock, decompensated heart failure, severe hepatic impairment, second- or third-degree AV block, severe bradycardia, or sick sinus syndrome (except in pts with pacemaker). **Cautions:** Concurrent use of digoxin, diltiazem, or verapamil; diabetes, myasthenia gravis; psychiatric disease; mild to moderate hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. May produce bradycardia, apnea, hypoglycemia, hypothermia during delivery; may contribute to low birthweight infants. **Pregnancy Category C (D if used in the second or third trimester). Children:** Safety and efficacy not established. **Elderly:** Incidence of dizziness may be increased.

INTERACTIONS

DRUG: Calcium channel blockers increase risk of cardiac conduction disturbances. **Diuretics, other antihypertensives** may potentiate hypotensive effects. **Cimetidine** may increase concentration. May increase concentration of **cyclosporine, digoxin. CYP2D6 inhibitors (e.g., fluoxetine, paroxetine)** may increase concentration/side effects. **Digoxin, beta-blockers** can increase risk of bradycardia. **CYP2C9 inhibitors (e.g., amiodarone, fluconazole)** may enhance slowing of HR or cardiac conduction. May increase effect of **insulin, oral hypoglycemics. Rifampin** decreases concentration. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUE:** May increase serum creatinine, bilirubin, AST, ALT, PT.

AVAILABILITY (Rx)

Tablets (Immediate-Release): 3.125 mg, 6.25 mg, 12.5 mg, 25 mg.

Capsules (Extended-Release [Coreg CR]): 10 mg, 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• Give with food (slows rate of absorption, reduces risk of orthostatic effects). • Do not crush or chew extended-release capsules. • Capsules may be opened and sprinkled on applesauce for immediate use.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO *(Immediate-Release)*: ADULTS, ELDERLY: Initially, 6.25 mg twice a day. May double at 7- to 14-day intervals to highest tolerated dosage. **Maximum:** 50 mg/day. ***(Extended-Release)*:** Initially, 20 mg once daily. May increase to 40 mg once daily after 1–2 wks. **Maximum:** 80 mg once daily.

CHF

PO *(Immediate-Release)*: ADULTS, ELDERLY: Initially, 3.125 mg twice a day. May double at 2-wk intervals to highest tolerated dosage. **Maximum:** For pts weighing more than 85 kg, give 50 mg twice a day;

for those weighing 85 kg or less, give 25 mg twice a day. ***(Extended-Release)*:** Initially, 10 mg once daily for 2 wks. May increase to 20 mg, 40 mg, and 80 mg over successive intervals of at least 2 wks.

Left Ventricular Dysfunction

PO *(Immediate-Release)*: ADULTS, ELDERLY: Initially, 3.125–6.25 mg twice a day. May increase at intervals of 3–10 days up to 25 mg twice a day. ***(Extended-Release)*:** Initially, 10–20 mg once daily. May increase to 40 mg and 80 mg once daily in intervals of 3–10 days.

SIDE EFFECTS

Carvedilol is generally well tolerated, with mild transient side effects. **Frequent (6%–4%):** Fatigue, dizziness. **Occasional (2%):** Diarrhea, bradycardia, rhinitis, back pain. **Rare (less than 2%):** Orthostatic hypotension, drowsiness, UTI, viral infection.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension, bronchospasm, cardiac insufficiency, cardiogenic shock, cardiac arrest. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremors. May precipitate CHF, MI in pts with cardiac disease; thyroid storm in those with thyrotoxicosis; peripheral ischemia in those with existing peripheral vascular disease. Hypoglycemia may occur in pts with previously controlled diabetes.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, apical pulse immediately before drug is administered (if pulse is 60 beats/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Monitor B/P for hypotension, respiration for dyspnea. Take standing systolic B/P 1 hr after dosing as guide for tolerance. Assess pulse for quality, regularity, rate for bradycardia. Monitor EKG for cardiac arrhythmias. Assist with ambulation if dizziness occurs. Assess for evidence of CHF: dyspnea (particularly on exertion or lying down), night cough, peripheral edema, distended neck veins. Monitor I&O (increase in weight, decrease in urine output may indicate CHF). Monitor renal/hepatic function tests.

PATIENT/FAMILY TEACHING

• Full antihypertensive effect noted in 1–2 wks. • Contact lens wearers may experience decreased lacrimation. • Take with food. • Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control hypertension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report excessive fatigue, prolonged dizziness. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician's approval. • Monitor B/P, pulse before taking medication. • Restrict salt, alcohol intake.

caspofungin

kas-poe-**fun**-jin
(Cancidas)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Echinocandin antifungal. **CLINICAL:** Antifungal (see p. 47C).

ACTION

Inhibits synthesis of glucan, a vital component of fungal cell wall formation, damaging fungal cell membrane. **Therapeutic Effect:** Fungistatic.

PHARMACOKINETICS

Distributed in tissue. Extensively bound to albumin. Protein binding: 97%. Slowly metabolized in liver to active metabolite. Excreted primarily in urine and, to a lesser extent, in feces. Not removed by hemodialysis. **Half-life:** 40–50 hrs.

C

USES

Treatment of invasive aspergillosis, candidemia, *Candida* infection (intra-abdominal abscess, peritonitis, esophageal, pleural space). Empiric therapy for presumed fungal infections in febrile neutropenia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Concurrent use of cyclosporine, hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be embryotoxic. Crosses placental barrier. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related moderate renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Cyclosporine may increase concentration. **Rifampin** may decrease concentration. May decrease concentration/effects of **tacrolimus. HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, creatinine, AST, ALT, urine protein, RBCs. May decrease serum albumin, bicarbonate, potassium, magnesium, Hgb, Hct.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50-mg, 70-mg vials.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 50-mg or 70-mg vial with 0.9% NaCl, Sterile Water for Injection, or Bacteriostatic Water for Injection. Further dilute in 0.9% NaCl or D_5W to maximum concentration of 0.5 mg/ml.

Rate of Administration • Infuse over 60 min.

Storage • Refrigerate vials but warm to room temperature before preparing with diluent. • Reconstituted solution, prior to preparation of pt infusion solution, may be stored at room temperature for 1 hr before infusion. • Final infusion solution can be stored at room temperature for 24 hrs or 48 hrs if refrigerated. • Discard if solution contains particulate or is discolored.

IV INCOMPATIBILITIES

Do not mix caspofungin with any other medication or use dextrose as a diluent.

INDICATIONS/ROUTES/DOSAGE

Aspergillosis

IV: ADULTS, ELDERLY: Give single 70-mg loading dose on day 1, followed by 50 mg/day thereafter. For pts with moderate hepatic insufficiency, reduce daily dose to 35 mg. **CHILDREN 3 MOS–17 YRS:** 70 mg/m^2 on day 1, then 50 mg/m^2 daily. **Maximum:** 70-mg loading dose, 50-mg daily dose.

Invasive Candidiasis

IV: ADULTS, ELDERLY: Initially, 70 mg followed by 50 mg daily. **CHILDREN 3 MOS–17 YRS:** 70 mg/m^2 on day 1, then 50 mg/m^2 daily. **Maximum:** 70-mg loading dose, 50-mg daily dose.

Esophageal Candidiasis

IV: ADULTS, ELDERLY: 50 mg a day. **CHILDREN 3 MOS–17 YRS:** 50 mg/m^2 daily. **Maximum:** 50 mg.

Empiric Therapy

IV: ADULTS, ELDERLY: Initially, 70 mg then 50 mg/day. May increase to 70 mg/day. **CHILDREN 3 MOS–17 YRS:** 70 mg/m^2 on day 1, then 50 mg/m^2 daily. **Maximum:** 70 mg.

Dosage in Hepatic Impairment

Mild	No adjustment
Moderate	(Child-Pugh score 7–9): 35 mg/day
Severe	No clinical experience

SIDE EFFECTS

Frequent (26%): Fever. **Occasional (11%–4%):** Headache, nausea, phlebitis. **Rare**

(3% or less): Paresthesia, vomiting, diarrhea, abdominal pain, myalgia, chills, tremor, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction (rash, facial edema, pruritus, sensation of warmth) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine baseline temperature, hepatic function tests. Assess for allergic or hypersensitivity reactions.

INTERVENTION/EVALUATION

Assess for signs/symptoms of hepatic dysfunction. Monitor hepatic enzyme tests in pts with preexisting hepatic dysfunction. Monitor CBC, serum potassium, Hgb. Monitor for fever, chills.

PATIENT/FAMILY TEACHING

- Report rash, facial swelling, itching, difficulty breathing.

cefaclor

seff-uh-klor
(Apo-Cefaclor ✱, Ceclor ✱, Novo-Cefaclor ✱)
Do not confuse Cefaclor with cephalexin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 23C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 25%. Widely distributed. Partially metabolized in liver. Primarily excreted in urine. Moderately removed by hemodialysis. **Half-life:** 0.6–0.9 hr (increased in renal impairment).

USES

Treatment of susceptible infections due to *S. pneumoniae, S. pyogenes, S. aureus, H. influenzae, E. coli, M. catarrhalis, Klebsiella* spp., *P. mirabilis,* including acute otitis media, bronchitis, pharyngitis/tonsillitis, respiratory tract, skin/skin structure, UTIs.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted in those older than 1 mo. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, LDH, AST, ALT. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Capsules: 250 mg, 500 mg. **Powder for Oral Suspension:** 125 mg/5 ml, 250 mg/5 ml, 375 mg/5 ml.

ADMINISTRATION/HANDLING

PO

- After reconstitution, oral solution is stable for 14 days if refrigerated.
- Shake oral suspension well before using.
- Chewable tablet must be chewed before swallowing; do not swallow whole.
- Give without regard to food; if GI upset occurs, give with food, milk.

C

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 250–500 mg q8h. **CHILDREN:** 20–40 mg/kg/day divided q8–12h. **Maximum:** 1 g/day.

Otitis Media

PO: CHILDREN: 40 mg/kg/day divided q12h. **Maximum:** 1 g/day.

Pharyngitis

CHILDREN: 20 mg/kg/day divided q12h. **Maximum:** 1 g/day.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
10–50 ml/min	50%–100% of normal
Less than 10 ml/min	50% of normal

SIDE EFFECTS

Frequent: Oral candidiasis, mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (pruritus, rash, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • May cause GI upset (may take with food, milk). • Refrigerate oral suspension. • Inform physician if persistent diarrhea occurs.

cefadroxil

sef-a-**drox**-il
(Apo-Cefadroxil, Novo-Cefadroxil)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: First-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 22C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 15%–20%. Widely distributed. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 1.2–1.5 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to group A streptococci, staphylococci, *S. pneumoniae, H. influenzae, Klebsi-*

ella spp., *E. coli, P. mirabilis,* including impetigo, pharyngitis/tonsillitis, skin/skin structure, UTIs.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, LDH, AST, ALT. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Capsules: 500 mg. **Powder for Oral Suspension:** 250 mg/5 ml, 500 mg/5 ml. **Tablets:** 1 g.

ADMINISTRATION/HANDLING

PO

• After reconstitution, oral solution is stable for 14 days if refrigerated. • Shake oral suspension well before using. • Give without regard to meals; if GI upset occurs, give with food, milk.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 1–2 g/day in 2 divided doses. **CHILDREN:** 30 mg/kg/day in 2 divided doses. **Maximum:** 2 g/day.

Dosage in Renal Impairment

After initial 1-g dose, dosage and frequency are modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
10–25 ml/min	q24h
Less than 10 ml/min	q36h

SIDE EFFECTS

Frequent: Oral candidiasis, mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, unusual bruising/bleeding, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly

spaced. • May cause GI upset (may take with food, milk). • Refrigerate oral suspension. • Report persistent diarrhea.

C

cefazolin

sef-ah-**zoe**-lin
(Ancef)
Do not confuse cefazolin with cefoxitin, cefprozil, ceftriaxone, or cephalexin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: First-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 22C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed. Protein binding: 85%. Primarily excreted unchanged in urine. Moderately removed by hemodialysis. **Half-life:** 1.4–1.8 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to *S. aureus, S. epidermidis,* group A beta-hemolytic streptococci, *S. pneumoniae, E. coli, P. mirabilis, Klebsiella* spp., *H. influenzae* including biliary tract, bone and joint, genital, respiratory tract, skin/skin structure, UTIs, endocarditis, perioperative prophylaxis, septicemia. **OFF-LABEL:** Prophylaxis against infective endocarditis.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy, history of seizures.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require reduced dosage.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, LDH, AST, ALT. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Ancef): 500 mg, 1 g. **Ready-to-Hang Infusion (Ancef):** 1 g/50 ml, 2 g/100 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 1 g with at least 10 ml Sterile Water for Injection or 0.9% NaCl. • May further dilute in 50–100 ml D_5W or 0.9% NaCl (decreases incidence of thrombophlebitis).
Rate of Administration • For IV push, administer over 3–5 min (**maximum concentration:** 100 mg/ml). • For intermittent IV infusion (piggyback), infuse over 10–60 min (**maximum concentration:** 20 mg/ml).
Storage • Solution appears light yellow to yellow. • Reconstituted solution stable for 24 hrs at room temperature or for 10 days if refrigerated. • IV infusion (piggyback) stable for 48 hrs at room temperature or for 14 days if refrigerated.

IM

• To minimize discomfort, inject deep IM slowly. • Less painful if injected into gluteus maximus rather than lateral aspect of thigh.

IV INCOMPATIBILITIES

Amikacin (Amikin), amiodarone (Cordarone), hydromorphone (Dilaudid).

IV COMPATIBILITIES

Calcium gluconate, dexamethasone (Decadron), diltiazem (Cardizem), famotidine (Pepcid), heparin, insulin (regular), lidocaine, lipids, lorazepam (Ativan), magnesium sulfate, meperidine (Demerol), metoclopramide (Reglan), midazolam (Versed), morphine, multivitamins, ondansetron (Zofran), potassium chloride, propofol (Diprivan), total parenteral nutrition (TPN), vecuronium (Norcuron).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IV, IM: ADULTS: 250 mg to 2g q6–12h (usually q8h). **CHILDREN OLDER THAN 1 MO**: 25–100 mg/kg/day divided q6–8h. **Maximum:** 6 g/day. **NEONATES OLDER THAN 7 DAYS**: 40–60 mg/kg/day in divided doses q8–12h. **NEONATES 7 DAYS AND YOUNGER**: 40 mg/kg/day in divided doses q12h.

Uncomplicated UTI

IV, IM: ADULTS, ELDERLY: 1 g q12h.

Mild to Moderate Infections

IV, IM: ADULTS, ELDERLY: 500 mg–1 g q6–8h.

Severe Infections

IV, IM: ADULTS, ELDERLY: 1–2 g q6–8h.

Life-Threatening Infections

IV, IM: ADULTS, ELDERLY: 1–2 g q4–6h. **Maximum**: 12 g/day.

Perioperative Prophylaxis

IV, IM: ADULTS, ELDERLY: 1 g 30–60 min before surgery, 0.5–1 g during surgery and q6–8h for up to 24 hrs postoperatively.

Dosage in Renal Impairment

Dosing frequency is modified based on creatinine clearance.

Creatinine Clearance	Dosage
11–34 ml/min	50% usual dose q12h
10 ml/min or less	50% usual dose q18–24h

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Evaluate IM site for induration and tenderness. Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection.

C

cefdinir

TOP 200

sef-di-neer
(Omnicef)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 24C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: 60%–70%. Widely distributed. Not appreciably metabolized. Primarily excreted unchanged in urine. Minimally removed by hemodialysis. **Half-life:** 1–2 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to *S. pyogenes, S. pneumoniae, H. influenzae, H. parainfluenzae, M. catarrhalis* including community-acquired pneumonia, acute exacerbation of chronic bronchitis, acute maxillary sinusitis, pharyngitis, tonsillitis, uncomplicated skin/skin structure infections, otitis media.

PRECAUTIONS

Contraindications: History of anaphylactic reaction to cephalosporins. **Cautions:** Hypersensitivity to penicillins; renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Not detected in breast milk. **Pregnancy Category B. Children:** Newborns, infants may have lower renal clearance. **Elderly:** Age-related renal impairment may require decreased dosage or increased dosing interval.

INTERACTIONS

DRUG: **Antacids, iron preparations** may interfere with absorption. **Probenecid** increases concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May produce false-positive reaction for urine ketones. May increase serum alkaline phosphatase, bilirubin, LDH, AST, ALT.

AVAILABILITY (Rx)

Capsules: 300 mg. **Powder for Oral Suspension:** 125 mg/5 ml, 250 mg/5 ml.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Twice daily doses should be given 12 hrs apart. • Shake oral suspension well before administering. • Store mixed suspension at room temperature. Discard unused portion after 10 days.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: 300 mg q12h or 600 mg once daily. **CHILDREN 6 MOS–12 YRS:** 7 mg/kg q12h or 14 mg/kg once daily. **Maximum:** 600 mg/day.

Community-Acquired Pneumonia

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 300 mg q12h for 10 days.

Acute Exacerbation of Chronic Bronchitis

PO: ADULTS, ELDERLY: 300 mg q12h for 5–10 days or 600 mg once daily for 10 days.

Acute Maxillary Sinusitis

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 300 mg q12h or 600 mg q24h for 10 days. **CHILDREN 6 MOS–12 YRS:** 7 mg/kg q12h or 14 mg/kg q24h for 10 days. **Maximum:** 600 mg/day.

Pharyngitis, Tonsillitis

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 300 mg q12h for 5–10 days or 600 mg q24h for 10 days. **CHILDREN 6 MOS–12 YRS:** 7 mg/kg q12h for 5–10 days or 14 mg/kg q24h for 10 days. **Maximum:** 600 mg/day.

Uncomplicated Skin/Skin Structure Infections

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 300 mg q12h for 10 days. **CHILDREN 6 MOS–12 YRS:** 7 mg/kg q12h for 10 days. **Maximum:** 600 mg/day.

Acute Bacterial Otitis Media

PO *(Capsules)*: CHILDREN: 6 MOS–12 YRS: 7 mg/kg q12h or 14 mg/kg q24h for 10 days. **Maximum:** 600 mg/day.

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min: 300 mg/day or 7 mg/kg as single daily dose. **Hemodialysis pts:** 300 mg or 7 mg/kg/dose every other day.

SIDE EFFECTS

Frequent: Oral candidiasis, mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to cefdinir or other cephalosporins, penicillins.

INTERVENTION/EVALUATION

Observe for rash. Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor hematology reports.

PATIENT/FAMILY TEACHING

• Take antacids 2 hrs before or following medication. • Continue medication for full length of treatment; do not skip doses. • Doses should be evenly spaced. • Report persistent severe diarrhea, rash, muscle aches, fever, enlarged lymph nodes, joint pain.

cefepime

sef-e-**peem**
(Maxipime)
Do not confuse cefepime with cefixime or ceftazidime.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fourth-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 24C).

ACTION

Binds to bacterial cell wall membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed after IM administration. Protein binding: 20%. Widely distributed. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:**

C

2–2.3 hrs (increased in renal impairment, elderly pts).

USES

Susceptible infections due to aerobic gram-negative organisms including *P. aeruginosa,* gram-positive organisms including *S. aureus.* Treatment of empiric febrile neutropenia, intra-abdominal infections, skin/skin structure infections, UTIs, pneumonia. **OFF-LABEL:** Brain abscess, malignant otitis externa, septic lateral/cavernous sinus thrombus.

PRECAUTIONS

Contraindications: History of anaphylactic reaction to penicillins, hypersensitivity to cephalosporins. **Cautions:** Renal impairment, history of seizure disorder.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted in those older than 2 mos. **Elderly:** Age-related renal impairment may require reduced dosage or increased dosing interval.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, LDH, AST, ALT. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg, 1 g, 2 g. **Injection, Premix:** 1 g (50 ml), 2 g (100 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 5 ml to 500-mg vial (10 ml for 1-g and 2-g vials). • Further dilute with 50–100 ml 0.9% NaCl or D_5W (final concentration not to exceed 40 mg/ml).

Rate of Administration • For intermittent IV infusion (piggyback), infuse over 20–30 min. For direct IV, administer over 5 min.

Storage • Solution is stable for 24 hrs at room temperature, 7 days if refrigerated.

IM

• Add 1.3 ml Sterile Water for Injection, 0.9% NaCl, or D_5W to 500-mg vial (2.4 ml for 1-g and 2-g vials). • Inject into a large muscle mass (e.g., upper gluteus maximus).

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin (Fungizone), cimetidine (Tagamet), ciprofloxacin (Cipro), cisplatin (Platinol), dacarbazine (DTIC), daunorubicin (Cerubidine), diazepam (Valium), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), doxorubicin (Adriamycin), droperidol (Inapsine), famotidine (Pepcid), ganciclovir (Cytovene), haloperidol (Haldol), magnesium, magnesium sulfate, mannitol, meperidine (Demerol), metoclopramide (Reglan), morphine, ofloxacin (Floxin), ondansetron (Zofran), vancomycin (Vancocin).

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, furosemide (Lasix), hydromorphone (Dilaudid), lorazepam (Ativan), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IV: ADULTS, ELDERLY: 1–2 g q8–12h. **CHILDREN:** 50 mg/kg q8–12h not to exceed adult dosing.

IM: ADULTS, ELDERLY: 0.5–1 g q12h. **CHILDREN:** 50 mg/kg/dose q8–12h not to exceed adult dosing.

Pneumonia

IV: ADULTS, ELDERLY: 1–2 g q12h for 7–10 days. **CHILDREN 2 MOS AND OLDER:** 50 mg/kg q12h. **Maximum:** 2 g/dose.

Intra-Abdominal Infections

IV: ADULTS, ELDERLY: 2 g q12h for 7–10 days.

Skin/Skin Structure Infections

IV: ADULTS, ELDERLY: 2 g q12h for 10 days. **CHILDREN 2 MOS AND OLDER:** 50 mg/kg q12h. **Maximum:** 2 g/dose.

UTI

IV: ADULTS, ELDERLY: 0.5–2 g q12h for 7–10 days. **CHILDREN 2 MOS AND OLDER:** 50 mg/kg q12h. **Maximum:** 2 g/dose.

Febrile Neutropenia

IV: ADULTS, ELDERLY: 2 g q8h. **CHILDREN 2 MOS AND OLDER:** 50 mg/kg q8h. **Maximum:** 2 g/dose.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
30–60 ml/min	500 mg q24h–2 g q12h
11–29 ml/min	500 mg–2 g q24h
10 ml/min or less	250 mg–1 g q24h
Hemodialysis	Initially, 1 g, then 0.5–1 g q24h or 1–2 g q48–72h.
Peritoneal dialysis	Normal dose q48h
Continuous renal replacement therapy	Initially, 2 g, then 1 g q8h or 2 g q12h

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Evaluate IM site for induration and tenderness. Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, CBC, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Continue therapy for full length of treatment. • Doses should be evenly spaced. • Notify physician if persistent diarrhea occurs.

cefixime

sef-**ix**-eem
(Suprax)
Do not confuse cefixime with cefepime, or Suprax with Sporanox or Surbex.

C

CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: 65%–70%. Widely distributed. Primarily excreted unchanged in urine. Minimally removed by hemodialysis. **Half-life:** 3–4 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to *S. pneumoniae, S. pyogenes, M. catarrhalis, H. influenzae, N. gonorrhoeae, E. coli, P. mirabilis* including otitis media, acute bronchitis, acute exacerbations of chronic bronchitis, pharyngitis, tonsillitis, uncomplicated UTI, uncomplicated gonorrhea.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** History of penicillin allergy, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not recommended during labor and delivery. Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. May increase **aminoglycoside** levels. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, LDH, AST, ALT. May cause a positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Oral Suspension: 100 mg/5 ml, 200 mg/5 ml. **Tablets:** 400 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • After reconstitution, oral suspension is stable for 14 days at room temperature. • Do not refrigerate. • Shake oral suspension well before administering.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER WEIGHING MORE THAN 50 KG: 400 mg/day as a single dose or in 2 divided doses. **CHILDREN 6 MOS–12 YRS WEIGHING LESS THAN 50 KG:** 8–20 mg/kg/day as a single dose or in 2 divided doses. **Maximum:** 400 mg.

Uncomplicated Gonorrhea

PO: ADULTS: 400 mg as a single dose.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
21–60 ml/min	75% of usual dose
20 ml/min or less	50% of usual dose

SIDE EFFECTS

Frequent: Oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (arthralgia, fever; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe

watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to cefixime or other cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor renal function tests for evidence of nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue medication for full length of treatment; do not skip doses. • Doses should be evenly spaced. • May cause GI upset (may take with food or milk). • Report diarrhea.

cefotaxime

sef-oh-**tax**-eem
(Claforan)
Do not confuse cefotaxime with cefoxitin, ceftizoxime, or cefuroxime, or Claforan with Claritin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 24C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed to CSF. Protein binding: 30%–50%. Partially metabolized in liver to active metabolite. Primarily excreted in urine. Moderately removed by hemodialysis. **Half-life:** 1 hr (increased in renal impairment).

USES

Treatment of susceptible infections (active vs. most gram-negative [not *Pseudomonas*] and gram-positive cocci [not *Enterococcus*]) including bone, joint, GU, gynecologic, intra-abdominal, lower respiratory tract, skin/skin structure infections, septicemia, meningitis, perioperative prophylaxis. **OFF-LABEL:** Treatment of Lyme disease.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** History of penicillin allergy, renal impairment with creatinine clearance less than 30 ml/min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause positive direct/indirect Coombs' test. May increase serum AST, ALT, alkaline phosphatase.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg, 1 g, 2 g. **Intravenous Solution (Premix):** 1 g/50 ml, 2 g/50 ml.

C

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute with 10 ml Sterile Water for Injection or 0.9% NaCl to provide a maximum concentration of 100 mg/ml. • May further dilute with 50–100 ml 0.9% NaCl or D_5W.

Rate of Administration • For IV push, administer over 3–5 min. • For intermittent IV infusion (piggyback), infuse over 15–30 min.

Storage • Solution appears light yellow to amber. • IV infusion (piggyback) is stable for 24 hrs at room temperature, 5 days if refrigerated. • Discard if precipitate forms.

IM

• Reconstitute with Sterile Water for Injection or Bacteriostatic Water for Injection to provide a concentration of 230–330 mg/ml. • To minimize discomfort, inject deep IM slowly. Less painful if injected into gluteus maximus than lateral aspect of thigh. For 2-g IM dose, give at 2 separate sites.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), filgrastim (Neupogen), fluconazole (Diflucan), hetastarch (Hespan), lipids, pentamidine (Pentam IV), vancomycin (Vancocin).

IV COMPATIBILITIES

Diltiazem (Cardizem), famotidine (Pepcid), hydromorphone (Dilaudid), lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IV, IM: ADULTS, ELDERLY: 1–2 g q4–12h. **CHILDREN WEIGHING 50 KG OR MORE:** 1–2 g q6–8h. **CHILDREN 1 MO–12 YRS WEIGHING LESS THAN 50 KG:** 50–200 mg/kg/day in divided doses q6–8h. **NEONATES:** 100–200 mg/kg/day divided q6–12h.

Uncomplicated Infections

IV, IM: ADULTS, ELDERLY: 1 g q12h.

Mild to Moderate Infections

IV, IM: ADULTS, ELDERLY: 1–2 g q8h.

Severe Infections

IV, IM: ADULTS, ELDERLY: 2 g q6–8h.

Life-Threatening Infections

IV, IM: ADULTS, ELDERLY: 2 g q4h. **CHILDREN:** 2 g q4h. **Maximum:** 12 g/day.

Gonorrhea

IM: ADULTS: (Male): 1 g as a single dose. **(Female):** 0.5 g as a single dose.

Perioperative Prophylaxis

IV, IM: ADULTS, ELDERLY: 1 g as a single dose 30–90 min before surgery.

Cesarean Section

IV: ADULTS: 1 g as soon as umbilical cord is clamped, then 1 g 6 and 12 hrs after first dose.

Dosage in Renal Impairment

Creatinine Clearance	Dosage Interval
10–50 ml/min	8–12 hrs
Less than 10 ml/min	24 hrs
Hemodialysis	q24h
Peritoneal dialysis	q24h
Continuous renal replacement therapy	q12h

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, se-

vere watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Check IM injection sites for induration, tenderness. Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Doses should be evenly spaced. • Continue antibiotic therapy for full length of treatment.

cefoxitin

sef-**ox**-i-tin
(Apo-Cefoxitin, Mefoxin)
Do not confuse cefoxitin with cefazolin, cefotaxime, ceftazidime, ceftriaxone, or Cytoxan, or Mefoxin with Lanoxin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 23C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well distributed. Protein binding: 65%–79%. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 0.8–1 hr.

USES

Treatment of susceptible infections due to *S. pneumoniae, S. aureus,* gram-negative enteric bacilli, anaerobes (e.g., *Bacteroides* spp.) including bone, joint, gynecologic, intra-abdominal, lower respiratory, skin/skin structure, UTIs, perioperative prophylaxis.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Renal impairment, history of penicillin allergy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, creatinine, AST, ALT. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1 g, 2 g. **Intravenous Solution:** 1 g/50 ml, 2 g/50 ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Give IM, IV push, intermittent IV infusion (piggyback).

C

IV

Reconstitution • Reconstitute with 10 ml Sterile Water for Injection, Bacteriostatic Water for Injection, 0.9% NaCl, or D_5W to provide a maximum concentration of 100 mg/ml. • May further dilute with 50–100 ml 0.9% Sterile Water for Injection, NaCl, or D_5W.

Rate of Administration • For IV push, administer over 3–5 min. • For intermittent IV infusion (piggyback), infuse over 10–60 min.

Storage • Solution appears colorless to light amber but may darken (does not indicate loss of potency). • IV infusion (piggyback) is stable for 24 hrs at room temperature, 48 hrs if refrigerated. • Discard if precipitate forms.

IM

• Reconstitute each 1 g with 2 ml Sterile Water for Injection or lidocaine to provide concentration of 400 mg/ml. • To minimize discomfort, inject deep IM slowly. Less painful if injected into gluteus maximus than lateral aspect of thigh.

IV INCOMPATIBILITIES

Filgrastim (Neupogen), pentamidine (Pentam IV), vancomycin (Vancocin).

IV COMPATIBILITIES

Diltiazem (Cardizem), famotidine (Pepcid), heparin, hydromorphone (Dilaudid), lipids, magnesium sulfate, morphine, multivitamins, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IM, IV: ADULTS, ELDERLY: 1–2 g q6–8h. **Maximum:** 12 g/day. **CHILDREN OLDER THAN 3 MOS:** 80–160 mg/kg/day in 3–6 divided doses. **Maximum:** 12 g/day. **NEONATES:** 90–100 mg/kg/day in divided doses q8h.

Mild to Moderate Infections

IV, IM: ADULTS, ELDERLY: 1–2 g q6–8h.

Severe Infections

IV, IM: ADULTS, ELDERLY: 1 g q4h or 2 g q6–8h up to 2 g q4h.

Perioperative Prophylaxis

IV, IM: ADULTS, ELDERLY: 1–2 g 30–60 min before surgery, then q6h for up to 24 hrs after surgery. **CHILDREN OLDER THAN 3 MOS:** 30–40 mg/kg 30–60 min before surgery, then q6h for up to 24 hrs after surgery.

Dosage in Renal Impairment

After a loading dose of 1–2 g, dosage and frequency are modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
30–50 ml/min	1–2 g q8–12h
10–29 ml/min	1–2 g q12–24h
5–9 ml/min	500 mg–1 g q12–24h
Less than 5 ml/min	500 mg–1 g q24–48h
Hemodialysis	Loading dose of 1–2 g after each HD. Maintenance dose based on creatinine clearance.
Continuous renal replacement therapy	1–2 g q8–24h.

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (pruritus, rash, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe

watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Assess IM injection sites for induration, tenderness. Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Doses should be evenly spaced. • Continue antibiotic therapy for full length of treatment.

cefpodoxime

sef-poe-**dox**-eem
(Vantin)
Do not confuse Vantin with Ventolin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 24C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract (food increases absorption). Protein binding: 18%–23%. Widely distributed. Primarily excreted unchanged in urine. Partially removed by hemodialysis. **Half-life:** 2.3 hrs (increased in renal impairment, elderly pts).

USES

Treatment of susceptible infections due to *S. pneumoniae, S. pyogenes, S. aureus, H. influenzae, M. catarrhalis, E. coli, Proteus, Klebsiella* spp., including acute maxillary sinusitis, chronic bronchitis, community-acquired pneumonia, gonorrhea, otitis media, pharyngitis, tonsillitis, skin/skin structure infections, UTIs.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Renal impairment, history of penicillin allergy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: High doses of **antacids containing aluminum, H_2 antagonists** may decrease absorption. **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** **Food** enhances absorption. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, LDH, AST, ALT. May cause positive direct/indirect Coombs' test.

C

AVAILABILITY (Rx)

Oral Suspension: 50 mg/5 ml, 100 mg/5 ml. **Tablets:** 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• Administer tablet with food (enhances absorption). • Administer suspension without regard to food. • After reconstitution, oral suspension is stable for 14 days if refrigerated.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 100–400 mg q12h. **CHILDREN 2 MOS–12 YRS:** 10 mg/kg/day in 2 divided doses. **Maximum:** 400 mg/day.

Chronic Bronchitis, Pneumonia

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 200 mg q12h for 10–14 days.

Gonorrhea, Rectal Gonococcal Infection (Female Pts Only)

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: 200 mg as a single dose.

Skin/Skin Structure Infections

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 13 YRS: 400 mg q12h for 7–14 days.

Pharyngitis, Tonsillitis

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 13 YRS: 100 mg q12h for 5–10 days. **CHILDREN 6 MOS–13 YRS:** 5 mg/kg q12h for 5–10 days. **Maximum:** 100 mg/dose.

Acute Maxillary Sinusitis

PO: ADULTS, CHILDREN OLDER THAN 13 YRS: 200 mg q12h for 10 days. **CHILDREN 2 MOS–13 YRS:** 5 mg/kg q12h for 10 days. **Maximum:** 200 mg/dose.

UTI

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 13 YRS: 100 mg q12h for 7 days.

Acute Otitis Media

PO: CHILDREN 6 MOS–13 YRS: 5 mg/kg q12h for 5 days. **Maximum:** 400 mg/dose.

Dosage in Renal Impairment

For pts with creatinine clearance less than 30 ml/min, usual dose is given q24h. For pts on hemodialysis, usual dose is given 3 times a wk after dialysis.

SIDE EFFECTS

Frequent: Oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (pruritus, rash, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

- Doses should be evenly spaced.
- Shake oral suspension well before us-

ing. • Continue antibiotic therapy for full length of treatment. • Refrigerate oral suspension. • Notify physician if persistent diarrhea occurs.

cefprozil

sef-proe-zil
(Apo-Cefprozil, Cefzil)
Do not confuse cefprozil with cefazolin, or Cefzil with Cefol, Ceftin, or Kefzol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 23C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 36%–45%. Widely distributed. Primarily excreted unchanged in urine. Moderately removed by hemodialysis. **Half-life:** 1.3 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to *S. pneumoniae, S. pyogenes, S. aureus, H. influenzae, M. catarrhalis* including pharyngitis, tonsillitis, otitis media, secondary bacterial infection of acute bronchitis, acute bacterial exacerbation of chronic bronchitis, uncomplicated skin/skin structure infections, acute sinusitis.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause positive direct/indirect Coombs' test. May increase serum alkaline phosphatase, AST, ALT.

AVAILABILITY (Rx)

Oral Suspension: 125 mg/5 ml, 250 mg/5 ml. **Tablets:** 250 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food; if GI upset occurs, give with food, milk. • After reconstitution, oral suspension is stable for 14 days if refrigerated. • Shake oral suspension well before using.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 250–500 mg q12h or 500 mg q24h. **CHILDREN OLDER THAN 6 MOS–12 YRS:** 7.5–15 mg/kg/day in 2 divided doses.

Pharyngitis, Tonsillitis

PO: ADULTS, ELDERLY: 500 mg q24h for 10 days. **CHILDREN 2–12 YRS:** 7.5 mg/kg q12h for 10 days. **Maximum:** 1 g/day.

Acute Bacterial Exacerbation of Chronic Bronchitis, Secondary Bacterial Infection of Acute Bronchitis

PO: ADULTS, ELDERLY: 500 mg q12h for 10 days.

Skin/Skin Structure Infections

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 250–500 mg q12h for 10

days. **CHILDREN 2–12 YRS:** 20 mg/kg q24h for 10 days. **Maximum:** 1 g/day.

C

Acute Sinusitis

PO: ADULTS, ELDERLY: 250–500 mg q12h for 10 days. **CHILDREN 6 MOS–12 YRS:** 7.5–15 mg/kg q12h for 10 days.

Otitis Media

PO: CHILDREN 6 MOS–12 YRS: 15 mg/kg q12h for 10 days. **Maximum:** 1 g/day.

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min: 50% of usual dose at usual interval. **Hemodialysis:** Administer dose after completion of dialysis.

SIDE EFFECTS

Frequent: Oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (pruritus, rash, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for evidence of stomatitis. Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (but increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Doses should be evenly spaced. • Continue antibiotic therapy for full length of treatment. • May cause GI upset (may take with food or milk). • Notify physician if persistent diarrhea occurs.

ceftaroline

sef-**tar**-oh-leen
(Teflaro)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fifth-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 24C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Protein binding: 20%. Widely distributed in plasma. Not metabolized. Primarily excreted unchanged in urine. Hemodialyzable. **Half-life:** 1.6 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to gram-positive and gram-negative organisms including *S. pneumoniae, S. aureus* (methicillin susceptible only), *H. influenzae, Klebsiella pneumoniae, E. coli* including acute bacterial skin and skin structure infections, community-acquired bacterial pneumonia.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction, hypersensitivity to cephalosporins. **Cautions:** History of allergy to penicillin, severe renal impairment with creatinine clearance less than 50 ml/min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Age-related renal impairment may require dose adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause positive direct/indirect Coombs' test. May increase BUN, serum creatinine. May decrease serum potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 400-mg, 600-mg single-use vial.

ADMINISTRATION/HANDLING

◀ALERT▶ Give by intermittent IV infusion (piggyback). Do not give IV push.

Reconstitution • Reconstitute either 400-mg or 600-mg vial with 20 ml Sterile Water for Injection. • Mix gently to dissolve powder. • Further dilute with 250 ml D_5W, 0.9% NaCl, or 0.45% NaCl to provide concentration of 20 mg/ml for 400-mg dose or 30 mg/ml for 600-mg dose.

Rate of Administration • Infuse over 60 min.

Storage • Discard if particulate is present. • Following reconstitution, solution should appear clear, light to dark yellow. • Solution is stable for 6 hrs at room temperature or 24 hrs if refrigerated.

IV INCOMPATIBILITIES

Fluconazole (Diflucan), lipids, vancomycin (Vancocin).

IV COMPATIBILITIES

Famotidine (Pepcid), hydromorphone (Dilaudid), lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Acute Bacterial Skin/Skin Structure Infections

IV Infusion: ADULTS, ELDERLY: 600 mg every 12 hrs for 5–14 days.

Community-Acquired Bacterial Pneumonia

IV Infusion: ADULTS, ELDERLY: 600 mg every 12 hrs for 5–7 days.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
30–50 ml/min	400 mg q12h
15–29 ml/min	300 mg q12h
End-stage renal disease, hemodialysis	200 mg every 12 hrs (give after dialysis)

SIDE EFFECTS

Occasional (5%–4%): Diarrhea, nausea. **Rare (3%–2%):** Allergic reaction (rash, pruritus, urticaria), phlebitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other super infections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

C

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to other cephalosporins, penicillins. For those on hemodialysis, administer medication after dialysis.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue. Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable, but increasing severity may indicate onset of antibiotic-associated colitis. Monitor I&O, renal function tests for evidence of nephrotoxicity. Be alert for superinfection: fever, vomiting, severe genital/anal pruritus, moderate to severe diarrhea, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue medication for full length of treatment. • Doses should be evenly spaced.

ceftazidime

sef-**taz**-ih-deem
(Fortaz, Tazicef)
Do not confuse ceftazidime with cefazolin, cefepime, or ceftriaxone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 24C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed including to CSF. Protein binding: 5%–17%. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 2 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to gram-negative organisms (including *Pseudomonas* and *Enterobacteriaceae*) including bone, joint, CNS (including meningitis), gynecologic, intra-abdominal, lower respiratory tract, skin/skin structure, UTI, septicemia. Treatment of CNS infections due to *H. influenzae, N. meningitidis,* including meningitis. **OFF-LABEL:** Bacterial endophthalmitis.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy, seizure disorder.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. May increase **aminoglycoside** levels. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, creatinine, LDH, AST, ALT. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Fortaz, Tazicef): 500 mg, 1 g, 2 g. **Injection, Premix:** 1 g/50 ml, 2 g/50 ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Give by IM injection, direct IV injection (IV push), or intermittent IV infusion (piggyback).

IV

Reconstitution • Add 10 ml Sterile Water for Injection to each 1 g to provide

concentration of 90 mg/ml. • May further dilute with 50–100 ml 0.9% NaCl, D_5W, or other compatible diluent.

Rate of Administration • For IV push, administer over 3–5 min (**maximum concentration:** 180 mg/ml). • For intermittent IV infusion (piggyback), infuse over 15–30 min.

Storage • Solution appears light yellow to amber, tends to darken (color change does not indicate loss of potency). • IV infusion (piggyback) stable for 12 hrs at room temperature or 3 days if refrigerated. • Discard if precipitate forms.

IM

• For reconstitution, add 1.5 ml Sterile Water for Injection or lidocaine 1% to 500-mg vial or 3 ml to 1-g vial to provide a concentration of 280 mg/ml. • To minimize discomfort, inject deep IM slowly. Less painful if injected into gluteus maximus than lateral aspect of thigh.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), doxorubicin liposomal (Doxil), fluconazole (Diflucan), idarubicin (Idamycin), midazolam (Versed), pentamidine (Pentam IV), total parenteral nutrition (TPN), vancomycin (Vancocin).

IV COMPATIBILITIES

Diltiazem (Cardizem), famotidine (Pepcid), heparin, hydromorphone (Dilaudid), lipids, morphine, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IV, IM: ADULTS, ELDERLY: 500 mg–2 g q8–12h.

IV: CHILDREN 1 MO–12 YRS: 100–150 mg/kg/day in divided doses q8h. **Maximum:** 6 g/day. **NEONATES 0–4 WKS:** 100–150 mg/kg/day in divided doses q8–12h.

Usual Elderly Dosage

ELDERLY (NORMAL RENAL FUNCTION): 500 mg–1 g q12h.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
31–50 ml/min	q12h
10–30 ml/min	q24h
Less than 10 ml/min	q48–72h
Hemodialysis	0.5–1 g q24h or 1–2 g q48–72h (give post hemodialysis on dialysis days)
Peritoneal dialysis	Initially, 1 g, then 0.5 g q24h
Continuous renal replacement therapy	Initially, 2 g, then 1 g q8h or 2 g q12h

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (pruritus, rash, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

C

INTERVENTION/EVALUATION

Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Assess IM injection sites for induration, tenderness. Check oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Doses should be evenly spaced. • Continue antibiotic therapy for full length of treatment.

ceftibuten

sef-tye-**bue**-ten
(Cedax)
Do not confuse Cedax with Cidex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 24C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 65%–77%. Excreted primarily unchanged in urine. **Half-life:** 2–3 hrs.

USES

Treatment of susceptible infections due to *S. pneumoniae, S. pyogenes, H. influenzae, M. catarrhalis* including chronic bronchitis, acute bacterial otitis media, pharyngitis, tonsillitis.

PRECAUTIONS

Contraindications: History of anaphylactic reaction, hypersensitivity to cephalosporins. **Cautions:** History of penicillin allergy, moderate to severe renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, LDH, AST, ALT. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Capsules: 400 mg. **Oral Suspension:** 90 mg/5 ml, 180 mg/5 ml.

ADMINISTRATION/HANDLING

Capsules: Administer without regard to food. **Suspension:** Shake well, give 2 hrs before or 1 hr after meals.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 400 mg once daily. **CHILDREN 6 MOS–11 YRS:** 9 mg/kg/day. **Maximum:** 400 mg/day.

Chronic Bronchitis

PO: ADULTS, ELDERLY: 400 mg/day once a day for 10 days.

Pharyngitis, Tonsillitis

PO: ADULTS, ELDERLY: 400 mg once a day for 10 days. **CHILDREN OLDER THAN 6 MOS:** 9 mg/kg once a day for 10 days. **Maximum:** 400 mg/day.

Otitis Media

PO: CHILDREN OLDER THAN 6 MOS: 9 mg/kg once a day for 10 days. **Maximum:** 400 mg/day.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
50 ml/min and higher	400 mg or 9 mg/kg q24h
30–49 ml/min	200 mg or 4.5 mg/kg q24h
Less than 30 ml/min	100 mg or 2.25 mg/kg q24h
Hemodialysis	400 mg or 9 mg/kg (**maximum:** 400 mg) after each dialysis session.

SIDE EFFECTS

Frequent: Oral candidiasis (thrush), mild diarrhea (discharge, itching). **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, serum renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue medication for full length of treatment; do not skip doses. • May cause GI upset (may take with food or milk). • Notify physician if persistent diarrhea occurs.

ceftriaxone

sef-trye-**ax**-own
(Rocephin)
Do not confuse ceftriaxone with cefazolin, cefoxitin, or ceftazidine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 24C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed including to CSF. Protein binding: 83%–96%. Primarily excreted unchanged in urine. Not removed by hemodialysis. **Half-life: IV:** 4.3–4.6 hrs; **IM:** 5.8–8.7 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to gram-negative aerobic organisms, some

C

gram-positive organisms including respiratory tract, GU tract, skin and skin structure, bone and joint, intra-abdominal, pelvic inflammatory disease (PID), biliary tract/urinary tract infections, bacterial septicemia, meningitis, perioperative prophylaxis, acute bacterial otitis media. **OFF-LABEL:** Complicated gonococcal infections, sexually transmitted diseases, Lyme disease, salmonellosis, shigellosis, atypical community-acquired pneumonia.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. Hyperbilirubinemic neonates, esp. premature infants, should not be treated with ceftriaxone (can displace bilirubin from its binding to serum albumin, causing bilirubin encephalopathy). Ceftriaxone must not be coadministered with calcium-containing IV solutions, including continuous calcium-containing infusion such as parenteral nutrition, in neonates due to the risk of precipitation of ceftriaxone-calcium salt. **Cautions:** Hepatic impairment, history of GI disease (esp. ulcerative colitis, antibiotic-associated colitis). Severe renal impairment, history of penicillin allergy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** May displace bilirubin from serum albumin. Caution in hyperbilirubinemic neonates. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase excretion. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, LDH, AST, ALT. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Rocephin): 250 mg, 500 mg, 1 g, 2 g. **Intravenous Solution (Rocephin):** 1 g/50 ml, 2 g/50 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 2.4 ml Sterile Water for Injection to each 250 mg to provide concentration of 100 mg/ml. • May further dilute with 50–100 ml 0.9% NaCl, D_5W.

Rate of Administration • For IV push, administer over 2–4 min (**maximum concentration:** 40 mg/ml). • For intermittent IV infusion (piggyback), infuse over 15–30 min for adults, 10–30 min in children, neonates. • Alternating IV sites, use large veins to reduce potential for phlebitis.

Storage • Solution appears light yellow to amber. • IV infusion (piggyback) is stable for 2 days at room temperature, 10 days if refrigerated. • Discard if precipitate forms.

IM

• Add 0.9 ml Sterile Water for Injection, 0.9% NaCl, D_5W, or lidocaine to each 250 mg to provide concentration of 250 mg/ml. • To minimize discomfort, inject deep IM slowly. Less painful if injected into gluteus maximus than lateral aspect of thigh.

IV INCOMPATIBILITIES

Aminophylline, amphotericin B complex (Abelcet, AmBisome, Amphotec), famotidine (Pepcid), filgrastim (Neupogen), fluconazole (Diflucan), labetalol (Normodyne), pentamidine (Pentam IV), vancomycin (Vancocin).

IV COMPATIBILITIES

Diltiazem (Cardizem), heparin, lidocaine, lipids, metronidazole (Flagyl), morphine, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IM/IV: ADULTS, ELDERLY: 1–2 g q12–24h. **CHILDREN:** 50–100 mg/kg/day in

1–2 divided doses. **Maximum:** 4 g/day (meningitis), 2 g/day (other). **NEONATES:** 50–75 mg/kg/day given once daily.

Mild to Moderate Infections

IV, IM: ADULTS, ELDERLY: 1–2 g as a single dose or in 2 divided doses. **CHILDREN:** 50–75 mg/kg/day in 1–2 divided doses q12–24h. **Maximum:** 2 g/day.

Serious Infections

IV, IM: ADULTS, ELDERLY: Up to 4 g/day in 2 divided doses. **CHILDREN:** 80–100 mg/kg/day in divided doses q12h. **Maximum:** 4 g/day.

Meningitis

IV: CHILDREN: Initially, 75–100 mg/kg, then 100 mg/kg/day as a single dose or in divided doses q12h. **Maximum:** 4 g/day.

Lyme Disease

IV: ADULTS, ELDERLY: 2 g/day for 14–28 days.

Acute Bacterial Otitis Media

IM: CHILDREN: 50 mg/kg once. **Maximum:** 1 g/day.

Perioperative Prophylaxis

IV, IM: ADULTS, ELDERLY: 1 g 0.5–2 hrs before surgery.

Dosage in Renal Impairment

Dosage modification is usually unnecessary but hepatic/renal function test results should be monitored in those with renal and hepatic impairment or severe renal impairment.

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity, CBC. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Doses should be evenly spaced. • Continue antibiotic therapy for full length of treatment.

cefuroxime

sef-ue-**rox**-eem
(Apo-Cefuroxime ♣, Ceftin, Zinacef)
Do not confuse Ceftin with Cefzil or Cipro, cefuroxime with cefotaxime, cefprozil, or deferoxamine, or Zinacef with Zithromax.

C

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 23C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 33%–50%. Widely distributed including to CSF. Primarily excreted unchanged in urine. Moderately removed by hemodialysis. **Half-life:** 1.3 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to group B streptococci, pneumococci, staphylococci, *H. influenzae, E. coli, Enterobacter, Klebsiella* including acute/chronic bronchitis, gonorrhea, impetigo, early Lyme disease, otitis media, pharyngitis/tonsillitis, sinusitis, skin/skin structure, UTI, perioperative prophylaxis.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction, hypersensitivity to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **Antacids, H_2-receptor antagonists (e.g, cimetidine, famotidine)** may decrease absorption. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, LDH, AST, ALT. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 750 mg, 1.5 g. **Injection, Solution:** 750 mg/50 ml, 1.5 g/50 ml. **Oral Suspension (Ceftin):** 125 mg/5 ml, 250 mg/5 ml. **Tablets (Ceftin):** 250 mg, 500 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 750 mg in 8 ml (1.5 g in 14 ml) Sterile Water for Injection to provide a concentration of 100 mg/ml. • For intermittent IV infusion (piggyback), further dilute with 50–100 ml 0.9% NaCl or D_5W.

Rate of Administration • For IV push, administer over 3–5 min. • For intermittent IV infusion (piggyback), infuse over 15–30 min.

Storage • Solution appears light yellow to amber (may darken, but color change does not indicate loss of potency). • IV infusion (piggyback) is stable for 24 hrs at room temperature, 48 hrs if refrigerated. • Discard if precipitate forms.

IM

• To minimize discomfort, inject deep IM slowly. Less painful if injected into gluteus maximus than lateral aspect of thigh.

PO

• Give tablets without regard to food (give 400-mg dose with food). • If GI upset occurs, give with food, milk. • Avoid crushing tablets due to bitter taste. • Suspension must be given with food. • Suspension stable at room temperature or refrigerated for 10 days.

IV INCOMPATIBILITIES

Filgrastim (Neupogen), fluconazole (Diflucan), midazolam (Versed), vancomycin (Vancocin).

IV COMPATIBILITIES

Diltiazem (Cardizem), hydromorphone (Dilaudid), lipids, morphine, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV, IM: ADULTS, ELDERLY: 750 mg–1.5 g q8h. **CHILDREN:** 75–150 mg/kg/day divided q8h. **Maximum:** 6 g/day. **NEONATES:** 50–100 mg/kg/day divided q12h.

PO: ADULTS, ELDERLY: 250–500 mg twice a day. **CHILDREN:** 20–30 mg/kg/day in 2 divided doses. **Maximum:** 1 g/day.

Pharyngitis, Tonsillitis

PO: CHILDREN 3 MOS–12 YRS: 125 mg (tablets) q12h or 20 mg/kg/day (suspension) in 2 divided doses for 10 days. **Maximum:** 500 mg/day.

Acute Otitis Media, Acute Bacterial Maxillary Sinusitis, Impetigo

PO: CHILDREN 3 MOS–12 YRS: 250 mg (tablets) q12h or 30 mg/kg/day (suspension) in 2 divided doses for 10 days. **Maximum:** 1 g/day.

Gonorrhea

PO: ADULTS, ELDERLY: 1 g as single dose.
IM: 1.5 g as single dose.

UTI

PO: ADULTS, ELDERLY: 125–250 mg q12h for 7–10 days.

Perioperative Prophylaxis

IV: ADULTS, ELDERLY: 1.5 g 30–60 min before surgery.

Dosage in Renal Impairment

Adult dosage frequency is modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
Greater than 20 ml/min	q8h
10–20 ml/min	q12h
Less than 10 ml/min	q24h
Peritoneal dialysis	Dose q24h
Continuous renal replacement therapy	1 g q12h

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

C

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Doses should be evenly spaced. • Continue antibiotic therapy for full length of treatment. • May cause GI upset (may take with food, milk).

celecoxib

TOP 200

sel-e-**kox**-ib
(Celebrex)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including MI, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines.

Do not confuse Celebrex with Celexa, Cerebyx, or Clarinex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID. **CLINICAL:** Anti-inflammatory (see p. 127C).

ACTION

Inhibits cyclooxygenase-2, the enzyme responsible for prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammation, relieves pain.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Widely distributed. Protein binding: 97%. Metabolized in liver. Primarily eliminated in feces. **Half-life:** 11.2 hrs.

USES

Relief of signs/symptoms of osteoarthritis, rheumatoid arthritis (RA) in adults. Treatment of acute pain, primary dysmenorrhea. Relief of signs/symptoms associated with ankylosing spondylitis. Treatment of juvenile rheumatoid arthritis (JRA).

PRECAUTIONS

◀ALERT▶ May increase cardiovascular risk when high doses given to prevent colon cancer.

Contraindications: Hypersensitivity to aspirin, NSAIDs, sulfonamides. Treatment of perioperative pain in coronary artery bypass graft (CABG) surgery. **Cautions:** History of GI disease (bleeding/ulcers); concurrent use with aspirin, anticoagulants; smoking; alcohol; elderly; debilitated pts; asthma; renal/hepatic impairment; heart failure. Pts with edema, cerebrovascular disease, ischemic heart disease, known or suspected deficiency of cytochrome P450 isoenzyme 2C9.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category C (D if used in third trimester or near delivery). Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease antihypertensive effect of ACE inhibitors and angiotensin II antagonists. **Fluconazole** may significantly increase concentration. May increase **lithium** concentration. **Warfarin** may increase risk of bleeding. **Aspirin** may increase risk of celecoxib-induced GI ulceration, other GI complications. **HERBAL:** Avoid herbs with anticoagulant or antiplatelet activity (e.g., **evening primrose, garlic, ginger, ginseng**). **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, alkaline phosphatase, creatinine, BUN. May decrease serum phosphate.

AVAILABILITY (Rx)

Capsules: 50 mg, 100 mg, 200 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

• Lower doses (200 mg): Give without regard to food; higher doses (400 mg):

Give with food. • Do not give with antacids. • Capsules may be swallowed whole or opened and mixed with applesauce.

INDICATIONS/ROUTES/DOSAGE

Osteoarthritis

PO: ADULTS, ELDERLY: 200 mg/day as a single dose or 100 mg twice a day.

Rheumatoid Arthritis (RA)

PO: ADULTS, ELDERLY: 100–200 mg twice a day.

Juvenile Rheumatoid Arthritis (JRA)

PO: CHILDREN 2 YRS AND OLDER, WEIGHING MORE THAN 25 KG: 100 mg twice a day. **WEIGHING 10–25 KG:** 50 mg twice a day.

Acute Pain

PO: ADULTS, ELDERLY: Initially, 400 mg with additional 200 mg on day 1, if needed. Maintenance: 200 mg twice a day as needed.

Ankylosing Spondylitis

PO: ADULTS, ELDERLY: 200 mg/day as a single dose or in 2 divided doses. May increase to 400 mg/day if no effect is seen after 6 wks.

Dosage in Hepatic Impairment

Decrease dose by 50% in pts with moderate hepatic impairment. Not recommended in severe hepatic impairment.

SIDE EFFECTS

Frequent (16%–5%): Diarrhea, dyspepsia, headache, upper respiratory tract infection. **Occasional (less than 5%):** Abdominal pain, flatulence, nausea, back pain, peripheral edema, dizziness, insomnia, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk of cardiovascular events, (MI, CVA), serious, potentially life-threatening GI bleeding.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformity, skin condition. Assess for allergy to sulfa, aspirin, or NSAIDs (contraindicated).

INTERVENTION/EVALUATION

Assess for therapeutic response: pain relief; decreased stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Observe for bleeding, bruising, weight gain.

PATIENT/FAMILY TEACHING

• If GI upset occurs, take with food. • Avoid aspirin, alcohol (increases risk of GI bleeding).

cephalexin

TOP 200

sef-a-**lex**-in
(Apo-Cephalex, Keflex, Novo-Lexin)

Do not confuse cephalexin with cefaclor, cefazolin, or ciprofloxacin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: First-generation cephalosporin. **CLINICAL:** Antibiotic (see p. 23C).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Rapidly absorbed from GI tract (delayed in young children). Protein binding: 10%–15%. Widely distributed. Primarily excreted unchanged in urine. Moderately removed by hemodialysis. **Half-life:** 0.9–1.2 hrs (increased in renal impairment).

C

USES

Treatment of susceptible infections due to staphylococci, group A *streptococcus, K. pneumoniae, E. coli, P. mirabilis, H. influenzae, M. catarrhalis* including respiratory tract, genitourinary tract, skin, soft tissue, bone infections; otitis media; rheumatic fever prophylaxis; follow-up to parenteral therapy.

PRECAUTIONS

Contraindications: History of anaphylactic reaction to penicillins, hypersensitivity to cephalosporins. **Cautions:** Renal/hepatic impairment, history of GI disease (esp. ulcerative colitis, antibiotic-associated colitis).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, LDH, AST, ALT. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Capsules (Keflex): 250 mg, 500 mg, 750 mg. **Powder for Oral Suspension (Keflex):** 125 mg/5 ml, 250 mg/5 ml. **Tablets:** 250 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

• After reconstitution, oral suspension is stable for 14 days if refrigerated. • Shake oral suspension well before using. • Give without regard to food. If GI upset occurs, give with food, milk.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: 250–1,000 mg q6h. **Maximum:** 4 g/day. **CHILDREN:** 25–100 mg/kg/day in 3–4 divided doses. **Maximum:** 4 g/day.

Streptococcal Pharyngitis, Skin/Skin Structure Infections

PO: ADULTS, ELDERLY: 500 mg q12h. **CHILDREN:** 25–50 mg/kg/day in 2 divided doses.

Uncomplicated Cystitis

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 15 YRS: 500 mg q12h for 7–14 days.

Otitis Media

PO: CHILDREN: 75–100 mg/kg/day in 4 divided doses.

Dosage in Renal Impairment

After usual initial dose, dosing frequency is modified based on creatinine clearance and severity of infection.

Creatinine

Clearance	Dosage
10–50 ml/min	500 mg q8–12h
Less than 10 ml/min	250–500 mg q12–24h
Hemodialysis	250 mg q12–24h

SIDE EFFECTS

Frequent: Oral candidiasis, mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with a history of allergies, esp. to penicillin, are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). With prolonged therapy, monitor renal/hepatic function tests.

PATIENT/FAMILY TEACHING

• Doses should be evenly spaced. • Continue therapy for full length of treatment. • May cause GI upset (may take with food, milk). • Refrigerate oral suspension. • Report prolonged diarrhea.

certolizumab

ser-toe-**liz**-oo-mab
(Cimzia)

BLACK BOX ALERT Tuberculosis, serious, sometimes fatal invasive fungal infections, other opportunistic infections have been reported.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tumor necrosis factor (TNF) blocker. **CLINICAL:** Crohn's disease agent.

ACTION

Binds specifically to TNF-alpha cell, a protein in the immune system that causes inflammation. **Therapeutic Effect:** Reduces signs and symptoms of Crohn's disease in those with inadequate response to conventional therapy.

PHARMACOKINETICS

Higher clearance with increasing body weight. Age, gender do not affect clearance. **Half-life:** 14 days.

USES

Reduces signs and symptoms of Crohn's disease, maintenance of clinical response in pts with moderate to severely active disease. Treatment of moderately to severely active rheumatoid arthritis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Chronic, latent, or localized infection, preexisting or recent-onset CNS demyelinating disorders, heart failure, underlying hematologic disorders, elderly. May increase risk of malignancies (e.g., lymphoma). Pts who have resided in regions where TB is endemic, pts who are hepatitis B virus carriers.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Use cautiously due to higher rate of infection.

INTERACTIONS

DRUG: Anakinra, other TNF antagonists (adalimumab, etanercept, infliximab) may increase risk of infection**. Live virus vaccines** may decrease immune response. **HERBAL: Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT, bilirubin, aPTT.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 200 mg. **Injection, Solution:** 200 mg/ml in a single-use prefilled syringe.

ADMINISTRATION/HANDLING

Subcutaneous

Reconstitution • Powder in each vial should be brought to room temperature before reconstitution. • Reconstitute two

C

200-mg vials for each dose. • Reconstitute each vial with 1 ml Sterile Water for Injection. • Gently swirl each vial without shaking, using syringe with 20-gauge needle. • Leave vials undisturbed to fully reconstitute (may take as long as 30 min). • Using a new 20-gauge needle for each vial, withdraw reconstituted solution into a separate syringe for each vial, resulting in two syringes each containing 1 ml (200 mg). • Switch each 20-gauge needle to a 23-gauge needle and inject full contents of each syringe subcutaneously into separate sites on the abdomen or thigh.

Storage • Store vial in refrigerator. • Once powder for solution is reconstituted, solution should appear as clear to opalescent, colorless to pale yellow liquid. • Discard if solution is discolored or contains precipitate. • Reconstituted solution is stable for up to 2 hrs at room temperature or 24 hrs if refrigerated.

INDICATIONS/ROUTES/DOSAGE

Crohn's Disease

Subcutaneous: Initially, 400 mg (given as 2 subcutaneous injections of 200 mg) and at weeks 2 and 4. Maintenance: In pts who obtain a therapeutic response, 400 mg every 4 wks.

Rheumatoid Arthritis

Subcutaneous: ADULTS, ELDERLY: Initially, 400 mg and at weeks 2 and 4. Maintenance: 200 mg q2wks or 400 mg q4wks.

SIDE EFFECTS

Occasional (6%): Arthralgia. **Rare (less than 1%):** Abdominal pain, diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory tract infection occurs in 20% of pts. UTI occurs in 7% of pts. Serious infections manifested as pneumonia, pyelonephritis occur in 3% of pts. Hypersensitivity reaction (rash, urticaria, hypotension, dyspnea) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Do not initiate treatment in pts with active infections, including chronic or localized infection. TB test should be obtained before treatment is initiated. Obtain baseline WBC count, urinalysis, C-reactive protein.

INTERVENTION/EVALUATION

Monitor pts for signs and symptoms of infection during and after treatment. If pt develops an infection, treatment should be discontinued. Monitor lab results, especially WBC count, urinalysis, C-reactive protein for evidence of infection. Monitor temperature.

PATIENT/FAMILY TEACHING

• Consult physician/nurse if cough, fever, flu-like symptoms occur. • Do not receive live virus vaccine during treatment or within 3 months of its discontinuation.

cetirizine

se-**teer**-ah-zeen
(Apo-Cetirizine, Reactine, Zyrtec)
Do not confuse cetirizine with levocetirizine, or Zyrtec with Xanax, Zantac, Zocor, or Zyprexa.

FIXED-COMBINATION(S)

Zyrtec D 12 Hour Tablets: cetirizine/pseudoephedrine: 5 mg/120 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation piperazine. **CLINICAL:** Antihistamine (see p. 53C).

ACTION

Competes with histamine for H_1-receptor sites on effector cells in GI tract, blood vessels, respiratory tract. **Therapeutic Effect:** Prevents allergic response, pro-

duces mild bronchodilation, blocks histamine-induced bronchitis.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	Less than 1 hr	4–8 hrs	Less than 24 hrs

Well absorbed from GI tract (absorption not affected by food). Protein binding: 93%. Undergoes low first-pass metabolism; not extensively metabolized. Primarily excreted in urine (more than 80% as unchanged drug). **Half-life:** 6.5–10 hrs.

USES

Relief of symptoms (sneezing, rhinorrhea, postnasal discharge, nasal pruritus, ocular pruritus, tearing) of seasonal and perennial allergic rhinitis (hay fever). Treatment of chronic urticaria (hives).

PRECAUTIONS

Contraindications: Hypersensitivity to cetirizine, hydroxyzine. **Cautions:** Hepatic/renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not recommended during first trimester of pregnancy. Distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category B. Children:** Less likely to cause anticholinergic effects. **Elderly:** More sensitive to anticholinergic effects (e.g., dry mouth, urinary retention). Dizziness, sedation, confusion more likely to occur.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depression. **Anticholinergics** may increase anticholinergic effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May suppress wheal and flare reactions to antigen skin testing unless drug is discontinued 4 days before testing.

AVAILABILITY (Rx)

Capsule: 10 mg. **Syrup:** 5 mg/5 ml. **Tablets:** 5 mg, 10 mg. **Tablets (Chewable):** 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ May cause drowsiness at dosage greater than 10 mg/day.

Allergic Rhinitis, Urticaria

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 5 YRS: Initially, 5–10 mg/day as single dose. **CHILDREN 2–5 YRS:** 2.5 mg/day. May increase up to 5 mg/day as a single dose or in 2 divided doses. **CHILDREN 12–23 MOS:** Initially, 2.5 mg/day. May increase up to 5 mg/day in 2 divided doses. **CHILDREN 6–11 MOS:** 2.5 mg once a day.

Dosage in Renal/Hepatic Impairment

Adult/elderly pts with renal impairment (creatinine clearance 11–31 ml/min), those receiving hemodialysis (creatinine clearance less than 7 ml/min), those with hepatic impairment: Dosage is decreased to 5 mg once a day. **CHILDREN 6–11 YRS:** Less than 2.5 mg once daily.

SIDE EFFECTS

Occasional (10%–2%): Pharyngitis, dry mucous membranes, nausea/vomiting, abdominal pain, headache, dizziness, fatigue, thickening of mucus, drowsiness, photosensitivity, urinary retention.

ADVERSE EFFECTS/ TOXIC REACTIONS

Children may experience paradoxical reaction (restlessness, insomnia, euphoria, nervousness, tremor). Dizziness, sedation, confusion more likely to occur in elderly.

C

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess lung sounds. Assess severity of rhinitis, urticaria, other symptoms. Obtain baseline hepatic function tests.

INTERVENTION/EVALUATION

For upper respiratory allergies, increase fluids to maintain thin secretions and offset thirst. Monitor symptoms for therapeutic response.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol during antihistamine therapy. • Avoid prolonged exposure to sunlight.

cetuximab

HIGH ALERT

se-**tux**-ih-mab
(Erbitux)

BLACK BOX ALERT Severe infusion reactions (bronchospasm, stridor, urticaria, hypotension, cardiac arrest) have occurred, especially with first infusion. Cardiopulmonary arrest reported in pts receiving radiation in combination with cetuximab.

Do not confuse cetuximab with bevacizumab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic (see p. 81C).

ACTION

Binds to the epidermal growth factor receptor (EGFR), a glycoprotein on normal and tumor cells. **Therapeutic Effect:** Inhibits tumor cell growth, inducing apoptosis.

PHARMACOKINETICS

Reaches steady-state levels by the third weekly infusion. Clearance decreases as dose increases. **Half-life:** 114 hrs (range: 75–188 hrs).

USES

As a single agent or in combination with irinotecan for treatment of EGFR-expressing, metastatic colorectal carcinoma in pts who are refractory or intolerant to irinotecan-based chemotherapy. Treatment of advanced squamous cell cancer of head/neck (with radiation). Treatment of recurrent or metastasized squamous cell carcinoma of head/neck progressing after platinum-based therapy. First-line treatment of squamous cell carcinoma of head and neck in combination with platinum-based therapy with 5-FU. **OFF-LABEL:** EGFR-expressing advanced non–small-cell lung cancer (NSCLC).

PRECAUTIONS

Contraindications: None known. **Cautions:** Preexisting IgE antibody versus cetuximab, coronary artery disease, heart failure, arrythmias, preexisting pulmonary disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placental barrier; has potential to cause fetal harm, abortifactant. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease WBCs, calcium, magnesium, potassium.

AVAILABILITY (Rx)

Injection Solution: 2 mg/ml (50 ml, 100 ml).

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Do not give by IV push or bolus.

Reconstitution • Does not require reconstitution. • Solution should appear

clear, colorless; may contain a small amount of visible, white particulates. • Do not shake or dilute. • Infuse with a low protein-binding 0.22-micron in-line filter.
Rate of Administration • First dose should be given as a 120-min IV infusion. • Maintenance infusion should be infused over 60 min. • Maximum infusion rate should not exceed 5 ml/min.
Storage • Refrigerate vials. • Preparations in infusion containers are stable for up to 12 hrs if refrigerated, up to 8 hrs at room temperature. • Discard any unused portion.

IV COMPATIBILITY

Irinotecan (Camptosar).

INDICATIONS/ROUTES/DOSAGE

Head/Neck Cancer, Metastatic Colorectal Carcinoma
IV: ADULTS, ELDERLY: Initially, 400 mg/m^2 as a loading dose. Maintenance: 250 mg/m^2 infused over 60 min weekly.

SIDE EFFECTS

Frequent (90%–25%): Acneiform rash, malaise, fever, nausea, diarrhea, constipation, headache, abdominal pain, anorexia, vomiting. **Occasional (16%–10%):** Nail disorder, back pain, stomatitis, peripheral edema, pruritus, cough, insomnia. **Rare (9%–5%):** Weight loss, depression, dyspepsia, conjunctivitis, alopecia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anemia occurs in 10% of pts. Severe infusion reaction (rapid onset of airway obstruction, precipitous drop in B/P, severe urticaria) occurs rarely. Dermatologic toxicity, pulmonary embolus, leukopenia, renal failure occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Monitor Hgb, Hct, serum potassium, magnesium. Assess signs/symptoms for evidence of anemia. Question pt regarding possibility of pregnancy.

INTERVENTION/EVALUATION

Diligently monitor pt for evidence of infusion reaction (rapid onset of bronchospasm, stridor, hoarseness, urticaria, hypotension) during infusion and for at least 1 hr postinfusion. Be aware that pt may experience first severe infusion reaction during later infusions. Assess skin for evidence of dermatologic toxicity (development of inflammatory sequelae, dry skin, exfoliative dermatitis, rash). Monitor serum electrolytes acute onset or worsening pulmonary symptoms.

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with anyone who recently received a live virus vaccine. • Avoid crowds, those with infection. • Wear sunscreen, limit sun exposure during therapy (sunlight can exacerbate skin reactions). • Female pts should take measures to avoid pregnancy. • Notify physician if cardiac or pulmonary symptoms, severe rash occurs.

chlorambucil HIGH ALERT

klor-**am**-bue-sil
(Leukeran)

BLACK BOX ALERT May cause myelosuppression. Affects fertility; potential for carcinogenic, mutagenic, teratogenic effects. May cause azoospermia.

Do not confuse Leukeran with Alkeran, Leukine, or Myleran.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent, nitrogen mustard. **CLINICAL:** Antineoplastic (see p. 81C).

ACTION

Inhibits DNA, RNA synthesis by cross-linking with DNA, RNA strands. Cell cycle–phase nonspecific. **Therapeutic Effect:** Interferes with nucleic acid function.

C

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: 99%. Rapidly metabolized in liver to active metabolite. Not removed by hemodialysis. **Half-life:** 1.5 hrs; metabolite, 2.5 hrs.

USES

Treatment of chronic lymphocytic leukemia (CLL), Hodgkin's and non-Hodgkin's lymphomas (NHL). **OFF-LABEL:** Nephrotic syndrome in children, Waldenström's macroglobulinemia.

PRECAUTIONS

Contraindications: Previous allergic reaction to other alkylating agents; prior resistance to chlorambucil; pregnancy. **Extreme Cautions:** Within 4 wks after full-course radiation therapy or myelosuppressive drug regimen. **Cautions:** Seizure disorder, head trauma, bone marrow suppression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breast-feeding not recommended. **Pregnancy Category D. Children:** No age-related precautions noted. When taken for nephrotic syndrome, may increase seizures. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Bone marrow depressants may increase myelosuppression. **Other immunosuppressants (e.g., steroids)** may increase risk of infection or development of neoplasms. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease antibody response to vaccine. **HERBAL: Echinacea** may decrease effects. **FOOD: Acidic foods, hot foods, spices** may delay absorption. **LAB VALUES:** May increase serum alkaline phosphatase, AST, uric acid.

AVAILABILITY (Rx)

Tablets: 2 mg.

ADMINISTRATION/HANDLING

PO

• Give 30–60 min before food. • Do not give with acidic foods, hot foods, spices.

INDICATIONS/ROUTES/DOSAGE

Chronic Lymphocytic Leukemia (CLL)

PO: ADULTS, ELDERLY: 0.1 mg/kg/day for 3–6 wks or 0.4 mg/kg pulsed doses administered intermittently, biweekly or monthly.

Hodgkin's Lymphoma (HL)

PO: ADULTS, ELDERLY: 0.2 mg/kg/day for 3–6 wks.

Non-Hodgkin's Lymphoma (NHL)

PO: ADULTS, ELDERLY: 0.1 mg/kg/day for 3–6 wks.

SIDE EFFECTS

Expected: GI effects (nausea, vomiting, anorexia, diarrhea, abdominal distress) generally mild, last less than 24 hrs, occur only if single dose exceeds 20 mg. **Occasional:** Rash, dermatitis, pruritus, cold sores. **Rare:** Alopecia, urticaria, erythema, hyperuricemia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity due to severe myelosuppression occurs frequently, manifested as neutropenia, anemia, thrombocytopenia. After discontinuation of therapy, thrombocytopenia, neutropenia usually last for 1–2 wks but may persist for 3–4 wks. Neutrophil count may continue to decrease for up to 10 days after last dose. Toxicity appears to be less severe with intermittent drug administration. Overdosage may produce seizures in children. Excessive serum uric acid level, hepatotoxicity occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC should be performed before therapy and each wk during therapy, WBC count performed 3–4 days following each weekly

CBC during first 3–6 wks of therapy (4–6 wks if pt on intermittent dosing schedule).

INTERVENTION/EVALUATION

Monitor CBC, platelet count, serum uric acid, hepatic function tests. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Assess skin for rash, pruritus, urticaria.

PATIENT/FAMILY TEACHING

• Increase fluid intake (may protect against hyperuricemia). • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, nausea, vomiting, rash.

chlordiazepoxide

klor-dye-az-e-**pox**-ide
(Apo-Chlordiazepoxide ✱, Librium)
Do not confuse Librium with Librax.

FIXED-COMBINATION(S)

Limbitrol: amitriptyline/chlordiazepoxide: 5 mg/12.5 mg, 10 mg/25 mg. **Librax:** chlordiazepoxide-clidinium: 5 mg/2.5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Antianxiety (see p. 13C).

ACTION

Enhances action of inhibitory neurotransmitter gamma-aminobutyric acid in CNS. **Therapeutic Effect:** Produces anxiolytic effect.

PHARMACOKINETICS

Widely distributed. Protein binding: 90%–98%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 6.6–25 hrs.

USES

Management of anxiety disorders, acute alcohol withdrawal symptoms; short-term relief of symptoms of anxiety, preop anxiety, tension.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment. Elderly, debilitated pts, respiratory disease, impaired gag reflex, porphyria, other CNS depressants, pts at risk for falls/traumatic injury, history of drug dependence, high risk of suicidal ideation.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category D. Children/Elderly:** Reduce initial dose, increase dosage gradually (prevents excessive sedation).

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depression. **Azole antifungals (e.g., ketoconazole), CYP3A4 inhibitors (e.g., fluconazole, diltiazem)** may increase serum concentration, increase risk of toxicity. **CYP3A4 inducers (e.g., rifampin)** may decrease concentration/effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease effectiveness. **FOOD:** None known. **LAB VALUES: Therapeutic serum level:** 0.1–3 mcg/ml; **toxic serum level:** greater than 23 mcg/ml.

AVAILABILITY (Rx)

Capsules (Librium): 5 mg, 10 mg, 25 mg.

ADMINISTRATION/HANDLING

PO

• May take without regard to food.

C

INDICATIONS/ROUTES/DOSAGE

Alcohol Withdrawal Symptoms

PO: ADULTS, ELDERLY: 50–100 mg. May repeat q2–4h. **Maximum:** 300 mg/24 hrs.

Anxiety

PO: ADULTS: 15–100 mg/day in 3–4 divided doses. **ELDERLY:** 5 mg 2–4 times a day. **CHILDREN 6 YRS AND OLDER:** 5 mg 2–4 times/day or 10 mg 2–3 times/day.

SIDE EFFECTS

Frequent: Drowsiness, ataxia, dizziness, confusion with oral dose (particularly in elderly or debilitated pts). **Occasional:** Rash, peripheral edema, GI disturbances. **Rare:** Paradoxical CNS reactions (hyperactivity, nervousness in children; excitement, restlessness in the elderly, generally noted during first 2 wks of therapy, particularly in presence of uncontrolled pain).

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt or too-rapid withdrawal may result in pronounced restlessness, irritability, insomnia, hand tremors, abdominal/muscle cramps, diaphoresis, vomiting, seizures. Overdose results in drowsiness, confusion, diminished reflexes, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations immediately before administration.

INTERVENTION/EVALUATION

Monitor vital signs, esp. B/P, for changes. Assess motor responses (agitation, tremors, tension), autonomic responses (cold/clammy hands, diaphoresis). Assess children, elderly for paradoxical reaction, particularly during early therapy. Assist with ambulation if drowsiness, ataxia occur. **Therapeutic serum level:** 0.1–3 mcg/ml; **toxic serum level:** greater than 23 mcg/ml.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established or drowsiness has diminished. • Drowsiness usually disappears during continued therapy. • If dizziness occurs, change positions slowly from recumbent to sitting before standing. • Smoking reduces drug effectiveness. • Do not abruptly discontinue medication after long-term therapy. • Avoid alcohol.

*chlorproMAZINE

klor-**pro**-ma-zeen
(Largactil, Novo-Chlorpromazine)

BLACK BOX ALERT Increased risk of mortality in elderly pts with dementia-related psychosis.

Do not confuse chlorpromazine with clomipramine, prochlorperazine, or promethazine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenothiazine. **CLINICAL:** Antipsychotic, antiemetic, antianxiety, antineuralgia adjunct (see p. 64C).

ACTION

Blocks dopamine neurotransmission at postsynaptic dopamine receptor sites. Possesses strong anticholinergic, sedative, antiemetic effects; moderate extrapyramidal effects; slight antihistamine action. **Therapeutic Effect:** Improves psychotic conditions; relieves nausea/vomiting; controls intractable hiccups, porphyria.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 92%–97%. Metabolized in liver, excreted in urine. **Half-life:** Initial 2 hrs; **terminal:** 30 hrs.

USES

Management of psychotic disorders (control of mania, treatment of schizo-

phrenia), severe nausea/vomiting, severe behavioral disturbances in children. Relief of intractable hiccups, acute intermittent porphyria. **OFF-LABEL:** Management of psychotic disorders; behavioral symptoms associated with dementia; agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: Comatose states, severe CNS depression. **Cautions:** Respiratory/hepatic/renal/cardiac impairment, alcohol withdrawal, subcortical brain damage, history of seizures, urinary retention, prostatic hypertrophy, hypocalcemia (increases susceptibility to dystonias), myasthenia gravis, cerebrovascular disease, pts with prolonged QT interval. Pts with hemodynamic instability, risk for aspiration pneumonia, decreased GI motility, visual problems (e.g., narrow-angle glaucoma).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children:** Those with acute illnesses (chickenpox, measles, gastroenteritis, CNS infection) are at risk for developing neuromuscular, extrapyramidal symptoms (EPS), particularly dystonias. **Elderly:** Susceptible to anticholinergic, neuromuscular effects; EPS.

INTERACTIONS

DRUG: Rifampin may decrease chlorpromazine effect. **Alcohol, CNS depressants** may increase respiratory depression, hypotensive effects. **MAOIs, tricyclic antidepressants** may increase sedative, anticholinergic effects. **HERBAL: St. John's wort** may decrease concentration, increase photosensitization, sedative effect. **Dong quai** may increase photosensitization. **Gotu kola, kava kava, valerian** may increase sedative effect. **FOOD:** None known. **LAB VALUES:** May produce false-positive pregnancy test, phenylketonuria (PKU) test. EKG changes may occur, including QT-interval and T-wave disturbances.

AVAILABILITY (Rx)

Injection Solution: 25 mg/ml. **Tablets:** 10 mg, 25 mg, 50 mg, 100 mg, 200 mg.

ADMINISTRATION/HANDLING

IM

◀ALERT▶ Do not give chlorpromazine by subcutaneous route (risk for severe tissue necrosis).

• Dilute the injection solution as prescribed with Sodium Chloride for Injection. • Slowly inject drug deep into large muscle, such as gluteus maximus rather than lateral aspect of the thigh, to minimize discomfort.

IV

• For direct IV injection, dilute with 0.9% NaCl to maximum concentration of 1 mg/ml. • Administer slowly: 0.5 mg/min in children, 1 mg/min in adults. Protect from light. A slightly yellow solution does not indicate potency loss. Discard markedly discolored solutions.

PO

Administer with food, water, or milk to decrease GI effects.

INDICATIONS/ROUTES/DOSAGE

Severe Nausea/Vomiting

PO: ADULTS, ELDERLY: 10–25 mg q4–6h. **CHILDREN:** 0.5–1 mg/kg q4–6h.

IV, IM: ADULTS, ELDERLY: 25–50 mg q4–6h. **CHILDREN:** 0.5–1 mg/kg q6–8h. **Maximum:** 40 mg/day for children less than 5 yrs; 75 mg/day for children 5–12 yrs.

Psychotic Disorders

PO: ADULTS, ELDERLY: 30–800 mg/day in 1–4 divided doses (usual dose: 200–600 mg/day). **CHILDREN OLDER THAN 6 MOS:** 0.5–1 mg/kg q4–6h.

IV, IM: ADULTS, ELDERLY: Initially, 25 mg; may repeat in 1–4 hrs. May gradually increase to 400 mg/dose. Usual dose: 300–800 mg/day. **CHILDREN OLDER THAN 6 MOS:** 0.5–1 mg/kg q6–8h. **Maximum:** 75 mg/day for children 5–12 yrs; 40 mg/day for children younger than 5 yrs.

C

Intractable Hiccups
PO, IM: ADULTS: 25–50 mg 3–4 times a day. **IV:** 25–50 mg by slow IV infusion.

Porphyria
PO: ADULTS: 25–50 mg 3–4 times a day.
IM: ADULTS, ELDERLY: 25 mg 3–4 times a day.

SIDE EFFECTS

Frequent: Drowsiness, blurred vision, hypotension, color vision or night vision disturbances, dizziness, decreased diaphoresis, constipation, dry mouth, nasal congestion. **Occasional:** Urinary retention, photosensitivity, rash, decreased sexual function, swelling/pain in breasts, weight gain, nausea, vomiting, abdominal pain, tremors.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extrapyramidal symptoms appear to be dose related (particularly high dosage) and are divided into three categories: akathisia (inability to sit still, tapping of feet), parkinsonian symptoms (mask-like face, tremors, shuffling gait, hypersalivation), acute dystonias (torticollis [neck muscle spasm], opisthotonos [rigidity of back muscles], and oculogyric crisis [rolling back of eyes]). Dystonic reaction may produce diaphoresis, pallor. Tardive dyskinesia (tongue protrusion, puffing of cheeks, puckering of the mouth) occurs rarely (may be irreversible). Abrupt discontinuation after long-term therapy may precipitate nausea, vomiting, gastritis, dizziness, tremors. Blood dyscrasias, particularly agranulocytosis, mild leukopenia, may occur. May lower seizure threshold.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Avoid skin contact with solution (contact dermatitis). **Antiemetic:** Assess for dehydration (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue). **Antipsychotic:** Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P for hypotension. Assess for EPS. Monitor WBC, differential count for blood dyscrasias, fine tongue movement (may be early sign of tardive dyskinesia). Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression). **Therapeutic serum level:** 50–300 ng/ml; **toxic serum level:** greater than 750 ng/ml.

PATIENT/FAMILY TEACHING

• Full therapeutic response may take up to 6 wks. • Urine may darken. • Do not abruptly withdraw from long-term drug therapy. • Report visual disturbances. • Drowsiness generally subsides with continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, exposure to sunlight.

cholestyramine

koe-lee-**stye**-rah-meen
(Novo-Cholamine, Prevalite, Questran, Questran Lite)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Bile acid sequestrant. **CLINICAL:** Antihyperlipoproteinemic (see p. 56C).

ACTION

Binds with bile acids in intestine, forming insoluble complex. Binding results in partial removal of bile acid from enterohepatic circulation. **Therapeutic Effect:** Removes LDL cholesterol from plasma.

PHARMACOKINETICS

Not absorbed from GI tract. Decreases in serum LDL apparent in 5–7 days and in serum cholesterol in 1 mo. Serum cholesterol returns to baseline levels about 1 mo after drug is discontinued.

USES

Adjunct to dietary therapy to decrease elevated serum cholesterol levels in pts with primary hypercholesterolemia. Relief of pruritus associated with elevated levels of bile acids. **OFF-LABEL:** Treatment of diarrhea (due to bile acids), binding toxicologic agents.

PRECAUTIONS

Contraindications: Complete biliary obstruction, hypersensitivity to cholestyramine, tartrazine (frequently seen in aspirin hypersensitivity). **Cautions:** GI dysfunction (esp. constipation), recent abdominal surgery.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not systemically absorbed. May interfere with maternal absorption of fat-soluble vitamins. **Pregnancy Category B. Children:** No age-related precautions noted. Limited experience in those younger than 10 yrs. **Elderly:** Increased risk of GI side effects, adverse nutritional effects.

INTERACTIONS

DRUG: May increase effects of **anticoagulants** by decreasing vitamin K level. May decrease **warfarin** absorption. May bind with, decrease absorption of **digoxin, folic acid, penicillins, propranolol, tetracyclines, thiazides, thyroid hormones, other medications.** May bind with, decrease effects of **oral vancomycin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, magnesium, AST, ALT. May decrease serum calcium, potassium, sodium. May prolong PT.

AVAILABILITY (Rx)

Powder for Oral Suspension: 4 g.

ADMINISTRATION/HANDLING

PO

• Give other drugs at least 1 hr before or 4–6 hrs following cholestyramine (capable of binding drugs in GI tract). • Do not give in dry form (highly irritating). Mix with 3–6 oz water, milk, fruit juice, soup. • Place powder on surface for 1–2 min (prevents lumping), then mix thoroughly. • Excessive foaming with carbonated beverages; use extra large glass, stir slowly. • Administer with meals.

INDICATIONS/ROUTES/DOSAGE

Hypercholesterolemia

PO: ADULTS, ELDERLY: Initially, 4 g 1–2 times a day. Gradually increase over at least 1-mo intervals. Maintenance: 4–16 g/day in divided doses. **Maximum:** 24 g/day, 6 doses/day. **CHILDREN:** 80 mg/kg 3 times a day. **Maximum:** 8 g/day.

Pruritis

PO: ADULTS, ELDERLY: Initially, 4 g 1–2 times a day. Maintenance: 4–16 g/day in divided doses. **Maximum:** 24 g/day.

SIDE EFFECTS

Frequent: Constipation (may lead to fecal impaction), nausea, vomiting, abdominal pain, indigestion. **Occasional:** Diarrhea, belching, bloating, headache, dizziness. **Rare:** Gallstones, peptic ulcer disease, malabsorption syndrome.

ADVERSE EFFECTS/ TOXIC REACTIONS

GI tract obstruction, hyperchloremic acidosis, osteoporosis secondary to calcium excretion may occur. High dosage may interfere with fat absorption, resulting in steatorrhea.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity to cholestyramine, tartrazine, aspirin. Obtain baseline serum cholesterol, triglycerides, electrolytes, hepatic enzyme levels.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Evaluate food tolerance, abdominal discomfort, flatulence. Monitor cholesterol, triglycerides, PT, hepatic enzymes, CBC, serum electrolytes. Encourage several glasses of water between meals.

PATIENT/FAMILY TEACHING

• Complete full course of therapy; do not omit or change doses. • Take other drugs at least 1 hr before or 4–6 hrs after cholestyramine. • Never take in dry form; mix with 3–6 oz water, milk, fruit juice, soup (place powder on surface for 1–2 min to prevent lumping, then mix well). • Use extra-large glass, stir slowly when mixing with carbonated beverages due to foaming. • Take with meals, drink several glasses of water between meals. • Eat high-fiber foods (whole-grain cereals, fruits, vegetables) to reduce potential for constipation.

chorionic gonadotropin, hCG

kore-ee-**on**-ik goe-**nad**-oh-troe-pin (Novarel, Ovidrel, Pregnyl)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Gonadotropin. **CLINICAL:** Infertility therapy adjunct, diagnostic aid (hypogonadism) (see p. 104C).

ACTION

Stimulates production of gonadal steroid hormones by stimulating interstitial cells (Leydig cells) of testes to produce androgen and corpus luteum of the ovary to produce progesterone. **Therapeutic Effect:** Androgen stimulation in male causes production of secondary sex characteristics, may stimulate descent of testes when no anatomic impediment exists. In women of childbearing age with normally functioning ovaries, causes maturation of corpus luteum, triggers ovulation.

PHARMACOKINETICS

Excreted in urine. **Half-life:** 23–29 hrs.

USES

Treatment of hypogonadotropic hypogonadism, prepubertal cryptorchidism. Induces ovulation and pregnancy in anovulatory infertile females. Spermatogenesis induction with follintropin alfa.

PRECAUTIONS

Contraindications: Novaryl, Pregnyl: Precocious puberty, carcinoma of prostate, other androgen-dependent neoplasia. Pregnancy. **Ovidrel:** Primary ovarian failure, uncontrolled thyroid/adrenal dysfunction, abnormal uterine bleeding, ovarian cyst, ovarian enlargement of undetermined source, sex hormone-dependent tumors, pregnancy. **Cautions:** Conditions aggravated by fluid retention (cardiac/renal disease, epilepsy, migraine, asthma). **Pregnancy Category X.**

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase urine concentrations of 17-hydroxycorticosteroids, 17-ketosteroids.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Novaryl, Pregnyl): 10,000 units. **Injection, Solution (Ovidrel):** 250 mcg/0.5 ml syringe.

ADMINISTRATION/HANDLING

IM

• **Novaryl, Pregnyl:** Reconstituted drug is stable for 30–90 days if refrigerated.

Subcutaneous

• **Ovidrel:** Refrigerate syringe. Inject into abdominal area.

INDICATIONS/ROUTES/DOSAGE

Prepubertal Cryptorchidism

IM: CHILDREN: Dosage is individualized based on indication, age, weight of pt, and physician preference.

Induction of Ovulation

IM *(Novaryl, Pregnyl)*: ADULTS (AFTER PRETREATMENT WITH MENOTROPINS): 5,000–10,000 international units 1 day after last dose of menotropins. **Subcutaneous *(Ovidrel)*:** 250 mcg given 1 day following last dose of follicle-stimulating agent.

Hypogonadotropic Hypogonadism

IM: CHILDREN: 500–1,000 units 3 times/wk for 3 wks, then 500–1,000 units 2 times/wk for 3 wks.

Spermatogenesis Induction

IM: ADULTS: 1,000–2,000 units 2–3 times/wk.

SIDE EFFECTS

Frequent: Pain at injection site. **Induction of ovulation:** Ovarian cysts, uncomplicated ovarian enlargement. **Occasional:** Gynecomastia, headache, irritability, fatigue, depression. **Induction of ovulation:** Severe ovarian hyperstimulation, peripheral edema. **Cryptorchidism:** Precocious puberty (acne, deepening voice, penile growth, pubic/axillary hair).

ADVERSE EFFECTS/ TOXIC REACTIONS

When used with menotropins: increased risk of arterial thromboembolism, ovarian hyperstimulation with high incidence (20%) of multiple births (premature deliveries and neonatal prematurity), ruptured ovarian cysts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline weight, B/P.

INTERVENTION/EVALUATION

Assess for edema: weigh every 2–3 days, report weight gain greater than 5 lb/wk; monitor B/P periodically during treatment; check for decreased urinary output, peripheral edema.

PATIENT/FAMILY TEACHING

• Promptly report abdominal pain, vaginal bleeding, signs of precocious puberty in males (deepening of voice; axillary, facial, pubic hair; acne; penile growth), signs of edema. • In anovulation treatment, begin recording daily basal temperature; initiate intercourse daily beginning the day preceding human chorionic gonadotropin (hCG) treatment. • Possibility of multiple births exists.

ciclesonide

sye-**kles**-oh-nide
(Alvesco HFA, Omnaris, Zetonna)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glucocorticoid. **CLINICAL:** Anti-inflammatory (see p. 2C, 75C).

ACTION

Inhibits accumulation of inflammatory cells, decreases and prevents tissues from responding to inflammatory process. **Therapeutic Effect:** Relieves symptoms of allergic rhinitis, asthma.

PHARMACOKINETICS

Minimally absorbed from nasal tissue, moderately absorbed from inhalation. Protein binding: 99%. Primarily metabolized in liver. Excreted mainly in feces with lesser amount eliminated in urine. **Half-life:** 2–3 hrs.

USES

Intranasal: Management of symptoms of seasonal or perennial allergic rhinitis. **Oral Inhalation:** Prophylactic management of bronchial asthma.

C

PRECAUTIONS

Contraindications: Primary treatment of acute asthma or status asthmaticus; moderate to severe bronchiectasis. **Cautions:** Cataracts, hepatic impairment, seizures, osteoporosis, glaucoma, thyroid disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Ketoconazole** may increase plasma concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Inhalation (Alvesco HFA): 80 mcg/spray, 160 mcg/spray. **Nasal Spray (Omnaris):** 50 mcg/spray. **(Zetonna):** 37 mcg/spray.

ADMINISTRATION/HANDLING

Inhalation

• Shaking not necessary. • Wait 2 min before inhaling second dose (allows for deeper bronchial penetration). • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness).

Intranasal

• Instruct pt to clear nasal passages as much as possible before use. • Tilt head slightly forward. • Insert spray tip into nostril, pointing toward nasal passages, away from nasal septum. • Spray into one nostril while pt holds other nostril closed, concurrently inspires through nose to permit medication as high into nasal passages as possible.

INDICATIONS/ROUTES/DOSAGE

Perennial Allergic Rhinitis

Intranasal: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: (Omnaris): 2 sprays (100 mcg) in each nostril once a day. **Maximum:** 200 mcg/day. **(Zetonna):** 1 spray (37 mcg) in each nostril daily.

Seasonal Allergic Rhinitis

Intranasal: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: (Omnaris): 2 sprays (100 mcg) in each nostril once a day. **Maximum:** 200 mcg/day. **(Zetonna):** 1 spray (37 mcg) in each nostril daily.

Asthma

Inhalation: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER (PREVIOUS THERAPY WITH BRONCHODILATORS ALONE): Initially, 80 mcg 2 times daily. **Maximum:** 320 mcg 2 times daily. **(PREVIOUS THERAPY WITH INHALED STEROIDS):** Initially, 80 mcg twice daily. **Maximum:** 640 mcg/day. **(PREVIOUS THERAPY WITH ORAL STEROIDS):** Initially, 320 mcg twice daily. **Maximum:** 640 mcg/day.

SIDE EFFECTS

Occasional (6%–4%): Headache, epistaxis, nasopharyngitis. **Rare (2%):** Ear pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive doses over prolonged periods may result in systemic hypercortisolism.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroids. Establish baseline history of asthma, rhinitis.

INTERVENTION/EVALUATION

Monitor for relief of symptoms. Monitor rate, depth, rhythm, type of respiration. Assess lung sounds for rhonchi, wheezing, rales. Assess oral mucous membranes for candidiasis.

PATIENT/FAMILY TEACHING

• Improvement noted in 24–48 hrs, but full effect may take 1–2 wks for seasonal allergic rhinitis, 5 wks for perennial allergic rhinitis. • Improvement in asthma may take 4 wks or longer. • Oral in-

halation not for acute asthma attacks. • Contact physician if no improvement in symptoms, sneezing or nasal irritation occurs.

cidofovir

sye-**dof**-oh-veer
(Vistide)

BLACK BOX ALERT Dose-dependent nephrotoxicity requires dose adjustment, discontinuation if changes in renal function occur (renal lab tests, urinalysis). May cause hypospermia. May be embryotoxic, teratogenic. Neutropenia reported: monitor neutrophil count.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-infective. **CLINICAL:** Antiviral (see p. 67C).

ACTION

Inhibits viral DNA synthesis by incorporating itself into growing viral DNA chain. **Therapeutic Effect:** Suppresses replication of cytomegalovirus (CMV).

PHARMACOKINETICS

Protein binding: less than 6%. Excreted primarily unchanged in urine. Effect of hemodialysis unknown. **Elimination Half-life:** 1.4–3.8 hrs.

USES

Treatment of CMV retinitis in those with HIV. Should be given with probenecid.

PRECAUTIONS

Contraindications: Direct intraocular injection, history of clinically severe hypersensitivity to probenecid or other sulfa-containing drugs, renal impairment (serum creatinine level greater than 1.5 mg/dl, creatinine clearance 55 ml/min or less, or urine protein level greater than 100 mg/dl). Use with or within 7 days of nephrotoxic agent. **Caution:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Embryotoxic (reduced fetal body weight) in animals. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Nephrotoxic medications (e.g., aminoglycosides, amphotericin B, foscarnet, IV pentamidine) increase risk of nephrotoxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease neutrophil count, serum bicarbonate, phosphate, uric acid. May elevate serum creatinine.

AVAILABILITY (Rx)

Injection Solution: 75 mg/ml (5-ml ampule).

ADMINISTRATION/HANDLING

◀ALERT▶ Do not exceed recommended dosage, frequency, infusion rate.

IV

Reconstitution • Dilute in 100 ml 0.9% NaCl or D_5W not to exceed concentration of 8 mg/ml.

Rate of Administration • Infuse over 1 hr. • IV hydration with 0.9% NaCl (1,000 ml prior to and after cidofovir infusion) and probenecid therapy **must** be used with each cidofovir infusion (minimizes risk of nephrotoxicity). • Ingestion of food before each dose of probenecid may reduce nausea/vomiting. Antiemetic may reduce potential for nausea.

Storage • Store at controlled room temperature (68°F–77°F). • Admixtures may be refrigerated for no more than 24 hrs. • Allow refrigerated admixtures to warm to room temperature before use.

IV INCOMPATIBILITIES

No information available for Y-site administration.

C

INDICATIONS/ROUTES/DOSAGE

Cytomegalovirus (CMV) Retinitis in Pts with HIV (in Combination with Probenecid)

IV Infusion: ADULTS: Induction: Usual dosage, 5 mg/kg at constant rate over 1 hr once weekly for 2 consecutive wks. Give 2 g of PO probenecid 3 hrs before cidofovir dose, then give 1 g 2 hrs and 8 hrs after completion of the 1-hr cidofovir infusion (total of 4 g). In addition, give 1 L of 0.9% NaCl over 1–2 hrs immediately before cidofovir infusion. If tolerated, a second liter may be infused over 1–3 hrs at start of infusion or immediately afterward. **CHILDREN:** 5 mg/kg one time with probenecid and hydration. Maintenance: **ADULTS, ELDERLY:** 5 mg/kg once every 2 wks. **CHILDREN:** 3–5 mg/kg/dose once q2wks for 2–4 doses.

Dosage in Renal Impairment

Changes during Therapy: If creatinine increases by 0.3–0.4 mg/dl, reduce dose to 3 mg/kg; if creatinine increases by 0.5 mg/dl or greater or proteinuria 3+ or greater develops, discontinue therapy.

Preexisting Renal Impairment: Do not use with serum creatinine greater than 1.5 mg/dl, creatinine clearance less than 55 ml/min, or urine protein 100 mg/dl or greater (2+ or greater proteinuria).

SIDE EFFECTS

Frequent: Nausea, vomiting (65%), fever (57%), asthenia (loss of strength, energy) (46%), rash (30%), diarrhea (27%), headache (27%), alopecia (25%), chills (24%), anorexia (22%), dyspnea (22%), abdominal pain (17%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious adverse effects include proteinuria (80%), nephrotoxicity (53%), neutropenia (31%), elevated serum creatinine (29%), infection (24%), anemia (20%), decrease in intraocular pressure (IOP) (12%), pneumonia (9%). Concurrent use of probenecid may produce a hypersensitivity reaction characterized by rash, fever, chills, anaphylaxis. Acute renal failure occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory tests prior to beginning therapy. For those taking zidovudine, temporarily discontinue zidovudine administration or decrease zidovudine dose by 50% on days of infusion (probenecid reduces metabolic clearance of zidovudine). Closely monitor renal function (urinalysis, serum creatinine) during therapy.

INTERVENTION/EVALUATION

Monitor serum creatinine, BUN, WBC count, urine protein, electrolytes, hepatic function tests before each dose. Monitor for proteinuria (may be early indicator of dose-dependent nephrotoxicity). Periodically monitor visual acuity, ocular symptoms.

PATIENT/FAMILY TEACHING

• Obtain regular follow-up ophthalmologic exams. • Those of childbearing age should use effective contraception during and for 1 mo after treatment. • Men should practice barrier contraceptive methods during and for 3 mos after treatment. • Breastfeeding not recommended. • Must complete full course of probenecid with each cidofovir dose. • Report rash immediately.

cilostazol

sil-**oh**-sta-zol
(Pletal)

BLACK BOX ALERT Contraindicated in pts with CHF of any severity.

Do not confuse Pletal with Plendil.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphodiesterase enzyme inhibitor. **CLINICAL:** Antiplatelet.

ACTION

Inhibits platelet aggregation. Dilates vascular beds with greatest dilation in femo-

ral beds. **Therapeutic Effect:** Improves walking distance in those with intermittent claudication; usually noted in 2–4 wks but may take as long as 12 wks.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: 95%–98%. Extensively metabolized in liver. Excreted primarily in urine and, to a lesser extent, in feces. Not removed by hemodialysis. **Half-life:** 11–13 hrs.

USES

Management of peripheral vascular disease, primarily intermittent claudication. **OFF-LABEL:** Adjunct with aspirin and clopidogrel for prevention of stent thrombosis and restenosis after coronary stent placement.

PRECAUTIONS

Contraindications: CHF of any severity, hemostatic disorders or active bleeding (bleeding peptic ulcer, intracranial bleeding). **Cautions:** Severe underlying heart disease, thrombocytopenia, those receiving other platelet aggregation inhibitors, moderate to severe hepatic impairment, severe renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Aspirin** may potentiate inhibition of platelet aggregation. **CYP3A4 inhibitors (e.g., clarithromycin, diltiazem, erythromycin, fluconazole), CYP2C19 inhibitors (e.g., omeprazole)** may increase concentration. **HERBAL:** **St. John's wort** may decrease effect. Avoid herbs with antiplatelet activity **(e.g., garlic, ginger, ginkgo).** **FOOD:** **Grapefruit, grapefruit juice** may increase concentration, toxicity. **LAB VALUES:** May increase BUN, serum glucose, uric acid. May decrease platelet count, WBC.

AVAILABILITY (Rx)

Tablets: 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Give at least 30 min before or 2 hrs after meals. • Do not take with grapefruit juice.

INDICATIONS/ROUTES/DOSAGE

Peripheral Vascular Disease

PO: ADULTS, ELDERLY: 100 mg twice a day at least 30 min before or 2 hrs after meals. 50 mg twice a day during concurrent therapy with CYP3A4 or CYP2C19 inhibitors (e.g., clarithromycin, diltiazem, erythromycin, fluconazole, fluoxetine, omeprazole, sertraline).

SIDE EFFECTS

Frequent (34%–10%): Headache, diarrhea, palpitations, dizziness, pharyngitis. **Occasional (7%–3%):** Nausea, rhinitis, back pain, peripheral edema, dyspepsia, abdominal pain, tachycardia, cough, flatulence, myalgia. **Rare (2%–1%):** Leg cramps, paresthesia, rash, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose noted as severe headache, diarrhea, hypotension, cardiac arrhythmias.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess platelet count, CBC before treatment and periodically during treatment.

INTERVENTION/EVALUATION

Monitor for improvement of symptoms (e.g., improved walking distance).

PATIENT/FAMILY TEACHING

• Take on an empty stomach (at least 30 min before or 2 hrs after meals). • Do not take with grapefruit juice.

C

cimetidine

sye-**met**-ih-deen
(Apo-Cimetidine, Novo-Cimetidine, Tagamet, Tagamet HB 200)
Do not confuse cimetidine with simethicone.

CLASSIFICATION

PHARMACOTHERAPEUTIC: H_2-receptor antagonist. **CLINICAL:** Antiulcer, gastric acid secretion inhibitor (see p. 107C).

ACTION

Inhibits histamine action at histamine-2 (H_2)-receptor sites of parietal cells. **Therapeutic Effect:** Inhibits gastric acid secretion.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 15%–20%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2 hrs (increased in renal impairment).

USES

Short-term treatment of active duodenal ulcer. Prevention of duodenal ulcer recurrence. Treatment of benign gastric ulcer, pathologic GI hypersecretory conditions, gastroesophageal reflux disease (GERD). **OTC use**: Heartburn, acid indigestion, sour stomach. **OFF-LABEL:** *H. pylori* eradication to reduce risk of duodenal ulcer recurrence.

PRECAUTIONS

Contraindications: Hypersensitivity to other H_2 antagonists. **Cautions:** Renal/hepatic impairment, elderly. Concurrent administration of medications metabolized through the P450 system.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Safe use in pregnancy has not been established (possible adverse effects on fetal development). **Pregnancy Category B. Children:** Long-term use may induce cerebral toxicity, affect hormonal system. **Elderly:** More likely to experience confusion, esp. in those with renal impairment.

INTERACTIONS

DRUG: May increase concentration, decrease metabolism of **warfarin, phenytoin, propranolol, tricyclic antidepressants.** May decrease absorption of **itraconazole, ketoconazole. HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** Interferes with skin tests using allergen extracts. May increase serum prolactin, creatinine, transaminase. May decrease parathyroid hormone concentration.

AVAILABILITY (Rx)

Liquid, Oral: 300 mg/5 ml. **Tablets:** 200 mg (OTC), 300 mg, 400 mg, 800 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Best given with meals and at bedtime. • Do not administer within 1 hr of antacids.

INDICATIONS/ROUTES/DOSAGE

Active Duodenal Ulcer

PO: ADULTS, ELDERLY: 300 mg 4 times a day or 400 mg twice a day or 800 mg at bedtime for up to 8 wks.

Prevention of Duodenal Ulcer

PO: ADULTS, ELDERLY: 400 mg at bedtime.

Gastric Hypersecretory Secretions

PO: ADULTS, ELDERLY: 300–600 mg q6h. **Maximum:** 2,400 mg/day.

Gastroesophageal Reflux Disease (GERD)

PO: ADULTS, ELDERLY: 800 mg twice a day or 400 mg 4 times a day for 12 wks.

OTC Use

PO: ADULTS, ELDERLY: 200 mg up to 30 min before meals. **Maximum:** 2 doses/day.

Usual Pediatric Dosage

CHILDREN: 20–40 mg/kg/day in divided doses q6h. **INFANTS:** 10–20 mg/kg/day in divided doses q6–12h. **NEONATES:** 5–10 mg/kg/day in divided doses q8–12h.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
Greater than 50 ml/min	No change
10–50 ml/min	50% of normal dose
Less than 10 ml/min	25% of normal dose

Give after hemodialysis and q12h between dialysis sessions.

SIDE EFFECTS

Occasional (4%–2%): Headache. **Elderly, pts with renal impairment, severely ill pts:** Confusion, agitation, psychosis, depression, anxiety, disorientation, hallucinations. Effects reverse 3–4 days after discontinuance. **Rare (less than 2%):** Diarrhea, dizziness, drowsiness, nausea, vomiting, gynecomastia, rash, impotence.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, PT, aPTT, BUN, creatinine.

INTERVENTION/EVALUATION

Assess for GI bleeding: hematemesis, blood in stool. Monitor for changes in mental status in elderly, severely ill, those with renal impairment.

PATIENT/FAMILY TEACHING

• Do not take antacids within 1 hr of cimetidine administration. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid smoking, excessive amounts of caffeine. • Report any blood in vomitus/stool, or dark, tarry stool.

cinacalcet

sin-ah-**kal**-set
(Sensipar)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium receptor agonist. **CLINICAL:** Calcimimetic.

ACTION

Increases sensitivity of calcium-sensing receptor on parathyroid gland to activation by extracellular calcium, thus lowering parathyroid hormone (PTH) levels. **Therapeutic Effect:** Decreases serum calcium, PTH levels.

PHARMACOKINETICS

Extensively distributed after PO administration. Protein binding: 93%–97%. Metabolized in liver to inactive metabolites. Primarily eliminated in urine with a lesser amount excreted in feces. **Half-life:** 30–40 hrs.

USES

Treatment of hypercalcemia in pts with parathyroid carcinoma. Treatment of secondary hyperparathyroidism in pts with chronic renal disease on dialysis. Treatment of severe hypercalcemia in pts with hyperparathyroidism. **OFF-LABEL:** Primary hyperparathyroidism.

PRECAUTIONS

Contraindications: Hypocalcemia. **Cautions:** Moderate to severe hepatic impairment. Seizure disorder, cardiovascular disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cross placental barrier; unknown if distributed in breast milk. Safe usage during lactation

C

not established (potential adverse reaction in infants). **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong **CYP3A4 inhibitors (e.g., erythromycin, itraconazole, ketoconazole)** increase plasma concentration. Concurrent administration of drugs metabolized by **CYP2D6 enzyme (e.g., flecainide, tricyclic antidepressants, metoprolol, carvedilol),** may require dosage adjustment. **HERBAL:** None significant. **FOOD: High-fat meals** increase plasma concentration. **LAB VALUES:** May decrease serum calcium, phosphorus level.

AVAILABILITY (Rx)

Tablets: 30 mg, 60 mg, 90 mg.

ADMINISTRATION/HANDLING

PO

• Store at room temperature. • Do not break/crush film-coated tablets. • Administer with food or shortly after a meal.

INDICATIONS/ROUTES/DOSAGE

Hypercalcemia in Parathyroid Carcinoma; Primary Hyperparathyroidism

PO: ADULTS, ELDERLY: Initially, 30 mg twice a day. Titrate dosage sequentially (60 mg twice a day, 90 mg twice a day, and 90 mg 3–4 times a day) every 2–4 wks as needed to normalize serum calcium level. **Maximum:** 360 mg/day (as 90 mg 4 times/day).

Secondary Hyperparathyroidism in Pts on Dialysis

PO: ADULTS, ELDERLY: Initially, 30 mg once a day. Titrate dosage sequentially (60, 90, 120, and 180 mg once a day) every 2–4 wks to maintain iPTH level between 150 and 300 pg/ml. **Maximum:** 180 mg/day.

SIDE EFFECTS

Frequent (31%–21%): Nausea, vomiting, diarrhea. **Occasional (15%–10%):** Myalgia, dizziness. **Rare (7%–5%):** Asthenia (loss of strength, energy), hypertension, anorexia, noncardiac chest pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may lead to hypocalcemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline serum electrolyte levels (esp. serum calcium, phosphorus for hyperparathyroidism, serum calcium for parathyroid carcinoma).

INTERVENTION/EVALUATION

Monitor serum calcium, phosphorus for hyperparathyroidism. Monitor daily pattern of bowel activity, stool consistency. Obtain order for antidiarrhea, antiemetic medication to prevent serum electrolyte imbalance. Assess for evidence of dizziness, institute fall risk precautions.

PATIENT/FAMILY TEACHING

• Take with food or shortly after a meal. • Notify physician immediately if vomiting, diarrhea, cramping, muscle pain, numbness occurs.

ciprofloxacin

TOP 200

sip-roe-**flox**-ah-sin

(Apo-Ciproflox, Cetraxal, Ciloxan, Cipro, Cipro IV, Cipro XR, Novo-Ciprofloxacin)

BLACK BOX ALERT May increase risk of tendonitis, tendon rupture.

Do not confuse Ciloxan with Cytoxan, or Cipro with Ceftin, or ciprofloxacin with cephalexin.

FIXED-COMBINATION(S)

Cipro HC Otic: ciprofloxacin/hydrocortisone (a steroid): 0.2%/1%. **CiproDex Otic:** ciprofloxacin/dexamethasone (a corticosteroid): 0.3%/0.1%.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fluoroquinolone. **CLINICAL:** Anti-infective (see p. 25C).

ACTION

Inhibits enzyme, DNA gyrase, in susceptible bacteria, interfering with bacterial cell replication. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 20%–40%. Widely distributed including to CSF. Metabolized in liver to active metabolite (limited activity). Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 3–5 hrs (increased in renal impairment, elderly).

USES

Treatment of susceptible infections due to *E. coli, K. pneumoniae, E. cloacae, P. mirabilis, P. vulgaris, P. aeruginosa, H. influenzae, M. catarrhalis, S. pneumoniae, S. aureus* (methicillin susceptible), *S. epidermidis, S. pyogenes, C. jejuni, Shigella* spp., *S. typhi* including intra-abdominal, bone, joint, lower respiratory tract, skin/skin structure, UTIs, infectious diarrhea, prostatitis, sinusitis, typhoid fever, febrile neutropenia. **Ophthalmic:** Treatment of superficial ocular infections. **OTIC:** Treatment of acute otitis externa due to susceptible strains of *P. aeruginosa* or *S. aureus*. **OFF-LABEL:** Treatment of chancroid. Acute pulmonary exacerbations in cystic fibrosis, disseminated gonococcal infections, prophylaxis to *Neisseria meningitidis* following close contact with infected person. Infectious diarrhea (children); periodontis.

PRECAUTIONS

Contraindications: Hypersensitivity to any fluoroquinolones, other quinolones. Concurrent use of tizanidine. **Cautions:** Renal impairment, CNS disorders, seizures, rheumatoid arthritis, history of QT prolongation, uncorrected hypokalemia, hypomagnesemia, myasthenia gravis. Suspension not for use in NG tube.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. If possible, do not use during pregnancy/lactation (risk of arthropathy to fetus/infant). **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. Arthropathy may occur if given to children younger than 18 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Antacids, iron preparations, sucralfate may decrease absorption. May increase effects of **caffeine, oral anticoagulants (e.g., warfarin).** May decrease concentration of **fosphenytoin, phenytoin.** May increase concentration, toxicity of **theophylline.** Decreases **theophylline** clearance. **HERBAL: Dong quai, St. John's wort** may increase photosensitization. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, creatine kinase (CK), LDH, AST, ALT.

AVAILABILITY (Rx)

Infusion Solution: 200 mg/100 ml, 400 mg/200 ml. **Injection, Solution (Cipro):** 10 mg/ml. **Ophthalmic Ointment (Ciloxan):** 0.3%. **Ophthalmic Solution (Ciloxan):** 0.3%. **Otic Solution (Cetraxal):** 0.2%. **Suspension, Oral:** 250 mg/5 ml, 500 mg/5 ml. **Tablets (Cipro):** 100 mg, 250 mg, 500 mg, 750 mg. **Tablets (Extended-Release) (Cipro XR):** 500 mg, 1,000 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Available prediluted in infusion container ready for use. Final concentration not to exceed 2 mg/ml.

Rate of Administration • Infuse over 60 min (reduces risk of venous irritation).

C

Storage • Store at room temperature. • Solution appears clear, colorless to slightly yellow.

PO

• May be given without regard to food (preferred dosing time: 2 hrs after meals). • Do not give with dairy products. • Do not administer antacids (aluminum, magnesium) within 2 hrs of ciprofloxacin. • Do not administer suspension through feeding tubes.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place ointment or drops into pocket. • Instruct pt to close eye gently for 1–2 min (so medication will not be squeezed out of the sac). • Instruct pt using ointment to roll eyeball to increase contact area of drug to eye. • Instruct pt using solution to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption. • Do not use ophthalmic solution for injection.

IV INCOMPATIBILITIES

Aminophylline, ampicillin and sulbactam (Unasyn), cefepime (Maxipime), dexamethasone (Decadron), furosemide (Lasix), heparin, hydrocortisone (Solu-Cortef), methylprednisolone (Solu-Medrol), phenytoin (Dilantin), sodium bicarbonate, total parenteral nutrition (TPN).

IV COMPATIBILITIES

Calcium gluconate, diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), lidocaine, lipids, lorazepam (Ativan), magnesium, midazolam (Versed), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: 250–750 mg q12h. **CHILDREN:** 20–30 mg/kg/day in 2 divided doses. **Maximum:** 1.5 g/day.
IV: ADULTS, ELDERLY: 200–400 mg q12h. **CHILDREN:** 20–30 mg/kg/day in divided doses q12h. **Maximum:** 800 mg/day.

Bone, Joint Infections

IV: ADULTS, ELDERLY: 400 mg q8–12h for 4–6 wks.
PO: ADULTS, ELDERLY: 500–750 mg q12h for 4–6 wks.

Conjunctivitis

Ophthalmic: ADULTS, ELDERLY: (Solution): 1–2 drops q2h for 2 days, then 2 drops q4h for next 5 days. **(Ointment):** ½ inch 3 times a day for 2 days, then ½ inch daily for 5 days.

Corneal Ulcer

Ophthalmic: ADULTS, ELDERLY: 2 drops q15min for 6 hrs, then 2 drops q30min for the remainder of first day, 2 drops q1h on second day, and 2 drops q4h on days 3–14.

Cystic Fibrosis

IV: CHILDREN: 40 mg/kg/day in 2–3 divided doses. **Maximum:** 1.2 g/day.
PO: CHILDREN: 40 mg/kg/day. **Maximum:** 2 g/day.

Febrile Neutropenia

IV: ADULTS, ELDERLY: 400 mg q8h for 7–14 days (in combination).

Gonorrhea

PO: ADULTS, ELDERLY: 250–500 mg as a single dose.

Infectious Diarrhea

PO: ADULTS, ELDERLY: 500 mg q12h for 3–7 days.

Intra-Abdominal Infections (with Metronidazole)

IV: ADULTS, ELDERLY: 400 mg q12h for 7–14 days.
PO: ADULTS, ELDERLY: 500 mg q12h for 7–14 days.

Lower Respiratory Tract Infections

IV: ADULTS, ELDERLY: 400 mg q8–12h for 7–14 days.
PO: ADULTS, ELDERLY: 500–750 mg q12h for 7–14 days.

Nosocomial Pneumonia
IV: ADULTS, ELDERLY: 400 mg q8h for 10–14 days.

Prostatitis
IV: ADULTS, ELDERLY: 400 mg q12h for 28 days.
PO: ADULTS, ELDERLY: 500 mg q12h for 28 days.

Sinusitis
IV: ADULTS, ELDERLY: 400 mg q12h for 10 days.
PO: ADULTS, ELDERLY: 500 mg q12h for 10 days.

Skin/Skin Structure Infections
IV: ADULTS, ELDERLY: 400 mg q12h for 7–14 days.
PO: ADULTS, ELDERLY: 500–750 mg q12h for 7–14 days.

Susceptible Infections
IV: ADULTS, ELDERLY: 400 mg q8–12h.
PO: ADULTS, ELDERLY: 500–750 mg q12h.

Typhoid Fever
PO: ADULTS, ELDERLY: 500 mg q12h for 10 days.

UTI
IV: ADULTS, ELDERLY: 200–400 mg q12h for 7–14 days.
PO: ADULTS, ELDERLY: Immediate-release: 250 mg q12h for 3 days for acute uncomplicated infections; 250 mg q12h for 7–14 days for mild to moderate infections; 500 mg q12h for 7–14 days for severe or complicated infections. **Extended-release: Complicated infection:** 1,000 mg q24h for 7–14 days. **Uncomplicated infection:** 500 mg q24h for 3 days.

Otitis Externa
Otic: ADULTS, ELDERLY, CHILDREN: Contents of one single-use container 2 times a day for 7 days.

Dosage in Renal Impairment
Dosage and frequency are modified based on creatinine clearance and the severity of the infection.

Creatinine Clearance	Dosage
30–50 ml/min	PO: 250–500 mg q12h
Less than 30 ml/min	PO (extended-release): 500 mg q24h PO (immediate-release): 250–500 mg q18h IV: 200–400 mg q18–24h

Hemodialysis
PO: ADULTS, ELDERLY: 250–500 mg q24h (after dialysis). **IV:** 200–400 mg q24h.

Peritoneal Dialysis
PO: ADULTS, ELDERLY: 250–500 mg q24h (after dialysis).

Continuous Renal Replacement Therapy
IV: ADULTS, ELDERLY: 200–400 mg q12–24h.

SIDE EFFECTS
Frequent (5%–2%): Nausea, diarrhea, dyspepsia, vomiting, constipation, flatulence, confusion, crystalluria. **Ophthalmic:** Burning, crusting in corner of eye. **Occasional (less than 2%):** Abdominal pain/discomfort, headache, rash. **Ophthalmic:** Bad taste, sensation of foreign body in eye, eyelid redness, itching. **Rare (less than 1%):** Dizziness, confusion, tremors, hallucinations, hypersensitivity reaction, insomnia, dry mouth, paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS
Superinfection (esp. enterococcal, fungal), nephropathy, cardiopulmonary arrest, cerebral thrombosis may occur. Hypersensitivity reaction (rash, pruritus, blisters, edema, burning skin), photosensitivity have occurred. Sensitization to ophthalmic form may contraindicate later systemic use of ciprofloxacin.

C

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity to ciprofloxacin, quinolones.

INTERVENTION/EVALUATION

Obtain urinalysis for microscopic analysis for crystalluria prior to and during treatment. Evaluate food tolerance. Monitor daily pattern of bowel activity, stool consistency. Encourage pt to drink several glasses of water daily (reduces risk of crystalluria). Monitor for dizziness, headache, visual changes, tremors. Assess for chest, joint pain. **Ophthalmic:** Observe therapeutic response.

PATIENT/FAMILY TEACHING

• Do not skip doses; take full course of therapy. • Maintain adequate hydration to prevent crystalluria. • Do not take antacids 2 hrs before or 6 hrs after ciprofloxacin (reduces/destroys effectiveness). • Shake suspension well before using; do not chew microcapsules in suspension. • Sugarless gum, hard candy may relieve bad taste. • Avoid caffeine. • Report tendon pain or swelling. • Avoid exposure to sunlight/artificial light (may cause photosensitivity reaction). • Report persistent diarrhea. • **Ophthalmic:** Crystal precipitate may form, usual resolution in 1–7 days.

cisplatin

HIGH ALERT

sis-**pla**-tin
(Platinol-AQ)

BLACK BOX ALERT Cumulative renal toxicity may be severe. Dose-related toxicities include myelosuppression, nausea, vomiting. Ototoxicity, especially pronounced in children, noted by tinnitus, loss of high-frequency hearing, deafness. Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Anaphylactic reaction can occur within minutes of administration.

Do not confuse cisplatin with carboplatin or oxaliplatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Platinum coordination complex. **CLINICAL:** Antineoplastic (see p. 81C).

ACTION

Inhibits DNA and, to a lesser extent, RNA protein synthesis by cross-linking with DNA strands. Cell cycle–phase nonspecific. **Therapeutic Effect:** Prevents cellular division.

PHARMACOKINETICS

Widely distributed. Protein binding: greater than 90%. Undergoes rapid nonenzymatic conversion to inactive metabolite. Excreted in urine. Removed by hemodialysis. **Half-life:** 58–73 hrs (increased in renal impairment).

USES

Treatment of metastatic testicular tumors, metastatic ovarian tumors, advanced bladder carcinoma. **OFF-LABEL:** Breast, cervical, endometrial, esophageal, gastric, head and neck, lung (small-cell, non–small-cell) carcinomas; Hodgkin's and non-Hodgkin's lymphomas; malignant melanoma, neuroblastoma, osteosarcoma, soft tissue sarcoma, Wilms tumor.

PRECAUTIONS

Contraindications: Hearing impairment, myelosuppression, preexisting renal impairment. **Cautions:** Elderly, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breast-feeding not recommended. **Pregnancy Category D. Children:** Ototoxic effects may be more severe. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease effects of **anticonvulsant medications. Bone marrow depressants (e.g., paclitaxel)** may

increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **Nephrotoxic, ototoxic agents (e.g., aminoglycosides)** may increase risk of toxicity. **HERBAL:** Avoid **black cohosh, dong quai** with estrogen-dependent tumors. **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum creatinine, uric acid, AST. May decrease creatinine clearance, serum calcium, magnesium, phosphate, potassium, sodium. May cause positive Coombs' test.

AVAILABILITY (Rx)

Injection Solution: 1 mg/ml (50 ml, 100 ml, 200 ml).

ADMINISTRATION/HANDLING

◀ALERT▶ Wear protective gloves during handling of cisplatin. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Dilution • For IV infusion, dilute desired dose in 250–1,000 ml 0.9% NaCl, D_5/0.45% NaCl, or D_5/0.9% NaCl to concentration of 0.05–2 mg/ml. Solution should have final NaCl concentration of 0.2% or greater.

Rate of Administration • Infuse over 2–24 hrs (per protocol). • Avoid rapid infusion (increases risk of nephrotoxicity, ototoxicity). • Monitor for anaphylactic reaction during first few minutes of IV infusion.

Storage • Protect from sunlight; do not refrigerate (may precipitate). Discard if precipitate forms. IV infusion: Stable for 72 hrs at 39°F–77°F.

IV INCOMPATIBILITIES

Amifostine (Ethyol), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), piperacillin and tazobactam (Zosyn), sodium bicarbonate, thiotepa.

IV COMPATIBILITIES

Etoposide (VePesid), granisetron (Kytril), heparin, hydromorphone (Dilaudid), lipids, lorazepam (Ativan), magnesium sulfate, mannitol, morphine, ondansetron (Zofran).

INDICATIONS/ROUTES/DOSAGE

Note: Pretreatment hydration with 1–2 liters of fluid recommended. Adequate hydration, urine output greater than 100 ml/hr should be maintained for 24 hrs after administration.

Bladder Carcinoma

IV: ADULTS, ELDERLY: (Single agent): 50–70 mg/m^2 q3–4wks.

Ovarian Tumors

IV: ADULTS, ELDERLY: 75–100 mg/m^2 q3–4wks (combination therapy) or 100 mg/m^2 q4wks (single agent).

Testicular Tumors

IV: ADULTS, ELDERLY: 10–20 mg/m^2 daily for 5 days repeated q3wks.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance, BUN.

◀ALERT▶ Repeated courses of cisplatin should not be given until serum creatinine is less than 1.5 mg/100 ml and/or BUN is less than 25 mg/100 ml.

Creatinine Clearance	Dosage
10–50 ml/min	75% of normal dose
Less than 10 ml/min	50% of normal dose
Hemodialysis	50% of dose post dialysis
Peritoneal dialysis	50% of dose
Continuous renal replacement therapy	75% of dose

SIDE EFFECTS

Frequent: Nausea, vomiting (occurs in more than 90% of pts, generally beginning 1–4 hrs after administration and lasting up to 24 hrs); myelosuppression (affecting 25%–30% of pts, with recov-

ery generally occurring in 18–23 days). **Occasional:** Peripheral neuropathy (with prolonged therapy [4–7 mos]). Pain/redness at injection site, loss of taste, appetite. **Rare:** Hemolytic anemia, blurred vision, stomatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anaphylactic reaction (angioedema, wheezing, tachycardia, hypotension) may occur in first few minutes of IV administration in those previously exposed to cisplatin. Nephrotoxicity occurs in 28%–36% of pts treated with single dose of cisplatin, usually during second wk of therapy. Ototoxicity (tinnitus, hearing loss) occurs in 31% of pts treated with single dose of cisplatin (more severe in children). Symptoms may become more frequent, severe with repeated doses.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum chemistry tests, urinalysis prior to beginning therapy. Pts should be well hydrated before and 24 hrs after medication to ensure adequate urinary output (100 ml/hr), decrease risk of nephrotoxicity.

INTERVENTION/EVALUATION

Measure all vomitus (general guideline requiring immediate notification of physician: 750 ml/8 hrs, urinary output less than 100 ml/hr). Monitor I&O q1–2h beginning with pretreatment hydration, continue for 48 hrs after cisplatin therapy. Assess vital signs q1–2h during infusion. Monitor urinalysis, serum electrolytes, hepatic/renal function tests, CBC, platelet count for changes from baseline.

PATIENT/FAMILY TEACHING

• Report signs of ototoxicity (tinnitus, hearing loss). • Do not have immunizations without physician's approval (lowers body's resistance). • Avoid contact with those who have recently taken oral polio vaccine. • Contact physician if nausea/vomiting continues at home. • Report signs of peripheral neuropathy.

citalopram

TOP 200

sye-**tal**-oh-pram
(Apo-Citalopram, Celexa, Novo-Citalopram)

BLACK BOX ALERT Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Celexa with Celebrex, Cerebyx, Ranexa, or Zyprexa.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin reuptake inhibitor. **CLINICAL:** Antidepressant (see p. 39C).

ACTION

Blocks uptake of the neurotransmitter serotonin at CNS presynaptic neuronal membranes, increasing its availability at postsynaptic receptor sites. **Therapeutic Effect:** Relieves depression.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 80%. Extensively metabolized in liver. Excreted in urine. **Half-life:** 35 hrs.

USES

Treatment of depression. **OFF-LABEL:** Treatment of alcohol abuse, diabetic neuropathy, obsessive-compulsive disorder in children, smoking cessation.

PRECAUTIONS

Contraindications: Sensitivity to citalopram, use within 14 days of MAOIs. Pts with congenital long QT syndrome. **Cautions:** Hepatic/renal impairment; history of seizures; during third trimester of pregnancy; elderly; concomitant CNS de-

pression; concomitant use of aspirin, NSAIDs, or warfarin. May prolong QT interval at high doses.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** May cause increased anticholinergic effects, hyperexcitability. **Elderly:** More sensitive to anticholinergic effects (e.g., dry mouth), more likely to experience dizziness, sedation, confusion, hypotension, hyperexcitability.

INTERACTIONS

DRUG: CYP2C19 inhibitors (e.g., fluconazole), other medications prolonging QT interval may increase risk of QT prolongation. **Linezolid, MAOIs, triptans** may cause serotonin syndrome (excitement, diaphoresis, rigidity, hyperthermia, autonomic hyperactivity, coma). **HERBAL: Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Oral Solution: 10 mg/5 ml. **Tablets:** 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Scored tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: Initially, 20 mg once a day in the morning or evening. May increase in 20-mg increments at intervals of no less than 1 wk. **Maximum:** 60 mg/day. **ELDERLY, PTS WITH HEPATIC IMPAIRMENT:** 20 mg/day. May titrate to 40 mg/day only for nonresponding pts. Poor Metabolizers of CYP2C19, Concurrent CYP2C19 Inhibitors: **Maximum:** 20 mg/day.

SIDE EFFECTS

Frequent (21%–11%): Nausea, dry mouth, drowsiness, insomnia, diaphoresis. **Occasional (8%–4%):** Tremor, diarrhea, abnormal ejaculation, dyspepsia, fatigue, anxiety, vomiting, anorexia. **Rare (3%–2%):** Sinusitis, sexual dysfunction, menstrual disorder, abdominal pain, agitation, decreased libido.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose manifested as dizziness, drowsiness, tachycardia, confusion, seizures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Hepatic/renal function tests, blood counts should be performed periodically for pts on long-term therapy. Observe, record behavior. Assess psychological status, thought content, sleep pattern, appearance, interest in environment.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood.

PATIENT/FAMILY TEACHING

• Do not stop taking medication or increase dosage. • Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report worsening depression, suicidal ideation, unusual changes in behavior.

cladribine

HIGH ALERT

klad-ree-bean
(Leustatin)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Myelosuppression, neurologic toxicity, acute nephrotoxicity have been reported.

C

Do not confuse cladribine with clevidipine, clofarabine, or fludarabine, or Leustatin with lovastatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic (see p. 81C).

ACTION

Disrupts cellular metabolism by incorporating into DNA of dividing cells. Cytotoxic to both actively dividing and quiescent lymphocytes, monocytes. **Therapeutic Effect:** Prevents DNA synthesis.

PHARMACOKINETICS

Protein binding: 20%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 5.4 hrs.

USES

Treatment of active hairy cell leukemia defined by clinically significant anemia, neutropenia, thrombocytopenia. **OFF-LABEL:** Treatment of chronic lymphocytic leukemia, non-Hodgkin's lymphoma, acute myeloid leukemia, autoimmune hemolytic anemia, progressive multiple sclerosis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment. Preexisting hematologic or immunologic abnormalities; those with high tumor burden.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce fetal harm; may be embryotoxic, fetotoxic; potential for serious reactions in breast-fed infants. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Bone marrow depressants may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 1 mg/ml (10 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • Must dilute before administration. • Wear gloves, protective clothing during handling; if contact with skin, rinse with copious amounts of water. • Add calculated dose (0.09 mg/kg) to 500 ml 0.9% NaCl. Avoid D_5W (increases degradation of medication).

Rate of Administration • Infuse over 1–2 hrs.

Storage • Refrigerate unopened vials. • May refrigerate dilution solution for no more than 8 hrs before administration. • Diluted solution is stable for at least 24 hrs at room temperature. • Discard unused portion.

IV INCOMPATIBILITIES

Do not mix with other IV drugs/additives or infuse concurrently via a common IV line.

INDICATIONS/ROUTES/DOSAGE

Hairy Cell Leukemia

IV Infusion: ADULTS, CHILDREN: 0.09–0.1 mg/kg/day as continuous infusion for 7 days. May repeat every 28–35 days.

Chronic Lymphocytic Leukemia

IV Infusion: ADULTS, ELDERLY: 0.1 mg/kg/day days 1–7.

Chronic Myelogenous Leukemia

IV Infusion: ADULTS, ELDERLY: 15 mg/m^2/day days 1–5. Give as a 1-hr infusion. If no response, increase to 20 mg/m^2/day with second course.

Acute Leukemias

IV Infusion: CHILDREN: 6.2–7.5 mg/m^2/day for days 1–5.

Dosage in Renal Impairment

	Children	Adults
CrCl 10–50	50% of dose	75% of dose
CrCl less than 10	30% of dose	50% of dose
Hemodialysis	30% of dose	—
Peritoneal dialysis	—	50% of dose
Continuous renal replacement therapy	50% of dose	—

SIDE EFFECTS

Frequent: Fever (69%), fatigue (45%), nausea (28%), rash (27%), headache (22%), injection site reactions (19%), anorexia (17%), vomiting (13%). **Occasional (10%–5%):** Diarrhea, cough, purpura, chills, diaphoresis, constipation, dizziness, petechiae, myalgia, shortness of breath, malaise, pruritus, erythema, insomnia, edema, tachycardia, abdominal/trunk pain, epistaxis, arthralgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression characterized as severe neutropenia (less than 500 cells/mm^3), severe anemia (Hgb less than 8.5 g/dl), thrombocytopenia occur commonly. High-dose treatment may produce acute nephrotoxicity (increased BUN, serum creatinine levels), neurotoxicity (irreversible motor weakness of upper/lower extremities).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support to pt, family. Perform neurologic function tests before chemotherapy. Use strict asepsis; protect pt from infection. Obtain baseline blood count, chemistries.

INTERVENTION/EVALUATION

Monitor vital signs during infusion, esp. during first hour. Observe for hypotension, bradycardia (usually both do not occur during same course). Immediately discontinue administration if severe hypersensitivity reaction occurs. Monitor for and report fever promptly. Assess for signs of infection. Assess skin for evidence of rash, purpura, petechiae. Monitor Hgb, Hct, BUN, platelet count, WBC, serum creatinine, potassium, sodium.

PATIENT/FAMILY TEACHING

• Narrow margin between therapeutic and toxic response. • Avoid crowds, persons with known infections; report signs of infection at once (fever, flu-like symptoms). • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Discuss importance of pregnancy testing, avoidance of pregnancy, measures to prevent pregnancy.

clarithromycin TOP 200

kla-**rith**-roe-**mye**-sin
(Apo-Clarithromycin, Biaxin, Biaxin XL, PMS-Clarithromycin)
Do not confuse clarithromycin with Claritin, clindamycin, or erythromycin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Macrolide.
CLINICAL: Antibiotic (see p. 26C).

ACTION

Binds to ribosomal receptor sites of susceptible organisms, inhibiting protein synthesis of bacterial cell wall. **Therapeutic Effect:** Bacteriostatic; may be bactericidal with high dosages or very susceptible microorganisms.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 65%–75%. Widely distributed (except CNS). Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis.

C

Half-life: 3–7 hrs; metabolite, 5–9 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to *C. pneumoniae, H. influenzae, H. parainfluenzae, H. pylori, M. catarrhalis, M. avium, M. pneumoniae, S. aureus, S. pneumoniae, S. pyogenes,* including bacterial exacerbation of bronchitis, otitis media, acute maxillary sinusitis, *Mycobacterium avium* complex (MAC), pharyngitis, tonsillitis, *H. pylori* duodenal ulcer, community acquired pneumonia, skin and soft tissue infections. Prevention of MAC disease. **OFF-LABEL:** Prophylaxis of infective endocarditis, pertussis.

PRECAUTIONS

Contraindications: Hypersensitivity to other macrolide antibiotics. Use with ergot alkaloids. History of cholestatic jaundice or hepatic impairment with prior clarithromycin use. Concomitant use with colchicine. **Cautions:** Hepatic/renal dysfunction, elderly with severe renal impairment. Myasthenia gravis, coronary artery disease. May prolong QT interval (rare).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentration, toxicity of **carbamazepine, colchicine, digoxin, ergotamine, theophylline. Rifabutin, rifampin, atorvastatin, efavirenz** may decrease plasma concentration. May increase **warfarin** effects. May decrease concentration of **zidovudine. Atazanavir, ritonavir** may increase concentration of clarithromycin. May increase concentration/effects of **sildenafil, tadalafil, vardenafil. HERBAL: St. John's wort** may decrease plasma concentration. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum AST, ALT, alkaline phosphatase, LDH, serum creatinine, PT. May decrease WBC.

AVAILABILITY (Rx)

Oral Suspension (Biaxin): 125 mg/5 ml, 250 mg/5 ml. **Tablets (Biaxin):** 250 mg, 500 mg.

Tablets (Extended-Release [Biaxin XL]): 500 mg.

ADMINISTRATION/HANDLING

PO

• Give immediate-release tablets, oral suspension without regard to food. • Extended-release tablets should be given with food. • Do not crush/chew extended-release tablets. • Give q12h (rather than twice daily). • Shake suspension well before each use.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: 250–500 mg q12h or 500–1,000 mg once daily (extended-release tablets). **CHILDREN 6 MOS AND OLDER:** 7.5 mg/kg q12h. **Maximum:** 500 mg.

Bronchitis

PO: ADULTS, ELDERLY: 250–500 mg q12h for 7–14 days.

PO *(Extended-Release)*: ADULTS, ELDERLY: 1 g once daily for 7 days.

Skin, Soft Tissue Infections

PO: ADULTS, ELDERLY: 250 mg q12h for 7–14 days. **CHILDREN:** 7.5 mg/kg q12h for 10 days. **Maximum:** 1 g/day.

Mycobacterium Avium Complex (MAC) Prophylaxis

PO: ADULTS, ELDERLY: 500 mg twice a day. **CHILDREN:** 7.5 mg/kg q12h. **Maximum:** 500 mg twice a day.

Mycobacterium Avium Complex (MAC) Treatment

PO: ADULTS, ELDERLY: 500 mg twice a day in combination. **CHILDREN:** 7.5 mg/kg

q12h in combination. **Maximum:** 500 mg twice a day.

Pharyngitis, Tonsillitis
PO: ADULTS, ELDERLY: 250 mg q12h for 10 days. **CHILDREN:** 7.5 mg/kg q12h for 10 days. **Maximum:** 1 g/day.

Pneumonia
PO: ADULTS, ELDERLY: 250 mg q12h for 7–14 days. **CHILDREN:** 7.5 mg/kg q12h.
PO *(Extended-Release)*: ADULTS, ELDERLY: 1 g/day.

Maxillary Sinusitis
PO: ADULTS, ELDERLY: 500 mg q12h or 1,000 mg (2×500 mg extended-release) once daily for 14 days. **CHILDREN:** 7.5 mg/kg q12h. **Maximum:** 500 mg twice a day.

H. Pylori
PO: ADULTS, ELDERLY: 500 mg q8–12h for 10–14 days in combination.

Acute Otitis Media
PO: CHILDREN: 7.5 mg/kg q12h for 10 days. **Maximum:** 500 mg q12h.

Dosage in Renal Impairment
Creatinine clearance less than 30 ml/min: Reduce dose by 50% and administer once or twice a day. **HD:** Administer dose after dialysis complete.

Combination with atazanavir

CrCl 30–60 ml/min	Decrease dose by 50%
CrCl <30 ml/min	Decrease dose by 75%

SIDE EFFECTS

Occasional (6%–3%): Diarrhea, nausea, altered taste, abdominal pain. **Rare (2%–1%):** Headache, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Hepatotoxicity, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question pt for allergies to clarithromycin, erythromycins.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable, but increasing severity may indicate onset of antibiotic-associated colitis. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor CBC, BUN, serum creatinine.

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • Biaxin may be taken without regard to food. Take Biaxin XL with food. • Report severe diarrhea.

clevidipine

kle-**vid**-ah-peen
(Cleviprex)
Do not confuse clevidipine with cladribine, or clafarabine, or Cleviprex with Claravis.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Short-acting calcium channel blocker. **CLINICAL:** Antihypertensive.

ACTION

Inhibits calcium ion movement across cell membranes, depressing contraction of cardiac, vascular smooth muscle. **Therapeutic Effect:** Increases heart rate, cardiac output. Decreases systemic vascular resistance, B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	2–4 min	—	—

C

Full recovery to therapeutic B/P reading occurs 5–15 min following termination of infusion. Rapidly distributed and metabolized. Protein binding: 99.5%. Eliminated primarily in urine with a lesser amount excreted in feces. **Half-life:** 30 sec–1 min.

USES

Management of hypertension.

PRECAUTIONS

Contraindications: Allergy to soy or eggs, abnormal lipid metabolism, severe aortic stenosis, hypertriglyceremia. **Cautions:** Cardiac failure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Diuretics, other antihypertensives** may increase hypotensive effect. **NSAIDs** may decrease antihypertensive effect. **HERBAL:** **Ephedra, ginger, licorice, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum uric acid, potassium, triglycerides.

AVAILABILITY (Rx)

Injection, Emulsion: 0.5 mg/ml as 50-ml vial, 100-ml vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Do not dilute.• Both 50-ml and 100-ml vials supplied as concentration of 0.5 mg/ml. • Invert vial gently several times before use to ensure uniformity of emulsion.

Storage • Refrigerate vials but may be held at controlled room temperature (77°F) for 2 mos. • Vial cannot be returned to refrigerator once warmed to room temperature. • Once stopper is punctured, use within 4 hrs; discard unused portion, including that currently being infused. • Discard if discoloration or particulate matter is present.

IV INCOMPATIBILITIES

Do not administer in same IV line as other medications.

IV COMPATIBILITIES

Sterile Water for Injection, 0.9% NaCl, D_5W, lactated Ringer's, 10% amino acid.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Titrate drug to achieve desired B/P reduction. Individualize dosage depending on desired B/P and pt response.

Hypertension

IV: ADULTS, ELDERLY: Initiate IV infusion at 1–2 mg/hr. Dose may be doubled at short (90-sec) intervals initially. As B/P approaches goal, increase in doses should be less than double and time between dose adjustments lengthened to every 5–10 min. Maintenance: Desired therapeutic response generally occurs at doses of 4–6 mg/hr. (Pts with severe hypertension may require doses up to 32 mg/hr.) **Maximum:** 16 mg/hr; no more than 21 mg/hr is recommended per 24-hr period.

SIDE EFFECTS

Generally well tolerated. **Occasional (6%–3%):** Headache, nausea, vomiting. **Rare (less than 1%):** Syncope, dyspnea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypotension, atrial fibrillation, sinus tachycardia may occur with large doses. Can exacerbate heart failure. Acute renal failure has occurred rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function tests. Assess B/P, apical pulse immedi-

ately before drug administration (if pulse is 60/min or less or systolic B/P is below 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Monitor B/P, pulse rate continuously during IV infusion and then until vital signs are stable. Monitor cardiac pts diligently. Pts who receive prolonged IV infusion and are not changed to other antihypertensive therapy should be monitored for rebound hypertension for at least 8 hrs after infusion is stopped.

PATIENT/FAMILY TEACHING

• Compliance with therapy regimen is essential to control hypertension. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician approval. • Monitor B/P, pulse before beginning oral antihypertensive medication. • Restrict salt, alcohol intake.

clindamycin TOP 200

klin-da-**mye**-sin
(Apo-Clindamycin, Cleocin, Cleocin Pediatric, Cleocin T, Cleocin Vaginal, Clindagel, Clindamax, Clindesse, Novo-Clindamycin)

BLACK BOX ALERT May cause severe, potentially fatal colitis characterized by severe, persistent diarrhea, severe abdominal cramps, passage of blood and mucus.

Do not confuse Cleocin with Clinoril or Cubicin, or clindamycin with clarithromycin, Claritin, or vancomycin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Lincosamide. **CLINICAL:** Antibiotic.

ACTION

Inhibits protein synthesis of bacterial cell wall by binding to bacterial ribosomal receptor sites. Topically, decreases fatty acid concentration on skin. **Therapeutic Effect:** Bacteriostatic. Prevents outbreaks of acne vulgaris.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 92%–94%. Widely distributed. Metabolized in liver to some active metabolites. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1.6–5.3 hrs (increased in renal impairment, premature infants).

USES

Systemic: Treatment of aerobic grampositive staphylococci and streptococci (not enterococci), *Fusobacterium, Bacteroides* spp., and *Actinomyces* for treatment of respiratory tract infections, skin/soft tissue infections, sepsis, intra-abdominal infections, infections of female pelvis and genital tract, bacterial endocarditis prophylaxis for dental and upper respiratory procedures in penicillin-allergic pts, perioperative prophylaxis. **Topical:** Treatment of acne vulgaris. **Intravaginal:** Treatment of bacterial vaginosis. **OFF-LABEL:** Treatment of actinomycosis, babesiosis, erysipelas, malaria, otitis media, *Pneumocystis jiroveci* pneumonia (PCP), sinusitis, toxoplasmosis. **PO:** Bacterial vaginosis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe hepatic dysfunction; history of GI disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Topical/vaginal:** Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Caution in those younger than 1 mo. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Adsorbent antidiarrheals may delay absorption. **Erythromycin** may antagonize effects. May increase effects of **neuromuscular blockers. HERBAL:**

C

St. John's wort may decrease plasma concentration. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT levels.

AVAILABILITY (Rx)

Capsules: 75 mg, 150 mg, 300 mg. **Cream, Vaginal (Cleocin, Clindesse):** 2%. **Gel, Topical (Cleocin T, Clindagel, Clindamax):** 1%. **Infusion, Premix (Cleocin):** 300 mg/50 ml, 600 mg/50 ml, 900 mg/50 ml. **Injection Solution (Cleocin):** 150 mg/ml. **Lotion (Cleocin T, Clindamax):** 1%. **Oral Solution (Cleocin Pediatric):** 75 mg/5 ml. **Suppositories, Vaginal (Cleocin):** 100 mg. **Swabs, Topical (Cleocin T):** 1%.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute 300–600 mg with 50 ml D_5W or 0.9% NaCl (900–1,200 mg with 100 ml). • Never exceed concentration of 18 mg/ml.

Rate of Administration • Infuse over at least 10–60 min at rate not exceeding 30 mg/min. Severe hypotension, cardiac arrest can occur with too-rapid administration. • No more than 1.2 g should be given in a single infusion.

Storage • Reconstituted IV infusion (piggyback) is stable for 16 days at room temperature, 32 days if refrigerated.

IM

• Do not exceed 600 mg/dose. • Administer deep IM.

PO

• Store capsules at room temperature. • After reconstitution, oral solution is stable for 2 wks at room temperature. • Do not refrigerate oral solution (avoids thickening). • Give with at least 8 oz water (minimizes esophageal ulceration). • Give without regard to food.

Topical

• Wash skin, allow to dry completely before application. • Shake topical lotion well before each use. • Apply liquid, solution, or gel in thin film to affected area. • Avoid contact with eyes or abraded areas.

Vaginal, Cream or Suppository

• Use one applicatorful or suppository at bedtime. • Fill applicator that comes with cream or suppository to indicated level. • Instruct pt to lie on back with knees drawn upward and spread apart. • Insert applicator into vagina and push plunger to release medication. • Withdraw, wash applicator with soap and warm water. • Wash hands promptly to avoid spreading infection.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), filgrastim (Neupogen), fluconazole (Diflucan), idarubicin (Idamycin).

IV COMPATIBILITIES

Amiodarone (Cordarone), diltiazem (Cardizem), heparin, hydromorphone (Dilaudid), lipids, magnesium sulfate, midazolam (Versed), morphine, multivitamins, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV, IM: ADULTS, ELDERLY: 1.2–2.7 g/day in 2–4 divided doses. **Maximum:** 4.8 g/day. **CHILDREN 1 MO–16 YRS:** 20–40 mg/kg/day in 3–4 divided doses. **Maximum:** 4.8 g/day. **CHILDREN YOUNGER THAN 1 MO:** 15–20 mg/kg/day in 3–4 divided doses. **NEONATES:** 10–30 mg/kg/day q6–12h.
PO: ADULTS, ELDERLY: 150–450 mg q6h. **Maximum:** 1.8 g/day. **CHILDREN:** 8–25 mg/kg/day in 3–4 divided doses. **NEONATES:** 10–30 mg/kg/day q6–12h.

Bacterial Vaginosis

Intravaginal *(Cream)*: ADULTS: One applicatorful at bedtime for 3–7 days or 1 suppository at bedtime for 3 days. ***(Clindesse)*: ADULTS:** One applicatorful once at any time of the day.

Acne Vulgaris

Topical: ADULTS: Apply thin layer to affected area twice a day.

SIDE EFFECTS

Frequent: Systemic: Abdominal pain, nausea, vomiting, diarrhea. **Topical:** Dry, scaly skin. **Vaginal:** Vaginitis, pruritus. **Occasional: Systemic:** Phlebitis, thrombophlebitis with IV administration, pain, induration at IM injection site, allergic reaction, urticaria, pruritus. **Topical:** Contact dermatitis, abdominal pain, mild diarrhea, burning, stinging. **Vaginal:** Headache, dizziness, nausea, vomiting, abdominal pain. **Rare: Vaginal:** Hypersensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may occur during and several wks after clindamycin therapy (including topical form). Blood dyscrasias (leukopenia, thrombocytopenia), nephrotoxicity (proteinuria, azotemia, oliguria) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question pt for history of allergies. Avoid, if possible, concurrent use of neuromuscular blocking agents.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Report diarrhea promptly due to potential for serious colitis (even with topical or vaginal administration). Assess skin for rash (dryness, irritation) with topical application. With all routes of administration, be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • Take oral doses with at least 8 oz water. • Caution should be used when applying topical clindamycin concurrently with peeling or abrasive acne agents, soaps, alcohol-containing cosmetics to avoid cumulative effect. • Do not apply topical preparations near eyes, abraded areas. • Notify physician if severe persistent diarrhea, cramps, bloody stool occur. • **Vaginal:** In event of accidental contact with eyes, rinse with copious amounts of cool tap water. • Do not engage in sexual intercourse during treatment. • Wear sanitary napkin to protect clothes against stains. Tampons should not be used.

clobazam

kloe-**bah**-zam
(Onfi)
Do not confuse clobazam with clonazepam or clozapine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Anticonvulsant.

ACTION

Potentiates neurotransmission of gamma-aminobutyric acid (GABA) by binding to GABA receptor. Depresses nerve impulse transmission in motor cortex. **Therapeutic Effect:** Decreases seizure activity.

PHARMACOKINETICS

Rapidly and extensively absorbed after PO administration. Peak plasma concentration: 0.5–4 hrs. Protein binding: 80–90%. Widely distributed in plasma. Metabolized in liver. Primarily excreted in urine. Unknown if removed by dialysis. **Half-life:** 36–42 hrs.

USES

Adjunctive treatment of seizures associated with Lennox-Gastaut syndrome in pts 2 yrs of age and older. **OFF-LABEL:** Catamenial epilepsy; epilepsy (monotherapy).

PRECAUTIONS

Contraindications: None. **Cautions:** Elderly, debilitated, mild to moderate he-

patic impairment, preexisting muscle weakness or ataxia, concomitant CNS depressants, impaired gag reflex, respiratory disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Excreted in breast milk. Some hormonal contraceptives may have decreased effectiveness. Nonhormonal contraception recommended. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 2 yrs of age. **Elderly:** May have decreased clearance levels (initial dose 5 mg/day).

INTERACTIONS

DRUG: CYP2C19 inhibitors (e.g., fluconazole, fluvoxamine, omeprazole, ticlopidine) may increase serum concentration. **Alcohol, other CNS depressants** may increase CNS depression. May decrease effect of **hormonal contraceptives. HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease **clobazam** levels. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

- May give without regard to food.
- Tablets may be crushed and mixed with applesauce.

INDICATIONS/ROUTES/DOSAGE

Seizure Control (Lennox-Gastaut Syndrome)

PO: ADULTS, CHILDREN WEIGHING 30 KG OR LESS: Initially, 5 mg once daily. Increase to 5 mg twice daily on day 7, then increase to 10 mg twice daily on day 14. **Maximum:** 20 mg/day. **ADULTS, CHILDREN WEIGHING MORE THAN 30 KG:** Initially, 10 mg once daily. Increase to 10 mg twice daily on day 7, then increase to 20 mg twice daily on day 14. **Maximum:** 40 mg/day.

PO: ELDERLY/HEPATIC IMPAIRMENT: Initially, 5 mg once daily. Increase at weekly increments by 5–10 mg/day based on tolerability. **Maximum:** 20 mg/day or 40 mg/day based on weight group. **Discontinuation:** Gradually taper by 5–10 mg/day on weekly basis.

SIDE EFFECTS

Frequent (26%–10%): Sleepiness, URI, lethargy. **Occasional (9%–5%):** Drooling, nausea, vomiting, constipation, irritability, ataxia, insomnia, cough, fatigue. **Rare (4%–2%):** Psychomotor hyperactivity, UTI, decreased/increased appetite, dysarthria, pyrexia, dysphagia, bronchitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

May increase risk of suicidal behavior/ideation (less than 1%). Physical dependence can increase with higher doses or concomitant alcohol/drug abuse. Abrupt benzodiazepine withdrawal may present as profuse sweating, cramping, nausea, vomiting, muscle pain, convulsions, psychosis, hallucinations, aggression, tremor, anxiety, insomnia. Overdose may result in confusion, lethargy, diminished reflexes, respiratory depression, coma. **Antidote:** Flumazenil (see Appendix K for dosage). Decreased mobility may potentiate higher risk of pneumonia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Review history of seizure disorder (frequency, duration, intensity, level of consciousness [LOC]). Question history of alcohol use. Obtain baseline vital signs. Assess history of depression/suicidal ideation.

INTERVENTION/EVALUATION

Observe for excess sedation, respiratory depression, suicidal ideation. Implement safety measures, observe frequently for seizure activity. Assist with ambulation if drowsiness, dizziness occurs. Evaluate for therapeutic response. Encourage

turning, coughing, deep breathing for pts with decreased mobility or who are bedridden.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Use caution when driving or operating machinery. • Do not abruptly discontinue medication. • If tapering, educate about benzodiazepine withdrawal symptoms. • Avoid alcohol. • Report depression, aggression, thoughts of suicide/self-harm, excessive drowsiness.

clofarabine

kloe-**fare**-ah-been
(Clolar)
Do not confuse clofarabine with cladribine or clevidipine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic.

ACTION

Metabolized intracellularly to ribonucleotide reductase. Alters mitochondrial membrane necessary in DNA synthesis. **Therapeutic Effect:** Decreases cell replication, inhibits cell repair. Produces cell death.

PHARMACOKINETICS

Protein binding: 47%, primarily to albumin. Metabolized intracellularly. Primarily excreted in urine (40%–60% unchanged). **Half-life:** 5.2 hrs.

USES

Treatment of pediatric pts (1–21 yrs) with relapsed or refractory acute lymphoblastic leukemia (ALL) after at least 2 prior regimens. **OFF-LABEL:** Acute myeloid leukemia (AML) in adults 60 yrs or older.

PRECAUTIONS

Contraindications: None known. **Cautions:** Dehydration, hypotension, concomitant nephrotoxic or hepatotoxic medications.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Hepatotoxic, nephrotoxic medications may increase risk of hepatic/renal toxicity. **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, uric acid, AST, ALT, bilirubin.

AVAILABILITY (Rx)

Injection, Solution: 1 mg/ml (20-ml vial).

ADMINISTRATION/HANDLING

IV

Reconstitution • Filter clofarabine through sterile, 0.2-micrometer syringe filter prior to further dilution with D_5W or 0.9% NaCl to final concentration of 0.15–0.4 mg/ml.

Rate of Administration • Administer over 2 hrs. • Continuously infuse IV fluids to decrease risk of tumor lysis syndrome, other adverse events.

Storage • Store undiluted or diluted solution at room temperature. • Use diluted solution within 24 hrs.

IV INCOMPATIBILITIES

Do not administer any other medication through same IV line.

INDICATIONS/ROUTES/DOSAGE

Acute Lymphoblastic Leukemia (ALL)

IV: CHILDREN 1–21 YRS: 52 mg/m^2 over 2 hrs once daily for 5 consecutive days; repeat q2–6wks following recovery or return to baseline organ function.

C

SIDE EFFECTS

Frequent: Vomiting (83%); nausea (75%); diarrhea (53%); pruritus (47%); headache (46%); fever, dermatitis (41%); rigors (38%); abdominal pain, fatigue (36%); tachycardia (34%); epistaxis (31%); anorexia (30%); petechiae, limb pain, hypotension (29%); anxiety (22%); constipation (21%); edema (20%). **Occasional:** Cough (19%); mucosal inflammation, erythema, flushing (18%); hematuria (17%); dizziness (16%); gingival bleeding (15%); injection site pain, respiratory distress, pharyngitis (14%); back pain, palmar-plantar erythrodysesthesia syndrome, myalgia, oral candidiasis (13%); hypertension, depression, irritability, arthralgia, anorexia (11%). **Rare (10%):** Tremor, weight gain, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia occurs in 57% of pts; pericardial effusion in 35%; left ventricular systolic dysfunction in 27%; hepatomegaly, jaundice in 15%; pleural effusion, pneumonia, bacteremia in 10%; capillary leak syndrome in less than 10%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Monitor Hgb, Hct; assess for signs/symptoms of anemia. Question pt regarding possibility of pregnancy. Assess serum AST, ALT, bilirubin, creatinine clearance, BUN, creatinine levels prior to therapy.

INTERVENTION/EVALUATION

Monitor B/P, hepatic/renal function tests, cardiac function, respiratory status, CBC, platelets, uric acid. Monitor daily pattern of bowel activity, stool consistency. Assess for GI disturbances. Assess skin for pruritus, dermatitis, petechiae, erythema on palms of hands and soles of feet. Assess for fever, sore throat; obtain blood cultures to detect evidence of infection. Ensure adequate hydration throughout duration of administration.

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with anyone who recently received a live virus vaccine. • Avoid crowds, those with infection. • Avoid pregnancy due to risk of fetal harm; pts of childbearing potential should use effective contraception. • Maintain fastidious oral hygiene and frequent handwashing. • Notify physician if fever, respiratory distress, prolonged nausea, vomiting, diarrhea, easy bruising occurs.

*clomiPRAMINE

kloe-**mip**-rah-meen
(Anafranil, Apo-Clomipramine)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Anafranil with enalapril, or clomipramine with chlorpromazine, clevidipine, clomiphene, or desipramine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic. **CLINICAL:** Antidepressant (see p. 37C).

ACTION

Blocks reuptake of neurotransmitters (norepinephrine, serotonin) at CNS presynaptic membranes, increasing availability at postsynaptic receptor sites. **Therapeutic Effect:** Reduces obsessive-compulsive behavior.

PHARMACOKINETICS

Rapidly absorbed. Metabolized in liver. **Half-life:** 20–30 hrs.

USES

Treatment of obsessive-compulsive disorder manifested as repetitive tasks producing marked distress, time-consuming, or significant interference with social

or occupational behavior. **OFF-LABEL:** Chronic pain, depression, panic attacks.

PRECAUTIONS

Contraindications: Acute recovery period after MI, use within 14 days of MAOIs. **Cautions:** Pts at high risk for suicide, prostatic hypertrophy, history of urinary retention/obstruction, narrow-angle glaucoma, seizures, hepatic/renal disease, alcoholism, xerostomia, visual problems, elderly, constipation, history of bowel obstruction.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category D. Children:** Increased risk of suicidal ideation, behavior noted in children, adolescents. Safety and effectiveness in those younger than 10 yrs not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS, respiratory depression, hypotensive effects. **Cimetidine, haloperidol** may increase plasma concentration, risk of toxicity. May decrease effects of **clonidine. Phenobarbital** may decrease concentration, antidepressant effects. **MAOIs** may increase risk of neuroleptic malignant syndrome, seizures, hyperpyresis, hypertensive crisis. **Phenothiazines** may increase anticholinergic, sedative effects. **Sympathomimetics** may increase the risk of cardiac effects. **HERBAL: Gota kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **FOOD: Grapefruit, grapefruit juice** may increase serum concentration, toxicity. **LAB VALUES:** May alter serum glucose, ECG readings.

AVAILABILITY (Rx)

Capsules: 25 mg, 50 mg, 75 mg.

ADMINISTRATION/HANDLING

PO

• May give with food to decrease risk of GI disturbance. • Recommended to administer at bedtime.

INDICATIONS/ROUTES/DOSAGE

Obsessive-Compulsive Disorder (OCD)

PO: ADULTS, ELDERLY: Initially, 25 mg/day. May gradually increase to 100 mg/day in the first 2 wks. **Maximum:** 250 mg/day. **CHILDREN 10 YRS AND OLDER:** Initially, 25 mg/day. May gradually increase up to maximum of 3 mg/kg/day or 200 mg, whichever is smaller.

SIDE EFFECTS

Frequent (30%–15%): Ejaculatory failure, dry mouth, somnolence, tremors, dizziness, headache, constipation, fatigue, nausea. **Occasional (14%–5%):** Impotence, diaphoresis, dyspepsia, sexual dysfunction, dysmenorrhea, nervousness, weight gain, pharyngitis. **Rare (less than 5%):** Diarrhea, myalgia, rhinitis, increased appetite, paresthesia, memory impairment, anxiety, rash, pruritus, anorexia, abdominal pain, vomiting, flatulence, flushing, UTI, back pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce seizures, cardiovascular effects (severe orthostatic hypotension, dizziness, tachycardia, palpitations, arrhythmias), altered temperature regulation (hyperpyrexia, hypothermia). Abrupt discontinuation after prolonged therapy may produce headache, malaise, nausea, vomiting, vivid dreams. Anemia, agranulocytosis have been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess psychological status, thought content, level of interest, mood, behavior, suicidal ideation.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood.

C

PATIENT/FAMILY TEACHING

• May cause dry mouth, constipation, blurred vision. • Tolerance to postural hypotension, sedative, anticholinergic effects usually develop during early therapy. • Maximum therapeutic effect may be noted in 2–4 wks. • Do not abruptly discontinue medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Daily dose may be given at bedtime to minimize daytime sedation. • Avoid alcohol. • Report worsening depression, suicidal ideation, change in behavior.

clonazepam

TOP 200

kloe-**naz**-e-pam
(Apo-Clonazepam, Clonapam, Klonopin, Klonopin Wafer, Novo-Clonazepam, Rivotril)
Do not confuse clonazepam or Klonopin with clonidine, clozapine, or lorazepam.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Anticonvulsant, antianxiety (see p. 34C).

ACTION

Depresses all levels of CNS; depresses nerve impulse transmission in motor cortex. Suppresses abnormal discharge in petit mal seizures. **Therapeutic Effect:** Produces anxiolytic, anticonvulsant effects.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	20–60 min	—	12 hrs or less

Well absorbed from GI tract. Protein binding: 85%. Metabolized in liver. Excreted in urine. Not removed by hemodialysis. **Half-life:** 18–50 hrs.

USES

Adjunct in treatment of Lennox-Gastaut syndrome (petit mal variant epilepsy); akinetic, myoclonic seizures; absence seizures (petit mal). Treatment of panic disorder. **OFF-LABEL:** Restless legs syndrome, neuralgia, multifocal tic disorder, parkinsonian dysarthria, bipolar disorder, adjunct therapy for schizophrenia, stomatitis.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, significant hepatic disease, pregnancy. **Cautions:** Renal/hepatic impairment, impaired gag reflex, chronic respiratory disease. Elderly, debilitated pts, depression, those at suicidal risk, or drug dependence.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. May be distributed in breast milk. Chronic ingestion during pregnancy may produce withdrawal symptoms, CNS depression in neonates. **Pregnancy Category D. Children:** Long-term use may adversely affect physical/mental development. **Elderly:** Usually more sensitive to CNS effects (e.g., ataxia, dizziness, oversedation). Use low dosage, increase gradually.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depressant effect. **CYP3A4 inhibitors (e.g., azole antifungals)** may increase serum concentration, toxicity. **HERBAL: Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Klonopin): 0.5 mg, 1 mg, 2 mg. **Tablets (Orally-Disintegrating [Klonopin Wafer]):** 0.125 mg, 0.25 mg, 0.5 mg, 1 mg, 2 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed.

Orally-Disintegrating Tablet

• Open pouch, peel back foil; do not push tablet through foil. • Remove tablet with dry hands, place in mouth. • Swallow with or without water. • Use immediately after removing from package.

INDICATIONS/ROUTES/DOSAGE

Seizures

PO: ADULTS, ELDERLY, CHILDREN 10 YRS AND OLDER: Initial dose not to exceed 1.5 mg/day in 3 divided doses; may be increased in 0.5- to 1-mg increments every 3 days until seizures are controlled or adverse effects occur. Maintenance: 0.05–0.2 mg/kg/day. **Maximum:** 20 mg/day. **INFANTS, CHILDREN YOUNGER THAN 10 YRS OR WEIGHING LESS THAN 30 KG:** 0.01–0.03 mg/kg/day in 2–3 divided doses; may be increased by no more than 0.5 mg every 3 days until seizures are controlled or adverse effects occur. Do not exceed maintenance dosage of 0.2 mg/kg/day in 3 divided doses.

Panic Disorder

PO: ADULTS, ELDERLY: Initially, 0.25 mg twice a day; increased in increments of 0.125–0.25 mg twice a day every 3 days. **Maximum:** 4 mg/day.

SIDE EFFECTS

Frequent (37%–11%): Mild, transient drowsiness; ataxia; behavioral disturbances (aggression, irritability, agitation), esp. in children. **Occasional (10%–5%):** Dizziness, ataxia, URI, fatigue. **Rare (4% or less):** Impaired memory, dysarthria, nervousness, sinusitis, rhinitis, constipation, allergic reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal may result in pronounced restlessness, irritability, insomnia, hand tremors, abdominal/muscle cramps, diaphoresis, vomiting, status epilepticus. Overdose results in drowsiness, confusion, diminished reflexes, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (frequency, duration, intensity, level of consciousness [LOC]). For panic attack, assess motor responses (agitation, trembling, tension), autonomic responses (cold/clammy hands, diaphoresis).

INTERVENTION/EVALUATION

Observe for excess sedation, respiratory depression, suicidal ideation. Assess children, elderly for paradoxical reaction, particularly during early therapy. Implement safety measures, observe frequently for recurrence of seizure activity. Assist with ambulation if drowsiness, ataxia occur. For those on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically. Evaluate for therapeutic response: decreased intensity and frequency of seizures or, if used in panic attack, calm facial expression, decreased restlessness.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Do not abruptly discontinue medication after long-term therapy. • Strict maintenance of drug therapy is essential for seizure control. • Avoid alcohol. • Report depression, thoughts of suicide/self-harm, excessive drowsiness, GI symptoms, worsening or loss of seizure control.

clonidine

TOP 200

klon-ih-deen

(Apo-Clonidine, Catapres, Catapres-TTS, Dixarit, Duraclon, Kapvay, Nexiclon XR, Novo-Clonidine)

C

BLACK BOX ALERT Epidural: Not to be used for perioperative, obstetric, or postpartum pain.

Do not confuse Catapres with Cataflam, or clonidine with clomiphene, clorazepam, Klonopin, or quinidine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiadrenergic, sympatholytic. **CLINICAL:** Antihypertensive (see pp. 60C, 154C).

ACTION

Stimulates alpha-adrenergic receptors, reducing sympathetic CNS response. **Epidural:** Prevents pain signal transmission to brain and produces analgesia at pre- and post-alpha-adrenergic receptors in spinal cord. **Therapeutic Effect:** Reduces peripheral resistance; decreases B/P, heart rate. Produces analgesia.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–1 hr	2–4 hrs	6–10 hrs

Well absorbed from GI tract. Transdermal best absorbed from chest and upper arm; least absorbed from thigh. Protein binding: 20%–40%. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 6–20 hrs (increased in renal impairment).

USES

Immediate Release: Nexiclon XR: Treatment of hypertension alone or in combination with other antihypertensive agents. **Kapvay:** Treatment of attention-deficit hyperactivity disorder (ADHD). **Epidural:** Combined with opiates for relief of severe pain. **OFF-LABEL:** Opioid or nicotine withdrawal, prevention of migraine headaches, treatment of diarrhea in diabetes mellitus, treatment of dysmenorrhea, menopausal flushing, alcohol dependence, glaucoma, clozapine-induced sialorrhea, Tourette's syndrome in children.

PRECAUTIONS

Contraindications: Epidural contraindicated in pts with bleeding diathesis or infection at the injection site, those receiving anticoagulation therapy. **Cautions:** Severe coronary insufficiency; recent MI; cerebrovascular disease; chronic renal failure; pre-existing bradycardia; sinus node dysfunction; conduction disturbances; concurrent use with digoxin, diltiazem, metoprolol, verapamil; depression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** More sensitive to effects; use caution. **Elderly:** May be more sensitive to hypotensive effect. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Discontinuation of concurrent **beta-blocker** therapy may increase risk of clonidine-withdrawal hypertensive crisis. **Tricyclic antidepressants** may decrease effect (may require increased dose of clonidine). **Digoxin, diltiazem, metoprolol, verapamil** may increase risk of serious bradycardia. **HERBAL: Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **Ephedra, ginseng, yohimbe** may decrease antihypertensive effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Duraclon): 100 mcg/ml, 500 mcg/ml. **Tablets (Catapres):** 0.1 mg, 0.2 mg, 0.3 mg. **Transdermal Patch (Catapres-TTS):** 2.5 mg (release at 0.1 mg/24 hrs), 5 mg (release at 0.2 mg/24 hrs), 7.5 mg (release at 0.3 mg/24 hrs).

Extended-Release Oral Suspension (Nexiclon XR): 0.09 mg/ml. **Extended-Release Tablets: (Kapvay):** 0.1 mg. **(Nexiclon XR):** 0.17 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed. • Give last oral dose just before bedtime. • Swallow extended-release tablets whole. Do not crush, chew, or break.

Transdermal

• Apply transdermal system to dry, hairless area of intact skin on upper arm or chest. • Rotate sites (prevents skin irritation). • Do not trim patch to adjust dose.

Epidural

• To be administered only by medical personnel trained in epidural management.

IV INCOMPATIBILITIES

None known.

IV COMPATIBILITIES

Bupivacaine (Marcaine, Sensorcaine), fentanyl (Sublimaze), heparin, ketamine (Ketalar), lidocaine, lorazepam (Ativan).

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 0.1 mg twice a day. Increase by 0.1–0.2 mg q2–4days. Maintenance: 0.2–1.2 mg/day in 2–4 divided doses up to maximum of 2.4 mg/day. **ELDERLY:** Initially, 0.1 mg at bedtime. May increase gradually. **CHILDREN 12 YRS AND OLDER:** Initially, 0.2 mg/day in 2 divided doses. May increase gradually at 5- to 7-day intervals in 0.1 mg/day increments. **Maximum:** 2.4 mg/day.

Extended-Release Tablet/Suspension *(Nexiclon XR)*: ADULTS, ELDERLY: Initially, 0.17 mg once daily at bedtime. May increase dose by 0.09 mg/day at weekly intervals. Range: 0.17–0.52 mg once daily.

Transdermal: ADULTS, ELDERLY: System delivering 0.1 mg/24 hrs up to 0.6 mg/24 hrs q7days. Usual dosage range: 0.1–0.3 mg once weekly.

Acute Hypertension

PO: ADULTS: Initially, 0.1–0.2 mg followed by 0.1 mg every hr if necessary, up to maximum total dose of 0.7 mg.

Attention-Deficit Hyperactivity Disorder (ADHD)

PO: CHILDREN: Initially 0.05 mg/day. May increase by 0.05 mg/day q3–7days up to 3–5 mcg/kg/day in divided doses 3–4 times a day. **Maximum:** 0.3–0.4 mg/day.

Extended-Release Tablet *(Kapvay)*: Initially, 0.1 mg daily at bedtime. May increase in increments of 0.1 mg/day at weekly intervals (**Maximum:** 0.4 mg/day). Doses should be taken twice daily with higher split dose given at bedtime.

Severe Pain

Epidural: ADULTS, ELDERLY: 30–40 mcg/hr. **CHILDREN:** Range: 0.5–2 mcg/kg/hr, not to exceed adult dose.

SIDE EFFECTS

Frequent: Dry mouth (40%), drowsiness (33%), dizziness (16%), sedation, constipation (10%). **Occasional (5%–1%): Tablets, Injection:** Depression, pedal edema, loss of appetite, decreased sexual function, itching eyes, dizziness, nausea, vomiting, nervousness. **Transdermal:** Pruritus, redness or darkening of skin. **Rare (less than 1%):** Nightmares, vivid dreams, feeling of coldness in distal extremities (esp. the digits).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces profound hypotension, irritability, bradycardia, respiratory depression, hypothermia, miosis (pupillary constriction), arrhythmias, apnea. Abrupt withdrawal may result in rebound hypertension associated with nervousness, agitation, anxiety, insomnia, paresthesia, tremor, flushing, diaphoresis.

C

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose is administered, in addition to regular monitoring (be alert to B/P fluctuations).

INTERVENTION/EVALUATION

Monitor B/P, pulse, mental status. Monitor daily pattern of bowel activity, stool consistency. If clonidine is to be withdrawn, discontinue concurrent beta-blocker therapy several days before discontinuing clonidine (prevents clonidine withdrawal hypertensive crisis). Slowly reduce clonidine dosage over 2–4 days.

PATIENT/FAMILY TEACHING

• Sugarless gum, sips of tepid water may relieve dry mouth. • Avoid tasks that require alertness, motor skills until response to drug is established. • To reduce hypotensive effect, rise slowly from lying to sitting position, permit legs to dangle momentarily before standing. • Skipping doses or voluntarily discontinuing drug may produce severe, rebound hypertension. • Avoid alcohol. • If patch loosens during 7-day application period, secure with adhesive cover.

clopidogrel

TOP 200 HIGH ALERT

kloe-**pid**-oh-grel
(Plavix)

BLACK BOX ALERT Diminished effectiveness in CYP2C19 metabolizers increases risk for cardiovascular events.

Do not confuse Plavix with Elavil or Paxil.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thienopyridine derivative. **CLINICAL:** Antiplatelet (see p. 32C).

ACTION

Inhibits binding of enzyme adenosine phosphate (ADP) to its platelet receptor and subsequent ADP-mediated activation of a glycoprotein complex. **Therapeutic Effect:** Inhibits platelet aggregation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	2 hrs	5–7 days (with repeated doses of 75 mg/day)	5 days after last dose

Rapidly absorbed. Protein binding: 98%. Extensively metabolized by liver. Eliminated equally in the urine and feces. **Half-life:** 8 hrs.

USES

Reduction of atherosclerotic events (e.g., MI, stroke, vascular death) in pts with recent MI or stroke, or established peripheral artery disease (PAD). Treatment of acute coronary syndrome (ACS). Reduces rate of atherothrombotic events in pts with unstable angina (UA), non-ST segment elevation MI (non-STEMI), ST-segment elevation MI (STEMI), or with percutaneous coronary intervention (PCI) or CABG. **OFF-LABEL:** Graft patency (saphenous vein), stable coronary artery disease (in combination with aspirin). Initial treatment of acute coronary syndrome in pts allergic to aspirin.

PRECAUTIONS

Contraindications: Active bleeding (e.g., peptic ulcer, intracranial hemorrhage). **Cautions:** Severe hepatic/renal impairment, pts at risk of increased bleeding (e.g., trauma), concurrent use of anticoagulants.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Aspirin, NSAIDs, warfarin may increase risk of bleeding. **Proton pump**

inhibitors (e.g., omeprazole) may decrease efficacy, increase risk of cardiovascular events. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, green tea, horse chestnut, red clover** may have additive antiplatelet effects. **FOOD: Grapefruit, grapefruit juice** may decrease effects. **LAB VALUES:** May increase bilirubin, AST, ALT, serum cholesterol, uric acid. May decrease neutrophil count, platelet count.

AVAILABILITY (Rx)

Tablets: 75 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Reduction of Atherosclerotic Events (Pts with Recent MI, Stroke, PAD)

PO: ADULTS, ELDERLY: 75 mg once a day.

Acute Coronary Syndrome (ACS), Unstable Angina/NSTEMI

PO: ADULTS, ELDERLY: Initially, 300–600 mg loading dose, then 75 mg once a day (in combination with aspirin).

ACS (STEMI)

PO: ADULTS, ELDERLY: 75 mg once a day (in combination with aspirin).

ACS (PCI)

PO: ADULTS, ELDERLY: Initially, 300–600 mg, then 75 mg once daily.

SIDE EFFECTS

Frequent (15%): Skin disorders. **Occasional (8%–6%):** Upper respiratory tract infection, chest pain, flu-like symptoms, headache, dizziness, arthralgia. **Rare (5%–3%):** Fatigue, edema, hypertension, abdominal pain, dyspepsia, diarrhea, nausea, epistaxis, dyspnea, rhinitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Agranulocytosis, aplastic anemia/pancytopenia, thrombotic thrombocytopenic purpura (TTP) occur rarely. Hepatitis, hypersensitivity reaction, anaphylactoid reaction have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Perform platelet counts before drug therapy, q2days during first wk of treatment, and weekly thereafter until therapeutic maintenance dose is reached. Abrupt discontinuation of drug therapy produces elevated platelet count within 5 days.

INTERVENTION/EVALUATION

Monitor platelet count for evidence of thrombocytopenia. Assess BUN, serum creatinine, bilirubin, AST, ALT, WBC, Hgb, Hct, signs/symptoms of hepatic insufficiency during therapy.

PATIENT/FAMILY TEACHING

- It may take longer to stop bleeding during drug therapy. • Report any unusual bleeding. • Inform physicians, dentists if clopidogrel is being taken, esp. before surgery is scheduled or before taking any new drug.

clorazepate

klor-**az**-e-pate
(Apo-Clorazepate, Novo-Clopate, Tranxene T-Tab)

Do not confuse clorazepate with clofibrate or clonazepam.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Antianxiety, anticonvulsant (see p. 13C).

ACTION

Depresses all levels of CNS, including limbic and reticular formation, by binding to benzodiazepine receptor sites on gamma-aminobutyric acid (GABA) receptor complex. Modulates GABA, a

C

major inhibitory neurotransmitter in the brain. **Therapeutic Effect:** Produces anxiolytic effect, suppresses seizure activity.

PHARMACOKINETICS

Readily absorbed from GI tract. Metabolized in liver to desmethyldiazepam (**Half-life:** 48–96 hrs) and oxazepam (**Half-life:** 6–8 hrs). Excreted primarily in urine.

USES

Management of generalized anxiety disorders, short-term relief of anxiety symptoms, partial seizures, acute alcohol withdrawal symptoms.

PRECAUTIONS

Contraindications: Acute narrow-angle glaucoma. **Cautions:** Renal/hepatic impairment, depression, high risk of suicidal ideation, history of drug dependence, elderly, debilitated pts, those with respiratory disease, sleep apnea.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category D. Children:** May experience paradoxical excitement. **Elderly:** Increased risk of dizziness, sedation, confusion, hypotension, hyperexcitability.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depressant effects. **CYP3A4 inhibitors (e.g., azole antifungals)** may increase plasma concentration, toxicity. **HERBAL:** **Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum creatinine, ALT, AST, alkaline phosphatase. May decrease Hct. **Therapeutic serum level:** 0.12–1 mcg/ml; **toxic serum level:** greater than 5 mcg/ml.

AVAILABILITY (Rx)

Tablets (Tranxene T-Tab): 3.75 mg, 7.5 mg, 15 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ If pt requires change to another anticonvulsant, decrease clorazepate dosage gradually as low-dose therapy begins with replacement drug.

PO

• May administer with food/water to decrease risk of GI disturbance.

INDICATIONS/ROUTES/DOSAGE

Anxiety

PO: ADULTS, ELDERLY: 7.5–15 mg 2–4 times a day.

Partial Seizures

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: Initially, up to 7.5 mg 2–3 times a day. May increase by 7.5 mg at weekly intervals. **Maximum:** 90 mg/day. **CHILDREN 9–12 YRS:** Initially, 3.75–7.5 mg twice a day. May increase by 3.75 mg at weekly intervals. **Maximum:** 60 mg/day in 2–3 divided doses.

Alcohol Withdrawal

PO: ADULTS, ELDERLY: Initially, 30 mg, then 15 mg 2–4 times a day on first day. Gradually decrease dosage over subsequent days. **Maximum:** 90 mg/day.

SIDE EFFECTS

Frequent: Drowsiness. **Occasional:** Dizziness, GI disturbances, anxiety, blurred vision, dry mouth, headache, confusion, ataxia, rash, irritability, slurred speech. **Rare:** Paradoxical CNS reactions (hyperactivity, nervousness in children; excitement, restlessness in elderly, debilitated, generally noted during first 2 wks of therapy, particularly in presence of uncontrolled pain).

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt or too-rapid withdrawal may result in pronounced restlessness, irritability, insomnia, hand tremors, abdominal/muscle cramps, diaphoresis, vomiting, seizures. Overdose results in drowsiness, confusion, diminished reflexes, coma.

May increase risk of suicidal ideation or behavior.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Anxiety: Assess autonomic response (cold/clammy hands, diaphoresis), motor response (agitation, trembling, tension). Offer emotional support to anxious pt. **Seizures:** Review history of seizure disorder (intensity, frequency, duration, level of consciousness [LOC]). Observe frequently for recurrence of seizure activity. Initiate seizure precautions.

INTERVENTION/EVALUATION

Assess for paradoxical reaction, particularly during early therapy. Assist with ambulation if drowsiness, dizziness occur. Evaluate for therapeutic response: **Anxiety:** Calm facial expression; decreased restlessness. Monitor for signs/symptoms of depression, anxiety (loss of interest, mood swings, suicidal ideation or behavior). **Seizures:** Decrease in intensity/frequency of seizures. **Therapeutic serum level:** 0.12–1 mcg/ml; **toxic serum level:** greater than 5 mcg/ml.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication after long-term use (may precipitate seizures). • Strict maintenance of drug therapy is essential for seizure control. • Drowsiness usually disappears during continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • If dizziness occurs, change positions slowly from recumbent to sitting position before standing. • Smoking reduces drug effectiveness. • Avoid alcohol. • Notify physician if thoughts of suicide, worsening depression, or loss of seizure control occurs.

clozapine

kloe-za-peen
(Apo-Clozapine, Clozaril, FazaClo)

BLACK BOX ALERT Significant risk of life-threatening agranulocytosis, increased risk of potentially fatal cardiovascular events, particularly myocarditis, in elderly pts with dementia-related psychosis. May cause severe orthostatic hypotension, dose-dependent seizures.

Do not confuse clozapine with clonazepam, clonidine, or Klonopin, or Clozaril with Clinoril or Colazal.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dibenzodiazepine derivative. **CLINICAL:** Antipsychotic (see p. 64C).

ACTION

Interferes with binding of dopamine at dopamine receptor sites; binds primarily at nondopamine receptor sites. **Therapeutic Effect:** Diminishes schizophrenic behavior.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 97%. Metabolized in liver. Excreted in urine. **Half-life:** 12 hrs.

USES

Management of severely ill schizophrenic pts who fail to respond to other antipsychotic therapy. Treatment of recurrent suicidal behavior. **OFF-LABEL:** Schizoaffective disorder, bipolar disorder, childhood psychosis, obsessive-compulsive disorder, agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: Concurrent use of other drugs that may suppress bone marrow function, history of clozapine-induced agranulocytosis or severe granulocytopenia, myeloproliferative disorders, paralytic ileus, uncontrolled seizures, severe CNS depression, coma. **Cautions:** History of seizures, cardiovascular disease, myocarditis; respiratory, hepatic, renal impairment; alcohol withdrawal; high risk of suicide; paralytic ileus; myasthenia gravis; pts at risk for aspiration pneumonia; urinary retention; narrow-

C

angle glaucoma; prostatic hypertrophy; xerostomia; visual disturbances; constipation; history of bowel obstruction; diabetes mellitus. **Pregnancy Category B.**

INTERACTIONS

DRUG: **Antihypertensive medications** may increase risk of hypotension. **Alcohol, other CNS depressants** may increase CNS depressant effects. **Bone marrow depressants** may increase myelosuppression. **Cimetidine, citalopram, ciprofloxacin, erythromycin** may increase concentration, risk of adverse effects. **SSRIs (e.g., paroxetine)** may increase concentration. **Lithium** may increase risk of confusion, dyskinesia, seizures. Medications prolonging QT interval may increase risk of QT prolongation. **CYP3A4 inducers (e.g., phenytoin, carbamazepine, rifampin)** may decrease concentration/effects. **HERBAL:** **St. John's wort** may decrease concentration/therapeutic effects. **Kava kava, gotu kola, valerian, St. John's wort** may increase risk of CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, cholesterol (rare), triglycerides (rare).

AVAILABILITY (Rx)

Tablets (Clozaril): 25 mg, 50 mg, 100 mg, 200 mg. **Tablets (Orally-Disintegrating [FazaClo]):** 12.5 mg, 25 mg, 100 mg, 150 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

Orally-Disintegrating Tablets

- Remove from foil blister; do not push tablet through foil. • Remove tablet with dry hands, place in mouth. • Allow to dissolve in mouth, swallow with saliva. • If dose requires splitting tablet, discard unused portion.

INDICATIONS/ROUTES/DOSAGE

Schizophrenic Disorders

◀ALERT▶ For initiation of therapy, must have WBC equal to or greater than 3,500 mm^3 and ANC equal to or greater than 2,000 mm^3.

PO: ADULTS: Initially, 12.5 mg once or twice a day. May increase by 25–50 mg/day over 2 wks until dosage of 300–450 mg/day is achieved. May further increase by 50–100 mg/day no more than once or twice a week. Range: 200–600 mg/day. **Maximum:** 900 mg/day. **ELDERLY:** Initially, 25 mg/day. May increase by 25 mg/day. **Maximum:** 450 mg/day.

Suicidal Behavior in Schizophrenia

PO: ADULTS: Initially, 12.5 mg 1–2 times/day. May increase in increments of 25–50 mg/day to a target dose of 300–450 mg/day after 2 wks. Range: 12.5–900 mg/day.

SIDE EFFECTS

Frequent: Drowsiness (39%), salivation (31%), tachycardia (25%), dizziness (19%), constipation (14%). **Occasional:** Hypotension (9%); headache (7%); tremor, syncope, diaphoresis, dry mouth (6%); nausea, visual disturbances (5%); nightmares, restlessness, akinesia, agitation, hypertension, abdominal discomfort, heartburn, weight gain (4%). **Rare:** Rigidity, confusion, fatigue, insomnia, diarrhea, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Seizures occur occasionally (3%). Overdose produces CNS depression (sedation, delirium, coma), respiratory depression, hypersalivation. Blood dyscrasias, particularly agranulocytosis, mild leukopenia, may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline weight, glucose, Hgb A_{1c}, WBC, absolute neutrophil count (ANC) before initiating treatment. Monitor WBC, ANC count every wk for first 6 mos of continuous therapy, then biweekly for 6 mos. If CBC and ANC are normal after 12 mos, then monthly monitoring of CBC

and ANC is recommended. Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P for hypertension/hypotension. Assess pulse for tachycardia (common side effect). Monitor CBC for blood dyscrasias. Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue long-term drug therapy. • Drowsiness generally subsides during continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, caffeine. • Report fever, sore throat, flu-like symptoms.

codeine HIGH ALERT

koe-deen
(Codeine Contin ✱)
Do not confuse codeine with Cardene or Lodine.

FIXED-COMBINATION(S)

Capital with Codeine, Tylenol with Codeine: acetaminophen/codeine: 120 mg/12 mg per 5 ml. **Tylenol with Codeine:** acetaminophen/codeine: 300 mg/15 mg, 300 mg/30 mg, 300 mg/60 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist. **CLINICAL:** Analgesic: Single entity: **Schedule II:** Fixed-combination form: **Schedule III:** (see p. 141C).

ACTION

Binds to opioid receptors in CNS, particularly in medulla. Inhibits ascending pain pathways. **Therapeutic Effect:** Alters perception of, emotional response to pain; suppresses cough reflex.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–60 min	1–1.5 hrs	4–6 hrs
IM	10–30 min	0.5–1 hr	4–6 hrs

Well absorbed following PO administration. Protein binding: Very low. Metabolized in liver. Excreted in urine. **Half-life:** 2.5–3.5 hrs.

USES

Relief of mild to moderate pain. **OFF-LABEL:** Short-term relief of cough.

PRECAUTIONS

Contraindications: Respiratory depression in absence of resuscitative equipment, acute or severe bronchial asthma or hypercarbia, paralytic ileus. **Cautions:** Adrenal insufficiency, biliary tract impairment, CNS depression/coma, morbid obesity, prostatic hyperplasia, urinary stricture, thyroid dysfunction, severe renal/hepatic impairment, COPD, respiratory disease, cardiovascular disease, hypovolemia, GI obstruction, head injury, elevated intracranial pressure, history of drug abuse.

LIFESPAN CONSIDERATIONS

Pregnancy Category C (D if used for prolonged periods or at high dosages at term). Children: Efficacy not established in those younger than 2 years. **Elderly:** May cause confusion, oversedation; use lower dosing range.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS, respiratory depression, hypotension. **Anticholinergics** may increase risk of urinary retention, severe constipation. **MAOIs**

C

may produce a severe, sometimes fatal reaction (reduce dosage to ¼ usual dose). **HERBAL:** **St. John's wort** may decrease plasma concentration. **Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Tablets: 15 mg, 30 mg, 60 mg.

ADMINISTRATION/HANDLING

PO

• Give with food or milk (minimizes adverse GI effects).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Reduce initial dosage in those with hypothyroidism, Addison's disease, renal insufficiency, those using other CNS depressants concurrently.

Analgesia

PO: ADULTS, ELDERLY: 15–60 mg q4h as needed. **Maximum total daily dose:** 360 mg. **CHILDREN:** 0.5–1 mg/kg q4–6h. **Maximum:** 60 mg/dose.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
10–50 ml/min	75% of usual dose
Less than 10 ml/min	50% of usual dose

SIDE EFFECTS

◀ALERT▶ Ambulatory pts, those not in severe pain may experience dizziness, nausea, vomiting, hypotension more frequently than those in supine position or with severe pain. **Frequent:** Constipation, drowsiness, nausea, vomiting. **Occasional:** Paradoxical excitement, confusion, palpitations, facial flushing, decreased urination, blurred vision, dizziness, dry mouth, headache, hypotension (including orthostatic hypotension), decreased appetite, injection site redness, burning, or pain. **Rare:** Hallucinations, depression, abdominal pain, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Too-frequent use may result in paralytic ileus. Overdose may produce cold/clammy skin, confusion, seizures, decreased B/P, restlessness, pinpoint pupils, bradycardia, respiratory depression, decreased LOC, severe weakness. Tolerance to drug's analgesic effect, physical dependence may occur with repeated dosage.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Analgesic: Assess onset, type, location, duration of pain. Effect of medication is reduced if full pain response recurs before next dose. **Antitussive:** Assess type, severity, frequency of cough, sputum production.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Increase fluid intake, environmental humidity to improve viscosity of lung secretions. Initiate deep breathing, coughing exercises. Assess for clinical improvement; record onset of relief of pain, cough.

PATIENT/FAMILY TEACHING

• Change positions slowly to avoid orthostatic hypotension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Tolerance, dependence may occur with prolonged use of high dosages. • Avoid alcohol.

colchicine

TOP 200 HIGH ALERT

kol-chi-seen
(Colcrys)
Do not confuse colchicine with Cortrosyn.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkaloid.
CLINICAL: Antigout.

ACTION

Decreases leukocyte motility, phagocytosis, lactic acid production. **Therapeutic Effect:** Decreases urate crystal deposits, reduces inflammatory process.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Highest concentration is in liver, spleen, kidney. Protein binding: 30%–50%. Reenters intestinal tract by biliary secretion and is reabsorbed from intestines. Partially metabolized in liver. Eliminated primarily in feces. **Half-life:** 12–30 min.

USES

Prevention, treatment of acute gouty arthritis. Used to reduce frequency of recurrence of familial Mediterranean fever (FMF). **OFF-LABEL:** Treatment of biliary cirrhosis, recurrent pericarditis.

PRECAUTIONS

Contraindications: Concomitant use of a P-glycoprotein (e.g., cyclosporine) or strong CYP3A4 inhibitor (e.g., clarithromycin) in presence of renal or hepatic impairment. **Cautions:** Hepatic impairment, elderly, debilitated, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May be more susceptible to cumulative toxicity. Age-related renal impairment may increase risk of myopathy.

INTERACTIONS

DRUG: May increase concentration of **statins** and increase risk of rhabdomyolysis. **Atazanavir, clarithromycin, cyclosporine, diltiazem, erythromycin, fluconazole, fosamprenavir, indinavir, itraconazole, ketoconazole, nelfinavir, ranolazine, ritonavir, saquinavir, verapamil** may increase colchicine concentration, toxicity. **HERBAL:** None significant. **FOOD: Grapefruit juice, grapefruit** may increase concentration/toxicity. **LAB VALUES:** May increase serum alkaline phosphatase, AST. May decrease platelet count.

AVAILABILITY (Rx)

Tablets: 0.6 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • For FMF, give in 1 or 2 divided doses. • Give with adequate water and maintain fluid intake.

INDICATIONS/ROUTES/DOSAGE

Acute Gouty Arthritis

PO: ADULTS, ELDERLY: Initially, 1.2 mg at first sign of gout flare, then 0.6 mg 1 hr later. **Coadministration with Strong CYP3A4 Inhibitors:** 0.6 mg, follow in 1 hr by single 0.3-mg dose. Do not repeat for at least 3 days. **Coadministration with Moderate CYP3A4 Inhibitors:** 1.2 mg once. Do not repeat for at least 3 days. **Coadministration with P-Glycoprotein Inhibitors:** 0.6 mg once. Do not repeat for at least 3 days.

Gout Prophylaxis

PO: ADULTS, ELDERLY: 0.6 mg 1–2 times/day. **Coadministration with Strong CYP3A4 Inhibitors:** If dose is 0.6 mg 2 times/day, adjust dose to 0.3 mg once daily; if dose is 0.6 mg once daily, adjust dose to 0.3 mg every other day. **Coadministration with Moderate CYP3A4 Inhibitors:** If dose is 0.6 mg 2 times/day, adjust dose to 0.3 mg twice daily or 0.6 mg once daily; if dose is 0.6 mg once daily, adjust dose to 0.3 mg once daily. **Coadministration with P-Glycoprotein Inhibitors:** If dose is 0.6 mg 2 times/day, adjust dose to 0.3 mg once daily; if dose is 0.6 mg once daily, adjust dose to 0.3 mg every other day.

C

FMF

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 1.2–2.4 mg/day. **Coadministration with strong CYP3A4 inhibitors: Maximum:** 0.6 mg once daily (or 0.3 mg twice daily). **Coadministration with moderate CYP3A4 inhibitors:** 1.2 mg/day (0.6 mg twice daily). **Coadministration with P-glycoprotein inhibitors:** 0.6 mg once daily (or 0.3 mg twice daily). **CHILDREN 6–12 YRS:** 0.9–1.8 mg/day. **CHILDREN 4–5 YRS:** 0.3–1.8 mg/day. Note: Increase or decrease dose by 0.3 mg/day, not to exceed maximum dose.

Pericarditis

PO: ADULTS, ELDERLY: 0.6 mg 2 times/day.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
Less than 30 ml/min	
FMF	0.3 mg initially
Gout prophylaxis	0.3 mg/day
Gout flare	No reduction
HD	
FMF	0.3 mg as single dose
Gout prophylaxis	0.3 mg 2–4 times/wk

SIDE EFFECTS

Frequent: Nausea, vomiting, abdominal discomfort. **Occasional:** Anorexia. **Rare:** Hypersensitivity reaction, including angioedema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bone marrow depression (aplastic anemia, agranulocytosis, thrombocytopenia) may occur with long-term therapy. Overdose initially causes burning feeling in skin/throat, severe diarrhea, abdominal pain. Second stage manifests as fever, seizures, delirium, renal impairment (hematuria, oliguria). Third stage causes hair loss, leukocytosis, stomatitis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Gout: Assess involved joints for pain, mobility, edema. **Mediterranean fever:** Assess abdominal pain, fever, chills, erythema, swollen skin lesions.

INTERVENTION/EVALUATION

Discontinue medication immediately if GI symptoms occur. Encourage high fluid intake (3,000 ml/day). Monitor I&O (output should be at least 2,000 ml/day), CBC, hepatic/renal function tests. Assess serum uric acid. Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Drink 8–10 glasses (8 oz) of fluid daily while taking medication. • Report skin rash, sore throat, fever, unusual bruising/bleeding, weakness, fatigue, numbness. • Stop medication as soon as gout pain is relieved or at first sign of nausea, vomiting, diarrhea. • Avoid grapefruit, grapefruit juice.

colesevelam

TOP 200

(ko-leh-**sev**-eh-lam)
(Welchol)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Bile acid sequestrant. **CLINICAL:** Antihyperlipidemic agent, hypoglycemic agent (see p. 44C, 56C).

ACTION

Binds with bile acids in the intestine, preventing reabsorption. Increases clearance of low-density lipoprotein cholesterol (LDL-C). Glycemic control mechanism unknown. **Therapeutic Effect:** Decreases serum LDL-C levels, Hgb A1C levels.

PHARMACOKINETICS

Not absorbed after PO administration. Strictly limited to intestines. Primarily excreted in feces.

USES

Adjunctive therapy to diet and exercise to reduce elevated LDL-C. Improves glycemic control in pts with type 2 diabetes mellitus when used with other antidiabetic agents. Used as monotherapy or in combination with other cholesterol-lowering drugs (statins). Indicated for children (10–17 yrs of age) with heterozygous familial hypercholesterolemia with LDL-C greater than 190 mg/dL or LDL-C greater than 160 mg/dL (after adequate trial of diet therapy) with positive family history of premature cardiovascular history, or two or more other cardiovascular risk factors.

PRECAUTIONS

Contraindications: Bowel obstruction, hypertriglyceridemia-induced pancreatitis, serum triglycerides greater than 500 mg/dL. **Cautions:** Chronic constipation, major GI surgery, gastroparesis, serum triglycerides 300–500 mg/dL, fat-soluble vitamin deficiency.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breast milk distribution unlikely due to nonsystemic absorption. **Pregnancy Category B. Children:** Safety and efficacy not established in pts under 10 yrs of age. Oral suspension recommended. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/effects of **oral contraceptives** containing **ethinyl estradiol** and **norethindrone, cyclosporine, glipizide, glyburide, levothyroxine, olmesartan, phenytoin.** **HERBAL:** **Gotu kola** may decrease effectiveness. **FOOD:** None significant. **LAB VALUES:** May increase serum triglycerides, CPK, AST/ALT. Decreases glucose, Hgb A1C.

AVAILABILITY (RX)

Tablets: 625 mg. **Suspension, Oral (Packet):** 3.75 grams.

ADMINISTRATION/HANDLING

PO

- Give with meal.

Oral Suspension

- Empty packet into 4–8 ounces of water, fruit juice, soft drink.

INDICATIONS/ROUTES/DOSAGE

Hyperlipidemia

PO: ADULTS, CHILDREN (10–17 YRS): 3 tablets (1,875 mg) twice/day with meal or 6 tablets (3,750 mg) once daily with meal. **Oral Suspension** 3.75 grams once daily with meal.

◀ALERT▶ Not indicated for treatment of type 1 diabetes, diabetic ketoacidosis.

SIDE EFFECTS

Frequent (11%–8%): Constipation, dyspepsia. **Occasional (6%–3%):** Nasopharyngitis, nausea, headache, fatigue, asthenia (loss of strength, energy), pharyngitis, flu-like symptoms. **Rare (2%):** Rhinitis, vomiting, myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Elevated serum triglycerides may increase cardiovascular risk. Hypoglycemia reported in 3% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Enhanced lipid panel, liver function test, Hgb A1C, blood glucose. Baseline therapeutic levels if applicable: TSH (hormone replacement therapy), PT/INR (warfarin), phenytoin free/total (phenytoin, fosphenytion).

INTERVENTION/EVALUATION

Monitor lipid panel, Hgb A1C, blood glucose for therapeutic response. Assess bowel activity. Notify physician if abdominal pain, distention occurs.

C

PATIENT/FAMILY TEACHING

• Instruct importance of diet, exercise. • Do not take medications within 4 hrs of dose. • Blood levels will be drawn routinely. • Sweating, confusion, dizziness, tremors may indicate low blood sugar. • Report any newly prescribed medications. • Take with meal. • Report persistent GI upset, severe abdominal pain, respiratory difficulties.

conivaptan

koe-nye-**vap**-tan
(Vaprisol)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Vasopressin antagonist. **CLINICAL:** Hyponatremia adjunct.

ACTION

Promotes excretion of free water (without loss of serum electrolytes) resulting in net fluid loss, increased urine output, decreased urine osmolarity. **Therapeutic Effect:** Restores normal serum sodium level.

PHARMACOKINETICS

Metabolized in liver to active metabolites. Protein binding: 99%. Mainly eliminated in feces with lesser amount excreted in urine. **Half-life:** 6.7–8.6 hrs.

USES

Treatment of euvolemic and hypervolemic hyponatremia (syndrome of inappropriate secretion of antidiuretic hormone, in setting of hypothyroidism, adrenal insufficiency, pulmonary disorders) in hospitalized pts.

PRECAUTIONS

Contraindications: Hypovolemic hyponatremia; concurrent use with strong CYP3A4 inhibitors (clarithromycin, ketoconazole, ritonavir); anuria. **Cautions:** Hepatic/renal impairment, underlying congestive heart failure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Accumulates in placenta; systemic exposure to fetus likely. Potential for decreased neonatal viability, delayed growth/development at doses lower than those required for therapeutic efficacy. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., ketoconazole, itraconazole) may increase concentration. **CYP3A4 inducers (e.g., rifampin, carbamazepine)** may decrease concentration. May increase level/toxicity of **digoxin. HERBAL: St. John's wort** may decrease effects. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, serum potassium, magnesium. May alter serum glucose.

AVAILABILITY (Rx)

Injection, Premix Solutions: 20 mg/100 ml D_5W.

ADMINISTRATION/HANDLING

◀ALERT▶ Administer through large veins; change peripheral IV site every 24 hrs (minimizes risk of vascular irritation).

IV

Reconstitution • No reconstitution needed.

Rate of Administration • For loading dose, 20 mg/100 ml bag over 30 min. Follow with infusion (20 mg/100 ml) over 24 hrs.

Storage • Store infusions at room temperature. • Do not remove protective overwrap until ready for use.

IV INCOMPATIBILITIES

Do not infuse concurrently with any other medication or solution.

INDICATIONS/ROUTES/DOSAGE

Euvolemic/Hypervolemic Hyponatremia

IV: ADULTS, ELDERLY: Loading dose: 20 mg given over 30 min. Follow with 20 mg in a continuous IV infusion over 24 hrs. Administer for an additional 1–3 days as a continuous infusion of 20 mg/day. May be titrated upward to 40 mg/day as a continuous infusion if serum sodium is not rising at desired rate. Duration of infusion after loading dose should not exceed 4 days.

SIDE EFFECTS

Frequent: Peripheral injection site reactions (pain, erythema, phlebitis, swelling) (53%), headache (12%). **Occasional (10%–4%):** Thirst, vomiting, hypertension, polyuria, orthostatic hypotension, diarrhea, constipation, fever, confusion, dry mouth, nausea. **Rare (3%–2%):** Atrial fibrillation, hypotension, insomnia, dehydration, oral candidiasis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overly rapid increase in serum sodium may produce temporary neurologic symptoms. UTI, anemia, hematuria, pneumonia occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum sodium, hepatic enzyme levels, BUN, creatinine, CBC. Start peripheral IV in large vein. Assess for increased pulse rate, poor skin turgor, nausea, diarrhea (signs of hyponatremia).

INTERVENTION/EVALUATION

Obtain, monitor frequent serum sodium levels. Assess peripheral IV site for pain, erythema, phlebitis, swelling; if vein irritation occurs, change IV site. New IV site should be obtained every 24 hrs (minimizes vein irritation). Monitor urine output. Observe for improvement in signs/symptoms of hyponatremia, impending signs/symptoms of hypernatremia (flushing, edema, restlessness, dry mucous membranes, fever).

PATIENT/FAMILY TEACHING

Change positions slowly to avoid orthostatic hypotension.

conjugated estrogens

TOP 200

kon-joo-gate-ed **ess**-troe-jenz (Cenestin, Enjuvia, Premarin)

BLACK BOX ALERT Risk of dementia may be increased in postmenopausal women. Do not use to prevent cardiovascular disease. May increase risk of endometrial carcinoma in postmenopausal women.

Do not confuse Enjuvia with Januvia, or Premarin with Primaxin, Provera, or Remeron.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Estrogen.
CLINICAL: Hormone.

ACTION

Increases synthesis of DNA, RNA, various proteins in target tissues; reduces release of gonadotropin-releasing hormone, reduces follicle-stimulating hormone (FSH), luteinizing hormone (LH) release. **Therapeutic Effect:** Promotes normal growth, development of female sex organs; maintains GU function, vasomotor stability. Prevents accelerated bone loss by inhibiting bone resorption, restoring balance of bone resorption/formation. Inhibits LH, decreases serum concentration of testosterone.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed. Protein binding: 50%–80%. Metabolized in liver. Primarily excreted in urine. **Half-life (total estrone):** 27 hrs.

USES

Premarin: Management of moderate to severe vasomotor symptoms associated

C

with menopause. Treatment of atrophic vaginitis, kraurosis vulvae, female hypogonadism and castration, primary ovarian failure. Retardation of osteoporosis in postmenopausal women. Palliative treatment of inoperable, progressive cancer of the prostate in men and of the breast in postmenopausal women. Treatment of moderate to severe postmenopausal dyspareunia (painful sexual intercourse). **Cenestin:** Treatment of moderate to severe vasomotor symptoms of menopause, treatment of vulvar/vaginal atrophy. **Enjuvia:** Treatment of moderate to severe vasomotor symptoms, moderate to severe vaginal dryness and pain with intercourse, symptoms of vulvar/vaginal atrophy associated with menopause. **OFF-LABEL:** Prevention of estrogen deficiency–induced premenopausal osteoporosis. **Cream:** Prevention of nosebleeds.

PRECAUTIONS

Contraindications: Breast cancer (except in pts being treated for metastatic disease), hepatic disease, history or current thrombophlebitis, undiagnosed abnormal vaginal bleeding, pregnancy. **Cautions:** Asthma, epilepsy, migraine headaches, diabetes, cardiac/renal dysfunction, history of severe hypocalcemia, lupus erythematosis, porphyria, endometriosis, gallbladder disease, familial defects of lipoprotein metabolism.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. May be harmful to fetus. Not for use during lactation. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL: Black cohosh, dong quai** may increase estrogenic activity. **Ginseng, red clover, saw palmetto** may increase hormonal effects. **St. John's wort** may decrease plasma concentration. **FOOD: Grapefruit juice** may increase concentration/toxicity. **LAB VALUES:** May increase blood glucose, HDL, serum calcium, triglycerides. May decrease serum cholesterol, LDH. May affect serum metapyrone testing, thyroid function tests.

AVAILABILITY (Rx)

Cream, Vaginal (Premarin): 0.625 mg/g. **Injection, Powder for Reconstitution:** 25 mg. **Tablet (Cenestin, Enjuvia, Premarin):** 0.3 mg, 0.45 mg, 0.625 mg, 0.9 mg, 1.25 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute with Sterile Water for Injection. • Slowly add diluent, shaking gently. Avoid vigorous shaking. **Rate of Administration** • Give slowly to prevent flushing reaction. **Storage** • Refrigerate vials for IV use. • Use immediately following reconstitution.

PO

- Administer at same time each day.
- Give with milk, food if nausea occurs.

IV INCOMPATIBILITIES

No information available on Y-site administration.

INDICATIONS/ROUTES/DOSAGE

Vasomotor Symptoms Associated with Menopause, Atrophic Vaginitis, Kraurosis Vulvae

PO: ADULTS, ELDERLY: 0.3–0.625 mg/day cyclically (21 days on, 7 days off) or continuously.

Intravaginal: ADULTS, ELDERLY: 0.5–2 g/day cyclically, such as 21 days on and 7 days off.

Female Hypogonadism

PO: ADULTS: 0.3–0.625 mg/day in divided doses for 20 days, then a rest period of 10 days.

Female Castration, Primary Ovarian Failure

PO: ADULTS: Initially, 1.25 mg/day cyclically. Adjust dosage, upward or downward, according to severity of symptoms and pt response. For maintenance, adjust

dosage to lowest level that will provide effective control.

Osteoporosis Prevention
PO: ADULTS, ELDERLY: 0.3–0.625 mg/day, cyclically, such as 25 days on and 5 days off.

Breast Cancer
PO: ADULTS, ELDERLY: 10 mg 3 times a day for at least 3 mos.

Prostate Cancer
PO: ADULTS, ELDERLY: 1.25–2.5 mg 3 times a day.

Abnormal Uterine Bleeding
PO: ADULTS: 1.25 mg q4h for 24 hrs, then 1.25 mg/day for 7–10 days.
IV, IM: ADULTS: 25 mg; may repeat once in 6–12 hrs.

Dyspareunia
Intravaginal: ADULTS, ELDERLY: 0.5 g daily (21 days on, 7 days off).

SIDE EFFECTS

Frequent: Vaginal bleeding (spotting, breakthrough bleeding); breast pain/tenderness; gynecomastia. **Occasional:** Headache, hypertension, intolerance to contact lenses. **High doses:** Anorexia, nausea. **Rare:** Loss of scalp hair, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged administration may increase risk of breast, cervical, endometrial, hepatic, vaginal carcinoma; cerebrovascular disease, coronary heart disease, gallbladder disease, hypercalcemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to estrogen, hepatic dysfunction, thromboembolic disorders associated with pregnancy, estrogen therapy. Assess frequency/severity of vasomotor symptoms.

INTERVENTION/EVALUATION

Assess B/P periodically. Assess for edema; weigh daily. Monitor for loss of vision, diplopia, migraine, thromboembolic disorder, sudden onset of proptosis.

PATIENT/FAMILY TEACHING

• Avoid smoking due to increased risk of heart attack, blood clots. • Avoid grapefruit juice. • Diet, exercise important part of therapy when used to retard osteoporosis. • Teach how to perform Homans' test, signs/symptoms of blood clots (report these to physician immediately). • Promptly report signs/symptoms of thromboembolic, thrombotic disorders: sudden severe headache, shortness of breath, vision/speech disturbance, weakness/numbness of an extremity, loss of coordination, pain in chest, groin, leg. • Notify physician of abnormal vaginal bleeding, depression. • Teach female pts to perform breast self-exam. • Report weight gain of more than 5 lbs a wk. • Stop taking medication, contact physician if pregnancy is suspected.

cortisone

kor-ti-sone
Do not confuse cortisone with Cardizem.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocortical steroid. **CLINICAL:** Glucocorticoid (see p. 97C).

ACTION

Inhibits accumulation of inflammatory cells at inflammation sites, phagocytosis, synthesis and release of mediators of inflammation. **Therapeutic Effect:** Prevents/suppresses cell-mediated immune reactions. Decreases/prevents tissue response to inflammatory process.

C

PHARMACOKINETICS

Slowly absorbed from GI tract. Widely distributed. Metabolized in liver. Excreted in urine/feces. **Half-life:** 0.5–2 hrs.

USES

Treatment of adrenocortical insufficiency, conditions treated by immunosuppression, inflammatory conditions.

PRECAUTIONS

Contraindications: Hypersensitivity to corticosteroids, administration of live virus vaccine, systemic viral or fungal infection, serious infections (except septic shock or tuberculosis meningitis). **Cautions:** Thromboembolic disorders, history of tuberculosis (may reactivate disease), hypothyroidism, cirrhosis, CHF, psychosis, renal insufficiency, seizure disorders, GI disease, cardiovascular disease, peptic ulcer, myasthenia gravis, hepatic impairment, diabetes, cataracts, or glaucoma. Prolonged therapy should be discontinued slowly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C (D if used in the first trimester). Children:** Monitor growth, development of children, infants on prolonged steroid therapy. **Elderly:** Higher risk for hypertension, osteoporosis.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., phenobarbital, phenytoin, rifampin) may decrease concentration/effects. **CYP3A4 inhibitors (e.g., itraconazole, ketoconazole)** may increase concentration. May alter effects of **anticoagulants.** **HERBAL: Echinacea** may decrease corticosteroid effectiveness. **FOOD:** None known. **LAB VALUES:** May increase blood glucose, serum cholesterol, amylase, sodium. May decrease serum calcium, potassium, thyroxine.

AVAILABILITY (Rx)

Tablets: 25 mg.

ADMINISTRATION/HANDLING

- Administer with meals, food, or milk to decrease risk of GI disturbance.

INDICATIONS/ROUTES/DOSAGE

Dosage is dependent on condition being treated and pt response.

Physiologic Replacement

PO: ADULTS, ELDERLY: 25–35 mg/day. **CHILDREN:** 0.5–0.75 mg/kg/day in 3 divided doses.

Inflammatory Conditions

PO: ADULTS, ELDERLY: 25–300 mg/day. **CHILDREN:** 2.5–10 mg/kg/day in 3–4 divided doses.

SIDE EFFECTS

Frequent: Insomnia, heartburn, anxiety, abdominal distention, increased diaphoresis, acne, mood swings, increased appetite, facial flushing, delayed wound healing, increased susceptibility to infection, diarrhea, constipation. **Occasional:** Headache, edema, change in skin color, frequent urination. **Rare:** Tachycardia, allergic reaction (rash, urticaria), psychological changes, hallucinations, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term therapy: Hypocalcemia, hypokalemia, muscle wasting (esp. arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer, CHF. **Abrupt withdrawal following long-term therapy:** Anorexia, nausea, fever, headache, joint pain, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any of the corticosteroids. Obtain baseline values for weight, B/P, serum glucose, cholesterol, electrolytes.

INTERVENTION/EVALUATION

Be alert for infection (reduced immune response): sore throat, fever, vague symptoms. For pts on long-term therapy, monitor for hypocalcemia (muscle twitching, cramps, positive Trousseau's or Chvostek's signs), hypokalemia (weakness, muscle cramps, numbness/tingling [esp. lower extremities], nausea/vomiting, irritability, EKG changes). Assess emotional status, ability to sleep.

PATIENT/FAMILY TEACHING

• Do not change dose or schedule or stop taking drug; **must** taper off under medical supervision. • Notify physician of fever, sore throat, muscle aches, sudden weight gain/swelling. • Inform dentist, other physicians of cortisone therapy now or within past 12 mos.

cosyntropin

koe-sin-**troe**-pin
(Cortrosyn)
Do not confuse Cortrosyn with colchicine, cortisone, or Cotazym.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocortical steroid. **CLINICAL:** Glucocorticoid.

ACTION

Stimulates initial reaction in synthesis of adrenal steroids from cholesterol. **Therapeutic Effect:** Increases endogenous corticoid synthesis.

USES

Diagnostic testing of adrenocortical function.

PRECAUTIONS

Contraindications: Hypersensitivity to cosyntropin, corticotropin. **Cautions:** Preexisting allergies, history of allergic reaction to corticotropin.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Powder for Injection: 0.25 mg. **Injection, Solution:** 0.25 mg/ml.

ADMINISTRATION/HANDLING

Reconstitution

IM: • Reconstitute with 1 ml 0.9% NaCl. • Give as 0.25 mg/ml concentration.
IV Push: • Dilute with 2–5 ml 0.9% NaCl over 2 min.

Storage

Powder: • Room temperature. **Solution:** • Refrigerate.

INDICATIONS/ROUTES/DOSAGE

Adrenocortical Insufficiency

IM, IV: ADULTS, ELDERLY, CHILDREN OLDER THAN 2 YRS: 0.25–0.75 mg. **CHILDREN 2 YRS AND YOUNGER:** 0.125 mg. **NEONATES:** 0.015 mg/kg/dose.
IV Infusion: ADULTS, ELDERLY, CHILDREN OLDER THAN 2 YRS: 0.25 mg over 4–8 hrs at 0.04 mg/hr.

SIDE EFFECTS

Occasional: Nausea, vomiting. **Rare:** Hypersensitivity reaction (fever, pruritus).

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Hold cortisone, hydrocortisone, spironolactone the day prior to and the day of the

C

test. Ensure that baseline plasma cortisol concentration has been drawn before start of test or 24-hr urine for 17-KS or 17-OHCS is initiated.

INTERVENTION/EVALUATION

Adhere to time frame for blood draws; monitor urine collection if indicated.

PATIENT/FAMILY TEACHING

- Explain procedure, purpose of test.

crizotinib

kriz-**oh**-ti-nib
(Xalkori)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic (see p. 81C).

ACTION

Inhibits receptor tyrosine kinases including anaplastic lymphoma kinase (ALK), hepatocyte growth factor receptors (HGFR, c-Met), receptor d'origine nantais (RON). **Therapeutic Effect:** Inhibits tumor cell proliferation and survival.

PHARMACOKINETICS

Well absorbed after PO administration. Peak plasma concentration: 4–6 hrs. Extensive tissue distribution from plasma. Protein binding: 91%. Metabolized in liver. Excreted primarily in feces (63%) and urine (22%). **Half-life:** 42 hrs.

USES

Treatment of locally advanced or metastatic non–small-cell lung cancer (NSCLC) that is anaplastic lymphoma kinase (ALK) positive.

PRECAUTIONS

Contraindications: None known. **Cautions:** Baseline hepatic impairment, congenital long QT interval syndrome. Pregnancy (avoid use).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy. May cause fetal harm. Contraception should be considered during therapy and for at least 12 wks after discontinuation. Do not initiate therapy until pregnancy status confirmed. Unknown if crosses placenta or distributed in breast milk. Nursing mothers must discontinue either nursing or drug therapy. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong **CYP3A inhibitors** including **atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nelfinavir, ritonavir, saquinavir, voriconazole** may increase concentration. Strong **CYP3A inducers** including **carbamazepine, phenobarbital, phenytoin, rifabutin, rifampin** may decrease concentration. May alter plasma levels of **alfentanil, cyclosporine, dihydroergotamine, ergotamine, fentanyl, pimozide, sirolimus. Proton pump inhibitors, H_2 blockers, antacids** may decrease solubility. May increase plasma levels of **colchicine, dexamethasone, doxorubicin, etoposide, non-nucleoside reverse transcriptase inhibitors, protease inhibitors, quinidine, tacrolimus, vinblastine. HERBAL: St. John's wort** may decrease effectiveness. **FOOD: Grapefruit** or **grapefruit juice** may increase concentration/toxicity (potential for torsades, myelotoxicity). **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, bilirubin. May decrease neutrophils, platelets, lymphocytes.

AVAILABILITY (Rx)

Capsules: 200 mg, 250 mg.

ADMINISTRATION/HANDLING

- May give without regard to meals.
- Avoid grapefruit or grapefruit juice.
- Do not crush or chew.

INDICATIONS/ROUTES/DOSAGE

Non–Small-Cell Lung Cancer (ALK-Positive)

PO: ADULTS: 250 mg twice daily. **Dosage Modification:** Interrupt and/or reduce to 200 mg twice daily based on graded protocol, including hematologic toxicity (grade 4), elevated LFTs with bilirubin elevation (grade 1), QT prolongation (grade 3). May reduce to 250 mg once daily if indicated. Discontinue treatment for QT prolongation (grade 4), elevated LFTs with bilirubin elevation (grade 2, 3, 4), any pneumonitis grade.

SIDE EFFECTS

Frequent (62%–27%): Diplopia, photopsia, photophobia, blurry vision, visual field defect, vitreous floaters, reduced visual acuity, nausea, diarrhea, vomiting, peripheral/localized edema, constipation. **Occasional (20%–4%):** Fatigue, decreased appetite, dizziness, neuropathy, paresthesia, dysgeusia, dyspepsia, dysphagia, esophageal obstruction/pain/spasm/ulcer, odynophagia, reflux esophagitis, rash, abdominal pain/tenderness, stomatitis, glossodynia, glossitis, cheilitis, mucosal inflammation, oropharyngeal pain/discomfort, bradycardia, headache, cough. **Rare (3%–1%):** Musculoskeletal chest pain, insomnia, dyspnea, arthralgia, nasopharyngitis, rhinitis, pharyngitis, URI, back pain, complex renal cysts, chest pain/tightness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe, life-threatening, sometimes fatal treatment-related pneumonitis, pneumonia, dyspnea, pulmonary embolism in less than 2% of pts was noted. Grade 3–4 elevation of hepatic enzymes, increased QT prolongation may require discontinuation of therapy. May cause thrombocytopenia, neutropenia, lymphopenia. Severe/worsening vitreous floaters, photopsia may indicate retinal hole, retinal detachment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess vital signs, O_2 saturation. Obtain baseline CBC with differential, CMP, hepatic function test, PT/INR, ECG. Question possibility of pregnancy or plans for breastfeeding. Obtain full medication history including vitamins, minerals, herbal products. Detection of ALK-positive NSCLC test needed prior to treatment. Assess history of tuberculosis, HIV, CHF, bradyarrhythmias, electrolyte imbalance, medications that prolong QT interval. Assess visual acuity, history of vitreous floaters.

INTERVENTION/EVALUATION

Assess vital signs, O_2 saturation routinely. Monitor CBC with differential monthly, LFTs monthly; increase testing for grades 2, 3, 4. Obtain EKG for bradycardia, electrolyte imbalance, chest pain, difficulty breathing. Monitor for bruising, hematuria, jaundice, right upper abdominal pain, weight loss, or acute infection (fever, diaphoresis, lethargy, oral mucosal changes, productive cough). Report decrease in RBC, Hgb, Hct, platelets, neutrophils, lymphocytes. Worsening cough, fever, or shortness of breath may indicate pneumonitis. Consider ophthalmological evaluation for vision changes. Reinforce birth control compliance.

PATIENT/FAMILY TEACHING

• Blood levels will be drawn routinely. • Use caution when driving or operating machinery. • Report urine changes, bloody or clay-colored stools, upper abdominal pain, nausea, vomiting, bruising, fever, cough, difficulty breathing. • Report history of liver abnormalities or heart problems including long QT syndrome, syncope, palpitations, extremity swelling. • Immediately report any newly prescribed medications, suspected pregnancy, or vision changes including light flashes, blurred vision, increased floaters, photo-

phobia, or new or increased floaters. • Contraception recommended during treatment and for at least 3 mos after treatment. • Avoid alcohol. • Do not eat grapefruit or drink grapefruit juice.

cyanocobalamin (vitamin B_{12})

sye-an-oh-koe-**bal**-a-min
(CaloMist, Nascobal)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Coenzyme. **CLINICAL:** Vitamin, antianemic (see p. 162C).

ACTION

Coenzyme for metabolic functions (fat, carbohydrate metabolism, protein synthesis). **Therapeutic Effect:** Necessary for cell growth and replication, hematopoiesis, myelin synthesis.

PHARMACOKINETICS

In presence of calcium, absorbed systemically in lower half of ileum. Initially, bound to intrinsic factor; this complex passes down intestine, binding to receptor sites on ileal mucosa. Protein binding: High. Metabolized in liver. Primarily eliminated unchanged in urine. **Half-life:** 6 days.

USES

Treatment of pernicious anemia, vitamin B_{12} deficiency due to malabsorption diseases, increased B_{12} requirement due to pregnancy, thyrotoxicosis, hemorrhage, malignancy, hepatic/renal disease. **CaloMist:** Maintenance of vitamin B_{12} concentrations.

PRECAUTIONS

Contraindications: Hereditary optic nerve atrophy, history of allergy to cobalamins. **Cautions:** Folic acid deficiency, anemia, premature neonates.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category A (C if used in doses above recommended daily allowance; C for intranasal). Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 1,000 mcg/ml. **Nasal Spray (Nascobal):** 500 mcg/spray. **(CaloMist)** 25 mcg/spray. **Tablets:** 50 mcg, 100 mcg, 250 mcg, 500 mcg, 1,000 mcg. **Tablets (Extended-Release):** 1,000 mcg, 1,500 mcg.

ADMINISTRATION/HANDLING

IM, Subcutaneous

• Avoid IV route.

PO

• May give without regard to food.

Intranasal

• Clear both nostrils. • Pull clear cover off top of pump. • Press down firmly and quickly on pump's finger grips until a droplet of gel appears at top of the pump. Then press down on finger grips two more times. • Place the tip of pump halfway into nostril, pointing tip toward back of nose. • Press down firmly and quickly on finger grips to release medication into one nostril while pressing other nostril closed. • Massage medicated nostril for a few seconds. • Administer nasal preparation at least 1 hr before or 1 hr after hot foods or liquids are consumed (hot foods can cause nasal secretion, resulting in loss of medication).

INDICATIONS/ROUTES/DOSAGE

Pernicious Anemia

IM, Subcutaneous: ADULTS, ELDERLY: 100 mcg/day for 7 days, then every other

day for 7 days, then every 3–4 days for 2–3 wks. Maintenance: 100 mcg/mo (PO 1,000–2,000 mcg/day). **CHILDREN:** 30–50 mcg/day for 2 or more wks. Maintenance: 100 mcg/mo. **NEONATES:** 0.2 mcg/kg for 2 days, then 1,000 mcg/day for 2–7 days. Maintenance: 100 mcg/mo.

Vitamin Deficiency

IM, Subcutaneous: ADULTS, ELDERLY: 30 mcg/day for 5–10 days, then 100–200 mcg/mo.

PO: ADULTS, ELDERLY: 250 mcg/day.

Intranasal: ADULTS, ELDERLY: (NASCOBAL): 500 mcg in one nostril once weekly. **(CALOMIST):** Maintenance: 25 mcg in each nostril daily.

SIDE EFFECTS

Occasional: Diarrhea, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Impurities in preparation may cause rare allergic reaction. Peripheral vascular thrombosis, pulmonary edema, hypokalemia, CHF occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Before and during therapy, assess for signs, symptoms of vitamin B_{12} deficiency (anorexia, ataxia, fatigue, hyporeflexia, insomnia, irritability, loss of positional sense, pallor, palpitations on exertion).

INTERVENTION/EVALUATION

Assess for CHF, pulmonary edema, hypokalemia in cardiac pts receiving subcutaneous/IM therapy. Monitor serum potassium (3.5–5 mEq/L), serum B_{12} (200–800 mcg/ml), rise in reticulocyte count (peaks in 5–8 days). Assess for reversal of deficiency symptoms (hyporeflexia, loss of positional sense, ataxia, fatigue, irritability, insomnia, anorexia, pallor, palpitations on exertion). Therapeutic response to treatment usually dramatic within 48 hrs.

PATIENT/FAMILY TEACHING

• Lifetime treatment may be necessary with pernicious anemia. • Report symptoms of infection. • Foods rich in vitamin B_{12} include organ meats, clams, oysters, herring, red snapper, muscle meats, fermented cheese, dairy products, egg yolks. • Use nasal preparation at least 1 hr before or 1 hr after consuming hot foods, liquids.

TOP 200

cyclobenzaprine

sye-kloe-**ben**-za-preen
(Amrix, Apo-Cyclobenzaprine, Flexeril, Flexitec, Flexmid, Novo-Cycloprine)

Do not confuse cyclobenzaprine with cycloserine or cyproheptadine, or Flexeril with Floxin.

◆CLASSIFICATION

CLINICAL: Skeletal muscle relaxant (see p. 152C).

ACTION

Centrally acting skeletal muscle relaxant that reduces tonic somatic muscle activity at level of brainstem. **Therapeutic Effect:** Relieves local skeletal muscle spasm.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	3–4 hrs	12–24 hrs

Well but slowly absorbed from GI tract. Protein binding: 93%. Metabolized in GI tract and liver. Primarily excreted in urine. **Half-life:** 8–37 hrs.

USES

Treatment of muscle spasm associated with acute, painful musculoskeletal conditions. **OFF-LABEL:** Treatment of muscle spasms associated with temporomandibular joint pain (TMJ).

C

PRECAUTIONS

Contraindications: Acute recovery phase of MI, arrhythmias, CHF, heart block, conduction disturbances, hyperthyroidism, use within 14 days of MAOIs. **Cautions:** Hepatic impairment, history of urinary hesitancy or retention, angle-closure glaucoma, increased intraocular pressure (IOP), elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Increased sensitivity to anticholinergic effects (e.g., confusion, urinary retention).

INTERACTIONS

DRUG: Alcohol, other CNS depressant medications may increase CNS depression. **MAOIs** may increase risk of hypertensive crisis, seizures. **Tramadol** may increase risk of seizures. **HERBAL: Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: (Flexeril): 5 mg, 10 mg. **(Flexmid):** 7.5 mg.

Capsules (Extended-Release [Amrix]): 15 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not crush or chew extended-release capsule. • Give extended-release capsule at same time each day.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Do not use longer than 2–3 wks.

Acute, Painful Musculoskeletal Conditions

PO: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: Initially, 5 mg 3 times a day. May increase to 7.5–10 mg 3 times a day.

PO *(Extended-Release)*: ADULTS, ELDERLY: 15–30 mg once daily.

Dosage in Hepatic Impairment

Note: Extended-release capsule not recommended in hepatic impairment. **MILD:** 5 mg 3 times a day. **MODERATE AND SEVERE:** Not recommended.

SIDE EFFECTS

Frequent: Drowsiness (39%), dry mouth (27%), dizziness (11%). **Rare (3%–1%):** Fatigue, asthenia (loss of strength, energy), blurred vision, headache, anxiety, confusion, nausea, constipation, dyspepsia, unpleasant taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in visual hallucinations, hyperactive reflexes, muscle rigidity, vomiting, hyperpyrexia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type, location, duration of muscular spasm. Check for immobility, stiffness, swelling.

INTERVENTION/EVALUATION

Assist with ambulation at all times. Assess for therapeutic response: relief of pain; decreased stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Drowsiness usually diminishes with continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, other depressants while taking medication. • Avoid sudden changes in posture. • Sugarless gum, sips of water may relieve dry mouth.

cyclophosphamide

HIGH ALERT

sye-kloe-**foss**-fa-mide
(Cytoxan, Procytox ✱)
Do not confuse cyclophosphamide with cyclosporine or ifosfamide, or Cytoxan with cefoxitin, Ciloxan, cytarabine, Cytosar, or Cytotec.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic (see p. 81C).

ACTION

Inhibits DNA, RNA protein synthesis by cross-linking with DNA, RNA strands. Cell cycle–phase nonspecific. **Therapeutic Effect:** Prevents cell growth. Potent immunosuppressant.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 10%–60%. Crosses blood-brain barrier. Metabolized in liver to active metabolites. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 3–12 hrs.

USES

Treatment of acute lymphocytic, acute nonlymphocytic, chronic myelocytic, chronic lymphocytic leukemias; ovarian, breast carcinomas; neuroblastoma; retinoblastoma; Hodgkin's, non-Hodgkin's lymphomas; multiple myeloma; mycosis fungoides; nephrotic syndrome in children. **OFF-LABEL:** Treatment of adrenocortical, bladder, cervical, endometrial, prostatic, testicular carcinomas; Ewing's sarcoma; multiple sclerosis; non–small-cell, small-cell lung cancer; organ transplant rejection; osteosarcoma; ovarian germ cell, primary brain, trophoblastic tumors; rheumatoid arthritis; soft-tissue sarcomas; systemic dermatomyositis; systemic lupus erythematosus; Wilms' tumor.

PRECAUTIONS

Contraindications: Severe myelosuppression. **Cautions:** Severe leukopenia, thrombocytopenia, tumor infiltration of bone marrow, previous therapy with other antineoplastic agents, radiation, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy. May cause fetal malformations (limb abnormalities, cardiac anomalies, hernias). Distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: CYP2D6 inducers (e.g., carbamazepine, phenobarbital) may decrease concentration; **CYP2D6 inhibitors (e.g., paroxetine, amiodarone)** may increase concentration. **Anthracycline agents (e.g., doxorubicin, epirubicin)** may increase risk of cardiomyopathy. **CYP3A4 inhibitors (e.g., ketoconazole)** may increase concentrations, risk of adverse effects. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** Pts with an estrogen-dependent tumor should avoid **black cohosh, dong quai. FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Cytoxan): 500 mg, 1 g, 2 g. **Tablets (Cytoxan):** 25 mg, 50 mg.

ADMINISTRATION/HANDLING

◄ALERT► May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Reconstitution • For IV push, reconstitute each 100 mg with 5 ml Sterile Water for Injection, 0.9% NaCl, or D_5W to pro-

vide concentration of 20 mg/ml. • Shake to dissolve. Allow to stand until clear.
Rate of Administration • May give by IV push or further dilute with 250 ml D_5W, 0.9% NaCl. • IV infusions may be given over 1–24 hrs. • Doses of 500 mg to 2g may be given over 20–30 min. • IV route may produce faintness, facial flushing, diaphoresis, oropharyngeal sensation.
Storage • Reconstituted solution is stable for 24 hrs at room temperature or up to 6 days if refrigerated.

PO
• Give on an empty stomach. If GI upset occurs, give with food. • Do not cut or crush. • To minimize risk of bladder irritation, do not give at bedtime.

IV INCOMPATIBILITY

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Granisetron (Kytril), heparin, hydromorphone (Dilaudid), lipids, lorazepam (Ativan), morphine, ondansetron (Zofran), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage (Refer to Individual Protocols)
IV: ADULTS, ELDERLY, CHILDREN: (Single dose): 400–1,800 mg/m^2 (30–50 mg/kg) per treatment course (1–5 days), which may be repeated q2–4wks. (Continuous daily dose): 60–120 mg/m^2 (1–2.5 mg/kg).
PO: ADULTS, ELDERLY, CHILDREN: 1–5 mg/kg/day.

Nephrotic Syndrome
PO: ADULTS, CHILDREN: 2.5–3 mg/kg/day for 60–90 days.

SIDE EFFECTS

Expected: Marked leukopenia 8–15 days after initial therapy. **Frequent:** Nausea, vomiting (beginning about 6 hrs after administration and lasting about 4 hrs); alopecia (33%). **Occasional:** Diarrhea, darkening of skin/fingernails, stomatitis, headache, diaphoresis. **Rare:** Pain/redness at injection site.

ADVERSE EFFECTS/ TOXIC REACTIONS

Major toxic effect is myelosuppression resulting in blood dyscrasias (leukopenia, anemia, thrombocytopenia, hypoprothrombinemia). Expect leukopenia to resolve in 17–28 days. Anemia generally occurs after large doses or prolonged therapy. Thrombocytopenia may occur 10–15 days after drug initiation. Hemorrhagic cystitis occurs commonly in long-term therapy (esp. in children). Pulmonary fibrosis, cardiotoxicity noted with high doses. Amenorrhea, azoospermia, hyperkalemia may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain WBC count weekly during therapy or until maintenance dose is established, then at 2- to 3-wk intervals.

INTERVENTION/EVALUATION

Monitor CBC, platelets, serum creatinine, BUN, urine output, serum uric acid, electrolytes. Monitor WBC counts closely during initial therapy. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Recovery from marked leukopenia due to myelosuppression can be expected in 17–28 days.

PATIENT/FAMILY TEACHING

• Encourage copious fluid intake, frequent voiding (assists in preventing cystitis) at least 24 hrs before, during, after therapy. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, difficulty or pain with urination, unusual bruising/bleeding from any site. • Alopecia is reversible, but new hair growth may have different color, texture.

*cycloSPORINE

sye-kloe-**spor**-in
(Gengraf, Neoral, Restasis, Sandimmune)

BLACK BOX ALERT Only physicians experienced in management of immunosuppressive therapy and organ transplant pts should prescribe. Renal impairment may occur with high dosage. Increased risk of neoplasia, susceptibility to infections. May cause hypertension, nephrotoxicity. Psoriasis pts: Increased risk of developing skin malignancies.

Do not confuse cyclosporine with cycloserine or cyclophosphamide, Gengraf with ProGraf, Neoral with Neurontin or Nizoral, or Sandimmune with Sandostatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cyclic polypeptide. **CLINICAL:** Immunosuppressant (see p. 119C).

ACTION

Inhibits cellular, humoral immune responses by inhibiting interleukin-2, a proliferative factor needed for T-cell activity. **Therapeutic Effect:** Prevents organ rejection, relieves symptoms of psoriasis, arthritis.

PHARMACOKINETICS

Variably absorbed from GI tract. Protein binding: 90%. Widely distributed. Metabolized in liver. Eliminated primarily by biliary or fecal excretion. Not removed by hemodialysis. **Half-life:** Adults, 10–27 hrs; children, 7–19 hrs.

USES

Prevents organ rejection of kidney, liver, heart in combination with steroid therapy and/or azathioprine. Treatment of chronic allograft rejection in those previously treated with other immunosuppressives. **Capsules/solution:** Treatment of severe, active rheumatoid arthritis, severe recalcitrant plaque psoriasis in nonimmunocompromised adults. **Ophthalmic:** Chronic dry eyes. **OFF-LABEL:** Allogenic stem cell transplants for prevention/treatment of graft-vs-host disease; focal segmental glomerulosclerosis, severe ulcerative colitis.

PRECAUTIONS

Contraindications: History of hypersensitivity to cyclosporine, polyoxyethylated castor oil. Uncontrolled hypertension, renal impairment, or malignancies in treatment of psoriasis or rheumatoid arthritis. **Cautions:** Hepatic, renal, impairment. **Ophthalmic**: Active eye infection.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** No age-related precautions noted in transplant pts. **Elderly:** Increased risk of hypertension, increased serum creatinine.

INTERACTIONS

DRUG: Allopurinol, bromocriptine, cimetidine, clarithromycin, danazol, diltiazem, oral contraceptives, erythromycin, fluconazole, itraconazole, ketoconazole may increase plasma concentration, risk of hepatic/renal toxicity. **Rifampin, carbamazepine, phenytoin** may decrease **cyclosporine** concentration. **ACE inhibitors, potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. **Immunosuppressants** may increase risk of infection, lymphoproliferative disorders. **Lovastatin, simvastatin, atorvastatin, pravastatin** may increase risk of rhabdomyolysis. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's response to vaccine. May increase concentration/toxicity of **digoxin, colchicine. HERBAL:** Avoid **cat's claw, echinacea** (possess immunostimulant properties). **St. John's wort** may decrease plasma concentration. **FOOD: Grapefruit, grapefruit juice** may in-

crease absorption/immunosupression, risk of toxicity. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, amylase, bilirubin, creatinine, potassium, uric acid, AST, ALT. May decrease serum magnesium. **Therapeutic peak serum level:** 50–400 ng/ml; **toxic serum level:** greater than 400 ng/ml.

AVAILABILITY (Rx)

Capsules (Gengraf, Neoral [Modified], Sandimmune [Nonmodified]): 25 mg, 100 mg. **Injection, Solution (Sandimmune):** 50 mg/ml. **Ophthalmic Emulsion (Restasis):** 0.05%. **Oral Solution (Gengraf, Neoral [Modified], Sandimmune [Nonmodified]):** 100 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Oral solution available in bottle form with calibrated liquid measuring device. Oral form should replace IV administration as soon as possible.

IV

Reconstitution • Dilute each ml (50 mg) concentrate with 20–100 ml 0.9% NaCl or D_5W (**maximum concentration:** 2.5 mg/ml).

Rate of Administration • Infuse over 2–6 hrs. • Monitor pt continuously for first 30 min after instituting infusion and frequently thereafter for hypersensitivity reaction (facial flushing, dyspnea).

Storage • Store parenteral form at room temperature. • Protect IV solution from light. • After diluted, stable for 6 hrs in PVC; 24 hrs in Excel or glass.

PO

• Administer consistently with relation to time of day and meals. • Oral solution may be mixed in glass container with milk, chocolate milk, orange juice, or apple juice (preferably at room temperature). Stir well. • Drink immediately. • Add more diluent to glass container. Mix with remaining solution to ensure total amount is given. • Dry outside of calibrated liquid measuring device before replacing cover. • Do not rinse with water. • Avoid refrigeration of oral solution (solution may separate). • Discard oral solution after 2 mos once bottle is opened.

Ophthalmic

• Invert vial several times to obtain uniform suspension. • Instruct pt to remove contact lenses before administration (may reinsert 15 min after administration). • May use with artificial tears.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), magnesium.

IV COMPATIBILITIES

Lipids, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Transplantation, Prevention of Organ Rejection

PO: ADULTS, ELDERLY, CHILDREN: NOT MODIFIED: 10–18 mg/kg/dose given 4–12 hrs prior to organ transplantation. Maintenance: 5–15 mg/kg/day in divided doses then tapered to 3–10 mg/kg/day. **MODIFIED:** (dose dependent upon type of transplant): Renal: 6–12 mg/kg/day in 2 divided doses. Hepatic: 4–12 mg/kg/day in 2 divided doses. Heart: 4–10 mg/kg/day in 2 divided doses.

IV: ADULTS, ELDERLY, CHILDREN: Initially, 5–6 mg/kg/dose given 4–12 hrs prior to organ transplantation. Maintenance: 2–10 mg/kg/day in divided doses.

Rheumatoid Arthritis

PO: ADULTS, ELDERLY: Initially, 2.5 mg/kg a day in 2 divided doses. May increase by 0.5–0.75 mg/kg/day. **Maximum:** 4 mg/kg/day.

Psoriasis

PO: ADULTS, ELDERLY: Initially, 2.5 mg/kg/day in 2 divided doses. May increase by 0.5 mg/kg/day after 4 wks; additional increases may be made q2wks. **Maximum:** 4 mg/kg/day.

Dry Eye

Ophthalmic: ADULTS, ELDERLY: Instill 1 drop in each affected eye q12h.

SIDE EFFECTS

Frequent: Mild to moderate hypertension (26%), hirsutism (21%), tremor (12%). **Occasional (4%–2%):** Acne, leg cramps, gingival hyperplasia (red, bleeding, tender gums), paresthesia, diarrhea, nausea, vomiting, headache. **Rare (less than 1%):** Hypersensitivity reaction, abdominal discomfort, gynecomastia, sinusitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Mild nephrotoxicity occurs in 25% of renal transplants, 38% of cardiac transplants, 37% of liver transplants, generally 2–3 mos after transplantation (more severe toxicity may occur soon after transplantation). Hepatotoxicity occurs in 4% of renal, 7% of cardiac, and 4% of liver transplants, generally within first mo after transplantation. Both toxicities usually respond to dosage reduction. Severe hyperkalemia, hyperuricemia occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If nephrotoxicity occurs, mild toxicity is generally noted 2–3 mos after transplantation; more severe toxicity noted early after transplantation; hepatotoxicity may be noted during first mo after transplantation.

INTERVENTION/EVALUATION

Diligently monitor BUN, serum creatinine, bilirubin, AST, ALT, LDH levels for evidence of hepatotoxicity, nephrotoxicity (mild toxicity noted by slow rise in serum levels; more overt toxicity noted by rapid rise in levels; hematuria also noted in nephrotoxicity). Monitor serum potassium for evidence of hyperkalemia. Encourage diligent oral hygiene (gingival hyperplasia). Monitor B/P for evidence of hypertension. Note: Reference ranges dependent on organ transplanted, organ function, cyclosporine toxicity. Trough levels should be obtained immediately prior to next dose. **Therapeutic serum level:** 50–400 ng/ml; **toxic serum level:** greater than 400 ng/ml.

PATIENT/FAMILY TEACHING

- Essential to repeat blood testing on a routine basis while receiving medication.
- Report severe headache, persistent nausea/vomiting, unusual swelling of extremities, chest pain.
- Avoid grapefruit, grapefruit juice (increases concentration/effects), St. John's wort (decreases concentration).

cytarabine

HIGH ALERT

sye-**tar**-ah-bean
(Ara-C, Cytosar-U, Depo-Cyt)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents. ***Conventional:*** Potent myelosuppressant. High risk of multiple toxicities (GI, CNS, pulmonary, cardiac). ***Liposomal:*** Chemical arachnoiditis, manifested by profound nausea, vomiting, fever, may be fatal if untreated.

Do not confuse cytarabine with Cytoxan or vidarabine, or Cytosar with Cytoxan or Neosar.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic (see p. 81C).

ACTION

Converted intracellularly to nucleotide. Cell cycle–specific for S phase of cell division. **Therapeutic Effect:** Appears to inhibit DNA synthesis. Potent immunosuppressive activity.

PHARMACOKINETICS

Widely distributed; moderate amount crosses blood-brain barrier. Protein binding: 15%. Primarily excreted in urine. **Half-life:** 1–3 hrs.

USES

Ara-C: Treatment of acute lymphocytic, acute nonlymphocytic, chronic myelocytic, meningeal leukemias. **Depo-Cyt:**

Treatment of lymphomatous meningitis. **OFF-LABEL:** **Ara-C:** Carcinomatous meningitis, Hodgkin's and non-Hodgkin's lymphomas, myelodysplastic syndrome.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, prior bone marrow suppression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy. May cause fetal malformations. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease concentration of **digoxin, flucytosine. Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's response to vaccine. **HERBAL:** **Echinacea** may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, uric acid, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Ara-C): 100 mg, 500 mg, 1 g, 2 g. **Injection, Solution (Ara-C):** 20 mg/ml, 100 mg/ml. **Injection, Suspension (Depo-Cyt):** 10 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ May give by subcutaneous, IV push, IV infusion, intrathecal routes at concentration not to exceed 100 mg/ml. May be carcinogenic, mutagenic, teratogenic (embryonic deformity). Handle with extreme care during preparation/administration. Depo-Cyt for intrathecal use only.

IV, Subcutaneous, Intrathecal

IV

Reconstitution • Ara-C: Reconstitute with Bacteriostatic Water for Injection. • Dose may be further diluted with 250–1,000 ml D_5W or 0.9% NaCl for IV infusion. • For intrathecal use, reconstitute vial with preservative-free 0.9% NaCl or pt's spinal fluid. Dose usually administered in 5–15 ml of solution, after equivalent volume of CSF removed. • Depo-Cyt: No reconstitution required.

Rate of Administration • Ara-C: For IV infusion, give over 1–3 hrs or as continuous infusion.

Storage • Ara-C: Store at room temperature. • Reconstituted solution is stable for 48 hrs at room temperature. • Use diluted solution within 24 hrs. • Discard if slight haze develops. • Depo-Cyt: Refrigerate; use within 4 hrs following withdrawal from vial.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), ganciclovir (Cytovene), heparin, insulin (regular).

IV COMPATIBILITIES

Dexamethasone (Decadron), diphenhydramine (Benadryl), filgrastim (Neupogen), granisetron (Kytril), hydromorphone (Dilaudid), lipids, lorazepam (Ativan), morphine, ondansetron (Zofran), potassium chloride, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage for Induction

IV: ADULTS, ELDERLY, CHILDREN: (Induction): 100 mg/m^2/day continuous infusion for 7 days or 100 mg/m^2/dose q12h for 7 days.

Intrathecal: ADULTS, ELDERLY, CHILDREN: 5–75 mg/m^2 q2–7 days.

Usual Maintenance Dosage

IV: ADULTS, ELDERLY, CHILDREN: 70–200 mg/m^2/day for 2–5 days q mo.

Subcutaneous: ADULTS, ELDERLY, CHILDREN: 1–1.5 mg/m^2 as single dose q1–4wks.

Usual Dosage for Depo-Cyt

Intrathecal: ADULTS, ELDERLY: (Induction): 50 mg q14days for 2 doses (wks

1, 3). **(Consolidation):** 50 mg q14days for 3 doses (wks 5, 7, 9) followed by additional dose at wk 13. **(Maintenance):** 50 mg q28days for 4 doses (wks 17, 21, 25, 29).

SIDE EFFECTS

Frequent: IV, Subcutaneous (33%–16%): Asthenia (loss of strength, energy), fever, pain, altered taste/smell, nausea, vomiting (risk greater with IV push than with continuous IV infusion). **Intrathecal (28%–11%):** Headache, asthenia (loss of strength, energy), altered taste/smell, confusion, drowsiness, nausea, vomiting. **Occasional: IV, Subcutaneous (11%–7%):** Abnormal gait, drowsiness, constipation, back pain, urinary incontinence, peripheral edema, headache, confusion. **Intrathecal (7%–3%):** Peripheral edema, back pain, constipation, abnormal gait, urinary incontinence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Major toxic reaction is myelosuppression resulting in blood dyscrasias (leukopenia, anemia, thrombocytopenia, megaloblastosis, reticulocytopenia) occurring minimally after single IV dose. Leukopenia, anemia, thrombocytopenia should be expected with daily or continuous IV therapy. Cytarabine syndrome (fever, myalgia, rash, conjunctivitis, malaise, chest pain), hyperuricemia may occur. High-dose therapy may produce severe CNS, GI, pulmonary toxicity.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, platelet count, renal/hepatic function tests. Leukocyte count decreases within 24 hrs after initial dose, continues to decrease for 7–9 days followed by brief rise at 12 days, decreases again at 15–24 days, then rises rapidly for next 10 days. Platelet count decreases 5 days after drug initiation to its lowest count at 12–15 days, then rises rapidly for next 10 days.

INTERVENTION/EVALUATION

Monitor BUN, serum creatinine, uric acid, AST, ALT, bilirubin, alkaline phosphatase. Monitor CBC for evidence of myelosuppression. Monitor for blood dyscrasias (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Monitor for signs of neuropathy (gait disturbances, handwriting difficulties, paresthesia).

PATIENT/FAMILY TEACHING

• Increase fluid intake (may protect against hyperuricemia). • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site.

dabigatran

TOP 200

dab-ih-**gah**-tran
(Pradaxa, Pradax ✱)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thrombin inhibitor. **CLINICAL:** Anticoagulant (see p. 31C).

ACTION

Direct thrombin inhibitor, preventing the conversion of fibrinogen into fibrin during coagulation cascade. **Therapeutic Effect:** Produces anticoagulation, preventing development of thrombus.

PHARMACOKINETICS

Metabolized in liver. Protein binding: 35%. Eliminated primarily in urine. **Half-life:** 12–17 hrs.

USES

Indicated to reduce risk of stroke, systemic embolism in pts with nonvalvular atrial fibrillation.

D

PRECAUTIONS

Contraindications: Active major bleeding. **Cautions:** Renal impairment (creatinine clearance 15–30 ml/min), moderate hepatic impairment, invasive procedures, spinal anesthesia, major surgery, those with congenital or acquired bleeding disorders.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Severe renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Rifampin** may decrease concentration. **Antacids, proton pump inhibitors** may decrease levels, effect. **Antiplatelet agents, NSAIDs, other anticoagulants, thrombolytics** may increase risk of bleeding. **HERBAL:** **Chamomile, feverfew, ginkgo biloba, green tea, red clover** may increase risk of bleeding. **St. John's wort** may decrease concentration/effects. **FOOD:** **High-fat meal** delays absorption approximately 2 hrs. **LAB VALUES:** May increase aPTT, PT, INR.

AVAILABILITY (Rx)

Capsules: 75 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

• May be given without regard to food. Administer with water. • Do not break, chew, open capsules.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Medication should be discontinued prior to invasive or surgical procedures.

Nonvalvular Atrial Fibrillation

PO: ADULTS, ELDERLY: 150 mg twice daily.

Renal Impairment

Creatinine Clearance 15–30 ml/min: 75 mg twice daily. Creatinine clearance less than 15, or **HD:** Use not recommended.

SIDE EFFECTS

Frequent (less than 16%): Dyspepsia (heartburn, nausea, indigestion), diarrhea, upper abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Gastrointestinal bleeding occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBC, including platelet count. Check PT, PTT. Determine initial B/P.

INTERVENTION/EVALUATION

Assess for any sign of bleeding (hematuria, stool for occult blood, bleeding from gums, petechiae, bruising). Handle pt carefully and as infrequently as possible to prevent bleeding. Do not obtain B/P in lower extremities (possible deep vein thrombosis). Assess for decrease in B/P, increase in pulse rate, complaint of abdominal pain, diarrhea, aPTT, PT, platelet count. Question for increase in discharge during menses. Monitor for any occurring hematoma. Use care in removing any dressing, tape.

PATIENT/FAMILY TEACHING

• Do not break, open, chew capsules. • Use electric razor, soft toothbrush to prevent bleeding. • Report any sign of red or dark urine, black or red stool, coffee-ground vomitus, red-speckled mucus from cough. • Keep in original container. Do not transfer to pill box/organizer. • Once bottle is opened, must be used within 60 days. • Open blister pack at time of use.

dacarbazine

HIGH ALERT

da-**kar**-bah-zeen
(DTIC)

BLACK BOX ALERT Myelosuppression is most common toxicity. May cause hepatic necrosis, hepatic vein thrombosis.

Do not confuse dacarbazine with Dicarbosil or procarbazine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic (see p. 82C).

ACTION

Forms methyldiazonium ions, which attack nucleophilic groups in DNA. Cross-links DNA strands. **Therapeutic Effect:** Inhibits DNA, RNA, protein synthesis.

PHARMACOKINETICS

Minimally crosses blood-brain barrier. Protein binding: 5%. Metabolized in liver. Excreted in urine. **Half-life:** 5 hrs (increased in renal impairment).

USES

Treatment of metastatic malignant melanoma, second-line therapy of Hodgkin's disease. **OFF-LABEL:** Treatment of islet cell carcinoma, soft-tissue sarcoma, pheochromocytoma, medullary carcinoma of thyroid.

PRECAUTIONS

Contraindications: Demonstrated hypersensitivity to dacarbazine. **Cautions:** Renal/hepatic impairment, bone marrow suppression.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bone marrow depressants may enhance myelosuppression. **CYP1A2 inducers (e.g., rifampin)** may decrease effects. **CYP1A2 inhibitors (e.g., fluoxetine, amlodipine)** may increase levels/effects. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to the vaccine. **HERBAL: Dong quai, St. John's wort** may increase photosensitization. **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, AST, ALT.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 100-mg vial, 200-mg vial.

ADMINISTRATION/HANDLING

◀ALERT▶ Give by IV push or IV infusion. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Reconstitution • Reconstitute 100-mg vial with 9.9 ml Sterile Water for Injection (19.7 ml for 200-mg vial) to provide concentration of 10 mg/ml.

Rate of Administration • Give IV push over 2–3 min. • For IV infusion, further dilute with 250–1,000 ml D_5W or 0.9% NaCl at a concentration not to exceed 10 mg/ml. Infuse over 15–120 min. • Apply hot packs if local pain, burning sensation, irritation at injection site occur. • Avoid extravasation (stinging, swelling, coolness, slight or no blood return at injection site).

Storage • Protect from light; refrigerate vials. • Color change from ivory to pink indicates decomposition; discard. • Solution containing 10 mg/ml is stable for 8 hrs at room temperature or 72 hrs if refrigerated. • Solution diluted with D_5W or 0.9% NaCl is stable for at least 24 hrs at room temperature.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), cefepime (Maxipime), heparin, piperacillin and tazobactam (Zosyn).

IV COMPATIBILITIES

Etoposide (VePesid), granisetron (Kytril), ondansetron (Zofran), paclitaxel (Taxol).

D

INDICATIONS/ROUTES/DOSAGE

Refer to individual protocols.

Metastatic Melanoma

IV: ADULTS, ELDERLY: 250 mg/m^2/day for 5 days, repeat q3wks.

Hodgkin's Disease

IV: ADULTS, ELDERLY, CHILDREN: 375 mg/m^2 once, repeat in 15 days (as combination therapy) of every 28-day cycle.

SIDE EFFECTS

Frequent (90%): Nausea, vomiting, anorexia (occurs within 1 hr of initial dose, may last up to 12 hrs). **Occasional:** Facial flushing, paresthesia, alopecia, flu-like symptoms (fever, myalgia, malaise), dermatologic reactions, confusion, blurred vision, headache, lethargy. **Rare:** Diarrhea, stomatitis, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression resulting in blood dyscrasias (leukopenia, thrombocytopenia) generally appears 2–4 wks after last dacarbazine dose. Hepatotoxicity occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Conflicting reports of effectiveness of administering antiemetics for nausea, vomiting. Some clinicians recommend food, fluid restriction 4–6 hrs before treatment; other clinicians believe good hydration to within 1 hr of treatment will prevent dehydration due to vomiting.

INTERVENTION/EVALUATION

Monitor leukocyte, erythrocyte, platelet counts for evidence of myelosuppression. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site).

PATIENT/FAMILY TEACHING

- Tolerance to GI effects occurs rapidly (generally after 1–2 days of treatment).
- Do not have immunizations without physician's approval (drug lowers resistance).
- Avoid contact with those who have recently received live virus vaccine.
- Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site.
- Notify physician of persistent nausea, vomiting.

dalfampridine

dal-**fam**-pri-deen
(Ampyra)
Do not confuse Ampyra with anakinra, or dalfampridine with desipramine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Potassium channel blocker. **CLINICAL:** Multiple sclerosis agent.

ACTION

Increases conduction of action potentials in demyelinated axons, inhibiting potassium channels. **Therapeutic Effect:** Improves ambulation in those with multiple sclerosis (MS).

PHARMACOKINETICS

Rapidly, completing absorbed from GI tract. Minimally metabolized in liver. Primarily unbound to plasma proteins. Primarily excreted in urine. **Half-life:** 5.2–6.5 hrs.

USES

Indicated to improve ambulation in pts with MS, as demonstrated by increase in walking speed.

PRECAUTIONS

Contraindications: History of seizures, moderate to severe renal impairment (creatinine clearance [CrCl] equal to or less than 50 ml/min). **Cautions:** Mild renal impairment (CrCl equal to 51–80 ml/min).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 years. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase creatinine clearance.

AVAILABILITY (Rx)

Tablet, Film-Coated, Extended-Release: 10 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Do not crush, chew, split tablets.

INDICATIONS/ROUTES/DOSAGE

Multiple Sclerosis

PO: ADULTS 18 YEARS AND OLDER, ELDERLY: 10 mg twice daily, approximately 12 hrs apart.

Dosage in Renal Impairment

Creatinine Clearance 50 ml/min or Less: Contraindicated.

SIDE EFFECTS

Frequent (9%–5%): Insomnia, dizziness, headache, nausea, asthenia (loss of strength, energy), back pain.

Rare (4%–2%): Paresthesia, nasopharyngitis, constipation, dyspepsia (heartburn, GI upset), pharyngolaryngeal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Urinary tract infection occurs in 12% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Creatinine clearance, BUN, CBC, serum chemistries should be obtained prior to treatment and routinely thereafter. Offer emotional support to pt, family.

INTERVENTION/EVALUATION

Periodically monitor CBC, serum chemistries, renal function tests, particularly creatinine clearance. Monitor for signs/symptoms of urinary, respiratory infection. Assess for therapeutic response (improvement in walking as demonstrated by increase in walking speed).

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Report difficulty in sleeping, dizziness, headache, nausea, back pain, loss of strength or energy.

dalteparin

HIGH ALERT

dal-te-pair-in (Fragmin)

BLACK BOX ALERT Epidural or spinal anesthesia greatly increases potential for spinal or epidural hematoma, subsequent long-term or permanent paralysis.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Low molecular weight heparin. **CLINICAL:** Anticoagulant (see p. 31C).

ACTION

Antithrombin in presence of low molecular weight heparin inhibits factor Xa, thrombin. Only slightly influences platelet aggregation, PT, aPTT. **Therapeutic Effect:** Produces anticoagulation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Subcutaneous	N/A	4 hrs	N/A

Protein binding: less than 10%. **Half-life:** 3–5 hrs.

USES

Treatment of unstable angina, non–Q-wave MI to prevent ischemic events. Prevention of deep vein thrombosis (DVT) in pts undergoing hip replacement or abdominal surgery who are at risk for thromboembolic complications. Those at risk are 40 yrs and older, obese, undergoing surgery under general anesthesia lasting longer than 30 min, malignancy, history of DVT, pulmonary embolism. Extended treatment of symptomatic venous thromboembolism (VTE) to reduce recurrence of VTE in cancer pts. Prevention of DVT or pulmonary embolism in acutely ill pts with severely restricted mobility. **OFF-LABEL:** Treatment of DVT in noncancer pts.

PRECAUTIONS

Contraindications: Active major bleeding; concurrent heparin therapy; hypersensitivity to dalteparin, heparin, pork products; thrombocytopenia associated with positive in vitro test for antiplatelet antibody; unstable angina; history of heparin-induced thrombocytopenia; non–Q-wave MI; acute venous thromboembolism undergoing regional anesthesia. **Cautions:** Conditions with increased risk for hemorrhage, bacterial endocarditis, renal/hepatic impairment, uncontrolled hypertension, history of recent GI ulceration/hemorrhage, peptic ulcer disease, pericarditis, preexisting thrombocytopenia, recent childbirth, concurrent use of aspirin.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use with caution, particularly during last trimester, immediate postpartum period (increased risk of maternal hemorrhage). Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Anticoagulants, NSAIDs, platelet inhibitors, thrombolytic agents may increase risk of bleeding. **HERBAL: Cat's claw, dong quai, evening primrose, garlic, ginseng, other herbs with anticoagulant/antiplatelet activity** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT. May decrease serum triglycerides.

AVAILABILITY (Rx)

Injection, Solution: 2,500 international units/0.2 ml, 5,000 international units/0.2 ml, 7,500 international units/0.3 ml, 10,000 international units/ml, 25,000 international units/ml, 12,500 international units/0.5 ml, 15,000 international units/0.6 ml, 18,000 international units/0.72 ml.

ADMINISTRATION/HANDLING

Subcutaneous

• Store at room temperature. • Instruct pt to sit/lie down before administering by deep subcutaneous injection. • Inject in U-shaped area around the navel, upper outer side of thigh, upper outer quadrangle of buttock. • Use fine needle (25–26 gauge) to minimize tissue trauma. • Introduce entire length of needle (½ inch) into skin fold held between thumb and forefinger, holding needle during injection at 45°–90° angle. • Do not rub injection site after administration (prevents bruising). • Alternate administration site with each injection. • New injections should be administered at least 1 inch from the old site. Never inject into an area where skin is tender, bruised, red, or hard.

INDICATIONS/ROUTES/DOSAGE

Abdominal Surgery, Low to Moderate DVT Risk

Subcutaneous: ADULTS, ELDERLY: 2,500 international units 1–2 hrs before surgery, then daily for 5–10 days.

Abdominal Surgery, High DVT Risk

Subcutaneous: ADULTS, ELDERLY: 5,000 international units 1–2 hrs before surgery, then daily for 5–10 days.

Total Hip Surgery

Subcutaneous: ADULTS, ELDERLY: 2,500 international units 1–2 hrs before surgery, then 2,500 units 4–8 hrs after surgery, then 5,000 units/day (starting at least 6 hrs after postsurgical dose) for 7–10 days.

Unstable Angina, Non–Q-Wave MI

Subcutaneous: ADULTS, ELDERLY: 120 international units/kg q12h (**maximum:** 10,000 international units/dose) given with aspirin until clinically stable.

Venous Thromboembolism (Cancer Pts)

Subcutaneous: ADULTS, ELDERLY: Initially (1 mo), 200 international units/kg (**maximum:** 18,000 international units) daily for 30 days. Maintenance (2–6 mos): 150 international units/kg once daily (**maximum:** 18,000 international units).

Prevention of Deep Vein Thrombosis (DVT), Acutely Ill Pt, Immobile Pt

Subcutaneous: ADULTS, ELDERLY: 5,000 international units once a day.

Dosage in Renal Impairment

For creatinine clearance less than 30 ml/min, monitor anti-Xa levels to determine appropriate dose.

SIDE EFFECTS

Occasional (7%–3%): Hematoma at injection site. **Rare (less than 1%):** Hypersensitivity reaction (chills, fever, pruritus, urticaria, asthma, rhinitis, lacrimation, headache); mild, local skin irritation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may lead to bleeding complications ranging from local ecchymoses to major hemorrhage. Thrombocytopenia occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline coagulation studies, CBC, esp. platelet count. Determine baseline B/P.

INTERVENTION/EVALUATION

Periodically monitor CBC, platelet count, stool for occult blood (no need for daily monitoring in pts with normal presurgical coagulation parameters). Assess for any sign of bleeding (bleeding at surgical site, hematuria, blood in stool, bleeding from gums, petechiae, bruising/bleeding at injection sites).

PATIENT/FAMILY TEACHING

• Usual length of therapy is 5–10 days. • Do not take any OTC medication (esp. aspirin) without consulting physician. • Report bleeding, bruising, dizziness, light-headedness, rash, itching, fever, swelling, breathing difficulty. • Rotate injection sites daily. • Teach proper injection technique. • Excessive bruising at injection site may be lessened by ice massage before injection.

dantrolene

dan-troe-leen
(Dantrium, Revontro)

BLACK BOX ALERT Potential for hepatotoxicity.

Do not confuse Dantrium with danazol or Daraprim, Revontro with Revatio.

◆CLASSIFICATION

CLINICAL: Skeletal muscle relaxant (see p. 152C).

ACTION

Reduces muscle contraction by interfering with release of calcium ion. Reduces calcium ion concentration. **Therapeutic Effect:** Dissociates excitation-contraction coupling. Interferes with catabolic process associated with malignant hyperthermic crisis.

PHARMACOKINETICS

Poorly absorbed from GI tract. Protein binding: High. Metabolized in liver. Pri-

marily excreted in urine. **Half-life:** **IV:** 4–8 hrs; **PO:** 8.7 hrs.

USES

PO: Relief of symptoms of spasticity due to spinal cord injuries, stroke, cerebral palsy, multiple sclerosis, esp. flexor spasms, concomitant pain, clonus, muscular rigidity. **Parenteral:** Management of fulminant hypermetabolism of skeletal muscle due to malignant hyperthermia crisis. Prevention of malignant hyperthermia (pre- or postoperative administration). **OFF-LABEL:** Neuroleptic malignant syndrome.

PRECAUTIONS

Contraindications: **IV:** None known. **PO:** When spasticity used to maintain posture/balance during locomotion or to obtain increased motor function. Active hepatic disease. **Cautions:** Cardiac/pulmonary impairment, history of previous hepatic disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Breast-feeding not recommended. **Pregnancy Category C. Children:** No age-related precautions noted in those 5 yrs and older. **Elderly:** No information available.

INTERACTIONS

DRUG: **CNS depressants** may increase CNS depression with short-term use. **Hepatotoxic medications** may increase risk of hepatic toxicity with chronic use. **CYP3A4 inhibitors (e.g., clarithromycin)** may increase concentration. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May alter serum hepatic function test results.

AVAILABILITY (Rx)

Capsules (Dantrium): 25 mg, 50 mg, 100 mg. **Injection, Powder for Reconstitution (Dantrium, Revontro):** 20-mg vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 20-mg vial with 60 ml Sterile Water for Injection (**not** Bacteriostatic Water for Injection).
Rate of Administration • For therapeutic or emergency dose, give IV over 2–3 min. • For IV infusion, administer over 1 hr. • Diligently monitor for extravasation (high pH of IV preparation). May produce severe complications.
Storage • Store at room temperature. • Use within 6 hrs after reconstitution. • Solution is clear, colorless. Discard if cloudy, precipitate forms.

PO

• Give without regard to food.

IV INCOMPATIBILITY

D_5W, 0.9% NaCl.

INDICATIONS/ROUTES/DOSAGE

Spasticity

PO: ADULTS, ELDERLY: Initially, 25 mg once daily for 7 days; then 25 mg 3 times/day for 7 days; then 50 mg 3 times/day for 7 days; then 100 mg 3 times/day. **Maximum:** 400 mg/day. **CHILDREN:** Initially, 0.5 mg/kg/dose once daily for 7 days; then 0.5 mg/kg/dose 3 times/day for 7 days; then 1 mg/kg/dose 3 times/day for 7 days; then 2 mg/kg/dose 3 times/day. **Maximum:** 400 mg/day.

Prevention of Malignant Hyperthermic Crisis

PO: ADULTS, ELDERLY, CHILDREN: 4–8 mg/kg/day in 3–4 divided doses beginning 1–2 days before surgery; give last dose 3–4 hrs before surgery.
IV: ADULTS, ELDERLY, CHILDREN: 2.5 mg/kg about 1.25 hrs before surgery with additional doses as needed.

Management of Malignant Hyperthermic Crisis

IV: ADULTS, ELDERLY, CHILDREN: Initially, a minimum of 2.5 mg/kg rapid IV; may repeat up to total cumulative dose of 10 mg/kg. May follow with 4–8 mg/kg/day PO in 4 divided doses up to 3 days after crisis.

SIDE EFFECTS

Frequent: Drowsiness, dizziness, weakness, general malaise, diarrhea (mild). **Occasional:** Confusion, diarrhea (severe), headache, insomnia, constipation, urinary frequency. **Rare:** Paradoxical CNS excitement or restlessness, paresthesia, tinnitus, slurred speech, tremor, blurred vision, dry mouth, nocturia, impotence, rash, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Risk of hepatotoxicity, most notably in females, those 35 yrs and older, those taking other hepatotoxic medications concurrently. Overt hepatitis noted most frequently between 3rd and 12th mo of therapy. Overdosage results in vomiting, muscular hypotonia, muscle twitching, respiratory depression, seizures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline hepatic function tests (AST, ALT, alkaline phosphatase, total bilirubin). Record onset, type, location, duration of muscular spasm. Check for immobility, stiffness, swelling.

INTERVENTION/EVALUATION

Assist with ambulation. For those on long-term therapy, hepatic/renal function tests, CBC should be performed periodically. Assess for therapeutic response: relief of pain, stiffness, spasm.

PATIENT/FAMILY TEACHING

• Drowsiness usually diminishes with continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol/other depressants while taking medication. • Report continued weakness, fatigue, nausea, diarrhea, skin rash, itching, bloody/tarry stools.

daptomycin

TOP 200

dap-toe-mye-sin
(Cubicin)

Do not confuse Cubicin with Cleocin, or daptomycin with dactinomycin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Lipopeptide antibacterial agent. **CLINICAL:** Antibiotic.

ACTION

Binds to bacterial membranes and causes rapid depolarization of membrane potential. Inhibits protein, DNA, RNA synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed. Protein binding: 90%. Primarily excreted unchanged in urine. Moderately removed by hemodialysis. **Half-life:** 7–8 hrs (increased in renal impairment).

USES

Treatment of complicated skin/skin structure infections caused by susceptible strains of gram-positive pathogens, including penicillin-resistant *Streptococcus pneumoniae,* methicillin-resistant *Staphyloccus aureus* (MRSA), vancomycin-resistant enterococci (VRE). Treatment of *S. aureus* systemic infections caused by methicillin susceptible and resistant *S. aureus*.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe renal impairment (creatinine clearance less than 30 ml/min), concurrent use of other medications associated with myopathy (e.g., statins).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category B. Children:** Safety and

efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

D

DRUG: Concurrent use with **HMG-CoA reductase inhibitors (statins)** may cause myopathy (discontinue use). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum CPK levels. May alter serum hepatic function test results.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg/vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 500-mg vial with 10 ml 0.9% NaCl to provide a concentration of 50 mg/ml. May further dilute in 0.9% NaCl. • Do not shake or agitate vial vigorously.
Rate of Administration • For IV injection, give over 2 min (concentration: 50 mg/ml). • For intermittent IV infusion (piggyback), infuse over 30 min.
Storage • Refrigerate. • Appears as pale yellow to light brown lyophilized cake. • Reconstituted solution is stable for 12 hrs at room temperature or up to 48 hrs if refrigerated. • Discard if particulate forms.

IV INCOMPATIBILITIES

Diluents containing dextrose. If same IV line is used to administer different drugs, flush line with 0.9% NaCl.

IV COMPATIBILITIES

0.9% NaCl, lactated Ringer's.

INDICATIONS/ROUTES/DOSAGE

Complicated Skin/Skin Structure Infections
IV: ADULTS, ELDERLY: 4 mg/kg every 24 hrs for 7–14 days.

Systemic Infections
IV: ADULTS, ELDERLY: 6 mg/kg once daily for 2–6 wks.

Dosage in Renal Impairment
Creatinine clearance less than 30 ml/min, (HD) hemodialysis, (PD) peritoneal dialysis: Dosage is 4 mg/kg q48h for skin and soft tissue infections, 6 mg/kg q48h for staphylococcal bacteremia. **(HD) hemodialysis:** Give dose after dialysis on dialysis days. **(CRRT) continuous renal replacement therapy:** 8 mg/kg q48h.

SIDE EFFECTS

Frequent (6%–5%): Constipation, nausea, peripheral injection site reactions, headache, diarrhea. **Occasional (4%–3%):** Insomnia, rash, vomiting. **Rare (less than 3%):** Pruritus, dizziness, hypotension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Skeletal muscle myopathy (muscle pain/weakness, particularly of distal extremities) occurs rarely. Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain blood culture, sensitivity test before first dose (therapy may begin before results are known).

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor for myopathy (muscle pain, weakness), CPK levels, renal function tests. Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable, but increasing severity may indicate onset of antibiotic-associated colitis. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor for dizziness, institute appropriate measures.

PATIENT/FAMILY TEACHING

• Report rash, headache, nausea, dizziness, constipation, diarrhea, muscle pain, or any new symptom.

darbepoetin alfa

TOP 200

dar-beh-poe-**ee**-tin **al**-fa
(Aranesp)

BLACK BOX ALERT Increased risk of serious cardiovascular events, thromboembolic events, mortality, time-to-tumor progression when administered to a target hemoglobin greater than 11 g/dl. Shortened overall survival and/or increased risk of tumor progression has been reported with breast, cervical, head/neck, NSCL cancers.

Do not confuse Aranesp with Aricept, or darbepoetin with dalteparin or epoetin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycoprotein. **CLINICAL:** Hematopoietic agent.

ACTION

Stimulates formation of RBCs in bone marrow; increases serum half-life of epoetin. **Therapeutic Effect:** Induces erythropoiesis, release of reticulocytes from bone marrow.

PHARMACOKINETICS

Well absorbed after subcutaneous administration. **Half-life:** 48.5 hrs.

USES

Treatment of anemia associated with chronic renal failure (including pts on dialysis and pts not on dialysis), chemotherapy-induced anemia (nonmyeloid malignancies). **OFF-LABEL:** Treatment of symptomatic anemia in myelodysplastic syndrome (MDS).

PRECAUTIONS

Contraindications: Pure red cell aplasia, uncontrolled hypertension. **Cautions:** History of seizures, hypertension.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum ferritin, serum transferrin saturation.

AVAILABILITY (Rx)

Injection Solution: 25 mcg/ml, 40 mcg/ml, 60 mcg/ml, 100 mcg/ml, 150 mcg/0.75 ml, 200 mcg/ml, 300 mcg/ml. **Prefilled Syringe:** 25 mcg/0.42 ml, 40 mcg/0.4 ml, 60 mcg/0.3 ml, 100 mcg/0.5 ml, 150 mcg/0.3 ml, 200 mcg/0.4 ml, 300 mcg/0.6 ml, 500 mcg/ml.

ADMINISTRATION/HANDLING

◄ALERT► Avoid excessive agitation of vial; do not shake (will cause foaming).

IV

Reconstitution • No reconstitution necessary. Do not dilute.

Rate of Administration • May be given as IV bolus.

Storage • Refrigerate vials. • Do not shake. Vigorous shaking may denature medication, rendering it inactive.

Subcutaneous

• Use 1 dose per vial; do not reenter vial. Discard unused portion.

IV INCOMPATIBILITIES

Do not mix with other medications.

INDICATIONS/ROUTES/DOSAGE

Anemia in Chronic Renal Failure

◄ALERT► Individualize dosing and use lowest dose to reduce need for RBC transfusions. **ON DIALYSIS:** Initiate when Hgb less than 10 g/dl; reduce or stop dose when Hgb approaches or exceeds 11 g/dl. **NOT ON DIALYSIS:** Initiate when Hgb less than 10 g/dl and Hgb decline would likely result in RBC transfusion;

reduce dose or stop if Hgb exceeds 10 g/dl.

IV, Subcutaneous: ADULTS, ELDERLY: ON DIALYSIS: Initially, 0.45 mcg/kg once weekly. Alternate for nondialysis pts: 0.75 mcg/kg once q2wks. **NOT ON DIALYSIS:** 0.45 mcg/kg q4wks.

Decrease dose by 25%: If hemoglobin approaches 12 g/dl or increases greater than 1 g/dl in any 2-wk period.

Increase dose by 25%: If hemoglobin does not increase by 1 g/dl after 4 wks of therapy and Hgb is below target range (with adequate iron stores), do not increase dose more frequently than every 4 wks.

Note: If pt does not attain hemoglobin range of 10–12 g/dl after appropriate dosing over 12 wks, do not continue to increase dose and use minimum effective dose to maintain hemoglobin level that will avoid red blood cell transfusions.

Anemia Associated with Chemotherapy

◀ALERT▶ Initiate only if Hgb less than 10 g/dl and anticipated duration of myelosuppression is 2 months or longer. Titrate dose to maintain Hgb level and avoid RBC transfusions. Discontinue upon completion of chemotherapy.

Subcutaneous: ADULTS, ELDERLY: 2.25 mcg/kg once weekly or 500 mcg every 3 wks.

Increase dose: If hemoglobin does not increase by 1 g/dl after 6 wks and Hgb is below target range, increase dose to 4.5 mcg/kg once weekly.

Decrease dose: Decrease dose by 40% if hemoglobin increases greater than 1 g/dl in any 2-wk period or hemoglobin reaches level that will avoid red blood cell transfusions. Note: Withhold dose when Hgb exceeds a level needed to avoid RBC transfusions, resume at dose 40% lower when Hgb approaches a level where transfusions may be required.

SIDE EFFECTS

Frequent: Myalgia, hypertension/hypotension, headache, diarrhea. **Occasional:** Fatigue, edema, vomiting, reaction at injection site, asthenia (loss of strength, energy), dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Vascular access thrombosis, CHF, sepsis, arrhythmias, anaphylactic reaction occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P before drug administration (80% of pts with chronic renal failure have history of hypertension). B/P often rises during early therapy in those with history of hypertension. Assess serum iron (transferrin saturation should be greater than 20%), serum ferritin (greater than 100 ng/ml) before and during therapy. Consider that all pts will eventually need supplemental iron therapy. Establish baseline CBC (esp. note Hct).

INTERVENTION/EVALUATION

Monitor Hgb, Hct, serum ferritin, CBC with differential, serum creatinine, BUN, potassium, phosphorus, reticulocyte count. Monitor B/P aggressively for increase (25% of pts taking medication require antihypertension therapy, dietary restrictions).

PATIENT/FAMILY TEACHING

• Frequent blood tests needed to determine correct dose. • Inform physician of swollen extremities, breathing difficulty, extreme fatigue, or severe headache. • Avoid tasks requiring alertness, motor skills until response to drug is established.

darifenacin

TOP 200

dare-ih-**fen**-ah-sin
(Enablex)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Muscarinic receptor antagonist. **CLINICAL:** Urinary antispasmodic.

ACTION

Acts as a direct antagonist at muscarinic receptor sites in cholinergically innervated organs. Blockade of those receptor sites limits bladder contractions. **Therapeutic Effect:** Reduces symptoms of bladder irritability/overactivity (urge incontinence, urinary urgency/frequency), improves bladder capacity.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 98%. Extensively metabolized in liver. Primarily excreted in urine with a lesser amount eliminated in feces. **Half-life:** 13–19 hrs.

USES

Management of symptoms of bladder overactivity (urge incontinence, urinary urgency/frequency).

PRECAUTIONS

Contraindications: Uncontrolled narrow-angle glaucoma, paralytic ileus, GI/GU obstruction, urine retention. **Cautions:** Bladder outflow obstruction, hepatic impairment, nonobstructive prostatic hyperplasia, GI obstructive disorders, decreased GI motility, constipation, hiatal hernia, reflux esophagitis, ulcerative colitis, controlled narrow-angle glaucoma, myasthenia gravis, concurrent use of CYP3A4 inhibitors.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (clarithromycin, erythromycin, isoniazid, protease inhibitors) may increase concentration/effects. **Anticholinergics** may increase side effects (e.g., dry mouth, constipation). **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES: Grapefruit** may increase potential for urinary retention; constipation.

AVAILABILITY (Rx)

Tablets (Extended-Release): 7.5 mg, 15 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Swallow extended-release tablets whole; do not crush, chew, or split tablet.

INDICATIONS/ROUTES/DOSAGE

Overactive Bladder

PO: ADULTS, ELDERLY: Initially, 7.5 mg once daily. If response is not adequate after at least 2 wks, may increase to 15 mg once daily. Do not exceed 7.5 mg once daily in moderate hepatic impairment or concurrent use with CYP3A4 inhibitors (clarithromycin, fluconazole, protease inhibitors, isoniazid).

Dosage Hepatic Impairment

Moderate impairment	**Maximum dose:** 7.5 mg
Severe impairment	Not recommended

SIDE EFFECTS

Frequent (35%–21%): Dry mouth, constipation. **Occasional (8%–4%):** Dyspepsia, headache, nausea, abdominal pain. **Rare (3%–2%):** Asthenia (loss of strength, energy), diarrhea, dizziness, ocular dryness.

ADVERSE EFFECTS/ TOXIC REACTIONS

UTI occurs occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Monitor voiding pattern, assess signs/symptoms of overactive bladder prior to therapy as baseline.

INTERVENTION/EVALUATION

Monitor I&O. Palpate bladder for urine retention. Monitor daily pattern of bowel activity, stool consistency for evidence of

constipation. Dry mouth may be relieved with sips of tepid water. Assess for relief of symptoms of overactive bladder (urge incontinence, urinary frequency/urgency).

PATIENT/FAMILY TEACHING

• Swallow tablet whole; do not crush, divide, chew. • Increase fluid intake to reduce risk of constipation. • Avoid tasks that require alertness, motor skills until response to drug is established.

darunavir

da-**roon**-ah-veer
(Prezista)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antiretroviral (see p. 68C, 117C).

ACTION

Prevents virus-specific processing of polyproteins, HIV-1 protease infected cells. **Therapeutic Effect:** Prevents formation of mature viral cells.

PHARMACOKINETICS

Readily absorbed following PO administration. Protein binding: 95%. Metabolized in liver. Eliminated mainly in feces with a lesser amount eliminated in urine. Not significantly removed by hemodialysis. **Half-life:** 15 hrs.

USES

Treatment of HIV infection in combination with ritonavir and other antiretroviral agents in adults and children 6 yrs and older.

PRECAUTIONS

Contraindications: Concurrent therapy with alfuzosin, dihydroergotamine, ergonovine, ergotamine, lovastatin, methylergonovine, oral midazolam, pimozide, rifampin, sildenafil (for treatment of PAH), simvastatin, St. John's wort, triamzolam. **Cautions:** Diabetes mellitus, hemophilia, known sulfonamide allergy, hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/effects of **amiodarone, bepredil, lidocaine, desipramine, colchicine, beta blockers, midazolam, paroxetine, sertraline, atorvastatin, clarithromycin, cyclosporine, felodipine, inhaled fluticasone, lovastatin, nicardipine, nifedipine, pravastatin, simvastatin, sirolimus, tacrolimus, trazodone, sildenafil, tadalafil, vardenafil. CYP3A4 inhibitors (e.g., itraconazole, ketoconazole, voriconazole)** may increase concentration. May decrease effect of **methadone, oral contraceptives. HERBAL: St. John's wort** may lead to loss of virologic response, potential resistance to darunavir. **FOOD: Food** increases plasma concentration. **LAB VALUES:** May increase aPTT, PT, serum alkaline phosphatase, bilirubin, amylase, lipase, cholesterol, triglycerides, uric acid. May decrease lymphocytes/neutrophil count, platelets, WBC count, serum bicarbonate, albumin, calcium. May alter serum glucose, sodium.

AVAILABILITY (Rx)

Tablets (Prezista): 75 mg, 150 mg, 400 mg, 600 mg.

ADMINISTRATION/HANDLING

PO

• Give with food (increases plasma concentration). • Coadministration with ritonavir required. • Do not crush, chew film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

HIV Infection, Treatment Experienced

PO: ADULTS, ELDERLY: 600 mg administered with 100 mg ritonavir and with food twice daily or 800 mg (two 400-mg tablets) with 100 mg ritonavir and with food once daily.

HIV Infection, Treatment Naive

PO: ADULTS, ELDERLY: 800 mg (two 400-mg tablets) administered with 100 mg ritonavir and with food once daily.

Usual Pediatric Dose

◀ALERT▶ Do not use once-daily dosing in pediaric pts.

PO: CHILDREN WEIGHING 40 KG OR MORE: 600 mg twice daily with 100 mg ritonavir. **WEIGHING 30–39 KG:** 450 mg twice daily with 60 mg ritonavir. **WEIGHING 20–29 KG:** 375 mg twice daily with 50 mg ritonavir.

SIDE EFFECTS

Frequent (19%–13%): Diarrhea, nausea, headache, nasopharyngitis. **Occasional (3%–2%):** Constipation, abdominal pain, vomiting. **Rare (less than 2%):** Allergic dermatitis, dyspepsia, flatulence, abdominal distention, anorexia, arthralgia, myalgia, paresthesia, memory impairment.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypertension, MI, transient ischemic attack occur in less than 2% of pts. Acute renal failure, diabetes mellitus, dyspnea, worsening of hepatic impairment, skin reactions including Stevens-Johnson syndrome, toxic epidermal necrolysis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory testing, esp. hepatic function tests, before beginning therapy and at periodic intervals during therapy. Offer emotional support. Obtain medication history.

INTERVENTION/EVALUATION

Closely monitor for evidence of GI discomfort. Monitor daily pattern of bowel activity, stool consistency. Assess skin for evidence of rash, other skin reactions. Monitor serum chemistry tests for marked laboratory abnormalities, particularly hepatic profile, glucose, cholesterol, triglycerides. Assess for opportunistic infections (onset of fever, oral mucosa changes, cough, other respiratory symptoms).

PATIENT/FAMILY TEACHING

• Take medication with food. • Continue therapy for full length of treatment. • Doses should be evenly spaced. • Darunavir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pt may continue to experience illnesses, including opportunistic infections. • Diarrhea can be controlled with OTC medication. • Notify physician if skin reactions occur.

dasatinib

HIGH ALERT

da-**sa**-ti-nib
(Sprycel)
Do not confuse dasatinib with erlotinib, imatinib, or lapatinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protein-tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic (see p. 82C).

ACTION

Reduces activity of proteins responsible for uncontrolled growth of leukemia cells by binding to most imatinib-resistant BCR-ABL mutations of pts with chronic myelogenous leukemia (CML) or acute lymphoblastic leukemia (ALL). **Therapeutic Effect:** Inhibits proliferation, tumor growth of CML and ALL cancer cell lines.

PHARMACOKINETICS

Extensively distributed in extravascular space. Protein binding: 96%. Metabo-

lized in liver. Eliminated primarily in feces. **Half-life:** 3–5 hrs.

USES

Treatment of adults with chronic, accelerated, myeloid or lymphoid blast phase of chronic myelogenous leukemia (CML) with resistance, intolerance to prior therapy, including imatinib. Treatment of adults with Philadelphia chromosome-positive (Ph+) acute lymphoblastic leukemia (ALL) with resistance or intolerance to prior therapy. Treatment of Philadelphia chromosome-positive (Ph+) chronic myeloid leukemia (CML) in chronic phase of newly diagnosed pts. **OFF-LABEL:** Post stem cell transplant follow-up treatment of CML. Treatment of GI stromal tumor.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment, myelosuppression (particularly thrombocytopenia), pts prone to fluid retention, those with prolonged QT interval, cardiovascular/pulmonary disease. Concomitant use of anticoagulants, CYP3A4 inducers/inhibitors may increase risk of pulmonary arterial hypertension.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential for severe teratogenic effects, fertility impairment. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, erythromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir) may increase concentration. **CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifampicin)** may decrease concentration. **Antacids** alter pH-dependent solubility of dasatinib. **Famotidine, omeprazole** may reduce dasatinib absorption. **HERBAL: St. John's wort, echinacea** may decrease concentration. **FOOD: Grapefruit juice** may increase concentration/toxicity (increased risk of torsades, myelotoxicity). **LAB VALUES:** May decrease WBC, platelets, Hgb, Hct, RBC, serum calcium, phosphates. May increase serum bilirubin, ALT, AST, creatinine.

AVAILABILITY (Rx)

Tablets (Film-Coated): 20 mg, 50 mg, 70 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Take with food or large glass of water if GI upset occurs. • Avoid grapefruit juice. • Do not chew/crush/cut film-coated tablets. • Store at room temperature. • Do not give antacids either 2 hrs prior to or within 2 hrs after dasatinib administration.

INDICATIONS/ROUTES/DOSAGE

Chronic Myelogenous Leukemia (CML)

PO: ADULTS, ELDERLY: (Chronic phase): 100 mg once daily. May increase to 140 mg once daily in pts not achieving cytogenetic response. **(Accelerated or blast phase):** 140 mg once daily. May increase to 180 mg once daily in pts not achieving cytogenetic response.

CML (Newly Diagnosed)

PO: ADULTS, ELDERLY: 100 mg once daily. May increase to 140 mg/day in pts not achieving cytogenetic response.

Ph+ ALL

PO: ADULTS, ELDERLY: 140 mg once daily. May increase to 180 mg once daily in pts not achieving cytogenetic response.

SIDE EFFECTS

Frequent (50%–32%): Fluid retention, diarrhea, headache, fatigue, musculoskeletal pain, fever, rash, nausea, dyspnea. **Occasional (28%–12%):** Cough, abdominal pain, vomiting, anorexia, as-

thenia (loss of strength, energy), arthralgia, stomatitis, dizziness, constipation, peripheral neuropathy, myalgia. **Rare (less than 12%):** Abdominal distention, chills, weight increase, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pleural effusion occurs in 8% of pts, febrile neutropenia in 7%, GI bleeding, pneumonia in 6%, thrombocytopenia in 5%, dyspnea in 4%, anemia, cardiac failure in 3%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC weekly for first mo, biweekly for second mo, and periodically thereafter. Monitor hepatic function tests (bilirubin, alkaline phosphatase, AST, ALT) before treatment begins and monthly thereafter.

INTERVENTION/EVALUATION

Assess lower extremities for pedal edema for early evidence of fluid retention. Weigh, monitor for unexpected rapid weight gain. Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess oral mucous membranes for evidence of stomatitis. Monitor CBC for neutropenia, thrombocytopenia; monitor hepatic function tests for hepatotoxicity.

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine; do not receive vaccinations. • Antacids may be taken up to 2 hrs before or 2 hrs after taking dasatinib. • Avoid grapefruit juice.

*DAUNOrubicin HIGH ALERT

daw-noe-**roo**-bi-sin
(Cerubidine, DaunoXome)

BLACK BOX ALERT Irreversible cardiotoxicity may occur. Myelosuppresant. Lipid component may cause infusion-related effects (back pain, flushing, chest tightness) within first 5 min of infusion. Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Caution in renal impairment or hepatic dysfunction. Potent vesicant.

Do not confuse daunorubicin with dactinomycin, doxorubicin, epirubicin, idarubicin, or valrubicin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anthracycline antibiotic. **CLINICAL:** Antineoplastic (see p. 82C).

ACTION

Inhibits DNA, DNA-dependent RNA synthesis by binding with DNA strands. Cell cycle–phase nonspecific. **Therapeutic Effect:** Prevents cell division.

PHARMACOKINETICS

Widely distributed. Protein binding: High. Does not cross blood-brain barrier. Metabolized in liver to active metabolite. Excreted in urine; eliminated by biliary excretion. **Half-life:** 18.5 hrs; metabolite: 26.7 hrs.

USES

Cerubidine: Treatment of leukemias (acute lymphocytic [ALL], acute myeloid (AML) in combination with other agents. **DaunoXome:** Advanced HIV-related Kaposi's sarcoma.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Breastfeeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Cardiotoxicity

may be more frequent; reduced bone marrow reserves require caution. Age-related renal impairment may require dosage adjustment.

D

INTERACTIONS

DRUG: Previous use of **doxorubicin,** concurrent use of **cyclophosphamide** increases risk of cardiotoxicity. **Hepatotoxic medications** increase risk of hepatotoxicity. **Bone marrow depressants** may enhance myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease levels/effects. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, uric acid, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Cerubidine): 20 mg. **Injection Solution (Cerubidine):** 5 mg/ml. **Injection Solution (DaunoXome):** 2 mg/ml.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ **Cerubidine:** Give by IV push or IV infusion. **DaunoXome:** Give by IV infusion. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

Reconstitution

Cerubidine • Reconstitute each 20-mg vial with 4 ml Sterile Water for Injection to provide concentration of 5 mg/ml. • Gently agitate vial until completely dissolved. • May further dilute with 100 ml D_5W or 0.9% NaCl.

DaunoXome • Must dilute with equal part D_5W to provide concentration of 1 mg/ml. • Do not use any other diluent.

Rate of Administration

Cerubidine • For IV push, withdraw desired dose into syringe containing 10–15 ml 0.9% NaCl. Inject over 1–5 min into tubing of rapidly infusing IV solution of D_5W or 0.9% NaCl. • For IV infusion, further dilute with 100 ml D_5W or 0.9% NaCl. Infuse over 15–30 min. • Extravasation produces immediate pain, severe local tissue damage. Aspirate as much infiltrated drug as possible, then infiltrate area with hydrocortisone sodium succinate injection (50–100 mg hydrocortisone) and/or isotonic sodium thiosulfate injection or ascorbic acid injection (1 ml of 5% injection). Apply cold compresses.

DaunoXome • Infuse over 60 min. • Do not use in-line filter.

Storage

Cerubidine • Reconstituted solution is stable for 4 days at room temperature. Diluted solution in D_5W or 0.9% NaCl is stable for 4 wks at room temperature if protected from light. • Color change from red to blue-purple indicates decomposition; discard.

DaunoXome • Refrigerate unopened vials • Reconstituted solution is stable for 6 hrs if refrigerated. • Do not use if opaque.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), aztreonam (Azactam), cefepime (Maxipime), dexamethasone (Decadron), fludarabine (Fludara), heparin, piperacillin and tazobactam (Zosyn). **DaunoXome:** Do not mix with any other solution, esp. NaCl or bacteriostatic agents (e.g., benzyl alcohol).

IV COMPATIBILITIES

Cytarabine (Cytosar), etoposide (VePesid), filgrastim (Neupogen), granisetron (Kytril), ondansetron (Zofran).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Refer to individual protocols. **Cerubidine:** Cumulative dose should not exceed 550 mg/m^2 in adults (increased risk of cardiotoxicity) or 400 mg/m^2 in those receiving chest irradiation.

Acute Lymphoblastic Leukemia (ALL)

IV *(Cerubidine)*: ADULTS, ELDERLY: 45 mg/m^2 on days 1, 2, and 3 of induction

course. **CHILDREN 2 YRS AND OLDER, BODY SURFACE AREA 0.5 m^2 OR GREATER:** 25 mg/m^2 on day 1 of every wk for up to 4–6 cycles. Cumulative dose not to exceed 300 mg/m^2. **CHILDREN YOUNGER THAN 2 YRS, BODY SURFACE AREA LESS THAN 0.5 m^2:** 1 mg/kg/dose per protocol. Cumulative dose not to exceed 10 mg/kg.

Acute Myeloid Leukemia (AML)

IV *(Cerubidine)*: ADULTS YOUNGER THAN 60 YRS: 45 mg/m^2 on days 1, 2, and 3 of induction course, then on days 1 and 2 of subsequent courses. **ADULTS 60 YRS AND OLDER:** 30 mg/m^2 on days 1, 2, and 3 of induction course, then on days 1 and 2 of subsequent courses. **CHILDREN 2 YRS AND OLDER, BSA 0.5 m^2 OR GREATER:** 30–60 mg/m^2/day on days 1–3 of cycle.

Kaposi's Sarcoma

IV *(Daunoxome)*: ADULTS: 40 mg/m^2 over 1 hr repeated q2wks.

Dosage in Renal Impairment

Cerubidine: SERUM CREATININE GREATER THAN 3 MG/DL: 50% of normal dose.

Daunoxome: SERUM CREATININE GREATER THAN 3 MG/DL: 50% of normal dose.

Dosage in Hepatic Impairment

Cerubidine: BILIRUBIN 1.2–3 MG/DL: 75% of normal dose. **BILIRUBIN 3.1–5 MG/DL:** 50% of normal dose. **BILIRUBIN GREATER THAN 5 MG/DL:** Daunorubicin is not recommended for use in this pt population.

Daunoxome: BILIRUBIN 1.2–3 MG/DL: 75% of normal dose. **BILIRUBIN GREATER THAN 3 MG/DL:** 50% of normal dose.

SIDE EFFECTS

Frequent: Complete alopecia (scalp, axillary, pubic), nausea, vomiting (beginning a few hrs after administration and lasting 24–48 hrs). **DaunoXome:** Mild to moderate nausea, fatigue, fever. **Occasional:** Diarrhea, abdominal pain, esophagitis, stomatitis, transverse pigmentation of fingernails, toenails. **Rare:** Transient fever, chills.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression manifested as hematologic toxicity (severe leukopenia, anemia, thrombocytopenia). Decrease in platelet count, WBC count occurs in 10–14 days, returns to normal level by third week. Cardiotoxicity noted as either acute, transient, abnormal. EKG findings and/or cardiomyopathy manifested as CHF (risk increases when cumulative dose exceeds 550 mg/m^2 in adults, 300 mg/m^2 in children 2 yrs and older, or total dosage greater than 10 mg/kg in children younger than 2 yrs).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain WBC, platelet, erythrocyte counts before and at frequent intervals during therapy. EKG should be obtained before therapy. Antiemetics may be effective in preventing, treating nausea.

INTERVENTION/EVALUATION

Monitor for stomatitis (burning, erythema of oral mucosa). May lead to ulceration within 2–3 days. Assess skin, nailbeds for hyperpigmentation. Monitor hematologic status, renal/hepatic function studies, serum uric acid. Monitor daily pattern of bowel activity, stool consistency. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Urine may turn reddish color for 1–2 days after beginning therapy. • Alopecia is reversible, but new hair growth may have different color, texture. • New hair growth resumes about 5 wks after last therapy dose. • Maintain fastidious oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs

of local infection, unusual bruising/bleeding from any site, yellowing of whites of eyes/skin, difficulty breathing. • Increase fluid intake (may protect against hyperuricemia). • Contact physician for persistent nausea, vomiting.

D

decitabine HIGH ALERT

de-**sye**-ta-bean
(Dacogen)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: DNA demethylation agent. **CLINICAL:** Antineoplastic.

ACTION

Exerts cytotoxic effect on rapidly dividing cells by causing demethylation of DNA in abnormal hematopoietic cells in bone marrow. **Therapeutic Effect:** Restores normal function to tumor suppressor genes regulating cellular differentiation, proliferation.

PHARMACOKINETICS

Protein binding: less than 1%. Elimination appears to occur by removal of an amino group from the enzyme cytidine deaminase, found principally in liver, but also in granulocytes, intestinal epithelium, whole blood. **Half-life:** 30 min.

USES

Treatment of myelodysplastic syndromes, specifically refractory anemia, myelomonocytic leukemia. **OFF-LABEL:** Treatment of acute and chronic myelogenous leukemia, sickle cell anemia.

PRECAUTIONS

Contraindications: None known. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be embryotoxic; may cause developmental abnormalities of fetus. Breast-feeding not recommended. Men should not father a child while receiving treatment and for 2 mos after treatment. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase levels/effects of **clozapine.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, WBC, RBC, platelets. May increase serum creatinine, AST, alkaline phosphatase, bicarbonate, lactate dehydrogenase, BUN, bilirubin, glucose, albumin, magnesium, sodium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute with 10 ml Sterile Water for Injection. • Further dilute with 50–250 ml 0.9% NaCl, D_5W, or lactated Ringer's to a final concentration of 0.1–1 mg/ml.

Rate of Administration • Give by continuous IV infusion over 1–3 hrs.

Storage • Store vials at room temperature. • Unless used within 15 min of reconstitution, diluted solution must be prepared using cold infusion fluids and stored in refrigerator up to maximum of 7 hrs until administration.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Premedicate with antiemetics prior to therapy.

Myelodysplastic Syndrome

IV Infusion: ADULTS, ELDERLY: (Option 1): 15 mg/m^2 given over 3 hrs q8h (45 mg/m^2/day) for 3 days. Subsequent treatment cycles should be repeated every 6 wks for a minimum of 4 cycles. **(Option 2):** 20 mg/m^2 given over 1 hr daily for 5 days. Repeat cycle q4wks. Adjust dose for

delayed hematologic recovery. Hold treatment until resolution of serum creatinine 2 mg/dl or greater; ALT or bilirubin 2 times upper limit of normal; active or uncontrolled infection.

SIDE EFFECTS

Frequent (53%–20%): Fever, nausea, cough, petechiae, constipation, diarrhea, insomnia, headache, vomiting, peripheral edema, pallor, ecchymosis, rigors, arthralgia. **Occasional (19%–11%):** Rash, limb pain, dizziness, back pain, anorexia, pharyngitis, abdominal pain, erythema, oral mucosal petechiae, stomatitis, confusion, lethargy, dyspepsia, anxiety, pruritus, hypoesthesia. **Rare (10%–5%):** Candidiasis, ascites, alopecia, chest wall pain, rales, catheter site infection, facial edema, hypotension, urticaria, dehydration, blurred vision, musculoskeletal discomfort, malaise, sinusitis, gastroesophageal reflux.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pneumonia occurs in 22% of pts, cellulitus in 12%. Hematologic toxicity manifested most commonly as neutropenia (90%; recovery 28–50 days), thrombocytopenia (89%), anemia (82%), febrile neutropenia (29%), leukopenia (28%), lymphadenopathy (12%). UTI occurs in 7%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Give emotional support to pt, family. Use strict asepsis, protect pt from infection. Perform blood counts as needed to monitor response, toxicity but esp. prior to each dosing cycle.

INTERVENTION/EVALUATION

Monitor for hematologic toxicity (fever, sore throat, signs of local infections, unusual bleeding/bruising), symptoms of anemia (excessive fatigue, weakness). Assess response to medication; monitor, report nausea, vomiting, diarrhea. Avoid rectal temperatures, other traumas that may induce bleeding. Monitor CBC, platelets, serum creatinine, hepatic enzyme tests. If serum creatinine increases to 2 mg/dl, ALT, total bilirubin at least 2 times upper limit of normal, and pt has active or uncontrolled infection, treatment should be stopped and not restarted until toxicity is resolved.

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (drug lowers resistance). • Avoid crowds, persons with known infections. • Report signs of infection (fever, flu-like symptoms) immediately. • Contact physician if nausea/vomiting continues at home. • Men should use barrier contraception while receiving treatment.

deferasirox

dee-**fur**-a-sir-ox
(Exjade)

BLACK BOX ALERT May cause renal/hepatic failure, gastrointestinal hemorrhage.

Do not confuse deferasirox with deferoxamine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Iron-chelating agent. **CLINICAL:** Iron reduction agent.

ACTION

Selective for iron. Binds iron with high affinity in a 2:1 ratio. **Therapeutic Effect:** Induces iron excretion.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 99%. Metabolized in liver. Primarily excreted in feces with a lesser amount eliminated in urine. **Half-life:** 8–16 hrs.

USES

Treatment of chronic iron overload due to blood transfusions (transfusional hemosiderosis).

D

PRECAUTIONS

Contraindications: Platelet counts less than 50,000/mm^3; poor performance status and high-risk myelodysplastic syndromes or advanced malignancies; creatinine clearance less than 40 ml/min or serum creatinine greater than 2 times the upper limit of normal. **Cautions:** Renal/hepatic impairment, cardiac dysfunction, elderly, concurrent medications that may increase GI effects (e.g., NSAIDs).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Not recommended for those younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Antacids containing aluminium, cholestyramine, phenobarbital, phenytoin, rifampin, ritonavir** decrease concentration/effects. May decrease effect of **cyclosporine, simvastatin, oral contraceptives.** May increase concentration of **cyclobenzapine, olanzapine, tizanidine.** **HERBAL:** None significant. **FOOD:** Bioavailability is variably increased when given with **food.** **LAB VALUES:** Decreases serum ferritin. May increase serum creatinine, transaminase, AST, ALT, urine protein.

AVAILABILITY (Rx)

Tablets for Oral Suspension (Exjade): 125 mg, 250 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

• Give on empty stomach 30 min before food. • Do not give simultaneously with aluminum-containing antacids, cholestyramine. • Tablets should not be chewed or swallowed whole. • Disperse tablet by stirring in water, apple juice, orange juice until fine suspension is achieved. • Dosage less than 1 g should be dispersed in 3.5 oz of liquid, dosage more than 1 g should be dispersed in 7 oz of liquid. If any residue remains in glass, resuspend with a small amount of liquid.

INDICATIONS/ROUTES/DOSAGE

Iron Overload

PO: ADULTS, ELDERLY, CHILDREN 2 YRS AND OLDER: Initially, 20 mg/kg once daily. Adjust dosage of 5 or 10 mg/kg/day every 3–6 mos based on serum ferritin levels. Hold dose for serum ferritin less than 500 mcg/L. **Maximum:** 40 mg/kg once daily.

Dosage in Renal Impairment

ADULTS: For increase in serum creatinine greater than 33% on 2 consecutive measures, reduce daily dose by 10 mg/kg. **CHILDREN:** For increase in serum creatinine above age-appropriate upper limit of normal on 2 consecutive measures, reduce daily dose by 10 mg/kg.

Dosage in Liver Impairment

For severe or persistent elevations in hepatic function tests, consider dose reduction or discontinuation.

SIDE EFFECTS

Frequent (19%–10%): Fever, headache, abdominal pain, cough, nasopharyngitis, diarrhea, nausea, vomiting. **Occasional (9%–4%):** Rash, arthralgia, fatigue, back pain, urticaria. **Rare (1%):** Edema, sleep disorder, dizziness, anxiety.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bronchitis, pharyngitis, acute tonsillitis, ear infection occur occasionally. Hepatitis, auditory disturbances, ocular abnormalities occur rarely. Acute renal failure, cytopenias (e.g., agranulocytosis, neutropenia, thrombocytopenia) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum CBC, ferritin, iron, creatinine, ALT, AST, transaminase, urine protein, then monthly thereafter. Auditory, ophthalmic testing should be obtained before therapy and annually thereafter.

INTERVENTION/EVALUATION

Treatment should be interrupted if serum ferritin levels are consistently less than 500 mcg/L. Suspend treatment if severe rash occurs.

PATIENT/FAMILY TEACHING

• Take on empty stomach 30 min before food. • Do not chew or swallow tablet whole; disperse tablet completely in water, apple juice, orange juice; drink resulting suspension immediately. • Do not take aluminum-containing antacids concurrently. • Inform physician if severe skin rash, changes in vision/hearing, or yellowing of skin/eyes occurs.

deferiprone

deh-**fair**-ih-prone
(Ferriprox)

BLACK BOX ALERT May cause agranulocytosis that can lead to serious infection, death. Neutropenia may precede development of agranulocytosis.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Iron-chelating agent. **CLINICAL:** Iron reduction.

ACTION

Selective for ferric ion. Attaches to iron to form a compound that can be excreted by the body. **Therapeutic Effect:** Induces iron excretion.

PHARMACOKINETICS

Rapidly absorbed following oral administration. Peak plasma concentration: 1 hr. Protein binding: 10%. Primarily metabolized to inactive metabolite. Primarily excreted in urine. **Half-life:** 1.9 hrs.

USES

Treatment of transfusional iron overload due to thalassemia syndrome (a generic blood disorder that causes anemia) when current chelation therapy is inadequate.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, those at increased risk of prolongation of QT interval (CHF, bradycardia, use of a diuretic, cardiac hypertrophy, hypokalemia, hypomagnesemia).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if excreted in breast milk. Do not breast-feed. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Aluminum-containing antacids, supplements containing **iron or zinc** may decrease effects of **deferiprone.** Separate by 4 hrs. Other **iron-chelating agents** increase risk of toxic effects. **HERBAL: Milk thistle** may increase risk of side effects. **FOOD:** None known. **LAB VALUES:** Decreases serum ferritin, zinc concentration. May increase serum ALT, AST, transaminase levels.

AVAILABILITY (Rx)

Tablets, Film-Coated, Scored: 500 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not give simultaneously with aluminum-containing antacids or supplements containing iron or zinc; separate by 4 hrs.

INDICATIONS/ROUTES/DOSAGE

Iron Overload

PO: ADULTS, ELDERLY: Initially, 25 mg/kg 3 times daily (morning, midday, evening)

for a total of 75 mg/kg per day. Adjust dosage up to 33 mg/kg 3 times daily. **Maximum:** 99 mg/kg per day. Dose should be rounded to nearest 250 mg (half-tablet).

D

SIDE EFFECTS

Occasional (15%–10%): Chromaturia (reddish/brown discoloration of urine), nausea, abdominal pain/discomfort, vomiting, arthralgia. **Rare (4%–2%):** Increased weight, diarrhea, headache, dyspepsia (heartburn, bloating, eructation), back pain, pain in extremity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Agranulocytosis, generally preceded by neutropenia may be noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum creatinine, ALT, AST, serum transaminase and monthly thereafter. Monitor serum ferritin monthly. Measure absolute neutrophil count (ANC) prior to therapy and monitor ANC weekly during therapy. If deferiprone is used during pregnancy or if pt becomes pregnant while taking medication, pt should be apprised of potential hazard to fetus.

INTERVENTION/EVALUATION

Monitor serum ferritin concentration every 2–3 mos to assess the effects of medication on body iron stores. If the serum ferritin falls consistently below 500 mcg/L, consider temporarily interrupting therapy. Interrupt treatment if infection develops or if neutropenia occurs, based on ANC. Monitor serum ALT values monthly during therapy. Interruption of therapy should be considered if there is a persistent increase in serum transaminase levels.

PATIENT/FAMILY TEACHING

• Urine may show a reddish-brown discoloration. • Report any symptoms that may indicate infection (fever, sore throat, flu-like symptoms). • Women of reproductive potential should be advised to avoid pregnancy during therapy and to immediately report if pregnancy occurs or plan to become pregnant. • Do not breast-feed during treatment. • Do not simultaneously take aluminum-containing antacids or supplements containing zinc or iron (separate by 4 hrs).

deferoxamine

de-fur-**ox**-ah-meen
(Desferal)
Do not confuse deferoxamine with cefuroxime or deferasirox, or Desferal with Desyrel.

◆CLASSIFICATION

CLINICAL: Antidote.

ACTION

Binds with iron to form complex. **Therapeutic Effect:** Promotes urinary excretion of iron.

PHARMACOKINETICS

Erratic absorption following IM administration. Widely distributed. Rapidly metabolized in tissues, plasma. Excreted in urine, eliminated in feces via biliary excretion. Removed by hemodialysis. **Half-life:** 6 hrs.

USES

Treatment of acute iron toxicity, chronic iron toxicity secondary to multiple transfusions associated with some chronic anemias (e.g., thalassemia). **OFF-LABEL:** Treatment/diagnosis of aluminum toxicity associated with chronic kidney disease.

PRECAUTIONS

Contraindications: Severe renal disease, anuria, primary hemochromatosis. **Cautions:** Renal impairment, elderly. **Pregnancy Category C.**

INTERACTIONS

DRUG: **Vitamin C** may increase effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause falsely elevated total iron-binding capacity (TIBC).

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg, 2 g.

ADMINISTRATION/HANDLING

◄ALERT► IM: Reconstitute each 500-mg vial with 2 ml Sterile Water for Injection to provide a concentration of 210 mg/ml or 8 ml to each 2-g vial to provide a concentration of 213 mg/ml. **IV:** Reconstitute with SWFI to provide concentration of 100 mg/ml. **Subcutaneous:** Reconstitute 500 mg with 5 ml; 2 g with 20 ml SWFI to provide a concentration of 95 mg/ml.

IV

• For IV infusion, further dilute with 0.9% NaCl, D_5W, and administer at no more than 15 mg/kg/hr for first 1,000 mg, followed by 500 mg over 4 hrs. • Too-rapid IV administration may produce skin flushing, urticaria, hypotension, shock.

IM

• Inject deeply into upper outer quadrant of buttock. No further dilution necessary.

Subcutaneous

• Administer subcutaneous very slowly. No further dilution necessary. Following reconstitution, stable for 7 days at room temperature.

IV INCOMPATIBILITY

Do not mix with any other IV medications.

INDICATIONS/ROUTES/DOSAGE

Acute Iron Intoxication

IV, IM: ADULTS: Initially, 1 g, then 0.5 g q4h for 2 doses; may give additional doses of 0.5 g q4–12h. **IM: CHILDREN 3 YRS AND OLDER:** 90 mg/kg/dose q8h. **Maximum:** 6 g/day.
IV: CHILDREN: 15 mg/kg/hr. **Maximum:** 6 g/day.

Chronic Iron Overload

Subcutaneous: ADULTS: 1–2 g/day or 20–40 mg/kg/day over 8–24 hrs. **CHILDREN 3 YRS AND OLDER:** 20–40 mg/kg/day over 8–12 hrs. **Maximum:** 2 g/day.
IM: ADULTS: 0.5–1 g/day. Also, 2 g with each unit of blood.
IV: CHILDREN 3 YRS AND OLDER: 15 mg/kg/hr. **Maximum:** 6 g/24h.

SIDE EFFECTS

Frequent: Pain, induration at injection site, urine color change (to orange-rose). **Occasional:** Abdominal discomfort, diarrhea, leg cramps, impaired vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

High-frequency hearing loss, tinnitus have been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess serum iron levels, total iron-binding capacity (TIBC) before and during therapy.

INTERVENTION/EVALUATION

Question for evidence of hearing loss (neurotoxicity). Periodic slit-lamp ophthalmic exams should be obtained in those treated for chronic iron overload. For IV administration, monitor serum ferritin, iron, TIBC, body weight, growth, B/P. If using subcutaneous technique, monitor for pruritus, erythema, skin irritation, edema.

PATIENT/FAMILY TEACHING

• Medication may produce discomfort at IM or subcutaneous injection site. • Urine will appear reddish. • Notify physician if hearing or vision changes occur.

D

degarelix

deg-a-**re**-lix
(Firmagon)
Do not confuse degarelix with cetrorelix or ganirelix.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Gonadotropin-releasing hormone antagonist. **CLINICAL:** Antineoplastic.

ACTION

Antagonizes pituitary gonadotropin-releasing hormone (GnRH) receptors (binds immediately and reversibly), suppressing release of luteinizing hormone (LH) from pituitary gland, leading to rapid and sustained suppression of testosterone release from testes. **Therapeutic Effect:** Reduces size and growth of prostate cancer.

PHARMACOKINETICS

Subcutaneously distributed throughout total body water. Protein binding: 90%. Metabolized due to peptide hydrolysis during hepatobiliary system passage. Primarily excreted as peptide fragments in feces, with a lesser amount eliminated in urine. **Half-life:** 53 days.

USES

Treatment of advanced prostate cancer.

PRECAUTIONS

Contraindications: Pregnancy (Pregnancy Category X). **Cautions:** Those with QT prolongation, hypokalemia, CHF, severe hepatic impairment, renal impairment (creatinine clearance less than 50 ml/min).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated for use in this pt population. **Pregnancy Category X. Children:** Not indicated for use in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Dronedarone, amiodarone, macrolide antibiotics other QT prolonging medications increase risk of QT prolongation. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Expected to decrease serum testosterone levels. May increase serum transaminase levels.

AVAILABILITY (Rx)

Injection, Powder for Solution: 80 mg, 120 mg.

ADMINISTRATION/HANDLING

Subcutaneous

• Reconstitute 80-mg vial with 4.2 ml Sterile Water for Injection to provide 20 mg/ml concentration (120 mg with 3 ml SWI to provide 40 mg/ml concentration). • Administer within 1 hr following reconstitution. • Wear gloves during preparation and administration. • Vial must be kept vertical at all times; do not shake. • Give in abdominal region in areas that will not be exposed to pressure (on or close to waistband area).

INDICATIONS/ROUTES/DOSAGE

Prostate Cancer

Subcutaneous: ADULTS, ELDERLY: 240 mg given as 2 injections of 120 mg (40 mg/ml). Administer maintenance dose every 28 days. Begin 28 days after initial treatment. Maintenance: 80 mg.

SIDE EFFECTS

Frequent (27%–11%): Hot flashes, injection site pain, erythema, increased weight. **Occasional (7%–5%):** Hypertension, local edema, fatigue, back pain, constipation, urinary tract infection, asthenia (lack of strength, energy), arthralgia, chills. **Rare (1%):** Insomnia, headache, nausea, dizziness, erectile dysfunction, gynecomastia, testicular atrophy, night sweats.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term androgen deprivation therapy may prolong QT interval. Loss of bone density may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline EKG, electrolyte parameters, ALT, AST, bilirubin, alkaline phosphatase, testosterone levels prior to initiation of therapy.

INTERVENTION/EVALUATION

Monitor serum electrolytes, prostate-specific antigen (PSA) periodically. If PSA increases, measure testosterone serum concentrations. Monitor routine EKG for QT prolongation. Assess for decrease in testosterone levels throughout therapy. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Advise pt that swelling, itching, redness may occur at injection site. • Avoid tasks that require alertness, motor skills until response to drug is established.

delavirdine

de-la-**veer**-deen
(Rescriptor)
Do not confuse delavirdine with dalfampridine, or Rescriptor with ritonavir.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonnucleoside reverse transcriptase inhibitor. **CLINICAL:** Antiretroviral (see pp. 68C, 116C).

ACTION

Binds directly to HIV-1 reverse transcriptase, blocks RNA- and DNA-dependent DNA polymerase activities. **Therapeutic Effect:** Interrupts HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 98%. Primarily distributed in plasma. Metabolized in liver. Eliminated in feces and urine. **Half-life:** 2–11 hrs.

USES

Treatment of HIV infection (in combination with other antiretrovirals).

PRECAUTIONS

Contraindications: Concurrent use of alprazolam, ergot alkaloids, midazolam, rifampin, triazolam. **Cautions:** Renal/hepatic impairment. Concurrent use of CYP3A4 inhibitors/inducers (e.g., clarithromycin, fluoxetine, verapamil, phenobarbital, carbamazepine).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** Safety and efficacy not established.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifabutin, rifampin) may decrease concentration/effects. May increase concentration/adverse effects of **statins, ergot derivatives, alprazolam, midazolam, triazolam. HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT. May decrease neutrophil count.

AVAILABILITY (Rx)

Tablets: 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• May disperse 100-mg tablets in water before consumption. 200-mg tablets should remain intact. • Give without regard to food. • Pts with achlorhydria should take with orange juice, cranberry juice.

INDICATIONS/ROUTES/DOSAGE

HIV Infection (in Combination with Other Antiretrovirals)

PO: ADULTS: 400 mg 3 times a day.

D

SIDE EFFECTS

Frequent (18%): Rash, pruritus. **Occasional (greater than 2%):** Headache, nausea, diarrhea, fatigue, anorexia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatic failure, severe rash, hemolytic anemia, rhabdomyolysis, erythema multiforme, Stevens-Johnson syndrome, acute renal failure have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab tests, esp. hepatic function tests, before initiation of therapy and at periodic intervals during therapy. Offer emotional support.

INTERVENTION/EVALUATION

Assess skin for rash. Question if nausea is noted. Monitor daily pattern of bowel activity, stool consistency. Assess eating pattern; monitor for weight loss. Monitor lab values carefully, particularly hepatic function, especially if taken with saquinavir.

PATIENT/FAMILY TEACHING

• Do not take any medications, including OTC drugs, without consulting physician. • Small, frequent meals may offset anorexia, nausea. • Delavirdine is not a cure for HIV infection, nor does it reduce risk of transmission to others.

demeclocycline

de-me-kloe-**sye**-kleen
(Declomycin)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tetracycline. **CLINICAL:** Antibiotic.

ACTION

Inhibits bacterial protein synthesis by binding to ribosomal receptor sites; inhibits antidiuretic hormone (ADH)-induced water reabsorption. **Therapeutic Effect:** Bacteriostatic. Produces water diuresis.

PHARMACOKINETICS

Food, dairy products interfere with absorption. Protein binding: 41%–91%. Metabolized in liver. Excreted in urine. Removed by hemodialysis. **Half-life:** 10–15 hrs.

USES

Treatment of acne, gonorrhea, pertussis, chronic bronchitis, UTI caused by both gram-negative and gram-positive organisms, syndrome of inappropriate antidiuretic hormone secretion (SIADH).

PRECAUTIONS

Contraindications: Children 8 yrs and younger. **Cautions:** Renal/hepatic impairment, sun/ultraviolet exposure (severe photosensitivity reaction), pregnancy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. May inhibit skeletal growth of fetus; avoid use in last half of pregnancy. **Pregnancy Category D. Children:** Not recommended in those 8 yrs and younger; may cause permanent discoloration of teeth, enamel hypoplasia; may inhibit skeletal growth. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antacids containing aluminum, calcium, or magnesium, **laxatives** containing magnesium, **oral iron preparations** impair absorption. May decrease effects of **oral contraceptives.** **HERBAL: Dong quai, St. John's wort** may increase photosensitization. **FOOD: Dairy products** may decrease absorption. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, amylase, bilirubin, AST, ALT.

AVAILABILITY (Rx)

Tablets: 150 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• Give 1 hr before or 2 hrs after meals. • Give antacids containing aluminum, calcium, magnesium, laxatives containing magnesium, oral iron preparations 1–2 hrs before or after demeclocycline (impair drug's absorption).

INDICATIONS/ROUTES/DOSAGE

Mild to Moderate Infection, Including Acne, Pertussis, Chronic Bronchitis, UTI

PO: ADULTS, ELDERLY: 150 mg 4 times a day or 300 mg 2 times a day. **CHILDREN OLDER THAN 8 YRS:** 8–12 mg/kg/day in 2–4 divided doses.

SIADH

PO: ADULTS, ELDERLY: Initially, 900–1,200 mg/day in 3–4 divided doses, then decrease dose to 600–900 mg/day in divided doses.

SIDE EFFECTS

Frequent: Anorexia, nausea, vomiting, diarrhea, dysphagia, possibly severe photosensitivity (with moderate to high demeclocycline dosage). **Occasional:** Urticaria, rash. Long-term therapy may result in diabetes insipidus syndrome (polydipsia, polyuria, weakness).

ADVERSE EFFECTS/ TOXIC REACTIONS

Superinfection (esp. fungal), anaphylaxis, benign intracranial hypertension occur rarely. Bulging fontanelles occur rarely in infants.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to tetracyclines.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assess food intake, tolerance. Monitor I&O, renal/hepatic function test results. Assess for rash. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor B/P, LOC (potential for increased ICP).

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • Take oral doses on empty stomach with full glass of water. • Avoid sun/ultraviolet light exposure.

denileukin

HIGH ALERT

de-ni-**loo**-kin
(Ontak)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Has been associated with severe capillary leak syndrome; severe and fatal infusion reactions; loss of visual acuity, usually with loss of color vision.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic response modifier. **CLINICAL:** Antineoplastic (see p. 82C).

ACTION

Cytotoxic fusion protein that targets cells expressing interleukin-2 (IL-2) receptors. After binding to IL-2 receptor, directs cytocidal action to malignant cutaneous T-cell lymphoma (CTCL) cells. **Therapeutic Effect:** Causes inhibition of protein synthesis, cell death.

PHARMACOKINETICS

Metabolized in liver. **Half-life:** 70–80 min.

USES

Treatment of persistent/recurrent cutaneous T-cell lymphoma (CTCL) whose malignant cells express CD25 component of IL-2 receptor. **OFF-LABEL:** Treatment of CTCL types mycosis fungoides and sezary syndrome. Peripheral T-cell lymphoma.

PRECAUTIONS

Contraindications: None known. **Cautions:** Pts older than 65 yrs of age, hypoalbuminemia. **Pregnancy Category C.**

D

INTERACTIONS

DRUG: None significant. **HERBAL:** **Echinacea** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May decrease serum albumin, calcium, potassium, WBC, Hgb, Hct. May increase serum transaminase.

AVAILABILITY (Rx)

Injection Solution: 150 mcg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Thaw in refrigerator for up to 24 hrs or at room temperature for 1–2 hrs. • Inject calculated dose into empty infusion bag. Dilute with 0.9% NaCl to a concentration of 15 mcg/ml or greater.
Rate of Administration • Infuse over 30–60 min.
Storage • Store frozen. • Solutions for IV infusion stable for 6 hrs.

IV INCOMPATIBILITIES

Do not mix with any other IV medications.

INDICATIONS/ROUTES/DOSAGE

Cutaneous T-Cell Lymphoma (CTCL)
IV Infusion: ADULTS: 9 or 18 mcg/kg/day for 5 consecutive days q21days for 8 cycles. Infuse over at least 30 min. Hold if serum albumin less than 3 g/dl.

SIDE EFFECTS

Frequent: Two distinct syndromes occur commonly: a hypersensitivity reaction (69%), consisting of 2 or more of the following: hypotension, back pain, dyspnea, vasodilation, vascular leak syndrome characterized by hypotension, edema, hypoalbuminemia, rash, chest tightness, tachycardia, dysphagia, syncope; and a flu-like symptom complex (91%), consisting of 2 or more of the following: fever, chills, nausea, vomiting, diarrhea, myalgia, arthralgia. **Occasional (25%–10%):** Dizziness, peripheral edema, chest pain, weight loss, rhinitis, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pancreatitis, acute renal insufficiency, hematuria, hypothyroidism/hyperthyroidism occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, blood chemistries (including renal/hepatic function tests), chest X-ray should be performed before therapy and weekly thereafter. Assess serum albumin level before initiation of each treatment (should be equal to or greater than 3 g/dl).

INTERVENTION/EVALUATION

Monitor serum albumin for hypoalbuminemia (generally occurs 1–2 wks after administration). Monitor for evidence of infection (lowered immune response: sore throat, fever, other vague symptoms). Monitor weight, B/P, hypersensitivity reaction. Assess for peripheral edema.

PATIENT/FAMILY TEACHING

• At home, increase fluid intake (protects against renal impairment). • Do not have immunizations without physician's approval (drug lowers resistance); avoid contact with those who have recently taken live virus vaccine.

denosumab

den-**oh**-sue-mab
(Prolia, Xgeva)

Do not confuse denosumab with daclizumab, or Prolia with Avandia or Zebeta.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Bone resorption inhibitor (see p. 144C).

ACTION

Binds to RANK ligand (transmembrane protein). Essential for formation, function, survival of osteoclasts. **Therapeutic Effect:** Decreases bone resorption; increases bone mass, strength.

PHARMACOKINETICS

Serum level detected 1 hr after administration. **Half-life:** 32 days.

USES

Prolia: Treatment of postmenopausal women with osteoporosis at high risk for fracture. Treatment to increase bone mass in men at high risk for fractures receiving androgen deprivation therapy for nonmetastatic prostate cancer and in women at high risk for fractures receiving adjuvant aromatase inhibitor therapy for breast cancer. Treatment to increase bone mass in men with osteoporosis at high risk for fracture. **Xgeva:** Prevention of skeletal-related events (e.g., fracture, spinal cord compression) in pts with bone metastases from solid tumor. **OFF-LABEL:** Treatment of bone destruction caused by rheumatoid arthritis.

PRECAUTIONS

Contraindications: **Prolia:** Preexisting hypocalcemia (must be corrected prior to surgery). **Cautions:** History of hypoparathyroidism, thyroid/parathyroid surgery, malabsorption syndromes, excision of small intestine, immunocompromised pts. Those with severe renal impairment (creatinine clearance less than 30 ml/min) or receiving dialysis are at greater risk for developing hypocalcemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Approved for use only in postmenopausal women. **Pregnancy Category C. Children:** Approved for use only in postmenopausal women. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease calcium, may increase cholesterol.

AVAILABILITY (Rx)

Injection, Solution (Prolia): 60 mg/ml. **(Xgeva):** 70 mg/ml (1.7 ml).

ADMINISTRATION/HANDLING

Subcutaneous

• Administer in upper arm, upper thigh, or abdomen.

Storage • Refrigerate. • Solution appears as clear, colorless to pale yellow.

INDICATIONS/ROUTES/DOSAGE

Prolia

Osteoporosis; Increase Bone Mass

Subcutaneous: ADULTS, ELDERLY: 60 mg every 6 mos.

Xgeva

Prevention of Skeletal-Related Events

Subcutaneous: ADULTS, ELDERLY: 120 mg q4wks.

SIDE EFFECTS

Frequent (35%–12%): Back pain, extremity pain. **Occasional (8%–5%):** Musculoskeletal pain, vertigo, peripheral edema, sciatica. **Rare (4%–2%):** Bone pain, upper abdominal pain, rash, insomnia, flatulence, pruritus, myalgia, asthenia (loss of strength, energy), GI reflux.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increases risk of infection, specifically cystitis, upper respiratory tract infection, pneumonia, pharyngitis, herpes zoster (shingles) occur in 2%–6% of pts. Osteonecrosis of the jaw (OJN). Suppression of bone turnover, pancreatitis have been reported.

D

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Hypocalcemia must be corrected prior to treatment. Calcium 1,000 mg/day and vitamin D at least 400 international units/day should be given. Dental exam should be provided prior to treatment.

INTERVENTION/EVALUATION

Monitor magnesium, calcium, phosphorus. In pts predisposed with hypocalcemia and disturbances of mineral metabolism, clinical monitoring of calcium, mineral levels is highly recommended. Adequately supplement all pts with calcium and vitamin D. Monitor for delayed fracture healing.

PATIENT/FAMILY TEACHING

• Report rash, new-onset eczema. • Seek prompt medical attention if signs, symptoms of severe infection (rash, itching, reddened skin, cellulitis) occur. • Report muscle stiffness, numbness, cramps, spasms (signs of hypocalcemia); swelling or drainage from jaw, mouth, or teeth.

desipramine

de-**sip**-ra-meen
(Apo-Desipramine, Norpramin)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse desipramine with clomipramine, dalfampridine, diphenhydramine, disopyramide, or imipramine, or Norpramin with nortriptyline.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic. **CLINICAL:** Antidepressant (see p. 37C).

ACTION

Blocks reuptake of neurotransmitters, (norepinephrine, serotonin) at presynaptic membranes, increasing their availability at postsynaptic receptor sites. Strong anticholinergic activity. **Therapeutic Effect:** Relieves depression.

PHARMACOKINETICS

Rapidly, well absorbed from GI tract. Protein binding: 90%. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 7–60 hrs.

USES

Treatment of depression, often in conjunction with psychotherapy. **OFF-LABEL:** Treatment of ADHD, adjunct in chronic pain treatment, neurogenic pain, panic disorder, depression in children 6–12 yrs.

PRECAUTIONS

Contraindications: Use within 14 days of MAOIs, acute recovery phase of MI. **Cautions:** Cardiovascular disease, cardiac conduction disturbances, urinary retention, diabetes, benign prostatic hyperplasia, glaucoma, narrow-angle glaucoma, xerostomia, visual problems, constipation, history of bowel obstruction, seizure disorders, hyperthyroidism, those taking thyroid replacement therapy, high risk of suicide, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Minimally distributed in breast milk. **Pregnancy Category C. Children:** Not recommended in those 6 yrs and younger. Children and adolescents with major depressive disorder (MDD), other psychiatric disorders are at increased risk for suicidal ideation, behavior while taking desipramine, esp. during first few mos of treatment. **Elderly:** Use lower dosages (higher dosages not tolerated, increases risk of toxicity).

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS, respiratory depression; hypotensive effects. **Cimetidine** may increase desipramine concentration, risk of toxicity. **Fluoxetine, paroxetine, phenothiazines, propafenone, flecainide** may increase concentration. **HERBAL: Kava kava, SAMe, St. John's wort, valerian** may increase sedation, risk of serotonin syndrome. **St. John's wort** may decrease concentration. **FOOD: Grapefruit, grapefruit juice** may increase concentration/toxicity. **LAB VALUES:** May alter serum glucose, EKG readings. **Therapeutic serum level:** 115–300 ng/ml; **toxic serum level:** greater than 400 ng/ml.

AVAILABILITY (Rx)

Tablets: 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

◀ALERT▶ Fourteen days must elapse between use of MAOIs and desipramine.

• Give with food, milk if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: 75 mg/day. May gradually increase to 150–200 mg/day. **Maximum:** 300 mg/day. **ELDERLY:** Initially, 10–25 mg/day. May gradually increase to 75–100 mg/day. **Maximum:** 150 mg/day. **CHILDREN OLDER THAN 12 YRS:** Initially, 25–50 mg/day. May gradually increase to 100 mg/day. **Maximum:** 150 mg/day. **CHILDREN 6–12 YRS (OFF-LABEL):** 1–3 mg/kg/day. **Maximum:** 5 mg/kg/day.

SIDE EFFECTS

Frequent: Drowsiness, fatigue, dry mouth, blurred vision, constipation, delayed micturition, orthostatic hypotension, diaphoresis, impaired concentration, increased appetite, urinary retention. **Occasional:** GI disturbances (nausea, GI distress, metallic taste). **Rare:** Paradoxical reactions (agitation, restlessness, nightmares, insomnia), extrapyramidal symptoms (particularly fine hand tremor).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce confusion, seizures, drowsiness, arrhythmias, fever, hallucinations, dyspnea, vomiting, unusual fatigue, weakness. Abrupt discontinuation after prolonged therapy may produce severe headache, malaise, nausea, vomiting, vivid dreams.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

For those on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically. For those at risk for arrhythmias, perform baseline EKG.

INTERVENTION/EVALUATION

Monitor for worsening of depression, suicidal ideation. Assess appearance, behavior, speech pattern, level of interest, mood. **Therapeutic serum level:** 115–300 ng/ml; **toxic serum level:** greater than 400 ng/ml. Monitor EKG if pt has history of arrhythmias.

PATIENT/FAMILY TEACHING

• Change positions slowly to avoid hypotensive effect. • Tolerance to postural hypotension, sedative, anticholinergic effects usually develops during early therapy. • Maximum therapeutic effect may be noted in 2–4 wks. • Do not abruptly discontinue medication. • Avoid alcohol. • Report worsening depression, suicidal ideation, unusual changes in behavior (esp. at initiation of therapy or with changes in dosage).

desloratadine

des-lor-**a**-ta-deen

(Aerius, Clarinex, Clarinex Redi-Tabs)

Do not confuse Clarinex with Celebrex or Claritin.

FIXED-COMBINATION(S)

Clarinex-D 24 Hour: desloratadine/pseudoephedrine (a sympathomimetic): 5 mg/240 mg. **Clarinex-D 12 Hour:** desloratadine/pseudoephedrine: 2.5 mg/120 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: H_1 antagonist. **CLINICAL:** Nonsedating antihistamine (see p. 54C).

ACTION

Exhibits selective peripheral histamine H_1 receptor blocking action. Competes with histamine at receptor sites. **Therapeutic Effect:** Prevents allergic response mediated by histamine (rhinitis, urticaria).

PHARMACOKINETICS

Rapidly, almost completely absorbed from GI tract. Distributed mainly in liver, lungs, GI tract, bile. Protein binding: 82%. Metabolized in liver to active metabolite and undergoes extensive first-pass metabolism. Eliminated in urine, feces. **Half-life:** 27 hrs (increased in elderly, renal/hepatic impairment).

USES

Relief of nasal/non-nasal symptoms of seasonal and perennial rhinitis (sneezing, rhinorrhea, itching/tearing of eyes, stuffiness), chronic idiopathic urticaria (hives).

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, breastfeeding.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Excreted in breast milk. **Pregnancy Category C. Children/Elderly:** More sensitive to anticholinergic effects (e.g., dry mouth, nose, throat).

INTERACTIONS

DRUG: Erythromycin, ketoconazole may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May suppress wheal, flare reactions to antigen skin testing unless antihistamines are discontinued 4 days before testing.

AVAILABILITY (Rx)

Syrup (Clarinex): 2.5 mg/5 ml. **Tablets (Clarinex):** 5 mg. **Tablets (Orally-Disintegrating [Clarinex RediTabs]):** 2.5 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

• May give with or without food.

Orally-Disintegrating Tablet

• Use immediately after removing from blister pack. • Place on tongue. • May give with or without water.

INDICATIONS/ROUTES/DOSAGE

Allergic Rhinitis, Urticaria

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 5 mg once a day. **CHILDREN 6–12 YRS:** 2.5 mg once a day. **CHILDREN 1–5 YRS:** 1.25 mg once a day. **CHILDREN 6–11 MOS:** 1 mg once a day.

Dosage in Hepatic/Renal Impairment

Dosage is decreased to 5 mg every other day.

SIDE EFFECTS

Frequent (12%): Headache. **Occasional (3%):** Dry mouth, drowsiness. **Rare (less than 3%):** Fatigue, dizziness, diarrhea, nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess lung sounds for wheezing; skin for urticaria, hives.

INTERVENTION/EVALUATION

For upper respiratory allergies, increase fluids to decrease viscosity of secretions, offset thirst, replace loss of fluids from diaphoresis. Monitor symptoms for therapeutic response.

PATIENT/FAMILY TEACHING

• Drink plenty of water (may cause dry mouth). • Avoid tasks that require alertness, motor skills until response to drug is established (may cause drowsiness). • Avoid alcohol.

desmopressin

des-moe-**press**-in
(Apo-Desmopressin, DDAVP, DDAVP Nasal, DDAVP Rhinal Tube, Minirin, Novo-Desmopressin, Octostim, Stimate)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic pituitary hormone. **CLINICAL:** Antidiuretic.

ACTION

Increases reabsorption of water by increasing permeability of collecting ducts of kidneys. Plasminogen activator. **Therapeutic Effect:** Increases plasma factor VIII (antihemophilic factor). Decreases urinary output.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2–7 hrs	8–12 hrs
IV	15–30 min	1.5–3 hrs	8–12 hrs
Intranasal	15 min–1 hr	1–5 hrs	8–12 hrs

Poorly absorbed after PO, nasal administration. Metabolism: Unknown. **Half-life: PO:** 1.5–2.5 hrs. **Intranasal:** 3.3–3.5 hrs. **IV:** 0.4–4 hrs.

USES

DDAVP Nasal: Central cranial diabetes insipidus. **Parenteral:** Central cranial diabetes insipidus. Maintain hemostasis and control bleeding in hemophilia A, von Willebrand's disease (type I). **Stimate intranasal:** Maintain hemostasis and control bleeding in hemophilia A, von Willebrand's disease (type I). **PO:** Central cranial diabetes insipidus, primary nocturnal enuresis, temporary polyuria, polydipsia following pituitary surgery or head trauma. **OFF-LABEL:** Uremic bleeding occurring with acute/chronic renal failure; prevent surgical bleeding in pts with uremia.

PRECAUTIONS

Contraindications: Hemophilia A with factor VIII levels less than 5%; hemophilia B; severe type I, type IIB, platelet-type von Willebrand's disease; hyponatremia; moderate to severe renal impairment. **Cautions:** Predisposition to thrombus formation; conditions with fluid, electrolyte imbalance; coronary artery disease; hypertensive cardiovascular disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Pregnancy Category B. Children: Caution in neonates, those younger than 3 mos (increased risk of fluid balance problems). Careful fluid restrictions recommended in infants. **Elderly:** Increased risk of hyponatremia, water intoxication.

INTERACTIONS

DRUG: Carbamazepine, lamotrigine, NSAIDs, SSRIs, tricyclic antidepressants may increase effects. **Demeclocycline, lithium** may decrease effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (DDAVP): 4 mcg/ml. **Nasal Solution (DDAVP):** 100 mcg/ml. **Nasal Spray (Stimate):** 1.5 mg/ml (150 mcg/spray). **(DDAVP):** 100 mcg/ml (10 mcg/spray). **Tablets (DDAVP):** 0.1 mg, 0.2 mg.

ADMINISTRATION/HANDLING

Reconstitution • For IV infusion, dilute in 10–50 ml 0.9% NaCl (10 ml for children 10 kg or less; 50 ml for adults, children greater than 10 kg).
Rate of Administration • Infuse over 15–30 min. • For preop use, administer 30 min before procedure.
Storage • Refrigerate. • Stable for 2 wks at room temperature.

Subcutaneous

• Withdraw dose from vial. Further dilution not required.

Intranasal

• Refrigerate DDAVP Rhinal Tube solution, Stimate nasal spray. • Rhinal Tube solution, Stimate nasal spray are stable for 3 wks at room temperature. • DDAVP nasal spray is stable at room temperature. • Calibrated catheter (rhinyle) is used to draw up measured quantity of desmopressin; with one end inserted in nose, pt blows on other end to deposit solution deep in nasal cavity. • For infants, young children, obtunded pts, air-filled syringe may be attached to catheter to deposit solution.

INDICATIONS/ROUTES/DOSAGE

Primary Nocturnal Enuresis

PO: CHILDREN 6 YRS AND OLDER: 0.2–0.6 mg once before bedtime. Limit fluid intake 1 hr prior and at least 8 hrs after dose.

Central Cranial Diabetes Insipidus

◀ALERT▶ Fluid restriction should be observed.

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 0.05 mg twice a day. Titrate to desired response. Range: 0.1–1.2 mg/day in 2–3 divided doses. **CHILDREN YOUNGER THAN 12 YRS:** Initially, 0.05 mg, twice a day. Titrate to desired response. Range: 0.1–1.2 mg daily.
IV, Subcutaneous: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2–4 mcg/day in 2 divided doses or $\frac{1}{10}$ of maintenance intranasal dose.
Intranasal *(Use 100 mcg/ml Concentration)*: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 10–40 mcg (0.1–0.4 ml) in 1–3 doses/day. **CHILDREN 3 MOS–12 YRS:** Initially, 5 mcg (0.05 ml)/day. Range: 5–30 mcg (0.05–0.3 ml)/day.

Hemophilia A, von Willebrand's Disease (Type I)

IV Infusion: ADULTS, ELDERLY, CHILDREN WEIGHING MORE THAN 10 KG: 0.3 mcg/kg diluted in 50 ml 0.9% NaCl. **CHILDREN WEIGHING 10 KG AND LESS:** 0.3 mcg/kg diluted in 10 ml 0.9% NaCl.
Intranasal *(Use 1.5 mg/ml Concentration Providing 150 mcg/Spray)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER WEIGHING MORE THAN 50 KG: 300 mcg; use 1 spray in each nostril. **ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER WEIGHING 50 KG OR LESS:** 150 mcg as a single spray.

Dosage in Renal Impairment

Creatinine clearance less than 50 ml/min: Not recommended.

SIDE EFFECTS

Occasional: IV: Pain, redness, swelling at injection site; headache; abdominal cramps; vulvular pain; flushed skin; mild B/P elevation; nausea with high dosages. **Nasal:** Rhinorrhea, nasal congestion, slight B/P elevation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Water intoxication, hyponatremia (headache, drowsiness, confusion, decreased urination, rapid weight gain, seizures, coma) may occur in overhydration. Children, elderly pts, infants are esp. at risk.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baselines for B/P, pulse, weight, serum electrolytes, urine specific gravity.

Check lab values for factor VIII coagulant concentration for hemophilia A, von Willebrand's disease; bleeding times.

INTERVENTION/EVALUATION

Check B/P, pulse with IV infusion. Monitor pt weight, fluid intake, urine volume, urine specific gravity, osmolality, serum electrolytes for diabetes insipidus. Assess factor VIII antigen levels, aPTT, factor VIII activity level for hemophilia.

PATIENT/FAMILY TEACHING

• Avoid overhydration. • Follow guidelines for proper intranasal administration. • Inform physician if headache, shortness of breath, heartburn, nausea, abdominal cramps occur.

TOP 200

desvenlafaxine

des-ven-la-**fax**-een
(Pristiq)

BLACK BOX ALERT Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenethylamine derivative. **CLINICAL:** Antidepressant (see p. 40C).

ACTION

Appears to inhibit serotonin and norepinephrine reuptake at CNS neuronal presynaptic membranes (weakly inhibits dopamine reuptake). **Therapeutic Effect:** Produces antidepressant effect.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 30%. Extensively metabolized to active metabolites. Excreted primarily in urine. Steady-state plasma levels occur in 4–5 days. **Half-life:** 9–11 hrs.

USES

Treatment of major depression exhibited as persistent, prominent dysphoria (occurring nearly every day for at least 2 wks) manifested by 4 of 8 symptoms: change in appetite, change in sleep pattern, increased fatigue, impaired concentration, feelings of guilt or worthlessness, loss of interest in usual activities, psychomotor agitation or retardation, or suicidal tendencies.

PRECAUTIONS

Contraindications: Use of MAOIs within 14 days or in those currently taking MAOIs (may cause neuroleptic malignant syndrome). Allow at least 7 days after discontinuing desvenlafaxine before starting an MAOI. **Cautions:** Renal impairment, history of seizures, bipolar disorder, those with suicidal ideation and behavior, increased intraocular pressure, narrow-angle glaucoma, cardiovascular or cerebrovascular disease.

LIFESPAN CONSIDERATIONS:

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Concurrent use of **MAOIs** may cause neuroleptic malignant syndrome: hyperthermia, rigidity, myoclonus, autonomic instability (including rapid fluctuations of vital signs), mental status changes, coma, extreme agitation. **Alcohol** increases CNS depressant effects. Decreases **midazolam** concentration. Increases **desipramine** concentration. **Aspirin, NSAIDs, warfarin** increase risk of bleeding. **Ketoconazole** may increase concentration. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depressant effects. **FOOD:** None known. **LAB VALUES:** May increase total serum cholesterol, LDL cholesterol, triglycerides, AST, ALT, prolactin level.

AVAILABILITY (Rx)

Tablets (Extended-Release): 50 mg, 100 mg.

D

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Give with food or milk if GI distress occurs. • Do not divide, crush, dissolve tablets. • Must be swallowed whole, with fluid. • Give at same time each day.

INDICATIONS/ROUTES/DOSAGE

Major Depressive Disorder

PO: ADULTS: 50 mg once daily.

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min: 50 mg every other day. **HD:** 50 mg every other day.

SIDE EFFECTS

Frequent (22%–20%): Nausea, headache. **Occasional (13%–7%):** Dizziness, dry mouth, diarrhea, sweating, constipation, insomnia, fatigue. **Rare (5%–2%):** Anorexia, drowsiness, decreased libido, erectile dysfunction in men, anxiety, blurred vision, vomiting, decreased weight, tremor, paresthesia, irritability, abnormal dreams, blurred vision, tinnitus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Seizures, syncope, extrapyramidal disorder, depersonalization, hypomania, epistaxis occur rarely. Ischemic cardiac events, including myocardial ischemia, myocardial infarction, coronary occlusion requiring revascularization, may occur. Sustained increase in diastolic B/P (10–15 mm Hg) occurs occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain initial weight, B/P. Assess appearance, behavior, speech pattern, level of interest, mood, sleep pattern. For those on long-term therapy, serum chemistry profile to assess hepatic function should be performed periodically.

INTERVENTION/EVALUATION

Assess sleep pattern for evidence of insomnia. Monitor for suicidal ideation (esp. at initiation of therapy or changes in dosage). Assess appearance, behavior, speech pattern, level of interest, mood for therapeutic response.

PATIENT/FAMILY TEACHING

• Take with food to minimize GI distress. • Do not increase, decrease, or suddenly discontinue medication. • For those on long-term therapy, obtain periodic serum chemistry profile to assess hepatic function. • Therapeutic effect may be noted within 1–4 wks. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Report worsening depression, suicidal ideation, unusual changes in behavior.

dexamethasone

dex-a-**meth**-a-sone

(Apo-Dexamethasone, Decadron, Dexamethasone Intensol, DexPak TaperPak, Diodex, Maxidex)

Do not confuse Decadron with Percodan, dexamethasone with dextroamphetamine, or Maxidex with Maxzide.

FIXED-COMBINATION(S)

Ciprodex Otic: dexamethasone/ciprofloxacin (antibiotic): 0.1%/0.3%.

Dexacidin, Maxitrol: dexamethasone/neomycin/polymyxin (antiinfectives): 0.1%/3.5 mg/10,000 units per g or ml.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Long-acting glucocorticoid. **CLINICAL:** Corticosteroid (see pp. 97C, 100C).

ACTION

Inhibits accumulation of inflammatory cells at inflammation sites, phagocytosis, lysosomal enzyme release and synthesis, and/or release of mediators of inflammation. **Therapeutic Effect:** Prevents/suppresses cell/tissue immune reactions, inflammatory process.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract after PO administration. Widely distributed. Protein binding: High. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 3–4.5 hrs.

USES

Acute exacerbations of chronic allergic disorders, cerebral edema, conditions treated by immunosuppression, inflammatory conditions, otitis externa, ophthalmic conditions (corneal injury, inflammatory conditions, allergic conjunctivitis). **OFF-LABEL:** Antiemetic, treatment of croup, dexamethasone suppression test (indicator consistent with suicide and/or depression), accelerate fetal lung maturation. Treatment of acute mountain sickness, high altitude cerebral edema.

PRECAUTIONS

Contraindications: Systemic fungal infections, cerebral malaria. **Cautions:** Thyroid disease, renal/hepatic impairment, cardiovascular disease, diabetes, glaucoma, cataracts, myasthenia gravis, pts at risk for seizures, osteoporosis, post MI.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C (D if used in the first trimester). Children:** Prolonged treatment with high-dose therapy may decrease short-term growth rate, cortisol secretion. **Elderly:** Higher risk for developing hypertension, osteoporosis.

INTERACTIONS

DRUG: Amphotericin may increase hypokalemia. May increase **digoxin** toxicity caused by hypokalemia. **CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin)** may decrease concentration. **CYP3A4 inhibitors (e.g., ketoconazole), macrolide antibiotics** may increase concentration. May decrease effects of **oral antidiabetic agents. Live virus vaccines** may decrease pt's antibody response to vaccine, increase vaccine side effects, potentiate virus replication. **HERBAL: Cat's claw, echinacea** may increase immunosuppressant effect. **FOOD:** Interferes with **calcium** absorption. **LAB VALUES:** May increase serum glucose, lipids, sodium levels. May decrease serum calcium, potassium, thyroxine, WBC.

AVAILABILITY (Rx)

Elixir: 0.5 mg/5 ml. **Injection, Solution:** 4 mg/ml, 10 mg/ml. **Ophthalmic Solution:** 0.1%. **Ophthalmic Suspension (Maxidex):** 0.1%. **Solution, Oral:** 0.5 mg/5 ml. **Solution, Oral Concentrate (Dexamethasone Intensol):** 1 mg/ml. **Tablets:** 0.5 mg, 0.75 mg, 1 mg, 1.5 mg, 2 mg, 4 mg, 6 mg. **Tablets (TaperPak [DexPak]):** 1.5 mg (35 or 51 tablets on taper dose card).

ADMINISTRATION/HANDLING

IV

ALERT Dexamethasone sodium phosphate may be given by IV push or IV infusion.

• For IV push, give over 1–4 min if dose is less than 10 mg. • For IV infusion, mix with 50–100 ml 0.9% NaCl or D_5W and infuse over 15–30 min. • For neonates, solution must be preservative free. • IV solution must be used within 24 hrs.

IM

• Give deep IM, preferably in gluteus maximus.

PO

• Give with milk, food (to decrease GI effect).

Ophthalmic Solution, Suspension

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place prescribed number of drops or ¼–½ inch ointment into pocket. • Instruct pt to close eye gently for 1–2 min (so medication will not be squeezed out of the sac). • Instruct pt to apply digital pressure to lacrimal sac at inner canthus for 1–2 min to minimize systemic absorption.

IV INCOMPATIBILITIES

Ciprofloxacin (Cipro), daunorubicin (Cerubidine), idarubicin (Idamycin), midazolam (Versed).

IV COMPATIBILITIES

Aminophylline, cimetidine (Tagamet), cisplatin (Platinol), cyclophosphamide (Cytoxan), cytarabine (Cytosar), docetaxel (Taxotere), doxorubicin (Adriamycin), etoposide (VePesid), furosemide (Lasix), granisetron (Kytril), heparin, hydromorphone (Dilaudid), lipids, lorazepam (Ativan), morphine, ondansetron (Zofran), paclitaxel (Taxol), potassium chloride, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Anti-Inflammatory

PO, IV, IM: ADULTS, ELDERLY: 0.75–9 mg/day in divided doses q6–12h. **CHILDREN:** 0.08–0.3 mg/kg/day in divided doses q6–12h.

Cerebral Edema

IV: ADULTS, ELDERLY: Initially, 10 mg, then 4 mg (IV or IM) q6h.

PO, IV, IM: CHILDREN: Loading dose of 1–2 mg/kg, then 1–1.5 mg/kg/day in divided doses q4–6h.

Nausea/Vomiting in Chemotherapy Pts

IV: ADULTS, ELDERLY: 8–20 mg once, then 4 mg (PO, IM, IV) q4–6h. **CHILDREN:** 10 mg/m^2/dose (**Maximum:** 20 mg), then 5 mg/m^2/dose q6h.

Physiologic Replacement

PO, IV, IM: ADULTS, ELDERLY, CHILDREN: 0.03–0.15 mg/kg/day in divided doses q6–12h.

Usual Ophthalmic Dosage, Ocular Inflammatory Conditions

Suspension: ADULTS, ELDERLY, CHILDREN: Initially, 2 drops q1h while awake and q2h at night for 1 day, then reduce to 3–4 times a day.

SIDE EFFECTS

Frequent: Inhalation: Cough, dry mouth, hoarseness, throat irritation. **Intranasal:** Burning, mucosal dryness. **Ophthalmic:** Blurred vision. **Systemic:** Insomnia, facial edema (cushingoid appearance [“moon face”]), moderate abdominal distention, indigestion, increased appetite, nervousness, facial flushing, diaphoresis. **Occasional: Inhalation:** Localized fungal infection (thrush). **Intranasal:** Crusting inside nose, epistaxis, sore throat, ulceration of nasal mucosa. **Ophthalmic:** Decreased vision; watering of eyes; eye pain; burning, stinging, redness of eyes; nausea; vomiting. **Systemic:** Dizziness, decreased/blurred vision. **Rare: Inhalation:** Increased bronchospasm, esophageal candidiasis. **Intranasal:** Nasal/pharyngeal candidiasis, eye pain. **Systemic:** Generalized allergic reaction (rash, urticaria); pain, redness, swelling at injection site; psychological changes; false sense of well-being; hallucinations; depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term therapy: Muscle wasting (esp. arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer disease, CHF. **Ophthalmic:** Glaucoma, ocular hypertension, cataracts. **Abrupt withdrawal following long-term therapy:** Severe joint pain, severe headache, anorexia, nausea, fever, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroids. Obtain baselines for height, weight, B/P, serum glucose, electrolytes.

INTERVENTION/EVALUATION

Monitor I&O, daily weight. Assess for edema. Evaluate food tolerance. Monitor daily pattern of bowel activity, stool consistency. Report hyperacidity promptly. Check vital signs at least twice a day. Be alert to infection (sore throat, fever, vague symptoms). Monitor serum electrolytes, esp. for hypercalcemia (muscle twitching, cramps), hypokalemia (weakness, muscle cramps, paresthesia [esp. lower extremities], nausea/vomiting, irritability), Hgb, occult blood loss. Assess emotional status, ability to sleep.

PATIENT/FAMILY TEACHING

• Do not change dose/schedule or stop taking drug. • **Must** taper off gradually under medical supervision. • Notify physician if fever, sore throat, muscle aches, sudden weight gain, edema, exposure to measles/chickenpox occurs. • Severe stress (serious infection, surgery, trauma) may require increased dosage. • Inform dentist, other physicians of dexamethasone therapy now or within past 12 mos. • Avoid alcohol, limit caffeine.

TOP 200

dexlansoprazole

dex-lan-soe-**pra**-zol
(Dexilant)

Do not confuse dexlansoprazole with aripiprazole, lansoprazole, omeprazole, pantoprazole, or rabeprazole.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzimidazole.

CLINICAL: Proton pump inhibitor (see p. 148C).

ACTION

Binds to and inhibits hydrogen-potassium adenosine triphosphatase, an enzyme on surface of gastric parietal cells, blocking the final step of acid production. **Therapeutic Effect:** Reduces gastric acid production.

PHARMACOKINETICS

Extensively metabolized in liver. Mainly excreted in urine, with slightly lesser amount eliminated in feces. Protein binding: 97%. **Half-life:** 1–2 hrs.

USES

Healing of all grades of erosive esophagitis; maintenance healing of erosive esophagitis. Treatment of heartburn associated with nonerosive gastroesophageal reflux disease (GERD).

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

Drug: May decrease **atazanavir** concentration/effects. May interfere with **ampicillin, digoxin, iron salts, ketoconazole** absorption. May increase effect of **warfarin. Sucralfate** may delay dexlansoprazole absorption (give dexlansoprazole 30 min before sucralfate). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Capsules (Delayed-Release): 30 mg, 60 mg.

ADMINISTRATION/HANDLING

PO

• Do not chew/crush delayed-release capsules. • Swallow whole. May take with or without regard to food. • If pt has difficulty swallowing capsules, open capsules, sprinkle granules on 1 tbsp of applesauce, and have pt swallow immediately.

INDICATIONS/ROUTES/DOSAGE

Erosive Esophagitis

PO: ADULTS, ELDERLY: 60 mg once daily for up to 8 wks. Maintenance of healed erosive esophagitis: 30 mg once daily for up to 6 mos.

GERD

PO: ADULTS, ELDERLY: 30 mg once daily for 4 wks.

Moderate Hepatic Impairment

PO: ADULTS, ELDERLY: Consider 30 mg maximum daily dose.

SIDE EFFECTS

Occasional (5%–4%): Diarrhea, abdominal pain. **Rare (3%–1%):** Nausea, vomiting, flatulence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory tract infection occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab values. Assess for epigastric or abdominal pain, occult blood.

INTERVENTION/EVALUATION

Assess for therapeutic response (relief of GI symptoms). Question for occurrence of diarrhea, GI discomfort, nausea. Monitor CBC, renal/hepatic function tests.

PATIENT/FAMILY TEACHING

• Do not chew/crush delayed-release capsules. • For pts who have difficulty swallowing capsules, open capsules, sprinkle granules on 1 tbsp of applesauce, and have pt swallow immediately.

dexmedetomidine

dex-med-e-**toe**-mye-deen
(Precedex)
Do not confuse Precedex with Percocet or Peridex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Alpha_2$ agonist. **CLINICAL:** Nonbarbiturate sedative, hypnotic.

ACTION

Selective $alpha_2$-adrenergic agonist. **Therapeutic Effect:** Produces analgesic, hypnotic, sedative effects.

PHARMACOKINETICS

Protein binding: 94%. Metabolized in liver. Excreted in urine. **Half-life:** 2 hrs.

USES

Sedation of initially intubated, mechanically ventilated adults during treatment in intensive care setting. Use in nonintubated pts requiring sedation before and/or during surgical and other procedures. **OFF-LABEL:** Pain relief, treatment of shivering, use in children.

PRECAUTIONS

Contraindications: None known. **Cautions:** Heart block, hepatic impairment, hypovolemia, diabetes, chronic hypertension, severe ventricular dysfunction, elderly, use of vasodilators or drugs decreasing heart rate. **Pregnancy Category C.**

INTERACTIONS

DRUG: Sedatives, opioids, hypnotics may enhance effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, potassium, AST, ALT.

AVAILABILITY (Rx)

Injection Solution: 100 mcg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute 2 ml of dexmedetomidine with 48 ml 0.9% NaCl.
Rate of Administration • Individualized, titrated to desired effect.
Storage • Store at room temperature.

IV INCOMPATIBILITIES

Do not mix dexmedetomidine with any other medications.

INDICATIONS/ROUTES/DOSAGE

Sedation

IV: ADULTS: Loading dose of 1 mcg/kg over 10 min followed by maintenance infusion of 0.2–0.7 mcg/kg/hr. **ELDERLY:** May require decreased dosage. No guidelines available.

SIDE EFFECTS

Frequent: Hypotension (30%), nausea (11%). **Occasional (3%–2%):** Pain, fever, oliguria, thirst.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bradycardia, atrial fibrillation, hypoxia, anemia, pain, pleural effusion may occur with too-rapid IV infusion.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor EKG for atrial fibrillation, pulse for bradycardia, B/P for hypotension, level of sedation. Assess respiratory rate, rhythm. Monitor ventilator settings. Do not discontinue abruptly.

TOP 200

dexmethylphenidate

dex-**meth**-il-**fen**-i-date
(Focalin, Focalin XR)

BLACK BOX ALERT Chronic use can lead to marked tolerance, psychological dependence. Frank psychosis may occur, especially with IV use. Severe depression may occur during drug withdrawal.
Do not confuse dexmethylphenidate with methadone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cerebral cortex stimulator **(Schedule II).**
CLINICAL: CNS stimulant.

ACTION

Blocks reuptake of norepinephrine, dopamine into presynaptic neurons, increasing release of these neurotransmitters into synaptic cleft. **Therapeutic Effect:** Decreases motor restlessness, fatigue; increases motor activity, mental alertness, attention span; elevates mood.

PHARMACOKINETICS

Readily absorbed from GI tract. Plasma concentrations increase rapidly. Metabolized in liver. Excreted in urine. **Half-life:** 2.2 hrs.

USES

Adjunct in treatment of ADHD with moderate to severe distractability, short attention spans, hyperactivity, emotional impulsivity in children 6 yrs and older. Focalin XR extended-release capsule approved for 30-min onset of action for treatment of ADHD.

PRECAUTIONS

Contraindications: Diagnosis or family history of Tourette's syndrome; glaucoma; history of marked agitation, anxiety, tension; motor tics; use of MAOIs within 14 days. **Cautions:** Cardiovascular disease (heart failure, recent MI), seizure disorder, psychosis, emotional instability, acute stress reactions, hyperthyroidism. Avoid use in those with history of substance abuse.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if excreted in breast milk. **Pregnancy Category C. Children:** May be more susceptible to

developing anorexia, insomnia, abdominal pain, weight loss. Chronic use may inhibit growth. In psychotic children, may exacerbate symptoms of behavior disturbance, thought disorder. **Elderly:** No age-related precautions noted.

D

INTERACTIONS

DRUG: May enhance effects of antihypertensives. May inhibit metabolism of **phenobarbital, phenytoin, primidone, tricyclic antidepressants;** decreased dosages may be necessary. May alter effects of **warfarin.** **HERBAL:** **Ephedra** may cause hypertension, arrhythmias. **Yohimbe** may increase CNS stimulation. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets (Focalin): 2.5 mg, 5 mg, 10 mg.

Capsules (Extended-Release [Focalin XR]): 5 mg, 10 mg, 15 mg, 20 mg, 30 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Do not give drug in afternoon or evening (causes insomnia). • Tablets may be crushed. • Give without regard to food. • Swallow extended-release capsules whole; do not chew, crush, divide. • May sprinkle contents of extended-release capsules on small amount of applesauce. • Give extended-release capsules once each day in the morning, before breakfast.

INDICATIONS/ROUTES/DOSAGE

ADHD

Pts not currently taking methylphenidate:

Capsules

PO: ADULTS, ELDERLY: Initially, 10 mg/day. May increase in increments of 10 mg/day at weekly intervals. **Maximum:** 40 mg/day. **CHILDREN 6 YRS AND OLDER:** Initially, 5 mg/day. May increase in increments of 5 mg/day at weekly intervals. **Maximum:** 30 mg/day.

Tablets

PO: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: Initially, 2.5 mg 2 times a day. Doses should be given at least 4 hrs apart. May increase in increments of 2.5–5 mg at weekly intervals. **Maximum:** 20 mg/day. **Extended-release:** One-half the total dose. **Maximum:** 40 mg/day for adults; 30 mg/day for children. **Conversion from methylphenidate: Immediate-release:** Initially, one-half the total dose of methylphenidate. **Maximum:** 20 mg/day. **Conversion from dexmethylphenidate immediate-release to extended-release:** Switch to same dose using extended-release formulation. **Maximum:** **ADULTS:** 40 mg/day; **CHILDREN:** 30 mg/day.

SIDE EFFECTS

Frequent: Abdominal pain, nausea, anorexia, fever. **Occasional:** Tachycardia, arrhythmias, palpitations, insomnia, twitching. **Rare:** Blurred vision, rash, arthralgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Withdrawal after prolonged therapy may unmask symptoms of underlying disorder. May lower seizure threshold in those with history of seizures. Overdose produces excessive sympathomimetic effects (vomiting, tremor, hyperreflexia, seizures, confusion, hallucinations, diaphoresis). Prolonged administration to children may delay growth. Neuroleptic malignant syndrome occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate pt for cardiac disease, psychiatric conditions.

INTERVENTION/EVALUATION

CBC, differential, platelet count, B/P, heart rate should be performed routinely during therapy. If paradoxical return of ADHD occurs, dosage should be reduced or discontinued. Weigh pediatric pt regularly to detect delayed growth.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Report any increase in seizures, chest pain, unexplained syncope. • Avoid caffeine. • Last dose should be given several hours before bedtime to prevent insomnia. • Report anxiety, fever.

dexrazoxane

dex-ra-**zoks**-ane
(Tolect, Zinecard)
Do not confuse Zinecard with Gemzar.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cytoprotective agent. **CLINICAL:** Antineoplastic.

ACTION

Rapidly penetrates myocardial cell membrane. Binds intracellular iron, prevents generation of free radicals by anthracyclines. **Therapeutic Effect:** Protects against anthracycline-induced cardiomyopathy.

PHARMACOKINETICS

Rapidly distributed after IV administration. Not bound to plasma proteins. Primarily excreted in urine. Removed by peritoneal dialysis. **Half-life:** 2.1–2.5 hrs.

USES

Tolect: Treatment of anthracycline-induced extravasation. **Zinecard:** Reduction of incidence, severity of cardiomyopathy associated with doxorubicin therapy in women with metastatic breast cancer having received a cumulative dose of 300 mg/m^2 and would benefit from continued doxorubicin therapy. Not recommended with initiation of doxorubicin therapy.

PRECAUTIONS

Contraindications: Use in nonanthracycline chemotherapy regimens. **Cautions:** Chemotherapeutic agents that are additive to myelosuppression; concurrent fluorouracil, adriamycin, cyclophosphamide (FAC) therapy. Renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be embryotoxic, teratogenic. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Information not available.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: (Zinecard): 250 mg (10 mg/ml reconstituted in 25-ml single-use vial). **(Tolect, Zinecard):** 500 mg (10 mg/ml reconstituted in 50-ml single-use vial).

ADMINISTRATION/HANDLING

◀ALERT▶ Do not mix with other drugs. Use caution in handling/preparation of reconstituted solution (glove use recommended).

IV

Reconstitution • Reconstitute with 0.167 molar (M/6) sodium lactate injection to give concentration of 10 mg dexrazoxane for each ml of sodium lactate. • May further dilute with 0.9% NaCl or D_5W. Concentration should range from 1.3–5 mg/ml. Treatment of extravasation: Further dilute reconstituted vial in 1,000 ml 0.9% NaCl.

Rate of Administration • Give reconstituted solution by slow IV push or IV infusion over 5–15 min. • After infusion is complete and before total elapsed time of 30 min from beginning of dexrazoxane infusion, give IV injection of doxorubicin. Treatment of extravasation: Infuse over 1–2 hrs in large vein other than in area of extravasation.

Storage • Store vials at room temperature. • **Zinecard:** Reconstituted solution is stable for 6 hrs at room temperature or if refrigerated. Discard unused solution. **Tolect:** Stable for 4 hrs in 0.9% NaCl.

D

IV INCOMPATIBILITIES

Do not mix dexrazoxane with other medications.

INDICATIONS/ROUTES/DOSAGE

Cardioprotective

IV *(Zinecard)*: ADULTS, CHILDREN: Recommended dosage ratio is 10 parts dexrazoxane to 1 part doxorubicin (e.g., 500 mg/m^2 dexrazoxane for every 50 mg/m^2 doxorubicin).

Anthracycline Extravasation

IV *(Tolect)*: ADULTS, ELDERLY: 1,000 mg/m^2 on days 1 and 2 (**maximum:** 2,000 mg), then 500 mg/m^2 on day 3 (**maximum:** 1,000 mg). Begin treatment within 6 hrs of extravasation.

Dosage in Renal Impairment

IV: ADULTS, ELDERLY: Moderate to severe (creatinine clearance less than 40 ml/min): Reduce dose by 50%.

SIDE EFFECTS

Frequent: Alopecia (94%), nausea (82%), vomiting (63%), fatigue/malaise (62%), anorexia (50%), stomatitis (36%), fever (35%), infection (31%), diarrhea (22%). **Occasional:** Pain at injection site (11%), neurotoxicity (16%), streaking/erythema at injection site (7%), dysphagia (6%). **Rare:** Esophagitis (5%), phlebitis (5%), urticaria (4%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Fluorouracil, adriamycin, cyclophosphamide (FAC) therapy with dexrazoxane increases risk for severe leukopenia, granulocytopenia, thrombocytopenia compared with those receiving FAC without dexrazoxane. Overdose can be removed with peritoneal dialysis or hemodialysis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Use gloves when preparing solution. If powder/solution comes in contact with skin, wash immediately with soap and water. Antiemetics may be effective in preventing, treating nausea.

INTERVENTION/EVALUATION

Frequently monitor platelets, CBC with differential for evidence of blood dyscrasias. Assess for stomatitis (burning/erythema of oral mucosa at inner margin of lips, sore throat, difficulty swallowing). Monitor hematologic status, renal/hepatic function studies, cardiac function. Monitor daily pattern of bowel activity, stool consistency. Monitor for hematologic toxicity (fever, signs of local infection, unusual bruising/bleeding from any site).

PATIENT/FAMILY TEACHING

• Alopecia is reversible, but new hair growth may have different color/texture. • New hair growth resumes 2–3 mos after last therapy dose. • Maintain fastidious oral hygiene. • Promptly report fever, sore throat, signs of local infection, bleeding, bruising. • Contact physician if persistent nausea/vomiting continues at home.

TOP 200

dextroamphetamine and amphetamine

dex-troe-am-**fet**-ah-meen/am-**fet**-ah-meen
(Adderall, Adderall-XR)

BLACK BOX ALERT High potential for abuse. Prolonged administration may lead to drug dependence.

Do not confuse Adderall with Inderal.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Amphetamine **(Schedule II). CLINICAL:** CNS stimulant.

ACTION

Enhances action of dopamine, norepinephrine by blocking reuptake from synapses. Inhibits monoamine oxidase, facilitates release of catecholamines. **Therapeutic Effect:** Increases motor activity, mental alertness; decreases drowsiness, fatigue; suppresses appetite.

PHARMACOKINETICS

Well absorbed following PO administration. Widely distributed including CNS. Metabolized in liver. Excreted in urine. Removed by hemodialysis. **Half-life:** 10–13 hrs.

USES

Treatment of narcolepsy; treatment of ADHD in hyperactive children.

PRECAUTIONS

Contraindications: Advanced arteriosclerosis, agitated mental states, glaucoma, history of drug abuse, hypersensitivity to sympathomimetic amines, hyperthyroidism, moderate to severe hypertension, symptomatic cardiovascular disease, use of MAOIs within 14 days. **Cautions:** Elderly, debilitated pts, history of seizures, mild hypertension.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 3 yrs. **Elderly:** Age-related cardiovascular, cerebrovascular disease, hepatic/renal impairment may increase risk of side effects.

INTERACTIONS

DRUG: May enhance effects of tricyclic antidepressants, sympathomimetics. **MAOIs** may prolong, intensify effects. May antagonize effects of hypotensive agents. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase plasma corticosteroid.

AVAILABILITY (Rx)

Tablets (Adderall): 5 mg, 7.5 mg, 10 mg, 12.5 mg, 15 mg, 20 mg, 30 mg.

Capsules (Extended-Release [Adderall-XR]): 5 mg, 10 mg, 15 mg, 20 mg, 25 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

• Give tablets at least 6 hrs before bedtime. • Extended-release capsules should be swallowed whole; do not break, crush, or chew. Avoid afternoon doses to prevent insomnia. • May open capsules and sprinkle on applesauce. Do not chew sprinkled beads; take immediately.

INDICATIONS/ROUTES/DOSAGE

Narcolepsy

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: Initially, 10 mg/day. Increase by 10 mg/day at weekly intervals until therapeutic response is achieved. **Maximum:** 60 mg/day given in 1–3 divided doses with interval of 4–6 hrs between doses. **CHILDREN 6–12 YRS:** Initially, 5 mg/day. Increase by 5 mg/day at weekly intervals until therapeutic response is achieved. **Maximum:** 60 mg/day given in 1–3 divided doses with interval of 4–6 hrs between doses.

ADHD

ADULTS, ELDERLY: (ADDERALL-XR): Initially, 20 mg once daily in the morning. May increase up to 60 mg/day. **CHILDREN 13–17 YRS: (ADDERALL-XR):** Initially, 10 mg once daily in the morning. May increase to 20 mg/day after 1 wk if symptoms are not controlled. May increase up to 60 mg/day. **CHILDREN 6–12 YRS: (ADDERALL):** Initially, 5 mg 1–2 times a day. May increase in 5-mg increments at weekly intervals until optimal response is obtained. **Maximum:** 40 mg/day given in 1–3 divided doses (use intervals of 4–6 hrs between additional doses). **(ADDERALL-XR):** Initially, 5–10 mg

once daily in the morning. May increase daily dose in 5- to 10-mg increments at weekly intervals. **Maximum:** 30 mg/day. **CHILDREN 3–5 YRS: (ADDERALL):** Initially, 2.5 mg/day given every morning. May increase daily dose in 2.5-mg increments at weekly intervals until optimal response is obtained. **Maximum:** 40 mg/day given in 1–3 divided doses (use intervals of 4–6 hrs between additional doses). Not recommended in children younger than 3 yrs.

SIDE EFFECTS

Frequent: Increased motor activity, talkativeness, nervousness, mild euphoria, insomnia. **Occasional:** Headache, chills, dry mouth, GI distress, worsening depression in pts who are clinically depressed, tachycardia, palpitations, chest pain, dizziness, decreased appetite.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce skin pallor/flushing, arrhythmias, psychosis. Abrupt withdrawal after prolonged use of high doses may produce lethargy (may last for wks). Prolonged administration to children with ADHD may temporarily suppress normal weight/height pattern. Avoid alcohol.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess child's attention span, impulse control, interaction with others.

INTERVENTION/EVALUATION

Monitor for CNS overstimulation, increase in B/P, growth rate, change in pulse rate, respirations, weight loss. **Narcolepsy:** Observe/document frequency of narcoleptic episodes. **ADHD:** Observe for improved attention span.

PATIENT/FAMILY TEACHING

• Normal dosage levels may produce tolerance to drug's anorexic mood-elevating effects within a few wks. • Avoid tasks that require alertness, motor skills until response to drug is established. • Dry mouth may be relieved with sugarless gum, sips of tepid water. • Take early in day. • May mask extreme fatigue. • Report pronounced anxiety, dizziness, decreased appetite, dry mouth, new or worsening behavior, chest pain, palpitations. • Avoid alcohol or large amounts of caffeine.

diazepam

TOP 200

dye-**az**-e-pam
(Apo-Diazepam, Diastat, Diazemuls, Diazepam Intensol, Novo-Dipam, Valium)
Do not confuse diazepam with diazoxide, diltiazem, Ditropan, or lorazepam, or Valium with Valcyte.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Antianxiety, skeletal muscle relaxant, anticonvulsant (see pp. 13C, 153C).

ACTION

Depresses all levels of CNS by enhancing action of gamma-aminobutyric acid, a major inhibitory neurotransmitter in the brain. **Therapeutic Effect:** Produces anxiolytic effect, elevates seizure threshold, produces skeletal muscle relaxation.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed. Protein binding: 98%. Metabolized in liver to active metabolite. Excreted in urine. Minimally removed by hemodialysis. **Half-life:** 20–70 hrs (increased in hepatic dysfunction, elderly).

USES

Short-term relief of anxiety symptoms, relief of acute alcohol withdrawal. Adjunct for relief of acute musculoskeletal conditions, treatment of seizures (IV route used for termination of status epilepticus). **Gel:** Control of increased seizure activity in refractory epilepsy in those on stable regi-

mens. **OFF-LABEL:** Treatment of panic disorder. Short-term treatment of spasticity in children with cerebral palsy. Sedation for mechanically vented pts in ICU.

PRECAUTIONS

Contraindications: Acute narrow-angle glaucoma, severe respiratory depression, severe, uncontrolled pain, severe hepatic insufficiency, sleep apnea syndrome, myasthenia gravis. Children less than 6 months of age. **Cautions:** Those receiving other CNS depressants or psychoactive agents, depression, history of drug and alcohol abuse, renal/hepatic impairment, hypoalbuminemia, respiratory disease, impaired gag reflex, concurrent use of strong CYP3A4 inhibitors or inducers.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May increase risk of fetal abnormalities if administered during first trimester of pregnancy. Chronic ingestion during pregnancy may produce withdrawal symptoms, CNS depression in neonates. **Pregnancy Category D. Children/Elderly:** Use small initial doses with gradual increases to avoid ataxia, excessive sedation.

INTERACTIONS

DRUG: **Alcohol, CNS depressants** may increase CNS depression. **CYP3A4 inducers (e.g., carbamazepine, rifampin)** may decrease concentration; **CYP3A4 inhibitors (e.g., itraconazole, ketoconazole)** may increase concentration. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration/effects. **FOOD:** **Grapefruit juice** increases concentration/effects. **LAB VALUES:** None significant. **Therapeutic serum level:** 0.5–2 mcg/ml; **toxic serum level:** greater than 3 mcg/ml.

AVAILABILITY (Rx)

Injection, Solution: 5 mg/ml. **Oral Concentrate (Diazepam Intensol):** 5 mg/ml. **Oral Solution:** 5 mg/5 ml. **Rectal Gel (Diastat)** (adult rectal tip): Delivers set doses of 12.5 mg, 15 mg, 17.5 mg, 20 mg. (pediatric rectal tip): Delivers set dose of 2.5 mg. (adult/pediatric tip): Delivers set doses of 5 mg, 7.5 mg, 10 mg. **Tablet (Valium):** 2 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Give by IV push into tubing of flowing IV solution as close as possible to vein insertion point. • Administer directly into large vein (reduces risk of thrombosis/phlebitis). Do not use small veins (e.g., wrist/dorsum of hand). • Administer IV at rate not exceeding 5 mg/min for adults. For children, give 1–2 mg/min (too-rapid IV may result in hypotension, respiratory depression). • Monitor respirations q5–15min for 2 hrs. **Storage** • Store at room temperature.

IM

• Injection may be painful. Inject deeply into deltoid muscle.

PO

• Give without regard to meals. • Dilute oral concentrate with water, juice, carbonated beverages; may be mixed in semisolid food (applesauce, pudding). • Tablets may be crushed.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), diltiazem (Cardizem), fluconazole (Diflucan), foscarnet (Foscavir), furosemide (Lasix), heparin, hydrocortisone (SoluCortef), hydromorphone (Dilaudid), meropenem (Merrem IV), potassium chloride, propofol (Diprivan), vitamins.

IV COMPATIBILITIES

Dobutamine (Dobutrex), fentanyl, morphine.

D

INDICATIONS/ROUTES/DOSAGE

Anxiety

PO: ADULTS: 2–10 mg 2–4 times a day. **ELDERLY:** Initially, 1–2 mg 1–2 times a day. **CHILDREN:** 0.12–0.8 mg/kg/day in divided doses q6–8h.
IV, IM: ADULTS: 2–10 mg; may repeat in 3–4 hrs if needed. **CHILDREN:** 0.04–0.3 mg/kg/dose q2–4h. **Maximum:** 0.6 mg/kg within 8-hr period.

Skeletal Muscle Relaxation

PO: ADULTS: 2–10 mg 2–4 times a day. **ELDERLY:** Initially, 1–2 mg 1–2 times a day. **CHILDREN:** 0.12–0.8 mg/kg/day in divided doses q6–8h.
IV, IM: ADULTS: 2–10 mg repeated in 3–4 hrs. **CHILDREN:** 0.04–0.3 mg/kg/dose q2–4h. **Maximum:** 0.6 mg/kg in an 8-hr period.

Alcohol Withdrawal

PO: ADULTS, ELDERLY: 10 mg 3–4 times during first 24 hrs, then reduced to 5 mg 3–4 times a day as needed.
IV, IM: ADULTS, ELDERLY: Initially, 10 mg, followed by 5–10 mg q3–4h.

Status Epilepticus

IV: ADULTS, ELDERLY: 5–10 mg q5–10min. **Maximum:** 30 mg. **INFANTS, CHILDREN:** 0.1–0.3 mg/kg over 5 min or less; may repeat after 5–10 min. **Maximum:** 10 mg/dose.

Control of Increased Seizure Activity (Breakthrough Seizures) in Pts with Refractory Epilepsy Who Are on Stable Regimens of Anticonvulsants

Rectal Gel: ADULTS, CHILDREN 12 YRS AND OLDER: 0.2 mg/kg; may be repeated in 4–12 hrs. **CHILDREN 6–11 YRS:** 0.3 mg/kg; may be repeated in 4–12 hrs. **CHILDREN 2–5 YRS:** 0.5 mg/kg; may be repeated in 4–12 hrs.

SIDE EFFECTS

Frequent: Pain with IM injection, drowsiness, fatigue, ataxia. **Occasional:** Slurred speech, orthostatic hypotension, headache, hypoactivity, constipation, nausea, blurred vision. **Rare:** Paradoxical CNS reactions (hyperactivity/nervousness in children, excitement/restlessness in elderly/debilitated) generally noted during first 2 wks of therapy, particularly in presence of uncontrolled pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

IV route may produce pain, swelling, thrombophlebitis, carpal tunnel syndrome. Abrupt or too-rapid withdrawal may result in pronounced restlessness, irritability, insomnia, hand tremor, abdominal/muscle cramps, diaphoresis, vomiting, seizures. Abrupt withdrawal in pts with epilepsy may produce increase in frequency/severity of seizures. Overdose results in drowsiness, confusion, diminished reflexes, CNS depression, coma. **Antidote:** Flumazenil (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations immediately before administration. **Anxiety:** Assess autonomic response (cold, clammy hands, diaphoresis), motor response (agitation, trembling, tension). **Musculoskeletal spasm:** Record onset, type, location, duration of pain. Check for immobility, stiffness, swelling. **Seizures:** Review history of seizure disorder (length, intensity, frequency, duration, LOC). Observe frequently for recurrence of seizure activity. Initiate seizure precautions.

INTERVENTION/EVALUATION

Monitor heart rate, respiratory rate, B/P, mental status. Assess children, elderly for paradoxical reaction, particularly during early therapy. Evaluate for therapeutic response (decrease in intensity/frequency of seizures; calm, facial expression, decreased restlessness; decreased intensity of skeletal muscle pain). **Therapeutic serum level:** 0.5–2 mcg/ml; **toxic serum level:** greater than 3 mcg/ml.

PATIENT/FAMILY TEACHING

• Avoid alcohol. • Limit caffeine. • May cause drowsiness. • Avoid tasks that require alertness, motor skills until response to drug is established. • May be habit forming. • Avoid abrupt discontinuation after prolonged use.

diclofenac

TOP 200

dye-**kloe**-fen-ak

(Apo-Diclo, Cambia, Cataflam, Flector, Novo-Difenac, Pennsaid, Solaraze, Voltaren, Voltaren Gel, Voltaren Ophthalmic, Voltaren XR, Zipsor)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines.

Do not confuse Cataflam with Catapres, diclofenac with Diflucan or Duphalac, or Voltaren with tramadol, Ultram, or Verelan.

FIXED-COMBINATION(S)

Arthrotec: diclofenac/misoprostol (an antisecretory gastric protectant): 50 mg/200 mcg, 75 mg/200 mcg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: Analgesic, anti-inflammatory (see p. 127C).

ACTION

Inhibits prostaglandin synthesis, intensity of pain stimulus reaching sensory nerve endings. Constricts iris sphincter. **Therapeutic Effect:** Produces analgesic, anti-inflammatory effects. Prevents miosis during cataract surgery.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	2–3 hrs	Up to 8 hrs

Completely absorbed from GI tract; penetrates cornea after ophthalmic administration (may be systemically absorbed). Protein binding: greater than 99%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 1.2–2 hrs.

USES

PO: (Immediate-release): Treatment of rheumatoid arthritis, osteoarthritis, ankylosing spondylitis, primary dysmenorrhea. **(Zipsor):** Mild to moderate pain. **(Delayed-release):** Treatment of rheumatoid arthritis, osteoarthritis, ankylosing spondylitis. **(Extended-release):** Treatment of rheumatoid arthritis, osteoarthritis. **Oral Solution (Cambia):** Treatment of migraine. **Topical Patch:** Treatment of acute pain due to minor strains, sprains, contusions. **Ophthalmic:** Treatment of photophobia, pain in pts undergoing corneal refractive surgery. **Topical Gel (3%):** Treatment of actinic keratoses. **(1%):** Treatment of osteoarthritis, joint pain (e.g., ankle, elbow, wrist). **Topical Solution:** Treatment of pain associated with osteoarthritis of knee. **OFF-LABEL:** Treatment of juvenile rheumatoid arthritis.

PRECAUTIONS

Contraindications: Asthmatic pts, hypersensitivity to aspirin, diclofenac, other NSAIDs; perioperative pain in setting of CABG surgery. **Cautions:** CHF, hypertension, renal/hepatic impairment, history of GI disease. Avoid topical gel in open skin wounds, infections, exfoliative dermatitis, eyes, neonates, infants, children.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category B (D if used in third trimester or near delivery; C for ophthalmic solution). Children:** Safety and efficacy not established. **Elderly:** GI bleeding, ulceration more likely to cause serious

adverse effects. Age-related renal impairment may increase risk of hepatic/renal toxicity; reduced dosage recommended.

INTERACTIONS

D

DRUG: May decrease effects of **antihypertensives, diuretics. Aspirin, other salicylates, warfarin** may increase risk of GI side effects/bleeding. **CYP2C9 inhibitors (e.g., voriconazole)** may increase concentration/risk of toxicity. **CYP2C9 inducers (e.g., rifampin)** may decrease effect. May increase serum **cyclosporine** concentration/toxicity. **Ophthalmic:** May decrease antiglaucoma effects of **antiglaucoma agents, epinephrine.** May decrease effects of **acetylcholine, carbachol. HERBAL: Cat's claw, dong quai, evening primrose, garlic, ginseng** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May increase urine protein, BUN, serum alkaline phosphatase, creatinine, LDH, potassium, AST, ALT. May decrease serum uric acid.

AVAILABILITY (Rx)

Adhesive Patch (Flector): 10×14 cm patch containing 180 mg diclofenac. **Capsules (Zipsor):** 25 mg. **Ophthalmic Solution (Voltaren Ophthalmic):** 0.1%. **Oral Solution (Cambia):** 25-mg, 50-mg packets. **Tablets (Cataflam):** 50 mg. **Topical Gel (Solaraze):** 3%. **(Voltaren Gel):** 1%. **Topical Solution (Pennsaid):** 1.5%.

Tablets (Delayed-Release [Voltaren]): 25 mg, 50 mg, 75 mg. **Tablets (Extended-Release [Voltaren XR]):** 100 mg.

ADMINISTRATION/HANDLING

PO

• Do not crush, break enteric-coated tablets. • May give with food, milk, antacids if GI distress occurs. • **Cambia:** Mix one packet in 1–2 oz water, stir well, and instruct pt to drink immediately.

Ophthalmic

• Place finger on lower eyelid and pull out until pocket is formed between eye and lower lid. • Place prescribed number of drops in pocket. • Instruct pt to close eye gently for 1–2 min (so medication will not be squeezed out of the sac) and to apply digital pressure to lacrimal sac for 1 min to minimize system absorption. • Remove excess solution with tissue.

Topical Solution

• Apply only to clean, dry skin. • Squeeze 10 drops into hand or directly onto knee. • Spread evenly onto knee (front, back, sides). • Repeat until 40 drops applied and knee completely covered.

Topical Gel

• Do not apply to eyes, mucous membranes, open wounds. • Avoid sunlight exposure to treated areas.

Transdermal Patch

• Apply to intact skin; avoid contact with eyes. • Do not wear when bathing/showering. • Wash hands after handling.

INDICATIONS/ROUTES/DOSAGE

Osteoarthritis

PO *(Cataflam, Voltaren)*: ADULTS, ELDERLY: 50 mg 2–3 times a day.
PO *(Voltaren XR)*: ADULTS, ELDERLY: 100 mg/day as a single dose.
Topical *(Voltaren Gel)*: 2–4 g 4 times a day. **Maximum:** (upper extremities): 8g per joint per day. (lower extremities): 16 g per joint per day.
Topical *(Pennsaid)*: 40 drops to knee 4 times/day.

Rheumatoid Arthritis (RA)

PO *(Cataflam, Voltaren)*: ADULTS, ELDERLY: 50 mg 2–4 times a day.
PO *(Voltaren XR)*: ADULTS, ELDERLY: 100 mg once a day. **Maximum:** 100 mg twice a day.

Ankylosing Spondylitis

PO *(Voltaren)*: ADULTS, ELDERLY: 100–125 mg/day in 4–5 divided doses.

Analgesia, Primary Dysmenorrhea

PO *(Cataflam)*: ADULTS, ELDERLY: 50 mg 3 times a day.

Acute Pain
Topical Patch *(Flector)*: ADULTS, ELDERLY: Apply 2 times a day.

Mild–Moderate Pain
PO: ADULTS, ELDERLY: 25 mg 4 times a day.

Migraine (Oral Solution)
PO: ADULTS, ELDERLY: 50 mg once.

Usual Pediatric Dosage
CHILDREN: 2–3 mg/kg/day in 2–4 divided doses. **Maximum:** 200 mg/day.

Actinic Keratoses
Topical *(Solaraze)*: ADULTS, ADOLESCENTS: Apply twice a day to lesion for 60–90 days.

Cataract Surgery
Ophthalmic: ADULTS, ELDERLY: Apply 1 drop to eye 4 times a day commencing 24 hrs after cataract surgery. Continue for 2 wks afterward.

Pain, Relief of Photophobia in Pts Undergoing Corneal Refractive Surgery
Ophthalmic: ADULTS, ELDERLY: Apply 1–2 drops to affected eye 1 hr before surgery, within 15 min after surgery, then 4 times a day for up to 3 days.

SIDE EFFECTS

Frequent (9%–4%): PO: Headache, abdominal cramps, constipation, diarrhea, nausea, dyspepsia. **Ophthalmic:** Burning, stinging on instillation, ocular discomfort. **Occasional (3%–1%): PO:** Flatulence, dizziness, epigastric pain. **Ophthalmic:** Ocular itching, tearing. **Rare (less than 1%): PO:** Rash, peripheral edema, fluid retention, visual disturbances, vomiting, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in acute renal failure. In those treated chronically, peptic ulcer, GI bleeding, gastritis, severe hepatic reaction (jaundice), nephrotoxicity (hematuria, dysuria, proteinuria), severe hypersensitivity reaction (bronchospasm, angioedema) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Anti-inflammatory: Assess onset, type, location, duration of pain, inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Monitor CBC, hepatic/renal function tests, urine output, occult blood test. Monitor for headache, dyspepsia. Monitor daily pattern of bowel activity, stool consistency. Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Swallow tablet whole; do not crush, chew. • Avoid aspirin, alcohol during therapy (increases risk of GI bleeding). • If GI upset occurs, take with food, milk. • Report skin rash, itching, weight gain, changes in vision, black stools, bleeding, jaundice, upper quadrant pain, persistent headache. • **Ophthalmic:** Do not use hydrogel soft contact lenses. • **Topical:** Avoid exposure to sunlight, sunlamps. • Inform physician if rash occurs.

dicyclomine

dye-**sye**-kloe-meen
(Bentyl, Bentylol, Formulex, Lomine)
Do not confuse Bentyl with Aventyl, Benadryl, Proventil, or Trental, or dicyclomine with diphenhydramine or doxycycline.

CLASSIFICATION

CLINICAL: GI antispasmodic, anticholinergic. **PHARMACOTHERAPEUTIC:** Anticholinergic, antimuscarinic agent.

D

ACTION

Directly acts as smooth muscle relaxant. **Therapeutic Effect:** Reduces tone, motility of GI tract.

PHARMACOKINETICS

Readily absorbed from GI tract. Widely distributed. Metabolized in liver. **Half-life:** 9–10 hrs.

USES

Treatment of functional disturbances of GI motility (e.g., irritable bowel syndrome). **OFF-LABEL:** Urinary incontinence.

PRECAUTIONS

Contraindications: Bladder neck obstruction, myasthenia gravis, narrow-angle glaucoma, obstructive disease of GI tract, severe ulcerative colitis, tachycardia, infants younger than 6 mos of age, nursing mothers. **Extreme Caution:** Autonomic neuropathy, mild to moderate ulcerative colitis. **Cautions:** Hyperthyroidism, hepatic/renal disease, hypertension, tachyarrhythmias, CHF, coronary artery disease, hiatal hernia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Infants, young children more susceptible to toxic effects. **Elderly:** May cause excitement, agitation, drowsiness, confusion.

INTERACTIONS

DRUG: **Antacids** may decrease absorption. May decrease absorption of **ketoconazole.** Other **anticholinergics (e.g., tricyclic antidepressants)** may increase effects. May antagonize effects of **antiglaucoma agents.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules (Bentyl): 10 mg. **Injection Solution (Bentyl):** 10 mg/ml. **Syrup (Bentyl):** 10 mg/5 ml. **Tablets (Bentyl):** 20 mg.

ADMINISTRATION/HANDLING

IM

- Injection should appear colorless.
- Do not administer IV or subcutaneous.
- Inject deep into large muscle mass.
- Do not give for longer than 2 days.

PO

- Dilute oral solution with equal volume of water just before administration.
- Administer 30 min before food.

INDICATIONS/ROUTES/DOSAGE

Functional Disturbances of GI Motility

PO: ADULTS: 10–20 mg 3–4 times a day up to 40 mg 4 times a day. **ELDERLY:** 10–20 mg 4 times a day. May increase up to 160 mg/day. **CHILDREN OLDER THAN 2 YRS:** 10 mg 3–4 times a day. **CHILDREN 6 MOS–2 YRS:** 5 mg 3–4 times a day.
IM: ADULTS: 20 mg q4–6h.

SIDE EFFECTS

Frequent: Dry mouth (sometimes severe), constipation, diminished sweating ability. **Occasional:** Blurred vision; photophobia; urinary hesitancy; drowsiness (with high dosage); agitation, excitement, confusion, drowsiness noted in elderly (even with low dosages); transient light-headedness (with IM route), irritation at injection site (with IM route). **Rare:** Confusion, hypersensitivity reaction, increased intraocular pressure, nausea, vomiting, unusual fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce temporary paralysis of ciliary muscle, pupillary dilation, tachycardia, palpitations, hot/dry/flushed skin, absence of bowel sounds, hyperthermia, increased respiratory rate, EKG abnormalities, nausea, vomiting, rash over face/upper trunk, CNS stimulation, psychosis (agitation, restlessness, rambling speech, visual hallucinations, paranoid behavior, delusions) followed by depression.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess symptoms of irritable bowel syndrome (abdominal cramping, bloating, excessive flatus).

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor I/O. Assess for urinary retention. Monitor changes in B/P, temperature. Be alert for fever (increased risk of hyperthermia). Assess skin turgor, mucous membranes to evaluate hydration status (encourage adequate fluid intake), bowel sounds for peristalsis.

PATIENT/FAMILY TEACHING

• Do not become overheated during exercise in hot weather (may result in heatstroke). • Avoid hot baths, saunas. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not take antacids or antidiarrheals within 1 hr of taking dicyclomine (decreased effectiveness).

didanosine

dye-**dan**-o-seen
(Videx, Videx EC)

BLACK BOX ALERT Pancreatitis, sometimes fatal, has been reported. Serious, sometimes fatal, hypersensitivity reactions, lactic acidosis, severe hepatomegaly with steatosis (fatty liver) have occurred.

Do not confuse Videx with Lidex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Purine nucleoside analogue. **CLINICAL:** Antiviral (see pp. 68C, 114C).

ACTION

Intracellularly converted into triphosphate, which interferes with RNA-directed DNA polymerase (reverse transcriptase). **Therapeutic Effect:** Inhibits replication of retroviruses, including HIV.

PHARMACOKINETICS

Variably absorbed from GI tract. Protein binding: less than 5%. Rapidly metabolized intracellularly to active form. Primarily excreted in urine. Partially (20%) removed by hemodialysis. **Half-life:** 1.5 hrs; metabolite, 8–24 hrs.

USES

Treatment of HIV infection in combination with other antiretroviral agents.

PRECAUTIONS

Contraindications: Hypersensitivity to didanosine or any of its components. Concurrent therapy with allopurinol or ribavirin. **Cautions:** Renal/hepatic impairment, alcoholism, elevated triglycerides, T-cell counts less than 100 cells/mm^3; extreme caution with history of pancreatitis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use during pregnancy only if clearly needed. Breastfeeding not recommended. **Pregnancy Category B. Children:** Well tolerated in those older than 3 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease absorption of **fluoroquinolones, itraconazole, ketoconazole, tetracyclines.** **HERBAL:** None significant. **FOOD:** **All foods** decrease absorption. **LAB VALUES:** May increase serum alkaline phosphatase, amylase, bilirubin, lipase, triglycerides, AST, ALT, uric acid. May decrease serum potassium, WBC, CBC.

AVAILABILITY (Rx)

◄ALERT► Chewable/dispersible buffered tablets not available in United States.

Pediatric Powder for Oral Solution (Videx): 2 g, 4 g (makes 10 mg/ml after final mixing).

Capsules (Delayed-Release [Videx EC]): 125 mg, 200 mg, 250 mg, 400 mg.

D

ADMINISTRATION/HANDLING

PO

• Store at room temperature. • Administer oral solution or tablets 30 min before or 2 hrs after a meal. • Pediatric powder for oral solution, following reconstitution as directed, is stable for 30 days if refrigerated. • **Powder for oral solution:** Add 100–200 ml water to 2 or 4 g, respectively, to provide concentration of 20 mg/ml. Immediately mix with equal amount of antacid to provide concentration of 10 mg/ml. Shake thoroughly before removing each dose. • **Enteric-coated capsules:** Swallow whole; do not break, open, chew capsules.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO *(Delayed-Release Capsules)*: ADULTS, CHILDREN 13 YRS AND OLDER, WEIGHING 60 KG OR MORE: 400 mg once a day. **ADULTS, CHILDREN 13 YRS AND OLDER, WEIGHING 25 KG TO LESS THAN 60 KG:** 250 mg once a day. **WEIGHING 20 KG TO LESS THAN 25 KG:** 200 mg once a day.

PO *(Oral Solution)*: ADULTS, CHILDREN 13 YRS AND OLDER, WEIGHING 60 KG OR MORE: 200 mg q12h or 400 mg once a day. **ADULTS, CHILDREN 13 YRS AND OLDER, WEIGHING LESS THAN 60 KG:** 125 mg q12h or 250 mg once a day. **CHILDREN 8 MOS–12 YRS:** 90–150 mg/m^2 2 times a day. **CHILDREN YOUNGER THAN 8 MOS:** 100 mg/m^2 2 times a day.

Dosage in Renal Impairment

Pts weighing less than 60 kg:

Creatinine Clearance	Oral Solution	Delayed-Release Capsules
30–59 ml/min	75 mg twice a day (or 150 mg once a day)	125 mg once a day
10–29 ml/min	100 mg once a day	125 mg once a day
Less than 10 ml/min	75 mg once a day	N/A

Pts weighing 60 kg or more:

Creatinine Clearance	Oral Solution	Delayed-Release Capsules
30–59 ml/min	100 mg twice a day (or 200 mg once a day)	200 mg once a day
10–29 ml/min	150 mg once a day	125 mg once a day
Less than 10 ml/min	100 mg once a day	125 mg once a day

SIDE EFFECTS

Frequent: Adults (greater than 10%): Diarrhea, neuropathy, chills, fever. **Children (greater than 25%):** Chills, fever, decreased appetite, pain, malaise, nausea, vomiting, diarrhea, abdominal pain, headache, nervousness, cough, rhinitis, dyspnea, asthenia (loss of strength, energy), rash, pruritus. **Occasional: Adults (9%–2%):** Rash, pruritus, headache, abdominal pain, nausea, vomiting, pneumonia, myopathy, decreased appetite, dry mouth, dyspnea. **Children (25%–10%):** Failure to thrive, weight loss, stomatitis, oral thrush, ecchymosis, arthritis, myalgia, insomnia, epistaxis, pharyngitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pneumonia, opportunistic infections occur occasionally. Peripheral neuropathy, potentially fatal pancreatitis are major toxic effects.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline values for CBC, serum renal/hepatic function tests, vital signs, weight.

INTERVENTION/EVALUATION

In event of abdominal pain, nausea, vomiting, elevated serum amylase, triglycerides, contact physician before administering medication (potential for pancreatitis). Be alert to sensation of burning feet, restless legs syndrome (unable to find comfortable position for legs or feet), lack of coordination, other signs of peripheral neuropathy. Monitor daily pattern of bowel activity, stool consistency. Check skin for rash, eruptions. Monitor serum electrolytes, CBC, glucose, renal/hepatic function tests, Hgb, platelet count. Assess for opportunistic infections (onset of fever, oral mucosa changes, cough, other respiratory symptoms). Check weight at least twice per wk. Assess for visual, auditory difficulty; provide protection from light if photophobia develops.

PATIENT/FAMILY TEACHING

• Avoid alcohol. • Inform physician if numbness, tingling, persistent severe abdominal pain, nausea, vomiting, change in vision occur. • Shake oral suspension well before use, keep refrigerated. • Discard solution after 30 days, obtain new supply.

digoxin

TOP 200 HIGH ALERT

di-**jox**-in
(Apo-Digoxin 🍁, Lanoxin)
Do not confuse digoxin with Desoxyn or doxepin, or Lanoxin with Lasix, Levoxyl, Levsinex, Lonox, or Mefoxin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cardiac glycoside. **CLINICAL:** Antiarrhythmic, cardiotonic.

ACTION

Increases influx of calcium from extracellular to intracellular cytoplasm. **Therapeutic Effect:** Potentiates activity of contractile cardiac muscle fibers, increases force of myocardial contraction. Slows the heart rate by decreasing conduction through SA, AV nodes.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–2 hrs	2–8 hrs	3–4 days
IV	5–30 min	1–4 hrs	3–4 days

Readily absorbed from GI tract. Widely distributed. Protein binding: 30%. Partially metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 36–48 hrs (increased in renal impairment, elderly).

USES

Treatment of mild to moderate CHF, chronic atrial fibrillation (rate-controlled). **OFF-LABEL:** Fetal tachycardia with or without hydrops; decrease ventricular rate in supraventricular tachyarrhythmias.

PRECAUTIONS

Contraindications: Ventricular fibrillation. **Cautions:** Renal impairment, sinus nodal disease, acute MI (within 6 mos), second- or third-degree heart block (unless functioning pacemaker), concurrent use of strong inducers or inhibitors of P-glycoprotein (cyclosporine), hyperthyroidism, hypothyroidism.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Premature infants more susceptible to toxicity. **Elderly:** Age-related hepatic/renal impairment may require dosage adjustment. Increased risk of loss of appetite.

INTERACTIONS

DRUG: **Amiodarone** may increase concentration/toxicity. **Beta-blockers, calcium channel blockers** may have

additive effect on slowing AV nodal conduction. **Potassium-depleting diuretics** may increase toxicity due to hypokalemia. **Sympathomimetics** may increase risk of arrhythmias. **HERBAL: Ephedra** may increase risk of arrhythmias. **Licorice** may cause sodium and water retention, loss of potassium. **FOOD: Meals with increased fiber (bran) or high in pectin** may decrease absorption. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Oral Solution (Lanoxin): 50 mcg/ml. **Injection Solution (Lanoxin):** 100 mcg/ml, 250 mcg/ml. **Tablets (Lanoxin):** 125 mcg, 250 mcg.

ADMINISTRATION/HANDLING

◀ALERT▶ IM rarely used (produces severe local irritation, erratic absorption). If no other route possible, give deep into muscle followed by massage. Give no more than 2 ml at any one site.

IV

• May give undiluted or dilute with at least a 4-fold volume of Sterile Water for Injection or D_5W (less may cause precipitate). • Use immediately. • Give IV slowly over at least 5 min.

PO

• May give without regard to meals. • Tablets may be crushed.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), fluconazole (Diflucan), foscarnet (Foscavir), propofol (Diprivan).

IV COMPATIBILITIES

Cimetidine (Tagamet), diltiazem (Cardizem), furosemide (Lasix), heparin, insulin regular (physically compatible for 3 hrs in 0.9% NaCl; in D_5W, a slight haze develops within 1 hr), lidocaine, lipids, midazolam (Versed), milrinone (Primacor), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Loading Dose

PO: ADULTS, ELDERLY: Initially, 0.5–0.75 mg, additional doses of 0.125–0.375 mg at 6- to 8-hr intervals. Range: 0.75–1.5 mg. **CHILDREN 10 YRS AND OLDER:** 10–15 mcg/kg. **CHILDREN 5–9 YRS:** 20–35 mcg/kg. **CHILDREN 2–4 YRS:** 30–40 mcg/kg. **CHILDREN 1–23 MOS:** 35–60 mcg/kg. **NEONATE, FULL-TERM:** 25–35 mcg/kg. **NEONATE, PREMATURE:** 20–30 mcg/kg.
IV: ADULTS, ELDERLY: 0.5–1 mg. **CHILDREN 10 YRS AND OLDER:** 8–12 mcg/kg. **CHILDREN 5–9 YRS:** 15–30 mcg/kg. **CHILDREN 2–4 YRS:** 25–35 mcg/kg. **CHILDREN 1–23 MOS:** 30–50 mcg/kg. **NEONATES, FULL-TERM:** 20–30 mcg/kg. **NEONATES, PREMATURE:** 15–25 mcg/kg.

Maintenance Dosage

	PO	IV/IM
Preterm infant	5–7.5 mcg/kg	4–6 mcg/kg
Full-term infant	6–10 mcg/kg	5–8 mcg/kg
1 mo–2 yrs	10–15 mcg/kg	7.5–12 mcg/kg
2–5 yrs	7.5–10 mcg/kg	6–9 mcg/kg
5–10 yrs	5–10 mcg/kg	4–8 mcg/kg
11–18 yrs	2.5–5 mcg/kg	2–3 mcg/kg
Adults	0.125–0.5 mg	0.1–0.4 mg

Dosage in Renal Impairment

Dosage adjustment is based on creatinine clearance. Total digitalizing dose: decrease by 50% in end-stage renal disease.

Creatinine Clearance	Dosage
10–50 ml/min	25%–75% of usual dose or q36h
Less than 10 ml/min	10%–25% of usual dose or q48h

SIDE EFFECTS

Dizziness, headache, diarrhea, rash, visual disturbances.

ADVERSE EFFECTS/ TOXIC REACTIONS

Most common early manifestations of digoxin toxicity are GI disturbances (an-

orexia, nausea, vomiting), neurologic abnormalities (fatigue, headache, depression, weakness, drowsiness, confusion, nightmares). Facial pain, personality change, ocular disturbances (photophobia, light flashes, halos around bright objects, yellow or green color perception) may occur. Sinus bradycardia, AV block, ventricular arrhythmias noted. **Antidote:** Digoxin immune FAB (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess apical pulse for 60 sec (30 sec if on maintenance therapy). If pulse is 60 or less/min (70 or less/min for children), withhold drug, contact physician. Blood samples are best taken 6–8 hrs after dose or just before next dose.

INTERVENTION/EVALUATION

Monitor pulse for bradycardia, EKG for arrhythmias for 1–2 hrs after administration (excessive slowing of pulse may be first clinical sign of toxicity). Assess for GI disturbances, neurologic abnormalities (signs of toxicity) q2–4h during loading dose (daily during maintenance). Monitor serum potassium, magnesium, calcium. **Therapeutic serum level:** 0.8–2 ng/ml; **toxic serum level:** greater than 2 ng/ml.

PATIENT/FAMILY TEACHING

• Follow-up visits, blood tests are an important part of therapy. • Follow guidelines to take apical pulse and report pulse 60 or less/min (or as indicated by physician). • Notify physician if any signs of toxicity occur. • Wear/carry identification of digoxin therapy and inform dentist, other physician of taking digoxin. • Do not increase or skip doses. • Do not take OTC medications without consulting physician. • Inform physician of decreased appetite, nausea/vomiting, diarrhea, visual changes.

digoxin immune FAB

di-**jox**-in
(Digibind, DigiFab)
Do not confuse digoxin immune FAB with Desoxyn or doxepin.

◆CLASSIFICATION

CLINICAL: Antidote.

ACTION

Binds molecularly to digoxin in extracellular space. **Therapeutic Effect:** Makes digoxin unavailable for binding at site of action on cells in the body.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	2–30 min	N/A	3–4 days

Widely distributed into extracellular space. Excreted in urine. **Half-life:** 15–20 hrs.

USES

Treatment of potentially life-threatening digoxin toxicity.

PRECAUTIONS

Contraindications: None known. **Cautions:** Cardiac failure, renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May alter serum potassium. Serum digoxin may increase precipitously and persist for up to 1 wk until FAB/digoxin complex is eliminated from body.

D

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 38-mg vial (Digibind), 40-mg vial (DigiFab).

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 38-mg vial with 4 ml Sterile Water for Injection to provide concentration of 9.5 mg/ml. • Further dilute with 50 ml 0.9% NaCl.

Rate of Administration • Infuse over 30 min (recommended that solution be infused through a 0.22-micron filter). • If cardiac arrest is imminent, may give IV push.

Storage • Refrigerate vials. • After reconstitution, stable for 4 hrs if refrigerated. • Use immediately after reconstitution.

IV INCOMPATIBILITY

None known.

INDICATIONS/ROUTES/DOSAGE

Potentially Life-Threatening Digoxin Overdose

IV: ADULTS, ELDERLY, CHILDREN: Dosage varies according to amount of digoxin to be neutralized. Refer to manufacturer's dosing guidelines.

SIDE EFFECTS

Rare: Allergic reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Digoxin toxicity may result in hyperkalemia (diarrhea, paresthesia, heaviness of legs, decreased B/P, cold skin, grayish pallor, hypotension, mental confusion, irritability, flaccid paralysis, tented T waves, widening QRS, ST depression). When effect of digitalis is reversed, hypokalemia may develop rapidly (muscle cramping, nausea, vomiting, hypoactive bowel sounds, abdominal distention, difficulty breathing, postural hypotension). Low cardiac output conditions, CHF occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain serum digoxin level before administering drug. If drawn less than 6 hrs before last digoxin dose, test result may be unreliable. Those with renal impairment may require more than 1 wk before serum digoxin assay is reliable. Assess muscle strength, mental status.

INTERVENTION/EVALUATION

Closely monitor temperature, B/P, EKG, serum potassium during and after drug is administered. Watch for changes from initial assessment (hypokalemia may result in muscle strength changes, tremor, muscle cramps, altered mental status, cardiac arrhythmias; hyponatremia may result in confusion, thirst, cold/clammy skin).

dihydroergotamine

dye-**hye**-droe-er-**got**-ah-meen (D.H.E. 45, Migranal)

BLACK BOX ALERT Concurrent use with CYP3A4 inhibitors (macrolide antibiotics, azole antifungals, protease inhibitors) increases risk of vasospasm, producing ischemia of brain and peripheral extremities.

FIXED-COMBINATION(S)

Bellergal-S: ergotamine/belladonna (anticholinergic)/phenobarbital (sedative-hypnotic): 0.6 mg/0.2 mg/ 40 mg. **Cafergot, Wigraine:** ergotamine/caffeine (stimulant): 1 mg/100 mg, 2 mg/100 mg.

Do not confuse Cafergot with Carafate.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Ergotamine derivative. **CLINICAL:** Antimigraine.

ACTION

Directly stimulates vascular smooth muscle, resulting in peripheral and cerebral

vasoconstriction. May have antagonist effects on serotonin. **Therapeutic Effect:** Suppresses vascular headaches, migraine headaches.

PHARMACOKINETICS

Slowly, incompletely absorbed from GI tract; rapidly and extensively absorbed after rectal administration. Protein binding: greater than 90%. Undergoes extensive first-pass metabolism in liver to active metabolite. Eliminated in feces by the biliary system. **Half-life:** 21 hrs.

USES

Treatment of migraine headache with or without aura. Injection used to treat cluster headache. **OFF-LABEL:** Prevention of deep venous thrombosis (DVT), prevention and treatment of orthostatic hypotension, xerostomia secondary to antidepressants, pelvic congestion with pain.

PRECAUTIONS

Contraindications: Uncontrolled hypertension, ischemic heart disease, coronary artery vasospasm, hemiplegic or basilar migraine, peripheral vascular disease, sepsis, severe renal/hepatic impairment, use of MAOIs within 14 days, use of 5-HT_B agonists within 24 hrs, CYP3A4 inhibitors (e.g., azole antifungals, macrolide antibiotics, protease inhibitors), pregnancy, breast-feeding. **Cautions:** Elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (produces uterine stimulant action, resulting in possible fetal death or retarded fetal growth); increases vasoconstriction of placental vascular bed. Drug distributed in breast milk. May produce diarrhea, vomiting in neonate. May prohibit lactation. **Pregnancy Category X. Children:** No precautions in those 6 yrs and older, but use only when unresponsive to other medication. **Elderly:** Age-related occlusive peripheral vascular disease increases risk of peripheral vasoconstriction. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Beta-blockers, erythromycin may increase risk of peripheral vasoconstriction. **Ergot alkaloids, 5-HT_B agonists (e.g., sumatriptan), systemic vasoconstrictors** may increase pressor effect. **HERBAL:** None significant. **FOOD: Coffee, cola, tea** may increase absorption. **Grapefruit, grapefruit juice** may increase concentration/toxicity. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Dihydroergotamine Injection, Solution: 1 mg/ml. **Intranasal Spray, Solution (Migranal):** 4 mg/ml (0.5 mg/spray).

INDICATIONS/ROUTES/DOSAGE

Vascular Headaches

IM/Subcutaneous: ADULTS, ELDERLY: 1 mg at onset of headache; repeat hourly. **Maximum:** 3 mg/day; 6 mg/wk.

IV: ADULTS, ELDERLY: 1 mg at onset of headache; repeat hourly. **Maximum:** 2 mg/day; 6 mg/wk.

Intranasal: ADULTS, ELDERLY: 1 spray (0.5 mg) into each nostril; repeat in 15 min. **Maximum:** 4 sprays/day; 8 sprays/wk.

SIDE EFFECTS

Occasional (5%–2%): Cough, dizziness. **Rare (less than 2%):** Myalgia, fatigue, diarrhea, upper respiratory tract infection, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged administration, excessive dosage may produce ergotamine poisoning, manifested as nausea, vomiting; paresthesia of fingers/toes, muscle pain/weakness; precordial pain; tachycardia/bradycardia; hypertension/hypotension. Vasoconstriction of peripheral arteries/arterioles may result in localized edema, pruritus. Feet, hands will become cold, pale. Muscle pain will occur when walking and later, even at rest. Other rare effects include confusion, depression, drowsiness, seizures, gangrene.

D

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of peripheral vascular disease, renal/hepatic impairment, possibility of pregnancy. Question regarding onset, location, duration of migraine, possible precipitating symptoms.

INTERVENTION/EVALUATION

Monitor closely for evidence of ergotamine overdosage as result of prolonged administration or excessive dosage.

PATIENT/FAMILY TEACHING

• Initiate therapy at first sign of migraine headache. • Report if there is need to progressively increase dose to relieve vascular headaches or if palpitations, nausea, vomiting, paresthesia, pain or weakness of extremities, chest pain are noted. • Female pts should take measures to avoid pregnancy. • Report suspected pregnancy immediately (Pregnancy Category X).

diltiazem

TOP 200

dil-**tye**-a-zem
(Apo-Diltiaz, Cardizem, Cardizem CD, Cardizem LA, Cartia XT, Dilacor XR, Dilt-CD, Dilt-XR, Diltia XT, Matzim LA, Novo-Diltiazem, Taztia XT, Tiazac)

Do not confuse Cardizem with Cardene or Cardene SR, Cartia XT with Procardia XL, diltiazem with Calan, diazepam, or Dilantin, or Tiazac with Ziac.

FIXED-COMBINATION(S)

Teczem: diltiazem/enalapril (ACE inhibitor): 180 mg/5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. **CLINICAL:** Antianginal, antihypertensive, antiarrhythmic (see pp. 18C, 61C, 77C).

ACTION

Inhibits calcium movement across cardiac, vascular smooth-muscle cell membranes (causes dilation of coronary arteries, peripheral arteries, arterioles). **Therapeutic Effect:** Decreases heart rate, myocardial contractility; slows SA, AV conduction; decreases total peripheral vascular resistance by vasodilation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–1 hr	N/A	N/A
PO (extended-release)	2–3 hrs	N/A	N/A
IV	3 min	N/A	N/A

Well absorbed from GI tract. Protein binding: 70%–80%. Undergoes first-pass metabolism in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–8 hrs.

USES

PO: Treatment of angina due to coronary artery spasm (Prinzmetal's variant angina), chronic stable angina (effort-associated angina). **Extended-release:** Treatment of essential hypertension, angina. **Cardizem LA:** Treatment of chronic stable angina. **Parenteral:** Temporary control of rapid ventricular rate in atrial fibrillation/flutter. Rapid conversion of paroxysmal supraventricular tachycardia (PSVT) to normal sinus rhythm. **OFF-LABEL:** Stable narrow complex tachycardia, recurrent SVT, pediatric hypertension.

PRECAUTIONS

Contraindications: Acute MI, pulmonary congestion, hypersensitivity to diltiazem or other calcium channel blockers, second- or third-degree AV block (except in presence of pacemaker), severe hypotension (less than 90 mm Hg, systolic), sick sinus syndrome. **Cautions:** Renal/hepatic impairment, CHF, concurrent use with beta-blocker, hypertrophic obstructive cardiomyopathy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Beta-blockers, digoxin** may have additive effect on prolonging A-V conduction. May increase concentration, risk of toxicity with **carbamazepine.** May increase serum **digoxin** concentration. **Rifampin** may decrease concentration/effects; may increase concentration of **statins** and risk of myopathy/rhabdomyolysis. **HERBAL:** **Ephedra** may worsen arrhythmias, hypertension. **Garlic** may increase antihypertensive effect. **Ginseng, yohimbe** may worsen hypertension. **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase PR interval.

AVAILABILITY (Rx)

Injection, Infusion (Ready to Hang): 1 mg/ml. **Injection, Solution:** 5 mg/ml (5 ml, 10 ml, 25 ml). **Tablets, Immediate-Release:** 30 mg, 60 mg, 90 mg, 120 mg.

Capsules, Extended-Release: (Cardizem CD): 120 mg, 180 mg, 240 mg, 300 mg, 360 mg. **(Cartia XT):** 120 mg, 180 mg, 240 mg, 300 mg. **(Dilacor XR, Dilt-XR, Diltia XT):** 120 mg, 180 mg, 240 mg. **(Taztia XT):** 120 mg, 180 mg, 240 mg, 300 mg, 360 mg. **(Tiazac):** 120 mg, 180 mg, 240 mg, 300 mg, 360 mg, 420 mg. **Capsules, Sustained-Release:** 60 mg, 90 mg, 120 mg. **Tablets, Extended-Release: (Cardizem LA):** 120 mg, 180 mg, 240 mg, 300 mg, 360 mg, 420 mg. **(Matzim LA):** 120 mg, 180 mg, 240 mg, 300 mg, 360 mg, 420 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 125 mg to 100 ml D_5W, 0.9% NaCl to provide concentration of 1 mg/ml.

Rate of Administration • Infuse per dilution/rate chart provided by manufacturer.

Storage • Refrigerate vials. • After dilution, stable for 24 hrs.

PO

• Give immediate-release tablets before meals and at bedtime. • Tablets may be crushed. • Do not open, chew, or crush sustained-release capsules or extended-release capsules or tablets. Swallow whole. • Taztia XT capsules may be opened and mixed with applesauce; follow with glass of water. • Cardizem CD, Cardizem LA, Cartia XT, Dilt-CD, Matzim LA may be given without regard to meals. • Dilacor XR, Dilt-XR, Diltia XT to be given on empty stomach.

IV INCOMPATIBILITIES

Acetazolamide (Diamox), acyclovir (Zovirax), aminophylline, ampicillin, ampicillin/sulbactam (Unasyn), cefoperazone (Cefobid), diazepam (Valium), furosemide (Lasix), heparin, insulin, nafcillin, phenytoin (Dilantin), rifampin (Rifadin), sodium bicarbonate.

IV COMPATIBILITIES

Albumin, aztreonam (Azactam), bumetanide (Bumex), cefazolin (Ancef), cefotaxime (Claforan), ceftazidime (Fortaz), ceftriaxone (Rocephin), cefuroxime (Zinacef), cimetidine (Tagamet), ciprofloxacin (Cipro), clindamycin (Cleocin), digoxin (Lanoxin), dobutamine (Dobutrex), dopamine (Intropin), gentamicin (Garamycin), hydromorphone (Dilaudid), lidocaine, lorazepam (Ativan), metoclopramide (Reglan), metronidazole (Flagyl), midazolam (Versed), morphine, multivitamins, nitroglycerin, norepinephrine (Levophed), potassium chloride, potassium phosphate, tobramycin (Nebcin), vancomycin (Vancocin).

INDICATIONS/ROUTES/DOSAGE

Angina

PO *(Immediate-Release) (Cardizem)*: **ADULTS, ELDERLY:** Initially, 30 mg 4 times a day. Range: 120–320 mg/day.

PO ***(Extended-Release) (Cardizem CD, Cartia XT, Dilacor XR, DILT-CD, DILT XR, DILT XT, Matzim LA)*****: ADULTS, ELDERLY:** Initially, 120–180 mg once daily. Range: 120–320 mg. **Maximum:** 480 mg/day.

(Extended-Release) (Tiazac, Taztia XT)**: ADULTS, ELDERLY:** Initially, 120–180 mg once daily. Range: 120–320 mg/day. **Maximum:** 540 mg/day.

(Extended-Release) (Cardizem LA)**:** Initially, 180 mg/day. Range: 120–320 mg. **Maximum:** 360 mg daily.

Hypertension

PO ***(Cardizem CD, Cartia XT, Dilacor XR, DILT CD, Diltia XT, Tiazac)*****: ADULTS, ELDERLY:** Initially, 180–240 mg/day. Range: 180–420 mg/day, **Tiazac:** 120–540 mg/day.

PO ***(Sustained-Release)*****: ADULTS, ELDERLY:** Initially, 60–120 mg twice a day. May increase at 14-day intervals. Maintenance: 240–360 mg/day.

PO ***(Cardizem LA)*****: ADULTS, ELDERLY:** Initially, 180–240 mg/day. May increase at 14-day intervals. Range: 120–540 mg/day.

Temporary Control of Rapid Ventricular Rate in Atrial Fibrillation/Flutter; Rapid Conversion of Paroxysmal Supraventricular Tachycardia to Normal Sinus Rhythm

IV Push: ADULTS, ELDERLY: Initially, 0.25 mg/kg (average dose: 20 mg) actual body weight over 2 min. May repeat in 15 min at dose of 0.35 mg/kg (average dose: 25 mg) actual body weight. Subsequent doses individualized.

IV Infusion: ADULTS, ELDERLY: After initial bolus injection, may begin infusion at 5–10 mg/hr; may increase by 5 mg/hr up to a maximum of 15 mg/hr. Infusion duration should not exceed 24 hrs.

SIDE EFFECTS

Frequent (10%–5%): Peripheral edema, dizziness, light-headedness, headache, bradycardia, asthenia (loss of strength, energy). **Occasional (5%–2%):** Nausea, constipation, flushing, EKG changes. **Rare (less than 2%):** Rash, micturition disorder (polyuria, nocturia, dysuria, frequency of urination), abdominal discomfort, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal may increase frequency, duration of angina, CHF; second- and third-degree AV block occur rarely. Overdose produces nausea, drowsiness, confusion, slurred speech, profound bradycardia. **Antidote:** Glucagon (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress). Assess baseline renal/hepatic function tests. Assess B/P, apical pulse immediately before drug is administered.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Assess for peripheral edema behind medial malleolus (sacral area in bedridden pts). Monitor pulse rate for bradycardia. Assess B/P, renal/hepatic function tests, EKG with IV therapy. Question for asthenia (loss of strength, energy), headache.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control anginal pain. • To avoid hypotensive effect, rise slowly from lying to sitting position, wait momentarily before standing. • Avoid tasks that require alertness, motor skills until response to drug is established. • Contact physician if palpitations, shortness of breath, pronounced dizziness, nausea, constipation occurs. • Avoid alcohol (may increase risk of hypotension or vasodilation).

dimenhydrinate

dye-men-**hye**-dra-nate
(Dramamine, Driminate)
Do not confuse dimenhydrinate with diphenhydramine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic, antihistamine. **CLINICAL:** Antiemetic, antivertigo (see p. 54C).

ACTION

Depressant action on labyrinthine function. **Therapeutic Effect:** Prevents, treats nausea, vomiting, vertigo associated with motion sickness.

PHARMACOKINETICS

	Onset	Peak	Duration
PO	15-60 min	1–2 hrs	4–6 hrs

Well absorbed following PO administration. Metabolized in liver. Primarily excreted in urine. **Half-life:** 1.5 hrs.

USES

Prevention and treatment of nausea, vomiting, dizziness, vertigo associated with motion sickness.

PRECAUTIONS

Contraindications: None known. **Cautions:** Narrow-angle glaucoma, peptic ulcer, prostatic hyperplasia, pyloroduodenal or bladder neck obstruction, asthma, COPD, increased IOP, cardiovascular disease, hyperthyroidism, hypertension, seizure disorders.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Small amount detected in breast milk. **Pregnancy Category B. Children/Elderly:** Paradoxical excitement may occur. **Elderly:** Increased risk for dizziness, sedation, confusion, hyperexcitability.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depressant effects. **Anticholinergics** may increase anticholinergic, CNS depressant effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May suppress wheal/flare reactions to antigen skin testing unless antihistamines are discontinued 4 days before testing.

AVAILABILITY (OTC)

Tablets: 50 mg. **Tablets, Chewable:** 50 mg.

ADMINISTRATION/HANDLING

PO

• Give with food or water. • Scored tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Nausea, Vomiting, Motion Sickness

PO: ADULTS, ELDERLY: 50–100 mg q4–6h. **Maximum:** 400 mg in 24 hrs. **CHILDREN 6–12 YRS:** 25–50 mg q6–8h. **Maximum:** 150 mg in 24 hrs. **CHILDREN 2–5 YRS:** 12.5–25 mg q6–8h. **Maximum:** 75 mg in 24 hrs.

SIDE EFFECTS

Occasional: Drowsiness, restlessness, dry mouth, hypotension, insomnia (esp. in children), excitation, lassitude. Sedation, dizziness, hypotension more likely noted in elderly. **Rare:** Visual disturbances, hearing disturbances, paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Children may experience dominant paradoxical reactions (restlessness, insomnia). Overdosage may result in seizures, respiratory depression.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for dehydration if excessive vomiting occurs (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue).

INTERVENTION/EVALUATION

Monitor B/P, esp. in elderly (increased risk of hypotension). Monitor children closely for paradoxical reaction. Monitor serum electrolytes in those with severe vomiting. Assess hydration status.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcoholic beverages during therapy. • Sugarless gum, sips of tepid water may relieve dry mouth. • Coffee, tea may help reduce drowsiness.

dinoprostone

dye-noe-**pros**-tone
(Cervidil, Prepidil, Prostin E_2)

BLACK BOX ALERT To be used only by personnel medically trained in dinoprostone-specific drug effects in a hospital setting.

Do not confuse Cervidil or Prepidil with bepridil.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Prostaglandin. **CLINICAL:** Oxytocic, abortifacient.

ACTION

Directly acts on myometrium, causing softening, dilation effect of cervix. **Therapeutic Effect:** Stimulates myometrial contractions in gravid uterus.

PHARMACOKINETICS

	Onset	Peak	Duration
Uterine stimulation	10 min (contractions begin)	1–2 hrs (abortion time)	2–6 hrs (contractions persist)

Undergoes rapid enzymatic deactivation primarily in maternal lungs. Protein binding: 73%. Primarily excreted in urine. **Half-life:** Less than 5 min.

USES

Vaginal suppository: To induce abortion from wk 12 through wk 20 of pregnancy to evacuate uterine contents in missed abortion or intrauterine fetal death up to 28 wks gestational age (as calculated from first day of last normal menstrual period), benign hydatidiform mole. **Gel:** Ripening unfavorable cervix in pregnant women at or near term with medical/obstetric need for labor induction. Induction of labor at or near term. **Vaginal insert:** Initiation and/or cervical ripening in pts with medical indication for induction of labor.

PRECAUTIONS

Contraindications: Gel: Active cardiac, hepatic, pulmonary, renal disease; acute pelvic inflammatory disease (PID); fetal malpresentation; grand multiparae with 6 or more previous term pregnancy cases with nonvertex presentation; history of cesarean section, major uterine surgery; history of difficult labor, traumatic delivery; hypersensitivity to other prostaglandins; placenta previa, unexplained vaginal bleeding during this pregnancy; pts for whom vaginal delivery is not indicated (vasa previa, active herpes genitalia); significant cephalopelvic disproportion. **Vaginal Suppository:** Active cardiac, hepatic, pulmonary, renal disease; acute PID. **Cautions:** Cervicitis, infected endocervical lesions, acute vaginitis, history of asthma, hypotension/hypertension, anemia, jaundice, diabetes, epilepsy, uterine fibroids, compromised (scarred) uterus, history of cardiovascular, renal/hepatic disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Suppository: Teratogenic, therefore abortion must be complete. **Gel:** Sustained uterine hyperstimulation may affect fetus (e.g., abnormal heart rate). **Pregnancy Category C. Children/Elderly:** Not used in these pt populations.

INTERACTIONS

DRUG: Oxytocics may cause uterine hypertonus, possibly resulting in uterine rupture, cervical laceration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May alter B/P, heart rate. May increase body temperature.

AVAILABILITY (Rx)

Endocervical Gel (Prepidil): 0.5 mg/3 g syringe. **Vaginal Inserts (Cervidil):** 10 mg. **Vaginal Suppositories (Prostin E_2):** 20 mg.

ADMINISTRATION/HANDLING

Gel

• Refrigerate. • Use caution in handling; prevent skin contact. Wash hands thoroughly with soap and water following administration. • Bring to room temperature just before use (avoid forcing the warming process). • Assemble dosing apparatus as described in manufacturer's insert. • Place pt in dorsal position with cervix visualized using a speculum. • Introduce gel into cervical canal just below level of internal os. • Have pt remain in supine position at least 15–30 min (minimizes leakage from cervical canal). • Wait 6–12h after gel administration before initiating oxytocin therapy.

Suppository, Vaginal Inserts

• Keep frozen (−4°F); bring to room temperature just before use. • Administer only in hospital setting with emergency equipment available. • Warm suppository to room temperature before removing foil wrapper. • Avoid skin contact (risk of absorption). • Insert high into vagina. • Pt should remain supine for 10 min after administration of suppository, 2 hrs after vaginal insert. • Wait at least 30 min after removing insert before initiating oxytocin therapy.

INDICATIONS/ROUTES/DOSAGE

Abortifacient

Intravaginal: ADULTS (VAGINAL SUPPOSITORY): 20 mg (or one suppository) high into vagina. May repeat at 3- to 5-hr intervals until abortion occurs. Do not administer for longer than 2 days.

Ripening of Unfavorable Cervix

Intracervical *(Prepidil)*: ADULTS (ENDOCERVICAL GEL): Initially, 0.5 mg (2.5 ml); if no cervical or uterine response, may repeat 0.5-mg dose in 6 hrs. **Maximum:** 1.5 mg (7.5 ml) for a 24-hr period.

Intracervical *(Cervidil)*: ADULTS (VAGINAL INSERT): 10 mg over 12-hr period; remove upon onset of active labor or 12 hrs after insertion.

SIDE EFFECTS

Frequent: Vomiting (66%), diarrhea (40%), nausea (33%). **Occasional:** Headache (10%), chills/shivering (10%), urticaria, bradycardia, increased uterine pain accompanying abortion, peripheral vasoconstriction. **Rare:** Flushing of skin, vulvar edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may cause uterine hypertonicity with spasm and tetanic contraction, leading to cervical laceration/perforation, uterine rupture/hemorrhage.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. **Suppository:** Obtain orders for antiemetics, antidiarrheals, meperidine, other pain medication for abdominal cramps. Assess any uterine activity, vaginal bleeding. **Gel:** Assess Bishop score. Assess degree of effacement (determines size of shielded endocervical catheter).

INTERVENTION/EVALUATION

Suppository: Check strength, duration, frequency of contractions. Monitor vital signs q15min until stable, then hourly until abortion complete. Check resting uterine tone. Administer medications for relief of GI effects if indicated or for abdominal cramps. **Gel:** Monitor uterine activity (onset of uterine contractions),

fetal status (heart rate), character of cervix (dilation, effacement). Have pt remain recumbent 12 hrs after application with continuous electronic monitoring of fetal heart rate, uterine activity. Record maternal vital signs at least hourly in presence of uterine activity. Reassess Bishop score.

PATIENT/FAMILY TEACHING

- **Suppository:** Report promptly fever, chills, foul-smelling/increased vaginal discharge, uterine cramps, pain.

*diphenhydrAMINE

dye-fen-**hye**-dra-meen (Allerdryl, Banophen, Benadryl, Benadryl Children's Allergy, Diphen, Diphenhist, Dytan, Genahist, Nytol)

Do not confuse Benadryl with benazepril, Bentyl, or Benylin, or diphenhydramine with desipramine, dicyclomine, or dimenhydrinate.

FIXED-COMBINATION(S)

Advil PM: diphenhydramine/ibuprofen (NSAID): 38 mg/200 mg. With calamine, an astringent, and camphor, a counterirritant **(Caladryl).**

CLASSIFICATION

PHARMACOTHERAPEUTIC: Ethanolamine. **CLINICAL:** Antihistamine, anticholinergic, antipruritic, antitussive, antiemetic, antidyskinetic (see p. 54C).

ACTION

Competitively blocks effects of histamine at peripheral H_1 receptor sites. **Therapeutic Effect:** Produces anticholinergic, antipruritic, antitussive, antiemetic, antidyskinetic, sedative effects.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–30 min	1–4 hrs	4–6 hrs
IV, IM	Less than 15 min	1–4 hrs	4–6 hrs

Well absorbed after PO, parenteral administration. Protein binding: 98%–99%. Widely distributed. Metabolized in liver. Primarily excreted in urine. **Half-life:** 1–4 hrs.

USES

Treatment of allergic reactions including nasal allergies; parkinsonism, including drug-induced extrapyramidal symptoms; prevention/treatment of nausea, vomiting, or vertigo due to motion sickness; antitussive; short-term management of insomnia; adjunct to epinephrine in treatment of anaphylaxis. Topical form used for relief of pruritus from insect bites, skin irritations.

PRECAUTIONS

Contraindications: Acute exacerbation of asthma, neonates or premature infants, breast-feeding. **Cautions:** Narrow-angle glaucoma, stenotic peptic ulcer, prostatic hypertrophy, pyloroduodenal/bladder neck obstruction, asthma, COPD, increased IOP, cardiovascular disease, hyperthyroidism.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Detected in breast milk (may produce irritability in breast-fed infants). Increased risk of seizures in neonates, premature infants if used during third trimester of pregnancy. May prohibit lactation. **Pregnancy Category B. Children:** Not recommended in newborns, premature infants (increased risk of paradoxical reaction, seizures). **Elderly:** Increased risk for dizziness, sedation, confusion, hypotension, hyperexcitability.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depressant ef-

fects. **Anticholinergics** may increase anticholinergic effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May suppress wheal/flare reactions to antigen skin testing unless drug is discontinued 4 days before testing.

AVAILABILITY (OTC)

Capsules: 25 mg (Banophen, Diphen, Genahist), 50 mg. **Cream (Benadryl):** 1%, 2%. **Injection Solution (Benadryl):** 50 mg/ml. **Syrup (Diphen, Diphenhist):** 12.5 mg/5 ml. **Tablets (Banophen, Benadryl, Genahist):** 25 mg, 50 mg. **Tablets, Orally-Disintegrating (Benadryl Children's Allergy):** 12.5 mg, 25 mg.

ADMINISTRATION/HANDLING

IV

• May be given undiluted. • Give IV injection over at least 1 min. **Maximum rate:** 25 mg/min.

IM

• Give deep IM into large muscle mass.

PO

• Give with food to decrease GI distress.
• Scored tablets may be crushed.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), dexamethasone (Decadron), foscarnet (Foscavir).

IV COMPATIBILITIES

Atropine, cisplatin (Platinol), cyclophosphamide (Cytoxan), cytarabine (Ara-C), droperidol (Inapsine), fentanyl, glycopyrrolate (Robinul), heparin, hydrocortisone (Solu-Cortef), hydromorphone (Dilaudid), hydroxyzine (Vistaril), lidocaine, lipids, metoclopramide (Reglan), ondansetron (Zofran), potassium chloride, promethazine (Phenergan), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Moderate to Severe Allergic Reaction

PO: ADULTS, ELDERLY: 25–50 mg q6–8h. **Maximum:** 400 mg/day. **IM, IV:** 10–50 mg/dose. **PO, IV, IM: CHILDREN:** 5 mg/kg/day in divided doses q6–8h. **Maximum:** 300 mg/day.

Motion Sickness

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 25–50 mg q4–6h. **Maximum:** 300 mg/day. **CHILDREN 6–11 YRS:** 12.5–25 mg q4–6h. **Maximum:** 150 mg/day. **CHILDREN 2–5 YRS:** 6.25 mg q4–6h. **Maximum:** 37.5 mg/day.

Parkinson's Disease

IM, IV ***(Dystonic Reaction):*** 50 mg; may repeat in 20–30 min.

Antitussive

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 25 mg q4h. **Maximum:** 150 mg/day. **CHILDREN 6–11 YRS:** 12.5 mg q4h. **Maximum:** 75 mg/day. **CHILDREN 2–5 YRS:** 6.25 mg q4h. **Maximum:** 37.5 mg/day.

Nighttime Sleep Aid

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 50 mg at bedtime. **CHILDREN 2–11 YRS:** 1 mg/kg/dose. **Maximum:** 50 mg.

Pruritus

Topical: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Apply 1% or 2% cream or spray 3–4 times a day. **CHILDREN 2–11 YRS:** Apply 1% cream or spray 3–4 times a day.

SIDE EFFECTS

Frequent: Drowsiness, dizziness, muscle weakness, hypotension, urinary retention, thickening of bronchial secretions, dry mouth, nose, throat, lips; in elderly: sedation, dizziness, hypotension. **Occasional:** Epigastric distress, flushing, visual/hearing disturbances, paresthesia, diaphoresis, chills.

D

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reactions (eczema, pruritus, rash, cardiac disturbances, photosensitivity) may occur. Overdose symptoms may vary from CNS depression (sedation, apnea, hypotension, cardiovascular collapse, death) to severe paradoxical reactions (hallucinations, tremors, seizures). Children, infants, neonates may experience paradoxical reactions (restlessness, insomnia, euphoria, nervousness, tremors). Overdosage in children may result in hallucinations, seizures, death.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If pt is having acute allergic reaction, obtain history of recently ingested foods, drugs, environmental exposure, emotional stress. Monitor B/P rate, depth, rhythm, type of respiration; quality, rate of pulse. Assess lung sounds for rhonchi, wheezing, rales.

INTERVENTION/EVALUATION

Monitor B/P, esp. in elderly (increased risk of hypotension). Monitor children closely for paradoxical reaction.

PATIENT/FAMILY TEACHING

• Tolerance to antihistaminic effect generally does not occur; tolerance to sedative effect may occur. • Avoid tasks that require alertness, motor skills until response to drug is established. • Dry mouth, drowsiness, dizziness may be an expected response to drug. • Avoid alcohol.

diphenoxylate with atropine

dye-fen-**ox**-i-late **at**-roe-peen (Lomotil)

Do not confuse Lomotil with Lamictal, Lamisil, or Lasix, or Lonox with Lanoxin, Loprox, or Lovenox.

FIXED-COMBINATION(S)

Lomotil: diphenoxylate/atropine (anticholinergic, antispasmodic): 2.5 mg/0.025 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Meperidine derivative. **CLINICAL:** Antidiarrheal (see p. 45C).

ACTION

Acts locally and centrally on gastric mucosa. **Therapeutic Effect:** Reduces intestinal motility.

PHARMACOKINETICS

	Onset	Peak	Duration
Antidiarrheal	45–60 min	—	3–4 hrs

Well absorbed from GI tract. Metabolized in liver to active metabolite. Primarily eliminated in feces. **Half-life:** 2.5 hrs; metabolite, 12–24 hrs.

USES

Adjunctive treatment of acute, chronic diarrhea.

PRECAUTIONS

Contraindications: Children younger than 2 yrs, dehydration, obstructive jaundice, narrow-angle glaucoma, severe hepatic disease, diarrhea associated with pseudomembranous colitis or enterotoxin-producing bacteria. **Cautions:** Cirrhosis, renal/hepatic disease, renal impairment, acute ulcerative colitis, dehydration.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Not recommended (increased susceptibility to toxicity, including respiratory depression). **Elderly:** More susceptible to anticholinergic effects, confusion, respiratory depression.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depressant effects. **Anticholinergics** may increase effects of atropine. **MAOIs** may precipitate hypertensive crisis. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum amylase.

AVAILABILITY (Rx)

Liquid (Lomotil): 2.5 mg/5 ml. **Tablets (Lomotil):** 2.5 mg diphenoxylate/0.025 mg atropine.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. If GI irritation occurs, give with food. • Use liquid for children 2–12 yrs (use graduated dropper for administration of liquid medication).

INDICATIONS/ROUTES/DOSAGE

Diarrhea

PO: ADULTS, ELDERLY: Initially, 5 mg (2 tabs or 10 ml) 4 times/day. **Maximum:** 20 mg/day. Then reduce dose as needed. Maintenance: 5–15 mg/day in 2–3 divided doses. **CHILDREN:** 0.3–0.4 mg/kg/day in 4 divided doses (**maximum:** 10 mg/day); then reduce dose as needed.

SIDE EFFECTS

Frequent: Drowsiness, light-headedness, dizziness, nausea. **Occasional:** Headache, dry mouth. **Rare:** Flushing, tachycardia, urinary retention, constipation, paradoxical reaction (marked by restlessness, agitation), blurred vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Dehydration may predispose pt to diphenoxylate toxicity. Paralytic ileus, toxic megacolon (constipation, decreased appetite, abdominal pain with nausea/vomiting) occur rarely. Severe anticholinergic reaction (severe lethargy, hypotonic reflexes, hyperthermia) may result in severe respiratory depression, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check baseline hydration status: skin turgor, mucous membranes for dryness, urinary status.

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. Record time of evacuation. Assess for abdominal disturbances. Discontinue medication if abdominal distention occurs.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Contact physician if fever, palpitations occur or diarrhea persists. • Report abdominal distention.

dipyridamole

HIGH ALERT

dye-pie-**rid**-ah-mole
(Apo-Dipyridamole FC, Persantine)

Do not confuse Aggrenox with Aggrastat, dipyridamole with disopyramide, or Persantine with Periactin.

FIXED-COMBINATION(S)

Aggrenox: dipyridamole/aspirin (antiplatelet): 200 mg/25 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Blood modifier, platelet aggregation inhibitor, coronary vasodilator. **CLINICAL:** Antiplatelet, antianginal, diagnostic agent (see p. 32C).

ACTION

Inhibits activity of adenosine deaminase and phosphodiesterase, enzymes causing accumulation of adenosine, cyclic adenosine monophosphate (AMP). **Thera-**

peutic Effect: Inhibits platelet aggregation; may cause coronary vasodilation.

PHARMACOKINETICS

Slowly, variably absorbed from the GI tract. Widely distributed. Protein binding: 91%–99%. Metabolized in liver. Primarily eliminated via biliary excretion. **Half-life:** 10–15 hrs.

USES

Adjunct to warfarin (Coumadin) anticoagulant therapy in prevention of postop thromboembolic complications of cardiac valve replacement. **IV:** Alternative to exercise in thallium myocardial perfusion imaging for evaluation of coronary artery disease. **OFF-LABEL:** Treatment of transient ischemic attacks (TIAs).

PRECAUTIONS

Contraindications: None known. **Cautions:** Hypotension, unstable angina, recent MI, hepatic impairment. **IV:** Bronchospastic disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Anticoagulants, aspirin, heparin, salicylates, thrombolytics may increase risk of bleeding. **HERBAL:** Herbs with antiplatelet activity, including **cat's claw, dong quai, evening primrose, garlic, ginseng** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 5 mg/ml. **Tablets:** 25 mg, 50 mg, 75 mg.

ADMINISTRATION/HANDLING

IV

• Dilute to at least 1:2 ratio with 0.9% NaCl or D_5W for total volume of 20–50 ml (undiluted may cause irritation). • Infuse over 4 min. • Inject thallium within 5 min after dipyridamole infusion.

PO

• Best taken on empty stomach with full glass of water.

IV INCOMPATIBILITIES

No information available on Y-site administration.

INDICATIONS/ROUTES/DOSAGE

Prevention of Thromboembolic Disorders

PO: ADULTS, ELDERLY: 75–100 mg 4 times a day in combination with other medications. **CHILDREN:** 3–6 mg/kg/day in 3 divided doses.

Diagnostic Aid

IV: ADULTS, ELDERLY (BASED ON WEIGHT): 0.142 mg/kg/min infused over 4 min. **Maximum:** 60 mg.

SIDE EFFECTS

Frequent (14%): Dizziness. **Occasional (6%–2%):** Abdominal distress, headache, rash. **Rare (less than 2%):** Diarrhea, vomiting, flushing, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces peripheral vasodilation, resulting in hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for presence of chest pain. Obtain baseline B/P, pulse. When used as antiplatelet, check hematologic status.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Assess B/P for hypotension. Monitor for change in heart rate. Assess skin for flushing, rash.

PATIENT/FAMILY TEACHING

• Avoid alcohol. • If nausea occurs, cola, unsalted crackers, dry toast may relieve

effect. • Therapeutic response may not be achieved before 2–3 mos of continuous therapy. • Use caution when rising suddenly from lying or sitting position.

disopyramide

dye-soe-**peer**-a-myde
(Norpace, Norpace CR, Rythmodan, Rythmodan LA)

BLACK BOX ALERT Increase in mortality or nonfatal myocardial arrest has occurred.

Do not confuse disopyramide with desipramine or dipyridamole, or Norpace with Norpramin.

CLASSIFICATION

CLINICAL: Antiarrhythmic (see p. 16C).

ACTION

Prolongs refractory period of cardiac cell by direct effect, decreasing myocardial excitability, conduction velocity. **Therapeutic Effect:** Depresses myocardial contractility. Has anticholinergic, negative inotropic effects.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–3.5 hrs	—	1.5–8.5 hrs

Rapidly, almost completely absorbed from GI tract. Protein binding: 20%–65%. Metabolized in liver. Excreted in urine. Removed by hemodialysis. **Half-life:** 4–10 hrs.

USES

Suppression/prevention of ventricular ectopy (premature ventricular contractions, ventricular tachycardia). Conversion and prevention of recurrence of atrial fibrillation, atrial flutter, and paroxysmal atrial tachycardia to normal sinus rhythm. **OFF-LABEL:** Prophylaxis/treatment of supraventricular tachycardia, hypertrophic obstructive cardiomyopathy.

PRECAUTIONS

Contraindications: Cardiogenic shock, congenital QT-interval prolongation, preexisting second- or third-degree AV block (except in pts with functioning pacemaker). **Cautions:** Sick sinus syndrome (bradycardia/tachycardia), Wolff-Parkinson-White syndrome, bundle-branch block, renal/hepatic impairment, cardiomyopathy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Increased sensitivity to anticholinergic effects.

INTERACTIONS

DRUG: Other **antiarrhythmics (e.g., diltiazem, propranolol, verapamil)** may prolong cardiac conduction, decrease cardiac output. **Hepatic enzyme inducers (e.g., carbamazepine, phenytoin)** may decrease concentration/effects. **Erythromycin** may increase concentration. **Medications prolonging QT interval (e.g., clarithromycin, tricyclic antidepressants)** may have additive effects. **HERBAL:** **Ephedra** may worsen arrhythmias. **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May decrease serum glucose. **Therapeutic serum level:** 2–8 mcg/ml; **toxic serum level:** greater than 8 mcg/ml.

AVAILABILITY (Rx)

Capsules (Norpace): 100 mg, 150 mg.

Capsules (Extended-Release [Norpace CR]): 100 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

• Administer on empty stomach. • Administer immediate-release capsules in divided doses. • Extended-release cap-

sules should be swallowed whole. • Do not crush, break, chew extended-release capsules.

INDICATIONS/ROUTES/DOSAGE

D

Suppression/Prevention of Cardiac Ectopy

PO: ADULTS, ELDERLY WEIGHING 50 KG OR MORE: 150 mg q6h (300 mg q12h with extended-release). **ADULTS, ELDERLY WEIGHING LESS THAN 50 KG:** 100 mg q6h (200 mg q12h with extended-release).

Usual Pediatric Dosage

PO *(Immediate-Release Capsules)*: CHILDREN 12–18 YRS: 6–15 mg/kg/day in divided doses q6h. **CHILDREN 5–11 YRS:** 10–15 mg/kg/day in divided doses q6h. **CHILDREN 1–4 YRS:** 10–20 mg/kg/day in divided doses q6h. **CHILDREN YOUNGER THAN 1 YR:** 10–30 mg/kg/day in divided doses q6h.

Dosage in Renal Impairment

With or without loading dose of 150 mg:

Creatinine Clearance	Dosage
40 ml/min and higher	100 mg q6h (extended-release 200 mg q12h)
30–39 ml/min	100 mg q8h
15–29 ml/min	100 mg q12h
Less than 15 ml/min	100 mg q24h

Dosage in Hepatic Impairment

ADULTS, ELDERLY WEIGHING 50 KG OR MORE: 100 mg q6h (200 mg q12h with extended-release).

Dosage in Cardiomyopathy, Cardiac Decompensation

ADULTS, ELDERLY WEIGHING 50 KG OR MORE: No loading dose; 100 mg q6–8h with gradual dosage adjustments.

SIDE EFFECTS

Frequent (greater than 9%): Dry mouth (32%), urinary hesitancy, constipation. **Occasional (9%–3%):** Blurred vision; dry eyes, nose, throat; urinary retention; headache; dizziness; fatigue; nausea. **Rare (less than 1%):** Impotence, hypotension, edema, weight gain, shortness of breath, syncope, chest pain, nervousness, diarrhea, vomiting, decreased appetite, rash, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

May produce/aggravate CHF. May produce severe hypotension, shortness of breath, chest pain, syncope (esp. in pts with primary cardiomyopathy, CHF). Hepatotoxicity occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Before giving medication, instruct pt to void (reduces risk of urinary retention).

INTERVENTION/EVALUATION

Monitor EKG for cardiac changes, particularly widening of QRS complex, prolongation of PR, QT intervals. Monitor B/P, EKG, serum potassium, glucose, hepatic enzymes. Monitor I&O (be alert to urinary retention). Assess for evidence of CHF (cough, dyspnea [particularly on exertion], rales at base of lungs, fatigue). Assist with ambulation if dizziness occurs. **Therapeutic serum level:** 2–8 mcg/ml; **toxic serum level:** greater than 8 mcg/ml.

PATIENT/FAMILY TEACHING

• Report shortness of breath, productive cough. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician approval. • Restrict salt, alcohol intake.

*DOBUTamine

HIGH ALERT

doe-**bue**-ta-meen
(Dobutrex)
Do not confuse dobutamine with dopamine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic. **CLINICAL:** Cardiac stimulant (see p. 158C).

ACTION

Direct-action inotropic agent acting primarily on $beta_1$-adrenergic receptors, decreasing preload, afterload. **Therapeutic Effect:** Enhances myocardial contractility, stroke volume, cardiac output. Improves renal blood flow, urinary output.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–2 min	10 min	Length of infusion

Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2 min.

USES

Short-term management of cardiac decompensation. **OFF-LABEL:** Positive inotropic agent in myocardial dysfunction or sepsis, stress echocardiography.

PRECAUTIONS

Contraindications: Idiopathic hypertrophic subaortic stenosis. **Cautions:** Atrial fibrillation, hypovolemia, post MI, concurrent use of MAOIs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Has not been administered to pregnant women. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Sympathomimetics** may increase effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium.

AVAILABILITY (Rx)

Infusion (Ready-to-Use): 1 mg/ml, 2 mg/ml, 4 mg/ml. **Injection Solution:** 12.5-mg/ml vial.

ADMINISTRATION/HANDLING

◀ALERT▶ Correct hypovolemia with volume expanders before dobutamine infusion. Those with atrial fibrillation should be digitalized before infusion. Administer by IV infusion only.

IV

Reconstitution • Dilute vial in 0.9% NaCl or D_5W to maximum concentration of 5,000 mcg/ml (5 mg/ml).

Rate of Administration • Use infusion pump to control flow rate. • Titrate dosage to individual response. • Infiltration causes local inflammatory changes. • Extravasation may cause dermal necrosis.

Storage • Store at room temperature (freezing produces crystallization). • Pink discoloration of solution (due to oxidation) does not indicate loss of potency if used within recommended time period. • Further diluted solution for infusion is stable for 48 hrs at room temperature, 7 days if refrigerated.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), alteplase (Activase), amphotericin B complex (Abelcet, AmBisome, Amphotec), bumetanide (Bumex), cefepime (Maxipime), foscarnet (Foscavir), furosemide (Lasix), heparin, piperacillin/tazobactam (Zosyn), sodium bicarbonate.

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium chloride, calcium gluconate, diltiazem (Cardizem), dopamine (Intropin), enalapril (Vasotec), epinephrine, famotidine (Pepcid), hydromorphone (Dilaudid), insulin (regular), lidocaine, lipids, lorazepam (Ativan), magnesium sulfate, midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, nitroprusside (Nipride), norepinephrine (Levophed), potassium chloride, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage determined by pt response to drug.

Management of Cardiac Decompensation

IV Infusion: ADULTS, ELDERLY, CHILDREN: 2.5–20 mcg/kg/min titrated to desired

response. May be infused at a rate of up to 40 mcg/kg/min to increase cardiac output. **NEONATES:** 2–20 mcg/kg/min titrated to desired response.

D

SIDE EFFECTS

Frequent (greater than 5%): Increased heart rate, B/P. **Occasional (5%–3%):** Pain at injection site. **Rare (3%–1%):** Nausea, headache, anginal pain, shortness of breath, fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce marked increase in heart rate (30 beats/min or higher), marked increase in B/P (50 mm Hg or higher), anginal pain, premature ventricular contractions (PVCs).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pt must be on continuous cardiac monitoring. Determine weight (for dosage calculation). Obtain initial B/P, heart rate, respirations. Correct hypovolemia before drug therapy.

INTERVENTION/EVALUATION

Continuously monitor for cardiac rate, arrhythmias. With physician, establish parameters for adjusting rate, stopping infusion. Maintain accurate I&O; measure urinary output frequently. Assess serum potassium, plasma dobutamine (therapeutic range: 40–190 ng/ml). Monitor B/P continuously (hypertension risk greater in pts with preexisting hypertension). Check cardiac output, pulmonary wedge pressure/central venous pressure (CVP) frequently. Immediately notify physician of decreased urinary output, cardiac arrhythmias, significant increase in B/P, heart rate, or less commonly hypotension.

docetaxel

HIGH ALERT

doe-se-**tax**-el
(Taxotere)

BLACK BOX ALERT Pts with hepatic impairment are at increased risk for grade 4 neutropenia, infections, severe thrombocytopenia, severe stomatitis, skin toxicity, death. Severe hypersensitivity reaction (rash, hypotension, bronchospasm, anaphylaxis) may occur. Fluid retention syndrome (pleural effusions, ascites, edema, dyspnea at rest) has been reported.

Do not confuse docetaxel with paclitaxel or Taxotere with Taxol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimitotic agent, taxoid. **CLINICAL:** Antineoplastic (see p. 82C).

ACTION

Disrupts microtubular cell network, essential for cellular function. **Therapeutic Effect:** Inhibits cellular mitosis.

PHARMACOKINETICS

Widely distributed. Protein binding: 94%. Extensively metabolized in liver. Excreted primarily in feces, with lesser amount in urine. **Half-life:** 11.1 hrs.

USES

Treatment of locally advanced or metastatic breast carcinoma after failure of prior chemotherapy. Treatment of metastatic non–small-cell lung cancer. Treatment of metastatic prostate cancer, head and neck cancer (with prednisone). Treatment of advanced gastric adenocarcinoma. **OFF-LABEL:** Bladder, esophageal, ovarian, small-cell lung carcinoma, soft tissue carcinoma, cervical cancer, Ewing's sarcoma, osteosarcoma.

PRECAUTIONS

Contraindications: History of severe hypersensitivity to drugs formulated with polysorbate 80, neutrophil count less than 1,500 cells/mm^3. **Cautions:** Hepatic impairment, myelosuppression, concomitant CYP3A4 inhibitors.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., erythromycin, ketoconazole) may increase concentration/toxicity. **CYP3A4 inducers (e.g., rifampin)** may decrease concentration/effects. **Live virus vaccines** may potentiate replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: Echinacea** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, AST, ALT. Reduces neutrophil, platelet counts, Hgb, Hct.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Pt should be premedicated with oral corticosteroids (e.g., dexamethasone 16 mg/day for 5 days beginning day 1 before docetaxel therapy); reduces severity of fluid retention, hypersensitivity reaction.

IV

Reconstitution • Withdraw dose and add to 250–500 ml 0.9% NaCl or D_5W in glass or polyolefin container to provide a final concentration of 0.3–0.74 mg/ml.

Rate of Administration • Administer as a 1-hr infusion. • Monitor closely for hypersensitivity reaction (flushing, localized skin reaction, bronchospasm [may occur within a few min after beginning infusion]).

Storage • Store vials between 36°F–77°F. • Protect from bright light. • If refrigerated, stand vial at room temperature for 5 min before administering (do not store in PVC bags). • Diluted solution should be used within 4 hrs.

IV INCOMPATIBILITIES

Amphotericin B (Fungizone), doxorubicin liposomal (DaunoXome), methylprednisolone (Solu-Medrol), nalbuphine (Nubain).

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, dexamethasone (Decadron), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), furosemide (Lasix), granisetron (Kytril), heparin, hydromorphone (Dilaudid), lorazepam (Ativan), magnesium sulfate, mannitol, morphine, ondansetron (Zofran), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Not recommended with total bilirubin greater than upper limit of normal (ULN), or AST and/or ALT greater than 1.5 times ULN with alkaline phosphatase greater than 2.5 times ULN.

Breast Carcinoma

IV: ADULTS: 60–100 mg/m^2 given over 1 hr q3wks as a single agent. Operable, node positive: 75 mg/m^2 q3wks for 6 courses (in combination with doxorubicin and cyclophosphamide).

Non–Small-Cell Lung Carcinoma (NSCLC)

IV: ADULTS: 75 mg/m^2 q3wks (as monotherapy or in combination with cisplatin).

Prostate Cancer

IV: ADULTS, ELDERLY: 75 mg/m^2 q3wks with concurrent administration of prednisone.

Head/Neck Cancer

IV: ADULTS, ELDERLY: 75 mg/m^2 q3wks (in combination with cisplatin and fluorouracil) for 3–4 cycles, followed by radiation therapy.

Gastric Adenocarcinoma

IV: ADULTS, ELDERLY: 75 mg/m^2 q3wks (in combination with cisplatin and fluorouracil).

D

SIDE EFFECTS

Frequent: Alopecia (80%); asthenia (loss of strength, energy) (62%); hypersensitivity reaction (e.g., dermatitis) (59%), which decreases to 16% in those pretreated with oral corticosteroids; fluid retention (49%); stomatitis (43%); nausea, diarrhea (40%); fever (30%); nail changes (28%); vomiting (24%); myalgia (19%). **Occasional:** Hypotension, edema, anorexia, headache, weight gain, infection (urinary tract, injection site, indwelling catheter tip), dizziness. **Rare:** Dry skin, sensory disorders (vision, speech, taste), arthralgia, weight loss, conjunctivitis, hematuria, proteinuria.

ADVERSE EFFECTS/ TOXIC REACTIONS

In pts with normal hepatic function tests, neutropenia (neutrophil count less than 2,000 cells/mm^3), leukopenia (WBC count less than 4,000 cells/mm^3) occur in 96% of pts; anemia (hemoglobin level less than 11 g/dl) occurs in 90% of pts; thrombocytopenia (platelet count less than 100,000 cells/mm^3) occurs in 8% of pts; infection occurs in 28% of pts. Neurosensory, neuromotor disturbances (distal paresthesia, weakness) occur in 54% and 13% of pts, respectively.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support to pt, family. Antiemetics may be effective in preventing, treating nausea/vomiting. Pt should be pretreated with corticosteroids before therapy to reduce fluid retention, hypersensitivity reaction.

INTERVENTION/EVALUATION

Frequent monitoring of blood counts is essential, particularly neutrophil count (less than 1,500 cells/mm^3 requires discontinuation of therapy). Monitor hepatic function tests, serum uric acid levels. Observe for cutaneous reactions (rash with eruptions, mainly on hands, feet). Assess for extravascular fluid accumulation: rales in lungs, dependent edema, dyspnea at rest, pronounced abdominal distention (due to ascites).

PATIENT/FAMILY TEACHING

• Alopecia is reversible, but new hair growth may have different color or texture. • New hair growth resumes 2–3 mos after last therapy dose. • Maintain fastidious oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid those who have recently taken any live virus vaccine. • Notify physician if persistent nausea, diarrhea, respiratory difficulty, chest pain, fever, chills, unusual bleeding, bruising occurs.

docusate

dok-yoo-sate

(Apo-Docusate, Colace, Diocto, Docusoft-S, Novo-Docusate, PMS-Docusate, Regulex, Selax, Soflax, Surfak)

Do not confuse Colace with Calan or Cozaar, or Surfak with Surbex.

FIXED COMBINATION(S)

Peri-Colace, Senokot-S: colace/senna (a laxative): 50 mg/8.6 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Bulk-producing laxative. **CLINICAL:** Stool softener (see p. 121C).

ACTION

Decreases surface film tension by mixing liquid with bowel contents. **Therapeutic Effect:** Increases infiltration of liquid to form a softer stool.

PHARMACOKINETICS

Minimal absorption from GI tract. Acts in small and large intestines. Results usually occur 1–2 days after first dose but may take 3–5 days.

USES

Stool softener for those who need to avoid straining during defecation; constipation associated with hard, dry stools.

PRECAUTIONS

Contraindications: Acute abdominal pain, concomitant use of mineral oil, intestinal obstruction, nausea, vomiting. **Cautions:** Do not use for longer than 1 wk.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Not recommended in those younger than 6 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Capsules: 50 mg (Colace), 100 mg (Colace, Docusoft-S), 240 mg (Surfak). **Liquid (Colace, Diocto):** 50 mg/5 ml. **Syrup (Colace, Diocto):** 60 mg/15 ml.

ADMINISTRATION/HANDLING

• Drink 6–8 glasses of water a day (aids stool softening). • Give each dose with full glass of water, fruit juice. • Administer docusate liquid with milk, fruit juice, infant formula (masks bitter taste).

INDICATIONS/ROUTES/DOSAGE

Stool Softener

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 50–500 mg/day in 1–4 divided doses. **CHILDREN 6–11 YRS:** 40–150 mg/day in 1–4 divided doses. **CHILDREN 3–5 YRS:** 20–60 mg/day in 1–4 divided doses. **CHILDREN YOUNGER THAN 3 YRS:** 10–40 mg in 1–4 divided doses.

SIDE EFFECTS

Occasional: Mild GI cramping, throat irritation (with liquid preparation). **Rare:** Rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. Record time of evacuation.

PATIENT/FAMILY TEACHING

• Institute measures to promote defecation: increase fluid intake, exercise, high-fiber diet. • Do not use for longer than 1 wk.

dofetilide

doe-**fet**-i-lide
(Tikosyn)

BLACK BOX ALERT Pt must be placed in a setting with continuous EKG monitoring for minimum of 3 days and monitored by staff familiar with treatment of life-threatening arrhythmias.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Potassium channel blocker. **CLINICAL:** Antiarrhythmic: Class III (see p. 18C).

ACTION

Prolongs repolarization without affecting conduction velocity by blocking one or more time-dependent potassium currents. No effect on sodium channels, alpha-adrenergic, beta-adrenergic receptors. **Therapeutic Effect:** Terminates

reentrant tachyarrhythmias, preventing reinduction.

PHARMACOKINETICS

Well absorbed following PO administration. 80% eliminated in urine as unchanged drug, 20% excreted as minimally active metabolites. Protein binding: 60%–70%. **Half-life:** 2–3 hrs.

USES

Maintenance of normal sinus rhythm (NSR) in pts with chronic atrial fibrillation/atrial flutter of longer than 1-wk duration who have been converted to NSR. Conversion of atrial fibrillation/flutter to NSR. **OFF-LABEL:** Treatment of atrial fibrillation in pts with hypertrophic cardiomyopathy.

PRECAUTIONS

Contraindications: Paroxysmal atrial fibrillation, congenital or acquired prolonged QT syndrome, severe renal impairment, concurrent use of drugs that may prolong QT interval, hypokalemia, hypomagnesemia, concurrent use with verapamil, itraconazole, ketoconazole, prochlorperazine, megestrol, cimetidine, hydrochlorothiazide, trimethoprim. Severe renal impairment. **Cautions:** Severe hepatic impairment, renal impairment, pts previously taking amiodarone.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Cimetidine, verapamil, itraconazole, ketoconazole, trimethoprim, hydrochlorothiazide may increase concentration, toxicity. **HERBAL: St. John's wort** may decrease concentration. **Ephedra** may worsen arrhythmias. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 125 mcg, 250 mcg, 500 mcg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Do not open capsules.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ EKG interval measurements, esp. QT interval, must be determined prior to first dose.

Antiarrhythmias

PO: ADULTS, ELDERLY: Individualized using a 7-step dosing algorithm dependent upon calculated creatinine clearance and QT measurements.

SIDE EFFECTS

Rare (less than 2%): Headache, chest pain, dizziness, dyspnea, nausea, insomnia, back/abdominal pain, diarrhea, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Angioedema, bradycardia, cerebral ischemia, facial paralysis, serious arrhythmias (ventricular, various forms of block) may be noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Prior to initiating treatment, QTc intervals must be determined. Do not use if heart rate is less than 50 beats/min. Provide continuous EKG monitoring, calculation of creatinine clearance, equipment for resuscitation available for minimum of 3 days. Anticipate proarrhythmic events.

INTERVENTION/EVALUATION

Assess for conversion of cardiac dysrhythmias and absence of new arrhythmias. Constantly monitor EKG. Provide emotional support to pt and family. Monitor renal function for electrolyte imbalance (prolonged or excessive diarrhea, sweating, vomiting, thirst).

PATIENT/FAMILY TEACHING

• Instruct pt on need for compliance and requirement for periodic monitoring of EKG and renal function.

dolasetron

doe-**las**-e-tron
(Anzemet)
Do not confuse Anzemet with Aldomet, Antivert, or Avandamet, or dolasetron with granisetron, ondansetron, or palonosetron.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective 5-HT_3 receptor antagonist. **CLINICAL:** Antiemetic.

ACTION

Acts centrally in chemoreceptor trigger zone, peripherally at the vagal nerve terminals to antagonize 5-HT_3 receptors. **Therapeutic Effect:** Prevents nausea/vomiting.

PHARMACOKINETICS

Readily absorbed from GI tract after PO administration. Protein binding: 69%–77%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 5–10 hrs.

USES

PO: Prevention of nausea/vomiting associated with cancer chemotherapy, including high-dose cisplatin; prevention of postop nausea/vomiting. **Injection:** Treatment of postop nausea/vomiting. **OFF-LABEL:** Radiation therapy-induced nausea/vomiting.

PRECAUTIONS

Contraindications: **Injection only:** Prevention of chemotherapy-induced nausea and vomiting. **Cautions:** Those who have or may have prolongation of cardiac conduction intervals, hypokalemia, hypomagnesemia, those taking diuretics with potential for inducing electrolyte disturbances, congenital prolonged QT interval syndrome, those taking antiarrhythmics that may lead to QT prolongation, cumulative high-dose anthracycline therapy, allergy to other 5-HT_3 receptor antagonists.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Medications prolonging QT interval (e.g., clarithromycin, tricyclic antidepressants)** may have additive effects. **HERBAL:** **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May transiently increase serum AST, ALT.

AVAILABILITY (Rx)

Injection, Solution: 20 mg/ml (0.625 ml, 5 ml, 25 ml).

Tablets: 50 mg, 100 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • May dilute in 0.9% NaCl, D_5W, D_5W with 0.45% NaCl, D_5W with lactated Ringer's, lactated Ringer's, or 10% mannitol injection to 50 ml.
Rate of Administration • Can be given as IV push as rapidly as 100 mg/30 sec. • Intermittent IV infusion (piggyback) may be infused over 15 min.
Storage • Store vials at room temperature. • After dilution, solution is stable for 24 hrs at room temperature or 48 hrs if refrigerated.

PO

• May give with or without food. • Do not cut, break, chew film-coated tablets.

Injection form may be mixed in juice for oral dosing. This dilution is stable for 2 hrs at room temperature.

IV INCOMPATIBILITIES

D

No information is available on Y-site administration.

INDICATIONS/ROUTES/DOSAGE

Prevention of Chemotherapy-Induced Nausea/Vomiting

PO: ADULTS: 100 mg within 1 hr of chemotherapy. **CHILDREN 2–16 YRS:** 1.8 mg/kg within 1 hr of chemotherapy. **Maximum:** 100 mg.

Prevention of Postop Nausea/Vomiting

PO: ADULTS: 100 mg within 2 hrs of surgery. **CHILDREN 2–16 YRS:** 1.2 mg/kg within 2 hrs of surgery. **Maximum:** 100 mg.

IV: ADULTS: 12.5 mg 15 min before cessation of anesthesia or as soon as nausea occurs. **CHILDREN 2–16 YRS:** 0.35 mg/kg 15 min before cessation of anesthesia or as soon as nausea occurs. **Maximum:** 12.5 mg.

Treatment of Postop Nausea/Vomiting

IV: ADULTS, ELDERLY: 12.5 mg as soon as nausea or vomiting presents. **CHILDREN 2–16 YRS:** 0.35 mg/kg as soon as nausea or vomiting presents. **Maximum:** 12.5 mg.

SIDE EFFECTS

Frequent (10%–5%): Headache, diarrhea, fatigue. **Occasional (5%–1%):** Fever, dizziness, tachycardia, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce a combination of CNS stimulant, depressant effects.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for dehydration if excessive vomiting occurs (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue). Provide emotional support.

INTERVENTION/EVALUATION

Monitor electrolytes, EKG in high-risk pts. Observe for therapeutic relief from nausea/vomiting. Maintain quiet, supportive atmosphere.

donepezil

TOP 200

doe-**nep**-e-zil
(Aricept, Aricept ODT)
Do not confuse Aricept with Aciphex, Ascriptin, or Azilect.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cholinesterase inhibitor. **CLINICAL:** Cholinergic.

ACTION

Inhibits enzyme acetylcholinesterase, increasing concentration of acetylcholine at cholinergic synapses, enhancing cholinergic function in CNS. **Therapeutic Effect:** Slows progression of Alzheimer's disease.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 96%. Extensively metabolized. Eliminated in urine, feces. **Half-life:** 70 hrs.

USES

Treatment of dementia of Alzheimer's disease. **OFF-LABEL:** Treatment of behavioral syndromes in dementia, dementia associated with Parkinson's disease, Lewy body dementia.

PRECAUTIONS

Contraindications: History of hypersensitivity to piperidine derivatives. **Cautions:** Asthma, COPD, bradycardia, bladder outflow obstruction, history of ulcer disease, those taking concurrent NSAIDs, supraventricular cardiac conduction disturbances (e.g., "sick sinus syndrome," Wolff-Parkinson-White syndrome), seizures.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effect of **anticholinergic medications.** May increase synergistic effects of **cholinergic agonists, neuromuscular blockers, succinylcholine. Ketoconazole** may inhibit metabolism of donepezil. **CYP3A4 inducers (e.g., carbamazepine, rifampin)** may decrease concentration/effects. **HERBAL: St. John's wort** may decrease concentration. **Ginkgo** may increase adverse effects. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets (Aricept): 5 mg, 10 mg, 23 mg. **Tablets (Orally-Disintegrating [Aricept ODT]):** 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• May be given at bedtime without regard to meals. • Swallow whole; do not split or crush. • **ODT:** Allow to dissolve completely on tongue. • Follow dose with water.

INDICATIONS/ROUTES/DOSAGE

Alzheimer's Disease

PO: ADULTS, ELDERLY: Initially 5 mg/day at bedtime. May increase at 4- to 6-wk intervals to 10 mg/day at bedtime. A dose of 23 mg once daily can be administered once pt has been taking 10 mg once daily for at least 3 mos.

SIDE EFFECTS

Frequent (11%–8%): Nausea, diarrhea, headache, insomnia, nonspecific pain, dizziness. **Occasional (6%–3%):** Mild muscle cramps, fatigue, vomiting, anorexia, ecchymosis. **Rare (3%–2%):** Depression, abnormal dreams, weight loss, arthritis, drowsiness, syncope, frequent urination.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in cholinergic crisis (severe nausea, increased salivation, diaphoresis, bradycardia, hypotension, flushed skin, abdominal pain, respiratory depression, seizures, cardiorespiratory collapse). Increasing muscle weakness may occur, resulting in death if muscles of respiration become involved. **Antidote:** Atropine sulfate 1–2 mg IV with subsequent doses based on therapeutic response.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess cognitive function (e.g., memory, attention, reasoning). Obtain baseline vital signs. Assess history for peptic ulcer, urinary obstruction, asthma, COPD, seizure disorder, cardiac conduction disturbances.

INTERVENTION/EVALUATION

Monitor behavior, mood/cognitive function, activities of daily living. Monitor for cholinergic reaction (GI discomfort/cramping, feeling of facial warmth, excessive salivation/diaphoresis), lacrimation, pallor, urinary urgency, dizziness. Monitor for nausea, diarrhea, headache, insomnia.

PATIENT/FAMILY TEACHING

• Report nausea, vomiting, diarrhea, diaphoresis, increased salivary secretions, severe abdominal pain, dizziness. • May take without regard to food (best taken at bedtime). • Not a cure for Alzheimer's disease but may slow progression of symptoms.

*DOPamine

HIGH ALERT

dope-a-meen

BLACK BOX ALERT If extravasation occurs, infiltrate area with phentolamine (5–10 ml 0.9% NaCl) as soon as possible, no later than 12 hrs after extravasation.

Do not confuse dopamine with dobutamine or Dopram.

D

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic (adrenergic agonist). **CLINICAL:** Cardiac stimulant, vasopressor (see p. 158C).

ACTION

Stimulates adrenergic receptors. Effects are dose dependent. Lower dosage stimulates dopaminergic receptors, causing renal vasodilation. Higher doses stimulate both dopaminergic and $beta_1$-adrenergic receptors, causing cardiac stimulation and renal vasodilation. **Therapeutic Effect: Low dosage (1–3 mcg/kg/min):** Increases renal blood flow, urinary flow, sodium excretion. **Low to moderate dosage (4–10 mcg/kg/min):** Increases myocardial contractility, stroke volume, cardiac output. **High dosage (greater than 10 mcg/kg/min):** Increases peripheral resistance, renal vasoconstriction, B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–2 min	N/A	Less than 10 min

Widely distributed. Does not cross blood-brain barrier. Metabolized in liver, kidneys, plasma. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2 min.

USES

Adjunct in treatment of hypotension, shock (associated with MI, trauma, renal failure, cardiac decompensation, open heart surgery, persisting after adequate fluid volume replacement). **OFF-LABEL:** Symptomatic bradycardia or heart block unresponsive to atropine or cardiac pacing.

PRECAUTIONS

Contraindications: Pheochromocytoma, ventricular fibrillation. **Cautions:** Ischemic heart disease, occlusive vascular disease, hypovolemia, recent use of MAOIs (within 2–3 weeks), ventricular arrhythmias, post-MI pts.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Recommended close hemodynamic monitoring (gangrene due to extravasation reported). **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May have increased effects with **vasopressors, vasoconstrictive agents. COMT inhibitors** may increase levels/effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 40 mg/ml, 80 mg/ml, 160 mg/ml. **Injection (Premix with Dextrose):** 0.8 mg/ml (250 ml, 500 ml), 1.6 mg/ml (250 ml, 500 ml), 3.2 mg/ml (250 ml).

ADMINISTRATION/HANDLING

◀ALERT▶ Blood volume depletion must be corrected before administering dopamine (may be used concurrently with fluid replacement).

IV

Reconstitution • Available prediluted in 250 or 500 ml D_5W or dilute in 250–500 ml 0.9% NaCl, D_5W, or lactated Ringer's to maximum concentration of 3,200 mcg/ml (3.2 mg/ml).

Rate of Administration • Administer into large vein (antecubital fossa, central line preferred) to prevent extravasation. • Use infusion pump to control flow rate. • Titrate drug to desired hemodynamic, renal response (optimum urinary flow determines dosage).

Storage • Do not use solutions darker than slightly yellow or discolored to yellow, brown, pink to purple (indicates decomposition of drug). • Stable for 24 hrs after dilution.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), furosemide (Lasix), insulin, sodium bicarbonate.

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium chloride, diltiazem (Cardizem), dobutamine (Dobutrex), enalapril (Vasotec), epinephrine, heparin, hydromorphone (Dilaudid), labetalol (Trandate), levofloxacin (Levaquin), lidocaine, lipids, lorazepam (Ativan), methylprednisolone (Solu-Medrol), midazolam (Versed), milrinone (Primacor), morphine, nicardipine (Cardene), nitroglycerin, norepinephrine (Levophed), piperacillin/tazobactam (Zosyn), potassium chloride, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Effects of dopamine are dose dependent. Titrate to desired response.

Acute Hypotension, Shock

IV Infusion: ADULTS, ELDERLY: Initially, 1–5 mcg/kg/min up to 20 mcg/kg/min. **Maximum:** 50 mcg/kg/min. Titrate to desired response. **CHILDREN:** Initially, 1–5 mcg/kg/min. Increase in 5–10 mcg/kg/min increments. Titrate to desired response. **Maximum:** 50 mcg/kg/min. **NEONATES:** 1–20 mcg/kg/min. Titrate to desired response.

SIDE EFFECTS

Frequent: Headache, arrhythmias, tachycardia, anginal pain, palpitations, vasoconstriction, hypotension, nausea, vomiting, dyspnea. **Occasional:** Piloerection (goose bumps), bradycardia, widening of QRS complex.

ADVERSE EFFECTS/ TOXIC REACTIONS

High doses may produce ventricular arrhythmias. Pts with occlusive vascular disease are at high risk for further compromise of circulation to extremities, which may result in gangrene. Tissue necrosis with sloughing may occur with extravasation of IV solution.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pt must be on continuous cardiac monitoring. Determine weight (for dosage calculation). Obtain initial B/P, heart rate, respirations.

INTERVENTION/EVALUATION

Continuously monitor for cardiac arrhythmias. Measure urinary output frequently. If extravasation occurs, immediately infiltrate affected tissue with 10–15 ml 0.9% NaCl solution containing 5–10 mg phentolamine mesylate. Monitor B/P, heart rate, respirations q15min during administration (more often if indicated). Assess cardiac output, pulmonary wedge pressure, or central venous pressure (CVP) frequently. Assess peripheral circulation (palpate pulses, note color/temperature of extremities). Immediately notify physician of decreased urinary output, cardiac arrhythmias, significant changes in B/P, heart rate, or failure to respond to increase or decrease in infusion rate, decreased peripheral circulation (cold, pale, mottled extremities). Taper dosage before discontinuing (abrupt cessation of therapy may result in marked hypotension). Be alert to excessive vasoconstriction (decreased urine output, increased heart rate, arrhythmias, disproportionate increase in diastolic B/P, decrease in pulse pressure); slow or temporarily stop infusion, notify physician.

doripenem

dor-i-**pen**-em
(Doribax)
Do not confuse Doribax with Zovirax, or doripenem with ertapenem, imipenem, or meropenem.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbapenem. **CLINICAL:** Antibiotic.

D

ACTION

Inactivates penicillin-binding proteins, resulting in inhibition of cell wall synthesis. **Therapeutic Effect:** Produces bacterial cell death.

PHARMACOKINETICS

Penetrates into body fluids, tissues. Widely distributed. Protein binding: 8%. Primarily excreted in urine. Removed by dialysis. **Half-life:** 1 hr.

USES

Treatment of complicated intra-abdominal infections, complicated UTIs due to susceptible gram-positive, gram-negative (including *Pseudomonas aeruginosa)*, and anaerobic bacteria. **OFF-LABEL:** Treatment of intravascular catheter-related bloodstream infection due to ESBL producing *Escherichia coli* and *Klebsiella* spp.

PRECAUTIONS

Contraindications: History of serious hypersensitivity to carbapenems (meropenem, imipenem-cilastin, ertapenem). Anaphylactic reactions to beta-lactam antibiotics. **Cautions:** Hypersensitivity to penicillins, cephalosporins.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Advanced renal insufficiency, end-stage renal insufficiency may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** reduces renal excretion of doripenem. May decrease **valproic acid** concentrations (do not use concurrently). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT. May decrease Hgb, Hct, platelet count, serum potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 250 mg, 500 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 250-mg or 500-mg vial with 10 ml Sterile Water for Injection or 0.9% NaCl. • Shake well to dissolve. • Further dilute with 100 ml 0.9% NaCl or D_5W.

Rate of Administration • Give by intermittent IV infusion (piggyback). • Do not give IV push. • Infuse over 60 min.

Storage • Stable for 12 hrs at room temperature, 72 hrs if refrigerated when diluted in 0.9% NaCl; 4 hrs at room temperature, 24 hrs if refrigerated when diluted in D_5W.

IV INCOMPATIBILITIES

Diazepam (Valium), potassium phosphate, propofol (Diprivan).

IV COMPATIBILITIES

Amiodarone, bumetanide (Bumex), calcium gluconate, dexamethasone, diltiazem (Cardizem), diphenhydramine (Benadryl), furosemide (Lasix), heparin, hydrocortisone (Solu-Cortef), hydromorphone (Dilaudid), insulin, labetalol (Trandate), lorazepam (Ativan), magnesium sulfate, methylprednisolone (Solu-Medrol), metoclopramide (Reglan), milrinone, morphine, ondansetron (Zofran), pantoprazole (Protonix), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Intra-Abdominal Infections

IV: ADULTS, ELDERLY: 500 mg q8h for 5–14 days.

Urinary Tract Infections

IV: ADULTS, ELDERLY: 500 mg q8h for 10–14 days.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
30–50 ml/min	250 mg q8h
11–29 ml/min	250 mg q12h
Hemodialysis	250 mg q24h, if treating infection caused by *Pseudomonas aeruginosa:* 500 mg q12h on day 1, then 500 g q24h
Continuous renal replacement therapy	250 mg q12h

SIDE EFFECTS

Frequent (10%–6%): Diarrhea, nausea, headache. **Occasional (5%–2%):** Altered mental status, insomnia, rash, abdominal pain, constipation, vomiting, edema, fever. **Rare (less than 2%):** Dizziness, cough, oral candidiasis, anxiety, tachycardia, phlebitis at IV site.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may occur. Anaphylactic reactions in those receiving beta-lactams have occurred. Seizures may occur in those with CNS disorders (brain lesions, history of seizures) or with bacterial meningitis or severe impaired renal function.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question pt for history of allergies, particularly to beta-lactams, penicillins, cephalosporins. Inquire about history of seizures.

INTERVENTION/EVALUATION

Monitor for signs of hypersensitivity reaction during first dose. Monitor daily pattern of bowel activity, stool consistency. Monitor for nausea, vomiting. Evaluate hydration status. Evaluate for inflammation at IV injection site. Assess skin for rash. Check mental status; be alert to tremors, possible seizures. Assess sleep pattern for evidence of insomnia.

PATIENT/FAMILY TEACHING

- Notify physician in event of tremors, seizures, rash, diarrhea, or other new symptoms.

doxazosin

dox-a-**zoe**-sin
(Apo-Doxazosin, Cardura, Cardura XL, Novo-Doxazosin)
Do not confuse Cardura with Cardene, Cordarone, Coumadin, K-Dur, or Ridaura, or doxazosin with doxapram, doxepin, or doxorubicin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha-adrenergic blocker. **CLINICAL:** Antihypertensive (see p. 60C).

ACTION

Selectively blocks $alpha_1$-adrenergic receptors, decreasing peripheral vascular resistance. **Therapeutic Effect:** Causes peripheral vasodilation, lowering B/P. Relaxes smooth muscle of bladder, prostate.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (antihypertensive)	1–2 hrs	2–6 hrs	24 hrs

Well absorbed from GI tract. Protein binding: 98%–99%. Metabolized in liver. Primarily eliminated in feces. Not removed by hemodialysis. **Half-life:** 19–22 hrs.

USES

Cardura: Treatment of mild to moderate hypertension. Used alone or in combination with other antihypertensives. Treatment of benign prostatic hyperplasia. **Cardura XL:** Treatment of benign prostatic hyperplasia. **OFF-LABEL:** Pediatric hypertension.

D

PRECAUTIONS

Contraindications: Hypersensitivity to other quinazolines (prazosin, terazosin). **Cautions:** Constipation, ileus GI obstruction, hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: **NSAIDs** may decrease effect. **Hypotension-producing medications (e.g., antihypertensives, diuretics)** may increase effect. **CYP3A4 inhibitors (e.g., atanazavir, ketoconazole)** may increase hypotensive effect. **HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. Avoid **saw palmetto** (limited experience with this combination). **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 1 mg, 2 mg, 4 mg, 8 mg.

Tablets, Extended-Release: 4 mg, 8 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not crush, chew, divide extended-release tablet. • Immediate-release tablets given morning or evening; extended-release tablets given with morning meal.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO *(Immediate-Release)*: ADULTS: Initially, 1 mg once a day. May increase upward over several weeks to a maximum of 16 mg/day. **ELDERLY:** Initially, 0.5 mg once a day. May increase upward over several weeks.

Benign Prostatic Hyperplasia

PO *(Immediate-Release)*: ADULTS, ELDERLY: Initially, 1 mg/day. May increase q1–2wks. **Maximum:** 8 mg/day. ***(Extended-Release)*:** Initially, 4 mg/day. May increase to 8 mg in 3–4 wks. Note: When switching to extended-release, omit evening dose prior to starting morning dose.

SIDE EFFECTS

Frequent (20%–10%): Dizziness, asthenia (loss of strength, energy), headache, edema. **Occasional (9%–3%):** Nausea, pharyngitis, rhinitis, pain in extremities, drowsiness. **Rare (2%–1%):** Palpitations, diarrhea, constipation, dyspnea, myalgia, altered vision, anxiety.

ADVERSE EFFECTS/ TOXIC REACTIONS

First-dose syncope (hypotension with sudden loss of consciousness) may occur 30–90 min following initial dose of 2 mg or greater, too-rapid increase in dosage, addition of another antihypertensive agent to therapy. First-dose syncope may be preceded by tachycardia (pulse rate 120–160 beats/min).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Give first dose at bedtime. If initial dose is given during daytime, pt must remain recumbent for 3–4 hrs. Assess B/P, pulse immediately before each dose, and q15–30min until B/P is stabilized (be alert to fluctuations).

INTERVENTION/EVALUATION

Monitor B/P, I/O. Monitor pulse diligently (first-dose syncope may be preceded by tachycardia). Assess for edema, headache. Assist with ambulation if dizziness, light-headedness occurs.

PATIENT/FAMILY TEACHING

• Full therapeutic effect may not occur for 3–4 wks. • May cause syncope (fainting); rise slowly from sitting/lying position. • Avoid tasks that require alertness,

motor skills until response to drug is established.

doxepin

dox-eh-pin
(Apo-Doxepin, Novo-Doxepin, Prudoxin, Silenor, Sinequan, Zonalon)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse doxepin with digoxin, doxapram, doxazosin, Doxidan, or doxycycline, or Sinequan with saquinavir, Seroquel, or Singulair.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic.
CLINICAL: Antidepressant, antianxiety, antineuralgic, antiulcer, antipruritic (see p. 38C).

ACTION

Increases synaptic concentrations of norepinephrine, serotonin. **Therapeutic Effect:** Produces antidepressant, anxiolytic effects.

PHARMACOKINETICS

PO: Rapidly, well absorbed from GI tract. Protein binding: 80%–85%. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 6–8 hrs. **Topical:** Absorbed through skin. Distributed to body tissues. Metabolized to active metabolite. Excreted in urine.

USES

Treatment of depression, often in conjunction with psychotherapy. **Silenor:** Treatment of insomnia in pts with difficulty staying asleep. **Topical:** Treatment of pruritus associated with atopic dermatitis. **OFF-LABEL:** Treatment of neurogenic pain, treatment of anxiety.

PRECAUTIONS

Contraindications: Angle-closure glaucoma, hypersensitivity to other tricyclic antidepressants, urinary retention, use of MAOIs within 14 days. **Cautions:** Cardiac/hepatic/renal disease, pts at risk for suicidal ideation, respiratory compromise, sleep apnea, history of bowel obstruction, increased IOP, glaucoma, history of seizures, history of urinary retention/obstruction, hyperthyroidism, prostatic hypertrophy, hiatal hernia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C (B for topical form). Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** Increased risk of toxicity (lower dosages recommended).

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS, respiratory depression, hypotensive effects. **Cimetidine** may increase concentration, risk of toxicity. **MAOIs** may increase risk of seizures, hyperpyrexia, hypertensive crisis (discontinue at least 2 wks prior to starting doxepin). **Phenothiazines** may increase anticholinergic, sedative effects. **HERBAL: Kava kava, SAMe, St. John's wort, valerian** may increase sedation, risk of serotonin syndrome. **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May alter serum glucose, EKG readings. **Therapeutic serum level:** 110–250 ng/ml; **toxic serum level:** greater than 300 ng/ml.

AVAILABILITY (Rx)

Capsules: 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 150 mg. **Cream (Prudoxin, Zonalon):** 5%. **Oral Concentrate:** 10 mg/ml. **Tablets (Silenor):** 3 mg, 6 mg.

ADMINISTRATION/HANDLING

PO

• Give with food, milk if GI distress occurs. • Dilute concentrate in 4-oz glass of water, milk, orange, tomato, prune, pineapple juice. Incompatible with carbonated drinks. • Give larger portion of daily dose at bedtime. • **Silenor:** Give within 30 min of bedtime but not within 3 hrs of a meal.

Topical

• Apply thin film of cream on affected areas of skin. • Do not use for more than 8 days. • Do not use occlusive dressing.

INDICATIONS/ROUTES/DOSAGE

Depression, Anxiety

PO: ADULTS: 25–150 mg/day at bedtime or in 2–3 divided doses. May increase gradually to 300 mg/day (single dose should not exceed 150 mg). **ELDERLY:** Initially, 10–25 mg at bedtime. May increase by 10–25 mg/day every 3–7 days. **Maximum:** 75 mg/day. **ADOLESCENTS:** Initially, 25–50 mg/day as a single dose or in divided doses. May increase to 100 mg/day. **CHILDREN 12 YRS AND YOUNGER:** 1–3 mg/kg/day.

Insomnia

PO: ADULTS: 3–6 mg. **ELDERLY:** 3 mg (give within 30 min of bedtime). May increase to 6 mg once daily.

Pruritus Associated with Atopic Dermatitis

Topical: ADULTS, ELDERLY: Apply thin film 4 times a day at 3- to 4-hr intervals. Not recommended for more than 8 days.

SIDE EFFECTS

Frequent: PO: Orthostatic hypotension, drowsiness, dry mouth, headache, increased appetite, weight gain, nausea, unusual fatigue, unpleasant taste. **Topical:** Edema; increased pruritus, eczema; burning, tingling, stinging at application site; altered taste; dizziness; drowsiness; dry skin; dry mouth; fatigue; headache; thirst. **Occasional: PO:** Blurred vision, confusion, constipation, hallucinations, difficult urination, eye pain, irregular heartbeat, fine muscle tremors, nervousness, impaired sexual function, diarrhea, diaphoresis, heartburn, insomnia. **Silenor:** Nausea, upper respiratory infection. **Topical:** Anxiety, skin irritation/cracking, nausea. **Rare: PO:** Allergic reaction, alopecia, tinnitus, breast enlargement. **Topical:** Fever, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt or too-rapid withdrawal may result in headache, malaise, nausea, vomiting, vivid dreams. Overdose may produce confusion, severe drowsiness, agitation, tachycardia, arrhythmias, shortness of breath, vomiting.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, EKG (those with history of cardiovascular disease). Perform CBC, serum electrolyte tests before long-term therapy. Assess pt's appearance, behavior, level of interest, mood, suicidal ideation, sleep pattern.

INTERVENTION/EVALUATION

Monitor B/P, pulse, weight. Perform CBC, serum electrolyte tests periodically to assess renal/hepatic function. Monitor mental status, suicidal ideation. Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood. **Therapeutic serum level:** 110–250 ng/ml; **toxic serum level:** greater than 300 ng/ml.

PATIENT/FAMILY TEACHING

• Do not discontinue abruptly. • Change positions slowly to avoid dizziness. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not cover affected area with occlusive dressing after applying cream. • May cause dry mouth. • Avoid alcohol,

limit caffeine. • May increase appetite. • Avoid exposure to sunlight/artificial light source. • Therapeutic effect may be noted within 2–5 days, maximum effect within 2–3 wks. • Notify physician of worsening depression, suicidal ideation, unusual changes in behavior (esp. at initiation of therapy or with changes in dosage).

*DOXOrubicin

HIGH ALERT

dox-oh-**roo**-bi-sin
(Adriamycin, Caelyx, Doxil)

BLACK BOX ALERT May cause concurrent or cumulative myocardial toxicity. Acute allergic or anaphylaxis-like infusion reaction may be life-threatening. Severe myelosuppresion may occur. Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Secondary acute myelogenous leukemia and myelodysplastic syndrome have been reported.

Do not confuse doxorubicin with dactinoycin, daunorubicin, doxazosin, epirubicin, idarubicin, or valrubicin, or Adriamycin with Aredia or idamycin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anthracycline antibiotic. **CLINICAL:** Antineoplastic (see p. 82C).

ACTION

Inhibits DNA, DNA-dependent RNA synthesis by binding with DNA strands. Liposomal encapsulation increases uptake by tumors, prolongs drug action, may decrease toxicity. **Therapeutic Effect:** Prevents cell division.

PHARMACOKINETICS

Widely distributed. Protein binding: 74%–76%. Does not cross blood-brain barrier. Metabolized rapidly in liver to active metabolite. Primarily eliminated by biliary system. Not removed by hemodialysis. **Half-life:** 20–48 hrs.

USES

Adriamycin: Treatment of acute lymphocytic leukemia (ALL), acute myeloid leukemia (AML), Hodgkin's disease, malignant lymphoma, breast, gastric, small-cell lung, ovarian, epithelial, thyroid, bladder carcinomas, neuroblastoma, Wilms tumor, osteosarcoma, soft tissue sarcoma. **Doxil:** Treatment of AIDS-related Kaposi's sarcoma, metastatic ovarian cancer. Used with bortezomib to treat multiple myeloma in pts who have not previously received bortezomib and have received at least one previous treatment. **OFF-LABEL: Adriamycin:** Multiple myeloma, endometrial carcinoma, uterine sarcoma, head and neck cancer, liver, kidney cancer. **Doxil:** Metastatic breast cancer, Hodgkin's lymphoma, cutaneous T-cell lymphomas, advanced soft tissue sarcomas, recurrent or metastatic cervical cancer, advanced or metastatic uterine sarcoma.

PRECAUTIONS

Contraindications: Adriamycin: Severe hepatic impairment, recent MI, severe arrhythmias. Cardiomyopathy; preexisting myelosuppression; previous or concomitant treatment with cyclophosphamide, idarubicin, mitoxantrone, or irradiation of cardiac region; severe CHF; baseline neutrophil count less than 1,500/mm^3. **Doxil:** Breast-feeding. **Cautions:** Hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breast-feeding not recommended. **Pregnancy Category D. Children/Elderly:** Cardiotoxicity may be more frequent in those younger than 2 yrs or older than 70 yrs.

INTERACTIONS

DRUG: Cyclosporine may increase risk of hematologic toxicity. **Bone marrow depressants** may increase myelosuppression. **Daunorubicin** may increase risk of cardiotoxicity. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease

pt's antibody response to vaccine. **HERBAL: St. John's wort** may decrease concentration. Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **FOOD:** None known. **LAB VALUES:** May cause EKG changes, increase serum uric acid. May reduce neutrophil, RBC counts.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 10 mg (Adriamycin), 50 mg (Adriamycin RDF). **Injection Solution (Adriamycin):** 2 mg/ml (5-ml, 10-ml, 25-ml, 100-ml vial). **Lipid Complex (Doxil):** 2 mg/ml (10 ml, 25 ml).

ADMINISTRATION/HANDLING

◀ALERT▶ Wear gloves. If powder or solution comes in contact with skin, wash thoroughly. Avoid small veins; swollen/edematous extremities; areas overlying joints, tendons. **Doxil:** Do not use with in-line filter or mix with any diluent except D_5W. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Reconstitution • Reconstitute vials of powder with 0.9% NaCl to provide concentration of 2 mg/ml. • Shake vial; allow contents to dissolve. • Withdraw appropriate volume of air from vial during reconstitution (avoids excessive pressure buildup). • May be further diluted with 50–1,000 ml D_5W or 0.9% NaCl and given as continuous infusion. **Doxil:** Dilute each dose in 250 ml D_5W (doses greater than 90 mg in 500 ml D_5W).

Rate of Administration • For IV push, administer into tubing of freely running IV infusion of D_5W or 0.9% NaCl, preferably via butterfly needle over 3–5 min (avoids local erythematous streaking along vein and facial flushing). • Must test for flashback q30sec to be certain needle remains in vein during injection. IV piggyback over 15–60 min or continuous infusion. • Extravasation produces immediate pain, severe local tissue damage. Terminate administration immediately; withdraw as much medication as possible, obtain extravasation kit, follow protocol. **Doxil:** Give as infusion over 60 min. Do not use in-line filter.

Storage • **Adriamycin powder:** Store at room temperature. • Reconstituted vials stable for 7 days at room temperature, 15 days if refrigerated. Infusions stable for 48 hrs at room temperature. • Protect from prolonged exposure to sunlight; discard unused solution. • **Adriamycin solution:** Refrigerate vials. Solutions diluted in D_5W or 0.9% NaCl stable for 48 hrs at room temperature. • **Doxil:** Refrigerate unopened vials. After solution is diluted, use within 24 hrs.

IV INCOMPATIBILITIES

Doxorubicin: Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), furosemide (Lasix), ganciclovir (Cytovene), heparin, lipids, piperacillin/tazobactam (Zosyn), propofol (Diprivan). **Doxil:** Do not mix with any other medications.

IV COMPATIBILITIES

Dexamethasone (Decadron), diphenhydramine (Benadryl), etoposide (VePesid), granisetron (Kytril), hydromorphone (Dilaudid), lorazepam (Ativan), morphine, ondansetron (Zofran), paclitaxel (Taxol).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Refer to individual protocols.

Usual Dosage

IV *(Adriamycin)*: ADULTS: 60–75 mg/m^2 as a single dose every 21 days, 20 mg/m^2 once weekly, or 20–30 mg/m^2/day on 2–3 successive days q4wks. Because of risk of cardiotoxicity, do not exceed cumulative dose of 550 mg/m^2 (400–450 mg/m^2 for those previously treated with related compounds or irradiation of cardiac region). **CHILDREN:** 35–75 mg/m^2 as a single dose q3wks or 20–30 mg/m^2

weekly, or 60–90 mg/m^2 as continuous infusion over 96 hrs q3–4wks.

Kaposi's Sarcoma
IV *(Doxil)*: ADULTS: 20 mg/m^2 q3wks infused over 30 min.

Ovarian Cancer
IV *(Doxil)*: ADULTS: 50 mg/m^2 q4wks.

Multiple Myeloma
IV *(Doxil)*: ADULTS: 30 mg/m^2/dose every 3 wks (with bortezomib).

Dosage in Hepatic Impairment
ADRIAMYCIN

Hepatic Function	Dosage
ALT/AST 2–3 times ULN	75% of normal dose
ALT/AST greater than 3 times ULN or bilirubin 1.2–3 mg/dl	50% of normal dose
Bilirubin 3.1–5 mg/dl	25% of normal dose
Bilirubin greater than 5 mg/dl	Not recommended

ULN = upper limit of normal.

DOXIL

Hepatic Function	Dosage
Bilirubin 1.2–3 mg/dl	50% of normal dose
Bilirubin greater than 3 mg/dl	25% of normal dose

SIDE EFFECTS

Frequent: Complete alopecia (scalp, axillary, pubic hair), nausea, vomiting, stomatitis, esophagitis (esp. if drug is given on several successive days), reddish urine. **Doxil:** Nausea. **Occasional:** Anorexia, diarrhea; hyperpigmentation of nailbeds, phalangeal, dermal creases. **Rare:** Fever, chills, conjunctivitis, lacrimation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression manifested as hematologic toxicity (principally leukopenia and, to lesser extent, anemia, thrombocytopenia) generally occurs within 10–15 days, returns to normal levels by third wk. Cardiotoxicity (either acute, manifested as transient EKG abnormalities, or chronic, manifested as CHF) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain WBC, platelet, erythrocyte counts before and at frequent intervals during therapy. Obtain EKG before therapy, hepatic function studies before each dose. Antiemetics may be effective in preventing, treating nausea.

INTERVENTION/EVALUATION

Monitor for stomatitis (burning or erythema of oral mucosa at inner margin of lips, difficulty swallowing). Observe IV injection site for infiltration, vein irritation. May lead to ulceration of mucous membranes within 2–3 days. Assess dermal creases, nailbeds for hyperpigmentation. Monitor hematologic status, renal/hepatic function studies, serum uric acid levels. Monitor daily pattern of bowel activity, stool consistency. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Alopecia is reversible, but new hair growth may have different color, texture. New hair growth resumes 2–3 mos after last therapy dose. • Maintain fastidious oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site. • Contact physician for persistent nausea/vomiting. • Avoid alcohol (may cause GI irritation, a common side effect with liposomal doxorubicin).

doxycycline

TOP 200

dox-i-**sye**-kleen
(Adoxa, Apo-Doxy, Doryx, Doxy-100, Doxycin, Monodox, Novo-Doxylin, Oracea, Oraxyl, Periostat, Vibramycin, Vibra-Tabs).
Do not confuse doxycycline with dicyclomine or doxepin, Monodox with Maalox, Oracea with Orencia, Vibramycin with Vancomycin or Vibativ, or Vibra-Tabs with Vibativ.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tetracycline. **CLINICAL:** Antibiotic.

ACTION

Inhibits bacterial protein synthesis by binding to ribosomes. **Therapeutic Effect:** Bacteriostatic.

PHARMACOKINETICS

Rapidly, almost completely absorbed after PO administration. Protein binding: 90%. Partially inactivated in GI tract by chelate formation. Partially excreted in urine; partially eliminated in bile. **Half-life:** 15–24 hrs.

USES

Treatment of susceptible infections due to *H. ducreyi, Pasteurella pestis, P. tularensis, Bacteroides* spp., *V. cholerae, Brucella* spp., *Rickettsiae, Y. pestis, Francisella tularensis, M. pneumoniae* including brucellosis, chlamydia, cholera, granuloma inguinale, lymphogranuloma venereum, malaria prophylaxis, nongonococcal urethritis, pelvic inflammatory disease (PID), plague, psittacosis, relapsing fever, rickettsia infections, primary and secondary syphilis, tularemia. Treatment of inflammatory lesions in adults with rosacea. **OFF-LABEL:** Sclerosing agent for pleural effusion; vancomycin-resistant enterococci (VRE); alternative for MRSA, treatment of refractory periodontis, juvenile periodontis.

PRECAUTIONS

Contraindications: Children 8 yrs and younger, hypersensitivity to tetracyclines or sulfites, last half of pregnancy. **Cautions:** Sun, severe hepatic dysfunction, ultraviolet light exposure (severe photosensitivity reaction).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category D. Children:** May cause permanent discoloration of teeth, enamel hypoplasia. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Antacids containing aluminum, calcium, magnesium; laxatives containing magnesium, oral iron preparations** decrease absorption. **Barbiturates, carbamazepine, phenytoin** may decrease concentration. **Cholestyramine, colestipol** may decrease absorption. May decrease effects of **oral contraceptives.** **HERBAL:** **Dong quai, St. John's wort** may increase photosensitization. **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, amylase, bilirubin, AST, ALT. May alter CBC.

AVAILABILITY (Rx)

Capsules: 20 mg (Oraxyl), 40 mg (Oracea), 50 mg (Monodox), 75 mg (Monodox), 100 mg (Doryx, Monodox, Vibramycin). **Injection, Powder for Reconstitution (Doxy-100):** 100 mg. **Oral Suspension (Vibramycin):** 25 mg/5 ml. **Syrup (Vibramycin):** 50 mg/5 ml. **Tablets:** 20 mg (Periostat), 50 mg (Adoxa), 75 mg (Adoxa), 100 mg (Adoxa, Vibra-Tabs), 150 mg (Adoxa).

ADMINISTRATION/HANDLING

◀ALERT▶ Do not administer IM or subcutaneous. Space doses evenly around clock.

IV

Reconstitution • Reconstitute each 100-mg vial with 10 ml Sterile Water for Injection for concentration of 10 mg/ml. • Further dilute each 100 mg with at least 100 ml D_5W, 0.9% NaCl, lactated Ringer's.
Rate of Administration • Give by intermittent IV infusion (piggyback). • Infuse over 1–4 hrs.
Storage • After reconstitution, IV infusion (piggyback) is stable for 12 hrs at room temperature or 72 hrs if refrigerated. • Protect from direct sunlight. Discard if precipitate forms.

PO

• Store capsules, tablets at room temperature. • Oral suspension is stable for 2 wks at room temperature. • Give with full glass of fluid. • Instruct pt to sit up for 30 min after taking to reduce risk of esophageal irritation and ulceration. • Give without regard to food. Oracea should be given 1 hr before or 2 hrs after meals. • Avoid concurrent use of antacids, milk; separate by 2 hrs.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), heparin, lipids, piperacillin/tazobactam (Zosyn).

IV COMPATIBILITIES

Acyclovir (Zovirax), amiodarone (Cordarone), diltiazem (Cardizem), granisetron (Kytril), hydromorphone (Dilaudid), magnesium sulfate, meperidine (Demerol), morphine, ondansetron (Zofran), propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV/PO: ADULTS, ELDERLY: 100–200 mg/day in 1–2 divided doses. **CHILDREN OLDER THAN 8 YRS:** 2–5 mg/kg/day (**maximum:** 200 mg/day) in 1–2 divided doses.

Acute Gonococcal Infections

PO: ADULTS: Initially, 200 mg, then 100 mg at bedtime on first day; then 100 mg twice a day for 14 days.

Syphilis

PO, IV: ADULTS: 200 mg/day in divided doses for 14–28 days.

Traveler's Diarrhea

PO: ADULTS, ELDERLY: 100 mg/day during a period of risk (up to 14 days) and for 2 days after returning home.

Rosacea

PO: ADULTS, ELDERLY: 40 mg (Oracea) once daily.

Periodontitis

PO: ADULTS: 20 mg twice a day.

SIDE EFFECTS

Frequent: Anorexia, nausea, vomiting, diarrhea, dysphagia, photosensitivity (may be severe). **Occasional:** Rash, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Superinfection (esp. fungal), benign intracranial hypertension (headache, visual changes) may occur. Hepatotoxicity, fatty degeneration of liver, pancreatitis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to tetracyclines, sulfites.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Monitor LOC due to potential for increased intracranial pressure (ICP). Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor CBC, renal/hepatic function tests.

PATIENT/FAMILY TEACHING

• Avoid unnecessary exposure to sunlight. • Do not take with antacids, iron products. • Complete full course of therapy. • After application of dental gel,

avoid brushing teeth, flossing the treated areas for 7 days. • Report severe diarrhea.

D

dronabinol

droe-**nab**-ih-nol
(Marinol ✱)
Do not confuse dronabinol with droperidol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Controlled substance **(Schedule III).** **CLINICAL:** Antinausea, antiemetic, appetite stimulant.

ACTION

Inhibits vomiting control mechanisms in medulla oblongata. **Therapeutic Effect:** Inhibits nausea/vomiting, stimulates appetite.

PHARMACOKINETICS

Well absorbed after PO administration, only 10%–20% reaches systemic circulation. Protein binding: 97%. Undergoes first-pass metabolism. Highly lipid soluble. Primarily excreted in feces. **Half-life:** 25–36 hrs.

USES

Prevention, treatment of nausea/vomiting due to cancer chemotherapy; appetite stimulant in AIDS, cancer pts. **OFF-LABEL:** Cancer-related anorexia.

PRECAUTIONS

Contraindications: Hypersensitivity to sesame oil, tetrahydrocannabinol products, marijuana, history of schizophrenia. **Cautions:** History of psychiatric illness, history of substance abuse, mania, depression, seizure disorder, hepatic impairment, elderly.

⌛ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Not recommended. **Elderly:** Monitor carefully during therapy.

INTERACTIONS

DRUG: Alcohol, other CNS suppressants may increase CNS depression. **Sympathomimetics, tricyclic antidepressants** may increase risk of hypertension, tachycardia. **Anticholinergics** may increase drowsiness, tachycardia. **HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules (Gelatin [Marinol]): 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Store in cool environment. May refrigerate capsules. • May administer without regard to meals. Give before meals if used for appetite stimulant.

INDICATIONS/ROUTES/DOSAGE

Prevention of Chemotherapy-Induced Nausea and Vomiting

PO: ADULTS, CHILDREN: Initially, 5 mg/m^2 1–3 hrs before chemotherapy, then q2–4h after chemotherapy for total of 4–6 doses a day. May increase by 2.5 mg/m^2 up to 15 mg/m^2 per dose.

Appetite Stimulant

PO: ADULTS: Initially, 2.5 mg twice a day (before lunch and dinner). Range: 2.5–20 mg/day.

SIDE EFFECTS

Frequent (24%–3%): Euphoria, dizziness, paranoid reaction, drowsiness. **Occasional (less than 3%–1%):** Asthenia (loss of strength, energy), ataxia, confusion, abnormal thinking, depersonalization. **Rare (less than 1%):** Diarrhea, depression, nightmares, speech difficulties, headache, anxiety, tinnitus, flushed skin.

ADVERSE EFFECTS/ TOXIC REACTIONS

Mild intoxication may produce increased sensory awareness (taste, smell, sound), altered time perception, reddened conjunctiva, dry mouth, tachycardia. Moderate intoxication may produce memory impairment, urinary retention. Severe intoxication may produce lethargy, decreased motor coordination, slurred speech, orthostatic hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess dehydration status if excessive vomiting occurs (skin turgor, mucous membranes, urinary output).

INTERVENTION/EVALUATION

Supervise closely for serious mood, behavior responses, esp. in pts with history of psychiatric illness. Monitor B/P, heart rate.

PATIENT/FAMILY TEACHING

• Change positions slowly to avoid dizziness. • Relief from nausea/vomiting generally occurs within 15 min of drug administration. • Do not take any other medications, including OTC, without physician approval. • Avoid alcohol, barbiturates. • Avoid tasks that require alertness, motor skills until response to drug is established. • For appetite stimulation, take before lunch and dinner.

dronedarone

droe-**ne**-da-rone
(Multaq)

BLACK BOX ALERT Contraindicated in those with Class II–III congestive heart failure (CHF) with recent decompensation requiring hospitalization or referral to specialized CHF clinic or with Class IV CHF (over 2-fold increased mortality risk).

Do not confuse dronedarone with amiodarone, dexamethasone, methyltrexone, milrinone, prednisone, or risperidone, or Multaq with Adalat, Atarax, Betaloc, Carac, or Titralac.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Cardiac agent. **CLINICAL:** Antiarrhythmic (see p. 18C).

ACTION

Exact mechanism unknown. Has antiarrhythmic properties of all 4 Vaughan-Williams classes, but contribution of each of these to clinical effect unknown. **Therapeutic Effect:** Suppresses arrhythmias.

PHARMACOKINETICS

Derivative of amiodarone. Protein binding: 98%. Metabolized extensively in liver via isoenzyme system. Eliminated mainly in feces, with smaller amount excreted in urine. **Half-life:** 13–19 hrs.

USES

Outpatient management to reduce cardiovascular hospitalization in those with persistent or paroxysmal atrial fibrillation, atrial flutter in those in sinus rhythm. **OFF-LABEL:** Treatment of atrial fibrillation in pts with hypertrophic cardiomyopathy.

PRECAUTIONS

Contraindications: Class II–III CHF with recent decompensation requiring hospitalization or referral to specialized CHF clinic, Class IV CHF, sick sinus syndrome without pacemaker, bradycardia less than 50 beats/min, concurrent use of drugs that prolong QT interval (QTc interval equal to or greater than 500 ms or PR interval greater than 280 ms), pregnancy, breastfeeding, severe hepatic impairment. Concomitant use of strong CYP3A4 inhibitors (e.g., ketoconazole, cyclosporine, clarithromycin). **Cautions:** Mild to moderate hepatic impairment, hypomagnesemia, hypokalemia. May increase risk of serious cardiovascular events in pts with permanent atrial fibrillation. Renal impairment, women of childbearing potential.

D

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be distributed in breast milk. May cause fetal harm; teratogenic. **Pregnancy Category X. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Drugs prolonging QT interval (e.g., tricyclic antidepressants, macrolide antibiotics, class I and III antiarrhythmics) are contraindicated. **Calcium channel blockers** that depress SA/AV node function may increase effects. May increase effect of **beta-blockers (bradycardia).** May increase concentration, toxicity of **digoxin. Simvastatin** may increase risk of myopathy, rhabdomyolysis. **Digoxin** may potentiate effects of dronedarone. **CYP3A4 inducers (e.g., rifampin)** may increase risk for torsades. **CYP3A4 inhibitors (e.g., ketoconazole)** may increase concentration. May increase concentration of **tacrolimus, sirolimus. HERBAL: St. John's wort** may decrease effect. **FOOD: Grapefruit, grapefruit juice** may decrease effect. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT, ANA titer. May cause changes in EKG, thyroid function tests. Expected to increase serum creatinine by about 0.1 mg/dl; elevation has rapid onset, reaches plateau after 7 days, and is reversible after discontinuation.

AVAILABILITY (Rx)

Tablets (Film-Coated): 400 mg.

ADMINISTRATION/HANDLING

PO

• Give with meals to reduce risk of GI distress. • Do not crush/chew/break film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Should only be used in pts who can be converted to normal sinus rhythm.

Atrial Fibrillation/Atrial Flutter

PO: ADULTS, ELDERLY: 400 mg twice daily: 1 tablet with morning meal, 1 tablet with evening meal.

SIDE EFFECTS

Frequent (9%–5%): Diarrhea, asthenia (lack of strength, weakness), nausea, rash (including pruritus, dermatitis, eczema). **Occasional (4%–3%):** Abdominal pain, bradycardia. **Rare (2%–1%):** Vomiting, dyspepsia, photosensitivity reaction, dysgeusia (distortion or loss of taste).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose manifested as arrhythmias, B/P changes.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Premenopausal women who have not undergone a hysterectomy or oophorectomy must use effective contraception (Pregnancy Category X). Obtain baseline pulmonary function tests, chest X-ray, AST, ALT, alkaline phosphatase, serum potassium, magnesium, creatinine. Potassium levels should be within normal range prior to administration and maintained in normal range during administration.

INTERVENTION/EVALUATION

If serum creatinine increases and plateaus, use increased value as pt's new baseline. Stop medication if QTc interval is equal to or greater than 500 ms. Assess pulse for strength/weakness, irregular rate, bradycardia. Monitor EKG for cardiac changes, particularly widening of QRS, prolongation of PR and QT intervals. Notify physician of any significant interval changes. Assess for diarrhea, nausea, rash, weakness.

PATIENT/FAMILY TEACHING

• Protect against photosensitivity reaction on skin exposed to sunlight. Wear protective clothing; avoid suntanning booths. • Report increased shortness of

breath, cough, sudden weight gain, dependent edema. • Pt should monitor pulse before taking medication. • Compliance with therapy regimen is essential to control arrhythmias. • Use appropriate contraception to avoid pregnancy (Pregnancy Category X).

droperidol

droe-**pare**-i-dol

BLACK BOX ALERT May alter cardiac conduction by prolonging QT interval, torsade de pointes (dose-dependent).

Do not confuse droperidol with dronabinol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: General anesthetic. **CLINICAL:** Anesthesia adjunct, antiemetic.

ACTION

Antagonizes dopamine neurotransmission at synapses by blocking postsynaptic dopamine receptor sites; partially blocks adrenergic receptor binding sites. **Therapeutic Effect:** Produces tranquilization, antiemetic effect.

PHARMACOKINETICS

Onset	Peak	Duration
IM		
3–10 min	30 min	2–4 hrs
IV		
3–10 min	30 min	2–4 hrs

Well absorbed after IM administration. Protein binding: Extensive. Crosses blood-brain barrier. Metabolized in liver. Primarily excreted in urine. **Half-life:** 2.3 hrs.

USES

Treatment of nausea/vomiting associated with surgical and diagnostic procedures.

PRECAUTIONS

Contraindications: Known or suspected QT interval prolongation, congenital long QT syndrome. **Cautions:** Hepatic/renal/cardiac impairment (may cause cardiac arrhythmias during administration), severe hypertension, pheochromocytoma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Dystonias more likely. **Elderly:** May be more sensitive to sedative, hypotensive effects.

INTERACTIONS

DRUG: Medications causing hypokalemia or hypomagnesemia (e.g., diuretics) may increase risk of QT prolongation. **CNS depressants** may increase CNS depressant effect. May have additive effect on prolongation of QT interval, with **medications prolonging QT interval (e.g., class I and III antiarrhythmics).** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 2.5 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Pt must remain recumbent for 30–60 min in head-low position with legs raised to minimize hypotensive effect.

Storage • Store parenteral form at room temperature.

IV

• May give undiluted as IV push over 2–5 min. • Dose for high-risk pts should be added to 0.9% NaCl, D_5W, or lactated Ringer's injection to a concentration of 1 mg/50 ml and given as an IV infusion.

IM

• Inject slowly, deep IM into upper outer quadrant of gluteus maximus.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotic), cefepime (Maxipime), foscarnet

(Foscavir), heparin, lipids, methotrexate, piperacillin/tazobactam (Zosyn).

IV COMPATIBILITIES

D

Atropine, diphenhydramine (Benadryl), glycopyrrolate (Robinul), metoclopramide (Reglan), midazolam (Versed), morphine, potassium chloride, promethazine (Phenergan).

INDICATIONS/ROUTES/DOSAGE

Nausea, Vomiting

IM, IV: ADULTS, ELDERLY: 0.625–1.25 mg given at end of surgery. **CHILDREN 2–12 YRS:** 0.01–0.015 mg/kg. **Maximum:** 1.25 mg given at end of surgery.

SIDE EFFECTS

Frequent: Mild to moderate hypotension. **Occasional:** Tachycardia, postop drowsiness, dizziness, chills, shivering. **Rare:** Postop nightmares, facial diaphoresis, bronchospasm.

ADVERSE EFFECTS/ TOXIC REACTIONS

May produce cardiac arrhythmias. Extrapyramidal symptoms (EPS) may appear as akathisia (motor restlessness), dystonias: torticollis (neck muscle spasm), opisthotonos (rigidity of back muscles), oculogyric crisis (rolling back of eyes).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess vital signs. Have pt void. Raise side rails. Instruct pt to remain recumbent.

INTERVENTION/EVALUATION

Monitor B/P, pulse diligently for hypotensive reaction during and after procedure. Monitor respiratory rate. Assess pulse for tachycardia. Monitor for extrapyramidal symptoms (EPS). Evaluate for therapeutic response from anxiety (calm facial expression, decreased restlessness). Monitor for decreased nausea, vomiting.

duloxetine

TOP 200

doo-**lox**-e-teen (Cymbalta)

BLACK BOX ALERT Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse duloxetine with fluoxetine or paroxetine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin norepinephrine reuptake inhibitor (SNRI). **CLINICAL:** Antidepressant (see p. 40C).

ACTION

Appears to inhibit serotonin and norepinephrine reuptake at CNS neuronal presynaptic membranes; is a less potent inhibitor of dopamine reuptake. **Therapeutic Effect:** Produces antidepressant effect.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: greater than 90%. Extensively metabolized to active metabolites. Excreted primarily in urine and, to a lesser extent, in feces. **Half-life:** 8–17 hrs.

USES

Treatment of major depression exhibited as persistent, prominent dysphoria (occurring nearly every day for at least 2 wks) manifested by 4 of 8 symptoms: appetite change, sleep pattern change, increased fatigue, impaired concentration, feelings of guilt or worthlessness, loss of interest in usual activities, psychomotor agitation or retardation, suicidal tendencies. Treatment of pain associated with diabetic neuropathy, fibromyalgia, or chronic musculoskeletal pain. Treatment of generalized anxiety disorder. **OFF-LABEL:** Treatment of stress incontinence, urinary incontinence.

PRECAUTIONS

Contraindications: Uncontrolled angle-closure glaucoma, use within 14 days of MAOIs. **Cautions:** Renal impairment, history of alcoholism, chronic hepatic disease, history of seizures, history of mania, pts with suicidal ideation and behavior. Inhibitors of CYP1A2 or thioridazine, hypertension. Controlled narrow-angle glaucoma, pts with impaired GI motility. Concomitant use of NSAIDs (may increase risk of bleeding).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce neonatal adverse reactions (constant crying, feeding difficulty, hyperreflexia, irritability). Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Caution required when increasing dosage.

INTERACTIONS

DRUG: **Alcohol** increases risk of hepatic injury. **CYP1A2** and **CYP2D6 inhibitors (e.g., fluoxetine, fluvoxamine, paroxetine, quinidine, quinolone antimicrobials)** may increase plasma concentration. **MAOIs** may cause serotonin syndrome (autonomic hyperactivity, coma, diaphoresis, excitement, hyperthermia, rigidity). **Aspirin, NSAIDs** may increase risk of bleeding. May increase concentration, potential toxicity of **tricyclic antidepressants.** Serotonergic drugs (e.g., **triptans, lithium, tramadol**) may increase risk of serotonin syndrome. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, AST, ALT, alkaline phosphatase.

AVAILABILITY (Rx)

Capsules (Delayed-Release, Enteric-Coated Pellets): 20 mg, 30 mg, 60 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Allow at least 14 days to elapse between use of MAOIs and duloxetine.

PO

• Give without regard to meals. Give with food, milk if GI distress occurs. • Do not crush, chew delayed-release capsules. • Contents of capsule may be sprinkled on applesauce or mixed in apple juice and swallowed (without chewing) immediately.

INDICATIONS/ROUTES/DOSAGE

Fibromyalgia

PO: ADULTS: Initially, 30 mg/day for 1 wk. Increase to 60 mg/day.

Major Depressive Disorder

PO: ADULTS: 20 mg twice a day, increased up to 60 mg/day as a single dose or in 2 divided doses. For doses greater than 60 mg/day, titrate in increments of 30 mg/day over 1 wk. **Maximum:** 120 mg/day. **ELDERLY:** Initially, 20 mg 1–2 times day. May increase to 40–60 mg/day as single or divided doses.

Diabetic Neuropathy Pain

PO: ADULTS, ELDERLY: 60 mg once a day. **Maximum:** 120 mg/day.

Generalized Anxiety Disorder

PO: ADULTS, ELDERLY: Initially, 30–60 mg once daily. May increase up to 120 mg/day in 30-mg increments weekly.

Chronic Musculoskeletal Pain

PO: ADULTS, ELDERLY: 30 mg once daily for 1 wk, then increase to 60 mg once daily.

Dosage in Renal Impairment

Not recommended with creatinine clearance less than 30 ml/min or ESRD.

SIDE EFFECTS

Frequent (20%–11%): Nausea, dry mouth, constipation, insomnia. **Occasional (9%–5%):** Dizziness, fatigue, diarrhea, drowsiness, anorexia, diaphoresis, vomiting. **Rare**

(4%–2%): Blurred vision, erectile dysfunction, delayed or failed ejaculation, anorgasmia, anxiety, decreased libido, hot flashes.

ADVERSE EFFECTS/ TOXIC REACTIONS

May slightly increase heart rate. Colitis, dysphagia, gastritis, irritable bowel syndrome occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess appearance, behavior, speech pattern, level of interest, mood, sleep pattern, suicidal tendencies. Question pain level, intensity, location of pain.

INTERVENTION/EVALUATION

For those on long-term therapy, serum chemistry profile to assess hepatic/renal function should be performed periodically. Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor B/P, mental status, anxiety, social functioning, glucose levels.

PATIENT/FAMILY TEACHING

• Therapeutic effect may be noted within 1–4 wks. • Do not abruptly discontinue medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Inform physician of intention of pregnancy or if pregnancy occurs. • Inform physician of anxiety, agitation, panic attacks, worsening of depression occurs. • Avoid heavy alcohol intake (associated with severe hepatic injury).

dutasteride

TOP 200

doo-**tas**-ter-ide
(Avodart)

FIXED-COMBINATION(S)

Jalyn: dutasteride/tamsulosin (alpha-adrenergic blocker): 0.5 mg/0.4 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Androgen hormone inhibitor. **CLINICAL:** Benign prostatic hyperplasia (BPH) agent.

ACTION

Inhibits 5-alpha reductase, an intracellular enzyme that converts testosterone into dihydrotestosterone (DHT) in the prostate gland, reducing serum DHT level. **Therapeutic Effect:** Reduces enlarged prostate gland.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	24 hrs	N/A	3–8 wks

Moderately absorbed after PO administration. Widely distributed. Protein binding: 99%. Metabolized in liver. Primarily excreted in feces. **Half-life:** Up to 5 wks.

USES

Treatment of benign prostatic hyperplasia (BPH), alone or in combination with tamsulosin (Flomax). **OFF-LABEL:** Treatment of hair loss. Prostate cancer prevention.

PRECAUTIONS

Contraindications: Females who are pregnant or of childbearing potential, pediatric pts. **Cautions:** Obstructive uropathy, physical handling of tablets by those who are or may be pregnant, **Pregnancy Category X.**

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., ritonavir)** may increase concentration. **HERBAL:** Avoid **saw palmetto** (limited experience with this combination). **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** Decreases serum prostate-specific antigen (PSA) level.

AVAILABILITY (Rx)

Capsules: 0.5 mg.

ADMINISTRATION/HANDLING

PO

• Swallow whole. Do not open/break capsules. • Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Benign Prostatic Hyperplasia (BPH)

PO: ADULTS, ELDERLY (MEN ONLY): 0.5 mg once a day.

SIDE EFFECTS

Occasional (5%–3%): Impotence, decreased libido. **Rare (less than 2%):** Ejaculation disorders, gynecomastia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Toxicity manifested as rash, diarrhea, abdominal pain.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Serum prostate-specific antigen (PSA) determination should be performed in pts with benign prostatic hyperplasia (BPH) before beginning therapy and periodically thereafter. Question possibility of sexual dysfunction.

INTERVENTION/EVALUATION

Diligently monitor I&O. Assess for signs/symptoms of BPH (hesitancy, reduced force of urinary stream, postvoid dribbling, sensation of incomplete bladder emptying).

PATIENT/FAMILY TEACHING

• Discuss potential for impotence; volume of ejaculate may be decreased during treatment. • May not notice improved urinary flow for up to 6 mos after beginning treatment. • Women who are or may be pregnant should not handle capsules (risk of fetal anomaly to male fetus). • Do not donate blood for at least 6 mos after last dose.

ecallantide

ee-**kal**-lan-tide
(Kalbitor)

BLACK BOX ALERT Risk of anaphylactic reaction. Must be administered by health care personnel with appropriate support to manage anaphylaxis, hereditary angioedema and an understanding of the similarity of symptoms.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Plasma kallikrein inhibitor. **CLINICAL:** Proteolytic complex.

ACTION

Blocks inflammatory and coagulation pathways; converts kininogen to bradykinin by inactivating enzymatic active components. **Therapeutic Effect:** Reduces conversion of kininogen to bradykinin, thereby treating symptoms of hereditary angioedema.

PHARMACOKINETICS

Half-life: 1.5–2.5 hrs.

USES

Treatment of acute attacks of hereditary angioedema in pts 16 yrs and older.

PRECAUTIONS

Contraindications: None known. **Cautions:** Known hypersensitivity to other proteolytic medications or to ecallantide (chest discomfort, hypotension, pharyngeal edema, wheezing).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** Age-related renal, hepatic, cardiac impairment may require dosage adjustment. Initiate treatment at low end of dosage range.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May prolong aPTT.

AVAILABILITY (Rx)

Single-Use Vial: 10 mg/ml. Dose supplied as three single-use vials in one carton.

ADMINISTRATION/HANDLING

Subcutaneous

Reconstitution • Withdraw 1 ml (10 mg) from each vial.

Rate of Administration • Administer as 3 subcutaneous injections. • Injection site for each injection may be in same or different anatomic locations (abdomen, thigh, upper arm). There is no need for site rotation. Injection sites should be located at least 2 inches away from anatomic site of attack.

Storage • Refrigerate unused vials. • Liquid appears as clear, colorless. Discard if solution contains particulate or is discolored. • Vials kept at room temperature must be used within 14 days or returned to refrigeration.

INDICATIONS/ROUTES/DOSAGE

Hereditary Angioedema

Subcutaneous: ADULTS, ELDERLY, ADOLESCENTS 16 YRS AND OLDER: 30 mg (3 ml) administered as three injections of 10 mg (1 ml) each. If attack persists, an additional 30-mg dose may be administered within 24 hrs.

SIDE EFFECTS

Occasional (8%–3%): Headache, nausea, diarrhea, fever, injection site reactions, nasopharyngitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Symptoms associated with anaphylactic reactions may include chest discomfort, flushing, pharyngeal edema, pruritus, rhinorrhea, sneezing, urticaria, rash, wheezing, hypotension. Reactions occur within first hr after dosing.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for history of immediate hypersensitivity reactions, including anaphylaxis.

INTERVENTION/EVALUATION

Observe pt following drug administration. Given the similarity between hypersensitivity reactions and acute hereditary angioedema symptoms, pt should be monitored closely in the event of a hypersensitivity reaction.

PATIENT/FAMILY TEACHING

• Immediately report signs, symptoms of allergic reactions. Pt should be advised that medication may cause anaphylaxis, other hypersensitivity reactions. • A second 30-mg subcutaneous dose administered within 24 hrs following initial dose may be given if symptoms persist or relapse occurs.

eculizumab

ee-kue-**liz**-oo-mab
(Soliris)

BLACK BOX ALERT Increased risk for meningococcal infections (septicemia, meningitis) in those with paroxysmal nocturnal hemoglobinemia. Meningococcal vaccination to be given 2 wks before initiation of treatment.

Do not confuse eculizumab with efalizumab or palivizumab, or Soliris with Synagis.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Hemostatic agent.

ACTION

Binds to complement protein C5, preventing terminal intravascular hemolysis. **Therapeutic Effect:** Prevents intravascular hemolysis in paroxysmal nocturnal hemoglobinuria.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	Rapid	End of infusion	1–2 wks

Complete bioavailablity. Unknown metabolism. **Half-life:** 11.3 days.

USES

Reduces hemolysis in pts with paroxysmal nocturnal hemoglobinuria. Treatment of atypical hemolytic uremic syndrome to inhibit complement-mediated thrombotic microangiopathy.

PRECAUTIONS

Contraindications: Unresolved serious *Neisseria meningitides* infection, pts not currently vaccinated against *N. meningitides*. **Cautions:** Systemic infection.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase levels/effect of **leflunomide, natalizumab. Trastuzumab** may increase concentration. **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** Reduces serum LDH levels.

AVAILABILITY (Rx)

Injection, Solution: 10 mg/ml (30-ml vial).

ADMINISTRATION/HANDLING

ALERT Vaccination with a meningococcal vaccine must be given at least 2 wks prior to receiving first dose of eculizumab. Must be given by IV infusion; do not give by bolus or IV push.

IV

Reconstitution • Withdraw required amount of eculizumab from vial and dilute with equal volume of 0.9% NaCl, D_5W, or lactated Ringer's to provide final concentration of 5 mg/ml. • Final admixture is 120 ml for 600-mg dose or 180 ml for 900-mg dose. • Gently invert bag to ensure thorough mixing. • Prior to administration, allow admixture to adjust to room temperature.

Rate of Administration • Administer as IV infusion over 35 min. • Total infusion time should not exceed 2 hrs.

Storage • Refrigerate vials. • Discard solution that is discolored or contains particulate matter. • Solution is stable for 24 hrs at room temperature or if refrigerated.

INDICATIONS/ROUTES/DOSAGE

Paroxysmal Nocturnal Hemoglobinuria

IV Infusion: ADULTS, ELDERLY: 600 mg every 7 days for 4 doses, followed by 900 mg 7 days later, then 900 mg every 14 days thereafter.

Atypical Hemolytic Uremic Syndrome

IV Infusion: ADULTS, ELDERLY: 900 mg every 7 days for 4 doses, followed by 1,200 mg 7 days later, then 1,200 mg every 14 days thereafter. **CHILDREN (based on body weight):**

Body Weight	Induction	Maintenance
40 kg and over	900 mg weekly × 4 doses	1,200 mg wk 5, then 1,200 mg q2wks
30–39 kg	600 mg weekly × 2 doses	900 mg wk 3, then 900 mg q2wks
20–29 kg	600 mg weekly × 2 doses	600 mg wk 3, then 600 mg q2wks
10–19 kg	600 mg weekly × 1 dose	300 mg wk 2, then 300 mg q2wks
5–9 kg	300 mg weekly × 1 dose	300 mg wk 2, then 300 mg q3wks

SIDE EFFECTS

Frequent (44%–23%): Headache, pharyngitis. **Occasional (19%–12%):** Back pain, nausea, cough, fatigue. **Rare (7%):** Constipation, myalgia, sinusitis, herpes simplex

infection, extremity pain, influenza-like symptoms.

ADVERSE EFFECTS/ TOXIC REACTIONS

Eculizumab increases susceptibility to serious meningococcal infections (septicemia, meningitis), encapsulated bacteria. Pts who discontinue treatment may be at increased risk for serious hemolysis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Vaccinate pts with meningococcal vaccine at least 2 wks prior to receiving first dose of eculizumab.

INTERVENTION/EVALUATION

Observe for infusion site reaction. Monitor CBC, LDH, AST, urinalysis results. Monitor for early signs of meningococcal infection (moderate to severe headache with nausea or vomiting; moderate to severe headache and fever; moderate to severe headache with stiff neck or stiff back; fever 103°F or higher; fever with rash, confusion, severe myalgia with flu-like symptoms, photosensitivity).

PATIENT/ FAMILY TEACHING

- Vaccination may not prevent meningococcal infection.

efavirenz

ee-fah-**veer**-enz
(Sustiva)

FIXED COMBINATION(S)

Atripla: efavirenz/emtricitabine (an antiretroviral)/tenofovir (an antiretroviral): 600 mg/200 mg/300 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonnucleoside reverse transcriptase inhibitor. **CLINICAL:** Antiretroviral (see pp. 68C, 114C, 116C).

ACTION

Inhibits activity of HIV-1 reverse transcriptase. **Therapeutic Effect:** Interrupts HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 99%. Metabolized in liver. Eliminated in urine, feces. **Half-life:** 40–55 hrs.

USES

Treatment of HIV infection in combination with other appropriate antiretroviral agents.

PRECAUTIONS

Contraindications: Concurrent use with bepridil, ergot derivatives, midazolam, St. John's wort, triazolam, voriconazole; efavirenz as monotherapy. **Cautions:** History of mental illness, seizures, suspected hepatitis B or C, substance abuse, hepatic impairment (class A).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 3 yrs; may have increased incidence of rash. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Ergot derivatives, midazolam, triazolam may cause serious or life-threatening reactions (cardiac arrhythmias, prolonged sedation, respiratory depression). Decreases plasma concentrations of **amprenavir, atazanavir, boceprevir, telaprevir, indinavir, saquinavir.** Increases plasma concentrations of **ritonavir. CYP3A4 inducers (e.g., phenobarbital, rifabutin, rifampin)** decrease concentration/effects. May alter **warfarin** plasma concentration. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD: High-fat meals** may increase drug ab-

sorption. **LAB VALUES:** May produce false-positive urine test results for cannabinoid; increases serum AST, ALT. May decrease neutrophils.

AVAILABILITY (Rx)

Capsules: 50 mg, 200 mg. **Tablets:** 600 mg.

ADMINISTRATION/HANDLING

PO

• Give with water at bedtime (decreases CNS adverse effects). • Avoid high-fat meals (may increase absorption) • Capsules may be opened and added to small amount of food/liquid. • Do not break tablets.

INDICATIONS/ROUTES/DOSAGE

HIV Infection (in Combination with Other Antiretrovirals)

PO: ADULTS, ELDERLY, CHILDREN 3 YRS AND OLDER WEIGHING 40 KG OR MORE: 600 mg once a day at bedtime. **CHILDREN 3 YRS AND OLDER WEIGHING 32.5 KG–LESS THAN 40 KG:** 400 mg once a day. **CHILDREN 3 YRS AND OLDER WEIGHING 25 KG–LESS THAN 32.5 KG:** 350 mg once a day. **CHILDREN 3 YRS AND OLDER WEIGHING 20 KG–LESS THAN 25 KG:** 300 mg once a day. **CHILDREN 3 YRS AND OLDER WEIGHING 15 KG–LESS THAN 20 KG:** 250 mg once a day. **CHILDREN 3 YRS AND OLDER WEIGHING 10 KG–LESS THAN 15 KG:** 200 mg once a day.

Dosage: Concurrent Rifampin

PO: ONLY IF PT WEIGHS 50 KG OR GREATER: 800 mg once daily.

Dosage: Concurrent Voriconazole

PO: Reduce efavirenz to 300 mg once daily; increase voriconazole to 400 mg q12h.

SIDE EFFECTS

Frequent (52%): Mild to severe: Dizziness, vivid dreams, insomnia, confusion, impaired concentration, amnesia, agitation, depersonalization, hallucinations, euphoria. **Occasional: Mild to moderate:** Maculopapular rash (27%); nausea, fatigue, headache, diarrhea, fever, cough (less than 26%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious adverse psychiatric experiences (aggressive reactions, agitation, delusions, emotional lability, mania, neurosis, paranoia, psychosis, suicide) have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support to pt and family. Obtain baseline AST, ALT in pts with history of hepatitis B or C; serum cholesterol or triglycerides before initiating therapy and at intervals during therapy. Obtain history of all prescription and OTC medications (high level of drug interaction).

INTERVENTION/EVALUATION

Monitor for CNS, psychological symptoms: severe acute depression (including suicidal ideation or attempts), dizziness, impaired concentration, drowsiness, abnormal dreams, insomnia (begins during first or second day of therapy, generally resolves in 2–4 wks). Assess for evidence of rash (common side effect). Monitor hepatic enzyme studies for abnormalities. Assess for headache, nausea, diarrhea.

PATIENT/FAMILY TEACHING

• Avoid high-fat meals during therapy. • If rash appears, contact physician immediately. • CNS, psychological symptoms occur in more than half of pts (dizziness, impaired concentration, delusions, depression). • Take medication every day as prescribed. • Do not alter dose or discontinue medication without informing physician. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Efavirenz is not a cure for HIV infection, nor does it reduce risk of transmission to others.

eletriptan

TOP 200

el-e-**trip**-tan
(Relpax)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor agonist. **CLINICAL:** Antimigraine (see p. 63C).

ACTION

Binds selectively to vascular receptors, producing vasoconstrictive effect on cranial blood vessels. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Metabolized by liver to inactive metabolite. Eliminated in urine. **Half-life:** 4.4 hrs (increased in hepatic impairment, elderly [older than 65 yrs]).

USES

Treatment of acute migraine headache with or without aura.

PRECAUTIONS

Contraindications: Arrhythmias associated with conduction disorders, cerebrovascular syndrome including strokes and transient ischemic attacks (TIAs), coronary artery disease, hemiplegic or basilar migraine, ischemic heart disease, peripheral vascular disease including ischemic bowel disease, severe hepatic impairment, uncontrolled hypertension; use within 24 hrs of treatment with another 5-HT1 agonist, an ergotamine-containing or ergot-type medication such as dihydroergotamine (DHE) or methysergide. **Cautions:** Mild to moderate renal/hepatic impairment, controlled hypertension, history of CVA.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May decrease possibility of ovulation. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Increased risk of hypertension in those older than 65 yrs.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., clarithromycin, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir) may decrease metabolism. **Ergotamine-containing medications** may produce vasospastic reaction. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets: 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

- Do not crush, break film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Acute Migraine Headache

PO: ADULTS, ELDERLY: 20–40 mg. If headache improves but then returns, dose may be repeated after 2 hrs. **Maximum:** 80 mg/day.

SIDE EFFECTS

Occasional (6%–5%): Dizziness, drowsiness, asthenia (loss of strength, energy), nausea. **Rare (3%–2%):** Paresthesia, headache, dry mouth, warm or hot sensation, dyspepsia, dysphagia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiac reactions (ischemia, coronary artery vasospasm, MI), noncardiac vasospasm-related reactions (hemorrhage, CVA) occur rarely, particularly in pts with hypertension, obesity, diabetes, strong family history of coronary artery disease; smokers; males older than 40 yrs; postmenopausal women.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question pt regarding onset, location, duration of migraine, possible precipitating symptoms. Obtain baseline B/P for evidence of uncontrolled hypertension (contraindication).

INTERVENTION/EVALUATION

Assess for relief of migraine headache, potential for photophobia, phonophobia (sound sensitivity), nausea, vomiting.

PATIENT/FAMILY TEACHING

• Take a single dose as soon as symptoms of an actual migraine attack appear. • Medication is intended to relieve migraine headaches, not to prevent or reduce number of attacks. • Avoid tasks that require alertness, motor skills until response to drug is established. • Contact physician immediately if palpitations, pain/tightness in chest/throat, sudden or severe abdominal pain, pain/weakness of extremities occur.

eltrombopag

el-**trom**-boe-pag
(Promacta, Revolade)

BLACK BOX ALERT May cause hepatotoxicity. Measure ALT, AST, and bilirubin prior to initiation of eltrombopag, every 2 wks during dose adjustment phase, and monthly following establishment of a stable dose. If bilirubin is elevated, perform fractionation. Discontinue eltrombopag if ALT levels increase to 3 times or greater upper limit of normal and are progressive, persistent for 4 or more wks, accompanied by increased direct bilirubin, clinical symptoms of hepatic injury, or evidence of hepatic decompensation.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Thrombopoietin receptor agonist. **CLINICAL:** Prevents thrombocytopenia.

ACTION

Interacts with the human thrombopoietin receptor and initiates signaling cascades. **Therapeutic Effect:** Induces proliferation and differentiation of megakaryocytes from bone marrow progenitor cells.

PHARMACOKINETICS

Readily absorbed from gastrointestinal tract. Primarily distributed in blood cells. Protein binding: 99%. Extensively metabolized including oxidation, conjugation with glucuronic acid or cysteine. Excreted primarily in feces. **Half-life:** 26–35 hrs.

USES

Treatment of thrombocytopenia in pts with chronic immune (idiopathic) thrombocytopenic purpura with insufficient response with corticosteroids, immunoglobulins, or splenectomy. Use only in pts who are at increased risk for bleeding; should not be used to normalize platelet counts.

PRECAUTIONS

Contraindications: None known. **Cautions:** Preexisting hepatic impairment, renal impairment (any degree), myelodysplastic syndrome (may increase risk for hematologic malignancies). Pts with known risk for thromboembolism, risk for cataracts.

LIFESPAN CONSIDERATIONS:

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Use caution due to increased frequency of hepatic, renal, cardiac dysfunction.

INTERACTIONS

DRUG: May increase concentration/toxicity of **atorvastatin, fluvastatin, methotrexate, nateglinide, pravastatin, repaglinide, rifampin, rosuvastatin. Aluminum, antacids, calcium, iron, magnesium** may decrease concentration/effects. **HERBAL:** None significant.

FOOD: **Dairy products** may decrease concentration/effects. **LAB VALUES:** May increase serum ALT, AST.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 75 mg.

E

ADMINISTRATION/HANDLING

PO

• Give on an empty stomach, either 1 hr before or 2 hrs after eating food. • Give at least 4 hrs before or 4 hrs after ingestion of antacids, food high in calcium or minerals, or calcium-fortified juices.

INDICATIONS/ROUTES/DOSAGE

Thrombocytopenia

PO: ADULTS, ELDERLY: Initially, 50 mg once daily (25 mg for pts of East Asian ancestry or moderate to severe hepatic insufficiency). After initiating eltrombopag, adjust dose (25 mg to 75 mg once daily) to achieve and maintain platelet count of 50×10^9/L or greater as necessary to reduce risk of bleeding. **Maximum:** 75 mg once daily.

SIDE EFFECTS

Frequent (6%–4%): Nausea, vomiting, menorrhagia. **Occasional (3%–2%):** Myalgia, paresthesia, dyspepsia, ecchymosis, cataract, conjunctival hemorrhage.

ADVERSE EFFECTS/ TOXIC REACTIONS

May cause hepatotoxicity. Increases risk of reticulin fiber deposits within bone marrow (may lead to bone marrow fibrosis). May produce hematologic malignancies. May cause excessive increase in platelets, leading to thrombotic complications.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBCs, including platelet counts and peripheral blood smears; hepatic function tests (ALT, AST, bilirubin) prior to initiating therapy. Examine peripheral blood smear to establish extent of RBC and WBC abnormalities. Obtain baseline ocular examination.

INTERVENTION/EVALUATION

Monitor CBC, platelet counts, peripheral blood smears, hepatic function tests (ALT, AST, bilirubin) throughout and following discontinuation of eltrombopag. Monitor for signs of cataracts during therapy.

PATIENT/FAMILY TEACHING

• Inform pt of need to monitor hepatic function, CBC, platelet counts, peripheral blood smears throughout therapy and for at least 4 wks following discontinuation of therapy. • Report any of the following signs and symptoms of hepatotoxicity: yellowing of the skin or whites of eyes, unusual darkening of the urine, unusual tiredness, pain in right upper stomach area.

emtricitabine

TOP 200

em-trih-**sye**-ta-bean
(Emtriva)

BLACK BOX ALERT Serious, sometimes fatal, hypersensitivity reaction, lactic acidosis, severe hepatomegaly with steatosis (fatty liver) have occurred. May exacerbate hepatitis B following completion of emtricitabine therapy.

FIXED-COMBINATION(S)

Atripla: emtricitabine/efavirenz (an antiretroviral)/tenofovir (an antiretroviral): 200 mg/600 mg/300 mg.
Complera: emtricitabine/rilpivirine (an antiretroviral)/tenofovir (an antiretroviral): 200 mg/25 mg/300 mg.
Truvada: emtricitabine/tenofovir (an antiretroviral): 200 mg/300 mg.
Stribild: emtricitabine/elvitegravir (an integrase inhibitor)/cobicistat (a pharmacokinetic enhancer)/tenofovir (a nucleotide reverse transcriptase inhibitor): 200 mg/150 mg/150 mg/300 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nucleoside reverse transcriptase inhibitor. **CLINICAL:** Antiretroviral agent.

ACTION

Inhibits HIV-1 reverse transcriptase by incorporating itself into viral DNA, resulting in chain termination. **Therapeutic Effect:** Impairs HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Rapidly, extensively absorbed from GI tract. Protein binding: less than 4%. Excreted primarily in urine. **Half-life:** 10 hrs.

USES

Used in combination with at least two other antiretroviral agents for treatment of HIV-1 infection in adults.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breast-feeding not recommended. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None known. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase, ALT, AST, triglycerides. May alter serum glucose.

AVAILABILITY (Rx)

Capsules: 200 mg. **Oral Solution:** 10 mg/ml.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

HIV

Capsules

PO: ADULTS, ELDERLY, CHILDREN 3 MOS–17 YRS, WEIGHING MORE THAN 33 KG: 200 mg once daily.

Oral Solution

PO: ADULTS, ELDERLY: 240 mg once daily. **CHILDREN 3 MOS–17 YRS:** 6 mg/kg once daily. **Maximum:** 240 mg once daily. **CHILDREN 0–3 MOS:** 3 mg/kg/day.

Dosage in Renal Impairment

Creatinine Clearance	Capsule	Oral Solution
30–49 ml/min	200 mg q48h	120 mg q24h
15–29 ml/min	200 mg q72h	80 mg q24h
Less than 15 ml/min; hemodialysis pts	200 mg q96h	60 mg q24h

Administer after dialysis on dialysis days.

SIDE EFFECTS

Frequent (23%–13%): Headache, rhinitis, rash, diarrhea, nausea. **Occasional (14%–4%):** Cough, vomiting, abdominal pain, insomnia, depression, paresthesia, dizziness, peripheral neuropathy, dyspepsia, myalgia. **Rare (3%–2%):** Arthralgia, abnormal dreams.

ADVERSE EFFECTS/ TOXIC REACTIONS

Lactic acidosis, hepatomegaly with steatosis (excess fat in liver) occur rarely; may be severe.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory tests, esp. serum hepatic function, triglycerides before beginning and at periodic intervals during therapy. Offer emotional support.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Question for evidence of nausea, pruritus. Assess skin for rash, urti-

caria. Monitor serum chemistry tests, hepatic function tests for marked abnormalities, signs/symptoms of lactic acidosis.

PATIENT/FAMILY TEACHING

• May cause redistribution of body fat. • Continue therapy for full length of treatment. • Emtricitabine is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pts may continue to acquire illnesses associated with advanced HIV infection. • Avoid tasks that require alertness, motor skills until response to drug is established. • Notify physician if persistent severe abdominal pain, nausea, vomiting, numbness occur.

enalapril

TOP 200

en-**al**-ah-pril
(Apo-Enalapril, Novo-Enalapril, Vasotec)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse enalapril with Anafranil, Elavil, Eldepryl, or ramipril.

FIXED-COMBINATION(S)

Lexxel: enalapril/felodipine (calcium channel blocker): 5 mg/2.5 mg, 5 mg/5 mg. **Teczem:** enalapril/diltiazem (calcium channel blocker): 5 mg/180 mg. **Vaseretic:** enalapril/hydrochlorothiazide (diuretic): 5 mg/12.5 mg, 10 mg/25 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin-converting enzyme (ACE) inhibitor. **CLINICAL:** Antihypertensive, vasodilator (see p. 9C, 60C).

ACTION

Suppresses renin-angiotensin-aldosterone system (prevents conversion of angiotensin I to angiotensin II, a potent vasoconstrictor; may inhibit angiotensin II at local vascular, renal sites). Decreases plasma angiotensin II, increases plasma renin activity, decreases aldosterone secretion. **Therapeutic Effect:** In hypertension, reduces peripheral arterial resistance. In CHF, increases cardiac output; decreases peripheral vascular resistance, B/P, pulmonary capillary wedge pressure, heart size.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	4–6 hrs	24 hrs
IV	15 min	1–4 hrs	6 hrs

Readily absorbed from GI tract. Protein binding: 50%–60%. Converted to active metabolite. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 11 hrs (increased in renal impairment).

USES

Treatment of hypertension alone or in combination with other antihypertensives. Adjunctive therapy for symptomatic CHF. Treatment of asymptomatic left ventricular dysfunction. **OFF-LABEL:** Diabetic nephropathy, hypertension due to scleroderma, renal crisis, hypertensive crisis, idiopathic edema, renal artery stenosis, diagnosis of aldosteronism, post MI for prevention of ventricular failure.

PRECAUTIONS

Contraindications: History of angioedema from previous treatment with ACE inhibitors. Idiopathic/hereditary angioedema. **Cautions:** Renal impairment, those with sodium depletion or on diuretic therapy, hypovolemia, severe CHF, left ventricular outflow tract obstruction, unstented unilateral or bilateral renal artery stenosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May cause fetal/neonatal mortality, morbidity. **Pregnancy Category D (C if used in first trimester). Children:** Safety and efficacy not established. **Elderly:** May be more susceptible to hypotensive effects.

INTERACTIONS

DRUG: **Alcohol, antihypertensive agents, diuretics** may increase effect. **NSAIDs** may decrease antihypertensive effect, increase risk of possible acute renal failure. **Potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. May increase **lithium** concentration, toxicity. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **Licorice** may cause sodium/water retention, loss of potassium. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, potassium, AST, ALT. May decrease serum sodium. May cause positive ANA titer.

AVAILABILITY (Rx)

Injection Solution: 1.25 mg/ml. **Tablets:** 2.5 mg, 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • May give undiluted or dilute with D_5W or 0.9% NaCl.
Rate of Administration • For IV push, give undiluted over 5 min. • For IV piggyback, infuse over 10–15 min.
Storage • Store parenteral form at room temperature. • Use only clear, colorless solution. • Diluted IV solution is stable for 24 hrs at room temperature.

PO

• Give without regard to food. • Tablets may be crushed.

IV INCOMPATIBILITIES

Amphotericin B (Fungizone), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), phenytoin (Dilantin).

IV COMPATIBILITIES

Calcium gluconate, dobutamine (Dobutrex), dopamine (Intropin), fentanyl (Sublimaze), heparin, lidocaine, lipids, magnesium sulfate, morphine, nitroglycerin, potassium chloride, potassium phosphate, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 2.5–5 mg/day. May increase at 1- to 2-wk intervals. Range: 2.5–40 mg/day in 1–2 divided doses. **CHILDREN 1 MO–16 YRS:** 0.08 mg/kg/day in 1–2 divided doses. **Maximum:** 5 mg/day. **NEONATES:** 0.04–0.1 mg/kg/day given q24h.
IV: ADULTS, ELDERLY: 0.625–1.25 mg q6h up to 5 mg q6h. **CHILDREN, NEONATES:** 5–10 mcg/kg/dose q8–24h.

Adjunctive Therapy for CHF

PO: ADULTS, ELDERLY: Initially, 2.5–5 mg/day. Range: 5–40 mg/day in 2 divided doses.

Asymptomatic Left Ventricular Dysfunction

PO: ADULTS, ELDERLY: 2.5 mg twice daily. Titrate up to 20 mg/day.

Dosage in Renal Impairment

Creatinine Clearance

Clearance	PO	IV
30 ml/min or greater	5 mg/day; titrate to maximum 40 mg/day	1.25 mg q6h; titrate to desired response
Less than 30 ml/min	2.5 mg/day; titrate to control B/P	0.626 mg q6h; titrate to desired response

HD: Initially, 2.5 mg on dialysis days, adjust dose on non-dialysis days depending on B/P.

SIDE EFFECTS

Frequent (7%–5%): Headache, dizziness. **Occasional (3%–2%):** Orthostatic hypotension, fatigue, diarrhea, cough, syncope. **Rare (less than 2%):** Angina, abdominal pain, vomiting, nausea, rash, asthenia (loss of strength, energy).

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive hypotension ("first-dose syncope") may occur in pts with CHF, severe salt or volume depletion. Angioedema (facial, lip swelling), hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in pts with renal impairment, collagen vascular diseases (scleroderma, systemic lupus erythematosus). Nephrotic syndrome may be noted in those with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose (be alert to fluctuations). In pts with renal impairment, autoimmune disease, or taking drugs that affect leukocytes/immune response, CBC should be performed before beginning therapy, q2wks for 3 mos, then periodically thereafter.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Monitor serum potassium, BUN, serum creatinine, CBC, B/P. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• To reduce hypotensive effect, rise slowly from lying to sitting position, permit legs to dangle from bed momentarily before standing. • Several wks may be needed for full therapeutic effect of B/P reduction. • Skipping doses or voluntarily discontinuing drug may produce severe, rebound hypertension. • Limit alcohol intake. • Inform physician if vomiting, diarrhea, diaphoresis, persistent cough, swelling of face, lips, tongue, difficulty in breathing occurs.

enfuvirtide

en-**fue**-veer-tide
(Fuzeon)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fusion inhibitor. **CLINICAL:** Antiretroviral agent (see p. 117C).

ACTION

Interferes with entry of HIV-1 into $CD4^+$ cells by inhibiting fusion of viral, cellular membranes. **Therapeutic Effect:** Impairs HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Comparable absorption when injected into subcutaneous tissue of abdomen, arm, thigh. Protein binding: 92%. Undergoes catabolism to amino acids. **Half-life:** 3.8 hrs.

USES

Used in combination with other antiretroviral agents for treatment of HIV-1 infection in treatment-experienced pts with evidence of HIV-1 replication.

PRECAUTIONS

Contraindications: None known. **Cautions:** Not recommended in antiretroviral-naïve pts, those with coagulation disorders or on anticoagulants.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breast-feeding not recommended. **Pregnancy Category B. Children:** Safety and effectiveness not established in those 6 yrs and younger. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase levels of **protease inhibitors. Protease inhibitors** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May elevate serum glucose, amylase, creatine kinase (CK), lipase, triglycerides, AST, ALT. May decrease Hgb.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 108-mg vials (approximately 90 mg/ml when reconstituted).

ADMINISTRATION/HANDLING

Subcutaneous

Reconstitution • Reconstitute with 1.1 ml Sterile Water for Injection. • Visually inspect vial for particulate matter. Solution should appear clear, colorless (may take up to 45 min to form clear, colorless solution). • Discard unused portion.

Rate of Administration • Administer into upper arm, anterior thigh, abdomen. Rotate injection sites.

Storage • Store at room temperature. • Refrigerate reconstituted solution; use within 24 hrs. • Bring reconstituted solution to room temperature before injection.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

Subcutaneous: ADULTS, ELDERLY: 90 mg (1 ml) twice a day. **CHILDREN 6–16 YRS:** 2 mg/kg twice a day. **Maximum:** 90 mg twice a day.

Pediatric Dosing Guidelines

Weight: kg (lb)	Dose: mg (ml)
11–15.5 (24–34)	27 (0.3)
15.6–20 (35–44)	36 (0.4)
20.1–24.5 (45–54)	45 (0.5)
24.6–29 (55–64)	54 (0.6)
29.1–33.5 (65–74)	63 (0.7)
33.6–38 (75–84)	72 (0.8)
38.1–42.5 (85–94)	81 (0.9)
Greater than 42.5 (greater than 94)	90 (1)

SIDE EFFECTS

Expected (98%): Local injection site reactions (pain, discomfort, induration, erythema, nodules, cysts, pruritus, ecchymosis). **Frequent (26%–16%):** Diarrhea, nausea, fatigue. **Occasional (11%–4%):** Insomnia, peripheral neuropathy, depression, cough, decreased appetite or weight loss, sinusitis, anxiety, asthenia (loss of strength, energy), myalgia, cold sores. **Rare (3%–2%):** Constipation, influenza, upper abdominal pain, anorexia, conjunctivitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

May potentiate bacterial pneumonia. Hypersensitivity (rash, fever, chills, rigors, hypotension), thrombocytopenia, neutropenia, renal insufficiency/failure occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory tests, esp. serum hepatic function, triglycerides before beginning enfuvirtide therapy and at periodic intervals during therapy. Offer emotional support.

INTERVENTION/EVALUATION

Assess skin for local injection site hypersensitivity reaction. Question for evidence of nausea, fatigue. Assess sleep pattern. Monitor for insomnia, signs/symptoms of depression, pneumonia. Monitor serum chemistry tests for marked abnormalities.

PATIENT/FAMILY TEACHING

• Increased rate of bacterial pneumonia has occurred with enfuvirtide therapy; seek medical attention if cough with fever, rapid breathing occurs. • Continue therapy for full length of treatment. • Enfuvirtide is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pt must continue practices to prevent HIV transmission. • Notify physician if injection site reaction is severe.

enoxaparin

TOP 200 HIGH ALERT

en-**ox**-ah-pear-in
(Lovenox)

BLACK BOX ALERT Epidural or spinal anesthesia greatly increases potential for spinal or epidural hematoma, subsequent long-term or permanent paralysis.

Do not confuse Lovenox with Lasix, Levaquin, Lotronex, or Protonix.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Low-molecular-weight heparin. **CLINICAL:** Anticoagulant (see p. 31C).

ACTION

Potentiates action of antithrombin III, inactivates coagulation factor Xa. **Therapeutic Effect:** Produces anticoagulation. Does not significantly influence bleeding time, PT, aPTT.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Subcutaneous	N/A	3–5 hrs	12 hrs

Well absorbed after subcutaneous administration. Eliminated primarily in urine. Not removed by hemodialysis. **Half-life:** 4.5 hrs.

USES

Prevention of postop deep vein thrombosis (DVT) following hip or knee replacement surgery, abdominal surgery. Long-term DVT prevention following hip replacement surgery, nonsurgical acute illness. Treatment of acute coronary syndrome (ACS): unstable angina, non–Q-wave MI, acute ST-segment elevation MI (STEMI). Acute DVT (with warfarin). **OFF-LABEL:** Prophylaxis/treatment of thromboembolism in children. DVT prophylaxis following moderate-risk general surgery, gynecologic surgery; management of venous thromboembolism (VTE) during pregnancy.

PRECAUTIONS

Contraindications: Active major bleeding, concurrent heparin therapy, hypersensitivity to heparin, pork products, thrombocytopenia associated with positive in vitro test for antiplatelet antibodies. **Cautions:** Conditions with increased risk of hemorrhage, history of heparin-induced thrombocytopenia platelet, defects, renal impairment (renal failure), elderly, uncontrolled arterial hypertension, history of recent GI ulceration or hemorrhage. When neuraxial anesthesia (epidural or spinal anesthesia) or spinal puncture is used, pts anticoagulated or scheduled to be anticoagulated with enoxaparin for prevention of thromboembolic complications are at risk for developing an epidural or spinal hematoma that can result in long-term or permanent paralysis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use with caution, particularly during third trimester, immediate postpartum period (increased risk of maternal hemorrhage). Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** May be more susceptible to bleeding.

INTERACTIONS

DRUG: Antiplatelet agents, aspirin, NSAIDs, thrombolytics may increase risk of bleeding. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng** may increase antiplatelet action. **FOOD:** None known. **LAB VALUES:** Increases serum alkaline phosphatase, AST, ALT. May decrease Hgb, Hct, RBCs.

AVAILABILITY (Rx)

Injection Solution: 30 mg/0.3 ml, 40 mg/0.4 ml, 60 mg/0.6 ml, 80 mg/0.8 ml, 100 mg/ml, 120 mg/0.8 ml, 150 mg/ml in prefilled syringes.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not mix with other injections, infusions. Do not give IM.

Subcutaneous

• Parenteral form appears clear, colorless to pale yellow. • Store at room temperature. • Instruct pt to lie down before administering by deep subcutaneous injection. • Inject between left and right anterolateral and left and right posterolateral abdominal wall. • Introduce entire length of needle (½ inch) into skin fold held between thumb and forefinger, holding skin fold during injection.

INDICATIONS/ROUTES/DOSAGE

Prevention of Deep Vein Thrombosis (DVT) After Hip and Knee Surgery

Subcutaneous: ADULTS, ELDERLY: 30 mg twice a day, generally for 7–10 days, with initial dose given within 12–24 hrs following surgery. Once-daily dosing following hip surgery: 40 mg with initial dose within 9–15 hrs before surgery.

Prevention of DVT After Abdominal Surgery

Subcutaneous: ADULTS, ELDERLY: 40 mg a day for 7–10 days, with initial dose given 2 hrs prior to surgery.

Prevention of DVT After Bariatric Surgery

BMI 50 or less (kg/m^2): 40 mg q12h. BMI greater than 50 kg/m^2: 60 mg q12h.

Prevention of Long-Term DVT in Nonsurgical Acute Illness

Subcutaneous: ADULTS, ELDERLY: 40 mg once a day; continue until risk of DVT has diminished (usually 6–11 days).

Prevention of Ischemic Complications of Unstable Angina, Non–Q-Wave MI (with Oral Aspirin Therapy)

Subcutaneous: ADULTS, ELDERLY: 1 mg/kg q12h (with oral aspirin).

STEMI

Subcutaneous: ADULTS LESS THAN 75 YRS OF AGE: 30 mg IV once plus 1 mg/kg q12h (**maximum:** 100 mg first 2 doses only). **ADULTS 75 YRS OR GREATER:** 0.75 mg/kg (**maximum:** 75 mg first 2 doses only) q12h.

Acute DVT

Subcutaneous: ADULTS, ELDERLY: 1 mg/kg q12h or 1.5 mg/kg once daily.

Usual Pediatric Dosage

Subcutaneous: CHILDREN 2 MOS AND OLDER: 0.5 mg/kg q12h (prophylaxis); 1 mg/kg q12h (treatment). **NEONATES, INFANTS LESS THAN 2 MOS:** 0.75/mg/kg/dose q12h (prophylaxis); 1.5 mg/kg/dose q12h (treatment).

Dosage in Renal Impairment

Clearance is decreased when creatinine clearance is less than 30 ml/min. Monitor and adjust dosage as necessary.

Use	Dosage
Abdominal surgery, pts with acute illness	30 mg once/day
Hip, knee surgery	30 mg once/day
DVT, angina, MI	1 mg/kg once/day
STEMI: (<75 yrs)	30 mg IV once plus 1 mg/kg q24h
STEMI (75 yrs or greater)	1 mg/kg q24h
NSTEMI	1 mg/kg q24h

SIDE EFFECTS

Occasional (4%–1%): Injection site hematoma, nausea, peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may lead to bleeding complications ranging from local ecchymoses to major hemorrhage. **Antidote:** IV injection of protamine sulfate (1% solution) equal to dose of enoxaparin injected. One mg protamine sulfate neutralizes 1 mg enoxaparin. A second dose of 0.5 mg protamine sulfate per 1 mg enoxaparin may be given if aPTT tested 2–4 hrs after first injection remains prolonged.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBC, including platelet count.

INTERVENTION/EVALUATION

Periodically monitor CBC, platelet count, stool for occult blood (no need for daily monitoring in pts with normal presurgical coagulation parameters). Assess for any sign of bleeding (bleeding at surgical site, hematuria, blood in stool, bleeding from gums, petechiae, bruising, bleeding from injection sites).

PATIENT/FAMILY TEACHING

• Usual length of therapy is 7–10 days. • Do not take any OTC medication (esp. aspirin) without consulting physician. • Notify physician if unusual bleeding or bruising occurs.

entacapone

en-**tak**-ah-pone
(Comtan)

FIXED-COMBINATION(S)

Stalevo: entacapone/carbidopa/levodopa (an antiparkinson agent): 200 mg/12.5 mg/50 mg, 200 mg/25 mg/100 mg, 200 mg/37.5 mg/150 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Enzyme inhibitor. **CLINICAL:** Antiparkinson agent (see p. 146C).

ACTION

Inhibits the enzyme catechol-*O*-methyltransferase (COMT), potentiating dopamine activity, increasing duration of action of levodopa. **Therapeutic Effect:** Decreases signs, symptoms of Parkinson's disease by enhancing effectiveness of levodopa/carbidopa in the brain.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 98%. Metabolized in liver. Primarily eliminated by biliary excretion. Not removed by hemodialysis. **Half-life:** 2.4 hrs.

USES

◀ALERT▶ Use only for pts taking total dose of levodopa of 600 mg or less and not experiencing dyskinesias.
To reduce immediate-release carbidopa/levodopa therapy when pts experience end-of-dose diminishing effectiveness.

PRECAUTIONS

Contraindications: None known. **Cautions:** Pts at risk for hypotension, preexisting dyskinesias, use of MAOIs within 14 days, hepatic impairment, severe renal impairment, lower GI disease.

⌛ LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Not used in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Nonselective MAOIs (including phenelzine) may inhibit catecholamine metabolism. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Serum iron may decrease.

AVAILABILITY (Rx)

Tablets: 200 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Always administer with levodopa/carbidopa.

Adjunctive Treatment of Parkinson's Disease

PO: ADULTS, ELDERLY: 200 mg concomitantly with each dose of carbidopa and levodopa up to a maximum of 8 times a day (1,600 mg).

SIDE EFFECTS

Frequent (greater than 10%): Dyskinesia (uncontrolled body movements), nausea, dark yellow or orange urine and sweat, diarrhea. **Occasional (9%–3%):** Abdominal pain, vomiting, constipation, dry mouth, fatigue, back pain. **Rare (less than 2%):** Anxiety, drowsiness, agitation, dyspepsia, flatulence, diaphoresis, asthenia (loss of strength, energy), dyspnea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hallucinations may be noted.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor for evidence of dyskinesia (difficulty with movement). Assess for clinical reversal of symptoms (improvement of tremor of head and hands at rest, mask-like facial expression, shuffling gait, muscular rigidity). Monitor B/P, hepatic function tests. Assess for orthostatic hypotension, diarrhea.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • May cause color change in urine or sweat (dark yellow, orange). • Report any uncontrolled movement of face, eyelids, mouth, tongue, arms, hands, legs.

entecavir

en-**tek**-ah-veer
(Baraclude)

BLACK BOX ALERT Serious, sometimes fatal, hypersensitivity reaction, lactic acidosis, severe hepatomegaly with steatosis (fatty liver) have occurred. May cause HIV resistance in chronic hepatitis B pts. Severe acute exacerbations of hepatitis B may occur upon discontinuation of entecavir.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Reverse transcriptase inhibitor. **CLINICAL:** Antiretroviral agent.

ACTION

Inhibits hepatitis B viral polymerase, an enzyme blocking reverse transcriptase activity. **Therapeutic Effect:** Interferes with viral DNA synthesis.

PHARMACOKINETICS

Poorly absorbed from GI tract. Protein binding: 13%. Extensively distributed into tissues. Partially metabolized in liver. Eliminated mainly in urine. **Half-life:** 5–6 days (increased in renal impairment).

USES

Treatment of chronic hepatitis B infection with evidence of active viral replication and evidence of either persistent transaminase elevations or histologically active disease or evidence of decompensated hepatic disease.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment, pts receiving concurrent therapy that may reduce renal function.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Ganciclovir, ribavirin, valganciclovir may increase concentration. **HERBAL:** None significant. **FOOD: Food** delays absorption, decreases concentration. **LAB VALUES:** May increase serum amylase, lipase, bilirubin, ALT, AST, creatinine, glucose. May decrease serum albumin, platelets.

AVAILABILITY (Rx)

Oral Solution: 0.05 mg/ml. **Tablets:** 0.5 mg, 1 mg.

ADMINISTRATION/HANDLING

PO

• Administer tablets on an empty stomach (at least 2 hrs after a meal and 2 hrs before the next meal). • Do not dilute, mix oral solution with water or any other liquid. • Each bottle of oral solution is accompanied by a dosing spoon. Before administering, hold spoon in vertical position, fill it gradually to mark corresponding to prescribed dose.

Storage • Store tablets, oral solution at room temperature.

INDICATIONS/ROUTES/DOSAGE

Chronic Hepatitis B (No Previous Nucleoside Treatment)
PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 0.5 mg once daily.

Chronic Hepatitis B (Receiving Lamivudine, Known Lamivudine Resistance, Decompensated Liver Disease)
PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 1 mg once daily.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
50 ml/min and greater	0.5 mg once daily
30–49 ml/min	0.25 mg once daily
10–29 ml/min	0.15 mg once daily
9 ml/min and less	0.05 mg once daily

SIDE EFFECTS

Occasional (4%–3%): Headache, fatigue. **Rare (less than 1%):** Diarrhea, dyspepsia, nausea, vomiting, dizziness, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Lactic acidosis, severe hepatomegaly with steatosis have been reported. Severe, acute exacerbations of hepatitis B have been reported in pts who have discontinued therapy; reinitiation of antihepatitis B therapy may be required. Hematuria occurs occasionally. May cause development of HIV resistance if HIV untreated.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory tests, esp. hepatic function, before beginning therapy and at periodic intervals during therapy. Offer emotional support. Obtain medication history.

INTERVENTION/EVALUATION

Hepatic function should be monitored closely with both clinical and laboratory follow-up for at least several mos in pts who discontinue antihepatitis B therapy. For pts on therapy, closely monitor serum amylase, lipase, bilirubin, ALT, AST, creatinine, glucose, albumin, platelet count. Assess for evidence of GI discomfort.

PATIENT/FAMILY TEACHING

• Take medication at least 2 hrs after a meal and 2 hrs before the next meal. • Avoid transmission of hepatitis B infection to others through sexual contact, blood contamination. • Notify physician immediately if unusual muscle pain, abdominal pain with nausea/vomiting, cold feeling in extremities, dizziness occur (signs and symptoms signaling onset of lactic acidosis).

enzalutamide

en-zah-**lew**-tah-myd
(XTANDI)
Do not confuse enzalutamide with bicalutamide, flutamide, or nilutamide.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiandrogen renal inhibitor. **CLINICAL:** Antineoplastic.

ACTION

Inhibits androgen binding to androgen receptors in target tissue, and inhibits interaction with DNA. **Therapeutic Effect:** Decreases proliferation, induces cell death of prostate cancer cells.

PHARMACOKINETICS

Readily absorbed in GI tract. Maximum plasma concentration achieved in 0.5–3 hrs. Metabolized by CYP2C8 and CYP3A4 pathways. Protein binding: (97%–98%). Primarily excreted in urine. **Half-life:** 5.8 days (Range: 2.8–10.2 days).

USES

Treatment of metastatic castration-resistant prostate cancer in pts who have previously received docetaxel.

PRECAUTIONS

Contraindications: Women who are or may become pregnant (not indicated in female population). **Cautions:** History of seizure, underlying brain injury with loss of consciousness, transient ischemic attack within past 12 mos, CVA, brain metastases, brain arteriovenous abnormality, use of concurrent medications that may lower seizure threshold.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not used in female population. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong **CYP2C8, CYP3A4 inhibitors (e.g., gemfibrozil, itraconazole)** may increase enzalutamide concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT, bilirubin. May decrease Hgb, Hct, platelets, WBC count.

AVAILABILITY (Rx)

Capsules: 40 mg.

ADMINISTRATION/HANDLING

PO • Must be given on empty stomach. • No food is to be consumed 2 hrs before or 1 hr after each dose (food may increase absorption up to 10× normal limit). • Do not crush, dissolve, or open capsules.

INDICATIONS/ROUTES/DOSAGE

Metastatic Castration-Resistant Prostate Cancer

PO: ADULTS, ELDERLY: 160 mg (40 mg capsules) given once daily.

Dose Modification

If a grade 3 or greater toxicity or an intolerable side effect occurs, withhold dosing for 1 week or until symptoms improve to grade 2 or less, then resume at same dose or a reduced dose (120 mg or 80 mg). Concurrent use of strong CYP2C8 inhibitors (e.g., gemfibrozil) should be avoided if possible. If concurrent use is necessary, reduce the enzalutamide dose to 80 mg once daily.

SIDE EFFECTS

Common (51%): Asthenia (loss of strength, energy). **Frequent (26%–15%):** Back pain, diarrhea, arthralgia, hot flashes, peripheral edema, musculoskeletal pain. **Occasional (12%–6%):** Headache, dizziness, insomnia, hematuria, paresthesia, anxiety, hypertension. **Rare (4%–2%):** Mental impairment disorders (includes amnesia, memory impairment, cognitive disorder, attention deficit), hematuria (includes pollakiuria, pruritus, dry skin).

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory tract infection occurs in 11% of pts; lower respiratory tract and lung infection (includes pneumonia, bronchitis) occur in slightly less (9%). Spinal cord compression and cauda equina syndrome occurs in 7% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Obtain baseline CBC, ALT/AST, bilirubin periodically throughout therapy. Assess bowel activity, stool consistency. Pregnancy Category X. If coadministered with warfarin (CYP2C9 substrate), conduct additional INR monitoring.

INTERVENTION/EVALUATION

Assess for peripheral edema behind medial malleolus (sacral area in bedridden patients). Question level of fatigue, weakness. Question presence of back pain, arthralgia, or headache. Assess level of anxiety. Monitor B/P for hypertension. Assess for hematuria. Question pt regarding sleeping pattern.

PATIENT/FAMILY TEACHING

• Sexually active men must wear condom during treatment and for 1 wk after treatment due to potential risks to fetus. • Women who are pregnant or are plan-

ning pregnancy may not touch medication without gloves. • Dizziness, headache, muscle weakness, leg swelling/discomfort should be reported. • Contact physician if fever or cough occurs. • Routine blood draws will occur during treatment.

E

◀ALERT▶ Must be given on empty stomach. No food is to be consumed 2 hrs before or 1 hr after each dose. Food may increase absorption up to 10× normal limit.

epinephrine

TOP 200 HIGH ALERT

ep-ih-**nef**-rin
(Adrenalin, EpiPen, EpiPen Jr., Primatene Mist, Twinject)
Do not confuse epinephrine with ephedrine.

FIXED-COMBINATION(S)

LidoSite: epinephrine/lidocaine (anesthetic): 0.1%/10%.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic (adrenergic agonist). **CLINICAL:** Antiglaucoma, bronchodilator, cardiac stimulant, antiallergic, antihemorrhagic, priapism reversal agent (see p. 158C).

ACTION

Stimulates alpha-adrenergic receptors (vasoconstriction, pressor effects), $beta_1$-adrenergic receptors (cardiac stimulation), $beta_2$-adrenergic receptors (bronchial dilation, vasodilation). **Therapeutic Effect:** Relaxes smooth muscle of bronchial tree, produces cardiac stimulation, dilates skeletal muscle vasculature.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IM	5–10 min	20 min	1–4 hrs
Subcutaneous	5–10 min	20 min	1–4 hrs
Inhalation	3–5 min	20 min	1–3 hrs

Well absorbed after parenteral administration; minimally absorbed after inhalation. Metabolized in liver, other tissues, sympathetic nerve endings. Excreted in urine. Ophthalmic form may be systemically absorbed as a result of drainage into nasal pharyngeal passages. Mydriasis occurs within several min and persists several hrs; vasoconstriction occurs within 5 min and lasts less than 1 hr.

USES

Treatment of asthma (acute exacerbation, reversible bronchospasm), anaphylaxis, hypersensitivity reaction, cardiac arrest. Added to local anesthetics to decrease systemic absorption and increase duration of activity of local anesthetic. Decreases superficial hemorrhage. **OFF-LABEL:** Ventricular fibrillation or pulseless ventricular tachycardia unresponsive to initial defibrillatory shocks; pulseless electrical activity, asystole, hypotension unresponsive to volume resuscitation; bradycardia/hypotension unresponsive to atropine or pacing; inotropic support.

PRECAUTIONS

Contraindications: Note: There are no absolute contraindications with injectable epinephrine in a life-threatening situation. **IV:** Narrow-angle glaucoma, shock, organic brain damage; during labor, heart failure; coronary insufficiency. **Inhalation:** Concurrent use or within 2 wks of MAOIs. **Cautions:** Elderly, diabetes mellitus, hypertension, Parkinson's disease, thyroid disease, cerebrovascular disease, concurrent use of tricyclic antidepressants.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effects of **beta-blockers. Digoxin, sympathomimetics** may increase risk of arrhythmias. **Ergonovine, methergine, oxytocin** may increase vasoconstriction. **MAOIs, tricyclic antidepressants** may increase cardiovascular effects. **HERBAL: Ephedra, yohimbe** may increase CNS stimulation. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium.

AVAILABILITY (Rx)

Aerosol for Oral Inhalation
***(Primatene Mist)*:** 0.22 mg/inhalation.

Injection, Solution (Prefilled Syringes):
***(EpiPen)*:** 0.3 mg/0.3 ml, ***(EpiPen Jr.)*:** 0.15 mg/0.3 ml, ***(Twinject)*:** 0.15 mg/0.15 ml. **Injection, Solution:** 0.1 mg/ml (1:10,000), 1 mg/ml (1:1,000).

Solution for Oral Inhalation
***(Adrenalin)*:** 2.25% (0.5 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • For injection, dilute each 1 mg of 1:1,000 solution with 10 ml 0.9% NaCl to provide 1:10,000 solution and inject each 1 mg or fraction thereof over 1 min or more (except in cardiac arrest). • For infusion, further dilute with 250–500 ml D_5W. Maximum concentration 64 mcg/ml.

Rate of Administration • For IV infusion, give at 1–10 mcg/min (titrate to desired response).

Storage • Store parenteral forms at room temperature. • Do not use if solution appears discolored or contains a precipitate.

Subcutaneous
• Shake ampule thoroughly. • Use tuberculin syringe for injection into lateral deltoid region. • Massage injection site (minimizes vasoconstriction effect). Use only 1:1,000 solution.

Inhalation
• Shake container well. • Instruct pt to exhale completely, place mouthpiece between lips, inhale deeply and slowly while pressing top of canister, hold breath as long as possible, then exhale slowly. • Allow at least 1 min between inhalations when multiple inhalations are ordered (allows for deeper bronchial penetration). • Rinsing mouth after each use decreases dry mouth, hoarseness.

Nebulizer
• No more than 10 drops Adrenalin Chloride solution 1:100 should be placed in reservoir of nebulizer. • Place nozzle just inside pt's partially opened mouth. • As bulb is squeezed once or twice, instruct pt to inhale deeply, drawing vaporized solution into lungs. • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness). • When nebulizer is not in use, replace stopper, keep in upright position.

IV INCOMPATIBILITIES

Aminophylline, ampicillin (Omnipen, Polycillin), sodium bicarbonate.

IV COMPATIBILITIES

Calcium chloride, calcium gluconate, diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), fentanyl (Sublimaze), heparin, hydromorphone (Dilaudid), lorazepam (Ativan), midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Anaphylaxis
IM: ADULTS, ELDERLY: 0.3–0.5 mg (0.3–0.5 ml of 1:1,000 solution). May repeat if

anaphylaxis persists. **CHILDREN WEIGHING 30 KG OR MORE:** 0.3 mg; may repeat in 5–15 min. **WEIGHING LESS THAN 30 KG:** 0.15 mg; may repeat in 5–15 min.

Asthma

Subcutaneous: ADULTS, ELDERLY: 0.3–0.5 mg (0.3–0.5 ml of 1:1,000 solution) q2h as needed. In severe attacks, may repeat q20min times 3 doses. **CHILDREN:** 0.01 ml/kg/dose (1:1,000 solution). **Maximum:** 0.4–0.5 ml/dose. May repeat q15–20min for 3–4 doses or q4h as needed.

Inhalation: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: 1 inhalation, wait at least 1 min. May repeat once. Do not use again for at least 3 hrs.

Cardiac Arrest

IV: ADULTS, ELDERLY: Initially, 1 mg. May repeat q3–5min as needed. **CHILDREN:** Initially, 0.01 mg/kg (0.1 ml/kg of a 1:10,000 solution). May repeat q3–5min as needed.

Endotracheal: ADULTS, ELDERLY: 2–2.5 mg q3–5 min as needed. **CHILDREN:** 0.1 mg/kg (0.1 ml/kg of a 1:1,000 solution). May repeat q3–5min as needed.

Hypersensitivity Reaction

IM, Subcutaneous: ADULTS, ELDERLY: 0.2–0.5 mg (1:1,000) q15–20min.

IV: 0.1 mg (1:10,000) over 5 min.

IM, Subcutaneous: CHILDREN: 0.01 mg/kg every 5–15 min. **Maximum single dose:** 0.3 mg.

SIDE EFFECTS

Frequent: Systemic: Tachycardia, palpitations, anxiety. **Ophthalmic:** Headache, eye irritation, watering of eyes. **Occasional: Systemic:** Dizziness, lightheadedness, facial flushing, headache, diaphoresis, increased B/P, nausea, trembling, insomnia, vomiting, fatigue. **Ophthalmic:** Blurred/decreased vision, eye pain. **Rare: Systemic:** Chest discomfort/pain, arrhythmias, bronchospasm, dry mouth/throat.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive doses may cause acute hypertension, arrhythmias. Prolonged/excessive use may result in metabolic acidosis due to increased serum lactic acid. Metabolic acidosis may cause disorientation, fatigue, hyperventilation, headache, nausea, vomiting, diarrhea.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor for vital sign changes. Assess lung sounds for rhonchi, wheezing, rales. Monitor ABGs. In cardiac arrest, monitor EKG, pt condition.

PATIENT/FAMILY TEACHING

- Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola, cocoa).
- Report any new symptoms (tachycardia, shortness of breath, dizziness) immediately: may be systemic effects.

epirubicin

HIGH ALERT

ep-i-**roo**-bi-sin
(Ellence, Pharmorubicin)

BLACK BOX ALERT Potential for cardiotoxicity, severe myelosuppresion. May increase risk of secondary leukemias. With IV, severe local tissue damage, necrosis may occur. Must be administered by personnel trained in administration/handling of chemotherapeutic agents.

Do not confuse Ellence with Elase, or epirubicin with daunorubicin, doxorubicin, or idarubicin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anthracycline antibiotic. **CLINICAL:** Antineoplastic (see p. 82C).

ACTION

May include formation of complex with DNA, subsequent inhibition of DNA, RNA, protein synthesis. Inhibits DNA helicase

activity, preventing enzymatic separation of double-stranded DNA, interfering with replication, transcription. **Therapeutic Effect:** Produces antiproliferative, cytotoxic activity.

PHARMACOKINETICS

Widely distributed into tissues. Protein binding: 77%. Metabolized in liver and RBCs. Primarily eliminated through biliary excretion. Not removed by hemodialysis. **Half-life:** 33 hrs.

USES

Component of adjuvant therapy in pts with evidence of axillary node tumor involvement following resection of primary breast cancer. **OFF-LABEL:** Esophageal, gastric, soft tissue sarcoma; uterine sarcoma.

PRECAUTIONS

Contraindications: Hypersensitivity to epirubicin, previous treatment with anthracyclines up to maximum cumulative dose, recent MI, severe myocardial insufficiency, severe arrhythmias. **Cautions:** Renal/hepatic/cardiac impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted but monitor for toxicity.

INTERACTIONS

DRUG: **Cytotoxic medications** may increase risk of hematologic and GI effects. **Calcium channel blockers** may increase risk of developing heart failure. **Cimetidine** may increase serum concentration, toxicity. **Daunorubicin, doxorubicin, idarubicin, mitoxantrone** may increase risk of GI, hematologic, hepatic effects; cardiotoxicity. **Hepatotoxic medications** may increase risk of hepatotoxicity. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease concentration. Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Injection Solution: 2-mg/ml single-use vials (25 ml, 100 ml). **Injection, Powder for Reconstitution:** 50 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Exclude pregnant staff from working with epirubicin; wear protective clothing. If accidental contact with skin or eyes occurs, flush area immediately with copious amounts of water.

IV

Reconstitution • Ready-to-use vials require no reconstitution. **Powder:** Reconstitute with Sterile Water for Injection to final concentration of 2 mg/ml.

Rate of Administration • **IV Push:** Infuse medication into tubing of free-flowing IV of 0.9% NaCl or D_5W over 3–10 min. **IV Infusion:** Further dilute with 50–250 ml 0.9% NaCl or D_5W and infuse over 15–20 min.

Storage • Refrigerate vial of solution; store vials of powder at room temperature. • Protect from light. • Use within 24 hrs of first penetration of rubber stopper. • Discard unused portion.

IV INCOMPATIBILITIES

Fluorouracil (5-FU), heparin. Do not mix epirubicin in same syringe with other medications.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Avoid use of veins over joints or in extremities with compromised venous or lymphatic drainage.

Breast Cancer

IV: ADULTS: 60 mg/m^2 on days 1 and 8 q28days for 6 cycles or 100 mg/m^2 on day 1 q21days for 6 cycles in combination with 5-fluorouracil (5-FU) and Cytoxan. Dosage adjustment considered in

pts with bone marrow depression or impaired renal function.

Dosage in Hepatic Impairment

Bilirubin 1.2–3 mg/dl or AST 2–4 times the upper limit of normal	50% of starting dose
Bilirubin >3 mg/dl or AST >4 times the upper limit of normal	25% of starting dose

SIDE EFFECTS

Frequent (83%–70%): Nausea, vomiting, alopecia, amenorrhea. **Occasional (9%–5%):** Stomatitis, diarrhea, hot flashes. **Rare (2%–1%):** Rash, pruritus, fever, lethargy, conjunctivitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Risk of cardiotoxicity (either acute, manifested as transient EKG abnormalities, or chronic, manifested as CHF) increases when total cumulative dose exceeds 900 mg/m^2. Extravasation during administration may result in severe local tissue necrosis. Myelosuppression may produce hematologic toxicity, manifested principally as leukopenia and, to lesser extent, anemia, thrombocytopenia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain WBC, platelet, erythrocyte counts before and at frequent intervals during therapy. Obtain EKG before therapy, serum hepatic function studies before each dose. Antiemetics may be effective in preventing, treating nausea.

INTERVENTION/EVALUATION

Monitor for stomatitis (may lead to ulceration of mucous membranes within 2–3 days). Monitor blood counts for evidence of myelosuppression, renal/hepatic function studies, cardiac function. Monitor daily pattern of bowel activity, stool consistency. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Monitor EKG changes. Assess injection site for extravasation, local skin reactions.

PATIENT/FAMILY TEACHING

• Alopecia is reversible, but new hair growth may have different color, texture. New hair growth resumes 2–3 mos after last therapy dose. • Maintain fastidious oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site.

eplerenone

ep-**ler**-e-nohn
(Inspra)
Do not confuse Inspra with Spiriva.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aldosterone receptor antagonist. **CLINICAL:** Antihypertensive (see p. 102C).

ACTION

Binds to mineralocorticoid receptors in kidney, heart, blood vessels, brain, blocking binding of aldosterone. **Therapeutic Effect:** Reduces B/P.

PHARMACOKINETICS

Absorption unaffected by food. Protein binding: 50%. Metabolized in liver. Excreted in urine, with lesser amount eliminated in feces. Not removed by hemodialysis. **Half-life:** 4–6 hrs.

USES

Treatment of hypertension alone or in combination with other antihypertensive agents. Treatment of CHF following acute myocardial infarction (AMI).

PRECAUTIONS

Contraindications: Concurrent use with strong CYP3A4 inhibitors (e.g., ketoconazole, itraconazole), creatinine clearance less than 50 ml/min (30 ml/min or less in pts with hypertension), serum creatinine level greater than 2 mg/dl in males or 1.8 mg/dl in females, serum potassium level greater than 5.5 mEq/L, type 2 diabetes mellitus with microalbuminuria. **Cautions:** Hyperkalemia, CHF, post MI, diabetes, mild renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: ACE inhibitors, angiotensin II antagonists potassium-sparing diuretics (e.g., spironolactone), potassium supplements increase risk of hyperkalemia. **CYP3A4 inhibitors (e.g., itraconazole, ketoconazole)** increase concentration five-fold (use is contraindicated). **NSAIDs** may decrease antihypertensive effect. **HERBAL: St. John's wort** decreases effectiveness. **FOOD: Grapefruit, grapefruit juice** may increase potential for hyperkalemia, arrhythmias. **LAB VALUES:** May increase serum potassium, ALT, AST, cholesterol, triglycerides, serum creatinine, uric acid. May decrease serum sodium.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg.

ADMINISTRATION/HANDLING

• Do not break, crush, chew film-coated tablets. • May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: 50 mg once a day. If 50 mg once a day produces an inadequate B/P response, may increase dosage to 50 mg twice a day. If pt is concurrently receiving CYP3A4 inhibitors (e.g., erythromycin, saquinavir, verapamil, or fluconazole), reduce initial dose to 25 mg once a day.

CHF Following MI

PO: ADULTS, ELDERLY: Initially, 25 mg once a day. If tolerated, titrate up to 50 mg once a day within 4 wks.

Dosage Adjustment for Serum Potassium Concentrations in CHF

Less than 5 mEq/L: Increase from 25 mg daily to 50 mg daily. Increase from 25 mg every other day to 25 mg daily.
5–5.4 mEq/L: No adjustment needed.
5.5–5.9 mEq/L: Decrease dose from 50 mg daily to 25 mg daily. Decrease dose from 25 mg daily to 25 mg every other day. Decrease dose from 25 mg every other day to withhold medication.
6 mEq/L or Greater: Withhold medication until potassium is less than 5.5 mEq/L, then restart at 25 mg every other day.

Dosage in Renal Impairment

Use is contraindicated in pts with hypertension with creatinine clearance less than 50 ml/min or serum creatinine greater than 2 mg/dl in males or greater than 1.8 mg/dl in females. All other indications, creatinine clearance less than 30 ml/min, use is contraindicated.

SIDE EFFECTS

Rare (3%–1%): Dizziness, diarrhea, cough, fatigue, flu-like symptoms, abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hyperkalemia may occur, particularly in pts with type 2 diabetes mellitus and microalbuminuria.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular

monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Monitor serum potassium levels. Assess B/P for hypertension and hypotension. Monitor daily pattern of bowel activity, stool consistency. Assess for evidence of flu-like symptoms.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established (possible dizziness effect). • Hypertension requires lifelong control. • Avoid exercising during hot weather (risk of dehydration, hypotension). • Do not use salt substitutes containing potassium.

epoetin alfa

TOP 200

eh-po-**ee**-tin **al**-fa
(Epogen, Eprex, Procrit)

BLACK BOX ALERT Increased risk of serious cardiovascular events, thromboembolic events, mortality, time-to-tumor progression in pts with head and neck cancer, metastatic breast cancer, non–small-cell lung cancer when administered to a target hemoglobin of more than 11 g/dl. Increases rate of deep vein thrombosis in perioperative pts not receiving anticoagulant therapy.

Do not confuse epoetin with darbepoetin, or Epogen with Neupogen.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycoprotein. **CLINICAL:** Erythropoietin.

ACTION

Stimulates division, differentiation of erythroid progenitor cells in bone marrow. **Therapeutic Effect:** Induces erythropoiesis, releases reticulocytes from bone marrow.

PHARMACOKINETICS

Well absorbed after subcutaneous administration. Following administration, an increase in reticulocyte count occurs within 10 days, and increases in Hgb, Hct, and RBC count are seen within 2–6 wks. **Half-life:** 4–13 hrs.

USES

Treatment of anemia in pts receiving or who have received chemotherapy, those with chronic renal failure, HIV-infected pts on zidovudine (AZT) therapy, those scheduled for elective noncardiac, nonvascular surgery, reducing need for allogenic blood transfusions. **OFF-LABEL:** Anemia in myelodysplastic syndromes.

PRECAUTIONS

Contraindications: Pure red cell aplasia, uncontrolled hypertension. **Cautions:** History of seizures or hypertension. **Cancer pts:** Tumor growth, shortened survival may occur when Hgb levels of 11 g/dl or greater are achieved with epoetin alfa. **Chronic kidney failure pts:** Increased risk for serious cardiovascular reactions (e.g., stroke, MI) when Hgb levels greater than 11 g/dl are achieved with epoetin alfa.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those 12 yrs and younger. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum phosphorus, potassium, creatinine, uric acid, sodium. May decrease bleeding time, iron concentration, serum ferritin.

AVAILABILITY (Rx)

Injection Solution (Epogen, Procrit): 2,000 units/ml, 3,000 units/ml, 4,000 units/ml,

10,000 units/ml, 20,000 units/ml, 40,000 units/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Avoid excessive agitation of vial; do not shake (foaming).

IV

Reconstitution • No reconstitution necessary.

Rate of Administration • May be given as an IV bolus.

Storage • Refrigerate. • Vigorous shaking may denature medication, rendering it inactive.

Subcutaneous

• Mix in syringe with bacteriostatic 0.9% NaCl with benzyl alcohol 0.9% (bacteriostatic saline) at a 1:1 ratio (benzyl alcohol acts as local anesthetic; may reduce injection site discomfort). • Use 1 dose per vial; do not reenter vial. Discard unused portion.

IV INCOMPATIBILITIES

Do not mix injection form with other medications.

INDICATIONS/ROUTES/DOSAGE

Anemia Associated with Chemotherapy

◀ALERT▶ Begin therapy only if Hgb less than 10 g/dl and anticipated duration of myelosuppressive chemotherapy is greater than 2 months. Use minimum effective dose to maintain Hgb level that will avoid red blood cell transfusions. Discontinue upon completion of chemotherapy.

Subcutaneous: ADULTS, ELDERLY: Initially, 150 units/kg 3 times/wk (commonly used dose of 10,000 units 3 times/wk) or 40,000 units once weekly. **CHILDREN 5 YRS AND OLDER:** 600 units/kg once weekly. **Maximum:** 40,000 units.

Increase dose: (Adults, elderly): If Hgb does not increase by greater than 1 g/dl and remains below 10 g/dl after initial 4 wks may increase to 300 units/kg 3 times/wk or 60,000 units once weekly.

(Children): If Hgb does not increase by greater than 1 g/dl and remains less than 10 g/dl after initial 4 wks of once-weekly dosing, may increase dose to 900 units/kg/wk. **Maximum:** 60,000 units once weekly.

Decrease dose: Decrease dose by 25% if Hgb increases greater than 1 g/dl in any 2-wk period or Hgb levels reaches level that will avoid red blood cell transfusions.

Reduction of Allogenic Blood Transfusions in Elective Surgery

Subcutaneous: ADULTS, ELDERLY: 300 units/kg/day for 10 days before and 4 days after surgery.

Anemia in Chronic Renal Failure

◀ALERT▶ Individualize dose, using lowest dose to reduce need for RBC transfusions. **ON DIALYSIS:** Initiate when Hgb less than 10 g/dl; reduce dose or discontinue if Hgb approaches or exceeds 11 g/dl. **NOT ON DIALYSIS:** Initiate when Hgb less than 10 g/dl; reduce dose or stop if Hgb exceeds 10 g/dl.

IV, Subcutaneous: ADULTS, ELDERLY: 50–100 units/kg 3 times/wk. **CHILDREN:** 50 units/kg 3 times/wk.

Maintenance:

Decrease dose by 25%: If Hgb increases greater than 1 g/dl in any 2-wk period.

Increase dose by 25%: If Hgb does not increase by greater than 1 g/dl after 4 wks of therapy. Do not increase dose more frequently than every 4 wks.

Note: If pt does not attain adequate response after appropriate dosing over 12 wks, do not continue to increase dose and use minimum effective dose to maintain Hgb level that will avoid red blood cell transfusions.

HIV Infection in Pts Treated with Zidovudine (AZT)

IV, Subcutaneous: ADULTS: Initially, 100 units/kg 3 times a wk for 8 wks; may increase by 50–100 units/kg 3 times a wk. Evaluate response q4–8wks thereafter. Adjust dosage by 50–100 units/kg 3 times a wk. If dosages larger than 300

units/kg 3 times a wk are not eliciting response, it is unlikely pt will respond. Maintenance: Titrate to maintain desired Hgb level. Hgb levels should not exceed 12 g/dl. If Hgb greater than 12 g/dl, resume treatment with 25% dose reduction when Hgb drops below 11 g/dl. Discontinue if Hgb increase not attained with 300 units/kg for 8 wks.

SIDE EFFECTS

Pts Receiving Chemotherapy

Frequent (20%–17%): Fever, diarrhea, nausea, vomiting, edema. **Occasional (13%–11%):** Asthenia (loss of strength, energy), shortness of breath, paresthesia. **Rare (5%–3%):** Dizziness, trunk pain.

Pts with Chronic Renal Failure

Frequent (24%–11%): Hypertension, headache, nausea, arthralgia. **Occasional (9%–7%):** Fatigue, edema, diarrhea, vomiting, chest pain, skin reactions at administration site, asthenia (loss of strength, energy), dizziness.

Pts with HIV Infection Treated with AZT

Frequent (38%–15%): Fever, fatigue, headache, cough, diarrhea, rash, nausea. **Occasional (14%–9%):** Shortness of breath, asthenia (loss of strength, energy), skin reaction at injection site, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypertensive encephalopathy, thrombosis, cerebrovascular accident, MI, seizures occur rarely. Hyperkalemia occurs occasionally in pts with chronic renal failure, usually in those who do not comply with medication regimen, dietary guidelines, frequency of dialysis regimen.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P before drug initiation (80% of pts with chronic renal failure have history of hypertension). B/P often rises during early therapy in pts with history of hypertension. Consider that all pts eventually need supplemental iron therapy. Assess serum iron (should be greater than 20%), serum ferritin (should be greater than 100 ng/ml) before and during therapy. Establish baseline CBC (esp. note Hct). Monitor aggressively for increased B/P (25% of pts on medication require antihypertensive therapy, dietary restrictions).

INTERVENTION/EVALUATION

Assess CBC routinely. Monitor Hgb, Hct, B/P. Monitor temperature, esp. in cancer pts on chemotherapy and zidovudine-treated HIV pts. Monitor BUN, serum uric acid, creatinine, phosphorus, potassium, esp. in chronic renal failure pts.

PATIENT/FAMILY TEACHING

• Frequent blood tests needed to determine correct dosage. • Inform physician if severe headache develops. • Avoid potentially hazardous activity during first 90 days of therapy (increased risk of seizures in pts with chronic renal failure during first 90 days). • Specific dietary regimen must be maintained.

eprosartan

ep-roe-**sar**-tan
(Teveten)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

FIXED COMBINATION(S)

HCT: eprosartan/hydrochlorothiazide (a diuretic): 400 mg/12.5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive (see p. 10C).

ACTION

Potent vasodilator. Blocks vasoconstrictor, aldosterone-secreting effects of an-

giotensin II, inhibiting binding of angiotensin II to AT_1 receptors. **Therapeutic Effect:** Causes vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 98%. Minimally metabolized in liver. Primarily excreted via urine, biliary system. Minimally removed by hemodialysis. **Half-life:** 5–9 hrs.

USES

Treatment of hypertension (alone or in combination with other medications).

PRECAUTIONS

Contraindications: None known. **Cautions:** Unstented renal artery stenosis, preexisting renal insufficiency, significant aortic/mitral stenosis, CHF.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has caused fetal and neonatal morbidity and mortality. Potential for adverse effects on breast-feeding infant. Breast-feeding not recommended. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Potassium-sparing diuretics, potassium supplements** may increase risk of hyperkalemia. May produce additive effect with **antihypertensive agents. HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension**. Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, AST, ALT. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 400 mg, 600 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not crush tablets.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 600 mg/day. Range: 400–800 mg/day as single dose or 2 divided doses.

SIDE EFFECTS

Occasional (5%–2%): Headache, cough, dizziness. **Rare (less than 2%):** Muscle pain, fatigue, diarrhea, upper respiratory tract infection, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdosage may manifest as hypotension, tachycardia. Bradycardia occurs less often.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). Question for possibility of pregnancy (see Pregnancy Category), history of hepatic/renal impairment, renal artery stenosis. Assess medication history (esp. diuretics).

INTERVENTION/EVALUATION

Monitor B/P, electrolytes, serum creatinine, BUN, urinalysis, pulse for tachycardia.

PATIENT/FAMILY TEACHING

• Inform female pt regarding consequences of second- and third-trimester exposure to medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Restrict sodium, alcohol intake. • Follow diet, control weight. • Do not stop taking medication; hypertension requires lifelong control. • Avoid exercising during hot weather (risk of dehydration, hypotension). • Check B/P regularly.

eptifibatide

HIGH ALERT

ep-ti-**fye**-ba-tide
(Integrilin)

E

CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycoprotein IIb/IIIa inhibitor. **CLINICAL:** Antiplatelet, antithrombotic (see p. 33C).

ACTION

Produces rapid inhibition of platelet aggregation by preventing binding of fibrinogen to receptor sites on platelets. **Therapeutic Effect:** Prevents thrombus formation within coronary arteries. Prevents acute cardiac ischemic complications.

PHARMACOKINETICS

Protein binding: 25%. Excreted in urine. **Half-life:** 2.5 hrs.

USES

Treatment of pts with acute coronary syndrome (ACS), including those managed medically and those undergoing percutaneous coronary intervention (PCI). **OFF-LABEL:** Support PCI during ST-elevation myocardial infarction (STEMI).

PRECAUTIONS

Contraindications: Active abnormal bleeding within previous 30 days; history of bleeding diathesis; history of stroke within 30 days or history of hemorrhagic stroke; severe hypertension; major surgery within previous 6 wks, depending on dialysis. **Cautions:** Impaired renal function, hemorrhagic retinopathy, platelet counts less than 100,000/mm^3. **Pregnancy Category B.**

INTERACTIONS

DRUG: Anticoagulants, heparin, NSAIDs, antiplatelets, thrombolytic agents may increase risk of bleeding. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng** may increase antiplatelet effects. **FOOD:** None known. **LAB VALUES:** Increases PT, aPTT, clotting time. Decreases platelet count.

AVAILABILITY (Rx)

Injection Solution: 0.75 mg/ml, 2 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Withdraw bolus dose from 10-ml vial (2 mg/ml); for IV infusion, withdraw from 100-ml vial (0.75 mg/ml). • IV push and infusion administration may be given undiluted.
Rate of Administration • Give bolus dose IV push over 1–2 min.
Storage • Store vials in refrigerator. • Solution appears clear, colorless. • Do not shake. • Discard any unused portion left in vial or if preparation contains *any* opaque particles.

IV INCOMPATIBILITIES

Administer in separate line; do not add other medications to infusion solution.

INDICATIONS/ROUTES/DOSAGE

Adjunct to Percutaneous Coronary Intervention (PCI)

IV Bolus, IV Infusion: ADULTS, ELDERLY: 180 mcg/kg (**maximum:** 22.6 mg) before PCI initiation; then continuous drip of 2 mcg/kg/min and a second 180 mcg/kg (**maximum:** 22.6 mg) bolus 10 min after the first. **Maximum:** 15 mg/hr. Continue until hospital discharge or for up to 18–24 hrs. Minimum 12 hrs is recommended. Concurrent aspirin and heparin therapy is recommended.

Acute Coronary Syndrome (ACS)

IV Bolus, IV Infusion: ADULTS, ELDERLY: 180 mcg/kg (**maximum:** 22.6 mg) bolus then 2 mcg/kg/min until discharge or coronary artery bypass graft, up to 72 hrs. **Maximum:** 15 mg/hr. Concurrent aspirin and heparin therapy is recommended.

Dosage in Renal Impairment

Creatinine Clearance Less than 50 ml/min: Use 180 mcg/kg bolus (**maxi-**

mum: 22.6 mg) and 1 mcg/kg/min infusion (**maximum:** 7.5 mg/hr).

SIDE EFFECTS

Occasional (7%): Hypotension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Minor to major bleeding complications may occur, most commonly at arterial access site for cardiac catheterization.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess platelet count, Hgb, Hct before treatment and during therapy. If platelet count less than 90,000/mm^3, additional platelet counts should be obtained routinely to avoid thrombocytopenia.

INTERVENTION/EVALUATION

Diligently monitor for potential bleeding, particularly at other arterial, venous puncture sites. If possible, urinary catheters, nasogastric tubes should be avoided.

eribulin

er-i-**bue**-lin
(Halaven)
Do not confuse eribulin with epirubicin or erlotinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Microtubule inhibitor. **CLINICAL:** Antineoplastic.

ACTION

Binds directly on microtubules during active stage of G_2 and M phases of cell cycle, preventing formation of microtubules, an essential part of process of separation of chromosomes. **Therapeutic Effect:** Blocks cells in mitotic phase of cell division, leading to cell death.

PHARMACOKINETICS

Extensively metabolized in liver. Protein binding: 49%–65%. Excreted unchanged mainly in feces, with lesser amount eliminated in urine. **Half-life:** 40 hrs.

USES

Treatment of metastatic breast cancer in those who previously received at least 2 chemotherapeutic regimens for treatment, including an anthracycline and a taxane agent.

PRECAUTIONS

Contraindications: None known. **Cautions:** Prolonged QTc (congenital, other medications that prolong QT interval), hepatic/renal impairment, moderate to severe neuropathy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause embryo-fetal toxicity. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **FOOD:** None known. **HERBAL:** None significant. **LAB VALUES:** May decrease WBC, Hgb, Hct, platelet count.

AVAILABILITY (Rx)

Injection, Solution: 1 mg/2 ml (0.5-mg/ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • May administer undiluted or dilute in 100 ml 0.9% NaCl.
Rate of Administration • Administer over 2–5 min.
Storage • Store at room temperature. • Once diluted, syringe or diluted solution may be stored for up to 4 hrs at room temperature or up to 24 hrs if refrigerated.

IV INCOMPATIBILITIES

Do not dilute with D_5W or administer through IV line containing solutions with dextrose or in same IV line with other medications.

E

INDICATIONS/ROUTES/DOSAGE

Metastatic Breast Cancer

IV: ADULTS, ELDERLY: 1.4 mg/m^2 over 2–5 min on days 1 and 8 of 21-day cycle.

Mild Hepatic/Renal Impairment (Creatinine Clearance 30–50 ml/min)

IV: ADULTS, ELDERLY: 1.1 mg/m^2 over 2–5 min on days 1 and 8 of 21-day cycle.

Moderate Hepatic Impairment

IV: ADULTS, ELDERLY: 0.7 mg/m^2 over 2–5 min on days 1 and 8 of 21-day cycle.

Recommended Dose Delays

Do not administer day 1 or day 8 of treatment for any of the following: ANC less than 1,000/mm^3, platelets less than 75,000/mm^3, grade 3 or 4 nonhematologic toxicities. Day 8 dose may be delayed for maximum of 1 wk. If toxicities do not resolve or improve to grade 2 severity by day 15, omit dose. If toxicities resolve or improve to grade 2 severity by day 15, continue treatment at reduced dose and initiate next cycle no sooner than 2 wks later. Do not re-escalate dose after it has been reduced.

SIDE EFFECTS

Common (54%–35%): Fatigue, asthenia (loss of strength, energy), alopecia, peripheral sensory neuropathy, nausea. **Frequent (25%–18%):** Constipation, arthralgia/myalgia, decreased weight, anorexia, pyrexia, headache, diarrhea, vomiting. **Occasional (16%–9%):** Back pain, dyspnea, cough, bone pain, extremity pain, urinary tract infection, oral mucosal inflammation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia occurs in 82% of pts, with 57% developing grade 3 neutropenia. Severe neutropenia (ANC less than 500/mm^3) lasting more than 1 wk occurred in 12%. Anemia occurs in 58% of pts. Peripheral neuropathy occurs in 8% of pts but is the most common adverse reaction requiring discontinuation of therapy. Prolonged QTc may be noted on day 8 of treatment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy. Obtain baseline CBC, serum chemistries before treatment begins and diligently monitor for neutropenia, peripheral neuropathy (most frequent cause of drug discontinuation). Obtain CBC prior to each dose.

INTERVENTION/EVALUATION

Monitor for symptoms of neuropathy (burning sensation, hyperesthesia, hypoesthesia, paresthesia, discomfort, neuropathic pain). Assess hands, feet for erythema. Monitor CBC for evidence of neutropenia, thrombocytopenia. Assess mouth for stomatitis (erythema, ulceration, mucosal burning).

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine. • Do not have immunizations without physician's approval (drug lowers body resistance). • Promptly report fever over 100.5°F, chills, cough, burning or pain urinating, numbness, tingling, burning sensation, erythema of hands/feet.

erlotinib

HIGH ALERT

er-**loe**-tih-nib
(Tarceva)

Do not confuse erlotinib with dasatinib, eribulin, geftinib, imatinib, or lapatinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Human epidermal growth factor. **CLINICAL:** Antineoplastic (see p. 83C).

ACTION

Inhibits tyrosine kinases (TK) associated with transmembrane cell surface receptors found on both normal and cancer cells. One such receptor is epidermal growth factor receptor (EGFR). **Therapeutic Effect:** TK activity appears to be vitally important to cell proliferation and survival.

PHARMACOKINETICS

About 60% is absorbed after PO administration; bioavailability is increased by food to almost 100%. Protein binding: 93%. Extensively metabolized in liver. Primarily eliminated in feces; minimal excretion in urine. **Half-life:** 24–36 hrs.

USES

Treatment of locally advanced or metastatic non–small-cell lung cancer (NSCLC) after failure of at least one prior chemotherapy regimen (as monotherapy). Treatment of locally advanced, unresectable, or metastatic pancreatic cancer (in combination with gemcitabine). Maintenance treatment of locally advanced or metastatic NSCLC that has not progressed after 4–6 cycles of first-line platinum-based chemotherapy. **OFF-LABEL:** Salvage therapy of advanced or metastatic breast, or head and neck tumors.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe hepatic/renal impairment, cardiovascular disease. Concurrent use of strong CYP3A4 inhibitors and inducers.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., atanzavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir) may increase concentration/effects. **CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifampin)** may decrease concentration/effects. **Proton pump inhibitors (e.g., omeprazole), H_2 antagonists (e.g., ranitidine)** may decrease absorption/effects. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD: Grapefruit, grapefruit juice** may increase potential for myelotoxicity. **LAB VALUES:** May increase serum bilirubin, ALT, AST.

AVAILABILITY (Rx)

Tablets: 25 mg, 100 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

• Give at least 1 hr before or 2 hrs after ingestion of food. • Avoid grapefruit, grapefruit juice. • May dissolve in 3–4 oz water and give orally or via feeding tube.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage adjustment for toxicity: Reduce dose in 50-mg increments.

Lung Cancer

PO: ADULTS, ELDERLY: 150 mg/day until disease progression or unacceptable toxicity occurs.

Pancreatic Cancer

PO: ADULTS, ELDERLY: 100 mg/day in combination with gemcitabine until disease progression or unacceptable toxicity occurs.

Dosage in Renal Impairment

Interrupt dosing for renal disease due to dehydration.

Dosage in Hepatic Impairment
Reduce starting dose to 75 mg and individualize dose escalation if tolerated.

SIDE EFFECTS

Frequent (greater than 10%): Fatigue, anxiety, headache, depression, insomnia, rash, pruritus, dry skin, erythema, diarrhea, anorexia, nausea, vomiting, mucositis, constipation, dyspepsia, weight loss, dysphagia, abdominal pain, arthralgia, dyspnea, cough. **Occasional (10%–1%):** Keratitis. **Rare (less than 1%):** Corneal ulceration.

ADVERSE EFFECTS/ TOXIC REACTIONS

UTI occurs occasionally. Pneumonitis, GI bleeding occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain serum electrolytes, hepatic enzyme levels, CBC before beginning therapy.

INTERVENTION/EVALUATION

Assess hepatic enzyme levels, CBC, renal function, serum electrolytes, hydration status periodically.

PATIENT/FAMILY TEACHING

• Take drug on empty stomach. • Notify physician if rash, blood in stool, diarrhea, irritated eyes, fever occur. • Avoid grapefruit, grapefruit juice.

ertapenem

er-ta-**pen**-em
(Invanz)
Do not confuse ertapenem with doripenem, imipenem, or meropenem, or Invanz with Avinza.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbapenem. **CLINICAL:** Antibiotic.

ACTION

Penetrates bacterial cell wall of microorganisms, binds to penicillin-binding proteins, inhibiting cell wall synthesis. **Therapeutic Effect:** Produces bacterial cell death.

PHARMACOKINETICS

Almost completely absorbed after IM administration. Protein binding: 85%–95%. Widely distributed. Primarily excreted in urine with smaller amount eliminated in feces. Removed by hemodialysis. **Half-life:** 4 hrs.

USES

Treatment of susceptible infections due to *S. aureus* (methicillin-susceptible only), *S. agalactiae, S. pneumoniae* (penicillin-susceptible only), *S. pyogenes, E. coli, H. influenzae* (beta-lactamase negative strains only), *K. pneumoniae, M. catarrhalis, Bacteroides* spp., *C. clostridioforme, Peptostreptococcus* spp., including moderate to severe intra-abdominal, skin/skin structure infections; community-acquired pneumonia; complicated UTI; acute pelvic infection; adult diabetic foot infections without osteomyelitis. Prevention of surgical site infection.

PRECAUTIONS

Contraindications: History of anaphylactic hypersensitivity to beta-lactams (e.g., imipenem and cilastin, meropenem), hypersensitivity to amide-type local anesthetics (IM). **Cautions:** Hypersensitivity to penicillins, cephalosporins; renal impairment; CNS disorders, esp. brain lesions or history of seizures.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Advanced or end-stage renal insufficiency may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration/effects. May decrease concentration/effects of **valproic acid.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT, bilirubin, BUN, creatinine, glucose, PT, aPTT, sodium. May decrease platelet count, Hgb, Hct, WBC.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1 g.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute 1-g vial with 10 ml 0.9% NaCl or Bacteriostatic Water for Injection. • Shake well to dissolve. • Further dilute with 50 ml 0.9% NaCl (**maximum concentration:** 20 mg/ml).

Rate of Administration • Give by intermittent IV infusion (piggyback). Do not give IV push. • Infuse over 30 min.

Storage • Solution appears colorless to yellow (variation in color does not affect potency). • Discard if solution contains precipitate. • Reconstituted solution is stable for 6 hrs at room temperature or 24 hrs if refrigerated.

IM

• Reconstitute with 3.2 ml 1% lidocaine HCl injection (without epinephrine). • Shake vial thoroughly. • Inject deep in large muscle mass (gluteal or lateral part of thigh). • Administer suspension within 1 hr after preparation.

IV INCOMPATIBILITIES

Do not mix or infuse with any other medications. Do not use diluents or IV solutions containing dextrose.

IV COMPATIBILITIES

Heparin, potassium chloride, Sterile Water for Injection, 0.9% NaCl.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IM, IV: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 1 g/day. **CHILDREN 3 MOS–12 YRS:** 15 mg/kg 2 times/day. **Maximum:** 1 g/day.

Intra-Abdominal Infection

IV, IM: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 1 g/day for 5–14 days. **CHILDREN 3 MOS–12 YRS:** 15 mg/kg 2 times/day. **Maximum:** 1 g/day.

Skin/Skin Structure Infection

IV, IM: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 1 g/day for 7–14 days. **CHILDREN 3 MOS–12 YRS:** 15 mg/kg 2 times/day. **Maximum:** 1 g/day.

Pneumonia, UTI

IV, IM: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 1 g/day for 10–14 days. **CHILDREN 3 MOS–12 YRS:** 15 mg/kg 2 times/day. **Maximum:** 1 g/day.

Pelvic Infection

IV, IM: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 1 g/day for 3–10 days. **CHILDREN 3 MOS–12 YRS:** 15 mg/kg 2 times/day. **Maximum:** 1 g/day.

Diabetic Foot Infection

IV, IM: ADULTS, ELDERLY: 1 g/day for 7–14 days.

Prevention of Surgical Site Infection

IV: ADULTS, ELDERLY: 1 g given 1 hr preoperatively.

Dosage in Renal Impairment

Adults and elderly pts with creatinine clearance less than 30 ml/min: 500 mg once a day.

Hemodialysis	If daily dose given within 6h prior to HD, give 150 mg dose post HD.
Peritoneal dialysis	500 mg once daily

SIDE EFFECTS

Frequent (10%–6%): Diarrhea, nausea, headache. **Occasional (5%–2%):** Altered mental status, insomnia, rash, abdominal pain, constipation, chest pain, vomiting, edema, fever. **Rare (less than 2%):** Dizziness, cough, oral candidiasis, anxiety, tachycardia, phlebitis at IV site.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Anaphylactic reactions have been reported. Seizures may occur in those with CNS disorders (brain lesions, history of seizures), bacterial meningitis, severe renal impairment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly to beta-lactams, penicillins, cephalosporins. Inquire about history of seizures.

INTERVENTION/EVALUATION

Monitor renal/hepatic function. Monitor daily pattern of bowel activity, stool consistency. Monitor for nausea, vomiting. Evaluate hydration status. Evaluate for inflammation at IV injection site. Assess skin for rash. Observe mental status; be alert to tremors, possible seizures. Assess sleep pattern for evidence of insomnia.

PATIENT/FAMILY TEACHING

- Notify physician in event of tremors, seizures, rash, prolonged diarrhea, chest pain, other new symptoms.

erythromycin

eh-rith-roe-**mye**-sin

(Akne-Mycin, Apo-Erythro Base, EES, Erybid, Eryc, EryDerm, EryPed, Ery-Tab, Erythrocin, PCE Dispertab)

Do not confuse Eryc with Emcyt, or erythromycin with azithromycin or clarithromycin.

FIXED-COMBINATION(S)

Eryzole, Pediazole: erythromycin/sulfisoxazole (sulfonamide): 200 mg/600 mg per 5 ml.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Macrolide. **CLINICAL:** Antibiotic, antiacne (see p. 26C).

ACTION

Penetrates bacterial cell membranes, reversibly binds to bacterial ribosomes, inhibiting protein synthesis. **Therapeutic Effect:** Bacteriostatic.

PHARMACOKINETICS

Variably absorbed from GI tract (depending on dosage form used). Protein binding: 70%–90%. Widely distributed. Metabolized in liver. Primarily eliminated in feces by bile. Not removed by hemodialysis. **Half-life:** 1.4–2 hrs (increased in renal impairment).

USES

Treatment of susceptible infections due to *S. pyogenes, S. pneumoniae, S. aureus, M. pneumoniae, Legionella, Chlamydia, N. gonorrheae, E. histolytica,* including syphilis, nongonococcal urethritis, diphtheria, pertussis, chancroid, *Campylobacter* gastroenteritis. **Topical:** Treatment of acne vulgaris. **Ophthalmic:** Prevention of gonococcal ophthalmia neonatorum, superficial ocular infections. **OFF-LABEL: Systemic:** Treatment of acne vulgaris, chancroid, *Campylobacter* enteritis, gastroparesis, Lyme disease, preoperative gut sterilization. **Topical:** Treatment of minor bacterial skin infections. **Ophthalmic:** Treatment of blepharitis, conjunctivitis, keratitis, chlamydial trachoma.

PRECAUTIONS

Contraindications: Hepatic impairment. Concomitant administration with ergot derivatives. **Cautions:** Elderly, myasthenia gravis. CYP3A4 inhibitors.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Erythromycin estolate may increase hepatic enzymes in pregnant women. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted. High dosage in those with decreased hepatic/renal function increases risk of hearing loss.

INTERACTIONS

DRUG: May increase concentration of **buspirone, cyclosporine, calcium channel blockers, statins.** May inhibit metabolism of **carbamazepine. Hepatotoxic medications** may increase risk of hepatotoxicity. May increase risk of **theophylline** toxicity. May increase effects of **warfarin. HERBAL: St. John's wort** may decrease concentration. **FOOD: Grapefruit** may increase potential for torsades. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, AST, ALT.

AVAILABILITY (Rx)

Gel, Topical: 2%. **Ointment, Ophthalmic:** 0.5%. **Ointment, Topical (Akne-Mycin):** 2%. **Oral Suspension (EES, EryPed):** 100 mg/2.5 ml, 200 mg/5 ml, 400 mg/5ml. **Tablet as Base:** 250 mg, 333 mg, 500 mg. **Tablet as Ethylsuccinate (EES):** 400 mg. **Tablet as Stearate (Erythrocin):** 250 mg, 500 mg.

Capsules, Delayed-Release (Eryc): 250 mg. **Tablets, Delayed-Release (Ery-Tab):** 250 mg, 333 mg, 500 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 500 mg with 10 ml Sterile Water for Injection without preservative to provide a concentration of 50 mg/ml. • Further dilute with 100–250 ml D_5W or 0.9% NaCl to maximum concentration of 5 mg/ml.

Rate of Administration • For intermittent IV infusion (piggyback), infuse over 20–60 min.

Storage • Store parenteral form at room temperature. • Initial reconstituted solution in vial is stable for 2 wks refrigerated or 24 hrs at room temperature. • Diluted IV solution stable for 8 hrs at room temperature or 24 hrs if refrigerated. • Discard if precipitate forms.

PO

• Store capsules, tablets at room temperature. • Oral suspension is stable for 14 days at room temperature. • Administer erythromycin base, stearate 1 hr before or 2 hrs following ingestion of food. Erythromycin estolate, ethylsuccinate may be given without regard to meals, but optimal absorption occurs when given on empty stomach. • Give with 8 oz water. • If swallowing difficulties occur, sprinkle capsule contents on teaspoon of applesauce, follow with water. • Do not crush delayed-release capsules, tablets.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place ¼–½ inch of ointment into pocket. • Instruct pt to close eye gently for 1–2 min (so medication will not be squeezed out of the sac) and to roll eyeball to increase contact area of drug to eye.

IV INCOMPATIBILITIES

Fluconazole (Diflucan), furosemide (Lasix), metoclopramide (Reglan).

IV COMPATIBILITIES

Aminophylline, amiodarone (Cordarone), diltiazem (Cardizem), heparin, hydromorphone (Dilaudid), lidocaine, lipids, lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, multivitamins, potassium chloride, total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Mild to Moderate Infections of Upper and Lower Respiratory Tract, Pharyngitis, Skin Infections

PO: ADULTS, ELDERLY: BASE: 250–500 mg q6–12h. **CHILDREN:** 30–50 mg/kg/day in 2–4 divided doses. **Maximum:** 2 g/day. **ETHYLSUCCINATE:** 400–800 mg q6–12h. **Maximum:** 4 g/day. **CHILDREN:** 30–50 mg/kg/day in divided doses. **Maximum:** 3.2 g/day. **NEONATES:** 20–40 mg/kg/day in divided doses q6–12h.
IV: ADULTS, ELDERLY: 15–20 mg/kg/day divided q6h. **Maximum:** 4 g/day. **CHILDREN, INFANTS:** 15–50 mg/kg/day divided q6h. **Maximum:** 4 g /day.

Preop Intestinal Antisepsis

PO: ADULTS, ELDERLY: 1 g at 1 PM, 2 PM, and 11 PM on day before surgery (with neomycin). **CHILDREN:** 20 mg/kg at 1 PM, 2 PM, and 11 PM on day before surgery (with neomycin).

Acne Vulgaris

Topical: ADULTS: Apply thin layer to affected area twice a day.

Gonococcal Ophthalmia Neonatorum

Ophthalmic: NEONATES: 0.5–2 cm no later than 1 hr after delivery.

SIDE EFFECTS

Frequent: IV: Abdominal cramping/discomfort, phlebitis/thrombophlebitis. **Topical:** Dry skin (50%). **Occasional:** Nausea, vomiting, diarrhea, rash, urticaria. **Rare: Ophthalmic:** Sensitivity reaction with increased irritation, burning, itching, inflammation. **Topical:** Urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever), reversible cholestatic hepatitis may occur. High dosage in pts with renal impairment may lead to reversible hearing loss. Anaphylaxis occurs rarely. Ventricular arrhythmias, prolonged QT interval occur rarely with IV form.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies (particularly erythromycins), hepatitis.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Assess for hepatotoxicity (malaise, fever, abdominal pain, GI disturbances). Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Check for phlebitis (heat, pain, red streaking over vein). Monitor for high-dose hearing loss.

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • Take medication with 8 oz water 1 hr before or 2 hrs following food or beverage. • **Ophthalmic:** Report burning, itching, inflammation. • **Topical:** Report excessive skin dryness, itching, burning. • Improvement of acne may not occur for 1–2 mos; maximum benefit may take 3 mos; therapy may last mos or yrs. • Use caution if using other topical acne preparations containing peeling or abrasive agents, medicated or abrasive soaps, cosmetics containing alcohol (e.g., astringents, aftershave lotion).

escitalopram

TOP 200

es-sye-**tal**-oh-pram
(Cipralex, Lexapro)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin reuptake inhibitor. **CLINICAL:** Antidepressant (see p. 39C).

ACTION

Blocks uptake of neurotransmitter serotonin at neuronal presynaptic membranes, increasing its availability at postsynaptic receptor sites. **Therapeutic Effect:** Antidepressant effect.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 56%. Primarily metabolized in liver. Primarily excreted in feces, with a lesser amount eliminated in urine. **Half-life:** 35 hrs.

USES

Treatment of major depressive disorder exhibited as persistent, prominent dysphoria (occurring nearly every day for at least 2 wks) manifested by 4 of 8 symptoms: appetite change, sleep pattern change, increased fatigue, impaired concentration, feelings of guilt or worthlessness, loss of interest in usual activities, psychomotor agitation or retardation, suicidal tendencies. Treatment of generalized anxiety disorder (GAD). **OFF-LABEL:** Social anxiety disorders in children and adolescents, developmental disorders (including autism). Treatment of mild dementia-associated agitation in nonpsychotic pt.

PRECAUTIONS

Contraindications: Use within 14 days of MAOIs. **Cautions:** Hepatic/renal impairment, history of seizures, concurrent use of CNS depressants, pts at high risk of suicide, concomitant aspirin, NSAIDs, warfarin (may potentiate bleeding risk).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** May cause increased anticholinergic effects or hyperexcitability. **Elderly:** More sensitive to anticholinergic effects (e.g., dry mouth), more likely to experience dizziness, sedation, confusion, hypotension, hyperexcitability.

INTERACTIONS

DRUG: Alcohol, other CNS suppressants may increase CNS depression. **Linezolid, aspirin, NSAIDs, warfarin** may increase risk of bleeding. **MAOIs** may cause serotonin syndrome (autonomic hyperactivity, diaphoresis, excitement, hyperthermia, rigidity, neuroleptic malignant syndrome, coma). **Sumatriptan** may cause weakness, hyperreflexia, poor coordination. **HERBAL: Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **Ginkgo biloba, St. John's wort** may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Oral Solution: 5 mg/5 ml.

Tablets: 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not crush, chew tablets.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: Initially, 10 mg once a day in the morning or evening. May increase to 20 mg after a minimum of 1 wk. **ELDERLY:** 10 mg/day. **CHILDREN 12–17 YRS:** Initially, 10 mg once daily. May increase to 20 mg/day after at least 3 wks. **Maximum:** 20 mg once daily. Recommended: 10 mg once daily.

Generalized Anxiety Disorder

PO: ADULTS: Initially, 10 mg once a day in morning or evening. May increase to 20 mg after minimum of 1 wk. **ELDERLY:** 10 mg/day.

Dosage in Renal Impairment

Use caution in pts with creatinine clearance less than 20 ml/min.

Dosage in Hepatic Impairment

10 mg/day.

SIDE EFFECTS

Frequent (21%–11%): Nausea, dry mouth, drowsiness, insomnia, diaphoresis. **Occasional (8%–4%):** Tremor, diarrhea, abnormal ejaculation, dyspepsia, fatigue, anxiety, vomiting, anorexia. **Rare (3%–2%):** Sinusitis, sexual dysfunction, menstrual disorder, abdominal pain, agitation, decreased libido.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose manifested as dizziness, drowsiness, tachycardia, confusion, seizures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

For pts on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically. Observe, record behavior. Assess psychological status, thought content, sleep pattern, appearance, interest in environment.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, suicide potential increases). Assess appearance, behavior, speech pattern, level of interest, mood. Monitor for suicidal ideation (esp. at beginning of therapy or when doses are increased or decreased), social interaction, mania, panic attacks.

PATIENT/FAMILY TEACHING

• Do not stop taking medication or increase dosage. • Avoid use of alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report worsening depression, suicidal ideation, unusual changes in behavior.

esmolol

HIGH ALERT

ess-moe-lol
(Brevibloc)
Do not confuse Brevibloc with Bumex or Buprenex, or esmolol with Osmitrol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Beta_1$-adrenergic blocker. **CLINICAL:** Antiarrhythmic (see pp. 17C, 72C).

ACTION

Selectively blocks $beta_1$-adrenergic receptors. **Therapeutic Effect:** Slows sinus heart rate, decreases cardiac output, reducing B/P.

PHARMACOKINETICS

Rapidly metabolized primarily by esterase in cytosol of red blood cells. Protein binding: 55%. Less than 1%–2% excreted in urine. **Half-life:** 9 min.

USES

Rapid, short-term control of ventricular rate in supraventricular tachycardia (SVT), atrial fibrillation or flutter; treatment of tachycardia and/or hypertension (esp. intraop or postop). Treatment of noncompensatory sinus tachycardia. **OFF-LABEL:** Postoperative hypertension or SVT in children. Arrhythmia and/or rate control during ACS, intubation, thyroid storm, pheochromocytoma, electroconvulsive therapy.

PRECAUTIONS

Contraindications: Cardiogenic shock, overt cardiac failure, second- or third-degree heart block (except in pts with pacemaker), sinus bradycardia. **Cautions:** Pts with sick sinus syndrome; compensated heart failure; concurrent use of digoxin, verapamil, diltiazem; diabetes; myasthenia gravis; renal impairment; history of anaphylaxis to allergens.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Opioids, calcium channel blockers, MAOIs may increase level/

effects. **HERBAL:** **Yohimbe** may decrease effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml (250 ml), 20 mg/ml (100 ml).

ADMINISTRATION/HANDLING

◀ALERT▶ Give by IV infusion. Avoid butterfly needles, very small veins (can cause thrombophlebitis).

IV

Rate of Administration • Administer by controlled infusion device; titrate to tolerance and response. • Infuse IV loading dose over 1–2 min. • Hypotension (systolic B/P less than 90 mm Hg) is greatest during first 30 min of IV infusion.

Storage • Use only clear and colorless to light yellow solution. • Discard solution if discolored or precipitate forms.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), furosemide (Lasix).

IV COMPATIBILITIES

Amiodarone (Cordarone), diltiazem (Cardizem), dopamine (Intropin), heparin, magnesium, midazolam (Versed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Rate Control in Supraventricular Arrhythmias

IV: ADULTS, ELDERLY: Initially, loading dose of 500 mcg/kg/min for 1 min, followed by 50 mcg/kg/min for 4 min. If optimum response is not attained in 5 min, give second loading dose of 500 mcg/kg/min for 1 min, followed by infusion of 100 mcg/kg/min for 4 min. A third (and final) loading dose can be given and infusion increased by 50 mcg/kg/min, up to 200 mcg/kg/min, for 4 min. Once desired response is attained, increase infusion by no more than 25 mcg/kg/min. Infusion usually administered over 24–48 hrs in most pts. Range: 50–200 mcg/kg/min (average dose 100 mcg/kg/min).

Intraop/Postop Tachycardia Hypertension (Immediate Control)

IV: ADULTS, ELDERLY: Initially, 80 mg over 30 sec, then 150 mcg/kg/min infusion up to 300 mcg/kg/min.

SIDE EFFECTS

Generally well tolerated, with transient, mild side effects. **Frequent:** Hypotension (systolic B/P less than 90 mm Hg) manifested as dizziness, nausea, diaphoresis, headache, cold extremities, fatigue. **Occasional:** Anxiety, drowsiness, flushed skin, vomiting, confusion, inflammation at injection site, fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound hypotension, bradycardia, dizziness, syncope, drowsiness, breathing difficulty, bluish fingernails or palms of hands, seizures. May potentiate insulin-induced hypoglycemia in diabetic pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, apical pulse immediately before drug is administered (if pulse is 60 or less/min or systolic B/P is 90 mm Hg or less, withhold medication, contact physician).

INTERVENTION/EVALUATION

Monitor B/P for hypotension, EKG, heart rate, respiratory rate, development of diaphoresis, dizziness (usually first sign of impending hypotension). Assess pulse for quality, irregular rate, bradycardia, extremities for coldness. Assist with ambulation if dizziness occurs. Assess for nausea, diaphoresis, headache, fatigue.

esomeprazole TOP 200

es-oh-**mep**-rah-zole
(Nexium)

Do not confuse esomeprazole with aripiprazole or omeprazole, or Nexium with Nexavar.

FIXED-COMBINATION(S)

Vimovo: esomeprazole/naproxen (NSAID): 20 mg/375 mg, 20 mg/500 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Proton pump inhibitor. **CLINICAL:** Gastric acid inhibitor (see p. 148C).

ACTION

Converted to active metabolites that irreversibly bind to, inhibit enzymes on surface of gastric parietal cells. Inhibits hydrogen ion transport into gastric lumen. **Therapeutic Effect:** Increases gastric pH; reduces gastric acid production.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 97%. Extensively metabolized in liver. Primarily excreted in urine. **Half-life:** 1–1.5 hrs.

USES

PO: Short-term treatment (4–8 wks) of erosive esophagitis (diagnosed by endoscopy); symptomatic gastroesophageal reflux disease (GERD). Treatment of Zollinger-Ellison syndrome. Used in triple therapy with amoxicillin and clarithromycin for treatment of *H. pylori* infection in pts with duodenal ulcer. Reduces risk of NSAID-induced gastric ulcer. **IV:** Treatment of GERD with erosive esophagitis. Short-term treatment of GERD when oral therapy is not appropriate. **OFF-LABEL:** Prevent recurrent peptic ulcer bleeding postendoscopy.

PRECAUTIONS

Contraindications: Hypersensitivity to benzimidazoles. **Cautions:** May increase risk of hip, wrist, spine fractures; hepatic impairment; elderly; Asian populations. Concurrent use of CYP3A4 inducers (e.g., rifampin).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/effects of **atazanavir, digoxin, iron, ketoconazole.** May increase effect of **warfarin.** May decrease effect of **clopidogrel. CYP3A4 inducers (e.g., rifampin)** may decrease concentration/effects. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Sodium): 20 mg, 40 mg. **Oral Suspension, Delayed-Release:** 10 mg, 20 mg, 40 mg.

Capsules (Delayed-Release [Nexium]): 20 mg, 40 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV push, add 5 ml of 0.9% NaCl to esomeprazole vial.

Infusion • For IV infusion, dissolve content of one vial in 50 ml 0.9% NaCl, D_5W, or lactated Ringer's.

Rate of Administration • For IV push, administer over not less than 3 min. For intermittent infusion (piggyback) infuse over 10–30 min. • Flush line with 0.9% NaCl, lactated Ringer's, or D_5W, both before and after administration.

Storage • Use only clear and colorless to very slightly yellow solution. • Discard solution if particulate forms. • IV infusion stable for 12 hrs in 0.9% NaCl or lactated Ringer's; 6 hrs in D_5W.

PO (Capsules)

• Give 1 hr or more before eating (best before breakfast). • Do not crush, chew capsule; swallow whole. • For those with difficulty swallowing capsules, open capsule and mix pellets with 1 tbsp applesauce. Swallow spoonful without chewing.

PO (Oral Suspension)

• Empty contents into 15 ml water and stir. • Let stand 2–3 min to thicken. • Stir and drink within 30 min.

IV INCOMPATIBILITIES

Do not mix esomeprazole with any other medications through the same IV line or tubing.

INDICATIONS/ROUTES/DOSAGE

Erosive Esophagitis

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 20–40 mg once daily for 4–8 wks. May continue for additional 4–8 wks. **CHILDREN 1–11 YRS, WEIGHING 20 KG OR MORE:** 10–20 mg/day for up to 8 wks. **WEIGHING LESS THAN 20 KG:** 10 mg/day for up to 8 wks.

Maintenance Therapy for Erosive Esophagitis

PO: ADULTS, ELDERLY: 20 mg/day.

Treatment of NSAID-Induced Gastric Ulcers

PO: ADULTS, ELDERLY: 20 mg/day for 4–8 wks.

Prevention of NSAID-Induced Gastric Ulcer

PO: ADULTS, ELDERLY: 20–40 mg once a day for up to 6 mos.

Gastroesophageal Reflux Disease (GERD)

IV: ADULTS, ELDERLY: 20 or 40 mg once daily for up to 10 days. **CHILDREN 1–17 YRS, WEIGHING 55 KG OR MORE:** 20 mg once daily; **1–17 YRS, WEIGHING LESS THAN 55 KG:** 10 mg once daily; **1 MO TO LESS THAN 1 YR:** 0.5 mg/kg once daily.
PO: ADULTS, ELDERLY, CHILDREN, 12–17 YRS: 20 mg once daily. **CHILDREN 1–11 YRS:** 10 mg/day for up to 8 wks.

Zollinger-Ellison Syndrome

PO: ADULTS, ELDERLY: 40 mg 2 times a day. Doses up to 240 mg/day have been used.

Duodenal Ulcer Caused by *Helicobacter Pylori*

PO: ADULTS, ELDERLY: 40 mg (esomeprazole) once a day, with amoxicillin 1,000 mg and clarithromycin 500 mg twice a day for 10 days.

Dosage Hepatic Impairment

SEVERE: Doses should not exceed 20 mg/day.

SIDE EFFECTS

Frequent (7%): Headache. **Occasional (3%–2%):** Diarrhea, abdominal pain, nausea. **Rare (less than 2%):** Dizziness, asthenia (loss of strength, energy), vomiting, constipation, rash, cough.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pancreatitis, hepatotoxicity, interstitial nephritis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess epigastric/abdominal pain.

INTERVENTION/EVALUATION

Evaluate for therapeutic response (relief of GI symptoms). Question if GI discomfort, nausea, diarrhea occur. Monitor for occult blood, observe for hemorrhage in pts with peptic ulcer.

PATIENT/FAMILY TEACHING

• Report headache. • Take at least 1 hr before eating. • If swallowing capsules is difficult, open capsule and mix pellets with 1 tbsp applesauce. Swallow spoonful without chewing.

estradiol

TOP 200

es-tra-**dye**-ole
(Alora, Climara, Delestrogen,

Depo-Estradiol, Divigel, Elestrin, Estrace, Estraderm, Estrasorb, Estring, Estrogel, Evamist, Femring, Femtrace, Menostar, Vagifem, Vivelle, Vivelle Dot)

BLACK BOX ALERT Increased risk of dementia when given to women 65 yrs and older. Use of estrogen without progestin increases risk of endometrial cancer in postmenopausal women with intact uterus. Do not use to prevent cardiovascular disease.

Do not confuse Alora with Aldara, or Estraderm with Testoderm.

FIXED-COMBINATION(S)

Activella: estradiol/norethindrone (hormone): 1 mg/0.5 mg. **Climara PRO:** estradiol/levonorgestrel (progestin): 0.045 mg/24 hr, 0.015 mg/24 hr. **Combi-patch:** estradiol/norethindrone (hormone): 0.05 mg/0.14 mg, 0.05 mg/0.25 mg. **Femhrt:** estradiol/norethindrone (hormone): 5 mcg/1 mg. **Lunelle:** estradiol/medroxy-progesterone (progestin): 5 mg/25 mg per 0.5 ml.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Estrogen. **CLINICAL:** Estrogen, antineoplastic.

ACTION

Increases synthesis of DNA, RNA, proteins in target tissues; reduces release of gonadotropin-releasing hormone from hypothalamus; reduces follicle-stimulating hormone (FSH), luteinizing hormone (LH) release from pituitary. **Therapeutic Effect:** Promotes normal growth/development of female sex organs, maintains GU function, vasomotor stability. Prevents accelerated bone loss by inhibiting bone resorption, restoring balance of bone resorption, formation. Inhibits LH, decreases serum testosterone concentration.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed. Protein binding: 50%–80%. Metabolized in liver. Primarily excreted in urine. **Half-life:** Unknown.

USES

Treatment of moderate to severe vasomotor symptoms associated with menopause, hypoestrogenism (due to hypogonadism, primary ovarian failure), metastatic breast cancer in men and post-menopausal women, advanced prostate cancer, prevention of osteoporosis in menopausal women, vaginal atrophy.

PRECAUTIONS

Contraindications: Hepatic dysfunction or disease, porphyria, undiagnosed abnormal vaginal bleeding, active arterial thrombosis, blood dyscrasias, estrogen-dependent cancer, known or suspected breast cancer (except for pts being treated for metastatic disease), pregnancy, thrombophlebitis or thromboembolic disorders. **Cautions:** Renal insufficiency, diabetes mellitus, endometriosis, hypercalcemia, hyperlipidemias, asthma, epilepsy, migraines, SLE, hypertension, hypocalcemia, hypothyroidism, history of jaundice due to past estrogen use or pregnancy, cardiovascular disease, obesity, venous thromboembolism, porphyria.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. May be harmful to infant. Breast-feeding not recommended. **Pregnancy Category X. Children:** Caution in those for whom bone growth is not complete (may accelerate epiphyseal closure). **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, rifampin) may decrease concentrated ion/effects). **CYP3A4 inhibitors (e.g., ketoconazole, ritonavir)** may increase concentration/effects. **HERBAL:** Avoid **black cohosh, dong quai, saw palmetto;** may enhance toxic/adverse effects. **St. John's**

wort may decrease plasma concentration/effects of estrogens. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, calcium, HDL, triglycerides. May decrease serum cholesterol, LDL. May affect metapyrone testing, thyroid function tests.

AVAILABILITY (Rx)

Emulsion, Topical (Estrasorb): 4.35 mg estradiol/1.74 g pouch (contents of 2 pouches deliver estradiol 0.05 mg/day). **Gel, Topical: (Divigel):** 0.1% (0.25-g packet delivers estradiol 0.25 mg, 0.5 g-packet delivers estradiol 0.5 mg, 1-g packet delivers 1 mg). **(Elestrin):** 0.06% delivers 0.52 mg estradiol/actuation. **(Estrogel):** 0.06% delivers 0.75 mg/actuation. **Injection (Cypionate): Depo-Estradiol:** 5 mg/ml. **(Valerate): Delestrogen:** 10 mg/ml, 20 mg/ml, 40 mg/ml. **Tablets: (Estrace):** 0.5 mg, 1 mg, 2 mg. **(Femtrace):** 0.45 mg, 0.9 mg, 1.8 mg. **Topical Spray (Evamist):** 1.53 mg/spray. **Transdermal System (Alora):** twice weekly: 0.025 mg/24 hrs, 0.05 mg/24 hrs, 0.075 mg/24 hrs, 0.1 mg/24 hrs. **Transdermal System (Climara):** once weekly: 0.025 mg/24 hrs, 0.0375 mg/24 hrs, 0.05 mg/24 hrs, 0.06 mg/24 hrs, 0.075 mg/24 hrs, 0.1 mg/24 hrs. **Transdermal System (Estraderm):** twice weekly: 0.05 mg/24 hrs, 0.1 mg/24 hrs. **Transdermal System (Menostar):** once weekly: 0.014 mg/24 hrs. **Transdermal System (Vivelle):** twice weekly: 0.05 mg/24 hrs, 0.1 mg/24 hrs. **Transdermal System (Vivelle Dot):** twice weekly: 0.025 mg/24 hrs, 0.0375 mg/24 hrs, 0.05 mg/24 hrs, 0.075 mg/24 hrs, 0.1 mg/24 hrs. **Vaginal Cream (Estrace):** 0.1 mg/g. **Vaginal Ring (Estring):** 2 mg (releases 7.5 mcg/day over 90 days). **Vaginal Ring (Femring):** 0.05 mg/day (total estradiol 12.4 mg-release 0.05 mg/day over 3 mos); 0.1 mg/day (total estradiol 24.8 mg-release 0.1 mg/day over 3 mos). **Vaginal Tablet (Vagifem):** 25 mcg.

ADMINISTRATION/HANDLING

IM

- Rotate vial to disperse drug in solution.
- Inject deep IM in large muscle mass.

PO

- Administer at same time each day.
- Administer with food.

Transdermal

- Remove old patch; select new site (buttocks are alternative application site). • Peel off protective strip to expose adhesive surface. • Apply to clean, dry, intact skin on trunk of body (area with as little hair as possible). • Press in place for at least 10 sec (do not apply to breasts or waistline).

Vaginal

- Apply at bedtime for best absorption. • Insert end of filled applicator into vagina, directed slightly toward sacrum; push plunger down completely. • Avoid skin contact with cream (prevents skin absorption).

INDICATIONS/ROUTES/DOSAGE

Prostate Cancer

IM *(Delestrogen)*: ADULTS, ELDERLY: 30 mg or more q1–2wks.
PO: ADULTS, ELDERLY: 1–2 mg tid for at least 3 mos.

Breast Cancer

PO: ADULTS, ELDERLY: 10 mg 3 times a day for at least 3 mos.

Osteoporosis Prophylaxis in Postmenopausal Females

PO: ADULTS, ELDERLY: 0.45–0.5 mg/day cyclically (3 wks on, 1 wk off).
Transdermal *(Climara)*: ADULTS, ELDERLY: Initially, 0.025 mg/24 hrs weekly, adjust dose as needed.
Transdermal *(Alora, Vivelle, Vivelle Dot)*: ADULTS, ELDERLY: Initially, 0.025 mg/24 hrs patch twice weekly, adjust dose as needed.
Transdermal *(Estraderm)*: ADULTS, ELDERLY: 0.05 mg/24 hrs twice weekly.
Transdermal *(Menostar)*: ADULTS, ELDERLY: 0.014 mg/24 hrs patch weekly.

Female Hypoestrogenism

PO: ADULTS, ELDERLY: 0.9–2 mg/day, adjust dose as needed.
IM *(Depo-Estradiol)*: ADULTS, ELDERLY: 1.5–2 mg monthly.
IM *(Delestrogen)*: ADULTS, ELDERLY: 10–20 mg q4wks.

Vasomotor Symptoms Associated with Menopause

PO: ADULTS, ELDERLY: 0.9–2 mg/day cyclically (3 wks on, 1 wk off), adjust dose as needed.
IM *(Depo-Estradiol)*: ADULTS, ELDERLY: 1–5 mg q3–4wks.
IM *(Delestrogen)*: ADULTS, ELDERLY: 10–20 mg q4wks.
Topical Emulsion *(Estrasorb)*: ADULTS, ELDERLY: 3.48 g (contents of 2 pouches) once a day in the morning.
Topical Gel *(Estrogel)*: ADULTS, ELDERLY: 1.25 g/day.
Transdermal Spray *(Evamist)*: Initially, 1 spray daily. May increase to 2–3 sprays daily.
Transdermal *(Climara)*: ADULTS, ELDERLY: 0.025 mg/24 hrs weekly. Adjust dose as needed.
Transdermal *(Alora, Estraderm, Vivelle Dot)*: ADULTS, ELDERLY: 0.05 mg/24 hrs twice a wk.
Transdermal *(Vivelle)*: ADULTS, ELDERLY: 0.0375 mg/24 hrs twice a wk.
Vaginal Ring *(Femring)*: ADULTS, ELDERLY: 0.05 mg. May increase to 0.1 mg if needed.

Vaginal Atrophy

Vaginal Ring *(Estring)*: ADULTS, ELDERLY: 2 mg.
Vaginal Cream *(Estrace)*: Insert 2–4 g/day intravaginally for 2 wks, then reduce dose by ½ initial dose for 2 wks, then maintenance dose of 1 g 1–3 times a wk.

Atrophic Vaginitis

Vaginal Tablet *(Vagifem)*: ADULTS, ELDERLY: Initially, 1 tablet/day for 2 wks. Maintenance: 1 tablet twice a wk.

SIDE EFFECTS

Frequent: Anorexia, nausea, swelling of breasts, peripheral edema marked by swollen ankles and feet. **Transdermal:** Skin irritation, redness. **Occasional:** Vomiting (esp. with high doses), headache (may be severe), intolerance to contact lenses, hypertension, glucose intolerance, brown spots on exposed skin. **Vaginal:** Local irritation, vaginal discharge, changes in vaginal bleeding (spotting, breakthrough, prolonged bleeding). **Rare:** Chorea (involuntary movements), hirsutism (abnormal hairiness), loss of scalp hair, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged administration increases risk of gallbladder disease, thromboembolic disease, breast, cervical, vaginal, endometrial, hepatic carcinoma. Cholestatic jaundice occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess frequency/severity of vasomotor symptoms. Question for hypersensitivity to estrogen, previous jaundice, thromboembolic disorders associated with pregnancy, estrogen therapy. Question for possibility of pregnancy (Pregnancy Category X).

INTERVENTION/EVALUATION

Monitor B/P, weight, serum calcium, glucose, hepatic enzymes. Monitor for loss of vision, sudden onset of proptosis, diplopia, migraine, thromboembolic disorders.

PATIENT/FAMILY TEACHING

• Limit alcohol, caffeine. • Avoid grapefruit, grapefruit juice. • Inform physician if sudden headache, vomiting, disturbance of vision/speech, numbness/weakness of extremities, chest pain, calf pain, shortness of breath, severe abdominal pain, mental depression, unusual bleeding occurs. • Avoid

smoking. • Report abnormal vaginal bleeding. • Never place patch on breast or waistline.

estramustine

HIGH ALERT

es-tra-**mus**-teen
(Emcyt)
Do not confuse Emcyt with Eryc, or estramustine with exemestane.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent, estrogen/nitrogen mustard. **CLINICAL:** Antineoplastic (see p. 83C).

ACTION

Binds to microtubule-associated proteins, causing their disassembly. **Therapeutic Effect:** Reduces serum testosterone concentration.

PHARMACOKINETICS

Well absorbed from GI tract. Highly localized in prostatic tissue. Rapidly dephosphorylated during absorption into peripheral circulation. Metabolized in liver. Primarily eliminated in feces by biliary system. **Half-life:** 20 hrs.

USES

Treatment of metastatic or progressive carcinoma of prostate gland.

PRECAUTIONS

Contraindications: Active thrombophlebitis or thromboembolic disorders (unless tumor is cause of thromboembolic disorder and benefits outweigh risk), hypersensitivity to estradiol, nitrogen mustard. **Cautions:** History of thrombophlebitis, thrombosis, thromboembolic disorders; cerebrovascular, coronary artery disease; hepatic impairment; renal insufficiency; migraine, seizure disorder; hypertension.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated for use in women. **Children:** Not used in this pt population. **Elderly:** Age-related renal impairment and/or peripheral vascular disease may require dosage adjustment.

INTERACTIONS

DRUG: Hepatotoxic medications may increase risk of hepatotoxicity. **HERBAL: Echinacea** may decrease concentration/effects. **FOOD: Milk, dairy products, other calcium-rich foods** may impair absorption. **LAB VALUES:** May increase serum glucose, bilirubin, cortisol, LDH, phospholipid, prolactin, AST, sodium, triglyceride. May decrease serum phosphate. May alter thyroid function test results.

AVAILABILITY (Rx)

Capsules: 140 mg.

ADMINISTRATION/HANDLING

PO

• Refrigerate capsules (may remain at room temperature for 24–48 hrs without loss of potency). • Give with water 1 hr before or 2 hrs after meals.

INDICATIONS/ROUTES/DOSAGE

Prostatic Carcinoma

PO: ADULTS, ELDERLY: 10–16 mg/kg/day (most common: 14 mg/kg/day) or 140 mg 4 times a day.

SIDE EFFECTS

Frequent: Peripheral edema (esp. lower extremities), breast tenderness/enlargement, diarrhea, flatulence, nausea. **Occasional:** Increase in B/P, thirst, dry skin, ecchymosis, flushing, alopecia, night sweats. **Rare:** Headache, rash, fatigue, insomnia, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

May exacerbate CHF; increased risk of pulmonary emboli, thrombophlebitis, CVA.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor serum calcium, hepatic function tests, B/P periodically.

PATIENT/FAMILY TEACHING

• Do not take with milk, milk products, calcium-rich food, calcium-containing antacids. • Use contraceptive measures during therapy. • If headache (migraine or severe), vomiting, disturbed speech/vision, dizziness, numbness, shortness of breath, calf pain, chest pain/pressure, unexplained cough occurs, contact physician.

eszopiclone

TOP 200

e-**zop**-i-klone
(Lunesta)
Do not confuse Lunesta with Neulasta.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonbenzodiazepine **(Schedule IV). CLINICAL:** Hypnotic (see p. 150C).

ACTION

May interact with GABA-receptor complexes at binding domains located close to or allosterically coupled to benzodiazepine receptors. **Therapeutic Effect:** Prevents insomnia, difficulty maintaining normal sleep.

PHARMACOKINETICS

Rapidly absorbed following PO administration. Protein binding: 52%–59%. Metabolized in liver. Excreted in urine. **Half-life:** 5–6 hrs.

USES

Treatment of insomnia in pts who experience difficulty falling asleep or are unable to sleep through the night (sleep maintenance difficulty).

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment, compromised respiratory function, clinical depression; concomitant CNS depressants, strong CYP3A4 inhibitors (e.g., ketoconazole); elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Those with impaired motor or cognitive performance may require dosage adjustment.

INTERACTIONS

DRUG: Alcohol, anticonvulsants, antihistamines, other CNS depressants may increase CNS depression. **CYP3A4 inhibitors (e.g., clarithromycin, itraconazole, ketoconazole, nelfinavir, ritonavir)** may increase concentration/toxicity. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** Onset of action may be reduced if taken with or immediately after a **high-fat meal. LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets, Film-Coated: 1 mg, 2 mg, 3 mg.

ADMINISTRATION/HANDLING

PO

• Should be administered immediately before bedtime. • Do not give with or immediately following a high-fat or heavy meal. • Do not crush, break, or chew tablet.

INDICATIONS/ROUTES/DOSAGE

Insomnia

PO: ADULTS: 2 mg before bedtime. **Maximum:** 3 mg. **Concurrent use with CYP3A4 inhibitors** (e.g., clarithromycin, erythromycin, azole antifungals): 1 mg before bedtime; if needed, dose

may be increased to 2 mg. **ELDERLY:** Initially, 1 mg before bedtime. **Maximum:** 2 mg.

Sleep Maintenance Difficulty
PO: ADULTS: 2 mg before bedtime.

Dosage in Hepatic Impairment
SEVERE: 1 mg; **maximum:** 2 mg.

SIDE EFFECTS

Frequent (34%–21%): Unpleasant taste, headache. **Occasional (10%–4%):** Drowsiness, dry mouth, dyspepsia, dizziness, nervousness, nausea, rash, pruritus, depression, diarrhea. **Rare (3%–2%):** Hallucinations, anxiety, confusion, abnormal dreams, decreased libido, neuralgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Chest pain, peripheral edema occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations. Raise bed rails, provide call light. Provide environment conducive to sleep (quiet environment, low or no lighting, TV off).

INTERVENTION/EVALUATION

Assess sleep pattern of pt. Evaluate for therapeutic response (decrease in number of nocturnal awakenings, increase in length of sleep).

PATIENT/FAMILY TEACHING

• Take only when experiencing insomnia. Do not take when insomnia is not present. • Avoid alcohol. • At least 8 hrs must be devoted for sleep time before daily activity begins. • Take eszopiclone immediately before bedtime. • Report insomnia that worsens or persists longer than 7–10 days; abnormal thoughts or behavior, memory loss, anxiety.

etanercept

TOP 200

ee-**tan**-er-sept
(Enbrel)

BLACK BOX ALERT Serious, potentially fatal, infections, including bacterial sepsis, tuberculosis, have occurred. Lymphomas, other malignancies may occur (reported in children/adolescents).

Do not confuse Enbrel with Levbid.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protein.
CLINICAL: Antiarthritic.

ACTION

Binds to tumor necrosis factor (TNF), blocking its interaction with cell surface receptors. Elevated levels of TNF, involved in inflammatory and immune responses, are found in synovial fluid of rheumatoid arthritis pts. **Therapeutic Effect:** Relieves symptoms of rheumatoid arthritis.

PHARMACOKINETICS

Well absorbed after subcutaneous administration. **Half-life:** 72–132 hrs.

USES

Reduces signs/symptoms of moderate to severely active rheumatoid arthritis (RA). Treatment of active juvenile rheumatoid arthritis, ankylosing spondylitis, psoriatic arthritis. Treatment of chronic, moderate to severe plaque psoriasis.

PRECAUTIONS

Contraindications: Serious active infection or sepsis. **Cautions:** History of recurrent infections, illnesses that predispose to infection (e.g., diabetes). Pts with CHF, decreased left ventricular function, history of significant hematologic abnormalities; moderate to severe alcoholic hepatitis, elderly, preexisting or recent onset CNS demyelinating disorder.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted in those 4 yrs and older. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Anakinra** may increase risk of infection. Use of **live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT, bilirubin.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 25 mg. **Injection, Solution Prefilled Syringe:** 50 mg/ml. **Injection, Solution (Autoinjector):** 50 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not add other medications to solution. Do not use filter during reconstitution or administration.

Subcutaneous

• Refrigerate prefilled syringes, powder for reconstitution. • Reconstitute with 1 ml Bacteriostatic Water for Injection (0.9% benzyl alcohol). Do not reconstitute with other diluents. • Slowly inject diluent into vial. Some foaming will occur. To avoid excessive foaming, slowly swirl contents until powder is dissolved (less than 5 min). • Visually inspect solution for particles, discoloration. Reconstituted solution should appear clear, colorless. If discolored, cloudy, or particles remain, discard solution; do not use. • Withdraw all of the solution into syringe. Final volume should be approximately 1 ml. • Inject into thigh, abdomen, upper arm. Rotate injection sites. • Give new injection at least 1 inch from an old site and never into area where skin is tender, bruised, red, hard. • Once reconstituted, may be stored in vial for up to 14 days refrigerated.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA), Psoriatic Arthritis, Ankylosing Spondylitis

Subcutaneous: ADULTS, ELDERLY: 25 mg twice weekly given 72–96 hrs apart or 50 mg once weekly. **Maximum:** 50 mg/wk.

Juvenile Rheumatoid Arthritis

Subcutaneous: CHILDREN 2–17 YRS: Twice weekly: 0.4 mg/kg 2 times/wk given 72–96 hrs apart. **Maximum dose:** 25 mg. Once weekly: 0.8 mg/kg/dose. **Maximum dose:** 50 mg.

Plaque Psoriasis

Subcutaneous: ADULTS, ELDERLY: 50 mg twice a wk (give 3–4 days apart) for 3 mos. Maintenance: 50 mg once a wk.

SIDE EFFECTS

Frequent (37%): Injection site erythema, pruritus, pain, swelling; abdominal pain, vomiting (more common in children than adults). **Occasional (16%–4%):** Headache, rhinitis, dizziness, pharyngitis, cough, asthenia (loss of strength, energy), abdominal pain, dyspepsia. **Rare (less than 3%):** Sinusitis, allergic reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Infection (pyelonephritis, cellulitis, osteomyelitis, wound infection, leg ulcer, septic arthritis, diarrhea, bronchitis, pneumonia) occurs in 29%–38% of pts. Rare adverse effects include heart failure, hypertension, hypotension, pancreatitis, GI hemorrhage.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain, inflammation. If significant exposure to varicella virus has occurred during treatment, therapy should be tempo-

rarely discontinued and treatment with varicella-zoster immune globulin considered.

INTERVENTION/EVALUATION

Assess for joint swelling, pain, tenderness. Monitor erythrocyte sedimentation rate (ESR), C-reactive protein level, CBC with differential, platelet count, signs of infection.

PATIENT/FAMILY TEACHING

• Instruct pt in subcutaneous injection technique, including areas of body acceptable as injection sites. • Injection site reaction generally occurs in first mo of treatment and decreases in frequency during continued therapy. • Do not receive live vaccines during treatment. • Inform physician if persistent fever, bruising, bleeding, pallor occurs.

ethambutol

eth-**am**-bue-tol
(Etibi, Myambutol)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Isonicotinic acid derivative. **CLINICAL:** Antitubercular.

ACTION

Interferes with RNA synthesis. **Therapeutic Effect:** Suppresses multiplication of mycobacteria.

PHARMACOKINETICS

Rapidly, well absorbed from GI tract. Protein binding: 20%–30%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 3–4 hrs (increased in renal impairment).

USES

In conjunction with at least one other antitubercular agent for initial treatment and retreatment of clinical tuberculosis. **OFF-LABEL:** Treatment of atypical mycobacterial infections (e.g., *Mycobacterium avium* complex [MAC]).

PRECAUTIONS

Contraindications: Optic neuritis. Use in young children, unconscious pts, or anyone unable to report visual changes. **Cautions:** Renal dysfunction, ocular defects (diabetic retinopathy, cataracts), recurrent ocular inflammatory conditions. Not recommended for children 13 yrs and younger (unless benefit outweighs risk).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 13 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Aluminum hydroxide may decrease concentration/effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Tablets: 100 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

• May be crushed and mixed with apple juice or applesauce. • Administer at least 4 hrs before giving aluminum hydroxide. • Give with food (decreases GI upset).

INDICATIONS/ROUTES/DOSAGE

Tuberculosis, Other Mycobacterial Diseases

PO: ADULTS, ELDERLY: 15–25 mg/kg/day. **Maximum:** 1.5–2.5 g/dose **or** 25–30 mg/kg/dose 3 times/wk. **Maximum:** 2.5 g/dose or 50 mg/kg/dose twice weekly. **Maximum:** 4 g/dose regardless of weight. **CHILDREN:** 15–20 mg/kg/day. **Maximum:** 1 g/

day **or** 50 mg/kg/dose twice weekly. **Maximum:** 2.5 g/dose regardless of weight.

Dosage in Renal Impairment

Dosage interval is modified based on creatinine clearance.

Creatinine Clearance	Dosage
10–50 ml/min	q24–36h
Less than 10 ml/min	q48h
Hemodialysis	Administer post HD
Peritoneal dialysis	Administer q48h
Continuous renal replacement therapy	Administer q24–36h

SIDE EFFECTS

Occasional: Acute gouty arthritis (chills, pain, swelling of joints with hot skin), confusion, abdominal pain, nausea, vomiting, anorexia, headache. **Rare:** Rash, fever, blurred vision, red-green color blindness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Optic neuritis (more common with high-dosage, long-term therapy), peripheral neuritis, thrombocytopenia, anaphylactoid reaction occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate initial CBC, renal/hepatic function test results, and monitor periodically.

INTERVENTION/EVALUATION

Assess for vision changes (altered color perception, decreased visual acuity may be first signs): discontinue drug and notify physician immediately. Give with food if GI distress occurs. Monitor serum uric acid. Assess for hot, painful, swollen joints, esp. great toe, ankle, knee (gout). Report numbness, tingling, burning of extremities (peripheral neuritis).

PATIENT/FAMILY TEACHING

• Do not skip doses; take for full length of therapy (may take mos or yrs). • Notify physician immediately of any visual problem (visual effects generally reversible with discontinuation of ethambutol but in rare cases may take up to 1 yr to disappear or may be permanent). • Promptly report swelling or pain of joints, numbness or tingling/burning of extremities, fever, chills.

etodolac

ee-**toe**-doe-lak

(Apo-Etodolac, Ultradol)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: NSAID, analgesic (see p. 127C).

ACTION

Produces analgesic, anti-inflammatory effects by inhibiting prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (analgesic)	2–4 hrs	N/A	4–12 hrs

Completely absorbed from GI tract. Protein binding: greater than 99%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 6–7 hrs. **Extended-release:** 12 hrs.

USES

Acute and long-term treatment of osteoarthritis, management of pain, treatment of rheumatoid arthritis (RA), juvenile rheumatoid arthritis (JRA).

PRECAUTIONS

Contraindications: Perioperative pain in setting of CABG surgery, history of hypersensitivity to aspirin, NSAIDs. **Cautions:** Renal/hepatic impairment, history of GI tract disease, predisposition to fluid retention, CHF. Active peptic ulcer disease, chronic inflammation of GI tract, GI bleeding/ulceration. Cardiovascular disease; concurrent use of aspirin, anticoagulants; smoking; elderly; use of alcohol; debilitated pts; asthma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category C (D if used in third trimester or near delivery). Children:** Safety and efficacy not established. **Elderly:** GI bleeding, ulceration more likely to cause serious adverse effects. Age-related renal impairment may increase risk of hepatic/renal toxicity; decreased dosage recommended.

INTERACTIONS

DRUG: May decrease antihypertensive effect of **ACE inhibitors. Aspirin, other salicylates** may increase risk of GI side effects, bleeding. May increase concentration/toxicity of **cyclosporine, digoxin, methotrexate.** May increase concentration, risk of toxicity of **lithium. HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng** may increase antiplatelet action, risk of bleeding. **FOOD:** None known. **LAB VALUES:** May increase bleeding time, serum creatinine, alkaline phosphatase, AST, ALT, bilirubin. May decrease serum uric acid.

AVAILABILITY (Rx)

Tablets: 400 mg, 500 mg.

Capsules: 200 mg, 300 mg. **Tablets (Extended-Release):** 400 mg, 500 mg, 600 mg.

ADMINISTRATION/HANDLING

PO

- Do not break, crush, dissolve, or divide capsules, extended-release tablets.
- May give with food, milk, antacids if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Osteoarthritis, Rheumatoid Arthritis (RA)

PO *(Immediate-Release)*: ADULTS, ELDERLY: Initially, 300 mg 2–3 times a day or 400 mg twice a day. Maintenance: 600–1,000 mg/day in 2–4 divided doses.

PO *(Extended-Release)*: ADULTS, ELDERLY: 400–1,000 mg once daily.

Juvenile Rheumatoid Arthritis (JRA)

PO *(Extended-Release)*: CHILDREN 6–16 YRS: 1,000 mg in children weighing more than 60 kg, 800 mg once daily in children weighing 46–60 kg, 600 mg once daily in children weighing 31–45 kg, 400 mg once daily in children weighing 20–30 kg.

Analgesia

PO *(Immediate-Release)*: ADULTS, ELDERLY: 200–400 mg q6–8h as needed. **Maximum:** 1,000 mg/day.

SIDE EFFECTS

Occasional (9%–4%): Dizziness, headache, abdominal pain/cramping, bloated feeling, diarrhea, nausea, indigestion. **Rare (3%–1%):** Constipation, rash, pruritus, visual disturbances, tinnitus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in acute renal failure. Increased risk of cardiovascular events (MI, CVA) and serious, potentially life-threatening GI bleeding. Rare reactions with long-term use include peptic ulcer, gastritis, jaundice, nephrotoxicity (hematuria, dysuria, proteinuria), severe hypersensitivity reaction (bronchospasm, angioedema).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Monitor CBC, hepatic/renal function tests. Observe for bleeding/ecchymosis. Evaluate for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Swallow capsule whole; do not crush, break, or chew. • Avoid aspirin, alcohol during therapy (increases risk of GI bleeding). • Report GI distress, visual disturbances, rash, edema, headache. • Report any signs of bleeding. • Take with food, milk, antacid if GI distress occurs. • Avoid tasks that require alertness, motor skills until response to drug is established.

etoposide, VP-16 HIGH ALERT

e-**toe**-poe-side
(Etopophos, Toposar, VePesid)

BLACK BOX ALERT Severe myelosuppression with resulting infection, bleeding may occur. Must be administered by personnel trained in administration/handling of chemotherapeutic agents.

Do not confuse etoposide with etidronate, or VePesid with Pepcid or Versed.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Epipodophyllotoxin. **CLINICAL:** Antineoplastic (see p. 83C).

ACTION

Induces single- and double-stranded breaks in DNA. Cell cycle-dependent and phase-specific; most effective in S and G_2 phases of cell division. **Therapeutic Effect:** Inhibits, alters DNA synthesis.

PHARMACOKINETICS

Variably absorbed from GI tract. Rapidly distributed, low concentrations in CSF. Protein binding: 97%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–12 hrs.

USES

Treatment of refractory testicular tumors, small-cell lung carcinoma. **OFF-LABEL:** Acute lymphocytic, acute nonlymphocytic leukemias; Ewing's and Kaposi's sarcoma; Hodgkin's and non-Hodgkin's lymphomas; endometrial, gastric, non–small-cell lung carcinomas; multiple myeloma; myelodysplastic syndromes; neuroblastoma; osteosarcoma; ovarian germ cell tumors; primary brain, gestational trophoblastic tumors; soft tissue sarcomas; Wilms tumor.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, myelosuppression, elderly, pts with low serum albumin.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Breastfeeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **Live-virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea, St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules (VePesid): 50 mg. **Injection, Powder for Reconstitution (Water-Soluble [Etopophos]):** 100 mg. **Injection Solution (Toposar):** 20 mg/ml (5 ml, 25 ml, 50 ml).

ADMINISTRATION/HANDLING

◀ALERT▶ Administer by slow IV infusion. Wear gloves when preparing solution. If powder or solution comes in contact with skin, wash immediately and thoroughly with soap, water. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation, administration.

IV

Reconstitution

Vepesid • Dilute each 100 mg (5 ml) with at least 250 ml D_5W or 0.9% NaCl to provide concentration of 0.4 mg/ml (500 ml for concentration of 0.2 mg/ml).

Etopophos • Reconstitute each 100 mg with 5–10 ml Sterile Water for Injection, D_5W, or 0.9% NaCl to provide concentration of 20 mg/ml or 10 mg/ml, respectively. • May give without further dilution or further dilute to concentration as low as 0.1 mg/ml with 0.9% NaCl or D_5W.

Rate of administration

Vepesid • Infuse slowly, at least 30–60 min (rapid IV may produce marked hypotension) at a rate not to exceed 100 mg/m²/hr. • Monitor for anaphylactic reaction during infusion (chills, fever, dyspnea, diaphoresis, lacrimation, sneezing, throat, back, chest pain).

Etopophos • May give over as little as 5 min up to 210 min.

Storage

Vepesid • Store injection at room temperature before dilution. • Concentrate for injection is clear, yellow. • Diluted solution is stable at room temperature for 96 hrs at 0.2 mg/ml, 24 hrs at 0.4 mg/ml. • Discard if crystallization occurs.

Etopophos • Refrigerate vials. • Stable at room temperature for 24 hrs or for 7 days if refrigerated after reconstitution.

PO

Storage • Refrigerate gelatin capsules.

IV INCOMPATIBILITIES

VePesid: Cefepime (Maxipime), filgrastim (Neupogen), idarubicin (Idamycin). **Etopophos:** Amphotericin B (Fungizone), cefepime (Maxipime), chlorpromazine (Thorazine), methylprednisolone (Solu-Medrol), prochlorperazine (Compazine).

IV COMPATIBILITIES

VePesid: Carboplatin (Paraplatin), cisplatin (Platinol), cytarabine (Cytosar), daunorubicin (Cerubidine), doxorubicin (Adriamycin), granisetron (Kytril), mitoxantrone (Novantrone), ondansetron (Zofran). **Etopophos:** Carboplatin (Paraplatin), cisplatin (Platinol), cytarabine (Cytosar), dacarbazine (DTIC-Dome), daunorubicin (Cerubidine), dexamethasone (Decadron), diphenhydramine (Benadryl), doxorubicin (Adriamycin), granisetron (Kytril), magnesium sulfate, mannitol, mitoxantrone (Novantrone), ondansetron (Zofran), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage individualized based on clinical response, tolerance to adverse effects. Treatment repeated at 3- to 4-wk intervals. Refer to individual protocols.

Refractory Testicular Tumors

IV: ADULTS: 50–100 mg/m²/day on days 1–5, or 100 mg/m²/day on days 1, 3, 5 (as combination therapy). Give q3–4wks for 3–4 courses.

Acute Myelocytic Leukemia

IV Infusion: CHILDREN 3 YRS AND OLDER: 100 mg/m²/day for 4 days. **YOUNGER THAN 3 YRS OF AGE:** 3.3 mg/kg/day for 4 days.

Brain Tumor

IV: CHILDREN 6 YRS AND OLDER: 150 mg/m²/day on days 3 and 4 of treatment course. **3–5 YRS:** 100 mg/m² on days 1, 2, and 3 of a 21-day cycle. **YOUNGER THAN**

3 YRS OF AGE: 6.5 mg/kg/dose on days 3 and 4 of a 28-day cycle.

Neuroblastoma
IV: CHILDREN: 100 mg/m²/day on days 1–5 of treatment course; repeated q4wks.

Small-Cell Lung Carcinoma
PO: ADULTS: Twice the IV dose rounded to nearest 50 mg. Give once a day for doses 400 mg or less, in divided doses for dosages greater than 400 mg.
IV: ADULTS: 35 mg/m²/day for 4 consecutive days up to 50 mg/m²/day for 5 consecutive days q3–4wks (as combination therapy).

Dosage in Renal Impairment

Creatinine Clearance	Dosage
15–50 ml/min	75% of normal dose
Less than 15 ml/min	Consider further dose reduction.

SIDE EFFECTS

Frequent (66%–43%): Mild to moderate nausea/vomiting, alopecia. **Occasional (13%–6%):** Diarrhea, anorexia, stomatitis. **Rare (2% or less):** Hypotension, peripheral neuropathy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression manifested as hematologic toxicity, principally anemia, leukopenia (occurring 7–14 days after drug administration), thrombocytopenia (occurring 9–16 days after administration), and, to lesser extent, pancytopenia. Bone marrow recovery occurs by day 20. Hepatotoxicity occurs occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain hematologic tests before and at frequent intervals during therapy. Antiemetics readily control nausea, vomiting.

INTERVENTION/EVALUATION

Monitor Hgb, Hct, WBC, platelet count, B/P, hepatic/renal function tests. Monitor daily pattern of bowel activity, stool consistency. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Assess for paresthesia (peripheral neuropathy). Monitor for stomatitis.

PATIENT/FAMILY TEACHING

• Alopecia is reversible, but new hair growth may have different color, texture. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising or bleeding from any site, burning or pain with urination, numbness in extremities, yellowing of skin, whites of eyes.

etravirine

e-tra-**veer**-een
(Intelence)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonnucleoside reverse transcriptase inhibitor. **CLINICAL:** Antiretroviral agent (see p. 68C, 116C).

ACTION

Binds directly to human immunodeficiency virus type 1 (HIV-1) reverse transcriptase, changing shape of enzyme, blocking RNA-, DNA-dependent DNA polymerase activity. **Therapeutic Effect:** Interferes with HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Well absorbed following PO administration if given following a meal. Protein binding:

99.6%. Metabolized in liver. Eliminated in feces and urine. **Half-life:** 41 hrs.

USES

Used in combination with other antiretroviral agents for treatment of HIV-1 infection in antiretroviral treatment-experienced adults and children aged 6 yrs of age and younger than 18 yrs who have evidence of viral replication and HIV-1 strains resistant to other antiretroviral drugs.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe hepatic impairment, renal impairment, elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related hepatic, renal, cardiac impairment may require dosage adjustment.

INTERACTIONS

DRUG: **CYP3A4 inducers (e.g., rifampin, carbamazepine, phenytoin)** may decrease concentration. **CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole)** may increase concentration. May decrease effect of **cyclosporine, sirolimus, tacrolimus.** May alter **warfarin** plasma concentrations. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depressant effects. **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, cholesterol, lipase, creatinine, triglycerides, glucose, ALT, AST. May decrease Hgb, neutrophil, platelet count.

AVAILABILITY (Rx)

Tablets: 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• Give following a meal. • Tablets may be dissolved in water. • Stir dispersion well and instruct pt to swallow immediately after dispersion. • Glass should be rinsed several times with water and each rinse swallowed to ensure entire dose is consumed.

INDICATIONS/ROUTES/DOSAGE

HIV-1 Infection

PO: ADULTS: 200 mg (one 200-mg or two 100-mg tablets) twice daily following a meal. **CHILDREN 6–18 YRS, WEIGHING 30 KG OR GREATER:** 200 mg twice daily. **WEIGHING 25–29 KG:** 150 mg twice daily. **WEIGHING 20–24 KG:** 125 mg twice daily. **WEIGHING 16–19 KG:** 100 mg twice daily.

SIDE EFFECTS

Occasional (17%–16%): Rash (mild to moderate, occurring primarily during wk 2 of therapy and infrequently after wk 4), nausea. **Rare (6%–3%):** Diarrhea, fatigue, abdominal pain, hypertension, peripheral neuropathy, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe/life-threatening rash presenting as Stevens-Johnson syndrome, hypersensitivity reaction, erythema multiforme occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab tests before beginning therapy and at periodic intervals thereafter. Offer emotional support to pt and family.

INTERVENTION/EVALUATION

Closely monitor for evidence of rash (usually appears on trunk, face, extremities during second wk of drug initiation). Rash generally resolves within 1–2 wks on continued therapy.

PATIENT/FAMILY TEACHING

• Do not take any medications, including OTC drugs, without consulting physician. • Small, frequent meals may offset anorexia, nausea. • Etravirine is not a cure

for HIV infection, nor does it reduce risk of transmission to others. • If rash appears, contact physician before continuing therapy.

everolimus

eh-**veer**-oh-li-mus
(Afinitor, Afinitor Disperz, Zortress)
Do not confuse Afinitor with Lipitor, or everolimus with sirolimus, tacrolimus, or temsirolimus.

BLACK BOX ALERT Immunosuppresant (may result in infection, malignancy including lymphoma or skin cancer); increased risk of nephrotoxicity in renal transplants (avoid standard doses of cyclosporine); increased risk of renal thrombosis in renal transplants.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Enzyme inhibitor. **CLINICAL:** Antineoplastic, immunosuppressant (see p. 83C).

ACTION

Prevents activation of rapamycin (MTOR) kinase activity. **Therapeutic Effect:** Reduces cell proliferation, produces cell death.

PHARMACOKINETICS

Peak concentration occurs in 1–2 hrs following administration, with steady-state levels achieved in 2 wks. Undergoes extensive hepatic metabolism. Protein binding: 74%. Eliminated primarily in feces, with lesser amount excreted in urine. **Half-life:** 30 hrs.

USES

Afinitor: Treatment of advanced renal cell carcinoma after failure of treatment with sunitinib or sorafenib. Treatment of subependymal giant cell astrocytoma (SEGA) associated with tuberous sclerosis. Advanced pancreatic neuroendocrine tumors (PNET). Treatment of breast cancer in postmenopausal women. Treatment of tuberous sclerosis complex (TSC) not requiring immediate surgery. **Zortress:** Prophylaxis of organ rejection after kidney transplant. **OFF-LABEL:** Prophylaxis of organ rejection in heart transplant; relapsed or refractory Waldenström's macroglobulinemia.

PRECAUTIONS

Contraindications: None significant. **Cautions:** Noninfectious pneumonitis; viral, fungal, or bacterial infection; oral ulceration; mucositis; current immunosuppression; hereditary galactose intolerance; hepatic impairment; hyperlipidemia; concurrent use of CYP3A4 inducers and inhibitors (see Interactions).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, voriconazole) may increase concentration. **CYP3A4 inducers (e.g., carbamazepine, dexamethasone, phenobarbital, phenytoin, rifabutin, rifampin, rifapentine)** may decrease concentration. **P-gp inhibitors (e.g., cyclosporine)** may increase everolimus concentrations, toxicity. **Statins** may increase risk of rhabdomyolysis. **FOOD: High-fat meals** may reduce plasma concentration. **Grapefruit juice, grapefruit** may increase concentration (potential for meylotoxicity, nephrotoxicity). **HERBAL: St. John's wort** may decrease plasma concentration. **LAB VALUES:** May increase BUN, serum creatinine, glucose, triglycerides, lipids. May decrease WBCs, neutrophils, Hgb, platelets.

AVAILABILITY (Rx)

Tablets (Zortress): 0.25 mg, 0.5 mg, 0.75 mg. **Tablets (Afinitor):** 2.5 mg, 5 mg, 10 mg. **Tablets for Oral Suspension (Afinitor Disperz):** 2 mg, 3 mg, 5 mg.

ADMINISTRATION/HANDLING

• Give without regard to food. • Do not crush/chew Afinitor or Zortress. • Avoid direct contact of crushed tablets with skin or mucous membranes. If unable to swallow, disperse in 30 ml water with gentle stirring, give immediately.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ If pt requires coadministration of a strong CYP3A4 inducer (carbamazepine, dexamethasone, phenobarbital, phenytoin, rifabutin, rifampin), consider doubling the dose. If strong inducer is discontinued, reduce everolimus to dose used prior to initiation. If moderate CYP3A4 inhibitors are required, reduce dose by 50%.

Renal Carcinoma, Pancreatic Neuroendocrine Tumors, Breast Cancer, TSC

PO: ADULTS, ELDERLY: (Afinitor): 10 mg once daily at same time every day. Coadministration with CYP3A4 inhibitors or P-gp inhibitors: 2.5 mg once daily. May increase to 5 mg/day. Coadministration with CYP3A4 inducers: Increase by 5-mg increments up to 20 mg/day.

SEGA with TSC

PO: ADULTS, CHILDREN: 4.5 mg/m^2 once daily.

Transplant Prophylaxis

PO: ADULTS, ELDERLY: (Zortress): Initially, 0.75 mg 2 times/day. Give in combination with basiliximab and concurrent with reduced doses of cyclosporine and corticosteroids.

Astrocytoma

PO: ADULTS, ELDERLY: Initial dose based on body surface area (BSA), titrated to attain trough concentration of 5–10 ng/ml.

BSA	Dose
2.2 m^2 or greater	7.5 mg/day
1.3–2.1 m^2	5 mg/day
0.5–1.2 m^2	2.5 mg/day

Moderate Hepatic Impairment

50% normal dose at same time every day.

SIDE EFFECTS

Common (44%–26%): Stomatitis, asthenia (loss of strength, energy), diarrhea, cough, rash, nausea. **Frequent (25%–20%):** Peripheral edema, anorexia, dyspnea, vomiting, pyrexia. **Occasional (19%–10%):** Mucosal inflammation, headache, epistaxis, pruritus, dry skin, epigastric distress, extremity pain. **Rare (less than 10%):** Abdominal pain, insomnia, dry mouth, dizziness, paresthesia, eyelid edema, hypertension, nail disorder, chills.

ADVERSE EFFECTS/ TOXIC REACTIONS

Noninfectious pneumonitis characterized as hypoxia, pleural effusion, cough, or dyspnea was reported in 14% of pts; grade 3 noninfectious pneumonitis reported in 4%. Localized and systemic infections, including pneumonia, other bacterial infections, and invasive fungal infections, have occurred due to everolimus immunosuppressive properties. Renal failure occurs in 3% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess medical history, esp. renal function, use of other immunosuppressants. Obtain baseline CBC, serum chemistries including hepatic function tests (bilirubin, AST, alkaline phosphatase), BUN, creatinine before treatment begins and routinely thereafter.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess skin for evidence

of rash, edema. Monitor CBC, particularly Hgb, platelet, neutrophil count, BUN, creatinine, hepatic function tests (AST, ALT, total bilirubin). Monitor for shortness of breath, fatigue, hypertension. Assess mouth for stomatitis, mucositis.

PATIENT/FAMILY TEACHING

• Take dose at same time each day. • Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine. • Do not have immunizations without physician's approval (drug lowers body resistance). • Promptly report fever, unusual bruising/bleeding from any site. • Swallow tablet whole. Do not crush, avoid direct contact of crushed tablets with skin or mucous membrane (wash thoroughly if contact occurs). • Do not drink grapefruit juice or eat grapefruit.

exemestane HIGH ALERT

ex-e-**mes**-tane
(Aromasin)
Do not confuse Aromasin with Arimidex, or exemestane with estramustine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Hormone.
CLINICAL: Antineoplastic (see p. 83C).

ACTION

Inactivates aromatase, the principal enzyme that converts androgens to estrogens in both premenopausal and postmenopausal women, lowering circulating estrogen level. **Therapeutic Effect:** Inhibits growth of breast cancers stimulated by estrogens.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 90%. Distributed extensively into tissues. Metabolized in liver; eliminated in urine and feces. **Half-life:** 24 hrs.

USES

Treatment of advanced breast cancer in postmenopausal women whose disease has progressed following tamoxifen therapy. Adjuvant treatment of postmenopausal women with estrogen-receptor positive early breast cancer after 2–3 yrs of tamoxifen therapy for completion of 5 consecutive yrs of adjuvant hormonal therapy. **OFF-LABEL:** Reduces risk of invasive breast cancer in postmenopausal women; treatment of endometrial cancer, uterine sarcoma.

PRECAUTIONS

Contraindications: Women who are pregnant or may become pregnant; use in premenopausal women. **Cautions:** Concomitant use of estrogen-containing agents, CYP3A4 inducers (e.g., phenobarbital, rifampin).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Indicated for postmenopausal women. **Pregnancy Category D. Children:** Not indicated for use in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., phenobarbital, rifampin) may decrease concentration/effects. **HERBAL: St. John's wort** may decrease concentration. Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT.

AVAILABILITY (Rx)

Tablets: 25 mg.

ADMINISTRATION/HANDLING

PO
• Give after meals.

INDICATIONS/ROUTES/DOSAGE

Breast Cancer
PO: ADULTS, ELDERLY: 25 mg once a day after a meal. 50 mg/day when used concurrently with potent CYP3A4 inducers (e.g., rifampin, phenytoin).

SIDE EFFECTS

Frequent (22%–10%): Fatigue, nausea, depression, hot flashes, pain, insomnia, anxiety, dyspnea. **Occasional (8%–5%):** Headache, dizziness, vomiting, peripheral edema, abdominal pain, anorexia, flu-like symptoms, diaphoresis, constipation, hypertension. **Rare (4%):** Diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

MI has been noted.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor for onset of depression. Assess sleep pattern. Monitor for and assist with ambulation if dizziness occurs. Assess for headache. Offer antiemetic for nausea/ vomiting.

PATIENT/FAMILY TEACHING

• Notify physician if nausea, hot flashes become unmanageable. • Avoid tasks that require alertness, motor skills until response to drug is established. • Best taken after meals and at same time each day.

exenatide

TOP 200 HIGH ALERT

ex-**en**-ah-tide
(Bydureon, Byetta)

BLACK BOX ALERT (Bydureon): Risk of thyroid C-cell tumors.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Incretin mimetic. **CLINICAL:** Antidiabetic (see p. 44C).

ACTION

Stimulates release of insulin from beta cells of pancreas, mimics enhancement of glucose-dependent insulin secretion, suppresses elevated glucagon secretion, slows gastric emptying (central action increases satiety). **Therapeutic Effect:** Improves glycemic control by increasing postmeal insulin secretion, decreasing postmeal glucagon levels, delaying gastric emptying, and increasing satiety.

PHARMACOKINETICS

Minimal systemic metabolism. Eliminated by glomerular filtration with subsequent proteolytic degradation. **Half-life:** 2.4 hrs.

USES

Adjunct to diet, exercise to improve glycemic control in pts with type 2 diabetes mellitus who are taking metformin (Glucophage) and a sulfonylurea (e.g., glyburide) or metformin and a thiazolidinedione (e.g., pioglitazone) or insulin glargine with or without metformin and/ or a thiazolidinedione. Bydureon: Adjunct to diet and exercise to improve glycemic control in type 2 diabetes.

PRECAUTIONS

Contraindications: Bydureon: History of medullary thyroid carcinoma. **Cautions:** Diabetic ketoacidosis, type 1 diabetes mellitus. Not recommended in severe renal impairment, severe GI disease, pancreatitis, gastroparesis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Injection, Solution (Prefilled Pen): (Byetta) 250 mcg/ml (1.2 ml provides 5 mcg/dose; 2.4 ml provides 10 mcg/dose). **Injection, Suspension (Bydureon):** 2 mg.

E

ADMINISTRATION/HANDLING

Subcutaneous

• May be given in thigh, abdomen, upper arm. • Rotation of injection sites is essential; maintain careful injection site record. • Give within 60 min before morning and evening meals. Give suspension immediately after powder is suspended.

Storage • Refrigerate prefilled pens. • Discard if freezing occurs. • May be stored at room temperature after first use. • Discard pen 30 days after initial use.

INDICATIONS/ROUTE/DOSAGE

Diabetes Mellitus

Subcutaneous: ADULTS, ELDERLY: (Byetta) 5 mcg per dose given twice a day at any time within the 60-min period before the morning and evening meals. Dose may be increased to 10 mcg twice a day after 1 mo of therapy. (Bydureon): 2 mg once q7days. ◀ALERT▶ Not recommended in pts with creatinine clearance less than 30 ml/min.

SIDE EFFECTS

(Byetta) Frequent (44%): Nausea. **Occasional (13%–6%):** Diarrhea, vomiting, dizziness, anxiety, dyspepsia. **Rare (less than 6%):** Weakness. **(Bydureon) 5% or greater:** Nausea, diarrhea, headache, constipation, vomiting, dyspepsia, injection site pruritus or nodule.

ADVERSE EFFECTS/ TOXIC REACTIONS

With concurrent sulfonylurea, hypoglycemia occurs in 36% when given a 10-mcg dose of exenatide, 16% when given a 5-mcg dose. May cause acute pancreatitis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose before administration. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt or family does not thoroughly understand diabetes management, glucose-testing technique. At least 1 mo should elapse to assess response to drug before new dose adjustment is made.

INTERVENTION/EVALUATION

Monitor serum glucose, food intake, renal function. Assess for hypoglycemia (cool wet skin, tremors, dizziness, anxiety, headache, tachycardia, numbness in mouth, hunger, diplopia), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity or stress, surgical procedure).

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. • Prescribed diet and exercise are principal parts of treatment. Do not skip, delay meals. • Continue to adhere to dietary instructions, regular exercise program, regular testing of serum glucose. • When taking combination therapy with a sulfonylurea, have source of glucose available to treat symptoms of hypoglycemia. • Report any unexplained severe abdominal pain with or without nausea and vomiting.

ezetimibe

TOP 200

eh-**zet**-ih-mib
(Ezetrol, Zetia)
Do not confuse Zetia with Zebeta or Zestril.

FIXED-COMBINATION(S)

Vytorin: ezetimibe/simvastatin (hydroxymethylglutaryl-CoA [HMG-CoA] reductase inhibitor): 10 mg/10 mg, 10 mg/20 mg, 10 mg/40 mg, 10 mg/80 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihyperlipidemic. **CLINICAL:** Anticholesterol agent (see p. 56C).

ACTION

Inhibits cholesterol absorption in small intestine, leading to decrease in delivery

of intestinal cholesterol to liver. **Therapeutic Effect:** Reduces total serum cholesterol, LDL, triglyceride; increases HDL.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: greater than 90%. Metabolized in small intestine and liver. Excreted by kidneys and bile. **Half-life:** 22 hrs.

USES

Adjunct to diet for treatment of primary hypercholesterolemia (monotherapy or in combination with HMG-CoA reductase inhibitors [statins]), homozygous sitosterolemia, homozygous familial hypercholesterolemia (combined with atrovastatin or simvastatin). Mixed hyperlipidemia (in combination with fenofibrate).

PRECAUTIONS

Contraindications: Concurrent use of an HMG-CoA reductase inhibitor (atorvastatin, fluvastatin, lovastatin, pravastatin, simvastatin) in pts with active hepatic disease or unexplained persistent elevations in serum transaminase; moderate or severe hepatic insufficiency; pregnancy; breast-feeding. **Cautions:** Severe renal or mild hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those 10 yrs or younger. **Elderly:** Age-related mild hepatic impairment may require dosage adjustment. Not recommended in those with moderate or severe hepatic impairment.

INTERACTIONS

DRUG: Antacids containing aluminum or magnesium, cyclosporine, fenofibrate, gemfibrozil increase plasma concentration. **Cholestyramine resin** decreases drug effectiveness. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, AST, ALT.

AVAILABILITY (Rx)

Tablets: 10 mg.

ADMINISTRATION/HANDLING

• Give without regard to food. • May give at same time as statins. Give at least 2 hrs before or 4 hrs after cholestyramine, colestipol, colesevelam.

INDICATIONS/ROUTES/DOSAGE

Hypercholesterolemia

PO: ADULTS, ELDERLY, CHILDREN, 10 YRS AND OLDER: Initially, 10 mg once a day, given with or without food. If pt is also receiving a bile acid sequestrant, give ezetimibe at least 2 hrs before or at least 4 hrs after bile acid sequestrant.

Sitosterolemia

PO: ADULTS, ELDERLY: 10 mg/day.

SIDE EFFECTS

Occasional (4%–3%): Back pain, diarrhea, arthralgia, sinusitis, abdominal pain. **Rare (2%):** Cough, pharyngitis, fatigue, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatitis, hypersensitivity reaction, myopathy, rhabdomyolysis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain diet history, esp. fat consumption. Obtain serum cholesterol, triglycerides, hepatic function tests, blood counts during initial therapy and periodically during treatment. Treatment should be discontinued if hepatic enzyme levels persist more than 3 times normal limit.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity and stool consistency. Question pt for signs/symptoms of back pain, abdominal disturbances. Monitor serum choles-

terol, triglycerides for therapeutic response.

PATIENT/FAMILY TEACHING

• Periodic laboratory tests are essential part of therapy. • Do not stop medication without consulting physician. • Report muscular or bone pain. • May give at same time as statins. Give at least 2 hrs before or 4 hrs after cholestyramine, colestipol, colesevelam.

ezogabine

ezo-**ga**-bean
(Potiga)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Potassium channel opener. **CLINICAL:** Anticonvulsant (see p. 34C).

ACTION

Reduces brain excitability and stabilizes resting membrane potentials by augmenting GABA-mediated currents, the major inhibitory neurotransmitter in CNS. **Therapeutic Effect:** Enhances transmembrane currents of potassium ion channels.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Peak concentration: 0.5–2 hrs. Protein binding: 80%. Metabolized by glucuronidation and acetylation. Primarily excreted in urine (85%), with lesser amount eliminated in feces (14%). **Half-life:** 7–11 hrs.

USES

Adjunctive therapy for treatment of partial-onset seizures in those 18 yrs of age and older.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, BPH, chronic cognitive impairment, psychiatric history, prolonged QT interval, those at risk for suicide.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Must either discontinue breast-feeding or discontinue drug regimen. **Pregnancy Category C. Children:** Safety and efficacy not established in pts under 18 yrs of age. **Elderly:** Dosage adjustment recommended for pts older than 65 yrs.

INTERACTIONS

DRUG: **Phenytoin, carbamazepine** may decrease plasma concentration/effects. **Alcohol** may increase plasma concentration/adverse effects. May inhibit clearance of **digoxin.** **HERBAL:** None known. **FOOD:** None significant. **LAB VALUES:** May create falsely elevated urine bilirubin level.

AVAILABILITY (Rx)

Tablets: 50 mg, 200 mg, 300 mg, 400 mg.

ADMINISTRATION/HANDLING

• May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Partial Seizures

◀ALERT▶ Increase at weekly intervals by no more than 50 mg 3 times daily (150 mg per day).

PO: ADULTS: Initially, 100 mg 3 times daily for 7 days. Increase to maintenance dose of 200–400 mg 3 times daily (600–1,200 mg daily). **Maximum:** 1,200 mg per day.

Dosage Modification

ELDERLY: Initially, 50 mg 3 times a day for 7 days. Then increase weekly to therapeutic level. **Maximum:** 250 mg 3 times a day (750 mg per day). **Renal Impairment (CrCl less than 50 or ESRD):** 50 mg 3 times a day for 7 days. Then increase to therapeutic level. **Maximum:** 200 mg 3 times a day (600 mg per day). **Hepatic Impairment (Child-Pugh score less**

than 9): Initially, 50 mg 3 times a day for 7 days. Then increase to therapeutic level. **Maximum:** 250 mg 3 times a day (750 mg per day). **Hepatic Impairment (Child-Pugh score greater than 9):** Initially, 50 mg 3 times a day for 7 days. Then increase to therapeutic level. **Maximum:** 200 mg 3 times a day (600 mg per day). **Discontinuation:** Reduce gradually over period of at least 3 wks.

SIDE EFFECTS

Frequent (23%–15%): Dizziness, somnolence, fatigue. **Occasional (8%–4%):** Tremor, vertigo, abnormal coordination, nausea, diplopia, attention disturbance, memory impairment, asthenia (loss of strength, energy), blurred vision, gait disturbance, aphasia, dysarthria, balance disorder. **Rare (3%–1%):** Constipation, anxiety, weight gain, dyspepsia, amnesia, dysphasia, disorientation, dysuria, urinary hesitation, hematuria, urine discoloration, psychotic behavior.

ADVERSE EFFECTS/ TOXIC REACTIONS

Urinary retention requiring catheterization, prolonged QT interval, myoclonus, peripheral edema, hypokinesia, dysphasia, hyperhydrosis, malaise reported in less than 2% of pts. Hydronephrosis associated with baseline renal impairment, increased risk of psychosis, hallucinations, suicidal ideation, depression, aggression, mania noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Question history of BPH, urinary retention, cognitive impairment, psychiatric disorder, hepatic/renal impairment, alcoholism, prolonged QT syndrome. Obtain full medication history including digoxin, antiarrhythmics, adjunct anticonvulsant therapy. Obtain baseline EKG, digoxin level if applicable. Question possibility of pregnancy or current breast-feeding.

INTERVENTION/EVALUATION

Initiate seizure precautions and observe for seizure activity. Assist with ambulation if dizziness occurs. Monitor for depression, suicidal ideation, unusual behavior, mania, anxiety. Routinely monitor digoxin levels. Monitor QT interval for pts with CHF, ventricular hypertrophy, hypokalemia, hypomagnesemia.

PATIENT/FAMILY TEACHING

• Monitor closely for seizure activity. • Immediately report any new medications, trouble urinating, palpitations, pregnancy, or plans to breast-feed. • Do not drink alcohol. • Report any thoughts of suicide, aggressive behavior, depression, anxiety, trouble sleeping, impulsiveness, unusual behavior. • Noncompliance may lead to increased risk of seizures.

F

famciclovir

fam-**sye**-klo-veer
(Apo-Famciclovir ✤, Famvir)
Do not confuse Famvir with Femara.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic nucleoside. **CLINICAL:** Antiviral (see p. 68C).

ACTION

Inhibits viral DNA synthesis. **Therapeutic Effect:** Suppresses replication of herpes simplex virus, varicella-zoster virus.

PHARMACOKINETICS

Rapidly, extensively absorbed after PO administration. Protein binding: 20%–25%. Rapidly metabolized to penciclovir by enzymes in GI tract, liver, plasma. Eliminated unchanged in urine. Removed by hemodialysis. **Half-life:** 2–3 hrs (increased in severe renal failure).

USES

Treatment of acute herpes zoster (shingles), treatment and suppression of recurrent genital herpes in immunocompetent pts, treatment of recurrent mucocutaneous herpes simplex in HIV-infected pts. Treatment of recurrent herpes labialis (cold sores) in immunocompetent pts.

PRECAUTIONS

Contraindications: Hypersensitivity to penciclovir cream. **Cautions:** Renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Increased mammary adenocarcinoma in animals. Unknown if excreted in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase hepatic enzymes, bilirubin.

AVAILABILITY (Rx)

Tablets: 125 mg, 250 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Give with food to decrease GI distress.

INDICATIONS/ROUTES/DOSAGE

Acute Herpes Zoster (Shingles)

PO: ADULTS: 500 mg q8h for 7 days. Begin within 72 hrs of rash onset.

Initial Genital Herpes

PO: ADULTS: 250 mg 3 times/day for 7–10 days.

Recurrent Genital Herpes

PO: ADULTS: 1,000 mg twice a day for 1 day.

Suppression of Recurrent Genital Herpes

PO: ADULTS: 250 mg twice a day for up to 1 yr.

Recurrent Mucotaneous/Genital Herpes Simplex in HIV Pts

PO: ADULTS: 500 mg twice a day for 7 days.

Herpes Labialis (Cold Sores)

PO: ADULTS, ELDERLY: 1,500 mg as a single dose. Initiate at first sign or symptom.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and disease process.

Dosage in Hemodialysis Pts

For adults with herpes zoster, give 250 mg after each dialysis treatment; for adults with genital herpes, give 125 mg after each dialysis treatment.

Creatinine Clearance	Herpes Zoster	Recurrent Genital Herpes (single-day regimen)	Recurrent Genital Herpes (suppression)	Recurrent Herpes Labialis Treatment (single-day regimen)	Recurrent Orolabial or Genital Herpes in HIV Pts
40–59 ml/min	500 mg q12h	500 mg q12h	—	750 mg	—
20–39 ml/min	500 mg q24h	500 mg	125 mg q12h	500 mg	500 mg q24h
Less than 20 ml/min	250 mg q24h	250 mg	125 mg q24h	250 mg	250 mg q24h
Hemodialysis	250 mg after each hemodialysis session	250 mg after each hemodialysis session	125 mg after each hemodialysis session	250 mg after each hemodialysis session	250 mg after each hemodialysis session

SIDE EFFECTS

Frequent: Headache (23%), nausea (12%). **Occasional (10%–2%):** Dizziness, drowsiness, paresthesia (esp. feet), diarrhea, vomiting, constipation, decreased appetite, fatigue, fever, pharyngitis, sinusitis, pruritus. **Rare (less than 2%):** Insomnia, abdominal pain, dyspepsia, flatulence, back pain, arthralgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Urticaria, hallucinations, confusion (delirium, disorientation occur predominantly in elderly) have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline chemistry tests.

INTERVENTION/EVALUATION

Evaluate cutaneous lesions. Be alert to neurologic effects: headache, dizziness. Provide analgesics, comfort measures; esp. exhausting in elderly. Monitor renal function, hepatic enzymes, CBC.

PATIENT/FAMILY TEACHING

• Drink adequate fluids. • Fingernails should be kept short, hands clean. • Do not touch lesions with fingers to avoid spreading infection to new site. • **Genital herpes:** Continue therapy for full length of treatment. • Space doses evenly. • Avoid contact with lesions during duration of outbreak to prevent cross-contamination. • Notify physician if lesions recur or do not improve. • Change position slowly from sitting/lying to standing. • Avoid tasks that require alertness, motor skills until response to drug is established.

famotidine

TOP 200

fah-**moe**-ta-deen
(Apo-Famotidine, Novo-Famotidine, Pepcid, Pepcid AC, Pepcid AC Maximum Strength, Ulcidine)

Do not confuse famotidine with fluoxetine or furosemide.

FIXED-COMBINATION(S)

Duexis: famotidine/ibuprofen (an NSAID): 26.6 mg/800 mg. **Pepcid Complete:** famotidine/calcium chloride/magnesium hydroxide (antacids): 10 mg/800 mg/165 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: H_2 receptor antagonist. **CLINICAL:** Antiulcer, gastric acid secretion inhibitor (see p. 108C).

ACTION

Inhibits histamine action of H_2 receptors of parietal cells. **Therapeutic Effect:** Inhibits gastric acid secretion (fasting, nocturnal, or stimulated by food, caffeine, insulin).

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	1–4 hrs	10–12 hrs
IV	0.5 hr	0.5–3 hrs	10–12 hrs

Rapidly, incompletely absorbed from GI tract. Protein binding: 15%–20%. Partially metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2.5–3.5 hrs (increased in renal impairment).

USES

Short-term treatment of active duodenal ulcer. Prevention, maintenance of duodenal ulcer recurrence. Treatment of active benign gastric ulcer, pathologic GI hypersecretory conditions. Short-term treatment of gastroesophageal reflux disease (GERD), including erosive esophagitis. OTC formulation for relief of heartburn, acid indigestion, sour stomach. **OFF-LABEL:** Autism, prophylaxis of aspiration pneumonitis, *H. pylori* eradication, stress ulcer prophylaxis in critically ill pts, relief of gastritis.

PRECAUTIONS

Contraindications: Hypersensitivity to other H_2 antagonists. **Cautions:** Renal/hepatic impairment, elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Confusion more likely to occur, esp. in those with renal/hepatic impairment.

INTERACTIONS

DRUG: May decrease absorption of **atazanavir, itraconazole, ketoconazole.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Interferes with skin tests using allergen extracts. May increase serum alkaline phosphatase, AST, ALT.

AVAILABILITY (Rx)

Infusion, Premix: 20 mg in 50 ml 0.9% NaCl. **Injection, Solution (Pepcid):** 10 mg/ml. **Powder for Oral Suspension (Pepcid):** 40 mg/5 ml. **Tablets: (Pepcid AC):** 10 mg. **(Pepcid):** 20 mg, 40 mg. **Tablets, Chewable (Pepcid AC Maximum Strength):** 20 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV push, dilute 20 mg with 5–10 ml 0.9% NaCl. • For intermittent IV infusion (piggyback), dilute with 50–100 ml D_5W, or 0.9% NaCl.

Rate of Administration • Give IV push over at least 2 min. • Infuse piggyback over 15–30 min.

Storage • Refrigerate unreconstituted vials. • IV solution appears clear, colorless. • After dilution, IV solution is stable for 48 hrs if refrigerated.

PO

• Store tablets, suspension at room temperature. • Following reconstitution, oral suspension is stable for 30 days at room temperature. • Give without regard to meals. • Shake suspension well before use.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), ceftriaxone (Rocephin), furosemide (Lasix), piperacillin/tazobactam (Zosyn).

IV COMPATIBILITIES

Calcium gluconate, dexamethasone (Decadron), dobutamine (Dobutrex), dopamine (Intropin), doxorubicin (Adriamycin), furosemide (Lasix), haloperidol (Haldol), heparin, hydromorphone (Dilaudid), insulin (regular), lidocaine, lipids, lorazepam (Ativan), magnesium sulfate, meperidine (Demerol), midazolam (Versed), morphine, nitroglycerin, norepinephrine (Levophed), ondansetron (Zofran), potassium chloride, potassium phosphate, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Duodenal, Gastric Ulcers

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 40 mg/day at bedtime or 20 mg twice daily for 4–8 wks. **CHILDREN 1–11 YRS:** 0.5 mg/kg/day at bedtime. **Maximum:** 40 mg/day.

Duodenal Ulcer, Prevention and Maintenance

PO: ADULTS, ELDERLY: 20 mg/day at bedtime.

Gastroesophageal Reflux Disease (GERD)

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 20 mg twice a day for 6 wks. **CHILDREN 1–11 YRS:** 1 mg/kg/day in 2 divided doses. **Maximum:** 40 mg 2 times/day. **CHILDREN 3 MOS–11 MOS:** 0.5 mg/kg/dose twice a day. **CHILDREN YOUNGER THAN 3 MOS, NEONATES:** 0.5 mg/kg/dose once a day.

Esophagitis

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 20–40 mg twice a day for up to 12 wks.

Hypersecretory Conditions
PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 20 mg q6h. May increase up to 160 mg q6h.

Acid Indigestion, Heartburn (OTC Use)
PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 10–20 mg q12h. May take 15–60 min before eating. **Maximum:** 2 doses per day.

Usual Parenteral Dosage
IV: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 20 mg q12h. **CHILDREN 1–12 YRS:** 0.25–0.5 mg/kg q12h. **Maximum:** 40 mg/day.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
Less than 50 ml/min	50% normal dose or increase dosing interval to 36–48 hrs

SIDE EFFECTS

Occasional (5%): Headache. **Rare (2% or less):** Confusion, constipation, diarrhea, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Agranulocytosis, pancytopenia, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess epigastric/abdominal pain.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor for diarrhea, constipation, headache. Assess confusion in elderly.

PATIENT/FAMILY TEACHING

• May take without regard to meals, antacids. • Report headache. • Avoid excessive amounts of coffee, aspirin. • If symptoms of heartburn, acid indigestion, sour stomach persist with medication, consult physician.

febuxostat

fe-**bux**-oh-stat
(Uloric)
Do not confuse febuxostat with Femstat.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Xanthine oxidase inhibitor. **CLINICAL:** Antigout agent.

ACTION

Decreases uric acid production by inhibiting the enzyme xanthine oxidase. **Therapeutic Effect:** Reduces uric acid concentrations in serum and urine.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed. Protein binding: 99%. Metabolized in liver to active metabolite. Eliminated primarily in urine, with lesser amount excreted in feces. Removed by hemodialysis. **Half-life:** 5–8 hrs.

USES

Management of hyperuricemia in pts with gout. Not recommended for treatment of asymptomatic hyperuricemia.

PRECAUTIONS

Contraindications: Concurrent use with azathioprine, mercaptopurine, or theophylline. **Cautions:** Severe renal/hepatic impairment, history of heart disease or stroke.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established.

Elderly: No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration, toxicity of **azathioprine, mercaptopurine, theophylline.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, AST, ALT, LDH, amylase, sodium, potassium, cholesterol, triglycerides, BUN, creatinine. May decrease platelet count, Hgb, Hct, neutrophil count. May prolong prothrombin time.

AVAILABILITY (Rx)

Tablets: 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to meals or antacids.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Recommended to take an NSAID or colchicine with initiation of therapy and continue for up to 6 mos to prevent exacerbations of gout.

Hyperuricemia

PO: ADULTS, ELDERLY: 40 mg once daily. If pt does not achieve serum uric acid level less than 6 mg/dl after 2 wks with 40 mg, may give 80 mg once daily.

SIDE EFFECTS

Rare (1%): Nausea, arthralgia, rash, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatic function abnormalities occur in 6% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function; concomitant medication (azathioprine, mercaptopurine, theophylline) contraindicated.

INTERVENTION/EVALUATION

Discontinue medication immediately if rash appears. Encourage high fluid intake (3,000 ml/day). Monitor I&O (output should be at least 2,000 ml/day). Monitor CBC, serum uric acid, renal/hepatic function levels. Assess urine for cloudiness, unusual color, odor. Assess for therapeutic response (reduced joint tenderness, swelling, redness, limitation of motion).

PATIENT/FAMILY TEACHING

• Encourage drinking 8–10 glasses (8 oz) of fluid daily while taking medication. • Report rash, chest pain, shortness of breath, symptoms suggestive of stroke. • Gout attacks may occur for several months after starting treatment (medication is not a pain reliever). • Continue taking even if gout attack occurs.

felodipine

fe-**loe**-di-peen
(Plendil, Renedil)
Do not confuse Plendil with Isordil, Pletal, Prilosec, or Prinivil, or Renedil with Prinivil.

FIXED-COMBINATION(S)

Lexxel: felodipine/enalapril (ACE inhibitor): 2.5 mg/5 mg, 5 mg/5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. **CLINICAL:** Antihypertensive, antianginal (see p. 61C, 77C).

ACTION

Inhibits calcium movement across cardiac, vascular smooth muscle cell membranes (does not depress SA, AV nodes). Potent peripheral vasodilator. **Therapeutic Effect:** Increases myocardial contractility, heart rate, cardiac output; decreases peripheral vascular resistance, B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	2–5 hrs	N/A	24 hrs

Rapidly, completely absorbed from GI tract. Protein binding: greater than 99%. Undergoes first-pass metabolism in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 11–16 hrs.

USES

Management of hypertension. May be used alone or with other antihypertensives. **OFF-LABEL:** Management of pediatric hypertension.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe left ventricular dysfunction, CHF, hepatic impairment, hypertrophic cardiomyopathy with outflow tract obstruction, edema, severe aortic stenosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May experience greater hypotensive response. Constipation may be more problematic.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., **ketoconazole, erythromycin, cimetidine**) may increase concentration. **HERBAL: St. John's wort** may decrease concentration. **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD: Grapefruit, grapefruit juice** may increase absorption, concentration. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Extended-Release): 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Give without food. • Do not chew, crush, break extended-release tablets. Swallow whole.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 5 mg/day as single dose. **ELDERLY, PTS WITH HEPATIC IMPAIRMENT:** Initially, 2.5 mg/day. Adjust dosage at no less than 2-wk intervals. Maintenance: 2.5–10 mg/day. Range: 2.5–20 mg/day. **CHILDREN:** Initially, 2.5 mg once daily. **Maximum:** 10 mg/day.

SIDE EFFECTS

Frequent (22%–18%): Headache, peripheral edema. **Occasional (6%–4%):** Flushing, respiratory infection, dizziness, lightheadedness, asthenia (loss of strength, energy). **Rare (less than 3%):** Angina, gingival hyperplasia, paresthesia, abdominal discomfort, anxiety, muscle cramping, cough, diarrhea, constipation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces nausea, drowsiness, confusion, slurred speech, hypotension, bradycardia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, apical pulse immediately before drug administration (if pulse is 60 or less/min or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Assist with ambulation if light-headedness, dizziness occur. Assess for peripheral edema behind media malleolus (sacral area in bedridden pts). Monitor pulse rate for bradycardia. Assess skin for flushing. Monitor hepatic enzyme tests. Question for headache, asthenia (loss of strength, energy).

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control hypertension. • To avoid hypotensive effect, rise slowly from lying to sitting position. Wait momentarily before standing. • Avoid tasks that require alertness, motor skills until response to drug is established. • Contact physician if palpitations, shortness of breath, pronounced dizziness, nausea occur. • Swallow tablet whole; do not crush, chew. • Avoid grapefruit, grapefruit juice, alcohol. • Report exacerbation of angina.

fenofibrate

TOP 200

fen-oh-**fye**-brate
(Antara, Apo-Fenofibrate, Fenoglide, Lipofen, Lofibra, Novo-Fenofibrate, Tricor, Triglide)
Do not confuse Tricor with Fibricor or Tracleer.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Fibric acid derivative. **CLINICAL:** Antihyperlipidemic (see p. 56C).

ACTION

Enhances synthesis of lipoprotein lipase (VLDL). **Therapeutic Effect:** Increases VLDL catabolism, reduces total plasma cholesterol, LDL, VLDL, triglycerides.

PHARMACOKINETICS

Well absorbed from GI tract. Absorption increased when given with food. Protein binding: 99%. Rapidly metabolized in liver to active metabolite. Excreted primarily in urine, with lesser amount in feces. Not removed by hemodialysis. **Half-life:** 10–35 hrs.

USES

Adjunct to diet for reduction of low-density lipoprotein cholesterol (LDL-C), total cholesterol, triglycerides, apo-lipoprotein B, and to increase high-density lipoprotein cholesterol (HDL-C) in pts with primary hypercholesterolemia, mixed dyslipidemia. Adjunct to diet for treatment of elevation of serum triglyceride levels (type IV and V hyperlipidemia).

PRECAUTIONS

Contraindications: Gallbladder disease, severe renal/hepatic dysfunction (including primary biliary cirrhosis, unexplained persistent hepatic function abnormality), breast-feeding (only Fenoglide). **Cautions:** Anticoagulant therapy (e.g., warfarin), history of hepatic disease, renal impairment, substantial alcohol consumption, **statin** therapy (increased risk of myopathy, rhabdomyolysis).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Safety in pregnancy not established. Breast-feeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Potentiates effects of **anticoagulants** (e.g., **warfarin**). **Bile acid sequestrants** may impede absorption. **Cyclosporine** may increase concentration/risk of nephrotoxicity. **HMG-CoA reductase inhibitors (statins)** may increase risk of severe myopathy, rhabdomyolysis, acute renal failure. **HERBAL:** None significant. **FOOD: All foods** increase absorption. **LAB VALUES:** May increase serum creatine kinase (CK), AST, ALT. May decrease Hgb, Hct, serum uric acid, WBC count.

AVAILABILITY (Rx)

Capsules: 43 mg (Antara), 50 mg (Lipofen), 67 mg (Lofibra), 130 mg (Antara), 134 mg (Lofibra), 150 mg (Lipofen), 200 mg (Lofibra). **Tablets:** 40 mg (Fenoglide), 48 mg (Tricor), 50 mg (Triglide), 54 mg (Lofibra), 120 mg (Fenoglide), 145 mg (Tricor), 160 mg (Lofibra, Triglide).

ADMINISTRATION/HANDLING

PO

• Give Fenoglide, Lipofen, Lofibra with meals. • Antara, Tricor, and Triglide may be given without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertriglyceridemia

PO *(Antara)*: ADULTS, ELDERLY: 43–130 mg/day.

PO *(Fenoglide)*: ADULTS, ELDERLY: 40–120 mg/day with meals.

PO *(Lipofen)*: ADULTS, ELDERLY: 50–150 mg/day with meals.

PO *(Lofibra)*: ADULTS, ELDERLY: 67–200 mg/day with meals.

PO *(Tricor)*: ADULTS, ELDERLY: 48–145 mg/day.

PO *(Triglide)*: ADULTS, ELDERLY: 50–160 mg/day.

Hypercholesterolemia, Mixed Hyperlipidemia

PO *(Antara)*: ADULTS, ELDERLY: 130 mg/day.

PO *(Fenoglide)*: ADULTS, ELDERLY: 120 mg/day with meals.

PO *(Lipofen)*: ADULTS, ELDERLY: 150 mg/day with meals.

PO *(Lofibra)*: ADULTS, ELDERLY: 200 mg/day with meals.

PO *(Tricor)*: ADULTS, ELDERLY: 145 mg/day.

PO *(Triglide)*: ADULTS, ELDERLY: 160 mg/day.

Dosage in Renal Impairment

Monitor renal function/lipid profile before adjusting dose. Decrease dose or increase dosing interval for pts with renal failure.

Initial doses:	Antara: 43 mg/day	Lofibra: 67 mg/day
	Fenoglide: 40 mg/day	Tricor: 48 mg/day
	Lipofen: 50 mg/day	Triglide: 50 mg/day

SIDE EFFECTS

Frequent (8%–4%): Pain, rash, headache, asthenia (loss of strength, energy), fatigue, flu-like symptoms, dyspepsia, nausea/vomiting, rhinitis. **Occasional (3%–2%):** Diarrhea, abdominal pain, constipation, flatulence, arthralgia, decreased libido, dizziness, pruritus. **Rare (less than 2%):** Increased appetite, insomnia, polyuria, cough, blurred vision, eye floaters, earache.

ADVERSE EFFECTS/ TOXIC REACTIONS

May increase cholesterol excretion into bile, leading to cholelithiasis. Pancreatitis, hepatitis, thrombocytopenia, agranulocytosis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain diet history, esp. fat consumption. Obtain serum cholesterol, triglycerides, hepatic function tests (including ALT), blood counts during initial therapy and periodically during treatment. Treatment should be discontinued if hepatic enzyme levels persist greater than 3 times normal limit.

INTERVENTION/EVALUATION

For pts on concurrent therapy with HMG-CoA reductase inhibitors, monitor for complaints of myopathy (muscle pain, weakness). Monitor serum creatine kinase (CK). Monitor serum cholesterol, triglyceride for therapeutic response.

PATIENT/FAMILY TEACHING

• Inform physician if diarrhea, constipation, nausea becomes severe. • Report skin rash/irritation, insomnia, muscle pain, tremors, dizziness.

fenofibric acid TOP 200

fen-oh-**fye**-brick as-id
(Fibricor, Trilipix)
Do not confuse Fibricor with Tricor or Trilipix with Trileptal.

F

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fibric acid derivative. **CLINICAL:** Antihyperlipidemic (see p. 57C).

ACTION

Increases lipolysis and elimination of triglyceride-rich particles from plasma by activating lipoprotein lipase, reducing lipase activity. **Therapeutic Effect:** Produces alteration in size, composition of LDL allowing for greater affinity for catabolism, decreasing plasma triglycerides, cholesterol.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 99%. Does not undergo oxidative metabolism. Excreted primarily in urine. **Half-life:** 20 hrs.

USES

Adjunct to diet for treatment of severely elevated serum triglycerides; adjunct for reduction of LDL-C, total cholesterol, triglycerides, apoprotein B, and increased HDL-C in primary hypercholesterolemia or mixed hyperlipidemia. **Trilipix:** With statin to reduce triglycerides, elevate HDL-C in pts with mixed lipidemia and/or at risk for coronary heart disease.

PRECAUTIONS

Contraindications: Severe renal impairment, primary biliary cirrhosis, active hepatic disease, gallbladder disease, nursing mothers. **Cautions:** Anticoagulant therapy, history of hepatic disease, substantial alcohol consumption.

LIFESPAN CONSIDERATIONS:

Pregnancy/Lactation: Safety in pregnancy not established. Avoid use in nursing mothers. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require monitoring.

INTERACTIONS

DRUG: Potentiates effects of **anticoagulants** (e.g., **warfarin**). **Bile acid sequestrants (cholestyramine, colestipol)** may impede absorption; give Trilipix 1 hr before or 4–6 hrs after dosing. **Cyclosporine** may increase risk of nephrotoxicity. **HMG-CoA reductase inhibitors (statins)** may increase risk of severe myopathy, rhabdomyolysis, acute renal failure. **HERBAL:** None significant. **FOOD: All foods** increase absorption. **LAB VALUES:** May increase serum creatine kinase (CK), AST, ALT. May decrease Hgb, Hct, serum uric acid, WBC count.

AVAILABILITY (Rx)

Delayed-Release Capsules (Trilipix): 45 mg, 135 mg. **Tablets (Fibricor):** 35 mg, 105 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Do not break, crush, or halve capsule. • May be given at the same time as a statin.

INDICATIONS/ROUTE/DOSAGE

Mixed Dyslipidemia, Primary Hypercholesterolemia

PO: ADULTS, ELDERLY: (Trilipix): 135 mg once daily. **(Fibricor):** 105 mg once daily.

Hypertriglyceridemia

PO: ADULTS, ELDERLY: (Trilipix): 45–135 mg once daily. **(Fibricor):** 35–105 mg once daily.

Mixed Lipidemia (with Statin)

PO: ADULTS, ELDERLY: (Trilipix): 135 mg once daily.

Renal Impairment (Creatinine Clearance: 30–80 ml/min)

PO: ADULTS, ELDERLY: (Trilipix): 45 mg once daily. **(Fibricor):** 35 mg once daily. (Contraindicated with creatinine clearance less than 30 ml/min).

SIDE EFFECTS

Frequent (13%): Headache. **Occasional (6%–4%):** Back pain, upper respiratory

tract infection, extremity pain, nausea, dizziness, diarrhea, arthralgia, dyspepsia, nasopharyngitis. **Rare (3%–2%):** Constipation, sinusitis, myalgia, fatigue, muscle spasm.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk for myopathy, rhabdomyolysis, particularly in elderly, those with diabetes, renal failure, hypothyroidism. May increase cholesterol excretion into the bile, leading to cholelithiasis. Pancreatitis, hepatitis, thrombocytopenia, agranulocytosis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline cholesterol, triglycerides, hepatic function tests, blood counts during initial therapy and periodically during treatment.

INTERVENTION/EVALUATION

For those on concurrent therapy with HMG-CoA reductase inhibitors, monitor for complaints of myopathy (muscle pain, weakness), including serum creatine kinase levels. Monitor cholesterol, triglyceride concentrations for therapeutic response.

PATIENT/FAMILY TEACHING

• Periodic lab tests are essential part of therapy. • Follow special diet (important part of treatment). • Inform physician if diarrhea, constipation, nausea becomes severe. • Report muscle pain, back/extremity pain, dizziness.

fenoldopam

fen-**nahl**-doe-pam
(Corlopam)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Vasodilator (dopamine receptor agonist). **CLINICAL:** Antihypertensive.

ACTION

Rapid-acting vasodilator. Agonist for D_1-like dopamine receptors, produces vasodilation in coronary, renal, mesenteric, peripheral arteries. **Therapeutic Effect:** Reduces systolic, diastolic B/P, increases heart rate.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	10 min	—	1 hr

After IV administration, metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** Approximately 5 min.

USES

Short-term (48 hrs or less) management of severe hypertension when rapid, but quickly reversible, emergency reduction of B/P is clinically indicated, including malignant hypertension with deteriorating end-organ function; short-term (up to 4 hrs) B/P reduction in pediatric pts.

PRECAUTIONS

Contraindications: None known. **Cautions:** Glaucoma, intraocular hypertension, angina, tachycardia, hypotension, hypokalemia, sulfite sensitivity, obstructive coronary disease, increased intracranial pressure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May elevate BUN, serum glucose, LDH, transaminase. May decrease serum potassium.

AVAILABILITY (Rx)

Injection, Solution: 10 mg/ml.

ADMINISTRATION/HANDLING

ALERT Must give by continuous IV infusion, not as bolus injection. B/P must be monitored diligently during infusion.

IV

Reconstitution • Each 10 mg (1 ml) must be diluted with 0.9% NaCl or D_5W to provide a concentration of 40 mcg/ml.

Rate of Administration • Administer as IV infusion at initial rate of 0.1–0.3 mcg/kg/min. • Use infusion pump.

Storage • Store ampules at room temperature. • Diluted solution is stable for 24 hrs. Discard any solution not used within 24 hrs.

IV INCOMPATIBILITIES

Bumetanide (Bumex), dexamethasone (Decadron), diazepam, fosphenytoin (Cerebyx), furosemide (Lasix), ketorolac (Toradol), methylprednisolone (Solu-Medrol), phenytoin (Dilantin), prochlorperazine (Compazine).

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium gluconate, diltiazem (Cardizem), dobutamine, dopamine, epinephrine, heparin, hydromorphone (Dilaudid), lidocaine, lorazepam (Ativan), magnesium, midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine, potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Short-Term Management of Severe Hypertension

IV Infusion *(Continuous)*: ADULTS, ELDERLY: Initially, 0.03–0.1 mcg/kg/min. May increase in increments of 0.05–0.1 mcg/kg/min every 15 min until target B/P is achieved. Usual length of treatment is 1–6 hrs with tapering of dose q15–30min. Average rate: 0.25–0.5 mcg/kg/min. **Maximum rate:** 1.6 mcg/kg/min. **CHILDREN:** Initially, 0.2 mcg/kg/min. May increase in increments of 0.3–0.5 mcg/kg/min q20–30min. Dosage greater than 0.8 mcg/kg/min has resulted in tachycardia with no additional benefit. Usual length of treatment: 4 hrs.

SIDE EFFECTS

ALERT Avoid concurrent use of beta-blockers (may cause significant hypotension). **Occasional:** Headache (7%), flushing (3%), nausea (4%), hypotension (2%). **Rare (2% or less):** Anxiety, vomiting, constipation, nasal congestion, diaphoresis, back pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive hypotension occurs occasionally. Substantial tachycardia may lead to ischemic cardiac events, worsened heart failure. Allergic-type reactions, including anaphylaxis, life-threatening asthmatic exacerbation, may occur in pts with sulfite sensitivity.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine initial B/P, apical pulse. It is essential to diligently monitor B/P, EKG during infusion to avoid hypotension and too-rapid decrease of B/P. Assess medication history (esp. for beta-blockers). Obtain baseline serum electrolytes, particularly potassium, and monitor periodically thereafter during infusion. Question asthmatic pts for history of sulfite sensitivity. Check with physician for desired B/P parameters.

INTERVENTION/EVALUATION

Monitor closely for symptomatic hypotension. Monitor rate of infusion frequently. Monitor EKG for tachycardia (may lead to ischemic heart disease, MI, angina, arrhythmias, worsening heart failure). Monitor renal/hepatic function tests.

fentanyl

TOP 200 HIGH ALERT

fen-ta-nil

(Abstral, Actiq, Duragesic, Fentora, Lazanda, Novo-Fentanyl, Onsolis, Sublimaze, Subsys)

BLACK BOX ALERT Physical and psychological dependence may occur with prolonged use. Must be alert to abuse, misuse, or diversion. May cause life-threatening hypoventilation, respiratory depression, or death. Use with strong or moderate CYP3A4 inhibitors may result in potentially fatal respiratory depression. **Buccal:** Tablet and lozenge contain enough medication that may be fatal to children. **Transdermal patch:** Serious or life-threatening hypoventilation has occurred. Limit use to children 2 yrs of age and older. Exposure to direct heat source increases drug release, resulting in overdose/death.

Do not confuse fentanyl with alfentanil or sufentanil.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid, narcotic agonist **(Schedule II).** **CLINICAL:** Analgesic (see p. 141C).

ACTION

Binds to opioid receptors in CNS, reducing stimuli from sensory nerve endings, inhibits ascending pain pathways. **Therapeutic Effect:** Alters pain reception, increases pain threshold.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–2 min	3–5 min	0.5–1 hr
IM	7–15 min	20–30 min	1–2 hrs
Transdermal	6–8 hrs	24 hrs	72 hrs
Transmucosal	5–15 min	20–30 min	1–2 hrs

Well absorbed after IM or topical administration. Transmucosal form absorbed through buccal mucosa and GI tract. Protein binding: 80%–85%. Metabolized in liver. Primarily eliminated by biliary system. **Half-life:** 2–4 hrs IV; 17 hrs transdermal; 6.6 hrs transmucosal.

USES

Pain relief, preop medication; adjunct to general or regional anesthesia. **Abstral:** Treatment of breakthrough pain in cancer pts 18 yrs of age and older. **Duragesic:** Management of chronic pain *(transdermal)*. **Actiq:** Treatment of breakthrough pain in chronic cancer or AIDS-related pain. **Fentora:** Breakthrough pain in pts on chronic opioids. **Onsolis:** Breakthrough pain in pts with cancer currently receiving opioids and tolerant to opioid therapy. **Lazanda:** Management of breakthrough pain in cancer. **Subsys:** Treatment of breakthrough cancer pain.

PRECAUTIONS

Contraindications: **Transdermal:** Severe respiratory disease/depression, paralytic ileus; short term therapy; intermittent pain. **Transdermal, transmucosal, lozenges, buccal films:** Management of acute or postoperative pain, pts not opioid tolerant. **Cautions:** Bradycardia; renal, hepatic, respiratory disease; head injuries; altered LOC; biliary tract disease; acute pancreatitis; cor pulmonale; significant COPD; increased ICP; use of MAOIs within 14 days; elderly; morbid obesity.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Unknown if distributed in breast milk. May prolong labor if administered in latent phase of first stage of labor or before cervical dilation of 4–5 cm has occurred. Respiratory depression may occur in neonate if mother received opiates during labor. **Pregnancy Category C (D if used for prolonged periods or at high dosages at term). Children:** Patch: Safety and efficacy not established in those younger than 12 yrs. Neonates more susceptible to respiratory depressant effects. **Elderly:** May be more susceptible to respiratory depressant effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **CYP3A4 inducers (e.g., rifampin, modafanil)** may decrease concentration/effects. **Alcohol, CNS depressant medications** may increase CNS depression. **CYP3A4 inhibitors (e.g., erythromycin, itraconazole, ketocon-**

azole, protease inhibitors [e.g., ritonavir]) may increase effects of transmucosal fentanyl. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration/effects. **FOOD: Grapefruit** may increase potential for respiratory depression with oral, transmucosal forms. **LAB VALUES:** May increase serum amylase, lipase.

F

AVAILABILITY (Rx)

Buccal Tablet (Fentora): 100 mcg, 200 mcg, 400 mcg, 600 mcg, 800 mcg. **Buccal Soluble Film (Onsolis):** 200 mcg, 400 mcg, 600 mcg, 800 mcg, 1,200 mcg. **Injection Solution (Sublimaze):** 50 mcg/ml. **Nasal Spray (Lazanda):** 100 mcg/spray, 400 mcg/spray. **Sublingual Tablets (Abstral):** 100 mcg, 200 mcg, 300 mcg, 400 mcg, 600 mcg, 800 mcg. **Sublingual Spray (Subsys):** 100 mcg, 200 mcg, 400 mcg, 600 mcg, 800 mcg. **Transdermal Patch (Duragesic):** 12 mcg/hr, 25 mcg/hr, 50 mcg/hr, 75 mcg/hr, 100 mcg/hr. **Transmucosal Lozenges (Actiq):** 200 mcg, 400 mcg, 600 mcg, 800 mcg, 1,200 mcg, 1,600 mcg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Give by slow IV injection (over 1–2 min). • Too-rapid IV increases risk of severe adverse reactions (skeletal/thoracic muscle rigidity resulting in apnea, laryngospasm, bronchospasm, peripheral circulatory collapse, anaphylactoid effects, cardiac arrest).

Storage • Store parenteral form at room temperature. • Opiate antagonist (naloxone) should be readily available.

Transdermal

• Apply to hairless area of intact skin of upper torso. • Use flat, nonirritated site. • Firmly press evenly and hold for 30 sec, ensuring adhesion is in full contact with skin and edges are completely sealed. • Use only water to cleanse site before application (soaps, oils may irritate skin). • Rotate sites of application. • Carefully fold used patches so that system adheres to itself; discard in toilet.

Buccal Film

• Wet inside of cheek. • Place film inside mouth with pink side of unit against cheek. • Press film against cheek and hold for 5 sec. • Leave in place until dissolved (15–30 min). • Do not chew, swallow, cut film. • Liquids may be given after 5 min of application; food after film dissolves.

Buccal Tablets

• Place tablet above a rear molar between upper cheek and gum. • Dissolve over 30 min. • Swallow remaining pieces with water. • Do not split tablet.

Sublingual Spray

• Open blister pack with scissors immediately prior to use. • Spray contents underneath tongue.

Sublingual Tablets

• Place under tongue. • Dissolves rapidly. • Do not suck, chew, or swallow tablet.

Nasal

• Prime device before use by spraying into pouch. • Insert nozzle about ½ inch into nose, pointing toward bridge of nose, tilting bottle slightly. • Press down firmly until hearing a "click" and number on counting window advances by one.

Transmucosal

• Suck lozenge vigorously. • Allow to dissolve over 15 min. • Do not chew.

IV INCOMPATIBILITIES

Azithromycin (Zithromax), pantoprazole (Protonix), phenytoin (Dilantin).

IV COMPATIBILITIES

Atropine, bupivacaine (Marcaine, Sensorcaine), clonidine (Duraclon), diltiazem (Cardizem), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), droperidol (Inapsine), heparin, hydromorphone (Dilaudid), ketorolac (Toradol), lipids, lorazepam (Ativan),

metoclopramide (Reglan), midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), ondansetron (Zofran), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Note: Doses titrated to desired effect dependent upon degree of analgesia, pt status.

Acute Pain Management

IM/IV: ADULTS, ELDERLY: 50–100 mcg/dose q1–2h as needed. **CHILDREN:** 0.5–2 mcg/kg/dose q1–2h as needed.

Premedication

IV, IM: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 50–100 mcg/dose 30–60 min prior to surgery.

Adjunct to Regional Anesthesia

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 25–100 mcg/dose over 1–2 min.

Adjunct to General Anesthesia

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2–50 mcg/kg.

Usual Buccal Dose

ADULTS, ELDERLY: Initially, 100 mcg. Titrate dose, providing adequate analgesia with tolerable side effects.

Usual Buccal Soluble Film Dose

Note: All pts must initiate with 200 mcg.

ADULTS, ELDERLY: Initially, 200 mcg up to 1,200 mcg. **Maximum:** No more than 4 doses per day, separate by at least 2 hrs.

Usual Nasal Dose

Nasal: ADULTS, ELDERLY: Initially, 100 mcg. Titrate from 100 mcg to 200 mcg to 400 mcg to 800 mcg **(maximum).** Wait at least 2 hrs between doses; no more than 4 doses in 24 hrs.

Usual Sublingual Tablet Dose

ADULTS, ELDERLY: Initially, 100 mcg, then titrate to desired dose/effect. Wait at least 2 hrs between doses; no more than 4 doses in 24 hrs.

Usual Sublingual Spray Dose

ADULTS, ELDERLY: Initially, 100 mcg. May repeat in 30 min if pain not relieved. Must wait at least 4 hours before treating another episode of pain.

Usual Transdermal Dose

ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 12–25 mcg/hr. May increase after 3 days.

Usual Transmucosal Dose

ADULTS, CHILDREN: 200–400 mcg for breakthrough pain. Limit to 4 units/day.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
10–50 ml/min	75% of usual dose
Less than 10 ml/min	50% of usual dose

SIDE EFFECTS

Frequent: IV: Postop drowsiness, nausea, vomiting. **Transdermal (10%–3%):** Headache, pruritus, nausea, vomiting, diaphoresis, dyspnea, confusion, dizziness, drowsiness, diarrhea, constipation, decreased appetite. **Occasional: IV:** Postop confusion, blurred vision, chills, orthostatic hypotension, constipation, difficulty urinating. **Transdermal (3%–1%):** Chest pain, arrhythmias, erythema, pruritus, syncope, agitation, skin irritations.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose or too-rapid IV administration may produce severe respiratory depression, skeletal/thoracic muscle rigidity (may lead to apnea, laryngospasm, bronchospasm, cold/clammy skin, cyanosis, coma). Tolerance to analgesic effect may occur with repeated use. **Antidote:** Naloxone (see Appendix K for dosage).

F

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Resuscitative equipment, opiate antagonist (naloxone 0.5 mcg/kg) must be available for initial input use. Establish baseline B/P, respirations. Assess type, location, intensity, duration of pain.

INTERVENTION/EVALUATION

Assist with ambulation. Encourage post-op pt to turn, cough, deep breathe q2h. Monitor respiratory rate, B/P, heart rate, oxygen saturation. Assess for relief of pain.

PATIENT/FAMILY TEACHING

• Avoid alcohol; do not take other medications without consulting physician. • Avoid tasks that require alertness, motor skills until response to drug is established. • Teach pt proper transdermal, buccal, lozenge administration. **Transdermal:** Avoid saunas (increases drug release time). • Use as directed to avoid overdosage; potential for physical dependence with prolonged use. • Report absence of pain relief, constipation. • After long-term use, must be discontinued slowly.

ferrous fumarate

fer-us **fue**-ma-rate
(Femiron, Ferro-Sequels, Nephro-Fer, Palafer)

ferrous gluconate

fer-us **gloo**-koe-nate
(Apo-Ferrous Gluconate, Fergon)

ferrous sulfate

fer-us **sul**-fate
(Apo-Ferrous Sulfate, Fer-In-Sol, Fer-Iron, Slow-Fe)

FIXED-COMBINATION(S)

Ferro-Sequels: ferrous fumarate/docusate (stool softener): 150 mg/100 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Enzymatic mineral. **CLINICAL:** Iron preparation (see p. 109C).

ACTION

Essential component in formation of Hgb, myoglobin, enzymes. Promotes effective erythropoiesis and transport, utilization of oxygen. **Therapeutic Effect:** Prevents iron deficiency.

PHARMACOKINETICS

Absorbed in duodenum and upper jejunum. Ten percent absorbed in pts with normal iron stores; increased to 20%–30% in those with inadequate iron stores. Primarily bound to serum transferrin. Excreted in urine, sweat, sloughing of intestinal mucosa, by menses. **Half-life:** 6 hrs.

USES

Prevention, treatment of iron deficiency anemia due to inadequate diet, malabsorption, pregnancy, blood loss.

PRECAUTIONS

Contraindications: Hemochromatosis, hemolytic anemias. **Cautions:** Peptic ulcer, regional enteritis, ulcerative colitis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category A. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Antacids, calcium supplements, pancreatin, pancrelipase** may decrease absorption of ferrous compounds. May decrease absorption of **etidronate, quinolones, tetracyclines.** **HERBAL:** None significant. **FOOD:** **Cereal, coffee, dietary fiber, eggs, milk, tea** decrease absorption. **LAB VALUES:** May increase serum bilirubin, iron. May decrease serum calcium.

AVAILABILITY (OTC)

Ferrous Fumarate

Tablets (Femiron): 63 mg (20 mg elemental iron).

Tablets (Timed-Release [Ferro-Sequels]): 150 mg (50 mg elemental iron).

Ferrous Gluconate

Tablets: 240 mg (27 mg elemental iron) (Fergon), 325 mg (36 mg elemental iron).

Ferrous Sulfate

Oral Drops (Fer-In-Sol, Fer-Iron): 75 mg/0.6 ml (15 mg/0.6 ml elemental iron). **Tablets:** 325 mg (65 mg elemental iron). **Elixir:** 220 mg/5 ml (44 mg elemental iron per 5 ml).

Tablets (Timed-Release [Slow-Fe]): 160 mg (50 mg elemental iron).

ADMINISTRATION/HANDLING

PO

• Store all forms (tablets, capsules, suspension, drops) at room temperature. • Ideally, give between meals with water or juice but may give with meals if GI discomfort occurs. • Transient staining of mucous membranes, teeth occurs with liquid iron preparation. To avoid staining, place liquid on back of tongue with dropper or straw. • Do not give with milk or milk products. • Do not crush timed-release preparations.

INDICATIONS/ROUTES/DOSAGE

Iron Deficiency Anemia

Dosage is expressed in terms of milligrams of elemental iron, degree of anemia, pt weight, presence of any bleeding. Expect to use periodic hematologic determinations as guide to therapy.

PO *(Ferrous Fumarate)*: ADULTS, ELDERLY: 60–100 mg twice a day. **CHILDREN:** 3–6 mg/kg/day in 2–3 divided doses.

PO *(Ferrous Gluconate)*: ADULTS, ELDERLY: 60 mg 2–4 times a day. **CHILDREN:** 3–6 mg/kg/day in 2–3 divided doses.

PO *(Ferrous Sulfate)*: ADULTS, ELDERLY: 65 mg 2–4 times a day. **CHILDREN:** 3–6 mg/kg/day in 2–3 divided doses.

Prevention of Iron Deficiency

PO *(Ferrous Fumarate)*: ADULTS, ELDERLY: 60–100 mg/day. **CHILDREN:** 1–2 mg/kg/day.

PO *(Ferrous Gluconate)*: ADULTS, ELDERLY: 60 mg/day. **CHILDREN:** 1–2 mg/kg/day.

PO *(Ferrous Sulfate)*: ADULTS, ELDERLY: 65 mg/day. **CHILDREN:** 1–2 mg/kg/day.

SIDE EFFECTS

Occasional: Mild, transient nausea. **Rare:** Heartburn, anorexia, constipation, diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Large doses may aggravate existing GI tract disease (peptic ulcer, regional enteritis, ulcerative colitis). Severe iron poisoning occurs most often in children, manifested as vomiting, severe abdominal pain, diarrhea, dehydration, followed by hyperventilation, pallor, cyanosis, cardiovascular collapse.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess nutritional status, dietary history. To prevent mucous membrane and teeth staining with liquid preparation, use dropper or straw and allow solution to drop on back of tongue.

INTERVENTION/EVALUATION

Monitor serum iron, total iron-binding capacity, reticulocyte count, Hgb, ferritin. Monitor daily pattern of bowel activity, stool consistency. Assess for clinical improvement, record relief of iron deficiency symptoms (fatigue, irritability, pallor, paresthesia of extremities, headache).

PATIENT/FAMILY TEACHING

• Expect stool color to darken. • Oral liquid may stain teeth. • If GI discomfort occurs, take after meals or with food. • Do not take within 2 hrs of other medication or eggs, milk, tea, coffee, cereal.

fesoterodine

fess-oh-**ter**-oh-deen
(Toviaz)
Do not confuse fesoterodine with fexofenadine or tolteradine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Muscarinic receptor antagonist. **CLINICAL:** Antispasmodic.

ACTION

Exhibits antimuscarinic activity by interceding via cholinergic muscarinic receptors, thereby inhibiting urinary bladder contraction. **Therapeutic Effect:** Decreases urinary frequency, urgency.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 50%. Rapidly and extensively hydrolyzed to its active metabolite. Primarily excreted in urine. **Half-life:** 7 hours.

USES

Treatment of overactive bladder with symptoms including urinary incontinence, urgency, frequency.

PRECAUTIONS

Contraindications: Gastric retention, uncontrolled angle-closure glaucoma, urinary retention. **Cautions:** Severe renal impairment, severe hepatic impairment, clinically significant bladder outflow obstruction (risk of urinary retention), GI obstructive disorders (e.g., pyloric stenosis [risk of gastric retention], treated narrow-angle glaucoma, myasthenia gravis, concurrent therapy with potent CYP3A4 inhibitors.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Increased incidence of antimuscarinic adverse events including dry mouth, constipation, dyspepsia, increase in residual urine, dizziness, urinary tract infections higher in pts 75 yrs of age and older.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., clarithromycin, erythromycin, itraconazole, ketoconazole, miconazole) may increase concentration. **HERBAL:** None significant. **FOOD: Grapefruit** may increase potential for urinary retention, constipation. **LAB VALUES:** May increase serum ALT, GGT.

AVAILABILITY (Rx)

Tablets, Extended-Release: 4 mg, 8 mg.

ADMINISTRATION/HANDLING

PO

- Take with liquid and swallow whole.
- May be administered with or without food. • Do not break, crush, dissolve, or divide tablet.

INDICATIONS/ROUTES/DOSAGE

Overactive Bladder

PO: ADULTS, ELDERLY: Initially, 4 mg once daily. May increase to 8 mg once daily. Maximum dose for pts with creatinine clearance less than 30 ml/min or concurrent use of CYP3A4 inhibitors (e.g., erythromycin, ketoconazole) is 4 mg once daily. Not recommended for use in severe hepatic impairment.

Dosage in Renal Impairment

PO: ADULTS, ELDERLY: Maximum dose: 4 mg with creatinine clearance less than 30 ml/min.

SIDE EFFECTS

Frequent: Dry mouth (34%–18%), constipation (6%–4%), urinary tract infection (4.2%–3.2%), dry eyes (3.7%–1.4%). **Occasional (2% or less):** Nausea, dysuria, back pain, rash, insomnia, peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe anticholinergic effects including abdominal cramps, facial warmth, excessive salivation/lacrimation, diaphoresis, pallor, urinary urgency, blurred vision.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess urinary pattern (e.g., urinary frequency, urgency). Obtain baseline chemistries.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Question for visual changes. Monitor incontinence, postvoid residuals.

PATIENT/FAMILY TEACHING

• May produce constipation and urinary retention. • Blurred vision may occur, use caution until drug effects have been determined. • Heat prostration (due to decreased sweating) can occur if used in a hot environment.

fexofenadine

TOP 200

fex-**oh**-fen-ah-deen
(Allegra, Allegra ODT)
Do not confuse Allegra with Viagra, or fexofenadine with fesoterodine.

FIXED-COMBINATION(S)

Allegra-D 12 Hour: fexofenadine/pseudoephedrine (sympathomimetic): 60 mg/120 mg. **Allegra-D 24 Hour:** fexofenadine/pseudoephedrine (sympathomimetic): 180 mg/240 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Piperidine. **CLINICAL:** Antihistamine (see p. 54C).

ACTION

Prevents, antagonizes most histamine effects (urticaria, pruritus). **Therapeutic Effect:** Relieves allergic rhinitis symptoms.

PHARMACOKINETICS

	Onset	Peak	Duration
PO	60 min	—	12 hrs or greater

Rapidly absorbed after PO administration. Protein binding: 60%–70%. Does not cross blood-brain barrier. Minimally metabolized. Eliminated in feces, urine. Not removed by hemodialysis. **Half-life:** 14.4 hrs (increased in renal impairment).

USES

Relief of seasonal allergic rhinitis, chronic idiopathic urticaria.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Aluminum-** and **magnesium**-containing **antacids** may decrease absorption if given within 15 min of fexofenadine. **HERBAL:** **St. John's wort** may decrease concentration. **FOOD:** **Fruit juices** may decrease bioavailability. **LAB VALUES:** May suppress wheal, flare reactions to antigen skin testing unless drug is discontinued at least 4 days before testing.

AVAILABILITY (Rx)

Oral Suspension: 6 mg/ml. **Tablets:** 30 mg, 60 mg, 180 mg. **Tablets (Orally-Disintegrating):** 30 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Avoid giving with fruit juices (apple, grapefruit, orange).

PO (Orally-Disintegrating Tablet)

• Take on empty stomach. • Remove from blister pack; immediately place on tongue. • May take with or without liquid. • Do not split or chew.

INDICATIONS/ROUTES/DOSAGE

Allergic Rhinitis

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 60 mg twice a day or 180 mg once a day. **CHILDREN 2–11 YRS:** 30 mg twice a day.

Urticaria

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 60 mg twice a day or 180 mg once a day. **CHILDREN 2–11 YRS:** 30 mg twice a day. **CHILDREN 6 MOS–LESS THAN 2 YRS:** 15 mg twice a day.

Dosage in Renal Impairment (Creatinine Clearance Less Than 80 ml/min)

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 60 mg once daily. **CHILDREN 2–11 YRS:** 30 mg once daily. **CHILDREN 6 MOS–LESS THAN 2 YRS:** 15 mg once daily.

SIDE EFFECTS

Rare (less than 2%): Drowsiness, headache, fatigue, nausea, vomiting, abdominal distress, dysmenorrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If pt is having an allergic reaction, obtain history of recently ingested foods, drugs, environmental exposure, emotional stress. Monitor rate, depth, rhythm, type of respiration; quality, rate of pulse. Assess lung sounds for rhonchi, wheezing, rales.

INTERVENTION/EVALUATION

Assess for therapeutic response; relief from allergy: itching, red, watery eyes, rhinorrhea, sneezing.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol during antihistamine therapy. • Coffee, tea may help reduce drowsiness. • Do not take with fruit juices.

fidaxomicin

fye-**dax**-oh-**mye**-sin
(Dificid)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Macrolide. **CLINICAL:** Antibiotic.

ACTION

Binds to ribosomal sites of susceptible organisms, inhibiting RNA-dependent protein synthesis by RNA polymerase. **Therapeutic Effect:** Bactericidal against *C. difficile.*

PHARMACOKINETICS

Minimal systemic absorption following PO administration. Mainly confined to GI tract. Excreted primarily in feces (92%). **Half-life:** 9 hrs.

USES

Treatment of *Clostridium difficile*-associated diarrhea.

PRECAUTIONS

Contraindications: None known. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** None known. **FOOD:** None significant. **LAB VALUES:** May increase serum AST, ALT, bilirubin, alkaline phosphatase.

AVAILABILITY (Rx)

Tablets: 200 mg.

ADMINISTRATION/HANDLING

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

***Clostridium Difficile*–Associated Diarrhea**

PO: ADULTS: 200 mg twice daily for 10 days.

SIDE EFFECTS

Frequent (62%–33%): Nausea, vomiting, abdominal pain. **Rare (less than 2%):** Pruritus, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Less than 2% reported events most likely related to diarrhea-associated illness including volume loss, dehydration, GI bleeding, bloating, megacolon, abdominal distention/tenderness, flatulence, dyspepsia, dysphasia, intestinal obstruction, bicarbonate loss, hyperglycemia, metabolic acidosis, and increased hepatic function tests. GI tract infection may cause bleeding, decreased platelets, decreased RBC count.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Verify positive C-Diff toxin test before initiating treatment. Implement infection control measures. Baseline CBC, CMP, fecal occult blood test. Assess abdominal pain, bowel sounds, and stool characteristics (color, frequency, consistency). Assess hydration status.

INTERVENTION/EVALUATION

Monitor for volume loss, dehydration, hypotension. Encourage nutrition/fluid intake. Routinely assess bowel sounds. Screen for intestinal obstruction (increased nausea, abdominal pain, hyperactive bowel sounds) and obtain abdominal X-ray if suspected.

PATIENT/FAMILY TEACHING

- Complete drug therapy, despite symptom improvement. Early discontinuation may result in antibacterial resistance and increased risk of recurrent infection.
- Notify physician of weakness, fatigue, pale skin, dizziness, or red/dark, tarry stools relating to GI bleeding.

F

filgrastim

fill-**gra**-stim
(G-CSF, Neupogen)
Do not confuse Neupogen with Epogen, Neulasta, Neumega, or Nutramigen.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic modifier. **CLINICAL:** Granulocyte colony-stimulating factor (G-CSF).

ACTION

Stimulates production, maturation, activation of neutrophils. **Therapeutic Effect:** Increases migration, activation of neutrophils.

PHARMACOKINETICS

Readily absorbed after subcutaneous administration. Onset of action: 24 hrs (plateaus in 3–5 days). White counts return to normal in 4–7 days. Not removed by hemodialysis. **Half-life:** 3.5 hrs.

USES

Decreases infection incidence in pts with malignancies receiving chemotherapy associated with severe neutropenia, fever. Reduces neutropenia duration, sequelae in pts with nonmyeloid malignancies having myeloablative therapy followed by bone marrow transplant (BMT). Mobilization of hematopoietic progenitor cells

into peripheral blood for collection by leukapheresis. Treatment of chronic, severe neutropenia. **OFF-LABEL:** Treatment of AIDS-related neutropenia in pts receiving zidovudine, drug-induced neutropenia, treatment of anemia in myelodysplastic syndrome. Treatment of hepatitis C treatment-associated neutropenia.

PRECAUTIONS

Contraindications: Hypersensitivity to *Escherichia coli*–derived proteins. **Cautions:** Malignancy with myeloid characteristics (due to G-CSF's potential to act as growth factor), gout, psoriasis, 24 hrs before or after cytotoxic chemotherapy, concurrent use of other drugs that may result in lowered platelet count. Neutrophil count greater than 50,000/mm^3, pts with sickle cell disease.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase LDH, leukocyte alkaline phosphatase (LAP) scores, serum alkaline phosphatase, uric acid.

AVAILABILITY (Rx)

Injection Solution: 300 mcg/ml (1 ml, 1.6 ml) vial, 600 mcg/ml (0.5 ml, 0.8 ml) prefilled syringe.

ADMINISTRATION/HANDLING

◀ALERT▶ May be given by subcutaneous injection, short IV infusion (15–30 min), or continuous IV infusion.

IV

Reconstitution • Use single-dose vial; do not reenter vial. • Do not shake. • Dilute with 10–50 ml D_5W to concentration of 15 mcg/ml or greater. For concentration from 5–14 mcg/ml, add 2 ml of 5% albumin to each 50 ml D_5W to provide a final concentration of 2 mg/ml. Do not dilute to final concentration less than 5 mcg/ml.

Rate of Administration • For intermittent infusion (piggyback), infuse over 15–30 min. • For continuous infusion, give single dose over 4–24 hrs. • In all situations, flush IV line with D_5W before and after administration.

Storage • Refrigerate vials. • Stable for up to 24 hrs at room temperature (provided vial contents are clear and contain no particulate matter). Remains stable if accidentally exposed to freezing temperature.

Subcutaneous

• Aspirate syringe before injection (avoid intra-arterial administration).

Storage • Store in refrigerator, but remove before use and allow to warm to room temperature.

IV INCOMPATIBILITIES

Amphotericin (Fungizone), cefepime (Maxipime), cefotaxime (Claforan), cefoxitin (Mefoxin), ceftizoxime (Cefizox), ceftriaxone (Rocephin), cefuroxime (Zinacef), clindamycin (Cleocin), dactinomycin (Cosmegen), etoposide (VePesid), fluorouracil, furosemide (Lasix), heparin, mannitol, methylprednisolone (Solu-Medrol), mitomycin (Mutamycin), prochlorperazine (Compazine), total parenteral nutrition (TPN).

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, hydromorphone (Dilaudid), lorazepam (Ativan), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Begin therapy at least 24 hrs after last dose of chemotherapy and at least 24 hrs after bone marrow infusion. Dosing based on actual body weight.

Chemotherapy-Induced Neutropenia

IV or Subcutaneous Infusion, Subcutaneous Injection: ADULTS, ELDERLY, CHILDREN: Initially, 5 mcg/kg/day. May increase by 5 mcg/kg for each chemotherapy cycle based on duration/severity

of neutropenia; continue for up to 14 days or until absolute neutrophil count (ANC) reaches 10,000/mm^3.

Bone Marrow Transplant

IV or Subcutaneous Infusion: ADULTS, ELDERLY, CHILDREN: 5–10 mcg/kg/day. Adjust dosage daily during period of neutrophil recovery based on neutrophil response.

Mobilization of Progenitor Cells

IV or Subcutaneous Infusion: ADULTS: 10 mcg/kg/day in donors beginning at least 4 days before first leukapheresis and continuing until last leukapheresis (usually for 6–7 days).

Chronic Neutropenia, Congenital Neutropenia

Subcutaneous: ADULTS, CHILDREN: 6 mcg/kg/dose twice a day.

Idiopathic or Cyclic Neutropenia

Subcutaneous: ADULTS, CHILDREN: 5 mcg/kg/dose once a day.

SIDE EFFECTS

Frequent: Nausea/vomiting (57%), mild to severe bone pain (22%) (more frequent with high-dose IV form, less frequent with low-dose subcutaneous form), alopecia (18%), diarrhea (14%), fever (12%), fatigue (11%). **Occasional (9%–5%):** Anorexia, dyspnea, headache, cough, rash. **Rare (less than 5%):** Psoriasis, hematuria, proteinuria, osteoporosis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term administration occasionally produces chronic neutropenia, splenomegaly. Thrombocytopenia, MI, arrhythmias occur rarely. Adult respiratory distress syndrome may occur in septic pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, platelet count (differential) should be obtained before therapy initiation and twice weekly thereafter.

INTERVENTION/EVALUATION

In septic pts, be alert for adult respiratory distress syndrome. Closely monitor those with preexisting cardiac conditions. Monitor B/P (transient decrease in B/P may occur), temperature, CBC with differential, platelet count, Hct, serum uric acid, hepatic function tests.

PATIENT/FAMILY TEACHING

- Inform physician of fever, chills, severe bone pain, chest pain, palpitations.

F

finasteride

TOP 200

fin-**as**-ter-ide
(Novo-Finasteride, Propecia, Proscar)

Do not confuse finasteride with furosemide, or Proscar with ProSom, Provera, or Prozac.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Androgen hormone inhibitor. **CLINICAL:** Benign prostatic hyperplasia agent.

ACTION

Inhibits 5-alpha reductase, an intracellular enzyme that converts testosterone into dihydrotestosterone (DHT) in prostate gland, resulting in decreased serum DHT. **Therapeutic Effect:** Reduces size of prostate gland.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (reduction of DHT)	8 hrs	—	24 hrs

Rapidly absorbed from GI tract. Protein binding: 90%. Widely distributed. Metabolized in liver. **Half-life:** 6–8 hrs. Onset of clinical effect: 3–6 mos of continued therapy.

USES

Proscar: Reduces risk of acute urinary retention, need for surgery in symptom-

atic benign prostatic hyperplasia (BPH) alone or in combination with doxazosin (Carura). Most improvement noted in urinary hesitancy, feeling of incomplete bladder emptying, interruption of urinary stream, difficulty initiating flow, dysuria, impaired volume, force of urinary stream. **Propecia:** Treatment of hair loss. **OFF-LABEL:** Treatment of female hirsutism.

PRECAUTIONS

Contraindications: Pregnancy, medications; use in children. **Cautions:** Hepatic function abnormalities. Pregnant women, those attempting to conceive should not handle; pts with large residual urine volume, severe diminished urine flow.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Physical handling of tablet by those who are or may become pregnant may produce abnormalities of external genitalia of male fetus. **Pregnancy Category X. Children:** Not indicated for use in children. **Elderly:** Efficacy not established.

INTERACTIONS

DRUG: None known. **HERBAL:** **St. John's wort** may decrease concentration. Avoid concurrent use with **saw palmetto** (not adequately studied). **FOOD:** None known. **LAB VALUES:** Decreases serum prostate-specific antigen (PSA) level, even in presence of prostate cancer. Decreases dihydrotestosterone (DHT). Increases follicle-stimulating hormone (FSH), luteinizing hormone (LH), testosterone.

AVAILABILITY (Rx)

Tablets: 1 mg (Propecia), 5 mg (Proscar).

ADMINISTRATION/HANDLING

PO

• Do not break, crush film-coated tablets. • Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Benign Prostatic Hyperplasia (BPH)

PO: ADULTS, ELDERLY: (Proscar): 5 mg once a day (for minimum of 6 mos).

Hair Loss

PO: ADULTS: (Propecia): 1 mg/day.

SIDE EFFECTS

Rare (4%–2%): Gynecomastia, sexual dysfunction (impotence, decreased libido, decreased volume of ejaculate).

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction, circumoral swelling, testicular pain occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Digital rectal exam, serum prostate-specific antigen (PSA) determination should be performed in those with benign prostatic hyperplasia (BPH) before initiating therapy and periodically thereafter.

INTERVENTION/EVALUATION

Diligent monitoring of I&O, esp. in those with large residual urinary volume, severely diminished urinary flow, or obstructive uropathy.

PATIENT/FAMILY TEACHING

• Pt should be aware of potential for impotence. • May not notice improved urinary flow even if prostate gland shrinks. • Need to take medication longer than 6 mos, and it is unknown if medication decreases need for surgery. • Because of potential risk to male fetus, women who are or may become pregnant should not handle tablets or be exposed to pt's semen. • Volume of ejaculate may be decreased during treatment.

fingolimod

fin-**goe**-li-mod
(Gilenya)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunomodulator. **CLINICAL:** Multiple sclerosis agent.

ACTION

Blocks capacity of lymphocytes to move out from lymph nodes, reducing number of lymphocytes in peripheral blood. **Therapeutic Effect:** May involve reduction of lymphocyte migration into central nervous system.

PHARMACOKINETICS

Metabolized by the enzyme sphingosine kinase to active metabolite. Highly distributed in red blood cells (85%). Minimally metabolized in liver. Protein binding: 99.7%. Primarily excreted in urine. **Half-life:** 6–9 days.

USES

Treatment of pts with relapsing forms of multiple sclerosis (MS) to reduce frequency of clinical exacerbations, delay accumulation of physical disability.

PRECAUTIONS

Contraindications: None known. **Cautions:** Antiarrhythmic drugs, beta-blockers, calcium channel blockers, those with low heart rate, history of syncope, sick sinus syndrome, second-degree or higher conduction block, ischemic heart disease, congestive heart failure, pts at increased risk for developing bradycardia or heart blocks. Severe hepatic impairment. Concomitant administration of immunosuppressants, immune modulating or antineoplastic medications. History of diabetes or uveitis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Age-related severe hepatic impairment may increase risk of adverse reactions.

INTERACTIONS

DRUG: Antineoplastics, immunosuppressives, immunomodulators increase risk of immunosuppression. **Ketoconazole** increases concentration/adverse effects. May decrease effect of vaccines. **HERBAL: Echinacea** may decrease concentration. **FOOD:** None known. **LAB VALUES:** Expect decrease in neutrophil count. May increase serum alkaline phosphatase, AST, ALT, bilirubin, triglycerides.

AVAILABILITY (Rx)

Capsules: 0.5 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Multiple Sclerosis

PO: ADULTS 18 YRS AND OLDER, ELDERLY: 0.5 mg once daily.

SIDE EFFECTS

Frequent (25%–10%): Headache, diarrhea, back pain, cough. **Occasional (8%–5%):** Dyspnea, clinical depression, dizziness, hypertension, migraine, paresthesia, decreased weight. **Rare (4%–2%):** Blurred vision, alopecia, eye pain, asthenia (loss of strength, energy), eczema, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

May increase risk of infections (influenza, herpes viral infection, bronchitis, sinusitis, gastroenteritis, ear infection) in 13%–4% of pts. Pts with diabetes or history of uveitis are at increased risk for developing macular edema.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum chemistries prior to initial treatment. At initial treatment (within first 4–6 hrs after dose), medication reduces heart rate, AV conduction, followed by progressive in-

crease after first day of treatment. Obtain baseline vitals, with particular attention to pulse rate. Perform ophthalmologic evaluation prior to treatment and 3–4 mos after initiation of treatment.

INTERVENTION/EVALUATION

Monitor for bradycardia for 6 hrs after first dose, followed by progressive increase after first day of treatment. Periodically monitor CBC, serum chemistries, particularly lymphocyte count (expected to decrease approximately 80% from baseline with continued treatment). Monitor for signs of systemic or local infection.

PATIENT/FAMILY TEACHING

• Obtain regular eye examinations during and for 2 mos following treatment. • Use effective methods of contraception during and for 3 mos following treatment. • Report fever, chills, aches, weakness, cough, nausea, symptoms of infection, visual changes, yellowing of skin, eyes, dark urine.

fluconazole

TOP 200

flu-**con**-ah-zole
(Apo-Fluconazole, Diflucan, Novo-Fluconazole)
Do not confuse Diflucan with diclofenac, Diprivan, or disulfiram, or fluconazole with fluoxetine, furosemide, or itraconazole.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic azole. **CLINICAL:** Systemic antifungal (see p. 47C).

ACTION

Interferes with cytochrome P-450, an enzyme necessary for ergosterol formation. **Therapeutic Effect:** Directly damages fungal membrane, altering its function. Fungistatic.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed, including to CSF. Protein binding: 11%. Partially metabolized in liver. Excreted unchanged primarily in urine. Partially removed by hemodialysis. **Half-life:** 20–30 hrs (increased in renal impairment).

USES

Candidiasis prophylaxis in pts undergoing bone marrow transplant, receiving chemotherapy and/or radiation therapy; treatment of esophageal, oropharyngeal, disseminated, vulvovaginal, urinary tract, systemic, peritonitis, pneumonia, candidiasis; treatment and suppression of cryptococcal meningitis. **OFF-LABEL:** Cryptococcal pneumonia, candidal intertrigo.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, hypersensitivity to other triazoles (e.g., itraconazole, terconazole), imidazoles (e.g., butoconazole, ketoconazole).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: High fluconazole dosages increase **cyclosporine, sirolimus, tacrolimus** concentrations. **Isoniazid, rifampin** may increase drug metabolism. May increase concentration/effects of **oral antidiabetic medication.** May decrease metabolism of **phenytoin, warfarin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, AST, ALT.

AVAILABILITY (Rx)

Injection, Solution, Pre-Mix: 200 mg (100 ml); 400 mg (200 ml). **Powder for Oral Suspension:** 10 mg/ml, 40 mg/ml. **Tablets:** 50 mg, 100 mg, 150 mg, 200 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Do not exceed maximum flow rate of 200 mg/hr.
Storage • Store at room temperature. • Do not remove from outer wrap until ready to use. • Squeeze inner bag to check for leaks. • Do not use parenteral form if solution is cloudy, precipitate forms, seal is not intact, or it is discolored. • Do not add supplementary medication.

PO

• Give without regard to meals. • PO and IV therapy equally effective; IV therapy for pt intolerant of drug or unable to take orally. Oral suspension stable for 14 days at room temperature or refrigerated.

IV INCOMPATIBILITIES

Amphotericin B (Fungizone), amphotericin B complex (Abelcet, AmBisome, Amphotec), ampicillin (Polycillin), calcium gluconate, cefotaxime (Claforan), ceftazidime (Fortaz), ceftriaxone (Rocephin), cefuroxime (Zinacef), chloramphenicol (Chloromycetin), clindamycin (Cleocin), co-trimoxazole (Bactrim), diazepam (Valium), digoxin (Lanoxin), erythromycin (Erythrocin), furosemide (Lasix), haloperidol (Haldol), hydroxyzine (Vistaril), imipenem and cilastatin (Primaxin), total parenteral nutrition (TPN).

IV COMPATIBILITIES

Diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), heparin, lipids, lorazepam (Ativan), midazolam (Versed), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Oropharyngeal Candidiasis

PO, IV: ADULTS, ELDERLY: 200 mg once, then 100 mg/day for at least 14 days. **CHILDREN:** 6 mg/kg/day once, then 3 mg/kg/day for at least 14 days.

Esophageal Candidiasis

PO, IV: ADULTS, ELDERLY: 200 mg once, then 100 mg/day (up to 400 mg/day) for 21 days and at least 14 days following resolution of symptoms. **CHILDREN:** 6 mg/kg/day once, then 3 mg/kg/day (up to 12 mg/kg/day) for 21 days and at least 14 days following resolution of symptoms.

Urinary Candidiasis

PO, IV: ADULTS, ELDERLY: 200–400 mg/day for 1–2 wks.

Vaginal Candidiasis

PO: ADULTS: (Uncomplicated): 150 mg once. (Complicated): 150 mg q72h for 3 doses.

Candidiasis Prophylaxis

PO: ADULTS: 400 mg/day. Begin 3 days before onset of neutropenia and continue for 7 days after neutrophils greater than 10,000 cells/mm^3.

Systemic Candidiasis

PO, IV: ADULTS, ELDERLY: 400–800 mg/day for at least 28 days and at least 14 days following resolution of symptoms. **CHILDREN:** 12 mg/kg/dose once daily for 21 days.

Cryptococcal Meningitis

PO, IV: ADULTS, ELDERLY: 400 mg once, then 200 mg/day (up to 800 mg/day) for 10–12 wks after CSF becomes negative (200 mg/day for suppression of relapse in pts with AIDS). **CHILDREN:** 12 mg/kg/day once, then 6–12 mg/kg/day for a minimum of 8 wks. **Maximum:** 800 mg/day. (6 mg/kg/day for suppression of relapse). **Maximum:** 200 mg/day.

Dosage in Renal Impairment

After a loading dose of 400 mg, daily dosage is based on creatinine clearance.

Creatinine Clearance	Dosage
Greater than 50 ml/min	100%
50 ml/min or less	50%
Dialysis	50%
CCRT	400–800 mg as loading dose

Creatinine Clearance	Dosage
CVVH	then 200–800 mg/day
CVVHDF	400–800 mg as loading dose, then 400–800 mg/day

SIDE EFFECTS

Occasional (4%–1%): Hypersensitivity reaction (chills, fever, pruritus, rash), dizziness, drowsiness, headache, constipation, diarrhea, nausea, vomiting, abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Exfoliative skin disorders, serious hepatic effects, blood dyscrasias (eosinophilia, thrombocytopenia, anemia, leukopenia) have been reported rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess infected area. Establish baselines for CBC, serum potassium, hepatic function studies.

INTERVENTION/EVALUATION

Assess for hypersensitivity reaction (chills, fever). Monitor serum hepatic/renal function tests, potassium, CBC, platelet count. Report rash, itching promptly. Monitor temperature at least daily. Monitor daily pattern of bowel activity, stool consistency. Assess for dizziness; provide assistance as needed.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Notify physician of dark urine, pale stool, jaundiced skin or sclera of eyes, rash, pruritus. • Pts with oropharyngeal infections should maintain fastidious oral hygiene. • Consult physician before taking any other medication.

fludarabine

HIGH ALERT

floo-**dar**-a-bean
(Fludara)

BLACK BOX ALERT Must be administered by certified chemotherapy personnel. Severe neurologic toxicity reported. Life-threatening hemolytic anemia, autoimmune thrombocytopenic purpura, hemophilia have occurred. Risk of severe myelosuppression (anemia, thrombocytopenia, neutropenia). Concurrent use with pentostatin may produce severe/fatal pulmonary toxicity.

Do not confuse Fludara with FUDR, or fludarabine with cladribine or Flumadine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic (see p. 83C).

ACTION

Inhibits DNA synthesis by interfering with DNA polymerase alpha, ribonucleotide reductase, DNA primase. **Therapeutic Effect:** Induces cell death.

PHARMACOKINETICS

Rapidly dephosphorylated in serum, then phosphorylated intracellularly to active triphosphate. Primarily excreted in urine. **Half-life:** 7–20 hrs.

USES

Treatment of chronic lymphocytic leukemia (CLL) in those who have not responded to or have not progressed with another standard alkylating agent. **Tablets:** Treatment of CLL. **OFF-LABEL:** Treatment of non-Hodgkin's lymphoma, acute leukemias in children, Waldenström's macroglobulinemia, reduced-intensity conditioning regimens prior to allogeneic hematopoietic stem-cell transplantation.

PRECAUTIONS

Contraindications: None known. (Canada): Severe renal impairment. Concurrent use with pentostatin. **Cautions:** Renal insuffi-

ciency, preexisting hematological disorders (e.g., granulocytopenia), seizure disorder, spasticity, peripheral neuropathy, infection, fever, immunodeficiency.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Not known whether distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Pentostatin** may increase risk of pulmonary toxicity. **Bone marrow depressants** may increase risk of myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, uric acid, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Fludara): 50 mg. **Injection, Solution:** 25 mg/ml.

Tablets: 10 mg.

ADMINISTRATION/HANDLING

◄ALERT► Give by IV infusion. Do not add to other IV infusions. Avoid small veins; swollen, edematous extremities; areas overlying joints, tendons.

IV

Reconstitution • Reconstitute 50-mg vial with 2 ml Sterile Water for Injection to provide concentration of 25 mg/ml. • Further dilute with 100–125 ml 0.9% NaCl or D_5W.

Rate of Administration • Infuse over 30 min.

Storage • Store in refrigerator. • Handle with extreme care during preparation/administration. If contact with skin or mucous membranes occurs, wash thoroughly with soap and water; rinse eyes profusely with plain water. • Reconstituted vials stable for 16 days at room temperature or refrigerated. • Diluted solutions stable for 48 hrs at room temperature or refrigerated.

PO

• May give with or without food. • Swallow whole; do not chew, break, or crush tablets.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B (Fungizone), daunorubicin, hydroxyzine (Vistaril), prochlorperazine (Compazine).

IV COMPATIBILITIES

Heparin, hydromorphone (Dilaudid), lorazepam (Ativan), magnesium sulfate, morphine, multivitamins, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Chronic Lymphocytic Leukemia (CLL), Non-Hodgkin's Lymphoma

IV: ADULTS: 25 mg/m^2 daily for 5 consecutive days. Continue for up to 3 additional cycles. Begin each course of treatment every 28 days.

CLL

PO: ADULTS, ELDERLY: 40 mg/m^2 once daily for 5 days every 28 days.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
PO	
30–70 ml/min	Decrease dose by 20%
Less than 30 ml/min	PO: 50% of dose
IV	
50–79 ml/min	20 mg/m^2
30–49 ml/min	15 mg/m^2
Less than 30 ml/min	Not recommended

SIDE EFFECTS

Frequent: Fever (60%), nausea/vomiting (36%), chills (11%). **Occasional (20%–**

10%): Fatigue, generalized pain, rash, diarrhea, cough, asthenia (loss of strength, energy), stomatitis, dyspnea, peripheral edema. **Rare (7%–3%):** Anorexia, sinusitis, dysuria, myalgia, paresthesia, headache, visual disturbances.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pneumonia occurs frequently. Severe hematologic toxicity (anemia, thrombocytopenia, neutropenia), GI bleeding may occur. Tumor lysis syndrome may begin with flank pain, hematuria; may also include hypercalcemia, hyperphosphatemia, hyperuricemia, resulting in renal failure. High-dosage therapy may produce acute leukemia, blindness, coma. Neurotoxicity (progressive demyelinating encephalopathy, mental status deterioration) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline CBC, platelet count, serum creatinine, Hgb, AST, ALT, electrolytes, uric acid and monitor during treatment. Drug should be discontinued if intractable vomiting, diarrhea, stomatitis, GI bleeding occurs.

INTERVENTION/EVALUATION

Assess for fatigue, visual disturbances, peripheral edema. Assess for onset of pneumonia. Monitor for dyspnea, cough, rapid decrease in WBC count, intractable vomiting, diarrhea, GI bleeding (bright red or tarry stool). Assess oral mucosa for erythema, ulceration at inner margin of lips, sore throat, difficulty swallowing (stomatitis). Assess skin for rash. Be alert to possible tumor lysis syndrome (onset of flank pain, hematuria), signs of neurotoxicity.

PATIENT/FAMILY TEACHING

• Avoid crowds, exposure to infection. • Maintain fastidious oral hygiene. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site. • Contact physician if nausea/vomiting continues.

flumazenil

floo-**maz**-e-nil
(Anexate, Romazicon)

BLACK BOX ALERT Benzodiazepine reversal may produce seizures.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine receptor antagonist. **CLINICAL:** Antidote.

ACTION

Antagonizes effect of benzodiazepines on gamma-aminobutyric acid (GABA) receptor complex in CNS. **Therapeutic Effect:** Reverses sedative effect of benzodiazepines.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–2 min	6–10 min	Less than 1 hr

Duration, degree of benzodiazepine reversal directly related to dosage, plasma concentration. Protein binding: 50%. Metabolized by liver; excreted in urine. **Half-life:** 41–79 min.

USES

Complete or partial reversal of sedative effects of benzodiazepines when general anesthesia has been induced and/or maintained with benzodiazepines, when sedation has been produced with benzodiazepines for diagnostic and therapeutic procedures, management of benzodiazepine overdosage.

PRECAUTIONS

Contraindications: History of hypersensitivity to benzodiazepines; pts who have been administered benzodiazepines for control of a potentially life-threatening condition (increased ICP, status epilepticus); pts exhibiting signs/symptoms of tricyclic antidepressant overdose (anticholinergic signs [mydriasis, dry mucosa, hypoperistalsis], arrhythmias, motor ab-

normalities, cardiovascular collapse). **Cautions:** Head injury, hepatic impairment, alcoholism, drug dependency, history of panic disorder, use of benzodiazepines for seizure control.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown whether drug crosses placenta or is distributed in breast milk. Not recommended during labor, delivery. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Benzodiazepine-induced sedation tends to be deeper, more prolonged, requiring careful monitoring.

INTERACTIONS

DRUG: Toxic effects (e.g., seizures, arrhythmias) of other drugs taken in overdosage (esp. **tricyclic antidepressants)** may emerge with reversal of sedative effects of **benzodiazepines.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 0.1 mg/ml (5 ml, 10 ml).

ADMINISTRATION/HANDLING

◄ALERT► Compatible with D_5W, lactated Ringer's, 0.9% NaCl.

Rate of Administration • Reversal of conscious sedation or general anesthesia: Give over 15 sec. • **Reversal of benzodiazepine overdose:** Give over 30 sec. • Administer through freely running IV infusion into large vein (local injection produces pain, inflammation at injection site). Do not exceed 0.2 mg/min in children, adults (reversal general anesthesia); 0.5 mg/min in adults (reversal benzodiazepine overdose).

Storage • Store parenteral form at room temperature. • Discard after 24 hrs once medication is drawn into syringe, is mixed with any solutions, or if particulate/discoloration is noted. • Rinse spilled medication from skin with cool water.

IV INCOMPATIBILITIES

No information available for Y-site administration.

IV COMPATIBILITIES

Aminophylline, cimetidine (Tagamet), dobutamine (Dobutrex), dopamine (Intropin), famotidine (Pepcid), heparin, lidocaine, procainamide (Pronestyl), ranitidine (Zantac).

F

INDICATIONS/ROUTES/DOSAGE

Reversal of Conscious Sedation or General Anesthesia

IV: ADULTS, ELDERLY: Initially, 0.2 mg (2 ml) over 15 sec; may repeat dose in 45 sec; then at 60-sec intervals. **Maximum:** 1 mg (usual 0.6–1 mg). If resedation occurs, repeat doses may be given at 20-min intervals with 1 mg/dose and 3 mg/hr maximum dose. **CHILDREN, NEONATES:** Initially, 0.01 mg/kg (**maximum:** 0.2 mg); may repeat in 45 sec, then at 60-sec intervals at dose of 0.005–0.01 mg/kg. **Maximum:** 0.2 mg single dose. **Maximum total dose:** 1 mg or 0.05 mg/kg (whichever is less).

Benzodiazepine Overdose

IV: ADULTS, ELDERLY: Initially, 0.2 mg (2 ml) over 30 sec; if desired LOC is not achieved after 30 sec, 0.3 mg (3 ml) may be given over 30 sec. Additional doses of 0.5 mg (5 ml) may be administered over 30 sec at 60-sec intervals. **Maximum:** 1 mg/dose or 3 mg/hr. Pts with partial response at 3 mg may require titration to total dose of 5 mg. If no response at 5 mg, major cause of sedation not likely benzodiazepine.

SIDE EFFECTS

Frequent (11%–3%): Agitation, anxiety, dry mouth, dyspnea, insomnia, palpitations, tremors, headache, blurred vision, dizziness, ataxia, nausea, vomiting, pain at injection site, diaphoresis. **Occasional (2%–1%):** Fatigue, flushing, auditory disturbances, thrombophlebitis, rash. **Rare (less than 1%):** Urticaria, pruritus, hallucinations.

ADVERSE EFFECTS/ TOXIC REACTIONS

Toxic effects (seizures, arrhythmias) of other drugs taken in overdose (esp. tricyclic antidepressants) may emerge with reversal of sedative effect of benzodiazepines. May provoke panic attack in those with a history of panic disorder.

F

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

ABGs should be obtained prior to and at 30-min intervals during IV administration. Prepare to intervene in reestablishing airway, assisting ventilation (drug may not fully reverse ventilatory insufficiency induced by benzodiazepines). Note that effects of flumazenil may dissipate before effects of benzodiazepines.

INTERVENTION/EVALUATION

Properly manage airway, assist breathing, maintain circulatory access and support, perform internal decontamination by lavage and charcoal as indicated, provide adequate clinical evaluation. Monitor for reversal of benzodiazepine effect. Assess for possible resedation, respiratory depression, hypoventilation. Assess closely for return of unconsciousness (narcosis) for at least 1–2 hrs after pt is fully alert.

PATIENT/FAMILY TEACHING

- Avoid ingestion of alcohol; tasks that require alertness, motor skills; or taking nonprescription drugs until at least 24 hrs after discharge.

flunisolide

floo-**niss**-oh-lyde
(Apo-Flunisolide, Nasalide, Rhinalar)
Do not confuse flunisolide with fluocinonide.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocorticosteroid. **CLINICAL:** Antiasthmatic, anti-inflammatory (see pp. 2C, 98C).

ACTION

Controls rate of protein synthesis, depresses migration of polymorphonuclear leukocytes, reverses capillary permeability, stabilizes lysosomal membranes. **Therapeutic Effect:** Prevents, controls inflammation.

PHARMACOKINETICS

Rapidly absorbed from lungs and GI tract following inhalation. About 50% of dose is absorbed from nasal mucosa following intranasal administration. Metabolized in liver. Partially excreted in urine and feces. **Half-life:** 1–2 hrs.

USES

Relieves symptoms of seasonal, perennial rhinitis.

PRECAUTIONS

Contraindications: Hypersensitivity to any corticosteroid, untreated nasal mucosal infection. **Cautions:** Respiratory tuberculosis, untreated systemic infections, ocular herpes simplex.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Nasal Spray: 25 mcg/activation.

ADMINISTRATION/HANDLING

Intranasal

- Instruct pt to clear nasal passages as much as possible before use (topical nasal decongestants may be needed 5–15 min

before use). • Tilt head slightly forward. • Insert spray tip into nostril, pointing toward inflamed nasal turbinates, away from nasal septum. • Pump medication into one nostril while pt holds other nostril closed, concurrently inspires through nose. • Discard opened nasal solution after 3 mos.

INDICATIONS/ROUTES/DOSAGE

Usual Intranasal Dosage

◀ALERT▶ Improvement usually seen within a few days; may take up to 3 wks. Discontinue use after 3 wks if no significant improvement occurs.

Intranasal: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: Initially, 2 sprays each nostril twice a day, may increase at 4- to 7-day intervals to 2 sprays 3 times a day. **Maximum:** 8 sprays in each nostril daily. **CHILDREN 6–14 YRS:** Initially, 1 spray 3 times a day or 2 sprays twice a day. **Maximum:** 4 sprays in each nostril daily. Maintenance: 1 spray into each nostril daily.

SIDE EFFECTS

Frequent: Inhalation (25%–10%): Unpleasant taste, nausea, vomiting, sore throat, diarrhea, cold symptoms, nasal congestion. **Occasional: Inhalation (9%–3%):** Dizziness, irritability, anxiety, tremors, abdominal pain, heartburn, oropharyngeal candidiasis, edema. **Nasal:** Mild nasopharyngeal irritation/dryness, rebound congestion, bronchial asthma, rhinorrhea, altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Acute hypersensitivity reaction (urticaria, angioedema, severe bronchospasm) occurs rarely. Transfer from systemic to local steroid therapy may unmask previously suppressed bronchial asthma condition.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline assessment of asthma, rhinitis.

INTERVENTION/EVALUATION

Advise pts receiving bronchodilators by inhalation concomitantly with steroid inhalation therapy to use bronchodilator several min before corticosteroid aerosol (enhances penetration of steroid into bronchial tree). Monitor rate, depth, rhythm, type of respiration; quality/rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Monitor ABGs.

PATIENT/FAMILY TEACHING

• Notify physician if exposed to measles, chickenpox. • Do not change dose/schedule or stop taking drug; must taper off gradually under medical supervision. • Maintain fastidious oral hygiene. • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness, oral fungal infection). • Increase fluid intake (decreases lung secretion viscosity). • **Intranasal:** Clear nasal passages before use. • Contact physician if no improvement in symptoms, sneezing or nasal irritation occurs. • Improvement usually noted in several days.

fluorouracil, 5-FU HIGH ALERT

flore-oh-**yer**-a-sil
(Adrucil, Carac, Efudex, Fluoroplex)

BLACK BOX ALERT Must be administered by personnel trained in administration/handling of chemotherapeutic agents.

Do not confuse Efudex with Efidac.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic (see p. 83C).

ACTION

Blocks formation of thymidylic acid. Cell cycle–specific for S phase of cell division. **Therapeutic Effect:** Inhibits DNA, RNA synthesis. **Topical:** Destroys rapidly proliferating cells.

F

PHARMACOKINETICS

Widely distributed. Crosses blood-brain barrier. Metabolized in liver. Primarily excreted by lungs as carbon dioxide. Removed by hemodialysis. **Half-life:** 16 min.

USES

Parenteral: Treatment of carcinoma of colon, rectum, breast, stomach, pancreas. Used in combination with levamisole after surgical resection in pts with Dukes stage C colon cancer. **Topical:** Treatment of multiple actinic or solar keratoses, superficial basal cell carcinomas. **OFF-LABEL: Parenteral:** Treatment of bladder, cervical, endometrial, head/neck, anal, esophageal, renal cell, unknown primary cancer.

PRECAUTIONS

Contraindications: Myelosuppression, poor nutritional status, potentially serious infections. **Cautions:** History of high-dose pelvic irradiation, hepatic/renal impairment, palmar-plantar erythrodysesthia syndrome (hand and foot syndrome), previous use of alkylating agents.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Topical: Pregnancy Category X. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bone marrow depressants may increase risk of myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: Echinacea** may decrease effect. Avoid use of **black cohosh, dong quai** in pts with estrogen-dependent tumors. **FOOD:** None known. **LAB VALUES:** May decrease serum albumin. **Topical:** May cause eosinophilia, leukocytosis, thrombocytopenia, toxic granulation.

AVAILABILITY (Rx)

Cream, Topical (Carac): 0.5%: **(Efudex):** 5%: **(Fluoroplex):** 1%. **Injection Solution (Adrucil):** 50 mg/ml. **Solution, Topical (Efudex):** 2%, 5%.

ADMINISTRATION/HANDLING

◀ALERT▶ Give by IV injection or IV infusion. Do not add to other IV infusions. Avoid small veins, swollen/edematous extremities, areas overlying joints, tendons. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Reconstitution • IV push does not need to be diluted or reconstituted. • Inject through Y-tube or 3-way stopcock of free-flowing solution. • For IV infusion, further dilute with 50–1,000 ml D_5W or 0.9% NaCl.

Rate of Administration • Give IV push slowly over 1–2 min. • IV infusion is administered over 30 min–24 hrs. • Extravasation produces immediate pain, severe local tissue damage. • Follow protocol.

Storage • Solution appears colorless to faint yellow. Slight discoloration does not adversely affect potency or safety. • If precipitate forms, redissolve by heating, shaking vigorously; allow to cool to body temperature. • Diluted solutions stable for 72 hrs at room temperature.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), droperidol (Inapsine), filgrastim (Neupogen), ondansetron (Zofran), vinorelbine (Navelbine).

IV COMPATIBILITIES

Granisetron (Kytril), heparin, hydromorphone (Dilaudid), leucovorin, morphine, potassium chloride, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Refer to individual protocols.

Usual Therapy

IV Bolus: ADULTS, ELDERLY: 500 mg/m² once weekly.

IV Infusion: ADULTS, ELDERLY: 1,000 mg/m²/day for 4–5 days every 3–4 wks or 2,600 mg/m² every wk or 1,600 mg/m²/day for 2 days q2wks or 400 mg/m² bolus, then 1,200 mg/m² for 2 days q2wks.

Multiple Actinic or Solar Keratoses

Topical *(Carac)*: ADULTS, ELDERLY: Apply once a day for up to 4 wks.

Topical *(Efudex)*: ADULTS, ELDERLY: Apply twice a day for 2–6 wks.

Basal Cell Carcinoma

Topical *(Efudex)*: ADULTS, ELDERLY: Apply twice a day for 3–6 wks up to 10–12 wks.

SIDE EFFECTS

Parenteral: Frequent (greater than 10%): Alopecia, dermatitis, anorexia, diarrhea, esophagitis, dyspepsia, stomatitis. **Occasional (10%–1%):** Cardiotoxicity (angina, EKG changes), skin dryness, epithelial fissuring, nausea, vomiting, excessive lacrimation, blurred vision. **Rare (less than 1%):** Headache, photosensitivity, somnolence, allergic reaction, dyspnea, hypotension, MI, pulmonary edema. **Topical: Occasional:** Erythema, skin ulceration, pruritus, hyperpigmentation, dermatitis, insomnia, stomatitis, irritability, photosensitivity, excessive lacrimation, blurred vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Earliest sign of toxicity (4–8 days after beginning therapy) is stomatitis (dry mouth, burning sensation, mucosal erythema, ulceration at inner margin of lips). Most common dermatologic toxicity is pruritic rash (generally on extremities, less frequently on trunk). Leukopenia generally occurs within 9–14 days after drug administration but may occur as late as 25th day. Thrombocytopenia occasionally occurs within 7–17 days after administration. Pancytopenia, agranulocytosis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC with differential, platelet count, serum renal/hepatic function tests and monitor during therapy.

INTERVENTION/EVALUATION

Monitor for rapidly falling WBC count, intractable diarrhea, GI bleeding (bright red or tarry stool). Assess oral mucosa for stomatitis. Drug should be discontinued if intractable diarrhea, stomatitis, GI bleeding occurs. Assess skin for rash.

PATIENT/FAMILY TEACHING

• Maintain fastidious oral hygiene. • Inform physician of signs/symptoms of infection, unusual bruising/bleeding, visual changes, nausea, vomiting, diarrhea, chest pain, palpitations. • Avoid sunlight, artificial light sources; wear protective clothing, sunglasses, sunscreen. • **Topical:** Apply only to affected area. • Do not use occlusive coverings. • Be careful near eyes, nose, mouth. • Wash hands thoroughly after application. • Treated areas may be unsightly for several weeks after therapy.

fluoxetine

TOP 200

floo-**ox**-e-teen

(Apo-Fluoxetine, Novo-Fluoxetine, Prozac, Prozac Weekly, Sarafem)

BLACK BOX ALERT Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs of age with major depressive disorder, other psychiatric disorders.

Do not confuse fluoxetine with duloxetine, famotidine, fluconazole, fluvastatin, fluvoxamine, fosinopril, furosemide, or paroxetine, or Prozac with Paxil, Prilosec, Prograf, Proscar, or ProSom, or Sarafem with Serophene.

FIXED-COMBINATION(S)

Symbyax: fluoxetine/olanzapine (an antipsychotic): 25 mg/6 mg, 25 mg/12 mg, 50 mg/6 mg, 50 mg/12 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective serotonin reuptake inhibitor (SSRI). **CLINICAL:** Antidepressant, antiobsessional agent, antibulimic (see p. 39C).

ACTION

Selectively inhibits serotonin uptake in CNS, enhancing serotonergic function. **Therapeutic Effect:** Relieves depression; reduces obsessive-compulsive, bulimic behavior.

PHARMACOKINETICS

Well absorbed from GI tract. Crosses blood-brain barrier. Protein binding: 94%. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–3 days; metabolite, 7–9 days.

USES

Treatment of clinical depression, obsessive-compulsive disorder (OCD), bulimia nervosa, premenstrual dysphoric disorder (PMDD), panic disorder. Treatment of resistant or bipolar 1 depression. **OFF-LABEL:** Treatment of fibromyalgia, post-traumatic stress disorder (PTSD), Raynaud's phenomena, social anxiety disorder, selective mutism.

PRECAUTIONS

Contraindications: Use within 14 days of MAOIs or thioridazine. **Cautions:** Seizure disorder, cardiac dysfunction (e.g., history of MI), diabetes, third-trimester pregnancy, impaired platelet aggregation, use of aspirin or NSAIDs, renal/hepatic impairment, those at high risk for suicide, in pts where weight-loss is undesirable, elderly. Pts at risk of acute narrow-angle glaucoma or with increased intraocular pressure.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown whether drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** May be more sensitive to behavioral side effects (e.g., insomnia, restlessness). **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Aspirin, NSAIDs, warfarin, may increase risk of bleeding. **Alcohol, other CNS depressants** may increase CNS depression. **MAOIs** may produce serotonin syndrome and neuroleptic malignant syndrome. May increase concentration/toxicity of **phenytoin, tricyclic antidepressants. HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may increase effect, risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Capsules: 10 mg (Prozac, Sarafem), 20 mg (Prozac, Sarafem), 40 mg (Prozac), 60 mg. **Oral Solution (Prozac):** 20 mg/5 ml. **Tablets (Sarafem):** 10 mg, 15 mg, 20 mg.

Capsules (Delayed-Release [Prozac Weekly]): 90 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food, but give with food, milk if GI distress occurs. • **Bipolar disorder:** Give once daily in evening. • **Depression OCD:** Give once daily in morning or twice daily (morning and noon). • **Bulimia:** Give once daily in morning.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Use lower or less frequent doses in pts with renal/hepatic impairment, those with concurrent disease or multiple medications, the elderly.

Depression

PO: ADULTS: Initially, 20 mg each morning. If therapeutic improvement does not occur after 2 wks, gradually increase to maximum of 80 mg/day in 2 equally divided doses in morning and at noon. **ELDERLY:** Initially, 10 mg/day. May increase by 10–20 mg q2wks. **Prozac Weekly:** 90 mg/wk, begin 7 days after last dose of 20 mg. **CHILDREN 8–18 YRS:** Initially, 5–10 mg/day. Titrate upward as needed. Usual dosage: 20 mg/day.

Panic Disorder

PO: ADULTS, ELDERLY: Initially, 10 mg/day. May increase to 20 mg/day after 1 wk. **Maximum:** 60 mg/day.

Bulimia Nervosa

PO: ADULTS: 60–80 mg each morning.

Obsessive-Compulsive Disorder (OCD)

PO: ADULTS, ELDERLY: 40–80 mg/day. **CHILDREN 7–18 YRS:** Initially, 10 mg/day. May increase to 20 mg/day after 2 wks. Range: 10–60 mg/day.

Depression Associated with Bipolar Disorder

PO: ADULTS, ELDERLY: Initially, 20 mg/day. May increase after several wks. Range: 20–50 mg/day.

Premenstrual Dysphoric Disorder (PMDD) (Sarafem)

PO: ADULTS: 20 mg/day **or** 20 mg/day beginning 14 days prior to menstruation and continuing through first full day of menses (repeated with each cycle).

SIDE EFFECTS

Frequent (greater than 10%): Headache, asthenia (loss of strength, energy), insomnia, anxiety, drowsiness, nausea, diarrhea, decreased appetite. **Occasional (9%–2%):** Dizziness, tremor, fatigue, vomiting, constipation, dry mouth, abdominal pain, nasal congestion, diaphoresis, rash. **Rare (less than 2%):** Flushed skin, light-headedness, impaired concentration.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce seizures, nausea, vomiting, excessive agitation, restlessness.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess appearance, behavior, mood, suicidal tendencies. For pts on long-term therapy, baseline hepatic/renal function tests, blood counts; testing should be performed periodically thereafter.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor mental status, anxiety, social functioning, appetite, nutritional intake. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Monitor serum hepatic function tests, glucose, sodium, weight.

PATIENT/FAMILY TEACHING

• Maximum therapeutic response may require 4 or more wks of therapy. • Do not abruptly discontinue medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • To avoid insomnia, take last dose of drug before 4 PM.

fluphenazine

floo-**fen**-a-zeen
(Apo-Fluphenazine, Modecate)

BLACK BOX ALERT Increased mortality in elderly with dementia-related psychosis.

Do not confuse fluphenazine with fluvoxamine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenothiazine. **CLINICAL:** Antipsychotic (see p. 65C).

ACTION

Antagonizes dopamine neurotransmission at synapses by blocking postsynaptic dopaminergic receptors in brain. **Therapeutic Effect:** Decreases psychotic behavior. Produces weak anticholinergic, sedative, antiemetic effects; strong extrapyramidal effects.

PHARMACOKINETICS

Erratic absorption. Protein binding: greater than 90%. Metabolized in liver. Excreted in urine. **Half-life:** 33 hrs (Decanoate: 163–232 hrs).

USES

Management of psychotic disturbances (schizophrenia, delusions, hallucinations). **OFF-LABEL:** Agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: Myelosuppression, coma, severe CNS depression, receiving large doses of hypnotics, hepatic disease, subcortical brain damage. **Cautions:** Elderly, seizures, Parkinson's disease, severe cardiac disease, renal impairment, pts at risk for pneumonia, those at risk for hypotension, decreased GI motility, urinary retention, BPH, narrow-angle glaucoma, myasthenia gravis, visual problems.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children:** Those with acute illnesses (e.g., chickenpox, measles, gastroenteritis, CNS infection) are at risk for developing neuromuscular, extrapyramidal symptoms (EPS), particularly dystonias. **Elderly:** Susceptible to anticholinergic effects.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase hypotensive, CNS, respiratory depressant effects. EPS may increase with **medications producing EPS. Antihypertensive medications, hypotensive agents** may worsen hypotension. **Lithium** may decrease absorption, produce adverse neurologic effects. **MAOIs, tricyclic antidepressants** may increase anticholinergic, sedative effects. **Medications prolonging QT interval (e.g., erythromycin)** may have additive effect. **HERBAL: Dong quai, St. John's wort** may increase photosensitization. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May produce false-positive pregnancy, phenylketonuria test results. May cause EKG changes, including Q- and T-wave disturbances.

AVAILABILITY (Rx)

Elixir: 2.5 mg/5 ml. **Injection (Decanoate):** 25 mg/ml. **Injection Solution: Hydrochloride** 2.5 mg/ml. **Oral Concentrate:** 5 mg/ml. **Tablets:** 1 mg, 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

- Avoid skin contact with fluphenazine solution (may cause contact dermatitis).
- Dilute oral liquid only with water, milk, juice. Do not dilute with caffeine-containing beverages.

INDICATIONS/ROUTES/DOSAGE

Psychosis

PO: ADULTS: 2.5–10 mg/day in divided doses q6–8h. Maintenance: 1–5 mg/day. **Maximum:** 40 mg/day. **ELDERLY:** Initially, 1–2.5 mg/day. Titrate gradually.

IM *(Hydrochloride)*: ADULTS, ELDERLY: 1.25 mg as single dose. May need 2.5–10 mg/day in divided doses q6–8h. ***(Decanoate)*:** Initially, 12.5–25 mg q2–4wks. May increase in 12.5-mg increments. **Maximum dose:** 100 mg.

SIDE EFFECTS

Frequent: Hypotension, dizziness, syncope (occur frequently after first injection, occasionally after subsequent injections, rarely with oral doses). **Occasional:** Drowsiness (during early therapy), dry mouth, blurred vision, lethargy, constipation or diarrhea, nasal congestion, pe-

ripheral edema, urinary retention. **Rare:** Ocular changes, altered skin pigmentation (with prolonged use of high doses).

ADVERSE EFFECTS/ TOXIC REACTIONS

EPS appear dose related (particularly high dosage), divided into 3 categories: akathisia (inability to sit still, tapping of feet, urge to move around), parkinsonian symptoms (hypersalivation, mask-like facial expression, shuffling gait, tremors), acute dystonias (torticollis [neck muscle spasm], opisthotonos [rigidity of back muscles], oculogyric crisis [rolling back of eyes]). Dystonic reaction may produce diaphoresis, pallor. Tardive dyskinesia (tongue protrusion, puffing of cheeks, chewing/puckering of the mouth) occurs rarely but may be irreversible. Abrupt withdrawal after long-term therapy may precipitate dizziness, gastritis, nausea, vomiting, tremors. Blood dyscrasias, particularly agranulocytosis, mild leukopenia, may occur. May lower seizure threshold.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P for hypotension. Monitor CBC for blood dyscrasias. Monitor for fine tongue movement (may be early sign of tardive dyskinesia). Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

• Full therapeutic effect may take up to 6 wks. • Avoid skin contact with solution (may cause contact dermatitis). • Urine may darken. • Do not abruptly withdraw from long-term drug therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Drowsiness generally subsides during continued therapy.

flurazepam

flure-**az**-e-pam
(Apo-Flurazepam ✦, Dalmane)
Do not confuse Dalmane with Dialume, or flurazepam with temazepam.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine (**Schedule IV**). **CLINICAL:** Sedative-hypnotic (see p. 149C).

ACTION

Enhances action of inhibitory neurotransmitter gamma-aminobutyric acid (GABA). **Therapeutic Effect:** Produces hypnotic effect due to CNS depression.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–20 min	3–6 hrs	7–8 hrs

Well absorbed from GI tract. Protein binding: 97%. Crosses blood-brain barrier. Widely distributed. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2.3 hrs; metabolite, 40–114 hrs.

USES

Short-term treatment of insomnia (4 wks or less). Reduces sleep-induction time, number of nocturnal awakenings; increases length of sleep.

PRECAUTIONS

Contraindications: Respiratory depression, preexisting CNS depression, hypersensitivity to other benzodiazepines, pregnancy, breast-feeding, narrow-angle

glaucoma. **Cautions:** Renal/hepatic impairment, depression, chronic pulmonary insufficiency, low albumin, history of drug dependence.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; may be distributed in breast milk. Chronic ingestion during pregnancy may produce withdrawal symptoms, CNS depression in neonates. **Pregnancy Category X. Children:** Safety and efficacy not established in those younger than 15 yrs. **Elderly:** Use small initial doses with gradual dose increases to avoid ataxia, excessive sedation.

INTERACTIONS

DRUG: **Alcohol, CNS depressants** may increase CNS depression. **CYP3A4 inhibitors** (e.g., **azole antifungals**) may increase concentration, risk of toxicity. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 15 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Capsules may be emptied and mixed with food.

INDICATIONS/ROUTES/DOSAGE

Insomnia

PO: ELDERLY, DEBILITATED, HEPATIC DISEASE, LOW SERUM ALBUMIN: 15 mg at bedtime. **ADULTS:** 15–30 mg at bedtime. **CHILDREN OLDER THAN 15 YRS:** 15 mg at bedtime.

SIDE EFFECTS

Frequent: Drowsiness, dizziness, ataxia, sedation. Morning drowsiness occurs initially. **Occasional:** GI disturbances, anxiety, blurred vision, dry mouth, headache, confusion, skin rash, irritability, slurred speech. **Rare:** Paradoxical CNS excitement, restlessness (esp. in elderly, debilitated).

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt or too-rapid withdrawal after long-term use may result in pronounced restlessness/irritability, insomnia, hand tremors, abdominal/muscle cramps, vomiting, diaphoresis, seizures. Overdose results in drowsiness, confusion, diminished reflexes, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations immediately before administration. Provide safe environment conducive to sleep (back rub, quiet environment, low lighting, raise bed rails).

INTERVENTION/EVALUATION

Assess for paradoxical reaction, particularly during early therapy. Evaluate for therapeutic response (decrease in number of nocturnal awakenings, increase in sleep duration).

PATIENT/FAMILY TEACHING

• Smoking reduces drug effectiveness. • Do not abruptly withdraw medication after long-term use. • May have disturbed sleep pattern 1–2 nights after discontinuing. • Notify physician if pregnant or planning to become pregnant (Pregnancy Category X). • Avoid alcohol, other CNS depressants. • May be habit forming.

flurbiprofen

flure-bi-proe-fen
(Apo-Flurbiprofen, Ansaid, Froben, Froben SR, Ocufen)

BLACK BOX ALERT Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines.

Do not confuse Ansaid with Asacol or Axid, flurbiprofen with

fenoprofen, or Ocufen with Ocuflox.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenylalkanoic acid. **CLINICAL:** NSAID, antidysmenorrheal (see p. 128C).

ACTION

Produces analgesic, anti-inflammatory effect by inhibiting prostaglandin synthesis. Relaxes iris sphincter. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain. Prevents, decreases miosis during cataract surgery.

PHARMACOKINETICS

Well absorbed from GI tract; ophthalmic solution penetrates cornea after administration (may be systemically absorbed). Protein binding: 99%. Widely distributed. Metabolized in liver. Primarily excreted in urine. **Half-life:** 5.7 hrs.

USES

PO: Symptomatic treatment of acute and/or chronic rheumatoid arthritis, osteoarthritis, dysmenorrhea, pain. **Ophthalmic:** Inhibits intraoperative miosis. **OFF-LABEL: PO:** Management of postoperative pain.

PRECAUTIONS

Contraindications: Perioperative pain in the setting of CABG surgery; history of hypersensitivity to aspirin, NSAIDs. **Cautions:** Renal/hepatic impairment; active peptic ulcer; chronic inflammation of GI tract; GI bleeding, ulceration history of GI tract disease; predisposition to fluid retention; cardiac disease; pts receiving anticoagulants.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. Avoid use during last trimester (may adversely affect fetal cardiovascular system, i.e., premature closure of ductus arteriosus). **Pregnancy Category C (D if used in third trimester or near delivery). Ophthalmic: Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** GI bleeding/ulceration more likely to cause serious adverse effects. Age-related renal impairment may increase risk of hepatic/renal toxicity; decreased dosage recommended.

INTERACTIONS

DRUG: May decrease effects of **ACE inhibitors. Aspirin, other salicylates** may increase risk of GI side effects, bleeding. May increase risk of bleeding, effects of **heparin, oral anticoagulants, thrombolytics.** May increase concentration, risk of toxicity of **cyclosporine, lithium.** May increase risk of **methotrexate** toxicity. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, horse chestnut, red clover, SAMe** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May increase bleeding time, serum alkaline phosphatase, LDH, AST, ALT. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Ophthalmic Solution (Ocufen): 0.03%.

Tablets (Ansaid): 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Do not crush, break enteric-coated tablets. • May give with food, milk, antacids if GI distress occurs.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until pocket is formed between eye and lower lid. • Place prescribed number of drops into pocket. Instruct pt to close eye gently for 1–2 min (so medication will not be squeezed out of the sac) and to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption. • Remove excess solution with tissue.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA), Osteoarthritis

PO: ADULTS, ELDERLY: 200–300 mg/day in 2–4 divided doses. **Maximum:** 100 mg/dose or 300 mg/day.

Dysmenorrhea, Pain

PO: ADULTS: 50 mg 4 times a day.

Usual Ophthalmic Dosage

ADULTS, ELDERLY, CHILDREN: Apply 1 drop q30min starting 2 hrs before surgery for total of 4 doses.

SIDE EFFECTS

Occasional: PO (9%–3%): Headache, abdominal pain, diarrhea, indigestion, nausea, fluid retention. **Ophthalmic:** Burning/stinging on instillation, keratitis, elevated intraocular pressure. **Rare (less than 3%): PO:** Blurred vision, flushed skin, dizziness, drowsiness, anxiety, insomnia, unusual fatigue, constipation, decreased appetite, vomiting, confusion.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in acute renal failure. Rare reactions with long-term use include peptic ulcer, GI bleeding, gastritis, severe hepatic reaction (jaundice), nephrotoxicity (hematuria, dysuria, proteinuria), severe hypersensitivity reaction (angioedema, bronchospasm), cardiac arrhythmias.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Anti-inflammatory: Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Monitor for headache, dyspepsia, dizziness. Monitor daily pattern of bowel activity, stool consistency. **Systemic use:** Monitor CBC, platelet count, BUN, serum creatinine, hepatic function tests. Monitor stool for occult blood loss. **Ocular:** Obtain periodic eye exams. **Anti-inflammatory:** Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Swallow tablet whole; do not crush, chew. • Avoid aspirin, alcohol (increases risk of GI bleeding). • If GI upset occurs, take with food, milk. • Report GI distress, visual disturbances, rash, edema, headache. • **Ophthalmic:** Eye burning may occur with instillation.

flutamide

HIGH ALERT

floo-tah-mide

(Apo-Flutamide, Euflex, Eulexin, Novo-Flutamide)

BLACK BOX ALERT Hospitalization and, rarely, death due to flutamide-associated hepatic failure have been reported.

Do not confuse Eulexin with Edecrin, or flutamide with Flumadine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiandrogen, hormone. **CLINICAL:** Antineoplastic (see p. 830).

ACTION

Inhibits androgen uptake and/or binding of androgen in target tissue. Used in conjunction with leuprolide to inhibit stimulant effects of flutamide on serum testosterone. **Therapeutic Effect:** Suppresses testicular androgen production, decreases growth of prostate carcinoma.

PHARMACOKINETICS

Completely absorbed from GI tract. Protein binding: 94%–96%. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 6 hrs (increased in elderly).

USES

Treatment of metastatic carcinoma of prostate (in combination with luteinizing hormone-releasing hormone [LHRH] analogues, e.g., leuprolide). **OFF-LABEL:** Female hirsutism.

PRECAUTIONS

Contraindications: Severe hepatic impairment, pregnancy. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not used in this pt population. **Pregnancy Category D. Children:** Not used in children. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effects of **warfarin.** **HERBAL:** **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, estradiol, testosterone, bilirubin, creatinine, alkaline phosphatase, BUN, AST, ALT. May decrease Hgb, WBC.

AVAILABILITY (Rx)

Capsules: 125 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • May open and mix with soft food (e.g., applesauce, pudding).

INDICATIONS/ROUTES/DOSAGE

Prostatic Carcinoma

PO: ADULTS, ELDERLY: 250 mg q8h.

SIDE EFFECTS

Frequent: Hot flashes (50%); decreased libido, diarrhea (24%); generalized pain (23%); asthenia (loss of strength, energy) (17%); constipation (12%); nausea, nocturia (11%). **Occasional (8%–6%):** Dizziness, paresthesia, insomnia, impotence, peripheral edema, gynecomastia. **Rare (5%–4%):** Rash, diaphoresis, hypertension, hematuria, vomiting, urinary incontinence, headache, flu-like syndrome, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity (including hepatic encephalopathy), hemolytic anemia may occur.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Obtain baseline hepatic function tests and periodically during long-term therapy.

PATIENT/FAMILY TEACHING

• Do not stop taking medication (both drugs must be continued). • Urine color may change to amber or yellow-green. • Avoid prolonged exposure to sun, tanning beds. Wear clothing to protect from ultraviolet exposure until tolerance is determined.

fluticasone

TOP 200

floo-**tik**-ah-sone
(Apo-Fluticasone, Cutivate, Flonase, Flovent Diskus, Flovent HFA, Veramyst)
Do not confuse Cutivate with Ultravate, or Flonase with Flovent.

FIXED-COMBINATION(S)

Advair, Advair Diskus, Advair HFA: fluticasone/salmeterol (bronchodilator): 100 mcg/50 mcg, 250 mcg/50 mcg, 500 mcg/50 mcg. **Dymista:** Fluticasone/azelastine (an antihistamine): 50 mcg/137 mcg per spray.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Corticosteroid. **CLINICAL:** Anti-inflammatory, antipruritic (see pp. 3C, 75C, 76C, 98C, 100C).

ACTION

Controls rate of protein synthesis, depresses migration of polymorphonuclear

leukocytes, reverses capillary permeability, stabilizes lysosomal membranes. **Therapeutic Effect:** Prevents, controls inflammation.

PHARMACOKINETICS

Inhalation/intranasal: Protein binding: 91%. Undergoes extensive first-pass metabolism in liver. Excreted in urine. **Half-life:** 3–7.8 hrs. **Topical:** Amount absorbed depends on affected area and skin condition (absorption increased with fever, hydration, inflamed or denuded skin).

USES

Nasal: Relief of seasonal/perennial allergic rhinitis. **Topical:** Relief of inflammation/pruritus associated with steroid-responsive disorders (e.g., contact dermatitis, eczema), atopic dermatitis. **Inhalation:** Maintenance treatment of bronchial asthma. Assists in reducing, discontinuing oral corticosteroid therapy.

PRECAUTIONS

Contraindications: **Inhalation:** Primary treatment of status asthmaticus, acute excacerbation of asthma, other acute asthmatic conditions. **Cautions:** Untreated systemic ocular herpes simplex viral infection; untreated fungal, bacterial infection; active or quiescent tuberculosis. Thyroid disease, cardiovascular disease, diabetes, glaucoma, hepatic/renal impairment, cataracts, myasthenia gravis, seizures, GI disease, risk for osteoporosis, untreated localized infection of nasal mucosa.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 4 yrs. Children 4 yrs and older may experience growth suppression with prolonged or high doses. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (ritonavir, indinavir, nelfinavir, clarithromycin, itraconazole, ketoconazole) may increase concentration. **Ritonavir** may reduce serum cortisol concentration. **HERBAL: Echinacea, St. John's wort** may decrease concentration/effectiveness. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Aerosol for Oral Inhalation (Flovent HFA): 44 mcg/inhalation, 110 mcg/inhalation, 220 mcg/inhalation. **Cream (Cutivate):** 0.05%. **Ointment (Cutivate):** 0.005%. **Powder for Oral Inhalation (Flovent Diskus):** 50 mcg, 100 mcg, 250 mcg. **Suspension Intranasal Spray: (Flonase):** 50 mcg/inhalation. **(Veramyst):** 27.5 mcg/spray.

ADMINISTRATION/HANDLING

Inhalation

• Shake container well. Instruct pt to exhale completely. Place mouthpiece fully into mouth, inhale, hold breath as long as possible before exhaling. • Allow at least 1 min between inhalations. • Rinsing mouth after each use decreases dry mouth, hoarseness.

Intranasal

• Instruct pt to clear nasal passages as much as possible before use (topical nasal decongestants may be needed 5–15 min before use). • Tilt head slightly forward. • Insert spray tip into 1 nostril, pointing toward inflamed nasal turbinates, away from nasal septum. • Pump medication into 1 nostril while pt holds other nostril closed, concurrently inspires through nose.

INDICATIONS/ROUTES/DOSAGE

Allergic Rhinitis

Intranasal: *(Flonase)*: ADULTS, ELDERLY: Initially, 200 mcg (2 sprays in each nostril once daily or 1 spray in each nostril q12h). Maintenance: 1 spray in each nostril once daily. May increase to 100 mcg (2 sprays) in each nostril. **Maximum:** 200

mcg/day. **CHILDREN 4 YRS AND OLDER:** Initially, 100 mcg (1 spray in each nostril once daily). **Maximum:** 200 mcg/day (2 sprays each nostril).
***(Veramyst)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER:** 110 mcg (2 sprays in each nostril) once daily. Maintenance: 55 mcg (1 spray in each nostril) once daily. **CHILDREN 2–11 YRS:** 55 mcg (1 spray in each nostril) once daily. May increase to 110 mcg (2 sprays each nostril) once daily.

Usual Topical Dosage

Topical: ADULTS, ELDERLY, CHILDREN 3 MOS AND OLDER: Apply sparingly to affected area once or twice a day.

Maintenance Treatment for Asthma (Previously Treated with Bronchodilators)

Inhalation Powder *(Flovent Diskus)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 100 mcg q12h. **Maximum:** 500 mcg/twice a day.
Inhalation *(Oral)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 88 mcg twice a day. **Maximum:** 440 mcg twice a day.

Maintenance Treatment for Asthma (Previously Treated with Inhaled Steroids)

Inhalation Powder *(Flovent Diskus)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 100–250 mcg q12h. **Maximum:** 500 mcg q12h.
Inhalation *(Oral)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 88–220 mcg twice a day. **Maximum:** 440 mcg twice a day.

Maintenance Treatment for Asthma (Previously Treated with Oral Steroids)

Inhalation Powder *(Flovent Diskus)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 500–1,000 mcg twice a day.
Inhalation *(Oral)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 440–880 mcg twice a day.

Usual Pediatric Dose (4–11 Yrs)

Flovent Diskus: Initially, 50 mcg twice a day. May increase to 100 mcg twice a day. **Flovent HFA:** Initially, 88 mcg twice daily.

SIDE EFFECTS

Frequent: Inhalation: Throat irritation, hoarseness, dry mouth, cough, temporary wheezing, oropharyngeal candidiasis (particularly if mouth is not rinsed with water after each administration). **Intranasal:** Mild nasopharyngeal irritation; nasal burning, stinging, dryness; rebound congestion; rhinorrhea; altered sense of taste. **Occasional: Inhalation:** Oral candidiasis. **Intranasal:** Nasal/pharyngeal candidiasis, headache. **Topical:** Stinging, burning of skin.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline history of skin disorder, asthma, rhinitis.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality/rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Monitor ABGs. Assess oral mucous membranes for evidence of candidiasis. Monitor growth in pediatric pts. **Topical:** Assess involved area for therapeutic response to irritation.

PATIENT/FAMILY TEACHING

• Pts receiving bronchodilators by inhalation concomitantly with steroid inhalation therapy should use bronchodilator several min before corticosteroid aerosol (enhances penetration of steroid into bronchial tree). • Do not change dose/schedule or stop taking drug; must taper off gradually under medical supervision. • Maintain fastidious oral hygiene. • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness, oral fungal infection). • Increase fluid intake (decreases lung secretion viscosity).

• **Intranasal:** • Clear nasal passages before use. • Contact physician if no improvement in symptoms or sneezing/nasal irritation occurs. • Improvement noted in several days. • **Topical:** Rub thin film gently into affected area. • Use only for prescribed area and no longer than ordered. • Avoid contact with eyes.

fluvastatin

floo-va-**stat**-in
(Lescol, Lescol XL)
Do not confuse fluvastatin with fluoxetine, nystatin, or pitavastatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydroxymethylglutaryl-CoA (HMG-CoA) reductase inhibitor. **CLINICAL:** Antihyperlipidemic (see p. 57C).

ACTION

Inhibits hydroxymethylglutaryl-CoA (HMG-CoA) reductase, the enzyme that catalyzes the early step in cholesterol synthesis. **Therapeutic Effect:** Decreases LDL cholesterol, VLDL, plasma triglyceride. Slightly increases HDL.

PHARMACOKINETICS

Well absorbed from GI tract. Unaffected by food. Does not cross blood-brain barrier. Protein binding: greater than 98%. Primarily eliminated in feces. **Half-life:** 3 hrs; extended-release, 9 hrs.

USES

Adjunct to diet therapy to reduce elevated total cholesterol (TC), low-density lipoprotein (LDL), apo-protein B, and triglycerides (TG) and increase high-density lipoprotein (HDL) in primary hypercholesterolemia and mixed dyslipidemia; reduce elevated TC, LDL, ApoB in children 10–16 yrs of age with heterozygous familial hypercholesterolemia (HFH); reduce need for revascularization procedures in pts with coronary artery disease (CAD); slow progression of atherosclerosis in pts with CAD.

PRECAUTIONS

Contraindications: Active hepatic disease, breast-feeding, pregnancy, unexplained increased serum transaminase. **Cautions:** Hepatic impairment; concurrent use with colchicine, gemfibrozil, fibric acid derivatives, or niacin; those at risk for rhabdomyolysis; heavy alcohol consumption; elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (suppression of cholesterol biosynthesis may cause fetal toxicity), lactation. Unknown if drug is distributed in breast milk. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Increased risk of acute renal failure, rhabdomyolysis with **cyclosporine, colchicine, gemfibrozil, niacin.** May increase concentration/toxicity of **digoxin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatine kinase (CK), transaminase.

AVAILABILITY (Rx)

Capsules (Lescol): 20 mg, 40 mg.

Tablets (Extended-Release [Lescol XL]): 80 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not break, crush, dissolve, or divide extended-release tablets. • Do not open capsules.

INDICATIONS/ROUTES/DOSAGE

Hyperlipoproteinemia

PO: ADULTS, ELDERLY, PATIENTS REQUIRING 25% OR LESS DECREASE IN LDL: Initially, 20

mg/day (capsule) in the evening. May increase up to 80 mg/day given as 40 mg 2 times/day (immediate-release) or 80 mg once daily (extended-release). **PATIENTS REQUIRING MORE THAN 25% DECREASE IN LDL:** 40 mg 1–2 times a day or 80-mg extended-release tablet once a day.

Heterozygous Familial Hypercholesterolemia

PO: CHILDREN 10–16 YRS: Initially, 20 mg/day. May increase q6wks to maximum dose of 80 mg/day, given in 2 divided doses or a single daily dose (extended-release).

SIDE EFFECTS

Frequent (8%–5%): Headache, dyspepsia, back pain, myalgia, arthralgia, diarrhea, abdominal cramping, rhinitis. **Occasional (4%–2%):** Nausea, vomiting, insomnia, constipation, flatulence, rash, pruritus, fatigue, cough, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myositis (inflammation of voluntary muscle) with or without increased creatine kinase (CK), muscle weakness occur rarely. May progress to frank rhabdomyolysis, renal impairment, renal failure.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy before initiating therapy (Pregnancy Category X). Assess baseline lab results (serum cholesterol, triglycerides, hepatic function test, CPK).

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assess for headache, dizziness. Assess for rash, pruritus. Monitor serum cholesterol, triglyceride lab results for therapeutic response. Be alert for malaise, muscle cramping, weakness.

PATIENT/FAMILY TEACHING

• Follow special diet (important part of treatment). • Periodic lab tests are essential part of therapy. • Do not open capsules; do not break, crush, or dissolve tablets. • Report promptly vision changes, unusual bruising, yellowing of skin or eyes, any muscle pain/weakness, esp. if accompanied by fever, malaise.

fluvoxamine

floo-**vox**-a-meen
(Apo-Fluvoxumine, Luvox CR, Novo-Fluvoxamine)

BLACK BOX ALERT Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse fluvoxamine with flavoxate or fluoxetine, or Luvox with Lasix, Levoxyl, or Lovenox.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin reuptake inhibitor. **CLINICAL:** Antidepressant, antiobsessive (see p. 39C).

ACTION

Selectively inhibits neuronal reuptake of serotonin. **Therapeutic Effect:** Relieves depression, symptoms of obsessive-compulsive disorder (OCD).

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 77%. Metabolized in liver. Excreted in urine. **Half-life:** 15–20 hrs.

USES

Immediate-Release: Treatment of obsessive-compulsive disorder (OCD) in adults and children 8 yrs and older. **Luvox CR:** Treatment of OCD in adults. **OFF-LABEL:** Treatment of anxiety disorders in children, depression, panic disorder, social anxiety disorder (SAD), mild dementia-associated agitation in nonpsychotic pts, post-traumatic stress disorder (PTSD).

PRECAUTIONS

Contraindications: Use within 14 days of MAOIs. Concomitant use with alosetron, thioridazine, or tizanidine. **Cautions:** Renal/hepatic impairment, elderly. Impaired platelet aggregation; concurrent use of NSAIDs, aspirin; seizure disorder; pts that are volume depleted; third trimester of pregnancy; pts with high suicide risk.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses the placenta; distributed in breast milk. **Children:** Safety and efficacy not established in those younger than 8 yrs. **Elderly:** Potential for reduced serum clearance; maintain caution.

INTERACTIONS

DRUG: May increase concentration, risk of toxicity of **benzodiazepines, carbamazepine, clozapine, theophylline. Lithium, tryptophan** may enhance fluvoxamine's serotonergic effects. **MAOIs** may produce serious reactions (hyperthermia, rigidity, myoclonus). **Tricyclic antidepressants** may increase concentration. May increase effects of **warfarin. HERBAL: Valerian, St. John's wort, SAMe, kava kava** may increase risk of serotonin syndrome or CNS depression. Avoid **herbs with antiplatelet activity (e.g., cat's claw, feverfew, ginger). FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 100 mg.

Capsules (Extended-Release [Luvox CR]): 100 mg, 150 mg.

ADMINISTRATION/HANDLING

• Do not chew, crush, or open extended-release capsules. • May give with or without food.

INDICATIONS/ROUTES/DOSAGE

Obsessive-Compulsive Disorder (OCD)

PO *(Immediate-Release)*: ADULTS: 50 mg at bedtime; may increase by 50 mg every 4–7 days. Dosages greater than 100 mg/day given in 2 divided doses. **Maximum:** 300 mg/day. ***(Extended-Release)*** Initially, 100 mg once daily at bedtime. May increase by 50 mg at no less than 1-wk intervals. **Maximum:** 300 mg/day. **CHILDREN 8–17 YRS (IMMEDIATE-RELEASE):** 25 mg at bedtime; may increase by 25 mg every 4–7 days. Dosages greater than 50 mg/day given in 2 divided doses. **Maximum: (CHILDREN 8–11 YRS):** 200 mg/day. **(CHILDREN 12–17 YRS):** 300 mg/day.

OCD, Social Anxiety Disorder

PO *(Extended-Release): (Luvox CR)*: ADULTS, ELDERLY: Initially, 100 mg once daily. May increase by 50 mg at weekly intervals. Range: 100–300 mg/day.

SIDE EFFECTS

Frequent: Nausea (40%); headache, drowsiness, insomnia (22%–21%). **Occasional (14%–8%):** Dizziness, diarrhea, dry mouth, asthenia (loss of strength, energy), dyspepsia, constipation, abnormal ejaculation. **Rare (6%–3%):** Anorexia, anxiety, tremor, vomiting, flatulence, urinary frequency, sexual dysfunction, altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce seizures, nausea, vomiting, excessive agitation, extreme restlessness.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline chemistries, esp. renal/hepatic function tests.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood. Assist with ambulation if dizziness, drowsiness occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Maximum therapeutic response may require 4 wks or more of therapy. • Dry mouth may be relieved by sugarless gum, sips of tepid water. • Do not abruptly discontinue medication. • Avoid tasks that require alertness, motor skills until response to drug is established.

folic acid

TOP 200

foe-lik **as**-id
(Apo-Folic, Folacin-800, Folvite)
Do not confuse folic acid with folinic acid.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Coenzyme.
CLINICAL: Nutritional supplement.

ACTION

Stimulates production of platelets, RBCs, WBCs. **Therapeutic Effect:** Essential for nucleoprotein synthesis, maintenance of normal erythropoiesis.

PHARMACOKINETICS

PO form almost completely absorbed from GI tract (upper duodenum). Protein binding: High. Metabolized in liver and plasma to active form. Excreted in urine. Removed by hemodialysis.

USES

Treatment of megaloblastic and macrocytic anemias due to folate deficiency (e.g., pregnancy, inadequate dietary intake). Supplement to prevent fetal neural tube defects. **OFF-LABEL:** Adjunct therapy in methanol toxicity.

PRECAUTIONS

Contraindications: None known. **Cautions:** Anemias (aplastic, normocytic, pernicious, refractory).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category A (C if more than recommended daily allowance). Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effects of **phenobarbital, phenytoin, primidone, raltitrexed. HERBAL: Green tea** may increase concentration. **FOOD:** None known. **LAB VALUES:** May decrease vitamin B_{12} concentration.

AVAILABILITY (Rx)

Injection Solution: 5 mg/ml. **Tablets:** 0.4 mg (OTC), 0.8 mg (OTC), 1 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food.
◀ALERT▶ Parenteral form used in acutely ill, parenteral/enteral alimentation, those unresponsive to oral route in GI malabsorption syndrome. Dosage greater than 0.1 mg/day may conceal pernicious anemia.

INDICATIONS/ROUTES/DOSAGE

Anemia

IM/IV/Subcutaneous/PO: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: 0.4 mg/day. **CHILDREN YOUNGER THAN 4 YRS:** Up to 0.3 mg/day. **INFANTS:** 0.1 mg/day. **PREGNANT/LACTATING WOMEN:** 0.8 mg/day.

Prevention of Neural Tube Defects

PO: WOMEN OF CHILDBEARING AGE: 400–800 mcg/day. **WOMEN AT HIGH RISK OR FAMILY HISTORY OF NEURAL TUBE DEFECTS:** 4 mg/day.

SIDE EFFECTS

None known.

ADVERSE EFFECTS/ TOXIC REACTIONS

Allergic hypersensitivity occurs rarely with parenteral form. Oral folic acid is nontoxic.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pernicious anemia should be ruled out with Schilling test and vitamin B_{12} blood level before initiating therapy (may produce irreversible neurologic damage). Resistance to treatment may occur if decreased hematopoiesis, alcoholism, antimetabolic drugs, deficiency of vitamin B_6, B_{12}, C, E is evident.

INTERVENTION/EVALUATION

Assess for therapeutic improvement: improved sense of well-being, relief from iron deficiency symptoms (fatigue, shortness of breath, sore tongue, headache, pallor).

PATIENT/FAMILY TEACHING

- Eat foods rich in folic acid, including fruits, vegetables, organ meats.

fondaparinux

HIGH ALERT

fon-**dap**-a-rin-ux
(Arixtra)

BLACK BOX ALERT Epidural or spinal anesthesia greatly increases potential for spinal or epidural hematoma, subsequent long-term or permanent paralysis.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Factor Xa inhibitor, pentasaccharide. **CLINICAL:** Antithrombotic (see p. 31C).

ACTION

Factor Xa inhibitor and pentasaccharide that selectively binds to antithrombin and increases its affinity for factor Xa, inhibiting factor Xa, stopping blood coagulation cascade. **Therapeutic Effect:** Indirectly prevents formation of thrombin and subsequently fibrin clot.

PHARMACOKINETICS

Well absorbed after subcutaneous administration. Undergoes minimal, if any, metabolism. Highly bound to antithrombin III. Distributed mainly in blood and to a minor extent in extravascular fluid. Excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 17–21 hrs (increased in renal impairment).

USES

Prevention of venous thromboembolism in pts undergoing total hip replacement, hip fracture surgery, knee replacement surgery, abdominal surgery. Treatment of acute deep vein thrombosis (DVT), acute pulmonary embolism. Used concurrently with warfarin therapy. **OFF-LABEL:** Prophylaxis of DVT in pts with history of heparin-induced thrombocytopenia.

PRECAUTIONS

Contraindications: Active major bleeding, bacterial endocarditis, prophylaxis treatment in pts with body weight less than 50 kg, severe renal impairment (creatinine clearance less than 30 ml/min), thrombocytopenia associated with antiplatelet antibody formation in presence of fondaparinux. **Cautions:** Conditions with increased risk of hemorrhage (GI ulceration, hemophilia, concurrent use of antiplatelet agents, severe uncontrolled hypertension, history of CVA), history of heparin-induced thrombocytopenia, renal/hepatic impairment, elderly, indwelling epidural catheter use.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use with caution, particularly during third trimester, immediate postpartum period (increased risk of maternal hemorrhage). Unknown if excreted in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may increase risk of bleeding.

INTERACTIONS

DRUG: **Anticoagulants, antiplatelet medications, aspirin, drotrecogin alfa, NSAIDs, thrombolytics** may in-

crease risk of bleeding. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, horse chestnut, red clover, SAMe** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May cause reversible increases in serum creatinine, AST, ALT. May decrease Hgb, Hct, platelet count.

AVAILABILITY (Rx)

Injection, Solution: 2.5 mg/0.5 ml, 5 mg/0.4 ml, 7.5 mg/0.6 ml, 10 mg/0.8 ml.

ADMINISTRATION/HANDLING

Subcutaneous

• Parenteral form appears clear, colorless. Discard if discoloration or particulate matter is noted. • Store at room temperature. • Do not expel air bubble from prefilled syringe before injection. • Pinch fold of skin at injection site between thumb and forefinger. Introduce entire length of subcutaneous needle into skin fold during injection. Inject into fatty tissue between left and right anterolateral or left and right posterolateral abdominal wall. • Rotate injection sites.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ For subcutaneous administration only.

Prevention of Venous Thromboembolism

Subcutaneous: ADULTS: 2.5 mg once a day for 5–9 days after surgery (up to 10 days following abdominal surgery; 11 days following hip or knee replacement). Initial dose should be given 6–8 hrs after surgery. Dosage should be adjusted in elderly and those with renal impairment.

Treatment of Venous Thromboembolism, Pulmonary Embolism

Note: Start warfarin on first treatment day and continue fondaparinux until INR reaches 2 to 3.

Subcutaneous: ADULTS, ELDERLY WEIGHING GREATER THAN 100 KG: 10 mg once daily. **ADULTS, ELDERLY WEIGHING 50–100 KG:** 7.5 mg once daily. **ADULTS, ELDERLY WEIGHING LESS THAN 50 KG:** 5 mg once daily.

Dosage in Renal Impairment

Creatinine clearance 30–50 ml/min: Use caution. **Creatinine clearance less than 30 ml/min:** Contraindicated.

SIDE EFFECTS

Frequent (19%–11%): Anemia, fever, nausea. **Occasional (10%–4%):** Edema, constipation, rash, vomiting, insomnia, increased wound drainage, hypokalemia. **Rare (less than 4%):** Dizziness, hypotension, confusion, urinary retention, injection site hematoma, diarrhea, dyspepsia, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Accidental overdose may lead to bleeding complications ranging from local ecchymoses to major hemorrhage. Thrombocytopenia occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBC, including platelet count, baseline BUN, creatinine clearance.

INTERVENTION/EVALUATION

Periodically monitor CBC, platelet count, stool for occult blood (no need for daily monitoring in pts with normal presurgical coagulation parameters). Assess for any signs of bleeding: bleeding at surgical site, hematuria, blood in stool, bleeding from gums, petechiae, ecchymosis, bleeding from injection sites. Monitor B/P, pulse; hypotension, tachycardia may indicate bleeding, hypovolemia.

PATIENT/FAMILY TEACHING

• Usual length of therapy is 5–9 days. • Do not take any OTC medication (esp. aspirin, NSAIDs). • Consult physician if swelling of hands/feet, unusual back pain, unusual bleeding/bruising, weakness, sudden or severe headache occurs.

formoterol

TOP 200

for-**moe**-ter-all
(Foradil Aerolizer, Oxeze, Perforomist)

BLACK BOX ALERT Long-acting beta-agonists (salmeterol, formoterol) increase risk of asthma-related deaths.

Do not confuse formoterol or Foradil with toradol.

F

FIXED COMBINATION(S)

Dulera: formoterol/mometasone (a corticosteroid): 5 mcg/100 mcg, 5 mcg/200 mcg. **Symbicort:** formoterol/budesonide (a glucocorticoid): 4.5 mcg/80 mcg, 4.5 mcg/160 mcg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic (beta$_2$-adrenergic agonist). **CLINICAL:** Bronchodilator (see pp. 74C, 75C).

ACTION

Stimulates beta$_2$-adrenergic receptors in lungs, resulting in relaxation of bronchial smooth muscle. Inhibits release of mediators from various cells in lungs, including mast cells, with little effect on heart rate. **Therapeutic Effect:** Relieves bronchospasm, reduces airway resistance. Improves bronchodilation, nighttime asthma control, peak flow rates.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Inhalation	1–3 min	15 min	12 hrs

Absorbed from bronchi after inhalation. Protein binding: 61%–64%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 10–14 hrs.

USES

Foradil: For long-term maintenance treatment of asthma, prevention of exercise-induced bronchospasm, treatment of bronchoconstriction in pts with COPD. Can be used concomitantly with short-acting beta-agonists, inhaled or systemic corticosteroids, theophylline therapy. **Perforomist:** Maintenance treatment of bronchoconstriction in pts with COPD.

PRECAUTIONS

Contraindications: Monotherapy of asthma, acute episodes of COPD. **Cautions:** Hypertension, cardiovascular disease, seizure disorder, hyperthyroidism, glaucoma, diabetes, hepatic impairment, hypokalemia. May increase risk of severe excacerbation of asthma.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 5 yrs. **Elderly:** May be more sensitive to tremor, tachycardia due to age-related increased sympathetic sensitivity.

INTERACTIONS

DRUG: Beta-blockers may decrease bronchodilating effects. **Diuretics, steroids, xanthine derivatives** may increase risk of hypokalemia. **Drugs that can prolong QT interval (e.g., erythromycin, quinidine, thioridazine), MAOIs, tricyclic antidepressants** may potentiate cardiovascular effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium. May increase serum glucose.

AVAILABILITY (Rx)

Inhalation Powder (Foradil): 12 mcg. **Inhalation Solution for Nebulization (Perforomist):** 20 mcg/2 ml.

ADMINISTRATION/HANDLING

Inhalation

• Pull off Aerolizer Inhaler cover, twisting mouthpiece in direction of arrow to open. • Place capsule in chamber. Capsule is pierced by pressing and releasing buttons on side of Aerolizer, once only. • Instruct pt to exhale completely; place mouthpiece

into mouth, close lips and inhale quickly, deeply through mouth (this causes capsule to spin, dispensing the drug). Pt should hold breath as long as possible before exhaling slowly. • Check capsule to ensure all the powder is gone. If not, pt should inhale again to receive rest of the dose. Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness).
Storage • Maintain capsules in individual blister pack until immediately before use. • Do not swallow capsules. • Do not use with a spacer.

Nebulization

• No diluent necessary. • Protect from heat. • Remove from foil pouch immediately before use. • Do not mix with other medications.

INDICATIONS/ROUTES/DOSAGE

Asthma

Inhalation Powder: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 12 mcg capsule inhaled q12h.

COPD

Inhalation Powder: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 12 mcg capsule q12h.
Inhalation Solution for Nebulization: ADULTS, ELDERLY: 20 mcg q12h.

Exercise-Induced Bronchospasm

Inhalation Powder: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 12 mcg capsule inhaled at least 15 min before exercise. Do not repeat for another 12 hrs.

SIDE EFFECTS

Occasional (less than 5%): Tremor, muscle cramps, tachycardia, insomnia, headache, irritability, mouth/throat irritation, diarrhea, nausea, vomiting, dizziness, nasopharyngitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive sympathomimetic stimulation may produce palpitations, extrasystoles, chest pain.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Assess rate, depth, rhythm, type of respiration; quality/rate of pulse. Monitor EKG, serum potassium, ABG determinations. Assess lung sounds for wheezing (bronchoconstriction), rales, pulmonary function tests.

PATIENT/FAMILY TEACHING

• Follow manufacturer guidelines for proper use of inhaler. • Increase fluid intake (decreases lung secretion viscosity). • Rinsing mouth with water immediately after inhalation may prevent mouth/throat irritation. • Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola).

fosamprenavir

foss-am-**pren**-ah-veer
(Lexiva, Telzir ✱)
Do not confuse Lexiva with Levitra.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antiviral (see p. 117C).

ACTION

Rapidly converted to amprenavir, inhibiting HIV-1 protease by binding to enzyme's active site, preventing processing of viral precursors, forming immature, noninfectious viral particles. **Therapeutic Effect:** Impairs HIV replication, proliferation.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 90%. Metabolized in liver. Primarily excreted in feces. **Half-life:** 7.7 hrs.

USES

Treatment of HIV infection in combination with at least 2 other antiretroviral agents.

PRECAUTIONS

Contraindications: Concurrent use of alfuzosin, dihydroergotamine, ergonovine, ergotamine, lovastatin, methylergonovine, midazolam, pimozide, rifampin, sildenafil (when used for pulmonary arterial hypertension), simvastatin, St. John's wort, triazolam. If fosamprenavir is given concurrently with ritonavir, then flecainide and propafenone are also contraindicated. **Extreme Caution:** Hepatic impairment. **Cautions:** Diabetes mellitus, elderly, known sulfonamide allergy, hemophilia, hepatitis B or C.

F

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 4 yrs. **Elderly:** Age-related hepatic impairment may require decreased dosage.

INTERACTIONS

DRUG: May interfere with metabolism of **amiodarone, bepridil, ergotamine, lidocaine, midazolam, oral contraceptives, quinidine, triazolam, tricyclic antidepressants. Carbamazepine, phenobarbital, phenytoin, rifampin** may decrease concentration. May increase concentrations of **colchicine, calcium channel blockers, bosentan, cyclosporine, tacrolimus, sirolimus, HMG-CoA reductase inhibitors (statins), warfarin. HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum lipase, triglycerides, AST, ALT. May decrease neutrophil count.

AVAILABILITY (Rx)

Oral Suspension: 50 mg/ml.

Tablets: 700 mg (equivalent to 600 mg amprenavir).

ADMINISTRATION/HANDLING

PO

- Give tablets without regard to meals.
- Do not crush, break film-coated tablets.
- Adults should take oral suspension without food. Children should take oral suspension with food.
- Shake suspension vigorously prior to use.

INDICATIONS/ROUTES/DOSAGE

HIV Infection without Previous Protease Inhibitor Therapy

PO: ADULTS, ELDERLY: (Unboosted regimen) 1,400 mg twice daily without ritonavir; or (Ritonavir boosted regimen) 1,400 mg once daily plus ritonavir 100 mg or 200 mg once daily; or 700 mg twice daily plus ritonavir 100 mg twice daily. **CHILDREN 6 YRS AND OLDER:** (Unboosted regimen) 30 mg/kg twice daily. **Maximum:** 1,400 mg twice daily. (Ritonavir boosted regimen) 18 mg/kg plus 3 mg/kg ritonavir twice daily. **Maximum:** 700 mg fosamprenavir plus 100 mg ritonavir twice daily. **CHILDREN 2–5 YRS:** 30 mg/kg twice daily. **Maximum:** 1,400 mg twice daily.

HIV Infection with Previous Protease Inhibitor Therapy

PO: ADULTS, ELDERLY: 700 mg twice daily plus ritonavir 100 mg twice daily. **CHILDREN 6 YRS AND OLDER:** 18 mg/kg plus 3 mg/kg ritonavir twice daily. **Maximum:** 700 mg plus 100 mg ritonavir twice daily.

Concurrent Therapy with Efavirenz

PO: ADULTS, ELDERLY: Once-daily regimen: 1,400 mg plus 300 mg ritonavir. Twice-daily regimen: 700 mg twice daily plus ritonavir 100 mg twice daily.

Dosage in Hepatic Impairment

Mild to moderate impairment: Reduce fosamprenavir to 700 mg twice daily (without concurrent ritonavir). **Severe impairment:** Reduce fosamprenavir to 350 mg twice daily (without ritonavir).

SIDE EFFECTS

Frequent (39%–35%): Nausea, rash, diarrhea. **Occasional (19%–8%):** Headache, vomiting, fatigue, depression. **Rare (7%–**

2%): Pruritus, abdominal pain, perioral paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe or life-threatening dermatologic reactions, including Stevens-Johnson syndrome, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab testing, esp. hepatic function tests, before beginning therapy and at periodic intervals during therapy. Offer emotional support. Obtain medication history.

INTERVENTION/EVALUATION

Closely monitor for evidence of GI discomfort. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Monitor serum chemistry tests for marked abnormalities, particularly hepatic profile, glucose, triglycerides, cholesterol. Assess for opportunistic infections (onset of fever, oral mucosa changes, cough, other respiratory symptoms).

PATIENT/FAMILY TEACHING

• Eat small, frequent meals to offset nausea, vomiting. • Continue therapy for full length of treatment. • Doses should be evenly spaced. • Fosamprenavir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pt may continue to experience illnesses, including opportunistic infections. • Diarrhea can be controlled with OTC medication. • Notify physician if rash develops.

foscarnet

foss-**kar**-net
(Foscavir)

BLACK BOX ALERT Renal toxicity occurs to some degree in majority of pts. For use only in immunocompromised pts with CMV retinitis and mucocutaneous acyclovir-resistant HSV infection. Seizures due to electrolyte/mineral imbalance may occur.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphonic acid derivative. **CLINICAL:** Antiviral (see p. 68C).

ACTION

Selectively inhibits binding sites on virus-specific DNA polymerase, reverse transcriptase. **Therapeutic Effect:** Inhibits replication of herpes virus.

PHARMACOKINETICS

Sequestered into bone, cartilage. Protein binding: 14%–17%. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 3.3–6.8 hrs (increased in renal impairment).

USES

Treatment of herpes virus infections suspected to be caused by acyclovir-resistant or ganciclovir-resistant strains. Treatment of cytomegalovirus (CMV) retinitis. Treatment of HIV/AIDS-related CMV infections and herpes. **OFF-LABEL:** Other CMV infections (e.g., colitis, esophagitis); CMV prophylaxis for cancer pts receiving alemtuzumab or allogenic stem cell transplant.

PRECAUTIONS

Contraindications: None known. **Cautions:** Neurologic/cardiac abnormalities, history of renal impairment, altered calcium, other electrolyte imbalances.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Nephrotoxic medications may increase risk of renal toxicity. **Pentamidine (IV)** may cause reversible hypocal-

cemia, hypomagnesemia, nephrotoxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, creatinine, AST, ALT. May decrease serum magnesium, potassium. May alter serum calcium, phosphate concentrations.

AVAILABILITY (Rx)

Injection Solution: 24 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Standard 24 mg/ml solution may be used without dilution when central venous catheter is used for infusion; 24 mg/ml solution *must* be diluted to maximum concentration of 12 mg/ml when peripheral vein catheter is being used. • Dilute only with D_5W or 0.9% NaCl solution.

Rate of Administration • Because dosage is calculated on body weight, unneeded quantity may be removed before start of infusion to avoid overdosage. Aseptic technique must be used and solution administered within 24 hrs of first entry into sealed bottle. • Do not give by IV injection or rapid infusion (increases toxicity). • Administer by IV infusion at rate not faster than 1 hr for doses up to 60 mg/kg and 2 hrs for doses greater than 60 mg/kg. • To minimize toxicity and phlebitis, use central venous lines or veins with adequate blood flow to permit rapid dilution, dissemination of foscarnet. • Use IV infusion pump to prevent accidental overdose.

Storage • Store parenteral vials at room temperature. • After dilution, stable for 24 hrs at room temperature. • Do not use if solution is discolored or particulate forms.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B (Fungizone), calcium, co-trimoxazole (Bactrim), diazepam (Valium), digoxin (Lanoxin), diphenhydramine (Benadryl), dobutamine (Dobutrex), droperidol (Inapsine), ganciclovir (Cytovene), haloperidol (Haldol), leucovorin, magnesium, midazolam (Versed), pentamidine (Pentam IV), prochlorperazine (Compazine), total parenteral nutrition (TPN), vancomycin (Vancocin).

IV COMPATIBILITIES

Dopamine (Intropin), heparin, hydromorphone (Dilaudid), lorazepam (Ativan), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Cytomegalovirus (CMV) Retinitis

IV: ADULTS, ELDERLY: Initially, 60 mg/kg q8h or 90 mg/kg q12h for 2–3 wks. Maintenance: 90–120 mg/kg/day as a single IV infusion.

Herpes Infection

IV: ADULTS: 40 mg/kg q8–12h for 2–3 wks or until healed.

Dosage in Renal Impairment

Dosages are individualized based on creatinine clearance. Refer to dosing guide provided by manufacturer.

SIDE EFFECTS

Frequent: Fever (65%); nausea (47%); vomiting, diarrhea (30%). **Occasional (29%–5%):** Anorexia, pain/inflammation at injection site, rigors, malaise, altered B/P, headache, paresthesia, dizziness, rash, diaphoresis, abdominal pain. **Rare (4%–1%):** Back/chest pain, edema, flushing, pruritus, constipation, dry mouth.

ADVERSE EFFECTS/ TOXIC REACTIONS

Nephrotoxicity occurs to some extent in most pts. Seizures, serum mineral/electrolyte imbalances may be life-threatening.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum mineral and electrolyte levels, vital signs, CBC values, renal function tests. Risk of renal impairment can be reduced by sufficient fluid intake to ensure diuresis prior to and during therapy.

INTERVENTION/EVALUATION

Monitor serum creatinine, calcium, phosphorus, potassium, magnesium, Hgb, Hct. Obtain periodic ophthalmologic exams. Assess for signs of serum electrolyte imbalance, esp. hypocalcemia (perioral paresthesia, paresthesia of extremities), hypokalemia (weakness, muscle cramps, paresthesia of extremities, irritability). Monitor renal function tests. Assess for tremors; provide safety measures for potential seizures. Assess for bleeding, anemia, developing superinfections.

PATIENT/FAMILY TEACHING

• Important to report perioral tingling, numbness in extremities, paresthesia during or following infusion (may indicate electrolyte abnormalities). • Tremors should be reported promptly due to potential for seizures.

fosinopril

foe-**sin**-oh-pril
(Apo-Fosinopril, Monopril, Novo-Fosinopril)

BLACK BOX ALERT May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse fosinopril with fluoxetine, Fosamax, furosemide, or lininopril, or Monopril with Accupril, minoxidil, moexipril, or ramipril.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: ACE inhibitor. **CLINICAL:** Antihypertensive (see p. 9C).

ACTION

Suppresses renin-angiotensin-aldosterone system (prevents conversion of angiotensin I to angiotensin II, a potent vasoconstrictor; may inhibit angiotensin II at local vascular, renal sites). Decreases plasma angiotensin II, increases plasma renin activity, decreases aldosterone secretion. **Therapeutic Effect:** Reduces peripheral arterial resistance, pulmonary capillary wedge pressure; improves cardiac output, exercise tolerance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2–6 hrs	24 hrs

Slowly absorbed from GI tract. Protein binding: 97%–98%. Metabolized in liver and GI mucosa to active metabolite. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 11.5 hrs.

USES

Treatment of hypertension, used alone or in combination with other antihypertensives. Treatment of heart failure. **OFF-LABEL:** Treatment of diabetic, nondiabetic nephropathy; post-MI left ventricular dysfunction.

PRECAUTIONS

Contraindications: Idiopathic or hereditary angioedema, history of angioedema from previous treatment with ACE inhibitors. **Cautions:** Renal impairment, those with sodium depletion or on diuretic therapy, dialysis, hypovolemia, hypertrophic cardiomyopathy, hyperkalemia, unstented unilateral/bilateral renal stenosis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May cause fetal or neonatal mortality or morbidity. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. Neonates, infants may be at increased risk for oliguria, neurologic abnormalities. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: Alcohol, antihypertensive agents, diuretics may increase effect. **NSAIDs** may decrease effect. **Potas-**

sium-sparing diuretics, potassium supplements may cause hyperkalemia. May increase **lithium** concentration/toxicity. **Antacids** may decrease absorption. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **Licorice** may cause sodium/water retention, loss of potassium. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, potassium, AST, ALT. May decrease serum sodium. May cause positive antinuclear antibody titer (ANA).

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 10 mg/day. Maintenance: 20–40 mg/day as a single dose or 2 divided doses. **Maximum:** 80 mg/day. **CHILDREN 6–16 YRS WEIGHING MORE THAN 50 KG:** Initially, 5–10 mg/day. **Maximum:** 40 mg/day.

Heart Failure

PO: ADULTS, ELDERLY: Initially, 10 mg/day. Maintenance: 20–40 mg/day. **Maximum:** 40 mg/day.

SIDE EFFECTS

Frequent (12%–9%): Dizziness, cough. **Occasional (4%–2%):** Hypotension, nausea, vomiting, upper respiratory tract infection.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive hypotension ("first-dose syncope") may occur in pts with CHF, severely salt/volume depleted. Angioedema (swelling of face/lips), hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in those with renal impairment, collagen vascular disease (scleroderma, systemic lupus erythematosus). Nephrotic syndrome may be noted in those with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose, in addition to regular monitoring (be alert to fluctuations). Renal function tests should be performed before beginning therapy. In pts with renal impairment, autoimmune disease, or taking drugs that affect leukocytes or immune response, CBC, differential count should be performed before therapy begins and q2wks for 3 mos, then periodically thereafter.

INTERVENTION/EVALUATION

If excessive reduction in B/P occurs, place pt in supine position with legs elevated. Assist with ambulation if dizziness occurs. Assess for urinary frequency. Auscultate lung sounds for rales, wheezing in those with CHF. Monitor renal function tests, CBC, urinalysis for proteinuria. Observe for angioedema (circumoral swelling, edema around eyes). Monitor serum potassium in those on concurrent diuretic therapy.

PATIENT/FAMILY TEACHING

• Report any sign of infection (sore throat, fever). • Several wks may be needed for full therapeutic effect of B/P reduction. • Skipping doses or voluntarily discontinuing drug may produce severe, rebound hypertension. • To reduce hypotensive effect, rise slowly from lying to sitting position, permit legs to dangle from bed momentarily before standing. • Inform physician if swelling of face, lips, tongue, difficulty breathing, vomiting, excessive perspiration, persistent cough develops. • Avoid potassium salt substitutes.

fosphenytoin

fos-**fen**-ih-toyn
(Cerebyx)
Do not confuse Cerebyx with Celebrex or Celexa, or fosphenytoin with fospropafol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydantoin. **CLINICAL:** Anticonvulsant (see p. 35C).

ACTION

Stabilizes neuronal membranes, limits spread of seizure activity. Decreases sodium, calcium ion influx into neurons. Decreases post-tetanic potentiation, repetitive discharge. **Therapeutic Effect:** Decreases seizure activity.

PHARMACOKINETICS

Completely absorbed after IM administration. Protein binding: 95%–99%. Rapidly and completely hydrolyzed to phenytoin after IM or IV administration. Time of complete conversion to phenytoin: 4 hrs after IM injection; 2 hrs after IV infusion. **Half-life:** 8–15 min (for conversion to phenytoin).

USES

Acute treatment, control of generalized convulsive status epilepticus; prevention, treatment of seizures occurring during neurosurgery; short-term substitution of oral phenytoin.

PRECAUTIONS

Contraindications: Adams-Stokes syndrome; hypersensitivity to phenytoin, other hydantoins; second- or third-degree AV block; severe bradycardia; SA block. **Cautions:** Porphyria, diabetes, hypothyroidism, hypotension, severe myocardial insufficiency, renal/hepatic disease, hypoalbuminemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May increase frequency of seizures during pregnancy. Increased risk of congenital malformations. Unknown if excreted in breast milk. **Pregnancy Category D. Children:** Safety not established. **Elderly:** Lower dosage recommended.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depression. **Amiodarone, anticoagulants, cimetidine, disulfiram, fluoxetine, isoniazid, sulfonamides** may increase concentration/effects, risk of toxicity. **CYP3A4 inhibitors (e.g., fluconazole, ketoconazole, miconazole)** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, GGT, alkaline phosphatase.

AVAILABILITY (Rx)

Injection Solution: 75 mg/ml (equivalent to 50 mg/ml phenytoin).

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute in D_5W or 0.9% NaCl to a concentration ranging from 1.5–25 mg phenytoin equivalents (PE)/ml.
Rate of Administration • Administer at rate less than 150 mg PE/min (decreases risk of hypotension, arrhythmias). Children: 1–3 mg PE/kg/min.
Storage • Refrigerate. • Do not store at room temperature for longer than 48 hrs. • After dilution, solution is stable for 8 hrs at room temperature or 24 hrs if refrigerated.

IV INCOMPATIBILITY

Midazolam (Versed).

IV COMPATIBILITIES

Lorazepam (Ativan), phenobarbital, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ 150 mg fosphenytoin yields 100 mg phenytoin. Dosage, concentration solution, infusion rate of fosphenytoin are expressed in terms of phenytoin equivalents (PE).

Status Epilepticus

IV: ADULTS: Loading dose: 15–20 mg PE/kg infused at rate of 100–150 mg PE/min.

Nonemergent Seizures

IV, IM: ADULTS: Loading dose: 10–20 mg PE/kg. Maintenance: 4–6 mg PE/kg/day.

Short-Term Substitution for Oral Phenytoin

IV, IM: ADULTS: May substitute for oral phenytoin at same total daily dose.

SIDE EFFECTS

Frequent: Dizziness, paresthesia, tinnitus, pruritus, headache, drowsiness. **Occasional:** Morbilliform rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Too-high fosphenytoin blood concentration may produce ataxia (muscular incoordination), nystagmus (rhythmic oscillation of eyes), diplopia, lethargy, slurred speech, nausea, vomiting, hypotension. As drug level increases, extreme lethargy may progress to coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Initiate seizure precautions. Obtain vital signs, medication history (esp. use of phenytoin, other anticonvulsants). Observe clinically.

INTERVENTION/EVALUATION

Monitor EKG, measure cardiac function, respiratory function, B/P during and immediately following infusion (10–20 min). Discontinue if skin rash appears. Interrupt or decrease rate if hypotension, arrhythmias are detected. Assess pt postinfusion (may feel dizzy, ataxic, drowsy). Assess blood levels of fosphenytoin (2 hrs post IV infusion or 4 hrs post IM injection).

PATIENT/FAMILY TEACHING

• If noncompliance is an issue in causing acute seizures, discuss and address reasons for noncompliance. • Avoid tasks that require alertness, motor skills until response to drug is established.

frovatriptan

froe-va-**trip**-tan
(Frova)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor agonist. **CLINICAL:** Antimigraine (see p. 63C).

ACTION

Binds selectively to vascular receptors, producing vasoconstrictive effect on cranial blood vessels. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 15%. Metabolized by liver to inactive metabolite. Primarily eliminated in feces (62%), urine (32%). **Half-life:** 26 hrs (increased in hepatic impairment).

USES

Treatment of acute migraine headache with or without aura in adults.

PRECAUTIONS

Contraindications: Management of basilar or hemiplegic migraine, cerebrovascular or peripheral vascular disease, coronary artery disease, ischemic heart disease (angina pectoris, history of MI, silent ischemia, Prinzmetal's angina), severe hepatic impairment (Child-Pugh grade C), uncontrolled hypertension, use

within 24 hrs of ergotamine-containing preparations or another serotonin receptor agonist, use within 14 days of MAOIs. **Cautions:** Mild to moderate hepatic impairment, pt profile suggesting cardiovascular risks. History of seizures.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is excreted in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Not recommended for use in this pt population.

INTERACTIONS

DRUG: Ergotamine-containing medications may produce vasospastic reaction. **SSRI, SNRI** (e.g., **duloxetine, fluoxetine, fluvoxamine, paroxetine, sertraline, venlafaxine**) may produce weakness, hyperreflexia, uncoordination. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 2.5 mg.

ADMINISTRATION/HANDLING

PO

• Give with fluids. • Do not crush, chew film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Acute Migraine Headache

PO: ADULTS, ELDERLY: Initially, 2.5 mg. If headache improves but then returns, dose may be repeated after at least 2 hrs. **Maximum:** 7.5 mg/day.

SIDE EFFECTS

Occasional (8%–4%): Dizziness, paresthesia, fatigue, flushing. **Rare (3%–2%):** Hot/cold sensation, dry mouth, dyspepsia (heartburn, epigastric distress).

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiac reactions (ischemia, coronary artery vasospasm, MI), noncardiac vasospasm-related reactions (cerebral hemorrhage, CVA) occur rarely, particularly in pts with hypertension, obesity, smokers, diabetes, strong family history of coronary artery disease; males older than 40 yrs; postmenopausal women.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of peripheral vascular disease, renal/hepatic impairment, possibility of pregnancy. Question regarding onset, location, duration of migraine, possible precipitating factors.

INTERVENTION/EVALUATION

Assess for relief of migraine headache, potential for photophobia, phonophobia (sound sensitivity), nausea, vomiting.

PATIENT/FAMILY TEACHING

• Take a single dose as soon as symptoms of an actual migraine attack appear. • Medication is intended to relieve migraine headaches, not to prevent or reduce number of attacks. • Avoid tasks that require alertness, motor skills until response to drug is established. • Contact physician immediately if palpitations, pain, tightness in chest or throat, sudden or severe abdominal pain, pain or weakness of extremities occur.

fulvestrant HIGH ALERT

ful-**vest**-rant
(Faslodex)
Do not confuse Faslodex with Fosamax.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Estrogen antagonist. **CLINICAL:** Antineoplastic (see p. 83C).

ACTION

Competes with endogenous estrogen at estrogen receptor binding sites. **Therapeutic Effect:** Inhibits tumor growth.

PHARMACOKINETICS

Extensively, rapidly distributed after IM administration. Protein binding: 99%. Metabolized in liver. Eliminated by hepatobiliary route; excreted in feces. **Half-life:** 40 days in postmenopausal women. Peak serum levels occur in 7–9 days.

USES

Treatment of hormone receptor–positive metastatic breast cancer in postmenopausal women with disease progression following antiestrogen therapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Thrombocytopenia, bleeding diathesis, anticoagulant therapy, hepatic disease, reduced hepatic blood flow, pregnancy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Do not administer to pregnant women. Unknown if excreted in breast milk. May cause fetal harm. **Pregnancy Category D. Children:** Not used in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Solution: 50 mg/ml.

ADMINISTRATION/HANDLING

IM

- Administer slowly into upper, outer quadrant or ventrogluteal area of buttock as two injections, one in each buttock over 1–2 min.

INDICATIONS/ROUTES/DOSAGE

Breast Cancer

IM: ADULTS, ELDERLY: Two 250-mg injections on days 1, 15, and 29, and once monthly thereafter.

SIDE EFFECTS

Frequent (26%–13%): Nausea, hot flashes, pharyngitis, asthenia (loss of strength, energy), vomiting, vasodilation, headache. **Occasional (12%–5%):** Injection site pain, constipation, diarrhea, abdominal pain, anorexia, dizziness, insomnia, paresthesia, bone/back pain, depression, anxiety, peripheral edema, rash, diaphoresis, fever. **Rare (2%–1%):** Vertigo, weight gain.

ADVERSE EFFECTS/ TOXIC REACTIONS

UTI occurs occasionally. Vaginitis, anemia, thromboembolic phenomena, leukopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Estrogen receptor assay should be done before beginning therapy. Baseline CT should be performed initially and periodically thereafter for evidence of tumor regression.

INTERVENTION/EVALUATION

Monitor blood chemistry, plasma lipids. Be alert to increased bone pain, ensure adequate pain relief. Check for edema, esp. of dependent areas. Monitor for and assist with ambulation if asthenia (loss of strength, energy) or dizziness occurs. Assess for headache. Offer antiemetic for nausea/vomiting.

PATIENT/FAMILY TEACHING

- Notify physician if nausea/vomiting, asthenia (loss of strength, energy), hot flashes become unmanageable.

furosemide

TOP 200

fur-**oh**-se-myde

(Apo-Furosemide, Lasix, Novo-Semide)

BLACK BOX ALERT Large amounts can lead to profound diuresis with water and electrolyte depletion.

Do not confuse furosemide with famotidine, finasteride, fluconazole, fluoxetine, loperamide, or torsemide, or Lasix with Lidex, Lovenox, Luvox, or Luxiq.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Loop diuretic. **CLINICAL:** Diuretic (see p. 102C).

ACTION

Enhances excretion of sodium, chloride, potassium by direct action at ascending limb of loop of Henle. **Therapeutic Effect:** Produces diuresis, lowers B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–60 min	1–2 hrs	6–8 hrs
IV	5 min	20–60 min	2 hrs
IM	30 min	N/A	N/A

Well absorbed from GI tract. Protein binding: greater than 98%. Partially metabolized in liver. Primarily excreted in urine (nonrenal clearance increases in severe renal impairment). Not removed by hemodialysis. **Half-life:** 30–90 min (increased in renal/hepatic impairment, neonates).

USES

Treatment of edema associated with CHF, chronic renal failure (including nephrotic syndrome), hepatic cirrhosis, acute pulmonary edema. Treatment of hypertension, either alone or in combination with other antihypertensives.

PRECAUTIONS

Contraindications: Anuria. **Cautions:** Hepatic cirrhosis, hepatic coma, severe electrolyte depletion, prediabetes, diabetes, systemic lupus erythematosus.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Half-life increased in neonates; may require increased dosage interval. **Elderly:** May be more sensitive to hypotensive, electrolyte effects, developing circulatory collapse, thromboembolic effect. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Amphotericin B, nephrotoxic, ototoxic medications may increase risk of nephrotoxicity, ototoxicity. May increase risk of **lithium** toxicity. **Other medications causing hypokalemia** may increase risk of hypokalemia. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, BUN, uric acid. May decrease serum calcium, chloride, magnesium, potassium, sodium.

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml. **Oral Solution:** 10 mg/ml, 40 mg/5 ml. **Tablets:** 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give undiluted but is compatible with D_5W or 0.9% NaCl. • Mlay be diluted for infusion to 1–2 mg/ml (**maximum:** 10 mg/ml). • Administer each 40 mg or fraction by IV push over 1–2 min. Do not exceed administration rate of 4 mg/min for short-term intermittent infusion.

Storage • Solution appears clear, colorless. • Discard yellow solutions. • Stable for 24 hrs at room temperature when mixed with 0.9% NaCl or D_5W.

IM

• Temporary pain at injection site may be noted.

PO

• Administer on empty stomach. • Give with food to avoid GI upset, preferably

with breakfast (may prevent nocturia).
• Food may decrease diuretic effect.

IV INCOMPATIBILITIES

Ciprofloxacin (Cipro), diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), doxorubicin (Adriamycin), droperidol (Inapsine), esmolol (Brevibloc), famotidine (Pepcid), filgrastim (Neupogen), fluconazole (Diflucan), gemcitabine (Gemzar), gentamicin (Garamycin), idarubicin (Idamycin), labetalol (Trandate), meperidine (Demerol), metoclopramide (Reglan), midazolam (Versed), milrinone (Primacor), nicardipine (Cardene), ondansetron (Zofran), quinidine, thiopental (Pentothal), vecuronium (Norcuron), vinblastine (Velban), vincristine (Oncovin), vinorelbine (Navelbine).

IV COMPATIBILITIES

Aminophylline, amiodarone (Cordarone), bumetanide (Bumex), calcium gluconate, cimetidine (Tagamet), heparin, hydromorphone (Dilaudid), lidocaine, lipids, morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Edema, Heart Failure, Hypertension

PO: ADULTS, ELDERLY: Initially, 20–80 mg/dose; may increase by 20–40 mg/dose q6–8h. May titrate up to 600 mg/day in severe edematous states. **CHILDREN:** 1–6 mg/kg/day in divided doses q6–12h. **NEONATES:** 1 mg/kg/dose 1–2 times a day.

IV, IM: ADULTS, ELDERLY: 20–40 mg/dose; may increase by 20 mg/dose q1–2h. **Maximum single dose:** 160–200 mg. **CHILDREN:** 1–2 mg/kg/dose q6–12h. **Maximum:** 6 mg/kg/dose. **NEONATES:** 1–2 mg/kg/dose q12–24h.

IV Infusion: ADULTS, ELDERLY: Bolus of 20–40 mg, followed by infusion of 10–40 mg/hr; may double q2h. **Maximum:** 80–160 mg/hr. **CHILDREN:** 0.05 mg/kg/hr; titrate to desired effect. **NEONATES:** Initially, 0.2 mg/kg/hr. May increase by 0.1 mg/kg/hr q12–24h. **Maximum:** 0.4 mg/kg/hr.

SIDE EFFECTS

Expected: Increased urinary frequency/volume. **Frequent:** Nausea, dyspepsia, abdominal cramps, diarrhea or constipation, electrolyte disturbances. **Occasional:** Dizziness, light-headedness, headache, blurred vision, paresthesia, photosensitivity, rash, fatigue, bladder spasm, restlessness, diaphoresis. **Rare:** Flank pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Vigorous diuresis may lead to profound water loss/electrolyte depletion, resulting in hypokalemia, hyponatremia, dehydration. Sudden volume depletion may result in increased risk of thrombosis, circulatory collapse, sudden death. Acute hypotensive episodes may occur, sometimes several days after beginning therapy. Ototoxicity (deafness, vertigo, tinnitus) may occur, esp. in pts with severe renal impairment. Can exacerbate diabetes mellitus, systemic lupus erythematosus, gout, pancreatitis. Blood dyscrasias have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check vital signs, esp. B/P, pulse, for hypotension before administration. Assess baseline serum electrolytes, esp. for hypokalemia. Assess skin turgor, mucous membranes for hydration status; observe for edema. Assess muscle strength, mental status. Note skin temperature, moisture. Obtain baseline weight. Initiate I&O monitoring.

INTERVENTION/EVALUATION

Monitor B/P, vital signs, serum electrolytes, I&O, weight. Note extent of diuresis. Watch for changes from initial assessment (hypokalemia may result in changes in muscle strength, tremor, muscle cramps, altered mental status, cardiac arrhyth-

mias). Hyponatremia may result in confusion, thirst, cold/clammy skin.

PATIENT/FAMILY TEACHING

• Expect increased frequency, volume of urination. • Report palpitations, signs of electrolyte imbalances (noted previously), hearing abnormalities (sense of fullness in ears, tinnitus). • Eat foods high in potassium such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins. • Avoid sunlight, sunlamps.

gabapentin

TOP 200

gah-bah-**pen**-tin
(Apo-Gabapentin, Horizant, Neurontin)
Do not confuse Neurontin with Motrin, Neoral, nitrofurantoin, Noroxin, or Zarontin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Gamma-aminobutyric acid analogue. **CLINICAL:** Anticonvulsant, antineuralgic (see p. 35G).

ACTION

May increase synthesis or accumulation of gamma-aminobutyric acid (GABA) by binding to as-yet-undefined receptor sites in brain tissue. **Therapeutic Effect:** Reduces seizure activity, neuropathic pain.

PHARMACOKINETICS

Well absorbed from GI tract (not affected by food). Protein binding: less than 5%. Widely distributed. Crosses blood-brain barrier. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 5–7 hrs (increased in renal impairment, elderly).

USES

Adjunct in treatment of partial seizures (with or without secondary generalized seizures) in children 13 yrs and older and adults. Adjunct to treatment of partial seizures in children 3–12 yrs; adjunct to treatment of neuropathic pain, postherpetic neuralgia. **Horizant:** Treatment of moderate to severe primary restless legs syndrome (RLS). **OFF-LABEL:** Treatment of neuropathic pain, diabetic peripheral neuropathy, vasomotor symptoms, fibromyalgia, postop pain.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those 3 yrs and younger. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Antacids** decrease absorption. **Morphine** may increase CNS depression. **HERBAL:** **Evening primrose** may decrease seizure threshold. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May alter serum glucose, WBC count. May increase serum alkaline phosphatase, ALT, AST, bilirubin.

AVAILABILITY (Rx)

Capsules (Neurontin): 100 mg, 300 mg, 400 mg. **Oral Solution (Neurontin):** 250 mg/5 ml. **Tablets (Neurontin):** 600 mg, 800 mg.

Tablets, Extended-Release: (Horizant) 600 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals; may give with food to avoid, reduce GI upset. • If treatment is discontinued or anticonvulsant therapy is added, do so gradually over at least 1 wk (reduces risk of loss of seizure control). Swallow extended-

release tablets whole; do not cut, crush, or chew. Take with food.

INDICATIONS/ROUTES/DOSAGE

Note: When given 3 times/day, maximum time between doses should not exceed 12 hrs.

Adjunctive Therapy for Seizure Control

PO: ADULTS, ELDERLY, CHILDREN 13 YEARS AND OLDER: Initially, 300 mg 3 times a day. May titrate dosage. Range: 900–1,800 mg/day in 3 divided doses. **Maximum:** 3,600 mg/day. **CHILDREN 3–12 YRS:** Initially, 10–15 mg/kg/day in 3 divided doses. May titrate up to 25–35 mg/kg/day (for children 5–12 yrs) and 40 mg/kg/day (for children 3–4 yrs). **Maximum:** 50 mg/kg/day.

Adjunctive Therapy for Neuropathic Pain

PO: ADULTS, ELDERLY: Initially, 100 mg 3 times a day; may increase by 300 mg/day at weekly intervals. **Maximum:** 3,600 mg/day in 3 divided doses. **CHILDREN:** Initially, 5 mg/kg/dose at bedtime, followed by 5 mg/kg/dose for 2 doses on day 2, then 5 mg/kg/dose for 3 doses on day 3. Range: 8–35 mg/kg/day in 3 divided doses.

Postherpetic Neuralgia, Neuropathic Pain

PO: ADULTS, ELDERLY: 300 mg once on day 1, 300 mg twice a day on day 2, and 300 mg 3 times a day on day 3 as needed. Range: 1,800–3,600 mg/day.

RLS

PO: ADULTS, ELDERLY (HORIZANT): 600 mg once daily at 5 PM.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance:

Creatinine Clearance	Dosage (Immediate-release)	(Extended-release)
60 ml/min or higher	300–1,200 mg tid	1,800 mg once/day
30–59 ml/min	200–700 mg q12h	600–1,800 mg once/day
16–29 ml/min	200–700 mg/day	Not recommended
Less than 16 ml/min	100–300 mg/day	Not recommended
Hemodialysis	125–300 mg after each 4-hr hemodialysis session	

Horizant not recommended in pts with creatinine clearance less than 30 ml/min or pts on hemodialysis.

SIDE EFFECTS

Frequent (19%–10%): Fatigue, drowsiness, dizziness, ataxia. **Occasional (8%–3%):** Nystagmus (rapid eye movements), tremor, diplopia (blurred vision), rhinitis, weight gain. **Rare (less than 2%):** Anxiety, dysarthria (speech difficulty), memory loss, dyspepsia, pharyngitis, myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal may increase seizure frequency, increased risk of suicidal behavior/thoughts. Overdosage may result in slurred speech, drowsiness, lethargy, diarrhea.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (type, onset, intensity, frequency, duration, LOC). Assess location, intensity of neuralgia/neuropathic pain. Routine laboratory monitoring of serum levels unnecessary for safe use.

INTERVENTION/EVALUATION

Provide safety measures as needed. Monitor seizure frequency/duration, renal function, weight, behavior in children. Monitor signs/symptoms of depression, suicidal tendencies, other unusual behavior.

PATIENT/FAMILY TEACHING

- Take gabapentin only as prescribed; do not abruptly stop taking drug (may in-

crease seizure frequency). • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Carry identification card/bracelet to note seizure disorder/anticonvulsant therapy. • Report suicidal ideation, depression, unusual behavioral changes (esp. with changes in dosage), worsening of seizure activity or loss of seizure control.

galantamine

gal-**an**-ta-meen
(Razadyne, Razadyne ER, Reminyl, Reminyl ER)
Do not confuse Razadyne with Rozerem, or Reminyl with Amaryl.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cholinesterase inhibitor. **CLINICAL:** Antidementia.

ACTION

Elevates acetylcholine concentrations by slowing degeneration of acetylcholine released by still intact cholinergic neurons (Alzheimer's disease involves degeneration of cholinergic neuronal pathways). **Therapeutic Effect:** Slows progression of Alzheimer's disease.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: 18%. Distributed to blood cells; binds to plasma proteins, mainly albumin. Metabolized in liver. Excreted in urine. **Half-life:** 7 hrs.

USES

Treatment of mild to moderate dementia of Alzheimer's type. **OFF-LABEL:** Severe dementia associated with Alzheimer's disease, mild to moderate dementia associated with Parkinson's disease, Lewy body dementia.

PRECAUTIONS

Contraindications: Severe hepatic/renal impairment. **Cautions:** Moderate renal/hepatic impairment, history of ulcer disease, asthma, COPD, bladder outflow obstruction, supraventricular cardiac conduction conditions (except with pacemaker), seizure disorder, concurrent medications that slow cardiac conduction through SA or AV node.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Not prescribed for this pt population. **Elderly:** No age-related precautions noted, but use is not recommended in those with severe hepatic/renal impairment (creatinine clearance less than 9 ml/min).

INTERACTIONS

DRUG: May interfere with the effects of **bethanechol, succinylcholine. Cimetidine, ketoconazole, paroxetine** may increase concentration. **HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Oral Solution (Razadyne): 4 mg/ml. **Tablets (Razadyne):** 4 mg, 8 mg, 12 mg.

Capsules (Extended-Release [Razadyne ER]): 8 mg, 16 mg, 24 mg.

ADMINISTRATION/HANDLING

PO

• Give tablet or solution with morning and evening meals. • Mix oral solution with nonalcoholic beverage, take immediately. • Capsule should be given at breakfast.

INDICATIONS/ROUTES/DOSAGE

Alzheimer's Disease

PO *(Immediate-Release)*: ADULTS, ELDERLY: Initially, 4 mg twice a day (8 mg/day). After a minimum of 4 wks (if well

tolerated), may increase to 8 mg twice a day (16 mg/day). After another 4 wks, may increase to 12 mg twice daily (24 mg/day). Range: 16–24 mg/day in 2 divided doses.

PO *(Extended-Release)*: ADULTS, ELDERLY: Initially, 8 mg once daily for 4 wks; then increase to 16 mg once daily for 4 wks or longer. If tolerated, may increase to 24 mg once daily. Range: 16–24 mg once daily.

Dosage in Renal/Hepatic Impairment

For moderate impairment, maximum dosage is 16 mg/day. Drug is not recommended for pts with severe impairment.

SIDE EFFECTS

Frequent (17%–7%): Nausea, vomiting, diarrhea, anorexia, weight loss. **Occcasional (5%–4%):** Abdominal pain, insomnia, depression, headache, dizziness, fatigue, rhinitis. **Rare (less than 3%):** Tremors, constipation, confusion, cough, anxiety, urinary incontinence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may cause cholinergic crisis (increased salivation, lacrimation, urination, defecation, bradycardia, hypotension, muscle weakness). Treatment aimed at generally supportive measures, use of anticholinergics (e.g., atropine).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess cognitive, behavioral, functional deficits of pt. Assess serum hepatic/renal function tests.

INTERVENTION/EVALUATION

Monitor cognitive, behavioral, functional status of pt. Evaluate EKG, periodic rhythm strips in pts with underlying arrhythmias. Assess for evidence of GI disturbances (nausea, vomiting, diarrhea, anorexia, weight loss).

PATIENT/FAMILY TEACHING

• Take with meals (reduces risk of nausea). • Avoid tasks that require alertness, motor skills until response to drug is established. • Report persistent GI disturbances, excessive salivation, diaphoresis, excessive tearing, excessive fatigue, insomnia, depression, dizziness, increased muscle weakness.

ganciclovir

gan-**sye**-kloe-veer
(Cytovene, Vitrasert, Zirgan)

BLACK BOX ALERT Toxicity presents as neutropenia, thrombocytopenia, anemia. Studies suggest carcinogenic and teratogenic effects, inhibition of spermatogenesis.

Do not confuse Cytovene with Cytosar, or ganciclovir with acyclovir.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic nucleoside. **CLINICAL:** Antiviral (see p. 68C).

ACTION

Competes with viral DNA polymerase and incorporation into growing viral DNA chains. **Therapeutic Effect:** Interferes with DNA synthesis, viral replication.

PHARMACOKINETICS

Widely distributed (including CSF and ocular tissue). Protein binding: 1%–2%. Undergoes minimal metabolism. Excreted primarily in urine. Removed by hemodialysis. **Half-life:** 1.7–5.8 hrs (increased in renal impairment).

USES

Parenteral: Treatment of cytomegalovirus (CMV) retinitis in immunocompromised pts (e.g., HIV), prophylaxis of CMV infection in transplant pts. **Implant:** Treatment of CMV retinitis. **Oph-**

thalmic: Treatment of acute herpetic keratitis. **OFF-LABEL:** CMV retinitis.

PRECAUTIONS

Contraindications: Absolute neutrophil count less than 500/mm^3, platelet count less than 25,000/mm^3, hypersensitivity to acyclovir, ganciclovir. **Cautions:** Pts with neutropenia, thrombocytopenia, renal impairment; children (long-term safety not determined due to potential for long-term carcinogenic, adverse reproductive effects).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Effective contraception should be used during therapy; ganciclovir should not be used during pregnancy. Breast-feeding should be discontinued; may be resumed no sooner than 72 hrs after the last dose of ganciclovir. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bone marrow depressants may increase myelosuppression. **Imipenem** may increase risk for generalized seizures. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum creatinine, alkaline phosphatase, bilirubin, AST, ALT.

AVAILABILITY (Rx)

Implant (Vitrasert): 4.5 mg. **Injection, Powder for Reconstitution (Cytovene):** 500 mg. **Ophthalmic Gel (Zirgan):** 0.15%.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 500-mg vial with 10 ml Sterile Water for Injection to provide concentration of 50 mg/ml; do **not** use Bacteriostatic Water (contains parabens, which is incompatible with ganciclovir). • Further dilute with 250–1,000 ml D_5W, 0.9% NaCl to provide a concentration of 10 mg/ml or less for infusion.

Rate of Administration • Administer only by IV infusion over at least 1 hr. • Do not give by IV push or rapid IV infusion (increases risk of toxicity); protect from infiltration (high pH causes severe tissue irritation). • Use large veins to permit rapid dilution, dissemination of ganciclovir (minimizes phlebitis); central venous ports may reduce catheter-associated infection.

Storage • Store vials at room temperature. Do not refrigerate. • Reconstituted solution in vial is stable for 12 hrs at room temperature. • After dilution, stable for 5 days at room tempearture or if refrigerated. • Discard if precipitate forms, discoloration occurs. • Avoid exposure to skin, eyes, mucous membranes. • Use latex gloves, safety glasses during preparation/handling of solution. • Avoid inhalation. • If solution contacts skin or mucous membranes, wash thoroughly with soap and water; rinse eyes thoroughly with plain water.

IV INCOMPATIBILITIES

Aldesleukin (Proleukin), amifostine (Ethyol), aztreonam (Azactam), cefepime (Maxipime), cytarabine (ARA-C), doxorubicin (Adriamycin), fludarabine (Fludara), foscarnet (Foscavir), gemcitabine (Gemzar), lipids, ondansetron (Zofran), piperacillin and tazobactam (Zosyn), sargramostim (Leukine), total parenteral nutrition (TPN), vinorelbine (Navelbine).

IV COMPATIBILITIES

Amphotericin B, enalapril (Vasotec), filgrastim (Neupogen), fluconazole (Diflucan), granisetron (Kytril), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Cytomegalovirus (CMV) Retinitis

IV: ADULTS, CHILDREN 3 MOS AND OLDER: 10 mg/kg/day in divided doses q12h for 14–21 days, then 5 mg/kg/day as a single daily dose or 6 mg/kg 5 days a wk.

Prevention of CMV in Transplant Pts

IV: ADULTS, CHILDREN: 10 mg/kg/day in divided doses q12h for 7–14 days, then 5 mg/kg/day as a single daily dose dependent on clinical condition and degree of immunosuppression.

Other CMV Infections

IV: ADULTS: Initially, 10 mg/kg/day in divided doses q12h for 14–21 days, then 5 mg/kg/day as a single daily dose. **CHILDREN:** Initially, 10 mg/kg/day in divided doses q12h for 14–21 days, then 5 mg/kg/day as a single daily dose.

Intravitreal Implant: ADULTS: 1 implant q5–8mos plus oral ganciclovir 1–1.5 g 3 times a day. **CHILDREN 9 YRS AND OLDER:** 1 implant q5–8mos plus oral ganciclovir (30 mg/dose q8h).

Acute Herpetic Keratitis

Ophthalmic: ADULTS, ELDERLY: 1 drop 5 times/day until ulcer heals, then 1 drop 3 times/day for 7 days.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

SIDE EFFECTS

Frequent: Diarrhea (41%), fever (40%), nausea (25%), abdominal pain (17%), vomiting (13%). **Occasional (11%–6%):** Diaphoresis, infection, paresthesia, flatulence, pruritus. **Rare (4%–2%):** Headache, stomatitis, dyspepsia, phlebitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity occurs commonly: leukopenia (41%–29%), anemia (25%–19%). Intraocular implant occasionally results in visual acuity loss, vitreous hemorrhage, retinal detachment. GI hemorrhage occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate hematologic baseline. Perform baseline ophthalmic exam. Obtain specimens for support of differential diagnosis (urine, feces, blood, throat) because retinal infection is usually due to hematogenous dissemination.

INTERVENTION/EVALUATION

Monitor I&O, ensure adequate hydration (minimum 1,500 ml/24 hrs). Diligently evaluate hematology reports for neutropenia, thrombocytopenia, decreased platelets. Obtain periodic ophthalmic examinations. Question pt regarding visual acuity, therapeutic improvement, complications. Assess for rash, pruritus.

PATIENT/FAMILY TEACHING

• Ganciclovir provides suppression, not cure, of cytomegalovirus (CMV) retinitis. • Frequent blood tests, eye exams are necessary during therapy because of toxic nature of drug. • Report any new symptom promptly. • May temporarily or

	Dosage	
Creatinine Clearance	**IV Induction**	**IV Maintenance**
50–69 ml/min	2.5 mg/kg q12h	2.5 mg/kg q24h
25–49 ml/min	2.5 mg/kg q24h	1.25 mg/kg q24h
10–24 ml/min	1.25 mg/kg q24h	0.625 mg/kg q24h
Less than 10 ml/min	1.25 mg/kg 3 times/wk	0.625 mg/kg 3 times/wk
Hemodialysis (give after HD on HD days)	1.25 mg/kg q48–72h	0.625 mg/kg q48–72h
Peritoneal dialysis	1.25 mg/kg 3 times/wk	0.625 mg/kg 3 times/wk
Continuous renal replacement therapy		
Continuous venovenous hemofiltration	2.5 mg/kg q24h	1.25 mg/kg q24h
Continuous venovenous hemodialysis/ continuous venovenous hemodiafiltration	2.5 mg/kg q12h	2.5 mg/kg q24h

permanently inhibit sperm production in men, suppress fertility in women. • Barrier contraception should be used during and for 90 days after therapy because of mutagenic potential.

gefitinib

geh-**fit**-in-ib
(Iressa)
Do not confuse gefitinib with erlotinib, dasatinib, imatinib, or lapatinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic (see p. 83C).

ACTION

Inhibits epidermal growth factor receptor–tyrosine kinase (EGFR-TK), a key driver in tumor cell growth. Interrupts angiogenesis and metastasis. **Therapeutic Effect:** Inhibits tumor cell proliferation and survival.

PHARMACOKINETICS

Slow absorption after PO administration. Peak plasma levels in 3–7 hrs. Extensively distributed into tissue. Protein binding: 90%. Metabolized in liver. Excreted primarily in feces (86%). **Half-life:** 48 hrs.

USES

Treatment of locally advanced or metastatic non–small-cell lung cancer (NSCLC) with epidermal growth factor receptor–tyrosine kinase (EGFR-TK) activating mutations. **OFF-LABEL:** First-line treatment of NSCLC with known EGFR mutation.

PRECAUTIONS

◀ALERT▶ Product contains lactose. Not recommended for pts who are lactose intolerant.

Contraindications: None known. **Cautions:** Hepatic impairment, lung disease, ocular disease, concurrent administration of CYP3A4 inducers and inhibitors.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy. Unknown if crosses placenta or is distributed in breast milk. Nursing mothers must discontinue either breastfeeding or drug regimen. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CYP3A4 inhibitors** (e.g., **clarithromycin, ketoconazole**) may increase concentration. **CYP3A4 inducers** (e.g., **phenytoin, rifampin**) may decrease concentration. **H_2 antagonists** (e.g., **ranitidine**) may decrease concentration. May increase bleeding risk with **warfarin.** **HERBAL:** **St. John's wort** may decrease effectiveness. **FOOD:** Avoid **grapefruit** or **grapefruit juice.** **LAB VALUES:** May increase serum AST, ALT, bilirubin, urine protein.

AVAILABILITY (Rx)

Tablets: 250 mg.

ADMINISTRATION/HANDLING

- May give without regard to meals.
- Avoid grapefruit or grapefruit juice.
- Do not crush or chew. Swallow whole or administer as dispersion in water. Gently swirl glass for up to 20 min and immediately ingest once dispersed.

INDICATIONS/ROUTES/DOSAGE

Non–Small-Cell Lung Cancer
PO: ADULTS: 250 mg daily.

SIDE EFFECTS

Frequent: Diarrhea, anorexia, hematuria, epistaxis, vomiting, nausea, stomatitis, rash, pruritus, asthenia (loss of strength, energy). **Occasional:** Conjunctivitis, blepharitis, dry eye, dehydration, dry

mouth, alopecia, pyrexia. **Rare:** Aberrant eyelash growth, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity, pancreatitis, Stevens-Johnson syndrome (toxic epidermal necrolysis), cutaneous vasculitis, cystitis, corneal ulcer/erosion, ocular bleeding, hypothyroidism. Interstitial lung disease (ILD) reported in 1.3% of pts; must consider interrupting treatment and promptly investigate. Allergic reactions including angioedema, urticaria reported in 1.5%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC with differential, CMP, hepatic function test, thyroid function test, PT/INR (if taking warfarin), EGRF mutation serostatus. Question possibility of pregnancy or plans of breastfeeding. Receive full medication history including vitamins, minerals, herbal products. Assess visual acuity.

INTERVENTION/EVALUATION

Assess vital signs, O_2 saturation routinely. Routinely monitor CBC with differential, LFTs. Worsening cough, fever, or shortness of breath may indicate interstitial lung disease. Consider ophthalmologic evaluation for vision changes. Monitor for bruising, hematuria, jaundice, right upper abdominal pain, weight loss, or acute infection (fever, diaphoresis, lethargy, productive cough). Monitor for skin lesions.

PATIENT/FAMILY TEACHING

• Blood levels will be drawn routinely. • Report urine changes, bloody or clay-colored stools, upper abdominal pain, nausea, vomiting, bruising, fever, cough, difficulty breathing. • Immediately report any newly prescribed medications, suspected pregnancy, vision changes (eye pain, bleeding, light hurting your eyes), or persistent diarrhea, dehydration. • Avoid alcohol. • Do not eat grapefruit or drink grapefruit juice.

gemcitabine

HIGH ALERT

jem-**sye**-ta-been
(Gemzar)
Do not confuse Gemzar with Zinecard.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic (see p. 84C).

ACTION

Inhibits ribonucleotide reductase, the enzyme necessary for catalyzing DNA synthesis. **Therapeutic Effect:** Produces death of cells undergoing DNA synthesis.

PHARMACOKINETICS

Not extensively distributed after IV infusion (increased with length of infusion). Protein binding: less than 10%. Metabolized intracellularly by nucleoside kinases. Excreted primarily in urine as metabolite. **Half-life:** Influenced by duration of infusion. Infusion 1 hr or less: 42–94 min; infusion 3–4 hrs: 4–10.5 hrs.

USES

Metastatic breast cancer in combination with paclitaxel. Treatment of locally advanced (stage II, III) or metastatic (stage IV) adenocarcinoma of pancreas. Indicated for pts previously treated with 5-fluorouracil. Monotherapy or in combination with cisplatin for treatment of locally advanced or metastatic non–small-cell lung cancer (NSCLC), ovarian cancer. **OFF-LABEL:** Treatment of biliary tract carcinoma, bladder carcinoma, germ cell tumors (e.g., testicular), Hodgkin's lymphoma, non-Hodgkin's lymphoma, acute leukemia; cervical, head, and neck cancer.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, pregnancy, elderly, concurrent radiation therapy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Increased risk of hematologic toxicity.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase risk of myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, creatinine, AST, ALT. May decrease Hgb, Hct, leukocyte count, platelet count.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 200-mg, 1-g vials.

ADMINISTRATION/HANDLING

IV

Reconstitution • Use gloves when handling/preparing gemcitabine. • Reconstitute 200-mg or 1-g vial with 0.9% NaCl injection without preservative (5 ml or 25 ml, respectively) to provide concentration of 38 mg/ml. • Shake to dissolve.
Rate of Administration • May give without further dilution. • May be further diluted with 50–500 ml 0.9% NaCl to a concentration as low as 0.1 mg/ml. • Infuse over 30 min. • Infusion time greater than 60 min increases toxicity.
Storage • Store at room temperature (refrigeration may cause crystallization). • Reconstituted solution is stable for 24 hrs at room temperature. Do not refrigerate.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B (Fungizone), cefotaxime (Claforan), furosemide (Lasix), ganciclovir (Cytovene), imipenem and cilastatin (Primaxin), irinotecan (Camptosar), methotrexate, methylprednisolone (Solu-Medrol), mitomycin (Mutamycin), piperacillin/tazobactam (Zosyn), prochlorperazine (Compazine).

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, dexamethasone (Decadron), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), granisetron (Kytril), heparin, hydrocortisone (Solu-Cortef), lorazepam (Ativan), ondansetron (Zofran), potassium.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage is individualized based on clinical response, tolerance to adverse effects. When used in combination therapy, consult specific protocols for optimum dosage, sequence of drug administration.

Breast Cancer

IV: ADULTS, ELDERLY: 1,250 mg/m^2 over 30 min on days 1 and 8 of each 21-day cycle (in combination with paclitaxel).

Non–Small-Cell Lung Cancer (NSCLC)

IV: ADULTS, ELDERLY, CHILDREN: 1,000 mg/m^2 on days 1, 8, and 15, repeated every 28 days; or 1,250 mg/m^2 on days 1 and 8. Repeat every 21 days.

Ovarian Cancer

IV: ADULTS, ELDERLY: 1,000 mg/m^2 on days 1 and 8 of each 21-day cycle (in combination with carboplatin).

Pancreatic Cancer

IV: ADULTS: 1,000 mg/m^2 once weekly for up to 7 wks or until toxicity necessitates decreasing dosage or withholding the dose, followed by 1 wk of rest.

Subsequent cycles should consist of once-weekly dose for 3 consecutive wks out of every 4 wks. For pts completing cycles at 1,000 mg/m^2, increase dose to 1,250 mg/m^2 as tolerated. Dose for next cycle may be increased to 1,500 mg/m^2.

Dosage Reduction Guidelines

Pancreatic Cancer, Non–Small-Cell Lung Cancer (NSCLC)

Dosage adjustments should be based on granulocyte count and platelet count, as follows:

Absolute Granulocyte Counts (cells/mm^3)	Platelet Count (cells/mm^3)	% of Full Dose
1,000 and	100,000	100
500–999 or	50,000–99,000	75
Less than 500 or	Less than 50,000	Hold

Breast Cancer

Absolute Granulocyte Counts (cells/mm^3)	Platelet Count (cells/mm^3)	% of Full Dose
Equal to or greater than 1,200 and	Greater than 75,000	100
1,000–1,199 or	50,000–75,000	75
700–999 and	Equal to or greater than 50,000	50
Less than 700 or	Less than 50,000	Hold

Ovarian Cancer

Absolute Granulocyte Counts (cells/mm^3)	Platelet Count (cells/mm^3)	% of Full Dose
1,500 or greater and	100,000 or greater	100
1,000–1,499 and/or	75,000–99,999	50
Less than 1,000 and/or	Less than 75,000	Hold

SIDE EFFECTS

Frequent: Nausea, vomiting (69%); generalized pain (48%); fever (41%); mild to moderate pruritic rash (30%); mild to moderate dyspnea, constipation (23%); peripheral edema (20%). **Occasional (19%–10%):** Diarrhea, petechiae, alopecia, stomatitis, infection, drowsiness, paresthesia. **Rare:** Diaphoresis, rhinitis, insomnia, malaise.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe myelosuppression (anemia, thrombocytopenia, leukopenia) occurs commonly.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, platelets, renal/hepatic function tests should be performed before starting therapy and periodically thereafter (CBC, platelets before each dose). Drug should be suspended or dosage modified if myelosuppression is detected.

INTERVENTION/EVALUATION

Assess all lab results before giving each dose. Monitor for dyspnea, fever, pruritic rash, dehydration. Assess oral mucosa for erythema, ulceration at inner margin of lips, sore throat, difficulty swallowing (stomatitis). Assess skin for rash. Monitor for, report diarrhea. Provide antiemetics as needed.

PATIENT/FAMILY TEACHING

- Avoid crowds, exposure to infection.
- Maintain fastidious oral hygiene.
- Promptly report fever, sore throat, signs of local infection, easy bruising, rash, yellowing of skin or eyes.
- Contact physician if nausea or vomiting continues at home.

gemfibrozil

jem-**fye**-broe-zil
(Apo-Gemfibrozil, Lopid, Novo-Gemfibrozil)

Do not confuse Lopid with Levbid, Lipitor, Lodine, or Slo-Bid.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fibric acid derivative. **CLINICAL:** Antihyperlipidemic (see p. 57G).

ACTION

Inhibits lipolysis of fat in adipose tissue; decreases hepatic uptake of free fatty acids (reduces hepatic triglyceride production). Inhibits synthesis of VLDL carrier apolipoprotein B. **Therapeutic Effect:** Lowers serum cholesterol, triglycerides (decreases VLDL, LDL; increases HDL).

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1.5 hrs.

USES

Treatment of hypertriglyceridemia in types IV and V hyperlipidemia for pts who are at greater risk for pancreatitis and those who have not responded to dietary intervention. Reduce risk of coronary heart disease (CHD) development in pts without symptoms who have decreased HDL, increased LDL, increased triglycerides.

PRECAUTIONS

Contraindications: Hepatic dysfunction (including primary biliary cirrhosis), preexisting gallbladder disease, severe renal dysfunction, concurrent use with repaglinide. **Cautions:** Concurrent use with statins, mild to moderate renal impairment. anticoagulant therapy (e.g., warfarin).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Decision to discontinue nursing or drug should be based on potential for serious adverse effects. **Pregnancy Category C. Children:** Not recommended in those younger than 2 yrs (cholesterol necessary for normal development). **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Statins may increase risk for myopathy/rhabdomyolysis. May increase effect of **repaglinide, warfarin. Bile acid–binding resins** (e.g., **colestipol**) may decrease concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, creatine kinase, LDH, AST, ALT. May decrease Hgb, Hct, leukocyte counts, serum potassium.

AVAILABILITY (Rx)

Tablets: 600 mg.

ADMINISTRATION/HANDLING

PO

- Give 30 min before morning and evening meals.

INDICATIONS/ROUTES/DOSAGE

Hyperlipidemia

PO: ADULTS, ELDERLY: 600 mg twice daily 30 min before breakfast and dinner.

SIDE EFFECTS

Frequent (20%): Dyspepsia. **Occasional (10%–2%):** Abdominal pain, diarrhea, nausea, vomiting, fatigue. **Rare (less than 2%):** Constipation, acute appendicitis, vertigo, headache, rash, pruritus, altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cholelithiasis, cholecystitis, acute appendicitis, pancreatitis, malignancy occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain diet history, esp. fat/alcohol consumption. Assess baseline lab results: serum glucose, triglyceride, cholesterol, hepatic function tests; CBC.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor LDL, VLDL, serum triglyceride, cholesterol lab results for therapeutic response. Assess for rash, pruritus. Check for headache, dizziness. Monitor hepatic function, hematology tests. Assess for pain, esp. right upper quadrant or epigastric pain suggestive of adverse gallbladder effects. Monitor serum glucose in those receiving insulin, oral antihyperglycemics.

PATIENT/FAMILY TEACHING

• Follow special diet (important part of treatment). • Take before meals. • Periodic lab tests are essential part of therapy. • Notify physician if dizziness, blurred vision, abdominal pain, diarrhea, nausea, vomiting becomes pronounced.

gemifloxacin

jem-ih-**flox**-ah-sin
(Factive)

BLACK BOX ALERT Increased risk of tendonitis, tendon rupture.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fluoroquinolone. **CLINICAL:** Antibiotic (see p. 25C).

ACTION

Inhibits the enzyme DNA gyrase in susceptible microorganisms, interfering with bacterial cell replication, repair. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Rapidly, well absorbed from GI tract. Protein binding: 70%. Widely distributed. Penetrates well into lung tissue and fluid. Undergoes limited metabolism in liver. Primarily excreted in feces; lesser amount eliminated in urine. Partially removed by hemodialysis. **Half-life:** 4–12 hrs.

USES

Treatment of susceptible infections due to *S. pneumoniae, H. influenzae, H. parainfluenzae, M. catarrhalis, M. pneumoniae, C. pneumoniae, K. pneumoniae* including acute bacterial exacerbation of chronic bronchitis, community-acquired pneumonia of mild to moderate severity. **OFF-LABEL:** Acute sinusitis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment, rheumatoid arthritis, history of QT prolongation, hypokalemia, hypomagnesemia, concurrent medications that prolong QT interval, seizure disorder, significant bradycardia, acute myocardial ischemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential for teratogenic effects. Substitute formula feedings for breast-feedings. **Pregnancy Category C. Children:** Safety and efficacy not established in those 18 yrs and younger. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Aluminum-, magnesium-containing antacids, didanosine, iron preparations, sucralfate** may decrease absorption. **Antipsychotics, class IA and class III antiarrhythmics, erythromycin, tricyclic antidepressants** may increase risk of prolonged QT interval, life-threatening arrhythmias. **HERBAL:** **Dong quai, St. John's wort** may increase risk of photosensitization. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum alkaline phosphatase, bilirubin, LDH, creatinine, AST, ALT. May alter platelets, neutrophils, Hgb, Hct, RBCs.

AVAILABILITY (Rx)

Tablets: 320 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals, milk, or calcium supplements. • Do not crush, break tablets. • Take 3 hrs before or 2 hrs after supplements containing iron, zinc, or magnesium.

INDICATIONS/ROUTES/DOSAGE

Acute Bacterial Exacerbation of Chronic Bronchitis

PO: ADULTS, ELDERLY: 320 mg once a day for 5 days.

Community-Acquired Pneumonia

PO: ADULTS, ELDERLY: 320 mg once a day for 5–7 days.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine Clearance	Dosage
Greater than 40 ml/min	320 mg once a day
40 ml/min or less	160 mg once a day

SIDE EFFECTS

Occasional (4%–2%): Diarrhea, rash, nausea. **Rare (1% or less):** Headache, abdominal pain, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Hypersensitivity reaction, including photosensitivity (rash, pruritus, blisters, edema, burning skin) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity to fluoroquinolone antibiotics.

INTERVENTION/EVALUATION

Monitor for signs/symptoms of infection. Assess WBC count, renal/hepatic function tests. Encourage adequate fluid intake. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Take with 8 oz of water, without regard to food. • Drink several glasses of water between meals. • Complete full course of therapy. • Take 3 hrs before or 2 hrs after supplements containing iron, zinc, or magnesium, antacids.

gentamicin

jen-ta-**mye**-sin
(Alcomicin, Garamycin, Gentak, Gentasol)

BLACK BOX ALERT Aminoglycoside antibiotics may cause neurotoxicity, nephrotoxicity. Risk of ototoxicity directly proportional to dosage, duration of treatment; ototoxicity usually is irreversible, precipitated by tinnitus, vertigo.

Do not confuse gentamicin with vancomycin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aminoglycoside. **CLINICAL:** Antibiotic (see p. 21C).

ACTION

Irreversibly binds to protein of bacterial ribosomes. **Therapeutic Effect:** Interferes with protein synthesis of susceptible microorganisms. Bactericidal.

PHARMACOKINETICS

Rapid, complete absorption after IM administration. Protein binding: less than 30%. Widely distributed (does not cross blood-brain barrier, low concentrations in CSF). Excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 2–4 hrs (increased in renal impairment,

neonates; decreased in cystic fibrosis, burn, or febrile pts).

USES

Parenteral: Treatment of infections susceptible to *Pseudomonas* and other gram-negative organisms including skin/skin structure, bone, joint, respiratory tract, intra-abdominal, complicated urinary tract, acute pelvic infections; burns; septicemia; meningitis. **Ophthalmic:** Ointment or solution for superficial eye infections.

G

PRECAUTIONS

Contraindications: Hypersensitivity to other aminoglycosides (cross-sensitivity) or their components. **Cautions:** Elderly, neonates due to renal insufficiency or immaturity; neuromuscular disorders (potential for respiratory depression), prior hearing loss, vertigo, renal impairment, hypocalcemia, myasthenia gravis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; unknown if distributed in breast milk. **Pregnancy Category C. Children:** Caution in neonates: Immature renal function increases half-life and toxicity. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Nephrotoxic, ototoxic medications** may increase risk of nephrotoxicity, ototoxicity. May increase neuromuscular blockade with concurrent use of **neuromuscular blockers.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase BUN, serum creatinine, bilirubin, LDH, AST, ALT. May decrease serum calcium, magnesium, potassium, sodium. **Therapeutic serum level:** peak: 4–10 mcg/ml; trough: 0.5–2 mcg/ml. **Toxic serum level:** peak: greater than 10 mcg/ml; trough: greater than 2 mcg/ml.

AVAILABILITY (Rx)

Injection, Infusion: 60 mg/50 ml, 60 mg/100 ml, 80 mg/50 ml, 80 mg/100 ml, 100 mg/50 ml, 100 mg/100 ml. **Injection, Solution:** 10 mg/ml, 40 mg/ml. **Ointment, Ophthalmic:** 0.3%. **Solution, Ophthalmic (Gentak, Gentasol):** 0.3%.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute with 50–100 ml D_5W or 0.9% NaCl. Amount of diluent for infants, children depends on individual needs.

Rate of Administration • Infuse over 30–60 min for adults, older children; over 60–120 min for infants, young children.

Storage • Store vials at room temperature. • Solution appears clear or slightly yellow. • Intermittent IV infusion (piggyback) is stable for 24 hrs at room temperature. • Discard if precipitate forms.

IM

• To minimize discomfort, give deep IM slowly. • Less painful if injected into gluteus maximus than lateral aspect of thigh.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place prescribed number of drops or ¼–½ inch ointment into pocket. Instruct pt to close eye gently for 1–2 min (so medication will not be squeezed out of the sac). • **Solution:** Instruct pt to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption. • **Ointment:** Instruct pt to roll eyeball to increase contact area of drug to eye. • Remove excess solution or ointment around eye with tissue.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotec), furosemide (Lasix), heparin, hetastarch (Hespan), idarubicin (Idamycin), indomethacin (Indocin), propofol (Diprivan).

IV COMPATIBILITIES

Amiodarone (Cordarone), diltiazem (Cardizem), enalapril (Vasotec), filgrastim (Neupogen), hydromorphone (Dilaudid), insulin, lipids, lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, multivitamins, total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Space parenteral doses evenly around the clock. Dosage based on ideal body weight. Peak, trough levels are determined periodically to maintain desired serum concentrations and minimize risk of toxicity.

Usual Parenteral Dosage

IV, IM: ADULTS, ELDERLY: 3–7.5 mg/kg/day in divided doses q8h or 4–7 mg/kg once a day. **CHILDREN 5–12 YRS:** 2–2.5 mg/kg/dose q8h. **CHILDREN YOUNGER THAN 5 YRS:** 2.5 mg/kg/dose q8h. **NEONATES:** 2.5 mg/kg/dose q8–24h.

Hemodialysis

IV, IM: ADULTS, ELDERLY: 0.5–0.7 mg/kg/dose after dialysis. **CHILDREN:** 1.25–1.75 mg/kg/dose after dialysis.

Usual Ophthalmic Dosage

Ophthalmic Ointment: ADULTS, ELDERLY: Apply ½-inch strip to conjunctiva 2–4 times/day.

Ophthalmic Solution: ADULTS, ELDERLY, CHILDREN: 1–2 drops q2–4h up to 2 drops/hr.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
41–60 ml/min	q12h
20–40 ml/min	q24h
Less than 20 ml/min	Monitor levels to determine dosage interval

SIDE EFFECTS

Occasional: IM: Pain, induration at injection site. **IV:** Phlebitis, thrombophlebitis, hypersensitivity reactions (fever, pruritus, rash, urticaria). **Ophthalmic:** Burning, tearing, itching, blurred vision. **Rare:** Alopecia, hypertension, fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Nephrotoxicity (increased BUN, serum creatinine; decreased creatinine clearance) may be reversible if drug is stopped at first sign of symptoms. Irreversible ototoxicity (tinnitus, dizziness, diminished hearing), neurotoxicity (headache, dizziness, lethargy, tremor, visual disturbances) occur occasionally. Risk increases with higher dosages, prolonged therapy, or if solution is applied directly to mucosa. Superinfections, particularly with fungi, may result from bacterial imbalance via any route of administration. Ophthalmic application may cause paresthesia of conjunctiva, mydriasis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Dehydration must be treated before beginning parenteral therapy. Establish baseline hearing acuity. Question for history of allergies, esp. aminoglycosides, sulfites (parabens for topical/ophthalmic routes).

INTERVENTION/EVALUATION

Monitor I&O (maintain hydration), urinalysis (casts, RBCs, WBCs, decrease in specific gravity). Be alert to ototoxic, neurotoxic symptoms (see Adverse Effects/Toxic Reactions). Check IM injection site for induration. Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Assess for rash (**Ophthalmic:** redness, burning, itching, tearing). Be alert for superinfection (genital/anal pruritus, changes in oral mucosa, diarrhea). When treating pts with neuromuscular disorders, assess respiratory response carefully. **Therapeutic serum level:** peak: 4–10 mcg/ml; peak levels are 2–3 times greater with once-daily dosing trough: 0.5–2 mcg/ml. **Toxic se-**

rum level: peak: greater than 10 mcg/ml; trough: greater than 2 mcg/ml.

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Blurred vision, tearing may occur briefly after each ophthalmic dose. • Notify physician if hearing, visual, balance, urinary problems occur, even after therapy is completed. • **Ophthalmic:** Contact physician if tearing, redness, irritation continues.

glatiramer

gla-**tir**-ah-mer
(Copaxone)
Do not confuse Copaxone with Compazine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunosuppressive. **CLINICAL:** Neurologic agent for multiple sclerosis.

ACTION

May act by modifying immune processes thought to be responsible for pathogenesis of multiple sclerosis. **Therapeutic Effect:** Slows progression of multiple sclerosis.

PHARMACOKINETICS

Substantial fraction of glatiramer is hydrolyzed locally. Some fraction of injected material enters lymphatic circulation, reaching regional lymph nodes; some may enter systemic circulation intact.

USES

Treatment of relapsing, remitting multiple sclerosis.

PRECAUTIONS

Contraindications: Hypersensitivity to glatiramer, mannitol. **Cautions:** Pts exhibiting immediate postinjection reaction (flushing, chest pain, palpitations, anxiety, dyspnea, urticaria).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Information not available.

INTERACTIONS

DRUG: None significant. **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml in prefilled syringes.

ADMINISTRATION/HANDLING

Subcutaneous

• Refrigerate syringes (bring to room temperature before use). • May be stored at room temperature for up to 1 mo. • Avoid heat, intense light. • Inject into deltoid region, abdomen, gluteus maximus, or lateral aspect of thigh. • Prefilled syringe suitable for single use only; discard unused portions.

INDICATIONS/ROUTES/DOSAGE

Multiple Sclerosis

Subcutaneous: ADULTS, ELDERLY: 20 mg once a day.

SIDE EFFECTS

Expected (73%–40%): Pain, erythema, inflammation, pruritus at injection site, asthenia (loss of strength, energy). **Frequent (27%–18%):** Arthralgia, vasodilation, anxiety, hypertonia, nausea, transient chest pain, dyspnea, flu-like symptoms, rash, pruritus. **Occasional (17%–10%):** Palpitations, back pain, diaphoresis, rhinitis, diarrhea, urinary urgency. **Rare (less than 9%):** Anorexia, fever, neck pain, peripheral edema, ear pain, facial edema, vertigo, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Infection occurs commonly. Lymphadenopathy occurs occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline neurologic function.

INTERVENTION/EVALUATION

Observe injection site for reaction. Monitor for fever, chills (evidence of infection). Observe for improvement in neurologic function.

PATIENT/FAMILY TEACHING

• Report difficulty in breathing/swallowing, rash, itching, swelling of lower extremities, fatigue. • Avoid pregnancy.

glimepiride

HIGH ALERT

glye-**mep**-ir-ide
(Amaryl, Apo-Glimepiride, Novo-Glimepiride)

Do not confuse Amaryl with Altace, Amerge, or Reminyl, Avandaryl with Benadryl, or glimepiride with glipizide or glyburide.

FIXED-COMBINATION(S)

Avandaryl: glimepiride/rosiglitazone (an antidiabetic): 1 mg/4 mg, 2 mg/4 mg, 4 mg/4 mg.
Duetact: glimepiride/pioglitazone (an antidiabetic): 2 mg/30 mg, 4 mg/30 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation sulfonylurea. **CLINICAL:** Antidiabetic agent (see p. 43C).

ACTION

Promotes release of insulin from beta cells of pancreas, increases insulin sensitivity at peripheral sites. **Therapeutic Effect:** Lowers serum glucose.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	2–3 hrs	24 hrs

Completely absorbed from GI tract. Protein binding: greater than 99%. Metabolized in liver. Excreted in urine, eliminated in feces. **Half-life:** 5–9.2 hrs.

USES

Adjunct to diet, exercise in management of non–insulin-dependent diabetes mellitus (type 2, NIDDM). Use in combination with insulin or metformin in pts whose diabetes is not controlled by diet, exercise in conjunction with a single oral hypoglycemic agent.

PRECAUTIONS

Contraindications: Diabetic complications (ketosis, acidosis, diabetic coma). **Cautions:** Renal impairment, stress (fever, trauma, infection), G6PD deficiency.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not recommended for use during pregnancy. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Hypoglycemia may be difficult to recognize. Age-related renal impairment may increase sensitivity to glucose-lowering effect.

INTERACTIONS

DRUG: Beta-blockers may increase hypoglycemic effect, mask signs of hypoglycemia. **Cimetidine, ciprofloxacin, fluconazole, ranitidine, large doses of salicylates** may increase effect. **Corticosteroids, thiazide diuretics** may decrease effect. **HERBAL: Garlic** may worsen hypoglycemia. **FOOD:** None known. **LAB VALUES:** May increase LDH concentrations, serum alkaline phosphatase, AST, ALT, bilirubin, C-peptide.

AVAILABILITY (Rx)

Tablets: 1 mg, 2 mg, 4 mg.

ADMINISTRATION/HANDLING

PO

• Give with breakfast or first main meal.

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus

PO: ADULTS, ELDERLY: Initially, 1–2 mg once a day with breakfast or first main meal. Maintenance: 1–4 mg once a day. After dose of 2 mg is reached, dosage should be increased in increments of up to 2 mg q1–2wks, based on serum glucose response. **Maximum:** 8 mg/day. **ELDERLY:** Initially, 1 mg/day. Titrate dose to avoid hypoglycemia.

Dosage in Renal Impairment

Creatinine clearance less than 22 ml/min: Initially, 1 mg/day, then titrate dose based on fasting serum glucose levels.

SIDE EFFECTS

Rare (less than 3%): Altered taste, dizziness, drowsiness, weight gain, constipation, diarrhea, heartburn, nausea, vomiting, stomach fullness, headache, photosensitivity, peeling of skin, pruritus, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose or insufficient food intake may produce hypoglycemia (esp. with increased glucose demands). GI hemorrhage, cholestatic hepatic jaundice, leukopenia, thrombocytopenia, pancytopenia, agranulocytosis, aplastic or hemolytic anemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose level. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt or family does not thoroughly understand diabetes management or serum glucose testing technique.

INTERVENTION/EVALUATION

Monitor serum glucose level, food intake. Assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep or rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity or stress, trauma, surgical procedure).

PATIENT/ FAMILY TEACHING

• Prescribed diet is principal part of treatment; do not skip or delay meals. • Avoid alcohol. • Carry candy, sugar packets, other quick-acting sugar supplements for immediate response to hypoglycemia. • Wear medical alert identification. • Check with physician when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity). • Avoid direct exposure to sunlight.

*glipiZIDE

TOP 200 HIGH ALERT

glip-ih-zide
(Glucotrol, Glucotrol XL)
Do not confuse glipizide with glimepiride or glyburide, or Glucotrol with Glucophage or Glucotrol XL.

FIXED-COMBINATION(S)

Metaglip: glipizide/metformin (an antidiabetic): 2.5 mg/250 mg, 2.5 mg/500 mg, 5 mg/500 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation sulfonylurea. **CLINICAL:** Antidiabetic agent (see p. 430).

ACTION

Promotes release of insulin from beta cells of pancreas, increases insulin sensitivity at peripheral sites. **Therapeutic Effect:** Lowers serum glucose.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–30 min	2–3 hrs	12–24 hrs
Extended-release	2–3 hrs	6–12 hrs	24 hrs

Well absorbed from GI tract. Protein binding: 92%–99%. Metabolized in liver. Excreted in urine. **Half-life:** 2–4 hrs.

USES

Adjunct to diet, exercise in management of stable, mild to moderately severe non–insulin-dependent diabetes mellitus (type 2, NIDDM). May be used concomitantly with insulin or metformin to improve glycemic control.

PRECAUTIONS

Contraindications: Diabetic ketoacidosis with or without coma, type 1 diabetes mellitus. **Cautions:** Adrenal/pituitary insufficiency, hypoglycemic reactions, hepatic/renal impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Insulin is drug of choice during pregnancy; glipizide given within 1 mo of delivery may produce neonatal hypoglycemia. Drug crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Hypoglycemia may be difficult to recognize. Age-related renal impairment may increase sensitivity to glucose-lowering effect.

INTERACTIONS

DRUG: **Beta-blockers** may increase hypoglycemic effect, mask signs of hypoglycemia. **Corticosteroids, thiazide diuretics** may decrease the effect. **HERBAL:** **Garlic** may worsen hypoglycemia. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, LDH, AST, ALT, bilirubin, C-peptide.

AVAILABILITY (Rx)

Tablets (Glucotrol): 5 mg, 10 mg.

Tablets (Extended-Release [Glucotrol XL]): 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Give immediate-release tablets 30 min before meals. Give extended-release tablets with breakfast. • Do not crush extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus

PO: ADULTS: Initially, 5 mg/day or 2.5 mg in elderly or those with hepatic disease. Adjust dosage in 2.5- to 5-mg increments at intervals of several days. Immediate-release tablet: **Maximum single dose:** 15 mg. **Maximum dose/day:** 40 mg. Extended-release tablet: **Maximum dose:** 20 mg/day. **ELDERLY:** Initially, 2.5–5 mg/day. May increase by 2.5–5 mg/day q1–2wks.

Dosage in Renal Impairment

Not recommended for pts with creatinine clearance less than 10 ml/min.

Dosage in Hepatic Impairment

(Immediate-Release): Initial dose: 2.5 mg/day.

SIDE EFFECTS

Rare (less than 3%): Altered taste, dizziness, drowsiness, weight gain, constipation, diarrhea, heartburn, nausea, vomiting, headache, photosensitivity, peeling of skin, pruritus, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose or insufficient food intake may produce hypoglycemia (esp. with increased glucose demands). GI hemorrhage, cholestatic hepatic jaundice, leukopenia, thrombocytopenia, pancytopenia, agranulocytosis, aplastic or hemolytic anemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose level. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt or family does not thor-

oughly understand diabetes management or serum glucose testing technique.

INTERVENTION/EVALUATION

Monitor serum glucose level, food intake. Assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep or rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity or stress, trauma, surgical procedure).

PATIENT/ FAMILY TEACHING

• Prescribed diet is principal part of treatment; do not skip or delay meals. • Avoid alcohol. • Carry candy, sugar packets, other quick-acting sugar supplements for immediate response to hypoglycemia. • Wear medical alert identification. • Check with physician when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity). • Avoid direct exposure to sunlight.

glucagon

gloo-ka-gon
(GlucaGen, GlucaGen Diagnostic Kit, Glucagon, Glucagon Emergency Kit)
Do not confuse glucagon with Glaucon.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glucose elevating agent. **CLINICAL:** Antihypoglycemic, antispasmodic, antidote.

ACTION

Promotes hepatic glycogenolysis, gluconeogenesis. Stimulates cAMP, an enzyme, resulting in increased serum glucose concentration, smooth muscle relaxation, and exerts inotropic myocardial effect. **Therapeutic Effect:** Increases serum glucose level.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	5–20 min	—	60–90 min
IM	30 min	—	60–90 min
Subcutaneous	30–45 min	—	60–90 min

Metabolized in liver. **Half-life:** 3–10 min.

USES

Treatment of severe hypoglycemia in diabetic pts. Not for use in chronic hypoglycemia or hypoglycemia due to starvation, adrenal insufficiency (hepatic glycogen unavailable). Diagnostic aid in radiographic examination of GI tract. **OFF-LABEL:** Treatment of esophageal obstruction due to foreign bodies; toxicity associated with beta-blockers, calcium channel blockers.

PRECAUTIONS

Contraindications: Hypersensitivity to glucagon, insulinoma, known pheochromocytoma. **Cautions:** History of insulinoma, pheochromocytoma, prolonged fasting, starvation, adrenal insufficiency, chronic hypoglycemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effects of **anticoagulants.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium.

AVAILABILITY (Rx)

Injection Powder (GlucaGen, GlucaGen Diagnostic Kit, Glucagon, Glucagon Emergency Kit): 1 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Place pt in side-lying position to prevent aspiration (glucagon, hypoglycemia may produce nausea/vomiting).

IV, IM, Subcutaneous

Reconstitution • Reconstitute with 1 ml sterile diluent to provide concentration of 1 mg/ml.

Rate of Administration • Pt usually awakens in 5–20 min. Although 1–2 additional doses may be administered, concern for effects of continuing cerebral hypoglycemia requires consideration of parenteral glucose. • When pt awakens, give supplemental carbohydrate to restore hepatic glycogen and prevent secondary hypoglycemia. If pt fails to respond to glucagon, IV dextrose is necessary.

Storage • Store vial at room temperature. • After reconstitution, is stable for 48 hrs if refrigerated. If reconstituted with Sterile Water for Injection, use immediately. Do not use glucagon solution unless clear.

IV INCOMPATIBILITIES

Do not mix glucagon with any other medications.

INDICATIONS/ROUTES/DOSAGE

Hypoglycemia

◀ ALERT ▶ Administer IV dextrose if pt fails to respond to glucagon.

IV, IM, Subcutaneous: ADULTS, ELDERLY, CHILDREN WEIGHING MORE THAN 20 KG: 0.5–1 mg. May repeat in 20 min. **CHILDREN WEIGHING 20 KG OR LESS:** 0.5 mg. May repeat in 20 min.

Diagnostic Aid

IV: ADULTS, ELDERLY: 0.25–2 mg 10 min prior to procedure. **IM:** 1–2 mg 10 minutes prior to procedure.

SIDE EFFECTS

Occasional: Nausea, vomiting. **Rare:** Allergic reaction (urticaria, respiratory distress, hypotension).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce persistent nausea/vomiting, hypokalemia (severe fatigue, decreased appetite, palpitations, muscle cramps).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain immediate assessment, including history, clinical signs/symptoms. If presence of hypoglycemic coma is established, give glucagon promptly.

INTERVENTION/EVALUATION

Monitor blood glucose, B/P, pulse, mental status. Monitor response time carefully. Have IV dextrose readily available in event pt does not awaken within 5–20 min. Assess for possible allergic reaction (urticaria, respiratory difficulty, hypotension). When pt is conscious, give oral carbohydrate.

PATIENT/FAMILY TEACHING

• Recognize significance of identifying symptoms of hypoglycemia: pale, cool skin; anxiety; difficulty concentrating; headache; hunger; nausea; shakiness; diaphoresis; unusual fatigue; unusual weakness; unconsciousness. • If symptoms of hypoglycemia develop, give sugar form first (orange juice, honey, hard candy, sugar cubes, table sugar dissolved in water or juice) followed by cheese and crackers, half a sandwich, glass of milk.

glucarpidase

gloo-**kar**-pi-dayz
(Voraxaze)
Do not confuse glucarpidase with Glynase or Voraxaze with Vyvanse.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Carboxypeptidase. **CLINICAL:** Methofrexate antidate.

ACTION

Converts methotrexate to inactive metabolites and glutamate, providing alternate nonrenal pathway for methotrexate elimination in patients with impaired renal

function. **Therapeutic Effect:** Rapidly reduces methotrexate levels in blood, reducing concentration below toxicity threshold.

PHARMACOKINETICS

Distributed by plasma. Methotrexate concentration is reduced by about 97% within 15 min, and is maintained at about 95% reduction for up to 8 days. **Half-life:** 5.6 hrs (greater with severe renal impairment).

USES

Treatment of toxic plasma methotrexate concentrations (greater than 1 micromole per liter) in patients with delayed methotrexate clearance due to impaired renal function. Not for use in those with normal renal function or mild to moderate renal impairment (risk for subtherapeutic methotrexate levels).

PRECAUTIONS

Contraindications: None known. **Cautions:** History of allergies, hypersensitivity reaction.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children, Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Leucovorin** is a substrate for glucarpidase; do not administer **leucovorin** within 2 hrs before or after a dose of glucarpidase (no dose adjustment needed for continuing leucovorin regimen). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Measurement of methotrexate using immunoassays is unreliable for samples collected within 48 hrs following glucarpidase dosing.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1,000 units per vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute vial contents with 1 ml Sterile Saline for Injection. • Roll and tilt vial gently to mix; do not shake. • Inspect vial and discard if solution is not clear, colorless, and free of particulates.

Rate of Administration • Administer as IV bolus injection over 5 min.

Storage • Store vials in refrigerator. • Reconstituted solution should be used immediately but may be stored under refrigeration for up to 4 hrs.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Do not administer leucovorin within 2 hrs before or after a dose of glucarpidase (leucovorin is a substrate for glucarpidase). For the first 48 hrs after administration, give same leucovorin dose as given prior to glucarpidase. Beyond 48 hrs after administration, give leucovorin based on methotrexate level. Do not discontinue leucovorin therapy based on a single methotrexate level below the leucovorin treatment threshold. Continue therapy with leucovorin until methotrexate concentration has been maintained below the leucovorin treatment threshold for a minimum of 3 days.

IV INCOMPATIBILITIES

Do not mix glucarpidase with other medications.

Toxic Plasma Methotrexate Level

◀ALERT▶ Flush IV line before and after administration.

IV: ADULTS, ELDERLY, CHILDREN: 50 units per kg given as a single intravenous injection over 5 min.

SIDE EFFECTS

Rare (2%–1%): Paresthesias, flushing (includes sense of heat, burning), nausea, vomiting, headache, hypotension. **Less than 1%:** Blurred vision, diarrhea, hypertension, rash, throat irritation, tremor.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious allergic reactions, including anaphylaxis, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Protocol specifies patients continue receiving IV hydration, urinary alkalinization, and leucovorin and that leucovorin administration be adjusted to ensure that it is not given within 2 hrs before or after glucarpidase administration. Obtain BUN, creatinine, methotrexate level, chemistry lab values and vital signs, particularly B/P, prior to and periodically throughout therapy.

INTERVENTION/EVALUATION

Question pt regarding location if tingling, numbness, tickling, burning, or pricking of skin is noted. Assess bowel activity, stool consistency. Monitor for evidence of facial or upper chest flushing. Obtain order for antiemetics if nausea, vomiting occur. Question for headache, blurred vision. Monitor B/P (medication risk for hypotension, hypertension). Continue monitoring methotrexate levels.

PATIENT/FAMILY TEACHING

- Immediately report any sign, symptoms of infusion reactions (fever, chills, flushing, feeling hot, rash, hives, itching, throat tightness or breathing problems, tingling, numbness, or headache).
- Comply with routine laboratory visits as ordered (particularly to assess methotrexate concentrations).

*glyBURIDE

TOP 200 HIGH ALERT

glye-bue-ride
(Apo-Glyburide, DiaBeta, Euglucon, Glynase Pres-Tab, Novo-Glyburide)

Do not confuse DiaBeta with Zebeta, glyburide with glimepiride, glipizide, or Glucotrol.

FIXED-COMBINATION(S)

Glucovance: glyburide/metformin (an antidiabetic): 1.25 mg/250 mg, 2.5 mg/500 mg, 5 mg/500 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation sulfonylurea. **CLINICAL:** Antidiabetic agent (see p. 43C).

G

ACTION

Promotes release of insulin from beta cells of pancreas, increases insulin sensitivity at peripheral sites. **Therapeutic Effect:** Lowers serum glucose level.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.25–1 hr	1–2 hrs	12–24 hrs

Well absorbed from GI tract. Protein binding: 99%. Metabolized in liver to weakly active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 5–16 hrs.

USES

Adjunct to diet, exercise in management of stable, mild to moderately severe non–insulin-dependent diabetes mellitus (type 2, NIDDM). May be used concomitantly with insulin or metformin to improve glycemic control. **OFF-LABEL:** Alternative to insulin in women for treatment of gestational diabetes mellitus.

PRECAUTIONS

Contraindications: Diabetic ketoacidosis with or without coma, type 1 diabetes mellitus, concurrent use with bosentan. **Cautions:** Adrenal or pituitary insufficiency, hypoglycemic reactions, hepatic/renal impairment, G6PD deficiency.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May produce neonatal hypoglycemia if given within 2 wks of delivery. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Hypoglycemia may be difficult to recognize. Age-related renal impairment may increase sensitivity to glucose-lowering effect.

INTERACTIONS

DRUG: **Beta-blockers** may increase hypoglycemic effect, mask signs of hypoglycemia. **Corticosteroids, thiazide diuretics** may decrease effect. **HERBAL:** **Garlic,** other herbs with hypoglycemic properties may enhance effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, LDH, AST, ALT, bilirubin, C-peptide.

AVAILABILITY (Rx)

Tablets (DiaBeta): 1.25 mg, 2.5 mg, 5 mg. **Tablets, Micronized (Glynase Pres-Tab):** 1.5 mg, 3 mg, 6 mg.

ADMINISTRATION/HANDLING

PO

• May give with food (response better if taken 15–30 min before meals).

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus

PO: ADULTS: Initially 2.5–5 mg. May increase by 2.5 mg/day at weekly intervals. Maintenance: 1.25–20 mg/day. **Maximum:** 20 mg/day. **ELDERLY:** Initially, 1.25–2.5 mg/day. May increase by 1.25–2.5 mg/day at 1- to 3-wk intervals.

PO *(Micronized Tablets)*: ADULTS, ELDERLY: Initially 0.75–3 mg/day. May increase by 1.5 mg/day at weekly intervals. Maintenance: 0.75–12 mg/day as a single dose or in divided doses.

Dosage in Renal Impairment

Not recommended for pts with creatinine clearance less than 50 ml/min.

SIDE EFFECTS

Rare (less than 3%): Altered taste, dizziness, drowsiness, weight gain, constipation, diarrhea, heartburn, nausea, vomiting, headache, photosensitivity, peeling of skin, pruritis, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose or insufficient food intake may produce hypoglycemia (esp. in pts with increased glucose demands). Cholestatic jaundice, leukopenia, thrombocytopenia, pancytopenia, agranulocytosis, aplastic or hemolytic anemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose level. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt or family does not thoroughly understand diabetes management or glucose testing technique.

INTERVENTION/EVALUATION

Monitor serum glucose level, food intake. Assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep or rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity or stress, trauma, surgical procedure).

PATIENT/ FAMILY TEACHING

• Prescribed diet is principal part of treatment; do not skip or delay meals. • Avoid alcohol. • Carry candy, sugar packets, other quick-acting sugar supplements for immediate response to hypoglycemia. • Wear medical alert identification. • Check with physician when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity). • Avoid direct exposure to sunlight.

golimumab

goe-**lim**-ue-mab
(Simponi)

BLACK BOX ALERT Tuberculosis, invasive fungal infections, other opportunistic infections have occurred; most infections occur in combination with other immunosuppressants. Test for tuberculosis prior to and during treatment.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Immune modulator, tumor necrosis factor inhibitor.

ACTION

Binds specifically to tumor necrosis factor (TNF) alpha cell, blocking its interaction with cell surface TNF receptors. **Therapeutic Effect:** Reduces inflammation, alters immune response.

PHARMACOKINETICS

Serum concentration appears to reach maximum steady state by week 12. **Half-life:** 7–20 days.

USES

Used alone or in combination with methotrexate for treatment of adult pts with active psoriatic arthritis. Used in combination with methotrexate for treatment of adult pts with moderately to severely active rheumatoid arthritis. Used alone for treatment of adult pts with active ankylosing spondylitis.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of opportunistic infections (bacterial, mycobacterial, invasive fungal, viral, protozoal), esp. tuberculosis, histoplasmosis, aspergillosis, candidiasis, coccidioidomycosis, listeriosis, pneumocystosis; preexisting or recent onset CNS demyelinating disorders, including multiple sclerosis; those with chronic or recurrent infection or who have been exposed to tuberculosis; hematologic cytopenia; cardiovascular disease (CHF, decreased left ventricular function); hepatitis B chronic carriers; elderly.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Cautious use due to increased risk of serious infections, malignancy.

INTERACTIONS

DRUG: Abatacept, anakinra, immunosuppressive therapy, natalizumab, rituximab may increase risk of infections. May decrease efficacy of immune response with **live vaccines.** **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST.

AVAILABILITY (Rx)

Injection Solution: 50 mg/0.5 ml in single-dose prefilled autoinjector or prefilled syringe.

ADMINISTRATION/HANDLING

Subcutaneous

• Remove prefilled syringe or autoinjector from refrigerator. Allow to sit at room temperature for 30 min; do not warm by any other method. • Avoid areas where skin is scarred, tender, bruised, red, scaly, hard. • Recommended injection site is front of middle thighs, but lower abdomen 2 inches below navel or outer, upper arms are acceptable. • Inject within 5 min after cap has been removed.

Autoinjector • Push open end of autoinjector firmly against skin at 90-degree angle. • Do not pull autoinjector away from skin until a first "click" sound and then a second "click" sound are heard (injection is finished and needle is pulled back). This usually takes 3–6 sec, but second click may take up to 15 sec to be heard. • If autoinjector is pulled away from skin before injection is completed, full dose may not be administered.

Prefilled Syringe • Gently pinch skin and hold firmly. Use quick, dart-like motion to insert needle into pinched skin at 45-degree angle.
Storage • Refrigerate; do not freeze. • Do not shake. • Solution appears slightly opalescent, colorless to light yellow. Discard if cloudy or contains particulate.

INDICATIONS/ROUTES/DOSAGE

Active Psoriatic Arthritis

Subcutaneous: ADULTS, ELDERLY: 50 mg once monthly. Use alone or in combination with methotrexate.

Moderate to Severely Active Rheumatoid Arthritis

Subcutaneous: ADULTS, ELDERLY: 50 mg once monthly. Use in combination with methotrexate.

Active Ankylosing Spondylitis

Subcutaneous: ADULTS, ELDERLY: 50 mg once monthly.

SIDE EFFECTS

Occasional (7%–6%): Upper respiratory tract infection, nasopharyngitis. **Rare (3%–1%):** Injection site erythema, hypertension, dizziness, bronchitis, pyrexia, paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS

New onset psoriasis, exacerbation of preexisting psoriasis have been reported. Serious infections noted, including sepsis, pneumonia, cellulitis, abscess, tuberculosis, invasive fungal infections, hepatitis B infection. Increased risk of lymphoma, melanoma. New onset or exacerbation of CNS demyelinating disorders, including multiple sclerosis, new onset or worsening of CHF noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate for active tuberculosis and test for latent infection prior to initiating treatment and periodically during therapy. Induration of 5 mm or greater with tuberculin skin testing should be considered a positive test result when assessing if treatment for latent tuberculosis is necessary. Antifungal therapy should be considered for those who reside or travel to regions where mycoses are endemic. Do not initiate therapy during an active infection.

INTERVENTION/EVALUATION

Monitor hepatitis B carriers during and several months following therapy. If reactivation occurs, therapy should be discontinued and antiviral therapy begun. Pts should be closely monitored for development of signs/symptoms of tuberculosis, including those who tested negative for latent tuberculosis infection prior to initiating therapy. Treatment should be discontinued if pt develops a serious infection, opportunistic infection, or sepsis and appropriate antimicrobial therapy initiated.

PATIENT/FAMILY TEACHING

• Inform pt that therapy may lower immune system response and ask pt to report any symptoms of infection. • Counsel pt regarding risk of lymphoma, melanoma. • Advise those with latex sensitivity that needle cover on prefilled syringe and autoinjector contains dry natural rubber (latex derivative). • Avoid live vaccines during therapy. • Advise on proper injection sites, rotation.

goserelin

HIGH ALERT

goe-se-**rel**-in
(Zoladex, Zoladex LA)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Gonadotropin-releasing hormone analogue.
CLINICAL: Antineoplastic (see pp. 84C, 105C).

ACTION

Stimulates release of luteinizing hormone (LH) and follicle-stimulating hormone (FSH) from anterior pituitary. **Therapeutic Effect:** In females, reduces ovarian, uterine, mammary gland size, regresses hormone-responsive tumors. In males, decreases testosterone level, reduces growth of abnormal prostate tissue.

PHARMACOKINETICS

Protein binding: 27%. Metabolized in liver. Excreted in urine. **Half-life:** 4.2 hrs (male); 2.3 hrs (female).

USES

Treatment of locally confined prostate cancer. Palliative treatment of advanced carcinoma of prostate as alternative when orchiectomy, estrogen therapy is either not indicated or unacceptable to pt. In combination with flutamide before and during radiation therapy for early stages of prostate cancer. Management of endometriosis. Treatment of advanced breast cancer in premenopausal and perimenopausal women. Endometrial thinning before ablation for dysfunctional uterine bleeding.

PRECAUTIONS

Contraindications: Pregnancy (except when used for palliative treatment of advanced breast cancer). **Cautions:** Women of childbearing potential until pregnancy has been excluded.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. **Pregnancy Category D (advanced breast cancer), X (endometriosis, endometrial thinning). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum prostatic acid phosphatase, testosterone.

AVAILABILITY (Rx)

Injection, Solution (Zoladex): 3.6 mg, 10.8 mg.

ADMINISTRATION/HANDLING

Subcutaneous

• Clean area of skin on upper abdominal wall with alcohol swab. • Stretch or pinch pt's skin with one hand, and insert needle into subcutaneous tissue. • Direct needle so that it parallels the abdominal wall. Push needle in until barrel hub touches pt's skin. Withdraw needle 1 cm to create a space to discharge goserelin. Fully depress plunger. • Withdraw needle, bandage site.

INDICATIONS/ROUTES/DOSAGE

Prostatic Carcinoma, Advanced

Subcutaneous: ADULTS OLDER THAN 18 YRS, ELDERLY: 3.6 mg every 28 days or 10.8 mg q12wks subcutaneously into upper abdominal wall.

Prostate Carcinoma, Locally Confined

Subcutaneous: ADULTS, ELDERLY: 3.6 mg once, follow in 28 days by 10.8 mg or 3.6 mg q28days for 4 doses.

Breast Carcinoma, Endometriosis

Subcutaneous: ADULTS: 3.6 mg every 28 days subcutaneously into upper abdominal wall.

Endometrial Thinning

Subcutaneous: ADULTS: 3.6 mg subcutaneously into upper abdominal wall as a single dose or in 2 doses 4 wks apart.

SIDE EFFECTS

Frequent: Headache (60%), hot flashes (55%), depression (54%), diaphoresis (45%), sexual dysfunction (21%), impotence (18%), lower urinary tract symptoms (13%). **Occasional (10%–5%):** Pain, lethargy, dizziness, insomnia, anorexia, nausea, rash, upper respiratory tract infection, hirsutism, abdominal pain. **Rare:** Pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Arrhythmias, CHF, hypertension occur rarely. Ureteral obstruction, spinal cord compression observed (immediate orchiectomy may be necessary).

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor pt closely for worsening signs/symptoms of prostatic cancer, esp. during first mo of therapy.

PATIENT/FAMILY TEACHING

• Use nonhormonal methods of contraceptive measures during therapy. • Inform physician if pt becomes pregnant or regular menstruation persists. • Breakthrough menstrual bleeding may occur if dose is missed.

granisetron

gra-**nis**-eh-tron
(Granisol, Kytril, Sancuso)
Do not confuse granisetron with dolasetron, ondansetron, or palonosetron.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor antagonist (5-HT_3). **CLINICAL:** Antiemetic.

ACTION

Selectively blocks serotonin stimulation at receptor sites at chemoreceptor trigger zone, vagal nerve terminals. **Therapeutic Effect:** Prevents nausea/vomiting.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–3 min	N/A	24 hrs

Rapidly, widely distributed to tissues. Protein binding: 65%. Metabolized in liver to active metabolite. Eliminated in urine, feces. **Half-life:** 10–12 hrs (increased in elderly).

USES

Prevents nausea/vomiting associated with emetogenic cancer therapy (includes high-dose cisplatin) and cancer radiation therapy. Prevention, treatment of postop nausea, vomiting. **OFF-LABEL: PO:** Breakthrough treatment of nausea/vomiting associated with chemotherapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hypersensitivity to other 5-HT_3 receptor antagonists, congenital QT prolongation, concomitant administration of medications that prolong QT interval, following abdominal surgery or in chemotherapy-induced nausea, vomiting (may mask progressive ileus or gastric distention).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, ALT.

AVAILABILITY (Rx)

Injection Solution (Kytril): 0.1 mg/ml, 1 mg/ml. **Oral Solution (Granisol, Kytril):** 2 mg/10 ml. **Tablets (Kytril):** 1 mg. **Transdermal Patch (Sancuso):** 52-cm^2 patch containing 34.3 mg granisetron delivering 3.1 mg/24 hrs.

ADMINISTRATION/HANDLING

IV

Reconstitution • May be given undiluted or dilute with 20–50 ml 0.9% NaCl or D_5W. Do not mix with other medications.

Rate of Administration • May give undiluted as IV push over 30 sec. • For IV piggyback, infuse over 5–20 min depending on volume of diluent used.
Storage • Appears as a clear, colorless solution. • Store at room temperature. • After dilution, stable for 3 days at room temperature or 7 days if refrigerated. • Inspect for particulates, discoloration.

PO

• Give 30 min to 1 hr prior to initiating chemotherapy.

Transdermal

• Apply to clean, dry, intact skin on upper outer arm. • Remove immediately from pouch before application. • Do not cut patch.

IV INCOMPATIBILITY

Amphotericin B (Fungizone).

IV COMPATIBILITIES

Allopurinol (Aloprim), bumetanide (Bumex), calcium gluconate, carboplatin (Paraplatin), cisplatin (Platinol), cyclophosphamide (Cytoxan), cytarabine (Ara-C), dacarbazine (DTIC-Dome), dexamethasone (Decadron), diphenhydramine (Benadryl), docetaxel (Taxotere), doxorubicin (Adriamycin), etoposide (VePesid), gemcitabine (Gemzar), lipids, magnesium, mitoxantrone (Novantrone), paclitaxel (Taxol), potassium.

INDICATIONS/ROUTES/DOSAGE

Prevention of Chemotherapy-Induced Nausea/Vomiting

PO: ADULTS, ELDERLY: 2 mg 1 hr before chemotherapy or 1 mg 1 hr before and 12 hrs after chemotherapy.
IV: ADULTS, ELDERLY, CHILDREN 2 YRS AND OLDER: 10 mcg/kg/dose (**maximum:** 1 mg/dose) within 30 min of chemotherapy. **Maximum:** 1 mg.
Transdermal: ADULTS, ELDERLY: Apply 24–48 hrs prior to chemotherapy. Remove minimum 24 hrs after completion of chemotherapy. May be worn up to 7 days, depending on chemotherapy duration.

Prevention of Radiation-Induced Nausea/Vomiting

PO: ADULTS, ELDERLY: 2 mg once a day, given 1 hr before radiation therapy.

Postop Nausea/Vomiting

IV: ADULTS, ELDERLY: 1 mg as a single postop dose. **CHILDREN OLDER THAN 4 YRS:** 20–40 mcg/kg. **Maximum:** 1 mg.

SIDE EFFECTS

Frequent (21%–14%): Headache, constipation, asthenia (loss of strength, energy). **Occasional (8%–6%):** Diarrhea, abdominal pain. **Rare (less than 2%):** Altered taste, fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction, hypertension, hypotension, arrhythmias (sinus bradycardia, atrial fibrillation, AV block, ventricular ectopy), EKG abnormalities occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess hydration status of pt. Ensure that granisetron is given within 30 min of starting chemotherapy.

INTERVENTION/EVALUATION

Monitor for therapeutic effect. Assess for headache. Monitor for dehydration due to recurrent vomiting. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Granisetron is effective shortly following administration; prevents nausea/vomiting. • Transitory taste disorder may occur.

griseofulvin

gris-ee-oh-**ful**-vin
(Grifulvin V, Gris-PEG)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antifungal antibiotic. **CLINICAL:** Antifungal.

ACTION

Inhibits fungal cell mitosis by disrupting mitotic spindle structure. **Therapeutic Effect:** Fungistatic.

PHARMACOKINETICS

Ultramicrosize is almost completely absorbed. Absorption is significantly enhanced after a fatty meal. Extensively metabolized in liver. Minimal excretion in urine. **Half-life:** 9–22 hrs.

USES

Treatment of susceptible tinea (ringworm) infections of the skin, hair caused by susceptible species of *Microsporum, Epidermophyton,* or *Trichophyton.*

PRECAUTIONS

Contraindications: Hepatocellular failure, porphyria, pregnancy. **Cautions:** Exposure to sun/ultraviolet light (photosensitivity), hypersensitivity to penicillins.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effects of **oral contraceptives, warfarin.** **HERBAL:** None significant. **FOOD:** **High-fat foods** enhance absorption. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Oral Suspension (Grifulvin V): 125 mg/5 ml. **Tablets (Microsize Grifulvin V):** 500 mg. **Tablets (Ultramicrosize, Gris-PEG):** 125 mg, 250 mg.

ADMINISTRATION/HANDLING

• Administer with fatty meal to increase absorption. • Take with food or milk to reduce GI irritation. • Ultramicrosize tablets may be crushed and sprinkled on applesauce. • Shake suspension well before use.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

◀ALERT▶ Duration of therapy depends on site of infection.

PO *(Microsize Tablets, Oral Suspension)*: ADULTS: 500–1,000 mg as a single dose or in divided doses. **CHILDREN 2 YRS AND OLDER:** 10–20 mg/kg/day in single or divided doses.

PO *(Ultramicrosize Tablets)*: ADULTS: 375–750 mg/day as a single dose or in divided doses. **CHILDREN 2 YRS AND OLDER:** 5–15 mg/kg/day in single or divided doses. **Maximum:** 750 mg/day in 2 divided doses.

SIDE EFFECTS

Occasional: Hypersensitivity reaction (pruritus, rash, urticaria), headache, nausea, diarrhea, excessive thirst, flatulence, oral thrush, dizziness, insomnia. **Rare:** Paresthesia of hands/feet, proteinuria, photosensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Granulocytopenia occurs rarely and should necessitate discontinuation of drug.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to griseofulvin, penicillins.

INTERVENTION/EVALUATION

Assess skin for rash, response to therapy. Monitor daily pattern of bowel activity, stool consistency. Question presence of headache: onset, location, type of discomfort. Assess for dizziness.

PATIENT/FAMILY TEACHING

• Prolonged therapy (wks or mos) is usually necessary. • Do not miss a dose; continue therapy as long as ordered. • Avoid alcohol (may produce tachycardia, flushing). • May cause photosensitivity reaction; avoid exposure to sunlight. • Maintain good hygiene (prevents superinfection). • Separate personal items in direct contact with affected areas. • Keep affected areas dry; wear light clothing for ventilation. • Take with foods high in fat such as milk, ice cream (reduces GI upset, assists absorption).

guaifenesin

gwye-**fen**-e-sin
(Mucinex, Organidin, Robitussin 🍁)
Do not confuse guaifenesin with guanfacine, or Mucinex with Mucomyst.

FIXED-COMBINATION(S)

Mucinex D: guaifenesin/pseudoephedrine (a sympathomimetic): 600 mg/60 mg, 1,200 mg/120 mg. **Mucinex DM:** guaifenesin/dextromethorphan (a cough suppressant): 600 mg/30 mg, 1,200 mg/60 mg. **Robitussin AC:** guaifenesin/codeine (a narcotic analgesic): 100 mg/10 mg, 75 mg/2.5 mg per 5 ml. **Robitussin DM:** guaifenesin/dextromethorphan (a cough suppressant): 100 mg/10 mg per 5 ml.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Respiratory expectorant. **CLINICAL:** Expectorant.

ACTION

Stimulates respiratory tract secretions by decreasing adhesiveness, viscosity of phlegm. **Therapeutic Effect:** Promotes removal of viscous mucus.

PHARMACOKINETICS

Well absorbed from GI tract. Metabolized in liver. Excreted in urine. **Half-life:** 1 hr.

USES

Expectorant for symptomatic treatment of productive coughs.

PRECAUTIONS

Contraindications: None known. **Cautions:** None known.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Caution advised in those younger than 2 yrs with persistent cough. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Liquid: 100 mg/5 ml. **Syrup:** 100 mg/5 ml. **Tablets:** 200 mg, 400 mg.

Tablets, Extended-Release: (Mucinex): 600 mg, 1,200 mg.

ADMINISTRATION/HANDLING

PO

• Store syrup, liquid, tablets at room temperature. • Give without regard to meals. • Do not crush, break extended-release tablet.

INDICATIONS/ROUTES/DOSAGE

Expectorant

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 200–400 mg q4h. **Extended-Release:** 600–1,200 mg q12h. **Maximum:** 2.4 g/day. **CHILDREN 6–12 YRS:** 100–200 mg q4h. **Maximum:** 1.2 g/day. **CHILDREN 2–5 YRS:** 50–100 mg q4h. **Maximum:** 600 mg/day. **CHILDREN 6 MOS–2 YRS:** 25–50 mg q4h. **Maximum:** 300 mg/day.

PO *(Extended-Release)*: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 600–1,200 mg q12h. **Maximum:** 2.4 g/day. **CHILDREN 6–12 YRS:** 600 mg q12h. **Maximum:** 1.2 g/day.

SIDE EFFECTS

Rare: Dizziness, headache, rash, diarrhea, nausea, vomiting, abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce nausea, vomiting.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess type, severity, frequency of cough. Increase fluid intake, environmental humidity to lower viscosity of lung secretions.

INTERVENTION/EVALUATION

Initiate deep breathing, coughing exercises, particularly in pts with pulmonary impairment. Assess for clinical improvement; record onset of relief of cough.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Do not take for chronic cough. • Inform physician if cough persists or if fever, rash, headache, sore throat is present with cough. • Maintain adequate hydration.

guanfacine

TOP 200

gwan-fah-seen
(Intuniv)
Do not confuse guanfacine with guaifenesin or guanidine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Alpha_{2A}$-adrenergic agonist. **CLINICAL:** Psychotherapeutic agent.

ACTION

Not a CNS stimulant. Interacts with $alpha_{2A}$-adrenergic receptors in prefrontal cortex of brain. Behaviors (inattention, hyperactivity, impulsiveness) related to attention-deficit hyperactivity disorder (ADHD) may be controlled in this part of the brain. **Therapeutic Effect:** Improves symptoms of ADHD.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 70%. Metabolized in liver. Excreted in urine. **Half-life:** 14–22 hrs.

USES

Treatment of ADHD. **OFF-LABEL:** Tic disorder, aggression.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hypotension, bradycardia, syncope, renal/hepatic impairment.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 6 yrs. Efficacy beyond 9 wks and safety beyond 2 yrs of treatment not established for children and adolescents older than 6 yrs. **Elderly:** Safety and efficacy not established. Not used in this pt population.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir) may increase risk of hypotension, bradycardia, sedation. **Rifampin** decreases guanfacine concentration. May increase **valproic acid** concentration. Increased risk of cardiovascular effects with **antihypertensives. Alcohol, antipsychotics, barbiturates, benzodiazepines, sedative/hypnotics** may produce additive sedative effects. **HERBAL:** None significant. **FOOD: High-fat meals**

FOOD: **High-fat meals** may increase concentration. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets, Extended-Release: 1 mg, 2 mg, 3 mg, 4 mg.

ADMINISTRATION/HANDLING

PO

• Do not give with high-fat meal. • Do not break, crush, chew extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

◄ALERT► Dosing should be considered on a mg/kg basis.

ADHD

PO: ADULTS, CHILDREN 6 YRS AND OLDER: Begin at dose of 1 mg/day and adjust in increments of no more than 1 mg/wk until clinical response and tolerability are observed. Maintain dose within range of 1–4 mg once daily. If switching from immediate-release guanfacine, discontinue that treatment and titrate with extended-release guanfacine. When discontinuing, taper dose in decrements of no more than 1 mg every 3–7 days.

SIDE EFFECTS

Frequent (38%–10%): Sedation, headache, fatigue, upper abdominal pain. **Occasional (6%–3%):** Nausea, lethargy, dizziness, irritability, hypotension or decreased B/P, decreased appetite, dry mouth, constipation. **Rare (2%–1%):** Dyspepsia, asthenia (loss of strength, energy), increased B/P, increased weight, orthostatic hypotension, increased urinary frequency.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt discontinuation may produce infrequent, transient elevations in B/P above original baseline (taper dose in decrements of no more than 1 mg every 3–7 days). Abrupt withdrawal following prolonged administration of high dosage may produce extreme fatigue (may last for wks). Prolonged administration to children may produce suppression of weight and/or height patterns. AV block, bradycardia, arrhythmias occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Measure pulse, B/P prior to initiation of therapy, following dose increases, and periodically during therapy.

INTERVENTION/EVALUATION

Assist with ambulation if sedation, dizziness, fatigue, lethargy occur. Be alert to mood changes. Assess for nausea, headache. Monitor B/P, blood serum chemistries, particularly renal/hepatic function studies for change from baseline. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Dry mouth may be relieved with sugarless gum, sips of tepid water. • Advise pts to avoid becoming dehydrated, overheated. • Do not substitute for immediate-release guanfacine tablets. • Swallow whole; do not break, crush, or chew. • Do not take with high-fat meal.

haloperidol

hal-oh-**per**-i-dol
(Apo-Haloperidol, Haldol, Haldol Decanoate, Novo-Peridol)

BLACK BOX ALERT Increased risk of mortality in elderly pts with dementia-related psychosis with use of injections.

Do not confuse Haldol with Halcion or Stadol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Butyrophenone antipsychotic. **CLINICAL:** Antipsychotic, antiemetic, antidyskinetic (see p. 65C).

ACTION

Competitively blocks postsynaptic dopamine receptors, interrupts nerve impulse movement, increases turnover of dopamine in brain. **Therapeutic Effect:** Produces tranquilizing effect. Strong extrapyramidal, antiemetic effects; weak anticholinergic, sedative effects.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 92%. Extensively metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 20 hrs.

USES

Treatment of psychoses (including schizophrenia), Tourette's disorder (controls tics and vocal utterances), severe behavioral problems in children. **OFF-LABEL:** Treatment of nonschizophrenic psychosis, ethanol dependence, psychosis/agitation related to Alzheimer's dementia, emergency sedation of severely agitated/psychotic pts.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, CNS depression, coma, myelosuppression, Parkinson's disease, severe cardiac/hepatic disease. **Cautions:** Renal/hepatic impairment, cardiovascular disease, history of seizures, prolonged QT syndrome, medications that prolong QT interval, hypothyroidism, thyrotoxicosis, electrolyte imbalance (e.g., hypokalemia, hypomagnesemia), EEG abnormalities, elderly, pts at risk for pneumonia, decreased GI motility, urinary retention, BPH, visual disturbances, myasthenia gravis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** More susceptible to dystonias; not recommended in those younger than 3 yrs. **Elderly:** More susceptible to orthostatic hypotension, anticholinergic effects, sedation; increased risk for extrapyramidal effects. Decreased dosage recommended.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depression. **CYP3A4 inducers (e.g., carbamazepine)** may decrease concentration. **Medications prolonging QT interval** may increase risk of QT prolongation. **Medications producing extrapyramidal symptoms (EPS)** may increase EPS. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant. **Therapeutic serum level:** 0.2–1 mcg/ml; **toxic serum level:** greater than 1 mcg/ml.

AVAILABILITY (Rx)

Injection, Oil (Decanoate [Haldol Decanoate]): 50 mg/ml, 100 mg/ml. **Injection, Solution (Lactate [Haldol]):** 5 mg/ml. **Oral Concentrate:** 2 mg/ml. **Tablets (Haldol):** 0.5 mg, 1 mg, 2 mg, 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Only haloperidol lactate is given IV.

Reconstitution • May give undiluted. • May add to 50–100 ml of D_5W.

Rate of Administration • Give IV push at rate of 5 mg/min. • Infuse IV piggyback over 30 min. • For IV infusion, up to 25 mg/hr has been used (titrated to pt response).

Storage • Discard if precipitate forms, discoloration occurs. • Store at room temperature; do not freeze. • Protect from light.

IM

Parenteral Administration • Pt should remain recumbent for 30–60 min in head-low position with legs raised to minimize hypotensive effect. • Prepare Decanoate IM injection using 21-gauge needle. • Do not exceed maximum volume of 3 ml per IM injection site. • Inject slow,

deep IM into upper outer quadrant of gluteus maximus.

PO

• Give without regard to meals. • Scored tablets may be crushed. • Dilute oral concentrate with water or juice. • Avoid skin contact with oral concentrate; may cause contact dermatitis.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), fluconazole (Diflucan), foscarnet (Foscavir), heparin, lipids, nitroprusside (Nipride), piperacillin/tazobactam (Zosyn).

IV COMPATIBILITIES

Dobutamine (Dobutrex), dopamine (Intropin), fentanyl (Sublimaze), hydromorphone (Dilaudid), lidocaine, lorazepam (Ativan), midazolam (Versed), morphine, nitroglycerin, norepinephrine (Levophed), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IM *(Lactate)*: ADULTS, ELDERLY: 2–5 mg q4–8h as needed. **CHILDREN 6–12 YRS:** 1–3 mg/dose q4–8h as needed. ***(Decanoate)*: ADULTS, ELDERLY:** 10–20 times stabilized oral dose, given at 4-wk intervals.

PO: ADULTS, ELDERLY: 0.5–5 mg 2–3 times/day. **Maximum:** 30 mg/day. **CHILDREN 3–12 YRS (15–40 KG):** 0.25–0.5 mg/day. May increase by 0.25–0.5 mg q5–7days. **Maximum:** 0.15 mg/kg/day.

SIDE EFFECTS

Frequent: Blurred vision, constipation, orthostatic hypotension, dry mouth, swelling or soreness of female breasts, peripheral edema. **Occasional:** Allergic reaction, difficulty urinating, decreased thirst, dizziness, diminished sexual function, drowsiness, nausea, vomiting, photosensitivity, lethargy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extrapyramidal symptoms (EPS) appear to be dose related and typically occur in first few days of therapy. Marked drowsiness/lethargy, excessive salivation, fixed stare may be mild to severe in intensity. Less frequently noted are severe akathisia (motor restlessness), acute dystonias: torticollis (neck muscle spasm), opisthotonos (rigidity of back muscles), oculogyric crisis (rolling back of eyes). Tardive dyskinesia (tongue protrusion, puffing of cheeks, chewing/puckering of the mouth) may occur during long-term therapy or after drug discontinuance and may be irreversible. Elderly female pts have greater risk of developing this reaction.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P, heart rate. Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor for rigidity, tremor, mask-like facial expression, fine tongue movement. Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression). Monitor EKG and QT interval. **Therapeutic serum level:** 0.2–1 mcg/ml; **toxic serum level:** greater than 1 mcg/ml.

PATIENT/FAMILY TEACHING

• Full therapeutic effect may take up to 6 wks. • Do not abruptly withdraw from long-term drug therapy. • Sugarless gum, sips of tepid water may relieve dry mouth. • Drowsiness generally subsides during continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Report muscle stiffness. • Avoid

exposure to sunlight, overheating, dehydration (increased risk of heatstroke).

heparin HIGH ALERT

hep-ah-rin
(Hepalean, Hepalean Leo, Hep-Lock)
Do not confuse heparin with Hespan.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sulfated polysaccharide; blood modifier. **CLINICAL:** Anticoagulant (see p. 31C).

ACTION

Interferes with blood coagulation by blocking conversion of prothrombin to thrombin and fibrinogen to fibrin. **Therapeutic Effect:** Prevents further extension of existing thrombi or new clot formation. No effect on existing clots.

PHARMACOKINETICS

Well absorbed following subcutaneous administration. Protein binding: Very high. Metabolized in liver. Removed from circulation via uptake by reticuloendothelial system. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1–6 hrs.

USES

Prophylaxis and treatment of thromboembolic disorders; anticoagulant for extracorporeal and dialysis procedures; maintain patency of IV devices. **OFF-LABEL:** STEMI, non-STEMI, unstable angina.

PRECAUTIONS

Contraindications: Pts at risk for bleeding (e.g., bacterial endocarditis, uncontrolled hypertension, platelet defects), severe thrombocytopenia, uncontrolled bleeding (unless secondary to DIC). **Cautions:** IM injections, peptic ulcer disease, menstruation, recent surgery or invasive procedures, severe hepatic/renal/biliary disease, indwelling catheters.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use with caution, particularly during last trimester, immediate postpartum period (increased risk of maternal hemorrhage). Does not cross placenta. Not distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. Benzyl alcohol preservative may cause gasping syndrome in infants. **Elderly:** More susceptible to hemorrhage. Age-related renal impairment may increase risk of bleeding.

INTERACTIONS

DRUG: Other anticoagulants, platelet aggregation inhibitors, thrombolytics may increase risk of bleeding. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo, ginseng, horse chestnut, red clover** have additional antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May increase free fatty acids, serum AST, ALT. May decrease serum cholesterol.

AVAILABILITY (Rx)

Injection Solution: 10 units/ml (Hep-Lock), 100 units/ml, 1,000 units/ml, 5,000 units/ml, 10,000 units/ml, 20,000 units/ml. **Premix Solution for Infusion:** 25,000 units/250 ml infusion, 25,000 units/500 ml infusion.

ADMINISTRATION/HANDLING

ALERT Do **not** give by IM injection (pain, hematoma, ulceration, erythema).

IV

ALERT Used in full-dose therapy. Intermittent IV dosage produces higher incidence of bleeding abnormalities. Continuous IV route preferred.

Reconstitution • Premix solution requires no reconstitution.

Rate of Administration • Use constant-rate IV infusion pump.

Storage • Store at room temperature.

Subcutaneous

◀ALERT▶ Used in low-dose therapy. • After withdrawal of heparin from vial, change needle before injection (prevents leakage along needle track). • Inject above iliac crest or in abdominal fat layer. Do not inject within 2 inches of umbilicus or any scar tissue. • Withdraw needle rapidly, apply prolonged pressure at injection site. Do not massage. • Rotate injection sites.

IV INCOMPATIBILITIES

Amiodarone (Cordarone), amphotericin B complex (Abelcet, AmBisome, Amphotec), ciprofloxacin (Cipro), dacarbazine (DTIC), diazepam (Valium), dobutamine (Dobutrex), doxorubicin (Adriamycin), droperidol (Inapsine), filgrastim (Neupogen), gentamicin (Garamycin), haloperidol (Haldol), idarubicin (Idamycin), labetalol (Trandate), lipids, nicardipine (Cardene), phenytoin (Dilantin), quinidine, tobramycin (Nebcin), vancomycin (Vancocin).

IV COMPATIBILITIES

Aminophylline, ampicillin/sulbactam (Unasyn), aztreonam (Azactam), calcium gluconate, cefazolin (Ancef), ceftazidime (Fortaz), ceftriaxone (Rocephin), digoxin (Lanoxin), diltiazem (Cardizem), dopamine (Intropin), enalapril (Vasotec), famotidine (Pepcid), fentanyl (Sublimaze), furosemide (Lasix), hydromorphone (Dilaudid), insulin, lidocaine, lorazepam (Ativan), magnesium sulfate, methylprednisolone (Solu-Medrol), midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), oxytocin (Pitocin), piperacillin/tazobactam (Zosyn), procainamide (Pronestyl), propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

Line Flushing

IV: ADULTS, ELDERLY, CHILDREN: 100 units q6–8h. **INFANTS WEIGHING LESS THAN 10 KG:** 10 units q6–8h.

Unstable Angina, NSTEMI, Acute Coronary Syndrome

IV Infusion: ADULTS, ELDERLY: 60–70 units/kg bolus (**maximum:** 5,000 units), then 12–15 units/kg/hr (**maximum:** 1,000 units/hr).

Treatment of DVT/PE

IV Infusion: ADULTS, ELDERLY: 80 units/kg bolus (**maximum:** 5,000 units), then 18 units/kg/hr adjusted according to aPTT.

Usual Pediatric Dose

IV Infusion: 75 units/kg bolus over 10 min, then 20 units/kg/hr to maintain aPTT of 60–85 sec.

Prevention of Thromboembolic Disorders

Subcutaneous: ADULTS, ELDERLY: 5,000 units q8–12h.

SIDE EFFECTS

Occasional: Pruritus, burning (particularly on soles of feet) caused by vasospastic reaction. **Rare:** Pain, cyanosis of extremity 6–10 days after initial therapy lasting 4–6 hrs, hypersensitivity reaction (chills, fever, pruritus, urticaria, asthma, rhinitis, lacrimation, headache).

ADVERSE EFFECTS/ TOXIC REACTIONS

Bleeding complications ranging from local ecchymoses to major hemorrhage occur more frequently in high-dose therapy, intermittent IV infusion, women 60 yrs and older. **Antidote:** Protamine sulfate 1–1.5 mg IV for every 100 units heparin subcutaneous within 30 min of overdose, 0.5–0.75 mg for every 100 units heparin subcutaneous if within 30–60 min of overdose, 0.25–0.375 mg for every 100 units heparin subcutaneous if 2 hrs have elapsed since overdose, 25–50 mg if heparin was given by IV infusion.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Cross-check dose with co-worker. Determine aPTT before administration and 24

hrs following initiation of therapy, then q24–48hrs for first wk of therapy or until maintenance dose is established. Follow with aPTT determinations 1–2 times weekly for 3–4 wks. In long-term therapy, monitor 1–2 times a mo.

INTERVENTION/EVALUATION

Monitor aPTT (therapeutic range at 1.5–2.5 times normal) diligently. Assess Hct, platelet count, AST, ALT. Monitor urine and stool for occult blood. Assess for decrease in B/P, increase in pulse rate, complaint of abdominal/back pain, severe headache (may be evidence of hemorrhage). Question for increase in amount of discharge during menses. Assess peripheral pulses; skin for ecchymosis, petechiae. Check for excessive bleeding from minor cuts, scratches. Assess gums for erythema, gingival bleeding. Assess urine output for hematuria. Avoid IM injections due to potential for hematomas. When converting to warfarin (Coumadin) therapy, monitor PT results (will be 10%–20% higher while heparin is given concurrently).

PATIENT/FAMILY TEACHING

• Use electric razor, soft toothbrush to prevent bleeding. • Report any sign of red or dark urine, black or red stool, coffee-ground vomitus, blood-tinged mucus from cough. • Do not use any OTC medication without physician approval (may interfere with platelet aggregation). • Wear or carry identification that notes anticoagulant therapy. • Inform dentist, other physicians of heparin therapy. • Limit alcohol.

*hydrALAZINE

hye-**dral**-a-zeen
(Apo-Hydralazine, Apresoline, Novo-Hylazin)
Do not confuse hydralazine with hydroxyzine.

FIXED-COMBINATION(S)

Apresazide: hydralazine/hydrochlorothiazide (a diuretic): 25 mg/25 mg, 50 mg/50 mg, 100 mg/50 mg. **BiDil:** hydralazine/isosorbide (a nitrate): 37.5 mg/20 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Vasodilator. **CLINICAL:** Antihypertensive (see p. 62C).

ACTION

Direct vasodilating effects on arterioles. **Therapeutic Effect:** Decreases B/P, systemic vascular resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	20–30 min	N/A	Up to 8 hrs
IV	5–20 min	N/A	1–4 hrs

Well absorbed from GI tract. Widely distributed. Protein binding: 85%–90%. Metabolized in liver to active metabolite. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–7 hrs (increased in renal impairment).

USES

Management of moderate to severe hypertension. **OFF-LABEL:** Hypertension secondary to eclampsia, preeclampsia. Treatment of CHF.

PRECAUTIONS

Contraindications: Coronary artery disease, mitral valvular rheumatic heart disease, dissecting aortic aneurysm. **Cautions:** Renal impairment, cerebrovascular disease, positive ANA titer.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta. Unknown if distributed in breast milk. Thrombocytopenia, leukopenia, petechial bleeding, hematomas have occurred in newborns (resolved within 1–3 wks). **Pregnancy Category C. Children:** No age-related precautions

noted. **Elderly:** More sensitive to hypotensive effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Diuretics, other antihypertensives may increase hypotensive effect. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** Any **foods** may increase plasma concentration. **LAB VALUES:** May produce positive direct Coombs' test.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml. **Tablets:** 10 mg, 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give undiluted. • Administer slowly: maximum rate 5 mg/min (0.2 mg/kg/min for children).
Storage • Store at room temperature.

PO

• Best given with food at regularly spaced meals. • Tablets may be crushed.

IV INCOMPATIBILITIES

Aminophylline, ampicillin (Polycillin), furosemide (Lasix).

IV COMPATIBILITIES

Dobutamine (Dobutrex), heparin, hydrocortisone (Solu-Cortef), nitroglycerin, potassium.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 10 mg 4 times a day. May increase by 10–25 mg/dose q2–5 days. Usual range: 25–100 mg in 2–3 divided doses. **Maximum:** 300 mg/day. **ELDERLY:** Initially, 10 mg 2–3 times a day. May increase by 10–25 mg q2–5 days. **CHILDREN:** Initially, 0.75–1 mg/kg/day in 2–4 divided doses, not to exceed 25 mg/dose. May increase over 3–4 wks. **Maximum:** 7.5 mg/kg/day (5 mg/kg/day in infants). **Maximum daily dose:** 200 mg.
IV, IM: ADULTS, ELDERLY: Initially, 10–20 mg/dose q4–6h. May increase to 40 mg/dose. **CHILDREN:** Initially, 0.1–0.2 mg/kg/dose (**maximum:** 20 mg) q4–6h, as needed, up to 1.7–3.5 mg/kg/day in divided doses q4–6h.

CHF

PO: ADULTS, ELDERLY: Initially, 10–25 mg 3–4 times/day up to 225–300 mg/day in combination with isosorbide dinitrate.

Dosage in Renal Impairment

Dosage interval is based on creatinine clearance.

Creatinine Clearance	Dosage
10–50 ml/min	q8h
Less than 10 ml/min	q8–24h

SIDE EFFECTS

Occasional: Headache, anorexia, nausea, vomiting, diarrhea, palpitations, tachycardia, angina pectoris. **Rare:** Constipation, ileus, edema, peripheral neuritis (paresthesia), dizziness, muscle cramps, anxiety, hypersensitivity reactions (rash, urticaria, pruritus, fever, chills, arthralgia), nasal congestion, flushing, conjunctivitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

High dosage may produce lupus erythematosus–like reaction (fever, facial rash, muscle/joint aches, glomerulonephritis, splenomegaly). Severe orthostatic hypotension, skin flushing, severe headache, myocardial ischemia, cardiac arrhythmias may develop. Profound shock may occur with severe overdosage.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations).

INTERVENTION/EVALUATION

Monitor B/P, pulse, ANA titer. Monitor for headache, palpitations, tachycardia. Assess for peripheral edema of hands, feet. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• To reduce hypotensive effect, rise slowly from lying to sitting position, permit legs to dangle from bed momentarily before standing. • Unsalted crackers, dry toast may relieve nausea. • Report muscle/joint aches, fever (lupus-like reaction), flu-like symptoms. • Limit alcohol use.

TOP 200

hydrochlorothiazide

hye-dro-**klor**-oh-**thy**-ah-zide (Apo-Hydro, HydroDIURIL, Microzide, Novo-Hydrazide)
Do not confuse Microzide with Maxzide.

FIXED-COMBINATION(S)

Accuretic: hydrochlorothiazide/quinapril (an angiotensin-converting enzyme [ACE] inhibitor): 12.5 mg/10 mg, 12.5 mg/20 mg, 25 mg/20 mg. **Aldactazide:** hydrochlorothiazide/spironolactone (a potassium-sparing diuretic): 25 mg/25 mg, 50 mg/50 mg. **Aldoril:** hydrochlorothiazide/methyldopa (an antihypertensive): 15 mg/250 mg, 25 mg/250 mg, 30 mg/500 mg, 50 mg/500 mg. **Anturnide:** hydrochlorothiazide/aliskiren (renin inhibitor)/amlodipine (calcium channel blocker): 12.5 mg/150 mg/5 mg, 12.5 mg/300 mg/5 mg, 25 mg/300 mg/5 mg, 12.5 mg/300 mg/10 mg, 25 mg/300 mg/10 mg. **Apresazide:** hydrochlorothiazide/hydralazine (a vasodilator): 25 mg/25 mg, 50 mg/50 mg, 50 mg/100 mg. **Atacand HCT:** hydrochlorothiazide/candesartan (an angiotensin II receptor antagonist): 12.5 mg/16 mg, 12.5 mg/32 mg. **Avalide:** hydrochlorothiazide/irbesartan (an angiotensin II receptor antagonist): 12.5 mg/150 mg, 12.5 mg/300 mg, 25 mg/300 mg. **Benicar HCT:** hydrochlorothiazide/olmesartan (an angiotensin II receptor antagonist): 12.5 mg/20 mg, 12.5 mg/40 mg, 25 mg/40 mg. **Capozide:** hydrochlorothiazide/captopril (an ACE inhibitor): 15 mg/25 mg, 15 mg/50 mg, 25 mg/25 mg, 25 mg/50 mg. **Diovan HCT:** hydrochlorothiazide/valsartan (an angiotensin II receptor antagonist): 12.5 mg/80 mg, 12.5 mg/160 mg. **Dutoprol:** hydrochlorothiazide/metoprolol (a beta blocker): 12.5 mg/25 mg, 12.5 mg/50 mg, 12.5 mg/100 mg. **Dyazide/Maxide:** hydrochlorothiazide/triamterene (a potassium-sparing diuretic): 25 mg/37.5 mg, 25 mg/50 mg, 50 mg/75 mg. **Exforge HCT:** hydrochlorothiazide/amlodipine (a calcium channel blocker)/valsartan (an angiotensin II receptor blocker): 12.5 mg/5 mg/160 mg, 25 mg/5 mg/160 mg, 12.5 mg/10 mg/160 mg, 25 mg/10 mg/160 mg, 25 mg/10 mg/320 mg. **Hyzaar:** hydrochlorothiazide/losartan (an angiotensin II receptor antagonist): 12.5 mg/50 mg, 12.5 mg/100 mg, 25 mg/100 mg. **Inderide:** hydrochlorothiazide/propranolol (a beta-blocker): 25 mg/40 mg, 25 mg/80 mg, 50 mg/80 mg, 50 mg/120 mg, 50 mg/160 mg. **Lopressor HCT:** hydrochlorothiazide/metoprolol (a beta-blocker): 25 mg/50 mg, 25 mg/100 mg, 50 mg/100 mg. **Lotensin HCT:** hydrochlorothiazide/bepridil (a calcium channel blocker): 6.25 mg/5 mg, 12.5 mg/10 mg, 12.5 mg/20 mg, 25 mg/20 mg. **Micardis HCT:** hydrochlorothiazide/telmisartan (an angiotensin II receptor antagonist): 12.5 mg/40 mg, 12.5 mg/80 mg. **Moduretic:** hydrochlorothiazide/amiloride (a potassium-sparing diuretic): 50 mg/5 mg. **Normozide:** hydrochlorothiazide/labetalol (a beta-blocker): 25 mg/100 mg, 25 mg/300 mg. **Prinzide/Zestoretic:** hydrochlorothiazide/lisinopril (an ACE inhibitor): 12.5 mg/10 mg, 12.5 mg/20

mg, 25 mg/20 mg. **Tekturna HCT:** hydrochlorothiazide/aliskiren (a renin inhibitor): 12.5 mg/150 mg, 25 mg/300 mg. **HCT:** hydrochlorothiazide/eprosartan (an angiotensin II receptor antagonist): 12.5 mg/600 mg, 25 mg/600 mg. **Timolide:** hydrochlorothiazide/timolol (a beta-blocker): 25 mg/10 mg. **Tribeuzor:** hydrochlorothiazide/olmesartan/amlodipine: 12.5 mg/20 mg/5 mg, 12.5 mg/40 mg/5 mg, 25 mg/40 mg/5 mg, 12.5 mg/40 mg/10 mg, 25 mg/40 mg/10 mg. **Uniretic:** hydrochlorothiazide/moexipril (an ACE inhibitor): 12.5 mg/7.5 mg, 25 mg/15 mg. **Vaseretic:** hydrochlorothiazide/enalapril (an ACE inhibitor): 12.5 mg/5 mg, 25 mg/10 mg. **Ziac:** hydrochlorothiazide/bisoprolol (a beta-blocker): 6.25 mg/5 mg, 6.25 mg/10 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sulfonamide derivative. **CLINICAL:** Thiazide diuretic, antihypertensive (see p. 61C, 101C).

ACTION

Diuretic: Blocks reabsorption of water, sodium, potassium at cortical diluting segment of distal tubule. **Antihypertensive:** Reduces plasma, extracellular fluid volume, peripheral vascular resistance by direct effect on blood vessels. **Therapeutic Effect:** Promotes diuresis; reduces B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (diuretic)	2 hrs	4–6 hrs	6–12 hrs

Variably absorbed from GI tract. Primarily excreted unchanged in urine. Not removed by hemodialysis. **Half-life:** 5.6–14.8 hrs.

USES

Treatment of mild to moderate hypertension, edema in CHF, nephrotic syndrome. **OFF-LABEL:** Treatment of lithium-induced diabetes insipidus.

PRECAUTIONS

Contraindications: Anuria, history of hypersensitivity to sulfonamides or thiazide diuretics, renal decompensation. **Cautions:** Severe renal disease, hepatic impairment, diabetes mellitus, elderly or debilitated, gout, moderate to high cholesterol, high triglycerides, hypercalcemia.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Small amount distributed in breast milk. Breast-feeding not recommended. **Pregnancy Category B (D if used in pregnancy-induced hypertension). Children:** No age-related precautions noted, except jaundiced infants may be at risk for hyperbilirubinemia. **Elderly:** May be more sensitive to hypotensive, electrolyte effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Cholestyramine, colestipol** may decrease absorption, effects. May increase risk of **digoxin** toxicity associated with hydrochlorothiazide-induced hypokalemia. May increase risk of **lithium** toxicity. **HERBAL:** **Ephedra, ginseng, yohimbe** may diminish effect. **Black cohosh, periwinkle** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, cholesterol, LDL, bilirubin, calcium, creatinine, uric acid, triglycerides. May decrease urinary calcium, serum magnesium, potassium, sodium.

AVAILABILITY (Rx)

Capsules (Microzide): 12.5 mg. **Tablets:** 12.5 mg, 25 mg, 50 mg.

ADMINISTRATION/HANDLING

PO

• If GI upset occurs, give with food or milk, preferably with breakfast (may prevent nocturia). • Give last dose no later than 6 PM unless instructed otherwise.
